(c) The use of portable lamps, naked lights or electrical equipment on extension cords is prohibited and only approved intrinsically safe self-contained flashlights are permitted on deck.

(d) Ventilators must be so trimmed as to exclude flammable gases entering the area and if this cannot be done the ventilators must be completely closed.

(e) The vessel's engines, steering gear and other essential manoeuvring equipment and deck machinery must remain ready with full power for immediate use to permit the vessel to clear the area upon instruction from the Company or the Mooring Master to do so.

(f) Window type air conditioners must be disconnected from their power source and not used unless a certificate can be produced from a recognised authority to show that the unit is safe to operate in flammable gas areas.

(g) The vessel's main radio and radar equipment must not be energised while the vessel is handling cargo or ballast. The use of intrinsically safe VHF radios for cargo handling and safety operations are permitted.

(h) A continuous and efficient fire watch must be maintained on deck and in the engine room at all times. The vessel's fire fighting equipment shall be ready for instant use at all times throughout the vessel. Fire hoses of sufficient length to reach all parts of the vessel must be laid out and connected to hydrants and there must be full pressure on the deck line.

(i) Recommendations contained in the I.C.S. International Safety Guide for oil tankers and terminals covering the loading and discharge of tankers shall be strictly followed at all times.

(j) The only open flames allowed while the vessel is at the loading berth are those in the vessel's boilers and galley equipment. Sufficient fire extinguishers must always be provided near the galley and boilers.

(k) Burners, tubes, uptakes, exhaust manifolds and spark arrestors shall be maintained in good working order and kept clean. Funnel uptakes and boiler tubes shall not be blown while the vessel is at the loading berth. Highly volatile cleaning solvents shall not be used in the engine room for any purpose whatsoever while the vessel is at the loading berth.

(l) In the event of fire breaking out on any part of the vessel, however minor the fire may be, the fire alarm must be given immediately. The fire alarm will consist of a succession of long blasts on the vessel's whistle together with a rapid and continuous ringing of the vessel's bell.

(m) Not less than 1 Deck Officer and 3 seamen shall be on duty, alert, available and in charge of the operations on deck at all times while the vessel is at the loading berth.

(n) Not less than 1 engineer shall be on duty, alert, available and in charge of the engine room at all times while the vessel is at the loading berth.

(o) A member of the vessel's crew, not one involved in any way with the loading operation, must be stationed on the bow of the vessel while the vessel is at the loading berth and a constant watch must be maintained on the moorings.

(p) During the discharge of clean ballast and the loading of crude oil, the vessel and the waters around the vessel must be illuminated during the hours of darkness with all available and suitable searchlights and floodlights.

(q) Before the floating cargo hose is brought on board the vessel, all deck scuppers must be plugged tight and adequate drip pans and sand must be provided where necessary on deck for use at all times. The deck scuppers must remain plugged until the floating cargo hose has been disconnected. All other materials necessary to clean up any oil spillage on deck must be on hand for immediate use.

(r) All unused bunker connections, cargo connections and vessel manifolds must be fitted with blank flanges including the stern discharge line if fitted.

(s) All cargo tank hatch covers and ullage port covers are to be kept closed except where tanks are to be hand sampled or hand ullaged in which case the ullage openings may be opened to sample or ullage the cargo.

(t) All cargo and ballasting operations shall be suspended during electrical storms in the vicinity of the vessel.

(u) Prior to the commencement of any loading operations, all empty vessel cargo tanks and tanks carrying cargo must be under positive pressure and fully inerted with gas having an oxygen content of less than 8 per cent.

(v) THE COMPANY DOES NOT HAVE A TUG OR VESSEL IN THE AREA EQUIPPED WITH FIRE FIGHTING APPARATUS.

GENERAL: *Government Officials:* Sharjah Officials such as the Customs Officer, Quarantine Officer, Immigration Officer, Captain of the Port and Police, are stationed in the town of Sharjah. Should Customs Guards be stationed on board the vessel while at the loading berth, it is expected that the vessel will provide food for these guards and other Sharjah Officials. Vessels calling at the loading berth must provide an accommodation ladder rigged on the port side for such Sharjah Officials.

Visitors: Visitors are not allowed to embark or disembark from the vessel at the loading berth.

Supplies: Commissary supplies, steward's stores, laundry services, fresh water, marine lubricants and bunkers are not available through the Company and may not be loaded at the loading berth. Any questions concerning the availability of such items from other sources and the loading of such items elsewhere should be handled through the vessel's Agent.

Contraband: The Company prohibits unauthorised craft from coming alongside vessels while at the loading berth without the permission of the Mooring Master. To avoid the possibility of undesirable items getting aboard vessels, it is recommended that Masters discourage any such craft from coming alongside while vessels are at or in the vicinity of the loading berth.

Garbage: The dumping of garbage and refuse overside is prohibited.

Agency: The Company does not perform any vessel Agency functions. Vessels calling at Hamriyah must arrange for their own Agents.

SHIPMASTER'S REPORT: July 1983 (updated 1986).

Location: Hamriyah Oil Terminal is owned by Amoco Sharjah Oil Company. The terminal is located in the Emirate of Sharjah, United Arab Emirates. A 30 in. pipe-line runs from the shore tank to a S.P.M. located in position Lat. 25° 34′ 31.68″ N., Long.55° 24′ 05.8″ E. and is operated by Lamnalco.

Documents: Health Declaration and Crew Lists. Customs, Immigration and Quarantine Officers have an office in Sharjah but usually do not come on board.

Pilotage: A pilot ladder to be prepared on vessel's Port side and lowered to about 12 ft. above the waterline. If the height of the deck exceeds 30 ft. a pilot ladder in conjunction with the accommodation ladder must be rigged.

Anchorages: The customary anchorage for vessels awaiting the loading berth of Hamriyah Oil Terminal is 3 miles North of the S.P.M. Anchorage within 3 miles is strictly prohibited unless instructed by the Mooring Master.

Max. Size: Vessels up to 250,000 tons have been accepted, subject to weather conditions.

Health: Rules are the same as found all over the world.

Radio/VHF: Amoco Sharjah and Lamnalco should be contacted by radio 3 days prior arrival via Bahrain Radio and maintain contact until prior arrival.

Telex: 68685 Amcosh EM and 68433 Lamshj EM.

Following information is required by both parties:

1. ETA.
2. Arrival Draft.
3. Quantity to be loaded.
4. Estimated sailing draft.
5. Last port of call.
6. Whether vessel has clean bill of health.
7. Distance bow to manifold.
8. Confirm vessels ability to load/deballast concurrently or alternatively to deballast after loading.

Both companies keep watch on international VHF Marine Channel 16.

Berthing: This cylindrical buoy is equipped with a navigational white flashing light code "U", range 5.7 miles, a radar reflector and a racon beacon coded "Zulu".

On forecastle, vessel should have 4 good quality mooring lines, minimum length of 120 fathoms and preferably of the floating type. Vessel's lines to be used to pick up the mooring lines of the buoy. The end of the buoy's mooring line consists of a steel chafing chain and will be secured onto vessel's bitts by mooring strops supplied by Lamnalco.

Port derrick should be up and ready for lifting moorings and cargo hose connecting gear and capable of lifting 7.5 tons safely.

Mooring Master and Cargo Oil Surveyor stay on board while vessel is on the berth and both to be accommodated in an officer's cabin and meals served in officer's messroom.

Notice of Readiness: Will only be accepted between 0600 and 1800 hrs. but will not be accepted at times when the Hamriyah Oil Terminal is closed on a public holiday or Friday (Moslem Sabbath). However, if the vessel is moved to the berth without delay after having arrived at any time and vessel is ready for mooring and loading the Mooring Master will accept the N.O.R. at the boarding time. Laytime shall commence upon expiration of 6 hours after accepting the N.O.R. and shall continue until hose has been disconnected from vessel's manifold.

Loading: The floating hose is 20 in. diameter with a 16 in. hose for connecting to the vessel's manifold. Loading rate approximately 23,000 bbls.p.h. Only one type of oil available, being crude oil condensate approximate API 50/60° and loading temperature approximately 95°F.

Ballast: There are no dirty ballast reception facilities and all vessels must arrive with sufficient clean ballast for manoeuvring with the propeller submerged and a trim of 8 ft. – 10 ft. by the stern. Non-permanent clean ballast to be discharged prior to commencing of loading.

Medical: Neither medical nor hospital facilities are available at Hamriyah Oil Terminal. Requests for emergency medical assistance should be passed to Hamriyah Oil Terminal by VHF and the information will be passed to vessel's Agent. Private doctors and hospital are available in the town of Sharjah.

Supplies: Stores, fresh water, laundry services, bunkers and lubricant not available via Amoco and may not be loaded at the berth. Availability of items should be handled through vessel's Agent and loading carried out elsewhere.

Consuls: No consulates in Sharjah; however, many nations have consular or diplomatic representatives in Abu Dhabi and Dubai.

Repatriation/Shore Leave: Not permitted while at loading berth.

Currents: Predominantly counter-clockwise circulation throughout the year along the Sharjah coastline and is generally not strong. Strongest in January (0.4 – 0.8 knots) and in April (0.6 – 1.7 knots).

Weather: Winds are usually light from Western quadrant, except during June to September when the Shamal blows and from November to April during passing of cold fronts with winds up to 20 knots producing rough seas.

AUTHORITY: *Operator:* Amoco Sharjah Oil Company, P.O.Box 1191, Sharjah, United Arab Emirates. *Tel:* (9716) 355100. *Telex:* 68685 Amcosh EM. *Contact:* R. W. Rausch, General Manager.

AGENT: See "Sharjah".

HAMRIYAH LPG TERMINAL: 25.28 N. 55.29 E.

(See Plan)

LOCATION: The Terminal is located in position Lat. 25° 27′ 37.3″ N., Long. 55° 29′ 12″ E. outside the village of Hamriyah on the coastline between Umm Al Qaiwain and Ajman.

The Hamriyah LPG Terminal is owned by Sharjah LPG Company Limited ("Shalco") and operated by Amoco Sharjah Oil Company and is operated 24 hours a day, 7 days a week, weather and other circumstances permitting.

The Terminal consists of 2 storage tanks for propane and butane, and a marine loading facility capable of loading vessels ranging in size from 30,000 cu.m. to 83,000 cu.m. 2 liquid loading lines and 2 vapour return lines are mounted on the trestle connecting the breakwater and the loading platform.

DOCUMENTS: The following documents are required when calling at the Hamriyah LPG Terminal:

Health Declaration.
Crew List.
Clearance from last port of call.

Officials: No immigration, Customs or Health Officials stationed at the Terminal.

PILOTAGE: Pilotage is compulsory from the seaward entrance of the dredged channel. The Pilot will board at or near the designated anchorage. The Pilot will be provided by the Operator and vessels will not be allowed to approach or depart from the port without the Operator's designated Pilot being on board. The Pilot will advise vessel's personnel on the approach through the channel to the jetty and all operations of mooring and unmooring. All manoeuvring of vessels within the loading berth area shall be performed by vessel's personnel as directed by the vessel's Master in accordance with the procedure advised by the Pilot. The vessel's Master must be on the bridge at all times while the vessel is manoeuvring.

Vessels shall provide food for the Pilot while on board the vessels and shall accommodate the Pilot in suitable accommodation equipped with private toilet facilities. The Pilot shall have access to the bridge and/or central area of the vessel and such areas shall not be locked or otherwise arranged to prevent immediate entry at any time by the Pilot.

Vessels are required to have a clean and efficient pilot ladder, fitted with spreaders and manropes, safely and securely rigged ready for the Pilot to immediately embark and disembark and of sufficient length to reach the Pilot's launch. A lifebuoy with safety line and self-igniting light together with a rope messenger for the Pilot's bag shall also be available at the pilot ladder head. Vessels shall afford a "Good Weather Lee" and shall reduce speed as directed by the Pilot in order to effect the safe embarking or disembarking of the Pilot.

Whenever, as in the case of large vessels in light condition, the height of the deck above the water exceeds 30 ft., the accommodation ladder shall also be used in conjunction with the pilot ladder and shall be lowered to about 12 ft. above the water with the pilot ladder rigged immediately adjacent to the bottom platform of the accommodation ladder. The rigging of the pilot ladder for the embarkation and disembarkation of the Pilot shall be supervised by a responsible officer and shall be positioned so that the ladder is well clear of any overboard discharge and such that each step of the ladder rests securely against the vessel's side.

If, in the sole opinion of the Pilot, the pilot ladder is not safe, the Pilot may refuse to board the vessel and any delay caused by such refusal shall be for the vessel's account.

Pilotage Radio Contact: Pilot/Vessel contact will be maintained on VHF Channel 16 or other frequency as mutually agreed by Operator's Marine Representative and vessel's Master.

Arrival at Anchorage/Pilot Boarding Area: Means of access to the vessel by the Pilot shall be provided by the vessel in accordance with the requirements of SOLAS. At night, the access area shall be adequately illuminated to provide a safe approach and boarding by the Pilot, Government Officials and Terminal Representatives.

The Conditions of Use of Shalco's Terminal Facilities will be presented to the Master for acceptance and signature on behalf of himself and the Owners prior to departures from the Anchorage/Pilot Boarding Area.

ANCHORAGE: The customary anchorage area for vessels awaiting loading at the Hamriyah LPG Terminal is a circle 1 mile in diameter with its centre in an approximate position of Lat. 25° 30′ N., Long. 55° 25′ E. There is an existing SBM located at approximately Lat. 25° 34′ N., Long. 55° 24′ E. for the Hamriyah Oil Terminal. the SBM is fitted with a flashing light and racon. This existing SBM may be used as a reference to the LPG Terminal anchorage which is 3 miles W.S.W. of the LPG entrance channel.

When within VHF communication range, Masters of vessels should ascertain berthing prospects from the terminal. In all cases where tankers are instructed to anchor, Masters should obtain clearance for their intended anchorage position from the Operator.

Radio Watches: While at the anchorage awaiting the loading berth, vessels should maintain a listening watch on VHF Channel 16 with the Terminal Operator.

Caution: Masters are cautioned that a 30 in. submarine pipe-line runs 7.6 miles from the Hamriyah Oil Terminal to an offshore SBM facility.

APPROACHES: *Approach Channel:* The approach channel's entrance is located in an approximate position of Lat. 25° 30′ 45″ N., Long. 55° 27′ 23″ E. The Fairway Buoy (Fl. "A" ev. 15 sec.) is located in position Lat. 25° 32′ 05″ N., Long. 55° 25′ 59″ E. The channel's length is 4,000 m. The width is 180 m. in the seaward channel, 250 m. in the intermediate channel and 180 m. in the near harbour channel. the channel depth has been dredged to 15 m.

Buoys:

Location	*Nominal Range (nautical miles)*	*Light Colour*
Fairway	5	White
Channel Marker	3	Red
Channel Marker	3	Green
Channel Marker	3	Red
Channel Marker	3	Green
Channel Marker	3	Red
Channel Marker	3	Green
Channel Marker	3	Red
Channel Marker	3	Green
Channel Marker	3	Red
Channel Marker	3	Green
Basin Limit Marker	2	Yellow
Basin Limit Marker	2	Yellow
Basin Limit Marker	2	Yellow

Beacons:

Location	*Nominal Range (nautical miles)*	*Light Colour*
Main Breakwater	13	Green
Lee Breakwater	5	Red
Leading Light	(White) 5	Green 2° Sectored White 1° Red 2°
Northern Training Wall	5	Red
Southern Training Wall	5	Green

RESTRICTIONS: Vessel will be moored in daylight only but unmooring and loading will be performed at any hour, weather and other circumstances permitting.

MAX. SIZE: The harbour has been dredged to a depth of 14 m. Maximum draft for vessels calling at the Hamriyah LPG Terminal is 12.6 m.

Max. Size: 83,000 cu.m. Max. LOA 230 m.
Minimum LOA 186 m. Minimum flat side 80 m.

HEALTH: No officials stationed at the terminal.

RADIO: *Initial Radio Communications:* The radio station at Bahrain will handle the initial radio communications between vessels and the Operator. The station call sign is "A9M" and the station operates on a 24 hour basis.

Advice of Arrival: It is important that vessels establish radio contact with the Operator and with the Operator's designated marine service when 3 days distant from Hamriyah LPG Terminal and maintain such contact until just prior to arrival at Hamriyah LPG Terminal. Vessels should send an ETA telex to the Operator (Telex No. 68685 a/b Amcosh EM) and to the Operator's designated marine service (Telex: 68433, a/b Lamsh EM) not less than 72 hours prior to arrival at Hamriyah LPG Terminal providing the following information:

1. ETA.
2. Estimated arrival draft, fore and aft.
3. Estimated sailing draft, fore and aft.
4. Whether part-loaded or in ballast. If part-loaded, nature and quantity of cargo.
5. Last port of call.
6. Any repairs that would be required which could delay cargo loading.
7. Pressure and temperature of the tanks that are to be loaded.
8. Last 3 cargoes carried.
9. Size and class of the connecting flange.
10. Distance of mainfold from bow.
11. Height above uppermost continuous deck.
12. Distance of manifold from ship's side.
13. Height above water line when loaded.
14. Height above water line when light.
15. Distance from presentation flange to support.
16. Manifold layout (LVVL or LVLV).

Further ETA telexes should be sent to the Operator and the Operator's designated marine service when the vessel is 48 hours and 24 hours distant from Hamriyah LPG Terminal confirming or giving notice of any change in the 72 hour ETA and at any other time after the 24 hour ETA telex when a change by more than 2 hours occurs in the ETA. The 24 hour ETA telex should include a positive statement regarding the vessel's Readiness to Load on arrival and the manner and the number of hours that will be required by the vessel to discharge clean ballast. Local time is Greenwich Mean Time plus 4 hours and Daylight Saving Time (Summer time) is not applicable.

VHF: *Ship-to-Shore Communications:* The company and its designated agents are equipped with VHF radios using international frequencies and maintain a radio watch on the international VHF marine Channel 16.

On approach to Hamriyah LPG Terminal, the vessel is required to maintain a radio watch on VHF Channel 16. Masters are recommended to use this facility as soon as the vessel is within range since such communications are the best means of avoiding delay in the mooring of the vessel. While a vessel is at the loading berth, the Mooring Master will be in direct charge of the portable VHF ship-to-shore radio and all ship-to-shore communications will be by portable VHF radio. The Mooring Master will advise the Master and officers regarding the emergency whistle signals set up for use in the event the VHF radio units become inoperative. The use of the vessel's radio station and/or battery charging equipment is prohibited during cargo loading operations.

TUGS: Tugs will be provided by the Terminal Operator. Due to the infrequency of LPG liftings, tugs will vary as to individual specifications. However, 2 tugs will normally attend each lifting and each will have a minimum of 1,500 h.p. and a bollard pull of 15 tons.

BERTHING: The fenders and fendering structure are designed to absorb, at normal working stress levels, the energy imparted by vessels approaching the jetty at a maximum velocity of 15 cm./sec. and at an angle of approach of up to 10° from the berthing line. Design is based on a 57,000 d.w.t. LPG vessel. Vessels always berth port side alongside.

Mooring: Dredged depth alongside the jetty face is 14.8 m. Mean Lowest Low Water level and the jetty extends a minimum of 16 m. in each direction from the centre of the loading platform. Vessels ranging from 30,000 cu.m. to 83,000 cu.m. may berth at the jetty. The vessel turning diameter in the harbour is 600 m.

The berth is equipped with 2 breasting dolphins (BD-1 and BD-2) which have 2 quick-release hooks along with powered capstans. The mooring dolphins (MD-1, MD-2, MD-3 and MD-4) are equipped with 3 quick-release hooks. All quick-relese hook units are provided with attached powered capstans. All quick-release hooks have a capacity of 60 tonnes and can be manually operated. The capstan capacity is 2 tonnes with a rope speed of 30 m. per minute. Electrical motor capacity is 11 kW. Bollards, bitts, and cleats are also provided.

Ships should remain adequately secured in their moorings. Ranging of the ship is to be prevented by the vessel's personnel keeping all mooring lines taut. Attention is to be given by vessel's personnel to the movement caused by passing ships, wind, currents, tides, and the cargo operation in progress. Adequate mooring of the vessel is the Master's responsibility and the vessel and its Owner shall be responsible for all damage to the loading berth and related facilities in any way attributable to the failure of the vessel's personnel to keep all mooring lines taut. Operator may suspend cargo operations and have the vessel put off the berth for any failure to comply with this provision with all resulting delay to be for the account of the vessel.

Vessel's personnel should be at their duty stations and alert at all times during mooring, unmooring, hose handling and cargo operations. Ships fitted with automatic tension winches should not use such winches in the automatic mode as they may not always hold the vessel in position at the berth.

LOADING: *Berth Details:* There is one dedicated LPG berth at the New Hamriyah LPG Terminal. This berth is capable of loading refrigerated LPG vessels up to a maximum of 83,000 cu.m. The maximum loading rates for propane and butane are 1,900 cu.m.p.h. Propane will be loaded at a temperature of approximately−46.3°F. Butane will be loaded through arm L-4802B at a temperature of approximately 20.0° F. The order of the loading arms is V, L, L, V. It is emphasised that venting of vapour to atmosphere is not allowed. Vapour should be returned to the Terminal via the vapour return lines provided or reliquified and returned to the cargo tanks.

Tanker Manifold Connections: The propane and butane loading arms are 12 in. in diameter. The return vapour arms are 8 in. in diameter. Each arm is fitted with a hydraulic coupler which can be adapted to fit different sizes. The loading arms can be adapted to fit 16 in., 12 in. and 10 in. standard 150 lbs ANSI flanges. The vapour return lines can be adapted to fit 10 in. and 8 in. standard 150 lbs ANSI flanges.

Any other flange size or ratings other than the above stated will require special fabricated spool pieces to meet the foregoing flange specification. Spool pieces must be furnished and installed by the vessel. Terminal personnel will connect the hydraulic couplers to the proper ship's flange.

All time lost due to the furnishing and installation of such spool pieces by the vessel shall be for the account of the vessel.

Ship's manifold connections must meet loading arm envelope configuration and must provide space and support on which to place loading arm support legs.

Distance of ship's manifold from ship's side:

	Min.	*Max.*
12 in. Loading Arm	2.0 m.	6.0 m.
Distance centre to centre for 12 in. ship's manifold	1.5 m.	3.5 m.
Height of centre point of manifold above deck	0.85 m.	2.1 m.

Jetty Emergency Shutdown Systems and Purge Systems: The jetty is equipped with an Emergency Shutdown (ESD) system to stop loading operations. The system is activated by pushing an electronic stop button in the jetty control room or on the pendant which will be placed on board the vessel. The pendant with the ESD button placed aboard the vessel is to be used only in an emergency, and is used in preference to the ship's systems. On activating the ESD system, all loading pumps and loading arms will be shut down.

The valves, etc., have been designed and set to close in a minimum time for safety and still avoid damaging surge pressures. For this reason, the ESD pendant is placed aboard the vessel and request made for the vessel to use the Terminal shutdown system in an emergency.

Recognising the tremendous damage surge pressures can cause, a careful check of the ship's emergency shutdown system will be made. If a suitable record is not available of valve closure times, the Master will be asked to operate the system to enable timing of the valves. The Terminal loading systems have been carefully calculated to provide charts for each product system, giving the allowable loading rates viz. effective valve closure times to remain below damaging surge pressure in the event of an ESD. (Note: effective valve closure time is a small percentage of total closing time and depends on valve style and valve actuator). It is desirable that the vessel furnish effective closure times from the manufacturer's data; if not, charts are available to estimate effective time once the total closing time is obtained. Using the individual system charts, the maximum loading rate is determined based on the minimum effective closing time of the ship's valves. If this rate is not acceptable to the vessel, arrangements will have to be made to change settings on valve actuators or temporarily lock-off the ship's loading ESD system and use the Terminal ESD pendant. The Terminal will not load at a rate in excess of that shown as being safe. Excess loading times caused by restricted loading rates due to the ship's ESD system will cause additional laytime to be allowed. The vessel may be requested to have valves adjusted before returning to Terminal for loading.

The following is a list showing minimum allowable effective valve closure times at *maximum* Safe Terminal pumping rates:

Product	*State*	*Pumping Rate cu.m/p.h.*	*Eff. Valve Closure Time – Secs.*
Propane	Refrigerated	1,900	7.5 Sec.
Butane	Refrigerated	1,900	7.5 Sec.

Before any cargo operation commences, the Master must ensure that all parts of the vessel's cargo system have been thoroughly tested and all safety checks are completed. The Terminal Representative and the Master, or officer in charge of the vessel's loading operations, should conduct and record a detailed loading plan. The Ship/Shore Safety Check List must be completed to the satisfaction of both the Terminal Representative and vessel's Master. Should any infringement of the Safety Check List be observed during loading operations it will be brought immediately to the attention of the vesssel's Master and if not rectified at once, the loading operation shall be terminated until remedial action has been implemented. All such time lost shall be for the account of the vessel. The vessel's Master shall remain responsible for the safety of the vessel and all operations on board the vessel at all times.

After completion of loading operations the vessel shall be ullaged. A Bill of Lading, Cargo Manifest, Ullage Report, Time Sheet, Certificate of Quality, Certificate of Quantity and Certificate of Origin will be completed. All such documents will be signed by the Master of the vessel prior to the vessel's departure. If required or requested by the Master of the vessel, the Agent of the vessel may sign the documents on behalf of the vessel's Master. The official quantity of the LPG delivered to the vessel shall be determined by the use of vessel gauges applied to vessel strappings and cargo tank volume calibrations. Tests for quality determinations shall be carried out by the Licensed Inspector.

Cargo Information: The vessel's Master will be informed of the approximate gravity and loading temperature of the LPG prior to commencement of loading. An official and final figure for specific gravity will be provided as soon as practical after completion of loading.

BALLAST: There are no facilities for off-loading ballast at Hamriyah LPG Terminal. Oil-free ballast suitable for pumping directly to the sea may be discharged overboard from the vessel. Export vessels arriving with ballast unsuitable for pumping to the sea may be rejected for loading, or made to keep such unsuitable ballast segregated on board. It is strictly against the law to pollute the waters of the United Arab Emirates, and any Master, his vessel and Owners, shall be subject to prosecution by the United Arab Emirates authorities if such pollution does occur.

FIRE PRECAUTIONS: The vessel's fire fighting appliances, including its main and emergency fire pumps shall be kept on standby and ready for immediate use. Before berthing operations comence, fire hoses shall be uncoiled and connected to the fire main which should be kept pressurised. Fire monitors should be elevated and maintained for immediate use. The water spray system of the vessel must be tested and maintained ready for use. The dry powder system or portable units shall be ready for use and in close proximity to the vessel's manifold.

The vessel is solely responsible for, and presumed capable of, fighting any fire on the vessel without assistance from terminal sources.

Should fire break out on either the vessel or the berth, the vessel's Master or deputy must immediately report the fire by the quickest means possible (VHF/UHF/telephone contact, sounding ship's siren, etc.) to the Terminal. The vessel's Master or deputy must also notify the Jetty Supervisor by means of VHF Channel 16. All cargo and ballast operations will be stopped immediately and then all valves closed. As the vessel's Master or deputy assisted by the crew is responsible for fighting the fire on board the vessel, he should stand-by to disconnect hoses or metal arms.

The jetty supervisor will be responsible for initiating the terminal fire alarm system and actuating the terminal emergency plan. He shall contact the senior deck officer on board the vessel to ascertain what assistance can be rendered by Terminal equipment and personnel.

In the event of an emergency, an alarm signal (continuous siren) will be sounded.

The loading platform fire fighting system has one main motor driven fire water pump and one stand-by diesel engine driven fire water pump. Both pumps are capable of handling 1,500 g.p.m. at 150 p.s.i.g. pressure, and are located on the jetty trestle.

The vessel's Master or his deputy will alert ship's personnel to stand-by for special instructions from the Terminal Supervisor. These instructions may require immediate departure of the vessel from the berth.

MEDICAL: Vessels requiring emergency medical assistance should contact Hamriyah LPG by VHF radio and supply the necessary, pertinent information which will be passed on to the vessel's Agent. Neither medical nor hospital facilities are available at Hamriyah LPG Terminal, but private doctors and hospital facilities are available in the town of Sharjah.

DENSITY: 1029.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: There are no Consulates in the village of Hamriyah; however, the Consular or Diplomatic Representatives for many nations maintain offices in the towns of Abu Dhabi and Dubai.

REPAIRS: There are no facilities for making vessel repairs at Hamriyah LPG Terminal and no repairs will be allowed at the jetty. However, arrangements can be made through the vessel's Agent to utilise the repair facilities at other ports.

SURVEYORS: No Cargo Inspectors or Marine Surveyors are based at the village of Hamriyah but inspectors and surveyors who reside at other ports can be arranged through the vessel's Agent.

CUSTOMS: Masters are advised that drinking or sale of alcoholic beverages is strictly forbidden to U.A.E. national citizens and is controlled for other nationals. Masters are warned of the serious consequences of offering such drinks to the Terminal staff or other officials who may board the vessel.

REPATRIATION: Not possible as no officials based at the terminal.

POLICE/AMBULANCE/FIRE: Contact terminal operator.

WEATHER/TIDES: *General:* The Company can advise of the following general environmental characteristics for the Sharjah coastline area but the navigator is referred to the published sailing instructions and directions for the area for more detailed information on the climate, weather, wind, tide, current and sea.

Climate: The climate along the coastline of Sharjah is characterised by cool Winters and very hot Summers. The annual mean rainfall is 4.2 in. and the relative humidity varies considerably according to the time of day with the highest relative humidity generally in the early morning and the lowest relative humidity generally in the early afternoon. The air temperature is generally moderate in the Winter, but is high in the Summer and can be extremely high in the interior on Summer afternoons.

Weather:

Annual mean rainfall	4.2 in.
Lowest mean daily minimum air temperature	55° F.
Highest mean daily maximum air temperature	102° F.
Lowest average monthly sea surface temperature	72° F.
Highest average monthly sea surface temperature	90° F.

Winds: The winds in the Southern part of the Gulf are usually light and generally blow from the Western quadrant most of the year but are occasionally interrupted by winds from varying directions. The visibility along the Sharjah coastline is generally good but from June to September the Shamal blows over the Gulf area and frequently produces rough seas and stirs up dust clouds which can affect visibility at sea. The cold fronts which move down the Gulf from November to April frequently cause a North or N.W. wind of 20 knots or more along the Sharjah coastline with accompanying swells.

Tides: The tide for Sharjah can be predicted with reasonable accuracy through use of the tide tables for Shatt Al Arab with the appropriate correction factor for Sharjah applied.

Currents: The current along the Sharjah coastline has a predominantly counter-clockwise circulation throughout the year and is not generally strong. The strongest current is usually during the month of January (0.46 to 0.8 knots) and during the month of April (0.6 to 1.7 knots).

Seas: High waves generally do not occur along the Sharjah coastline since the winds are usually light in the vicinity of the coastline. On those occasions when the wind does become strong, the wave heights generally remain somewhat limited since the distance over which the wind can blow to generate waves is somewhat short from most directions due to the bend in the Gulf which tends to reduce the fetch of North winds at Sharjah (e.g. waves over 8 ft. occur 0.2 per cent of the time).

GENERAL: *Flag:* Vessels are required to fly the flag of the United Arab Emirates on the foremast during daylight hours while in Sharjah waters. The Sharjah territorial waters extend 12 nautical miles seaward from the Sharjah coastline.

Government Officials: Sharjah officials such as the Customs Officer, Quarantine Officer, Immigration Officer, Port Authorities and Police are stationed in the town of Sharjah. Should Customs Guards be stationed on board the vessel while at the jetty it is expected that the vessel will provide food for these Guards and other Sharjah officials.

Quarantine Regulations: The rules governing the quarantine of vessels are the same as those found in other parts of the world.

Contraband: During loading it is prohibited for any unauthorised craft to come alongside vessels while at the LPG Terminal.

Garbage: The dumping of garbage and refuse overside is prohibited.

Shore Leave and Crew Changes: Vessel's personnel (other than medical emergency cases) are not allowed to embark or disembark from the vessel at the jetty. There are no facilities for crew changes at the jetty.

Visitors: Visitors are not allowed to embark or disembark from the vessel at the jetty.

Supplies: Commissary supplies, stewards stores, laundry services, fresh water, marine lubricants and bunkers are not available through the Operator and may not be loaded at the jetty. Any questions concerning the availability of such items from other sources and the loading of such items elsewhere should be handled through the vessel's Agent.

Readiness: As no berthing may be undertaken during hours of darkness, the Notice of Readiness will be accepted by the Terminal only between the hours of 0600 and 1800 provided that the vessel is apparently in all respects ready to moor and receive the cargo. Notice of Readiness will not be accepted during a period when the port is closed on account of adverse weather or when the vessel arrives prior to the date upon which it is nominated to load.

The foregoing paragraph notwithstanding, in no event shall a Notice of Readiness, whether previously accepted or not, be valid or binding on the Terminal unless and until such time as the vessel, her tanks and equipment, are, in fact, in every respect whatsoever in the proper condition and operation to receive the cargo.

Agency: The Operator does not perform any vessel agency functions. Vessels calling at Hamriyah LPG Terminal must arrange for their own Agents.

AUTHORITY: *Owner:* Shalco (Sharjah LPG Co.) P.O.Box 787, Sharjah, United Arab Emirates. *Tel:* 543666. *Telex:* 68799.

Operator: Amoco Sharjah Oil Company, P.O.Box 1191, Sharjah, United Arab Emirates. *Tel:* 355100. *Telex:* 68685. *Contact:* R. W. Rausch, General Manager.

LPG Terminal, Hamriyah, Sharjah, United Arab Emirates. *Tel:* 542744. *Contact:* Captain H. Dietze.

AGENT: See "Sharjah".

HULAYLAH TERMINAL, Ras Al Khaimah:

25.58 N. 55.56 E.

LOCATION: The geographical location of the Hulaylah Terminal SPM is: Lat. 25° 58′ 26″ N., Long. 55° 56′ 11″ E.

Hulaylah Terminal is the export crude oil facility operated by Ras Al Khaimah Offshore Petroleum Limited (RAKOPET), located approximately 6 miles offshore from Mina Saqr, Ras Al Khaimah, United Arab Emirates.

Crude oil from the Saleh Offshore Field is transferred to shore tanks located in approximate position 25° 58′ 26″ N., 55° 56′ 17″ E. from where it is transferred to the SPM by pipe-line.

Saleh Field production facilities are located at the following positions:

	Latitude	*Longitude*
Saleh 1 and Production Platform	26° 11′ 31″ N.	55° 42′ 27″ E.
Saleh 1 Flare	26° 11′ 44″ N.	55° 42′ 35″ E.
Saleh 2 Platform	26° 10′ 43″ N.	55° 42′ 16″ E.
Saleh 3 Platform	26° 10′ 11″ N.	55° 41′ 47″ E.
Saleh 4 Platform	26° 10′ 27″ N.	55° 45′ 37″ E.
Saleh 5 Platform	26° 09′ 51″ N.	55° 45′ 11″ E.
Saleh 6/7 Platforms	26° 11′ 00″ N.	55° 43′ 29″ E.

DOCUMENTS: None required.

PILOTAGE: The Mooring Master Boarding Area for the Hulaylah Terminal is 3 miles Westward of the SPM, or boarding will be at the anchorage as appropriate.

The RAKOPET Mooring Master will remain on board throughout the export vessel's stay on the berth to co-ordinate the petroleum transfer operation; therefore, suitable and adequate accommodation shall be provided for him on board the export vessel.

Arrival at Pilot Station/Anchorage: Means of access to the vessel by the RAKOPET Mooring Master shall be provided in accordance with the requirements of SOLAS, and early advice will be given by RAKOPET as to the side of the vessel that access should be provided.

At night the access area shall be adequately illuminated to provide for the approach and boarding of the RAKOPET Mooring Master, Government Officials and for RAKOPET Representatives.

The Conditions of Entry into and Use of Hulaylah Terminal and Agreement for the Hiring of Tugs will be presented to the Master of the export tanker and shall be signed by him on behalf of himself, the vessel and its Owners prior to departure from the pilot station/anchorage and commencement of berthing operations.

The Notice of Readiness will be accepted only between the hours of 0600 and 1800 provided the RAKOPET Mooring Master is satisfied that the export vessel is apparently in all respects ready to moor and load. Notice of Readiness will not be accepted during a period when the port is closed on account of adverse weather, or when an export vessel arrives prior to the date upon which it is nominated to load.

The foregoing paragraph notwithstanding, in no event shall a Notice of Readiness, whether previously accepted or not, be valid or binding on the Terminal unless and until such time as the export vessel, her tanks and equipment, are, in fact, in every respect whatsoever in the proper condition and operation to receive the cargo.

ANCHORAGES: Should it be necessary to anchor, then vessel should proceed to the recommended Tanker Anchorage Area which is within a circle 0.5 miles in diameter and with its centre located in position Lat. 25° 58′ N., Long. 55° 53′ E.

MAX. SIZE: Max. deadweight 300,000 tons. Larger vessels require prior clearance by the terminal.

HEALTH: No health clearance requirements currently in force.

RADIO: Following receipt of a nomination of an export vessel to load at the Hulaylah Terminal, RAKOPET will cable to that vessel via Bahrain Radio (A9M) details of nomination, loading API and temperature, and berthing prospects.

On receipt of this cable, and in any case not later than 72 hours prior to arrival time at Hulaylah Terminal, the export vessel is required to cable to RAKOPET via Bahrain Radio the following information:

(a) Name of vessel.
(b) ETA in GMT (U.A.E. time is GMT plus 4 hours throughout the year).
(c) Name of Master.
(d) Estimated arrival draft, fore and aft, and displacement.
(e) Time for discharging clean ballast, if any.
(f) If vessel proceeding to any port(s) prior to Hulaylah, and if so any delays anticipated.

Sections (a) and (b) of above message should be repeated via Bahrain Radio 48 hours, 24 hours and again 12 hours prior to the export vessel's arrival at the Hulaylah Terminal and at any other time when ETA changes more than 1 hour.

When approaching the Terminal, an export vessel should contact the Terminal on VHF Channel 16 (156.8 MHz), establishing a working channel and confirm ETA.

VHF: *Export Tanker:* When the export tanker is berthed at the SPM communication between the Terminal and the export tanker will be established on VHF Channel 16 or on a mutually agreed VHF channel.

In those cases where the VHF equipment on board the export tanker is not compatible with the Terminal equipment, the RAKOPET Mooring Master will arrange for the availability of compatible VHF sets for use during the transfer operation. These sets shall be returned to the RAKOPET Mooring Master prior to his departure from the export tanker.

Approach to the Anchorage/Mooring Master Boarding Area: When within VHF communication range, Masters of export tankers should ascertain berthing prospects from the Terminal.

TUGS: Suitable tugs and line boats are chartered for each lifting and are for export tanker's account.

BERTHING: *Mooring/Unmooring Arrangements:* The export tanker will be moored to the SPM according to a mooring plan to be agreed between the RAKOPET Mooring Master and the Master of the export tanker.

LOADING: *Transfer Operations:* The RAKOPET Mooring Master will remain aboard the export tanker throughout the petroleum transfer operation and will co-ordinate all activities on board the export tanker with the Terminal.

The maximum loading rate available for the transfer operation will be about 9,000 bbls.p.h.

At all times during the transfer operation, a responsible deck officer shall be in charge of operations, either on deck or in the control room. On vessels with a central control room from which all operations are controlled, a deck watch in contact with the control room is required to continuously patrol the cargo deck, and monitor the manifold area of the export vessel. A crew member shall be kept on watch on the bow.

When the responsible export tanker officer has declared the export tanker ready to load with all necessary valves open, the Mooring Master will instruct the Terminal to commence the transfer.

At any time during the transfer operation, the rate can be reduced as requested by the Master or responsible officer of the export tanker.

The RAKOPET Mooring Master shall be given advance notice by the Master or responsible officer on the export tanker when a reduction of loading rate is required preparatory to completion of transfer.

After completion of loading, the vessel will be ullaged. A Bill of Lading, Cargo Manifest, Ullage Report, Certificate of Quantity, Certificate of Quality, Certificate of Origin, and Port Time Log will be completed. All such documents shall be signed by the Master of the export tanker prior to that vessel's departure. If required or requested by the Master of the export tanker, the Agent for the export tanker may sign the cargo documents on behalf of the export tanker's Master. The official quantity and quality of the crude oil delivered to the export tanker shall be determined by RAKOPET and shall be final and binding on the export tanker and her Owners and Charterers.

Hose Handling: The storage vessel will present a single 16 in., 150 ASA connection, hose will be connected on the port side. Hose connection/disconnection will be carried out by the export tanker's crew who are required to be at all times under the control of a responsible deck officer and undertake hose handling operations in co-operation with procedures advised by the RAKOPET Mooring Master.

The export tanker will be required to have ready a derrick at the port manifold area for the handling of the flexible hose.

Minimum Derrick Capacity:

Vessel size	*Derrick capacity*
up to 70,000 d.w.t.	7.5 tons
70,000 – 150,000 d.w.t	10.0 tons
over 150,000 d.w.t.	15.0 tons

Cargo Information: Oil loaded at the Hulaylah Terminal is Saleh Crude with an average API gravity of approximately 58°. The loading temperature will vary from 73°F in the Winter to 85°F in the Summer months. Some H_2S may be present in the crude oil.

Hydrogen Sulphide: Vessels nominated to load at the Hulaylah Terminal SPM should be advised that Saleh Crude may contain H_2S. Continued exposure over long periods to even small concentrations of hydrogen sulphide can cause headache and nausea. Exposure to high concentration may be dangerous and even fatal. Masters should ensure that personnel involved in the loading operation take the appropriate precautions as recommended by their Owners for handling cargo containing H_2S.

Deballasting Operations: Export vessels are required to arrive with sufficient ballast or cargo and be adequately trimmed for safe manoeuvring.

Hulaylah Terminal has no ballast reception or slop disposal facilities, and therefore, export vessels are required to arrive with sufficient clean ballast suitable for pumping directly to the sea. Export vessels arriving with ballast unsuitable for pumping to the sea may be rejected for loading, or will be required to keep that portion of their ballast unsuitable for discharge to the sea segregated on board. RAKOPET will not accept any claims for vessels unable to meet such requirements.

It is strictly against the law to pollute the waters of the United Arab Emirates, and any Master, his vessel and Owners, may be subject to prosecution by the United Arab Emirates Authorities if such pollution does occur.

Simultaneous Deballasting and Loading of Cargo Tanks: Under certain weather/sea conditions this practice may be necessary. In such circumstances, simultaneous deballasting and loading may be requested by the RAKOPET Mooring Master.

If such operations are found necessary, it shall be done at the sole risk of the export vessel, its Master and Owners, and the most stringent care and attention shall be taken by the export tanker. The Owners, shall remain fully responsible for, and indemnify and hold RAKOPET, its parent companies, subsidiaries, and affiliates, harmless from, any and all claims, demands, damages, liabilities, costs, fines, and expenses, of every kind whatsoever, arising out of, on account of, or in any way connected with the simultaneous deballasting and loading of the export tanker.

Inert Gas Systems: All crude tankers of 20,000 d.w.t. or greater nominated to load shall arrive with cargo tanks inerted to 8% oxygen or less by volume and pressurised as required by the SOLAS Convention. Normally cargo tanks under pressure will not be inspected by the Terminal Representative provided a declaration is signed by the Master prior to commencement of loading confirming that all compartments of the vessel have been prepared in all respects as required for the cargo to be loaded.

(a) Tank Inspection, Gauging, Sampling, Water Dips and Temperatures: Should it be necessary for tanks to be inspected, then it should only be done on a tank-by-tank basis. The system shall be maintained at about 200 mm. water gauge pressure except for the individual tank to be opened which, if possible, is to be isolated from the system and the sighting port opened with care. On completion of inspection the tank shall be secured and re-pressurised. The next tank is not to be isolated and opened until the preceding tank is secured and open to the IG system. All gauging, sampling, water dips and temperatures will be taken either through special fittings provided; or if it is necessary to open up tanks for this purpose, then this will be done one tank at a time as described above.

(b) Failure of IGS: If at any time the IGS is not maintaining the prescribed conditions, the RAKOPET Mooring Master shall order a suspension of transfer operations. The cost of any delays will be for the export vessel's account.

MEDICAL: Doctors and dentists available.

DENSITY: 1030.

FRESH WATER: Not available.

FUEL: It is not permitted to load bunkers while berthed at the SPM. Bunkers can be arranged at anchorage by vessels' local Agents.

CONSULS: At Dubai.

REPAIRS: Repair facilities are not readily available.

Repairs will not be permitted when the export vessel is berthed at the SPM.

SURVEYORS: At Dubai.

CUSTOMS ALLOWANCES: Most crew transit through Dubai where import allowances are:

1. 1,000 cigarettes or 200 cigars or 1 kilo of tobacco.
2. One litre toilet water and 150 gms. perfume.
3. No alcohol of more than 2% permitted without an import licence.
4. There are no restrictions outbound.

REPATRIATION: Launch service available.

AIRPORT: Ras Al Khaimah has an international airport but Dubai Airport has greater frequency of flights.

SHORE LEAVE: Permitted.

WEATHER: The winds in the Southern part of the Gulf are usually light and generally blow from the Western quadrant most of the year but are occasionally interrupted by winds from varying directions. The visibility along the Ras Al Khaimah coastline is generally good, but from June to September the Shamal blows over the Gulf area and frequently produces rough seas and stirs up dust clouds which can affect visibility at sea. The cold fronts which move down the Gulf from November to April frequently cause a North or N.W. wind of 20 knots or more along the Ras Al Khaimah coastline with accompanying swells.

High waves generally do not occur along the Ras Al Khaimah coastline since the winds are usually light in this area. On those occasions when the wind does become strong, the wave heights generally remain limited since the distance over which the wind can blow to generate waves is relatively short from most directions. This is due to the bend in the Gulf which tends to reduce the fetch of North winds (e.g. waves over 8 ft. occur 0.2% of the time).

Currents are omnidirectional and variable in strength. During the month of January 1984, currents in excess of 1 knot were recorded.

SAFETY: *Safety Requirements:* Masters will be given the RAKOPET Safety Requirement Letter by the RAKOPET Mooring Master prior to commencement of berthing operations, and a signed acknowledgement will be required.

Safety Check List: On completion of berthing and prior to the commencement of deballasting or cargo loading, the Ship Safety Check List will be completed following a joint inspection by the RAKOPET Mooring Master and a responsible export tanker's officer. The RAKOPET Safety Check List is based on the recommendations of the "International Safety Guide for Oil Tankers and Terminals" (ISGOTT).

GENERAL: *Operating Procedures:* Procedures for cargo and ballast operations shall be agreed in writing between the RAKOPET Mooring Master and the export tanker's Master and Chief Officer.

Flags: The national flags of the United Arab Emirates and Ras Al Khaimah shall be permanently displayed by vessels at the Hulaylah Terminal.

Alcohol: Masters are advised that drinking or sale of alcoholic beverages is strictly forbidden to U.A.E. National Citizens and are warned of the serious consequences of offering such drinks to the Terminal staff who may board the vessel.

Storing: It is not permitted to load stores while berthed at the SPM.

Agency: RAKOPET does not perform any vessel Agency functions. Vessels calling at the Hulaylah Terminal are required to arrange their own Agency representation from an Agency operating in Ras Al Khaimah.

AUTHORITY: Ras Al Khaimah Offshore Petroleum Limited (RAKOPET), P.O.Box 540, Ras Al Khaimah, United Arab Emirates. *Telex:* 99255 Rakopet Em. *FAX:* 22702. *Contact:* Mr. A. A. Renner, General Manager. Tel: 22755.

AGENT: See "Mina Saqr".

JEBEL ALI, Dubai: 25.00 N., 55.03 E. **(See Plan)**

FLAG: U.A.E. and Dubai Emirate.

LOCATION: The Port of Jebel Ali is a major port situated some 35 km. S.W. of the city of Dubai.

The Port Control Tower is situated in position Lat. 24° 59.4′ N., Long. 55° 02.9′ E.

The Jebel Ali approach channel commences 12 km. off shore, the entrance to the channel being marked by a fairway buoy. The buoy is situated in Lat. 25° 06′ 54″ N., Long. 54° 56′ 33″ E.

The approach channel with a depth of 15.0 m. is buoyed and runs in a direction 315°T – 135°T towards the port. After 10.5 km. the channel takes a 25° bend and becomes the entrance channel which leads into the port on an alignment of 340°T – 160°T.

The approach channel has a width of 280 m. reducing to 235 m. In the bend the channel widens to 300 m. and in the entrance channel to 340 m.

The Outer Basin is 2.3 km. long and 600 m. wide with depth of 14 m. and the Inner Basin is 3.7 km. long and 425 m. wide with a depth of 11.5 m. The main axis of both basins is 047° – 227°.

All channel, basin and docks' bottoms are sandstone.

Tankers and LPG ships will use the dual purpose berth situated in the Outer Basin and will generally be berthed starboard side alongside. A second tanker berth is situated at Berth No. 2 in the 14 m. basin for the import of products. Vessels normally berth starboard side to.

In all other berths ships can secure port or starboard side to.

DOCUMENTS: The following documentation should be forwarded to the ship's Agent, for delivery to the Cargo Handling Manager, at least 48 hours prior to vessel's arrival.

(a) Discharging Vessels

3 copies Cargo Stowage Plans
7 copies Cargo Manifests
3 copies Hazardous and Dangerous Cargo Declaration
3 copies Hatch List
3 copies Arrival/Cargo Advice
1 copy Each Bill of Lading/Packing List.

(b) Loading Vessels:

3 copies Cargo Stowage Plans
3 copies Cargo Loading List
3 copies Hazardous and Dangerous Cargo Declaration

On completion of loading 3 copies of the Vessel Manifest endorsed by Customs must be provided.

Immigration: Three Crew Lists are required on arrival.

Immigration Offices are established in the port. The service is available 24 hours a day. However, Masters should advise their Agent that the ship may leave outside normal office hours and that the Agent should check that Immigration Officials will be available to clear the vessel outward. This also applies to public holidays.

Masters are advised that "Immigration Clearance" must be on board and sighted by the Pilot before he can take the vessel to sea.

MINIMUM REQUIREMENTS:

In the interest of avoiding delays, all vessels programmed for Jebel Ali should comply with the following minima and be fitted with:

(i) Fully operational Radar.
(ii) Fully operational VHF Radio with normal marine channels.
(iii) Sufficient crew to handle tugs' lines and moorings efficiently.
(iv) Efficient propulsion and deck machinery.
(v) Efficient and adequate moorings to secure vessel safely.
(vi) Efficient signalling equipment.
(vii) Fully operational Tachometer, Rudder and Helm indicators.
(viii) Efficient mooring stations communications systems.
(ix) An efficient anchor windlass and anchors.

If any of the above requirements cannot be complied with, the Harbour Master should be advised prior to arrival via "Jebel Ali Port Control".

APPROACHES: Ships should make for "Jebel Ali" light float in position 25° 10′ 30″ N., 54° 52′ 15″ E. (Gp. Fl.3 every 15 secs. 15 miles). This float lies on the axis of the channel leading into Jebel Ali Port i.e. from this float vessel should steer 135° to approach Pilot Boarding Area.

Vessel should await Pilot in the area North of the seaward end of the buoyed channel, marked by a fairway buoy. This buoy is a safe water mark painted red and white vertical stripes. Light character is Fl. 10 sec. The centre of this waiting area, with a radius of 1 mile, is Lat. 25° 09′ N. and Long. 54° 54′ E.

PILOTAGE: Pilots are available on a 24-hour/day basis. Ships requiring a Pilot should call "Jebel Ali Port control" on VHF Channel 16 at least 2 hours before arrival at Pilot Boarding Area.

All ships other than excepted ships, navigating whether by entry, leaving or moving within Jebel Ali shall be under the charge of a pilot.

The following ships will be excepted ships:

(i) Ships of War.
(ii) Pleasure Craft.
(iii) Ships of less than 150 n.r.t.
(iv) Tugs, dredgers, barges or similar vessels whose ordinary course of navigation does not exceed beyond the Gulf.
(v) Tenders of M.E.N.A.S.
(vi) Country Craft.

Pilots board from fast pilot launches, equipped with VHF, watch kept on Channel 16. Jebel Ali Port Control listens on Channel 16 and the working frequency is Channel 69. Additional Channels are also available.

Vessels requiring a Pilot should give at least 2 hours notice of arrival in the Pilot Boarding Area.

Outbound ships should request Pilot at least one hour prior to departure. Masters should obtain "Master's Report" from the Inward Pilot and return it completed to the Inward Pilot.

Pilot Boarding Areas: The Pilot boarding area is located North of the channel entrance. The centre of this area is in position Lat. 25° 09′ N., Long. 54° 54′ E. with a radius of 1 mile.

Pilots will normally meet and embark incoming vessels at the above mentioned Pilot boarding area.

Masters are reminded to provide a safe lee.

Pilot Ladder Requirements: The following points are stressed:

(i) The rigging of pilot ladders and the embarkation and disembarkation of Pilots thereby shall be supervised by a responsible officer of the ship.
(ii) Every pilot ladder shall be secured in a position clear of any possible discharges from the ship, and so that each step rests firmly against the ship's side.
(iii) Every pilot ladder shall be secured in a positon where the Pilot can gain convenient access to the ship after climbing not less than 5 ft. and not more than 30 ft..
(iv) Whenever the distance from the water to the point of access to the ship exceeds 30 ft., access from the pilot ladder to the ship shall be by means of an accommodation ladder or equally safe and convenient means.
(v) A light shall be provided at night so that the pilot ladder overside and also the position where the Pilot boards the ship shall be adequately lit.
(vi) Lifebuoy and heaving line should be available at the ladder.
(vii) When a pilot hoist is provided as the method of access, it must be of an "approved" type, complying with the recommendations of the "European Maritime Pilots Association".

ANCHORAGE: The holding ground is poor, ships are recommended to use more chain than usual.

The anchorage is an area enclosed by the following four positions:

1.	Lat. 25° 11′ 20″ N.	Long. 54° 49′ 45″ E.
2.	Lat. 25° 08′ 12″ N.	Long. 54° 53′ 12″ E.
3.	Lat. 25° 05′ 18″ N.	Long. 54° 49′ 45″ E.
4.	Lat. 25° 08′ 20″ N.	Long. 54° 46′ 12″ E.

Ships will anchor here in a depth of approximately 16 m. – 20 m. (9 – 11 fathoms).

Pipe-line: All ships are warned that an untrenched pipe-line lies East of the channel. This line comes ashore in position 25° 01′ N., 55° 04′ 30″ E. From this position it lies in a direction of 345° for approximately 10 miles, thence assumes a direction of 313° towards the "Fatah Field" i.e. it is from 2 to 5 miles East of the buoyed entrance channel. Ships should **not** anchor near this pipe-line, nor should they approach the area with anchors walked back or trailing.

MAX. SIZE: No limit on LOA except Tanker Berth. Max. LOA Tanker Berth 270 m.

Also see "Berthing", "Bulk Handling Facilities" and "Tankers".

RADIO: *ETA requirements:* (Also see "Tankers").

Vessels arriving at the Port of Jebel Ali are required to provide the Harbour Authority with the following estimated times of arrival:

(i) At least 48 hours prior to arrival or on leaving the last port, whichever is later, via Bahrain Radio or via Jebel Ali SSB radio, listening on 2182 kHz.
(ii) Confirm the vessel's estimated time of arrival at least 24 hours before arrival at the designated pilotage area.

Communications: The Port radio station maintains continuous listening watch on VHF Channel 16. The Port Emergency Channel is 18A. On coming within VHF range of "Jebel Ali Port Control", vessels should establish VHF contact for the purpose of updating the estimated time of arrival, and at least 2 hours' notice of arrival in the Boarding Area should be given.

Continuous watch is maintained on radio frequency 2182 kHz.

Vessels are warned that VHF Channels are monitored and taperecorded and any misuse of VHF Channels will be reported to the proper Authorities.

Notice of Arrival: Agents should arrange berthing and stevedoring with the Cargo Handling Manager at least 48 hours prior to the vessel's arrival (Cargo Handling Manager Tel. 56578).

Pre-Arrival Information: Prior to arrival, all vessels regardless of tonnage calling at the Port of Jebel Ali should provide "Jebel Ali Port Control" with the following information:

(i) Name of vessel
(ii) Port of Registry
(iii) Name of Master
(iv) Gross Tonnage
(v) LOA
(vi) Draft
(vii) Cargo to discharge or load
(viii) Pilot boarding arrangements
(ix) Number of crew, indicating the number of deck crew available for manoeuvring
(x) Health information
(xi) Last port of call.

VHF: See "Radio" and "Pilotage".

RADAR: VTS harbour radar in Port Control Tower in position 29° 59.4′ N., 55° 02.9′ E.

The Control Tower is equipped with a Sperry Radar Vessel Traffic System C.A.S. II. This equipment consists of a dual radar system combined with a data processor and computer. Traffic movements are monitored, and recorded within the Port limits and approaches. The Tower is continually manned by qualified Radar/Radio Operators.

TUGS: Two tugs with bollard pull of approximately 30 tons and one tug with bollard pull 40 tons are available in the port at all times, watch maintained on VHF Channel 16. Extra tugs can be made available if needed.

Mooring boats: Two mooring boats, the "Dina" and the "Wafa" are available at all times. These boats are also equipped with towing hooks and VHF.

BERTHING:

Berths No. 1 – 17: Depth 14.0 m.
Berths No. 18 – 66: Depth 11.5 m.
Tanker/LPG Berth No. 1: Depth 15 m.
Tanker Berth No.2: Depth 14 m.
"Star Energy" Berths: Depth 14.0 m.
Bulk Grain Berths: Depth 14.0 m.
Dubai Terminal: Depth 14.0 m.

Moorings: Bollards on the various quays and wharves are of capaci and spacing as listed below.

Quay/Wharf	*Capacity* (Tonnes)	*Spacing* (m.)
1, 2, 3	100	27
4A, 4B	70	30
5, 6, 7	70	30
8, 8 Basin	30	30
9 West	70	30
9 East, 10	70	20
West Wharf	15	14.4
East Wharf	15	14.4
Bitumen Wharf	30	20

It is essential that whilst alongside quays, moorings are tend carefully and regularly and conform with recommended mooring patte for ship sizes. The average rise and fall is 1.14 m.

There are special 250 tonne bollards on Berths No. 5, 7, 10, 11, 12, 13, 19, 20, 21, 22, 23 and 52 for vessels over 300 m. in length. These berths can cater for laid-up VLCCs and are fitted with electric points and shore telephone points. All berths can be connected to shore fire mains and fresh water points. Enquiries for further information and conditions to the Harbour Master.

General Cargo Areas: These are located on Quays No. 6 and 10 with 21 m. wide concrete aprons, covered and open storage, truck delivery and receiving docks.

Prior arrangements must be made with the Cargo Handling Manager for the discharge of obnoxious and hazardous cargo.

Storage: Six transit warehouses provide more than 48,000 sq. m. of covered storage. Over 175,000 sq. m. paved open storage areas are provided.

Equipment: A full supply of supporting cargo handling equipment to complement general cargo operations is available. This includes a 35 ton fixed jib derrick for barge or shallow draft ship loading, two mobile cranes (40 ton and 20 ton) and a comprehensive selection of materials handling equipment.

Ro-Ro Terminal: The Ro-Ro Terminal is situated at Berths 32-34, with two ramps specially designed for stern discharging vessels, and a water depth of 11.5 m.

An 8,000 sq. m. warehouse provides covered storage while 105,000 sq. m. of paved open storage is available. Equipment includes 3 Douglas Tugmasters.

Cold Store: The Cold Store is situated at Berth 31 and has a capacity of approximately 7,000 tons. Temperature can be separately controlled in each of eight rooms in the range of −29°C. to 13°C.

BULK HANDLING FACILITIES: *Dubai Terminal:* This facility is located on Quay 1, Berth No. 1. A travelling unloader equipped with 2 booms having a travel of 140 m. is used for discharging of alumina powder. Hourly capacity 380 t.p.h. through 2 booms. Outreach of boom 27 m. Max. draft 13.25 m.

Bulk Grain Terminal: This facility is located on Quay 1, Berths No. 3 – 4. Two travelling loader/unloader arms, with an outreach of 22.5 m. and a loading/unloading rate of approximately 800 t.p.h. each, are installed, and can travel 460 m. parallel with quay face. Max. draft 13.25 m.

CONTAINER FACILITIES: The Container Terminal is situated at Berths 15-17, totalling 900 m., with 60 m. wide concrete aprons and a water depth of 14 m.

Storage: The Container Yard can accommodate over 8,000 T.E.U's.

The Container Freight Station provides 10,000 sq. m. of covered storage.

The 4,000 sq. m. temperature-controlled warehouse provides cool storage at low humidity.

Equipment: Three third generation 41 ton Mitsubishi electric Gantry cranes, and 2 Hitachi gantry cranes with telescopic spreaders to handle 20 ft., 35 ft. and 40 ft. containers, and appropriate fittings for over height and flat rack units. Crane Specifications:

S.W.L. under the spreader 30.5 tons.
S.W.L. under cargo hook beam 35 tons.
Distance from face or rubber fender to centre line of container at maximum outreach 33.5 m.
Top of container at maximum lift above quay level 25.75 m.
Top of container at lowest position below quay level 13.75 m.
Quay level above highest tide 2 m. (6 ft. 6 in.)
Quay level above lowest tide 4 m. (13 ft. 1 in.)
Container crane travel 1,200 m.
Container crane reach behind back rail 9.14 m.
Maximum weight of 20 ft., 35 ft., 40 ft. container handled by spreader 34.5 tons.
Maximum heavy lift with spreader removed. 41,007 kg. (90,405 lbs.)

11 top-lift container handling vehicles with a 31 ton capacity, one with a 20 ton capacity and 4 rubber tyred gantries.

141 × 380 volt Kheops and 75 × 380 volt Crouse Hinds refrigerated container plugs with 24-hour monitoring service.

Flat bed trailers, low bed trailers, tractor units, mafis, goosenecks and an assortment of trucks.

Truck scale with a capacity of 50 tons.

A container cleaning service is available.

STEVEDORES: By Port Authority of Jebel Ali.

Normal Working Hours:

0700 – 1200 hrs, 1300 – 1600 hrs. 24 hour working can be arranged.

MEDICAL: There are medical facilities provided in Dubai Hospitals – arrangements can be made through the Agent. In any emergency, medical services are available in Jebel Ali village, telephone No. 56489.

TANKERS: *Tanker/LPG Berth No. 1:* This berth provides facilities for product tankers as well as LPG and condensate carriers. 4 loading arms are available to handle Product tankers through 10 in. connections with reducers available. On the LPG half of the jetty, there are 3 loading arms with 16 in. connections. Two vapour return lines are also fitted, 1 for propane and 1 for butane with 14 in. connections. Various reducers and straight pieces are also available. The depth of water in the berth is 15 m. Max. draft 14.25 m. on H.W.

This berth is equipped with mooring hooks of 100 tons strength, each fitted with electric capstan. The hooks are tripped manually.

Tankers will generally be berthed starboard side to the Berth.

Tanker Berth No. 2: This berth provides facilities for product tankers, using 10 in. Chicksan arms and/or flexible connections. Various reducers are available. On this berth, Class 1 products can also be handled. Max. draft 13.25 m.

Chemical Tanker Berth: A designated Chemical Tanker berth is operational at Berth No. 51. Depth of water at the berth is 11.5 m. Max. draft 10.75 m.

"Star Energy Resources" Berths: Star Energy Resources operates 2 product tanker berths on Quay 2 (Berths No. 8 and 9). Two ships upto 255 m. LOA each can be accommodated simultaneously on these berths, which are equipped with 2×14 in. Chicksan arms. Berths are also equipped with mooring hook assemblies, each fitted with capstans. The hooks are tripped manually. Maximum draft 13.25 m. Tankers can be berthed port or starboard side to the quay.

Vessels are warned that no dirty ballast discharge will be allowed within the limits of Jebel Ali. There are no shore ballast reception facilities.

Also see "General".

Vessel Requirements: Below, are details of information required by the terminal operators for accepting vessels for LPG, LNG and Condensate loading and Port Authority of Jebel Ali's requirements and regulations for a tanker in berth.

Port Authority of Jebel Ali – Tanker Berth: Uniform mooring system is advisable, i.e., all synthetic or all wire for all moorings except backsprings. P.A.J.A. does not allow the use of nylon tails on wire moorings. Backsprings must be of wire.

Concerning deballasting requirements P.A.J.A. allows the discharge of permanent segregated clean ballast in the harbour. Clean tank ballast can only be discharged if a surveyor appointed by Agents at Owner's/Charterer's expense, certifies that the tank ballast is clean, that all cargo pumps and lines are clean and the surveyor remains on board to witness and if necessary stop the discharging of cargo tank ballast if it proves to be unclean.

It is also recommended that all efforts be made to cut down time taken by ships for documentation purposes after completion.

Bunkers may not be taken during cargo operations.

On all occasions, P.A.J.A. would berth all ships starboard-side-to on the tanker berth unless some particular "one off" technical reason prevents this.

LPG – Vessel Particulars: The following items shall be submitted with each vessel nomination. In the event that all the data is not available, the nominated vessel acceptance shall be tentative and subject to the approval of "Seller" Dubai Natural Gas Company Limited.

1. Vessel name and flag.
2. Vessel Master's name.
3. Vessel ETA at Jebel Ali.
4. Vessel communication channel.
5. Vessel description (weight, length, dimensions, etc.).
6. Loading connection: (a) Size. (b) Rating. (c) System – ASA/Metric/British, etc.
7. Height of the loading connection from the centre line of the flange to the first obstacle downward below each flange.
8. Distance from the loading flange face to ship's rail.
9. Distance between loading and vapour return connection centres.
10. Distance from the loading flange to the first obstacle toward the manifold.
11. Height of the ship's rail in front of the loading manifold.
12. Previous cargo and its origin.
13. Manifold sequence of the loading and vapour return connection.
14. Loading rate per product for this particular lifting.
15. Cargo tanks temperature per product upon vessel arrival at the loading port.
16. Can propane and butane be loaded simultaneously?
17. Cargo on board, its origin and specification per tank upon vessel arrival for loading.
18. Vessel meets Government, P.A.J.A. and seller regulation, or specify which regulation the vessel meets.
19. Vessel in possession of reducers, their type, size and rating.
20. Demurrage rate and conditions, if any.
21. Specify if vessel will install any mesh screens in their manifold during this lifting.
22. Amount to be loaded.
23. Vessel has nylon mooring lines.
24. Buyer or Agent to notify Dugas of the vessel location, quantity to be loaded and its ETA 72, 48 and 24 hours before the first day of the vessel's scheduled ETA.
25. Can propane and butane be purged and/or cooled simultaneously? (If applicable.)

LNG – Vessel Particulars: The following items shall be submitted with each vessel nomination. In the event that all the data is not available, the nominated vessel acceptance shall be tentative and subject to the approval of "Seller" Dubai Natural Gas Company Limited.

1. Vessel name and flag.
2. Vessel Master's name.
3. Vessel ETA at Jebel Ali.
4. Vessel communication channel.
5. Vessel description (weight, length, dimensions, etc.).
6. Loading connection:
   (a) Size.
   (b) Rating.
   (c) System – ASA/Metric/British, etc.
7. Height of the loading connection from the centre line of the flange to the first obstacle downward below each flange.
8. Distance from the loading flange face to ship's rail.
9. Distance between loading connection centres.
10. Distance from the loading flange to the first obstacle toward the manifold.
11. Height of the ship's rail in front of the loading manifold.
12. Previous cargo and its origin.
13. Vessel gas vapour venting system.
14. Loading rate for this particular lifting, per single loading arm connection.
15. Ballast on board condition (clean, dirty, etc.).
16. Deballasting estimated time required after berthing.
17. Cargo on board, its origin and specification per tank upon vessel arrival for loading.
18. Vessel meets Government, P.A.J.A. and seller regulation, or specify which regulation the vessel meets.
19. Vessel in possession of reducers, their type, size and rating.
20. Demurrage rate and conditions, if any.

21. Specify if vessel will install any mesh screen in their manifold during this lifting.
22. Amount to be loaded.
23. Vessel has nylon mooring lines.
24. Buyer or Agent to notify Dugas of the vessel location, quantity to be loaded and its ETA 72, 48 and 24 hours before the first day of the vessel's scheduled ETA.

Condensate – Vessel Particulars: The following items shall be submitted with each vessel nomination. In the event that all the data is not available, the nominated vessel acceptance shall be tentative and subject to the approval of "Seller" Arco Dubai.

1. Vessel name and flag.
2. Vessel Master's name.
3. Vessel ETA at Jebel Ali.
4. Vessel communication channel.
5. Vessel description (weight, length, dimensions, arrival draft fore and aft, estimated departure draft, etc.).
6. Loading connection:
   (a) Size.
   (b) Rating.
   (c) System – ASA/Metric/British, etc.
   (d) Is manifold located centre line of LOA.
7. Height of the loading connection from the centre line of the flange to the first obstacle downward below each flange.
8. Distance from the loading flange face to ship's rail.
9. Distance between loading connection centres.
10. Flange thickness. Maximum acceptable: 37 mm.
11. Clearance behind connecting flange for coupling claws. Minimum requirement: 240 mm.
12. Height of the ship's rail in front of the loading manifold.
13. Previous cargo and its origin.
14. Loading rate for this particular lifting. Minimum requirement 25,000 bbls p.h. per single loading arm connection.
15. Specify quantity of permanent and cargo tank ballast on board. Only permanent segregated ballast discharge allowed at Jebel Ali port. Repeat only permanent segregated ballast discharge allowed.
16. Estimated deballasting time required after berthing. Specify if simultaneous with loading.
17. Cargo on board, its origin and specification per tank upon vessel arrival for loading.
18. Vessel in possession of reducers, their type, size and rating.
19. Please confirm agreement release inert gas pressure in all tanks for inspection by Arco Surveyor.
20. Buyer or Agent to notify Arco of the vessel location, quantity to be loaded and its ETA 72, 48 and 24 hours before the first day of the vessel's scheduled ETA.
21. Arco Dubai advise starboard side alongside.
22. Arco Dubai advise loading arm size nominal 16 in. with provision for 16, 14 and 12 in. connection by hydraulic coupler.
23. Quantity to be loaded, in barrels. Arco Dubai advise
    API:– Temp.:–

DENSITY: 1032.

FRESH WATER: Supplied by Dubai Water Services (Tel: 39236/56749). Order through Agents. Water laid on at all berths.

FUEL: A Bunkering Barge is stationed in Jebel Ali operated by "E.B.B. Co.". Arrangements for bunkers are to be made through vessels' Agents. Barge can deliver diesel oil and/or fuel oil. Delivery by road tanker also available. Tel: 56759.

Lubricating Oils: Available, transported by road.

CONSULS: Embassies and Consulates in Dubai.

Embassies:

Federal Republic of Germany	Tel: 231013/214352
United Kingdom	Tel: 531070

Consulates:

Bangladesh	Tel: 236676.	Malaysia	Tel: 285695
Belgium	Tel: 226206	Netherlands	Tel: 225156
China	Tel: 227411	Norway	Tel: 233152
Egypt	Tel: 434417	Oman	Tel: 223692
France	Tel: 232442/237252	Pakistan	Tel: 531412
India	Tel: 220201/2	Panama	Tel: 285340
Iran	Tel: 531150/531915	Qatar	Tel: 221216
Iraq	Tel: 660822	Saudi Arabia	Tel: 222163
Italy	Tel: 377167	Sweden	Tel: 375542
Jordan	Tel: 667097	Switzerland	Tel: 375542
Kuwait	Tel: 221900	Syria	Tel: 663354
Lebanon	Tel: 451351	U.S.A.	Tel: 371115

The foregoing are Embassies and Consulates situated in Dubai. Most countries maintain diplomatic missions/embassies, etc., in Abu Dhabi – some 120 km. from Jebel Ali.

REPAIRS: Berths are available for afloat repairs to be done by local contractors.

Lay-up Berths for long and short periods can be arranged for vessels up to 550,000 d.w.t. with draft up to 13.5 m. Special bollards are installed to provide 8 berths for ULCC class vessels.

Marine engineering firms with specialised workshops in Dubai, undertake engineering repairs. Agents will make necessary arrangements.

Repairs to radar, radio, echo sounders and other electronic navigational and communication aids are available by major manufacturers' Agents, (i.e. Marconi, Decca, Kelvin-Hughes, Telefunken, etc.), being represented in Dubai and sets serviced by trained engineers. Agents will advise.

A Port Authority diver can be arranged through vessel's Agent.

SURVEYORS: Lloyd's, B.V., A.B.S., N.V., N.K. and the Salvage Association as well as other private qualified cargo, hull and engine surveyors and consultants are available.

Gas Free Certificates, Inert Gas Certificates and hot work permits can be obtained through independent qualified surveyors.

Surveys: The following surveys and certification can be carried out in Jebel Ali: Load Line, Safety Equipment, Safety Construction, Radio.

TELEPHONES: Ship board telephones available by arrangement.

Important Telephone Numbers at Jebel Ali:

Port Control	35326
Harbour Master & Port Control	35251
Police	56111
Port Health	56892
Customs	56374/5
Immigration	56844/56334
Ambulance and Fire Service	56222 (24 hours)
Security	56846/56578 ext. 218, 232, 233

SHORE LEAVE: The following is the standard procedure for shore leave as dictated by the Port Immigration Department.

Crew members wishing to go ashore are to report to the Port Immigration Office (Agent to arrange) and collect a "Marine Landing Permit" which should be carried at all times. On returning to the ship, the permit should be handed back to the Port Police. The process is to be repeated on every subsequent shore leave.

WEATHER: *Weather and Currents:* Cross currents of up to 1.75 knots may be experienced in the Approach Channel. These currents are wind and tide induced.

Fresh winds are frequently experienced at Jebel Ali. However, during evening, night and morning hours, light Southeasterly winds prevail, veering to N.W. by noon and freshening to Force 4-5.

On occasions, especially during November-March, fog may be prevalent during early morning.

GENERAL: *Dirty Ballast and Refuse:* All vessels are warned that no dirty ballast, bilges, etc., should be pumped out in the vicinity of the Port of Jebel Ali. Offenders will be prosecuted and the U.A.E. and Dubai Police maintain maritime and helicopter patrols to ensure no dirty ballast is discharged and no refuse is thrown overboard.

These rules apply while vessels are alongside and the Harbour Master may instruct offending vessels to leave or bar them from returning to Jebel Ali.

Rubbish skips supplied by the Port Authority at a charge and are compulsory.

Ballast Requirements: For the purpose of safe manoeuvring, the Harbour Master requires all vessels to maintain an acceptable ballasted condition.

Vessels should carry sufficient ballast so that the propeller can have maximum immersion whilst maintaining an acceptable stern trim.

Masters are reminded that no dirty ballast will be allowed to be discharged in Jebel Ali.

Tanker Ballast Discharge Rules:

1. Clean water ballast from tankers segregated ballast tanks may be discharged overside.
2. Clean water ballast from dedicated clean ballast tanks as defined in Marpol 73/78 may also be discharged in the port. However, if no separate ballast pumping system exists then such discharge must be monitored by an independent surveyor and the ballast discharged must be certified clean. This discharge operation may take place during daylight hours only.
3. Ships in the "C.O.W." mode may not discharge ballast from cargo tanks, unless such tanks have been thoroughly cleaned and have reverted to the status of C.B.T. since last carrying oil.
4. "Clean" ballast means ballast containing less than 15 parts per million of Hydro Carbons.
5. Not withstanding all the above, if any visible signs of pollution are seen on or below the surface around the ship discharging ballast, the ballast discharge will be stopped and no further discharge will be permitted.

Fumigation: Fumigation can be carried out by specialist firms.

Ships' Chandlers, Ship Supplies: All types of provisions – fresh and dry, and all types of fresh and frozen meat are available ex-Dubai. Arrangements through Agent and/or through direct VHF contacts with ship chandlers and provision merchants. Paints, ropes, etc., available as well as charts. Laundry services are also available.

Visitors Port Passes: Any Person entering the Port is required to have either a permanent or visitors temporary/day pass. Passes can be obtained from the Pass Office situated at the Main Entrance. The Pass Office operates daily from 0700 hours to 1900 hours.

Permanent passes cost Dh. 25 each and are valid for 12 calendar months from date of issue. Applicants are required to produce a Sponsor's letter and complete an application for Pass Form. Documents such as Passports and Photographs are not required.

Temporary or Day passes which are free of charge are only issued to irregular visitors who have a confirmed appointment to visit the Port.

No more than one of these passes a month will be issued to any individual. Day Passes can be obtained from the Pass Office or any Terminal Checkpoint.

Shops: A small supermarket is open in the port. Hours of work are 0800 – 1300 hrs. Saturday to Thursday inclusive.

Bank: The National Bank of Dubai maintains a branch in the port. Hours of work: 0800 – 1200 hrs. Saturday to Thursday inclusive for counter staff.

Seamen's Recreational Facilities in Dubai:

International Seamen's Club (Tel: 435551)
Norwegian Seamen's Mission (Tel: 470561/3)

Jebel Ali International Seamen's Centre: Situated on Quay No. 10. Tel: 35297/35296. Hours: 1600-2359 daily and 1100-2359 on Fridays and public holidays. Facilities: Bus service to and from berths; international telephones; post box and stamps; small shop for tobacco, toiletries, writing materials, etc.; money changing; pool and darts; T.V. and video library; snacks and full bar service.

Transport: Arrangements for taxis can only be made through the Agent.

American: Radio Navigational Aids (Defence Mapping Agency), Publication No. 117B (Pacific/Indian Ocean Area).

SHIPMASTER'S REPORT: June 1990.
Location: A third tanker loading/discharging facility is situated at Berths No. 8 and No. 9, on the N.E. face of the 14 m. basin. This facility is operated by Star Energy Corporation (See "Berthing").
Star Energy are based in Abu Dhabi, Telex No. 24160.
Documents: The documents listed in the "Guide" do not apply to tankers. Requirements for tankers are:
1 copy Arrival/Cargo Advice (supplied by Pilot).
2 copies Bonded Stores List.
2 copies Drugs and Firearms Declaration.
2 copies Crew Declaration.
3 copies Crew List.
1 copy Maritime Declaration of Health (only if sickness on board, or if it is necessary to have any vaccinations performed).

Ship's Agency also usually has own Arrival/Sailing forms to be completed.
Anchorage: The Eastern corner of the anchorage area has been found to have very poor holding ground, and it is suspected that there may be scattered coral heads in this area, as this vessel dragged anchor there in moderate weather conditions, and anchor flukes were later found to have been damaged by the nature of the bottom.
Radio: Jebel Ali Port Control listen on Channel 16, and usually conducts operations thereafter on Channel 69.
Tugs: There are usually 3 modern tugs, owned by the Port Authority, on duty: The 'Asad', 'Namer' and 'Shadeed'.
Tankers: Tanker Berth No. 8: Alongside continuous fendered quay at N.E. end of 14 m. basin, equipped with 1×12 in. Chicksan arm. Products handled at present are naphtha, gas oil and fuel oil.
Tanker Berth No. 9: Adjacent to No. 8, on same continuous quay, equipped with 2×12 in. Chicksan arms. As far as is known same products handled as at Berth No. 8.
Both berths can accommodate product carriers of up to, and sometimes in excess of, 100,000 d.w.t., the larger vessels usually only part-load.
The terminal acts as a trans-shipment depot, for oil products supplied from other ports and refineries in the Gulf.
Vessels are berthed either side alongside at both berths.
Star Energy Complex: This is a self-contained area within the Jebel Ali Port Complex. The Operators enforce very strict security and safety procedures.
Crew members are not permitted to wander about or walk to the entrance gate, but must use the transport provided. This only operates on the hour, being summoned by radio. A pass is issued to each person leaving the area, and also a book must be signed. The passes will allow re-entry to the area on return, and are quite separate from the passes required by the Immigration Authorities. Provided the seamen are not leaving the Port Complex itself, e.g. visiting the Seaman's Club, no further passes are necessary.
Should, however, anyone wish to leave the Jebel Ali Port Area itself, to go to Dubai, the following procedure is necessary.
On arrival, most Shipping Agents supply forms which act as requests to the Immigration Authorities to issue a Shore Pass. This form is taken, along with a Passport size photo, and either Seaman's Book or Passport, to the Immigration Office near the Main Gate. An official pass will then be issued, with the photo affixed, after which the individual may leave the Port Area. *It is very important that this document is not lost.*
On return to Jebel Ali, the reverse procedure is necessary, presentation of the official pass will usually obtain the return of the identity document, after which the individual may proceed to his vessel. If the vessel is berthed at the Star Energy facility, their previously mentioned pass is required for admittance.
There are occasions when it may not be possible for individuals to recover their identity documents personally, or some may not have time to wait, in which case the official passes should be returned to the Master, and the Agent can take these to Immigration when Clearance is sought, when the documents in question will be given to him for return to the vessel. Clearance will not be issued until everything is in order, which is the reason for taking care not to allow anything to happen to the official pass.
Lengthy delays may be incurred in the case of any lost pass, as the individual in question must then go, in person, with the Agent, to the Immigration Office, if possible with an explanatory letter from the ship's Master. The procedure outlined above must be adhered to, so that there are no problems.
Departure: Pilots require minimum 1 hour's notice, via Harbour Control of vessel's sailing time. They are required to sight the clearance before leaving the berth, therefore it has been found advisable to actually have it on board before confirming sailing time.

(A) GENERAL

AUTHORITY: Abu Dhabi National Oil Company, – Petroleum Ports Authority (ADNOC-PPA), the Governing Authority for the petroleum ports in the Emirate of Abu Dhabi. *Tel:* Abu Dhabi 6023450/1. *Telex:* 22215 EM. *FAX:* Abu Dhabi 6923389, 6023422.
Abu Dhabi Petroleum Ports Operating Company (ADPPOC), P.O.Box 61, Abu Dhabi, U.A.E. *Tel:* 336700, 333718. *Telex:* 22209, 52207. *FAX:* 216002. *Contact:* Operations Manager and/or Station Manager (Ruwais). (ADPPOC is the service company contracted by the Petroleum Ports Authority).
Two Port Officers working on rotational basis represent the Port Authority at the Port. They are Captain H. Al-Holli and Captain I. Kazi. Telex: 52207 Apocru Em. Tel: Ruwais (052) 72089. Fax: (052) 72102.

PORT LIMITS: All waters Southward of Lat. 24° 26′ 48″ N., to the coast up to Spring High Water Mark, between meridians of Long. 52° 33′ 36″ E. and Long. 52° 46′ 36″ E., (that is, with reference to Chart 3780 B.A. & USHO, the whole waters of that Chart) and shall include all jetties, wharves, structures, sea-berths, reefs, rocks, sandbars and islands, excluding Sir Bani Yas Island, within the said area.

PILOTAGE: Pilotage is compulsory for all ships navigating within port limits other than exempted ships (See "General"). Ships may, however, drop anchor or sail from Gasha Anchorage without a Pilot. This rule is not applicable to U.A.E. Naval, Coast Guard vessels or country craft who may, having ascertained channel clearance from Port Control, proceed without the service of a Pilot.
Pilot Station: Pilots will board and disembark at the main Gasha Pilot Station as delineated on B.A. Chart No. 3780.
Use of North Channel: Masters of Exempted ships of suitable draft should use the North Channel and East Yabr Relief Channel when entering or leaving the port.
Pilotage Exemption Certificate: Port Pilotage Exemption Certificate may be granted to Masters of regular trading vessels of less than 3,000 n.r.t., upon the Port Officer's satisfaction of their competency. Such certificates shall be renewed annually.
Berthing and Unberthing at Oil and Gas Berths: Notwithstanding anything contained in these Rules berthing or unberthing at oil and gas berths at Jebel Dhanna or Ruwais shall be under the control of a Pilot.
N.B.: Berthing and unberthing of a small ship at the ADNOC Berth in position Lat. 24° 11′ 55″ N., Long. 52° 38′ 59″ E., may be undertaken without a Pilot provided that the Master has Pilotage Exemption Certificate.
Pilot Ladder: A clean and efficient pilot ladder fitted with spreaders and manropes shall be made available for the Pilot to embark or disembark and at night the ladder shall be illuminated with an efficient and safe light.
Accommodation Ladder and Pilot Ladder: Whenever as in the case of large vessels, the height of the deck above the water exceeds 30 ft., the accommodation ladder shall also be used in conjunction with the pilot ladder, and shall be lowered to about 22 ft. (7.0 m.) above the water with the pilot ladder immediately adjacent to the bottom platform of the accommodation ladder.
Mechanical Hoist: A mechanical hoist of an approved pattern shall be considered an acceptable alternative to a conventional pilot ladder to be used in conjunction with the accommodation ladder.
NOTE: Mechanical hoists whose operation relies upon a single wire are not of approved pattern under these rules.
Supervision of Pilot Ladders: The rigging of the pilot ladders for the embarkation and disembarkation of Pilots shall be supervised by a responsible ship's officer, and shall be so effected that the ladder is well clear of any overboard discharge and so that each step of the ladder rests securely against the side of the ship.
Safe embarkation and disembarkation: A Master of any ship navigating in the port, shall afford such suitable "weather lee" and speed reductions as may be directed by the assigned Authority Pilot in order to provide a safe embarkation or disembarkation operation.
Pilot to Advise Course and Speed: Vessels navigating within Port Limits shall proceed on such a course and at such speed as the Pilot advises.
Provided that when passing through the inner anchorage areas every vessel whether under Pilotage charge, or navigated by her Master with an Exemption Certificate, shall proceed with caution and at a moderate speed duly considering other vessels and cargo operations in the area.
Small High Speed Vessels: High speed vessels as of "Crew Boat" type shall proceed at a moderate speed to reduce the wave making wash in the vicinity of vessels, working cargo, dredging or construction works, diving operations, etc., until past and clear of these vessels or operations.
Anchors Ready for Use: Every ship prior to any movement within the port shall have both Bower Anchors (if two fitted) prepared for immediate emergency use. Masters shall, however, consult with the assigned Pilot (if any) before lowering an anchor to the sea surface.
Any Damage to Ship to be Notified: Before entry the Master shall inform the Port Authority of any damage to the vessel or any projection from the hull above or below water which may affect the vessel's draft, shiphandling qualities or berthing capability.

NOTE:
To ensure greater safety in the Jebel Dhanna Channel, in consultation with Messrs ADPPOC and executive manager of Petroleum Ports Authority, it has been decided to minimise the amount of paperwork the Pilot is expected to complete while in transit from Gasha beacon to inner anchorage area.

Therefore a vessel arriving at Gasha while tendering her "Notice of Readiness" will henceforth be required to pass to Jebel Dhanna:

1. Name of vessel.
2. Tonnage required.
3. Her maximum loading rate, always assuming 2×16 in. hoses.
4. Number of hours ballast.
5. Any health hazard infectious diseases/or none.
6. Draft outwardbound.
7. Any other pertinent information.

The Pilot is to obtain signature on "acceptance of port regulations" booklet prior to entering channel. All other documentation can be completed after vessel is made fast in the berth. This will ensure no distractions while in transit in the channel and further enhance the exemplary safety standards.

All parties are kindly requested to comply with the slight change in Jebel Dhanna/Ruwais documentation procedures to enhance safety requirements.

TIDAL STREAMS: In the outer approaches to Jebel Dhanna-Ruwais, tidal streams would appear to attain a maximum of 1 knot while 1.7 knots may be encountered in the channel N.E. of Jazirat Sir Bani Yas.

Tidal currents in the area of the berths seldom exceed 0.4 knots.

The tides are generally diurnal, winds from N.E. and N.W. may cause an increase up to 0.6 m. in the height of the tide.

The highest average, spring high tide is 2.0 m. above chart datum.

The highest average, neap high tide is 1.0 m. above chart datum.

AIDS TO NAVIGATION: Approaches to Jebel Dhanna-Ruwais (See Admiralty Charts No. 3778, 3779 and 3780).

The outer channel for deep drafted vessels between Jazirat Zarakhuh (Zirku) and Gasha Anchorage is marked by 6 buoys and 2 light floats as follows:

Name/No.	*Description*	*Characteristic*	*Position*
Outer Fairway	Safe Water Mark	Iso 10 secs.	24° 45′ 48″ N. 52° 53′ 12″ E.
O1	Conical Green	Fl.G. 5 secs.	24° 46′ 20″ N. 52° 49′ 30″ E.
Creagh Shoal	Light Float	Fl. 10 secs. 14 M Racon "C" 72 secs.	24° 43′ 00″ N. 52° 42′ 15″ E.
Patch	Conical Green	Fl.G. 3 secs.	24° 40′ 00″ N. 52° 41′ 32″ E.
O5		Qk.Fl.(2) G. 10 secs.	24° 37′ 43″ N. 52° 38′ 13″ E.
Dalma	Light Float	Qk.Fl.(9) 15 secs. Racon "D" 72 secs.	24° 32′ 24″ N. 52° 27′ 48″ E.
O7	Conical Green	Gp.Fl.(3) G. 10 secs.	24° 29′ 27″ N. 52° 29′ 24″ E.
Gasha	West Cardinal	Qk.Fl.(9) 15 secs.	24° 25′ 46″ N. 52° 34′ 25″ E.

A relief route known as North Channel passes from the outer fairway buoy S.E. of Creagh Shoal and enters the port East of Gasha Island. It is marked by:

Obstruction	Isolated Danger Mark	Gp.Fl.(2) 10 secs.	24° 37′ 50″ N. 52° 47′ 17″ E.
North Channel	Safe Water Mark	Iso. 10 secs.	24° 30′ 00″ N. 52° 41′ 36″ E.
West Kurkum	West Cardinal	Qk.Fl.(9) 15 secs.	24° 23′ 51″ N. 52° 41′ 31″ E.
East Gasha	Green Conical	Fl.G. 5 secs.	24° 23′ 54″ N. 52° 41′ 15″ E.

The least depth in this channel 7.5 m. (1980) occurs about 0.8 nautical miles North of the Gasha/Kurkum entrance.

A Beacon was established at Price Shoal (1980) consisting of a pile with a bottle chamber at the top and a gas lantern.

Price Shoal	Red Pile Structure	Fl. 5 secs. 12 m. 14 miles Racon "P" 48 secs.	24° 17′ 24″ N. 52° 42′ 09″ E.

ANCHORAGES: The main anchorage positions are defined on Chart No. 3780, and are identified by the letters of the alphabet.

Explosives Anchorage: Anchorage bounded by the following points:

(i) Lat. 24° 13′ 30″ N., Long. 52° 44′ 55″ E.
(ii) Lat. 24° 12′ 46″ N., Long. 52° 45′ 48″ E.
(iii) Lat. 24° 13′ 18″ N., Long. 52° 46′ 18″ E.
(iv) Lat. 24° 14′ 00″ N., Long. 52° 45′ 27″ E.

Explosives Buoy: Mooring buoy in position Lat. 24° 09′ 36″ N., Long. 52° 46′ 18″ E., for the purpose of temporary mooring of barges or pontoons carrying explosives.

CHANNELS:

Deep Water Channel: The channel marked at its outer end by:

Gasha Buoy in position Lat. 24° 25′ 46″ N., Long. 52° 34′ 25″ E. marked on the West side by:

Buoy No. 1 in	Lat. 24° 24′ 28″ N.	Long. 52° 36′ 26″ E.
No. 3	Lat. 24° 23′ 50″ N.	Long. 52° 37′ 18″ E.
No. 5	Lat. 24° 23′ 02″ N.	Long. 52° 38′ 37″ E.
No. 7	Lat. 24° 21′ 33″ N.	Long. 52° 40′ 14″ E.
No. 9	Lat. 24° 20′ 33″ N.	Long. 52° 41′ 22″ E.
No. 11	Lat. 24° 19′ 49″ N.	Long. 52° 41′ 52″ E.
No. 13	Lat. 24° 17′ 42″ N.	Long. 52° 40′ 34″ E.
No. 15	Lat. 24° 14′ 55″ N.	Long. 52° 39′ 26″ E.
No. 17	Lat. 24° 11′ 41″ N.	Long. 52° 41′ 42″ E.

and marked on the East side by:

Buoy No. 2 in	Lat. 24° 25′ 18″ N.	Long. 52° 35′ 40″ E.
No. 4	Lat. 24° 24′ 18″ N.	Long. 52° 37′ 07″ E.
No. 6	Lat. 24° 23′ 57″ N.	Long. 52° 37′ 34″ E.
No. 8	Lat. 24° 22′ 46″ N.	Long. 52° 39′ 06″ E.
No. 10	Lat. 24° 21′ 37″ N.	Long. 52° 40′ 21″ E.
No. 12	Lat. 24° 20′ 58″ N.	Long. 52° 41′ 08″ E.
No. 14	Lat. 24° 20′ 29″ N.	Long. 52° 41′ 42″ E.
No. 16	Lat. 24° 19′ 49″ N.	Long. 52° 42′ 18″ E.
No. 18	Lat. 24° 18′ 42″ N.	Long. 52° 41′ 48″ E.
No. 20	Lat. 24° 17′ 45″ N.	Long. 52° 41′ 28″ E.

North Channel: The inward/outward route marked at its southern end by:

East Gasha Buoy	in	Lat. 24° 23′ 54″ N. Long. 52° 41′ 15″ E.
West Kurkum Buoy	in	Lat. 24° 23′ 51″ N. Long. 52° 41′ 31″ E.

Yabr Channel: The route East of Jazirat Yabr marked by:

North Yabr Buoy	in	Lat. 24° 20′ 54″ N. Long. 52° 43′ 18″ E.
Yabr Channel	in	Lat. 24° 18′ 55″ N. Long. 52° 45′ 11″ E.
S.E. Yabr	in	Lat. 24° 18′ 20″ N. Long. 52° 44′ 24″ E.
South Yabr Channel	in	Lat. 24° 15′ 46″ N. Long. 53° 43′ 24″ E.

Halat Al Alaq Island is now marked by:

North Alaq	in	Lat. 24° 15′ 20″ N. Long. 52° 40′ 54″ E.
West Alaq	in	Lat. 24° 14′ 27″ N. Long. 52° 40′ 27″ E.
N.W. Alaq	in	Lat. 24° 15′ 06″ N. Long. 52° 40′ 21″ E.
South Alaq	in	Lat. 24° 13′ 48″ N. Long. 52° 41′ 30″ E.
East Alaq	in	Lat. 24° 14′ 23″ N. Long. 52° 41′ 38″ E.

Ruwais Approach: The channel to N.E. of Ruwais middle marked by:

(i) Buoy No. 22	in	Lat. 24° 13′ 38″ N. Long. 52° 42′ 12″ E.
(ii) Buoy No. 24	in	Lat. 24° 12′ 24″ N. Long. 52° 44′ 42″ E.
(iii) Buoy North Middle	in	Lat. 24° 12′ 42″ N. Long. 52° 43′ 41″ E.
(iv) Buoy East Middle	in	Lat. 24° 12′ 08″ N. Long. 52° 44′ 26″ E.
(v) Buoy South Middle	in	Lat. 24° 11′ 07″ N. Long. 52° 43′ 46″ E.
(vi) Buoy West Middle	in	Lat. 24° 11′ 39″ N. Long. 52° 42′ 29″ E.
(vii) Buoy No. 26	in	Lat. 24° 12′ 17″ N. Long. 52° 45′ 48″ E.
(viii) Buoy No. 28	in	Lat. 24° 11′ 17″ N. Long. 52° 45′ 19″ E.
(ix) Buoy No. 30	in	Lat. 24° 10′ 10″ N. Long. 52° 45′ 24″ E.
(x) Buoy No. 32	in	Lat. 24° 10′ 15″ N. Long. 52° 45′ 45″ E.

Bulk Cargo Terminal (BCT): Turning basin marked by buoys:

(i) BCT 1	in	Lat. 24° 09′ 29″ N. Long. 52° 43′ 54″ E.
(ii) BCT 2	in	Lat. 24° 09′ 24″ N. Long. 52° 44′ 12″ E.
(iii) BCT 4	in	Lat. 24° 09′ 07″ N. Long. 52° 44′ 16″ E.
(iv) BCT 6	in	Lat. 24° 08′ 57″ N. Long. 54° 44′ 14″ E.

A relief channel East of Sir Bani Yas Island is marked by:

(i) N.E. Yas	in	Lat. 24° 21′ 58″ N. Long. 52° 39′ 21″ E.
(ii) Stewart	in	Lat. 24° 20′ 09″ N. Long. 52° 40′ 05″ E.

The entrance to the Construction Wharf is marked by:

CW1	in	Lat. 24° 19′ 12″ N. Long. 52° 40′ 20″ E.
CW2	in	Lat. 24° 09′ 10″ N. Long. 52° 45′ 07″ E.
CW3	in	Lat. 24° 09′ 09″ N. Long. 52° 45′ 04″ E.
CW4	in	Lat. 24° 08′ 34″ N. Long. 52° 45′ 08″ E.

PROHIBITED AREAS: Prohibited Areas exist for a distance of 2 cables (1,200 ft. – 365 m.) around any berth at which any ship is engaged in loading or discharging any petroleum cargo of whatever description including crude oils and refined products whether in bulk or containers, LNG or LPG and no vessels or craft may enter such restricted areas without instructions from the Port Authority or Oil Company.

RESTRICTED AREAS:

Sea Berths: A restricted area exists around ADCO's sea-berths within an area bounded by a line from:

(a) Jebel Dhanna Jetty Light in Lat. 24° 11′ 20″ N., Long. 52° 37′ 51″ E., thence 359° to

(b) Light Beacon "T.13" in Lat. 24° 13′ 06″ N., Long. 52° 37′ 49″ E. thence 060° to

(c) in Lat. 24° 14′ 00″ N., Long. 52° 39′ 30″ E., thence to 139° to

(d) Buoy No. 17 in Lat. 24° 11′ 41″ N., Long. 52° 41′ 42″ E., thence 255.5° to the coast to

(e) in Lat. 24° 10′ 48″ N., Long. 52° 37′ 57″ E.

Navigation and anchorage within this area is strictly prohibited to all unauthorised vessels and those not under the control of a Pilot.

Refinery/GASCO/FERTIL: A restricted area exists around the Refinery, GASCO Jetties and FERTIL Jetties at Ruwais within an area bounded by a line from:

(a) in Lat. 24° 08′ 36″ N., Long. 52° 42′ 12″ E., thence 000° to
(b) in Lat. 24° 10′ 24″ N., Long. 52° 42′ 12″ E., thence 035.75° to
(c) in Lat. 24° 10′ 48″ N., Long. 52° 42′ 30″ E., thence 103.5° to
(d) in Lat. 24° 10′ 18″ N., Long. 52° 44′ 42″ E., thence 119.5° to
(e) in Lat. 24° 09′ 57″ N., Long. 52° 45′ 24″ E., thence 195° to
(f) Construction harbour jetty head in Lat. 24° 08′ 12″ N., Long. 52° 44′ 54″ E.

Navigation and anchorage is prohibited to all unauthorised vessels not under control of a Pilot. Within this area no vessel or craft may secure or make fast to the Petroleum Jetty without instruction from the Pilot, Port Officer or the Oil Company.

RESTRICTIONS:

Times of Entry or Leaving: Subject to limitations upon draft, under keel clearance and extreme adverse weather conditions, vessels may enter or leave at any time during the day or night.

Minimum Under Keel Clearance: To ensure safe channel passage, a minimum under keel clearance is required for all ships entering or leaving the port when deep loaded, as follows:

(a) 3 ft. (0.91 m.) for ships of less than 100,000 Summer d.w.t.
(b) 4 ft. (1.22 m.) for ships between 100,000 and 250,000 Summer d.w.t.
(c) 5 ft. (1.52 m.) for ships of over 250,000 Summer d.w.t.

And such under keel clearance may be increased at any time at the Port Authority's discretion having due regard to weather conditions.

NOTE: While observing the safety requirements of under keel clearance, tidal delays may be experienced as follows:

(a) Ships drawing 44 ft. (13.4 m.) may sail at any time.
(b) Ships drawing 45 ft. (13.7 m.) will rarely have to wait for the tide.
(c) Ships drawing 46 ft. (14.0 m.) will usually have to wait for the tide.
(d) Ships drawing 47 ft. (14.3 m.) will always have to wait for the tide.
(e) Ships drawing 48 ft. (14.6 m.) will occasionally be neaped.
(f) Ships drawing 49 ft. (14.9 m.) will be neaped ±294 days per year.

The best months are June, July and August.

Meteorological conditions may reduce the height of the tide by up to 1 ft. (0.305 m.)

Movements Within the Port Limits: No vessel may enter, leave or move within the confines of the port unless permission for moving is first obtained from the Port Control Office.

Outward Priority: When one ship is ready to leave and another to enter simultaneously, a deep loaded outward bound ship which requires to transit the "Deep Water Channel" on account of draft in excess of 30 ft. (9.14 m.) shall have priority subject to the provisions of Rules mentioned above.

HEALTH: *Quarantine and Medical Clearance:* The standard International Declaration of Health is required upon arrival. Free Pratique is obtained by radio.

There are no facilities for Derat at Ruwais.

If Free Pratique has not been granted prior to the vessel's arrival, the Master may contact Port Control for advice/instruction as per Port Health instructions.

Every vessel within the port shall display the appropriate quarantine signals as prescribed in the International Code of Signals.

ARRIVAL/DEPARTURE NOTICES: *Notice of Arrival:* The Master or Agent shall inform the Port Officer 72 hours prior to the vessel's arrival, giving the following details:

1. Name of vessel.
2. Flag.
3. G.r.t., n.r.t. and Summer Deadweight.
4. Arrival draft.
5. Nature of cargo and amount to be discharged or loaded if known.
6. ETA and subsequent amendments.
7. Deballasting time, type and quantity of ballast to be discharged.
8. Inerting time.
9. Date of expiry of the following certificates:
   (a) Load Line.
   (b) Ship Safety Construction Certificate.
   (c) Ship Safety Equipment Certificate.
   (d) Ship Safety Radio-Telegraphy – as appropriate.
   (e) Ship Safety Radio-Telephony – as appropriate.
   (f) Oil Liability Certificate (TOVALOP).
   (g) International Oil Pollution Liability (CLC).
   (h) Derat/Exemption Certificate.
   (i) Any other service required.

And shall confirm or amend such information at 48 hours and 24 hours before arrival.

Vessels should also advise:

1. The date and final port and country of her last loading at an Gulf or Omani port.

2. A list of ports and countries at which the vessel has called between 1. above and her arrival at Jebel Dhanna.

3. Should the tanker not have loaded in the Gulf or an Omani port since building, then a list of ports and countries at which the vessel has called from the date of building to her arrival at Jebel Dhanna.

In order to expedite Pilot attendance, Masters should endeavour to confirm their final ETA to "Port Control" Jebel Dhanna/Ruwais on VHF radio, Channel 9, 6 hours and 2 hours prior to arrival at anchorage.

Notice by Agent: The Agent shall also supply the Port Health Officer, Customs and Immigration, the requisite ship information 48 hours prior to arrival.

Notice of Departure: The Master or Agent of any ship within the port shall inform Port Control giving at least 12 hours' notice of departure and shall further confirm the time of departure 2 hours before being ready to sail.

BERTHING FACILITIES: The Port of Jebel Dhanna-Ruwais consists of two main oil terminals, one petroleum gas terminal, one bulk cargo terminal, a sulphur handling jetty and a small cargo harbour (see Admiralty Chart No. 3780).

The Crude Oil Terminal at Jebel Dhanna is operated by the Abu Dhabi Company for Onshore Oil Operations (ADCO) and consists of 4 C.B.M. Berths capable of accepting tankers up to 330,000 d.w.t. and 1,215 ft., (370.3 m.) in length. Minimum depths at the berths are:

Berth No. 1: 51 ft. (15.54 m.) max. length of ship 950 ft. (289.6 m.).
Berth No. 2: 52 ft. (15.85 m.) max. length of ship 1,100 ft. (335.3 m.).
Berth No. 3: 55 ft. (16.76 m.) max. length of ship 1,200 ft. (365.76 m.).
Berth No. 4: 55 ft. (16.76 m.) max. length of ship 1,215 ft. (370.3 m.).

The installation of an SBM replacing No. 3 or a spur to an SBM is planned for installation late 1990.

Also see "Section B".

The Refinery Terminal at Ruwais about 2.5 miles S.E. of the Jebel Dhanna Terminal Berths is owned and operated by the Abu Dhabi National Oil Company Ruwais Refinery and consists of a 3 km. jetty with 2 deep water berths and 4 coastal tanker berths for the exportation of refined petroleum products and importation of crude oil.

Also see "Section C".

The Abu Dhabi Gas Industries Ltd. (GASCO) Terminal consisting of a 2.6 km. trestle jetty and one berth lies about half a mile East of the Refinery Jetty and can accept LPG carriers in the range 28,000 cu.m. to 125,000 cu.m. There is a minimum depth alongside of 17.0 m.

Also see "Section D".

The Ruwais Fertiliser Industries (FERTIL) Jetty is designed for berthing combinations of vessels up to 2 fully laden 200 m. long, 25,000 d.w.t. bulk cargo vessels along its Eastern side. Provision is made at the Northern end of the jetty for the loading of liquid ammonia.

Also see "Section E".

A bulk sulphur export jetty with 6 berthing face piles capable of handling cargo vessels up to 25,000 tons d.w.t. with a depth of 36 ft. alongside completed in 1984. Loading via a single gantry.

Also see "Section F".

RUWAIS CARGO HANDLING SERVICE CONSTRUCTION JETTY:

General Information: ADPPOC, as the Port Operator, provides cargo handling service for the prime purpose of serving the construction and commissioning of the ADNOC and GASCO Refineries and Petroleum Export Terminals.

This undertaking is provided on an independent basis as an additional port facility and may be utilised by any importer who wishes to route cargo through the port to destinations in the Western region of Abu Dhabi.

A harbour, known as the Construction Jetty, consisting of 4 small cargo ship berths and 1 Ro-Ro Berth, is situated to the East of the Ruwais Petroleum complex. Vessels and barges with a draft of less than 4.2 m. may enter and lie safely alongside to discharge cargo. Larger cargo ships with a draft in excess of 4.2 m. will anchor in the cargo ship anchorages located N.N.W. 2 miles (approximately) from the Construction Jetty and discharge onto barges.

There are full Customs and Clearance facilities available.

Extent of Service: Cargo will be worked in the cargo anchorages, weather permitting, during daylight hours only. The target minimum rate for discharge of general cargo will be 700 freight tons per day. In special circumstances these limitations may be modified to suit the dispatch and turn-round of the discharging freighter.

Weight Limitations: Normal discharge to barges will be to the maximum of ship's own lifting equipment. The heavy lift barge (reinforced deck) can receive a single weight to a maximum of 700 tons. The shore cranes can plumb to a distance of 3.2 m. from the quayside to lift 80 tons.

To discharge heavy lifts by a floating crane, the maximum possible notice is required. Similar notice is required for heavy lift cranage for parcels in excess of 80 tons over quayside and heavy lifts in excess of 55 tons which require special trailer transport.

Procedure:

1. Consignee or his Agent must sign a Cargo Handling Indemnity form before discharge and vessel's Manager must sign Port's Conditions of Use receipt before entering port and berthing.

2. All Customs cargo documentation and clearance of vessels is the responsibility of the Shipping Agent/Consignee. Tally receipts will be supplied by the ADPPOC Cargo Representative on site.

3. The ship will normally be charged for port dues only as per 1984 Regulations and Tariff, except that, for working overstowed cargo, a charge per gang hour will be levied to the ship.

4. The consignee will normally pay the full handling charge per freight ton. The charge covers ship stevedoring, barge and towage, and either barge discharge to landed on quay, direct to trailer, or delivered to Custom's Pound.

5. Agents and/or consignees should advise their requirements, vessel ETAs and supply cargo manifests and stowage plans to: The Port Officer, Jebel Dhanna-Ruwais Port, ADPPOC, Ruwais, P.O.Box 61, Abu Dhabi. Tel: Ruwais 72018 daytime or Port Control Ruwais 75700, ext. 5762 (24 hours). Telex: 52207 Apocru EM.

PORT EQUIPMENT/CRAFT: The following craft and equipment are available in the port and subject to utilisation may be chartered or hired on application to the Station Manager who will advise the current rates.

Vessels:

2×3,200 h.p. twin screw shiphandling tugs with a bollard pull of 40 tons.

Equipped for fire fighting and oil dispersant spraying, fitted with 2 centrifugal pumps producing 680 cu.m. water/foam per hour to a height of 120 m. through a horizontal distance of 85 m.

Each tug carries 45 metric tons of foam and 11 metric tons oil concentrate dispersant.

2×15 m. twin screw mooring launches, 480 h.p. with 2 live-on-board crew.

5×15 m. single screw mooring launches, 360 h.p. each, no accommodation.

1×16 m. twin screw pilot-cum-ambulance vessel 20 knots with live-on-board accommodation.

1×32 m. self-propelled maintenance barge with 30 ton hydraulic 'Pettibone' crane.

1 twin screw diving tender vessel.

1×12 m. single screw general purpose workboat.

1 barge with reinforced deck for heavy lifts and tank divided for oil pollution slops, 1,200 tons.

Shore Equipment:

1×150 ton Manitowoc mobile crane with 30 m. boom.

1×80 ton Grove Rough Terrain mobile crane with hydraulic extending booms, maximum normal extension 35 m.

1×10 ton fork lift.

2×5 ton fork lifts.

2×3 ton fork lifts for crane hold work.

Miscellaneous:

Fully equipped marine workshops for repairs, overhauls to tugs, launches, vehicles, mooring buoys, etc.

One double lock (2 man) decompression diving chamber in air conditioned module.

MEDICAL: If any person suffers a serious injury or sickness within the port limits and immediate medical attention becomes necessary the Master of the vessel concerned or the person in charge of the location shall notify the emergency to the Port Control on VHF Channel 9.

N.B. The Port "Casevac" system for such emergencies will be put into immediate effect by the Port Control.

Masters of all vessels are hereby advised that a brief but concise description of the injury or sickness must be stated at the time of reporting. In the event a crew member has to be landed for hospitalisation the following items should accompany the casualty:

(a) Passport and/or Seaman's Discharge Book
(b) Vaccination Certificates
(c) Address of next of kin
(d) Brief report (if necessary pinned to an unconscious person) comprising:
 1. Time and cause of accident/sickness
 2. Time and description of medication administered, if any
 3. Further details of First Aid given, and/or symptoms noticed.
(e) Masters of vessels which are not berthed alongside the Ruwais jetties should prepare invalid cases for landing in a fast launch or picking up by helicopter e.g. Niel Robertson stretcher; and afford a weather lee (if possible) in adverse weather conditions.

Medical/Police Assistance: The Master of any vessel within the Port for which Medical or Police assistance is required shall make request for such assistance through the Agent.

FRESH WATER: Fresh water is obtainable at the refinery berths and should be arranged through the ship's Agent.

FUEL: Bunkers are obtained at the refinery berths and should be arranged through the ship's Agent.

The following bunker fuels are available:

A. Marine Diesel Oil

Test and Spec. Limits	*Method*	*ASTM*
1. Viscosity Kin. at 33°C, CS, Max.	1.4	D445
2. Carbon Residue Conradson Wt. Pct. Max.	1.5	D189
3. Flash Point °C, Min.	66	D93
4. Water Cont. Pct. Vol. Max.	0.25	D95
5. Sediment Pct. Wt. Max.	0.02	D473
6. Ash Pct. Wt. Max.	0.02	D482
7. Sulphur Pct. Wt. Max.	1.80	D129
8. Pour Point °C Max.	12	D97

B. Marine Fuel Oil

1. Kin. Viscosity at 50°C. Max.	180	D445
2. Flash Point, °C. Min.	60	D93
3. Water Cont. Vol. Pct. Max.	1.0	D95
4. Sediment Pct. Wt. Max.	0.25	D478
5. Ash Pct. Wt. Max.	0.20	D482
6. Sulphur Point °C. Max.	4.0	D129
7. Pour Point °C. Max.	24	D97
8. Sp. Gravity at 60/60° F. Max.	0.990	D1298

CUSTOMS: Customs Officials will board upon arrival and seal the bond.

Alcoholic Liquor: No alcoholic liquor of any description may be carried to or from any vessel or oil terminal within the port. This rule shall not apply in the case of a vessel taking in or landing such liquors as cargo or ship's stores under the supervision of Customs Officials.

Masters are reminded and warned that public consumption of alcoholic drinks is strictly prohibited in the U.A.E. and its territorial waters. Crew members must not be allowed to offer alcohol to any Moslem for any reason whatsoever.

The penalties imposed by the civil authorities for non-compliance of the above are heavy and include possible imprisonment.

CLIMATE: The cool winter season extends over November to February with mean daily maximum temperatures of 25° C. to 30° C. and night temperatures of 10° C. to 15° C. The lowest recorded temperature being 4° C. Ground frost can occur inland.

The hot summer season extends over May to September with maximum day temperatures between 40° C. to 45° C.: the highest recorded being 48° night temperatures are about 20° C. to 25° C.

Relative humidity is high throughout the year averaging between 50 and 60 per cent by day and 75 to 80 per cent by night. Heavy dew may be experienced throughout the year.

Rainfall is usually associated with thunderstorms which are prevalent from November to May giving a total annual rainfall of 10 mm. to 50 mm. Rain is rare during the remaining months while in some years there is none at all.

Throughout the year the prevailing winds are from the West to North North-East sector. They are strongest during November to April when they occasionally reach gale force. Gusts of up to 50 knots have been recorded (April) and a 24-hours mean wind speed of 32 knots from the North-West is on record (January) the Shamal or strong North-West wind may blow for periods up to three days and raise a rough sea with waves up to 4.5 m. off Gasha buoy and up to 2 m. at the berths in Jebel Dhanna. 'Land and Sea' breezes are experienced throughout the year.

Visibility is 10 nautical miles for 70% of the time and less than 2 nautical miles up to 5% of occasions due to dust haze or radiation fog. Fog can occur during any month of the year but is most frequent in Winter: normally it develops during the night and early morning and clears by 1000 hrs. Usually the fog banks drift to seaward towards Si Bani Yas Island.

Sea temperatures at 3 m. depth range from 20° C. (Winter) to 32° C (Summer). During the Summer the 15 m. depth temperature is only a degree or so lower than that at the surface.

GENERAL:

Stores: Emergency stores may be obtained by giving 48 hours' notice to the Ship's Agent. These stores are not permitted to be loaded at an oil or gas berth and must be taken on board in the anchorage.

Agency: Agency work is carried out by registered Shipping Agents who are appointed by the vessel's owners, Charterers or Master.

In no instance will ADPPOC or any of the Oil Companies undertake the agency of a ship.

M.E.N.A.S. Light Dues: Masters are advised that the "M.E.N.A.S." Light Dues for the Gulf navigation aids, when applicable, are collected by the vessel's Agents for payment direct to "M.E.N.A.S.", Bahrain.

Flag: Every vessel within the port shall fly her own national flag and the flag of the United Arab Emirates from sunrise to sunset.

Inward Clearance: No person other than the Pilot, Police, Customs, Immigration and Port Health Officers shall be allowed on board any vessel before Inward Clearance has been granted by such officials.

Port Clearance: The Owner, Master or Agent of every vessel wishing to leave the Port shall obtain a Port Clearance.

Port Clearance may be withheld from any ship by the Port Authority for non-payment of dues or for any legal cause or restraint which has been duly ordered by the Court in Abu Dhabi.

Exempted Ship: To mean ships exempted from pilotage whose Master has been granted a Pilotage Exemption Certificate by the Harbour Master.

Excepted Ship: To mean vessels excepted from paying Port Dues. Excepted ships shall include the following vessels:–

(a) Vessels of the U.A.E. Defence Forces.

(b) Vessels belonging to U.A.E. Customs, Medical and Police Services.

(c) Dredgers, Survey Vessels and special ancillary non-cargo craft, on contract to the Port Authority, ADNOC.

(d) Light tenders belonging to or on contract to M.E.N.A.S.

(e) Vessels and Ships excepted from such charges by order of H.E. the Ruler.

Port Control: The officers currently situated at Ruwais Construction Wharf are responsible for all vessel traffic movements within the port limits and the implementation of the Port Officer's instructions pertaining to the management of the port.

N.B. – Vessels should communicate with the Port Control via VHF radio.

Heavy Lift: Any piece of cargo inclusive of transportation cradle whose deadweight is in excess of 35 long tons (35.56 tonnes).

Country Craft: Mechanically propelled vessels less than 100 n.r.t. engaged in the coastal trade which may also rely upon sails for motive power.

Rat Guards: Rat guards must be fitted to all mooring ropes and wires immediately a vessel is secured alongside a berth on a jetty or wharf.

Mooring Launches: All ships berthing or unberthing at a main sea berth, oil jetty or cargo wharf will be provided with a suitable Port Authority mooring launch (if required) to assist with the running of moorings and the lifting of submarine loading pipe-lines in the case of ADCO's sea berths.

Main Engine Readiness: Every vessel berthed at an Oil Terminal or cargo wharf shall maintain her engines in a state of constant readiness to move at all times. No repairs which may immobilise the vessel shall be permitted to be carried out while vessels are in the berths.

A Master of any Ship securely anchored in an assigned anchorage area, may request permission from the Port Control to carry out routine engine repairs or overhaul. The granting of such permission will be subject to the respective Terminal approval that the berthing time factor is sufficient.

Sufficient Crew Onboard: Every vessel within the Port shall retain on board at all times a sufficient number of crew as may be necessary to perform any duties concerned with the safety and movement of the vessel.

Fire Wires: All Ships berthed at the GASCO and Refinery Terminals shall provide 2 Tug Fire Wires, 1 forward and 1 aft, throughout the period of occupying such berth. The wires shall be robust, with one end fitted with a spliced eye, which shall be maintained at a height of 2 ft. above the sea surface on the outboard side of the ship, (i.e. opposite side from jetty). The inboard end of the wire shall be made fast securely on deck.

Craft Alongside: No Craft shall attempt to make fast to or go alongside a ship manoeuvring in the port before such ship has anchored unless specially permitted by the Master and if there is a Pilot on board, the Pilot.

Dirty Ballast: Whenever a ship enters port with ballast which it is necessary to discharge before or during loading, such ballast, in the case of water ballast, shall be clean and not liable to cause pollution of the sea and a certificate to that effect shall be handed to the Port Authority's representative before deballasting commences.

Pollution: Ashes, oils, chemicals, bilge water and other refuse shall not be discharged to the sea or thrown overboard within Port Limits.

The discharge to the sea of any substance whether liquid or solid other than clean water ballast shall be deemed to cause pollution to the harbour.

The Master of any vessel, the Person in charge of a Terminal or construction operation contravening this rule so as to cause pollution shall be charged with an offence against these Rules and upon conviction be liable to a fine and shall also pay any expenses which may be incurred in the removal of such pollution.

Diving/Swimming: No person shall swim or dive from or near any vessel, jetty, quay or pier for the purposes of trading, recreation or sport.

Diving: No person shall engage in diving with the assistance of breathing apparatus within the Restricted Areas mentioned in Section 4 of these Rules without the written permission or instruction from the Port Authority.

Commercial Diving: Notwithstanding anything contained above, any person or company wishing to operate a Diver for commercial reasons within the Port, shall inform the Harbour Master giving full information of the Diving Operations, and shall conform with such precautions as he may direct in Permission to Dive.

Use of Ship's Radio: The use of the ship's radio within Port Limits is prohibited for the transmission of private messages.

When a ship is secured to an oil or gas loading berth the use of the ship's main radio equipment is totally prohibited. Intrinsically safe VHF radio equipment may be used for necessary port communications.

Ship's Dangerous Stores: Ship's stores of an inflammable or explosive nature, including pyrotechnic distress signals carried in accordance with the Convention for the Safety of Life at Sea shall be kept in a safe place securely closed and sealed while the vessel is moored in a berth. This Rule shall also apply to the vessel's paint locker.

Explosives: No person may bring explosives or dangerous goods into the Port without the written permission of the Port Authority. Vessels importing "explosives" or dangerous goods of an inflammable or corrosive nature will normally be assigned the "Explosives" anchorage on arrival. A Port Authority Representative will inspect the cargo and consult with the Master and Agent before discharge.

The unauthorised handling and detonating of any explosive or pyrotechnic device within the Port Limits is strictly prohibited. Where explosives are required for construction purposes the Contractor concerned must apply to the Harbour Master for written permission. Blasting for commercial purposes shall be under the strict control of the Port Authority.

Pollution Emergency: In the event that pollution of the Port waters occurs, regardless of cause the Person in charge or responsible for the operation, works or location where the pollution was initiated should immediately report the incident to the Port Control.

Where the pollution is serious, particularly oily pollution, the incident must be treated as a full emergency situation, and the call for assistance to the Port Control should be prefixed by the words "MAYDAY, MAYDAY" in order to gain immediate attention.

The Master of the vessel concerned or the Person in charge, shall also take such steps as may stop further pollution and contain or clean up any spillage of oil, etc., on the vessel's deck or jetty surfaces to remove the fire hazard potential.

N.B. – All port Users and Operators are advised that failure to report a pollution incident is an offence against these Rules and Persons found contravening this requirement will be prosecuted in the Abu Dhabi Courts and liable to heavy fines.

Ship's Lifeboats: The lowering of ship's lifeboats within the Port, except in the course of a regulation Lifeboat Drill duly authorised by the Port Authority, is strictly prohibited and during such drill the lifeboats shall not land on any part of the shore.

The use of any boat carried on any vessel solely for the purpose of recreation, pleasure or fishing shall be allowed only at the discretion of the Port Authority subject to the current Security Regulations in force at any time.

Inert Gas System: As the Government of Abu Dhabi have now ratified the Solas Convention, with effect from 1st January, 1984, no tanker will be accepted for loading in this port unless an Inert Gas System has been fitted.

Cargo Discharge Certificates: Abu Dhabi National Oil Company require documentation for cargoes of Refined Products loaded at Ruwais as follows:

1. Discharge Certificate showing:
   (a) Port of discharge.
   (b) Discharge quantity in tonnes.
   (c) Date(s) of discharge.
   (d) Name and nationality of vessel.
   (e) Name of Master.
2. Copy of Bill of Lading.

Both documents must be signed by receiver and countersigned by Port Authorities and returned to:

A.D.N.O.C. Marketing Rpd Sl,
Post Box 898,
Abu Dhabi,
U.A.E.

In the event that cargoes of Refined Products are loaded at Umm al Nar the same procedure should be followed.

(B) *JEBEL DHANNA – SEA BERTHS TERMINAL*

LOCATION: 24° 11′ N. 52° 38′ E.

OPERATOR: ADPPOC is service contractor to Abu Dhabi Company for Onshore Oil Operations (ADCO).

APPROACHES: *(Inward Passage).*

Outer Route between Jazirat az Zarqa and Ghasha Tower Beacon marked by 2 light floats and 4 buoys. The 2 light floats are both port hand marks, and the buoys starboard hand, as indicated by shape, colour and light characteristics.

Inner Channel, from Ghasha Buoy to berths at Jebel Dhanna marked by 21 light buoys. Least depth in this channel is 46 ft. and minimum width of 800 ft. between Buoys No. 7 and 10.

(Outward Passage)

After clearing berth an outward bound vessel should steer to pass midway between Buoys No. 13 and 20, leaving Alaq Island to starboard. From Buoys No. 13 and 20 the same track is followed as for inward passage.

Navigation in shallow waters: The navigation of deep drafted vessels at high speeds in shallow waters introduces certain hazards. Masters of ships should be guided by the following:

Due consideration should be given to the effect of squat at speed on vessel's draft in shallow water, bearing in mind vessel's trim.

If possible, confirm actual height of tide against predictions and if not, bear in mind that after strong winds the actual height of tide may be reduced and extra caution must be exercised for a few days during and after bad weather.

Ensure accuracy of vessel's draft reading, including the midship draft, having in mind the tendency of vessels to sag and the adverse effect of a small list.

Reduce to minimum safe speed to pass over and near shoal areas.

Reduce to a minimum safe speed when negotiating turns in order to reduce heel under helm.

Note that list can mean an appreciable increase in draft.

When strong tidal streams are running across a channel, extra vigilance is required, and allowance made for set, particularly at reduced speed, to ensure vessel proceeds along mid channel.

DOCUMENTS:

2 Crew Lists.
2 Passenger Lists.
2 Manifests.
1 International Maritime Declaration of Health.

READINESS TO LOAD: If an accepted Tankship arrives at the Port of Jebel Dhanna and tenders Notice of Readiness to Load:

(i) Within its Set Range then running hours shall commence, berth or no berth, either six hours after such Notice of Readiness or at the time of connection of cargo loading hoses, whichever is the earlier.
(ii) Prior to the commencement of its Set Range then running hours shall commence at 1400 hrs. on the first day of its Set Range, berth or no berth, notwithstanding the fact that loading may have commenced for any reason prior to 1400 hrs. on the first day of its Set Range; or
(iii) After expiry of the Set Range, then running hours shall commence at the time of connection of cargo hoses.

Running hours shall finish at the time of disconnection of cargo loading hoses.

The Company will make every effort to load the tanker on arrival provided a berth is available and weather permitting.

EARLY DEPARTURE PROCEDURE: Early Departure Procedure is not available.

ANCHORAGES: If berth not available, or if ships cannot sail immediately after loading, they can anchor in an area South of Buoys No. 13 and 20 and North of Berths. This area marked by Buoy No. 15 to West, Buoy No. 22 to East and by berths to South. Alaq Island lies in the middle of this area and is marked by 2 buoys No. 17 and N. Alaq and by S. Alaq Beacon.

MAX. SIZE: (Also see "Berthing"). Vessels up to 330,000 d.w.t. and max. LOA 1,215 ft. can berth at Jebel Dhanna.

Also see Section "A" – "Restrictions".

EQUIPMENT: Port and Starboard anchors to be fitted with anchor buoys and sufficient line to facilitate recovery of anchor in the event of loss.

4 good mooring lines of not less that 120 fathoms each and of a suitable size for the vessel. 2 additional 120 fathoms lines securely tailed to the first lines for occasions where 120 fathoms may not reach the stern buoys initially.

For vessels of 50,000 d.w.t. and larger, power mooring winches with 200 fathoms wire mooring rope are recommended.

Suitable new rope stoppers to be available forward and aft.

2 good stoppers for use on 40 mm. diameter wires. Preferably patent carpenter's stoppers.

2 good boat ropes 4.5 in. circumference of at least 200 ft. long.

A clean, safe pilot ladder of adequate length battened so as to prevent turning. A suitable line to be ready for hauling gear on board, such as hose clamps, reducers and elbows. A lifebuoy should be placed handy to this ladder.

Tankers of 40,000 d.w.t. and over should have rigged, when in ballast, an accommodation ladder lowered to about 12 ft. above water. This can be adjusted to suit the conditions. A pilot ladder should be rigged immediately adjacent to the accommodation ladder platform, to within 2 ft. of the water. This will enable the Pilot and others when the vessel is moored to ascend the pilot ladder clear of the launch and then step on to the lower platform of the accommodation ladder.

Deck machinery must be available at all times.

Whistle or siren must be available at all times.

Adequate deck lighting should be provided for night-time operations, with special emphasis on the following areas:

1. Overside at boarding position for Pilot.
2. Overside abreast of manifold, for hose lifting.
3. Working area around manifold.
4. Poop working area, for handling mooring ropes and wires.

Note: "Aldis" type signalling lamp to be available when mooring.

BERTHING: Berthing is by mooring to 2 anchors and stern buoys. Arrangements in advance by contacting Jebel Dhanna Pilots on Channels 9 and 16.

Berths are approached on W.S.W. course passing S.E. of Alaq Island. Leading lights have been established which will lead ships on the line of the 2 anchors when in berth. A small marker buoy has been established to assist the Mooring Master in placing starboard anchor in correct position. Vessels berth heading N.W. Holding ground good. Bottom consists of clayey silt.

Sea Line Loading Berths. 4 Sea-Line Berths No. 1, 2, 3 and 4. Nos. 1 and 2 supplied by single 36 in. lines, and Nos. 3 and 4 supplied by 42 in. lines, each terminating in a header which passes under vessel in berth.

Berth	Draft Accept-able (ft.)	Approx d.w.t.* accept-able	Max loading rate (t.p.h.)	Strings of flexible hoses	Length of sea line (ft.)
No. 1	45	83,000	6,000	2×16 in.	16,269
No. 2	46	85,000	6,000	2×16 in.	16,427
No. 3 †	49	90,000	8,500	2×16 in.	19,000
No. 4	49	90,000	9,500	2×16 in.	17,200

*Deadweights shown for vessels loading full cargoes. Part cargoes may be greater. Berths No. 2, 3 and 4 can accommodate VLCCs but Berth No. 2 is restricted to vessels having a max. LOA of 1,100 ft.

†The installation of an SBM replacing Berth No. 3 or a spur to an SBM is planned for installation late 1990.

Least depth of water available in berth, and swinging circle, after deducting 6 ft. for height above sea bed of sea line cradle is as follows: Berth No. 1, 51 ft.; Berth No. 2, 52 ft.; Berths No. 3 & 4, 55 ft.

Swinging circle defined as one and a half ship's lengths from dropping position of ship's inshore anchor.

The approximate draft limits quoted above are based on an underkeel clearance in the berths of 6 ft., rising tides permit deeper loading in berths.

Seawards ends of pipe-lines, terminate in 16 in. flexible hoses. Hoses are lifted on the port side of the vessel.

Additional information obtainable from Jebel Dhanna Pilots on Channel 16 prior to vessel's arrival.

HOSES: Derricks or cranes must be capable of lifting a string of hoses from the sea-bed to a height of 30 ft. above the deck. For lifting 16 in. diameter hoses, the lifting gear should have a SWL of not less than 10 tons.

Gear should be rigged on port side of the vessel in order to lift hoses.

It may be convenient to handle blank flanges, reducers, etc., with the derrick or crane. Reducers or adaptors should be bolted to the ship's flanges, so as to take 16 in. hoses.

Note: Where a vessel has 2 or more loading connections, those used should not be less than 7 ft. apart.

Hose Hang-off bitts are required at about 10 ft. from the ship's rail at the loading manifold to secure the submarine hoses on both sides.

LOADING: *Flash Point:* The flash point of Murban Crude is below 32° F. *Crude Oil Temperatures:* While every effort will be made to keep the loading temperatures of export crude below 150° F., there may be times when this temperature is exceeded.

Whenever possible Masters will be advised when this temperature increase is likely to occur, but in Jebel Dhanna the temperature ashore varies according to loading rate, production rate, changes in production pattern from the field, tank levels, etc., and the temperature difference between shore and ship varies according to loading rate, quantity of cargo taken, berth occupied and when last used, etc., thus the ship's temperature obtained on a previous voyage may be substantially different to that obtained on the current voyage and the previous vessel's temperature can be taken as an approximate guide only.

ADCO will not accept any responsibility for the failure by the Master of any tanker loading at Jebel Dhanna to take appropriate action to receive hot oil, prevent any damage to his vessel and/or injury to his crew. *H_2S Content:* Murban Crude contains concentrations of H_2S (Hydrogen Sulphide). Hydrogen sulphide has a disagreeable odour characteristic of rotten eggs which quickly deadens the sense of smell so that a dangerous concentration may be present which cannot be detected by odour. It is, therefore, important that when the presence of the gas is detected the area or compartment concerned should be left with all possible despatch until adequate ventilation can be carried out. The combustible gas indicator may not detect this type of gas. The foregoing must be dealt with in the light of experience where large quantities of crudes of this type have been carried without accident and we do not wish to exaggerate the dangers. However, the under-noted precautions have been evolved as necessary to provide against a possible accident and should be strictly observed.

During loading gas should only be allowed to escape via the agreed venting arrangements.

When ullaging or sampling, personnel should stand facing at right angles to the wind direction and so avoid inhaling gas. If H_2S is inadvertently inhaled the man should leave the area and not return until his sense of smell has been restored which means that at least two people should attend the operation.

No one should enter any pump room or any compartment where gas could collect unless another person is standing by.

Life lines, breathing apparatus and resuscitator should be readily available.

As a precautionary measure, the gas ejector for pump room should be put into operation at any time entry is made into this space whilst the possibility of H_2S gas entering pump room from cargo or empty tanks exist.

Loading Operations: The advice from the vessel which states she is ready to receive cargo is considered as final, and as indicating that every operation necessary aboard the vessel has been completed. As soon as possible after such a signal has been received, and without further advice, loading will commence. Damage to hoses can occur if ship's valves are not open at the start of loading. The Mooring Master will not transmit any loading instructions to the shore until the officer-in-charge of the deck has satisfied him that the hoses are connected correctly and that all valves have been set for receiving cargo.

While in berth, ships should be ready to move under their own power in the event of their breaking adrift, catching fire, fire in adjacent berths or other emergency. No repairs are to be carried out while in berth which would immobilise the ship or impair her fire-fighting efficiency.

The Mooring Master will instruct the Master of the Ship as to any signals needed for local requirements.

The Mooring Master will bring a portable radio to the ship.

The radio may not be used for private conversation. Use of the ship's radio while at the loading berth is strictly prohibited.

When loading, the cargo being received shall be frequently measured thereby preventing loss of oil through a leaking hose. This particularly applies at night, as seepage of oil is practically invisible on the water during darkness.

Caution: The oil loading rates to ships are controlled on shore and an extremely dangerous situation can arise if a ship's valves are closed against the flow of oil.

Particular care must be exercised by ship's personnel to ensure that the Terminal is given timely advice should any reduction be required in the loading rate and adequate "Stand-by" notice must be given before the Final "Stop". At all times the Terminal must be advised when an increase in the loading pressure can be expected due to switching tanks, topping up, etc. To prevent excessive pressure from surge on ship/shore connections, ship's valves should be closed slowly.

The Terminal facilities at Jebel Dhanna have been designed so that tankers can be loaded by turbine driven loading pumps at max. rates up to 6,000 t.p.h. in Berths 1 and 2, 8,500 t.p.h. in Berth 3, and 9,500 t.p.h. in berth 4. Availability of max. loading rates is dependent on the number of berths occupied and operational circumstances.

If vessel is unable to accept the max. loading rate available, then ADCO will be grateful if you will give a brief explanation of the reason for the limitation and we suggest some of the reasons which may govern your restrictions:

(a) Inadequate venting system.
(b) Condition of ship's lines and valves.
(c) Inexperience of crew.

and there may be other reasons.

We are anxious to obtain this information in order to assist in formulating plans for future development.

The quantity of cargo received on board is the responsibility of the ship and no overage may be sent back ashore.

When loading is completed, hoses will be disconnected and lowered to the sea bed, under the supervision of the Mooring Master.

Ships will then proceed to an anchorage allocated by the Port Authority or direct to sea.

BALLAST: No facilities for disposal of slops or dirty ballast.

When a vessel enters port waters in ballast, the ballast water for overside discharge must be clean and a declaration signed by the Master and delivered to the representative of the Terminal to this effect. Ashes, oil, oily water or other refuse must not be discharged overboard in port waters. Vessel's scuppers must be effectively plugged and leakage or spillage of oil aboard ship must not be swept or washed overboard whilst in port waters.

It is essential that vessel is adequately ballasted to ensure safe handling and manoeuvring. Please comply with the Mooring Master's requests as to ballast quantity and disposition.

Jebel Dhanna is an open roadstead and subject to sudden changes in weather. On occasions it is of great advantage to commence loading whilst discharging ballast or prior to completely deballasting to avoid having the vessel in a flying light condition.

There must be no cleaning of boiler tubes whilst ship is in port.

MEDICAL: A hospital run by the Abu Dhabi National Oil Company (ADNOC) is situated adjacent to the Ruwais Industrial Complex. Ambulance facilities are available.

DENSITY: 1031.

FRESH WATER: Not available.

FIRE PRECAUTIONS: As laid down in the Abu Dhabi (Petroleum Ports) Law No. 12 of 1973 and ISGOTT Safety Guide.

CONSULS: None.

REPAIRS/DRY DOCKS: No facilities.

GANGWAY/DECK WATCHMEN: Not necessary.

CUSTOMS ALLOWANCES: Tobacco: No restrictions in quantity on board but must not be conveyed ashore or from one vessel to another without appropriate written permit from Customs Authorities and Port Officer. Wine and/or Spirit: Conveyance of alcoholic liquor from any vessel to the shore or from the shore to any vessel, or from one vessel to another, prohibited without appropriate written permits from Port Officer.

Shipmaster's Report: 1978.

All alcoholic liquor must be under bond and sealed.

REPATRIATION: With sufficient notice Agents will assist in any repatriation. Landing permit is required for all sign on/sign off personnel for which Agent requires Full Name/nationality/Seaman's Book/Passport Number and also 4 to 5 working days to process same. However facilities are limited and if possible crew changes should be made at other ports.

Shipmaster's Report: 1978.

Immigration Authorities require at least 4 days' notice and preferably 7 days' notice via Agent.

AIRPORT: One mile distant, air strip owned by ADCO for private use. Nearest International Airport is Abu Dhabi the capital of the State.

TIME: Local time GMT plus 4 hours. No alterations to clocks during year.

POLICE/AMBULANCE/FIRE: The Abu Dhabi Defence Force, Oilfield Security Section maintains a police post at Jebel Dhanna and Ruwais and is responsible to act in case of accident or other emergency, whether ashore or in territorial waters.

TELEPHONES: Jebel Dhanna is connected to the international telephone system.

SERVICES: None.

SHORE LEAVE: Crews not allowed ashore.

IDENTIFICATION CARDS: Not required.

SHIPMASTER'S REPORT: December 1979.

Anchorage: Ghasha Anchorage apparently has good holding ground; bottom is sand with a little clay.

VHF: Call on Channel 16 or 9 (continuous watch). All operations carried out on Channel 9.

Medical: Any injury requiring treatment ashore necessitates having the following documents ready before the injured seaman can be transported to Ruwais Hospital.

1. Extract of Ship's log.
2. Master's report of the incident.
3. Two eye witness reports (if possible).
4. Pilot's report.
5. Letter from Master accepting responsibility for the injured man.

He must also take his Seaman's Book/Passport with him and all the above documents must be signed and ship's stamped by Master.

Gangway: Accommodation ladder usually port side but best to wait until vessel is nearly moored in order to determine best lee side.

Customs Allowances: Customs can be very strict. All alcohol must be locked up before arrival and they will then give an issue.

(C) RUWAIS – REFINERY TERMINAL

OPERATOR: ADPPOC is the service contractor to Abu Dhabi National Oil Co., (ADNOC).

GENERAL: The ADNOC Ruwais Refinery Terminal is situated about 2.5 miles SE of the Jebel Dhanna Sea Berths and consists of a trestle jetty 3 km. in length with 2 deep water berths and 4 coastal tanker berths. Vessels will berth port or starboard side at the discretion of the Pilot having regard for the tide and weather conditions.

RADIO: *Format for information required from vessels prior to berthing at Ruwais Refinery Terminal:*

A. Firm ETA Ruwais 72, 48, 36, 24 and 12 hours prior to arrival.
B. Cargo(es) (with quantity in M.tons) to be loaded and acceptable loading rate per hour per line. Number of lines for each cargo.
C. Cargo(es) on board on arrival (if any), with tanks and last port loaded.
D. Will cargo(es) ex-Ruwais be commingled with cargo on board. If so, indicate details.
E. Stowage of clean ballast to be discharged overboard. Indicate under ballast details below if discharge will take place during or prior to loading, as applicable.
   1. Quantity of clean ballast in tanks No.... nominated for Cargo loading at Ruwais.....M.tons
   2. In segregated ballast tanks.....M.tons
   3. In permanent ballast tanks.....M.tons
   4. Total time required for ballast discharging, prior to loading.....Hours

Note: Clean ballast oil content must be below 15 p.p.m. and samples will be drawn for tests to ensure compliance.

F. Quantity of dirty ballast (if any) to be discharged to the Refinery dirty ballast system and time required for discharging. This is subject to acceptance by the Refinery. Dirty ballast must be free of lead and/or chemical washings.
G. Last three cargoes handled by vessel in the following sequence:
   (i) The very last Cargo(es)/Stowage arrangements.
   (ii) The 2nd last Cargo(es)/Stowage arrangements.
   (iii) The 3rd last Cargo(es)/Stowage Rrangements.
H. Full details of tanks washing and cleaning carried out since the discharge of the last Cargo(es).
I. Draft on arrival and maximum expected draft on sailing.
J. Maximum freeboard on arrival after discharging ballast prior to loading and expected freeboard on sailing (including height from deck to connections at manifold) in metres.
K. Distance from vessel's rails to manifold connection and height of rails from deck.
L. Distance between manifold connections centre to centre in metres.
M. Displacement on arrival and expected displacement on sailing.
N. Bunkers/Water requirements.
O. Any other requirements.
P. SOLAS Protocols with latest revisions are strictly applied in this port and vessels should fully comply with all relevant regulations while in the port area.
   Accordingly, please advise if tanks are inerted per SOLAS requirements and condition of inert gas system fitted in vessel.

Please note vessels should arrive with all tanks properly inerted as applicable under SOLAS Protocol, unless otherwise advised by Ruwais Refinery to arrive in gas free condition to enable internal inspection at inner cabotage by Third Party Inspectors, prior to loading. In this case please advise time required to inert vessel's tanks after completion of inspection.

The above information should be made available 72 hours prior to arrival at Ruwais and is additional to the requirements of the Ruwais Port Officer.

VHF: The Refinery Terminal maintains VHF watch on Channel 16 and Channel 9 for ship/shore communications and once berthed, the vessel will be connected to the terminal by land line telephone.

The Pilot will bring on board UHF Hand Set for manoeuvring purposes only.

Arrival Telegram Ship/Shore: After the Pilot boards the Ship/Shore Arrival Telegram will be passed by VHF Radio Channel 16/9 as follows:

(1) Name of Vessel.
(2) Nationality and Port of Registry.
(3)
  a – Gross Registered Tonnage.
  b – Net Registered Tonnage.
  c – Summer Deadweight.
(4) Size of manifold.
(5) Are reducers to 12 in., 10 in. and 8 in. available on board?
(6) Are adequate nuts and bolts and gaskets available on board?
(7) Number of hours required to de-ballast and quantity.
(8) Vessel's maximum loading rate.
(9) Quantity and type of cargo.
  a –
  b –
  c –
(10) Last Port.
(11) Next Port.
(12) Master's Name.
(13) Date and time of arrival.
(14) Date and time of Pilot on Board.
(15) ETA at Berth.
(16) Arrival Draft.
(17) Estimated Departure Draft.
(18) Bunkers requirements (quantity and type).
(19) Drinking Water requirement quantity.
(20) Is the ballast lead free?

BERTHING:

Berth "B"

Berth "B" is designed to accommodate tankers in the range 9,100 to 104,000 tons displacement. Length of ship 118.5 m. to 280 m. The minimum depth alongside the berth is 12.7 m.

The berth consists of the Loading Platform, four mooring dolphins and four breasting dolphins connected by walkways.

On the Loading Platform a bank of six cargo Chicksan arms serve to load or discharge ships, namely:

2×12 in. dia. Each arm is provided for Fuel Oil loading and ballast unloading.
2×12 in. dia. Each arm is provided for Gasoline (Premium and Regular), Kerosene, Jet Fuel and Diesel Oil.
1×10 in. dia. For Bunker 'C' and Marine Diesel Oil loading.
1×12 in. dia. For Naphtha loading.

One 3 in. hose for drinking water is provided.

Products available for loading are Naphtha, Fuel Oil, Gasoline, Kerosene/Jet Fuel, Diesel Oil, Marine Diesel and Bunker 'C'.

Flow rates are as follows:

Naphtha	1,400 cu.m./h.
Reg. Gasoline	1,400 cu.m./h.
Prem. Gasoline	1,400 cu.m./h.
Kerosene	2,500 cu.m./h.
Diesel Oil	3,000 cu.m./h.
Fuel Oil	3,200 cu.m./h.
Crude Oil	6,000 cu.m./h.
Bunker 'C'	1,000 cu.m./h.
Marine Diesel Oil	300 cu.m./h.
Drinking Water	100/300 cu.m./h.
Ballast	1,500 cu.m./h.

The loading arms are provided with:

(i) Hydraulic quick coupling.
(ii) Automatic drain system (emergency condition).
(iii) Electro hydraulic operation.
(iv) Range control system.
(v) Remote Control.
(vi) Connecting flange mating device.
(vii) Vacuum Breaker.

Berth "C"

Berth "C" is designed to accommodate vessels with range 26,000 to 130,000 tons displacement. Length of ship 180 m. to 295 m. The minimum depth alongside the berth is 16.8 m.

The berth consists of the Loading Platform, six mooring dolphins and four breasting dolphins connected by walkways.

On the Loading Platform a bank of seven cargo Chicksan arms serve to load or discharge the ship, namely:

3×12 in. dia. Each arm is provided for Crude Oil, ballast unloading and Fuel Oil loading.
2×12 in. dia. Each is provided for Gasoline, Kerosene, Diesel Oil loading.
1×10 in. dia. For Bunker 'C' and Marine Diesel Oil loading.
1×12 in. dia. For Naphtha loading.

One 3 in. hose for drinking water is provided.

Products available for loading are Naphtha, Gasoline, Kerosene/Jet Fuel, Diesel Oil, Fuel Oil, Marine Diesel and Bunker 'C'.

Flow rates are as follows:

Naphtha	1,400 cu.m./h.
Reg. Gasoline	1,400 cu.m./h.
Prem. Gasoline	1,400 cu.m./h.
Kerosene	2,500 cu.m./h.
Diesel Oil	3,000 cu.m./h.
Fuel Oil	3,200 cu.m./h.
Crude Oil	6,000 cu.m./h.
Bunker 'C'	1,000 cu.m./h.
Marine Diesel Oil	300 cu.m./h.
Drinking Water	100/300 cu.m./h.
Ballast	1,500 cu.m./h.

The loading arms are provided with:

(i) Hydraulic quick coupling.
(ii) Automatic drain system (emergency condition).
(iii) Electro hydraulic operation.
(iv) Range control system.
(v) Remote control.
(vi) Connecting flange mating device.
(vii) Vacuum Breaker.

Coastal Berth 1

Coastal Berth 1 is the Inner Berth on the North side of the Cabotage Jetty. The Berth consists of the loading platform, four mooring dolphins and four breasting dolphins. Length of ship 70 m. to 118.5 m. The loading platform has a bank of five Chicksan loading arms with 8 in. diameter connections. The minimum depth alongside the berth is 9.1 m. Vessel size 2,600 to 9,100 tons displacement.

Products available are: Fuel Oil, Diesel, Kerosene/Jet Fuel, Gasoline, Bunker 'C' and Marine Diesel Oil. Ballast will be pumped ashore.

Flow rates are as follows:

Reg. Gasoline	1,000 cu.m./h.
Prem. Gasoline	1,000 cu.m./h.
Kerosene	900 cu.m./h.
Diesel Oil	900 cu.m./h.
Fuel Oil	800 cu.m./h.
Marine Diesel Oil	300 cu.m./h.
Bunker 'C'	900 cu.m./h.
Ballast	400 cu.m./h.
Drinking Water	100/300 cu.m./h.

One 3 in. flanged connection for fresh water.

The loading arms are provided with:

(i) Electro hydraulic operation.
(ii) Manual quick coupling and hydraulic emergency release.
(iii) Range control system.
(iv) Vacuum breaker.
(v) Remote control system.
(vi) Connecting flange mating device.

Coastal Berth 2

Coastal Berth 2 is the Inner Berth on the South side of the Cabotage Jetty and consists of the loading platform; four mooring dolphins and four breasting dolphins. Length of ship 70 m. to 118.5 m., size 2,600 to 9,100 tons displacement. The minimum depth alongside the berth is 8.7 m. The loading platform has a bank of two 8 in. diameter loading arms.

vis. 1×8 in. to discharge ballast.
1×8 in. to load Bunker 'C', Marine Diesel or Fuel Oil. TEL unloading facilities are available.

Flow rates are as follows:

Reg. Gasoline	1,000 cu.m./h.
Prem. Gasoline	1,000 cu.m./h.
Kerosene	900 cu.m./h.
Diesel Oil	900 cu.m./h.
Fuel Oil	800 cu.m./h.
Marine Diesel Oil	300 cu.m./h.
Bunker 'C'	900 cu.m./h.
Ballast	400 cu.m./h.
Drinking Water	100/300 cu.m./h.

One 3 in. flanged connection for fresh water.

The loading arms are provided with:

(i) Electro hydraulic operation.
(ii) Manual quick coupling and hydraulic emergency release.
(iii) Range control system.
(iv) Vacuum breaker.
(v) Remote control system.
(vi) Connecting flange mating device.

Coastal Berths 3 & 4

The Outer Berth North and South side of the Cabotage Jetty each consist of four breasting dolphins and three mooring dolphins with a fourth common mooring dolphin with Berths 1 & 2. Length of ship 70 m. to 118.5 m., size 2,600 to 9,100 tons displacement.

The minimum depth alongside the berth is 9.4 m. (No. 3) and 9.2 m. (No. 4). The berths are equipped with four 8 in. loading arms and a 3 in. water connection.

Products available are: Diesel Oil, Kerosene/Jet Fuel, Gasoline, Marine Diesel Oil, Bunker 'C'.

Ballast water will be pumped ashore.

Flow rates are as follows:

Reg. Gasoline	1,000 cu.m./h.
Prem. Gasoline	1,000 cu.m./h.
Kerosene	900 cu.m./h.
Diesel Oil	900 cu.m./h.
Fuel Oil	800 cu.m./h.
Marine Diesel Oil	300 cu.m./h.
Bunker 'C'	900 cu.m./h.
Ballast	400 cu.m./h.
Drinking Water	100/300 cu.m./h.

The loading arms are provided with:

(i) Electro hydraulic operation.
(ii) Manual quick coupling and hydraulic emergency release.
(iii) Vacuum breaker.
(iv) Remote control system.
(v) Range control system.
(vi) Connecting flange mating device.

BERTHING AIDS:

Berths 'B' and 'C' are equipped with a radar operated safety berthing system indicating by means of coloured lights the forward and aft berthing velocity of the ship.

Two groups of coloured lights one forward and one aft indicate the safe/acceptable/dangerous lateral approach of the ship from a distance of 50 m. off the berth.

BALLASTING/DEBALLASTING: Ruwais Refinery has dirty ballast water treatment equipment and all dirty ballast shall be discharged ashore for treatment. (No dirty ballast may be discharged into the sea and pollution of the waters of the port is an offence against the Port Regulation and the laws of Abu Dhabi).

Accepting dirty ballast into the refinery storage is subject to approval by refinery, a sample of the dirty ballast may be required for analysis, a letter from Master requesting permission to discharge is to be made (letter is provided for Master's signature).

During loading/unloading all deck scuppers must be plugged. All precautions shall be taken to prevent oil or oily waters escaping into the sea during connection and disconnection of loading arms.

Normally the terminal Control Room will give a 10 minutes warnin before deballasting may commence. Deballasting shall commence a slow speed to check systems and back pressure.

Simultaneous deballasting with loading of cargo is permitted only i the case of cargo of Bunker 'C'.

While encouraging quick turn around and the use of minimum ballas upon arrival, sufficient ballast must be retained on board for the saf manoeuvring of the vessel at the Pilot's discretion.

LOADING AND UNLOADING:

(i) The Master should give the terminal a 'STAND BY' warnin 10 minutes before ready to commence loading or discharging.
(ii) Upon 'COMMENCE LOADING' from the Master only one pum will be used to ensure a slow flow rate until it is established tha all systems are operating correctly and pressures are constant. Full loading rate may then be ordered.
(iii) The vessel's cargo tanks shall be inspected prior to and durin loading and should it be found that the tanks are not tight a loading shall cease, the vessel be rejected and further loadin refused. The vessel will not be accepted later until satisfactor evidence of repair is produced duly certified by ABS, Lloyd's o other officially accredited classification society or surveyor.
(iv) During the hours of darkness vessels loading products o discharging crude oil or ballast shall rig overside lights t illuminate the surface of the sea around the ship to the Termina Operators satisfaction to ensure that any oily products on the surface may be detected quickly and early action taken as appropriate.

DERAT: There are no facilities for Derat at Ruwais.

FUEL: Bunkers are obtainable at Refinery berths and should b arranged through the ship's Agent.

FRESH WATER: Fresh water is obtainable at Refinery berths and should be arranged through the ship's Agent.

STORES/PROVISIONS: Stores and provisions are not permitted to b loaded at Refinery berths and must be taken on board in the anchorag

(D) RUWAIS – NGL TERMINAL:

LOCATION: 24° 09′ 49″ N. 52° 43′ 16″ E.

OPERATOR: ADPPOC is the service contractor to Abu Dhabi Ga Industries (GASCO).

GENERAL INFORMATION: The Terminal Regulations are issued fo the information and guidance of Masters of vessels loading at the GASCO Jetty at Ruwais. After receipt of the first ETA advice from a ga carrier GASCO will cable the Master of the vessel instructions to carr out following tests and checks 24 hours prior to arrival:

1. Check condition (oxygen content) of atmosphere in void spaces around cargo tanks.
2. Check all reliquefaction units fully operational.
3. Check settings of cargo tank safety relief valves.
4. Test ESD (Emergency Shut Down) of cargo valves/pumps boosters from all activating stations.
5. Check gas detecting unit with suitable spangas and have un working continuously.
6. Test water spray system deck area, flush all lines and chec nozzles for proper operation and coverage.
7. Check ventilation of control room and compressor room and hav ducts set for LPG.
8. Check over-pressurising and motor-trip system of motor room.
9. Check navigation equipment and steering gear fully operational.

The results of above tests should be cabled to GASCO not less tha 18 hours prior to arrival.

On arrival at the terminal, the Terminal Representative will discus with the Master the safety requirements. Attention is drawn to th International Safety Guide for Oil Tankers and Terminals (ISGOTT) an the Safety Inspection Guildelines and Terminal Safety Check List fo gas carriers as published by the International Chamber of Shipping an Oil Companies International Marine Forum (OCIMF). For efficien loading it is essential that the ship should be fitted with adequa equipment. Improvisations made after the ship has arrived alongsid the jetty are not sound practice and result in delays and possible damag to the loading arms and other equipment.

Abu Dhabi Gas Industries Ltd. (GASCO) have equipped their termina with loading machinery and mooring arrangements which will ensu tankers and gas carriers receiving their cargoes at a reasonable rat thereby extending to the ship the benefit of a rapid turnaround.

Mooring, loading and unmooring are carried out by night as well a by day. Co-operation between the Ship's Officers and Termina Representatives is essential to secure the full benefit of the faciliti provided.

MAX. SIZE: *Gas Carriers:* 28,000 cu.m. – 125,000 cu.m.

Tankers: Minimum Size – 15,000 tonnes S.D.W.T. Max displacemen on arrival 95,000 tonnes. Max. LOA 320 m.

TUGS: Twin screw tugs (35 tons bollard pull) are used for both berthin and unberthing of vessels. The number of tugs to be used is to th discretion of the Pilot but will normally be two for berthing and one f unberthing. The tugs will use their own ropes and/or wires. The tugs ar fitted with foam/water monitors, including one at approximately 19 m above sea level, to assist in fire-fighting. Also fitted are spray booms t apply dispersants in case of oil spills.

BERTHING: *The Jetty:* The centreline of the GASCO-NGL Jetty Loadin Platform is situated in 15 m. of water in position Lat. 24° 09′ 49″ N Long. 52° 43′ 16″ E. with the berthing line in direction 305°/125°. Vesse are normally berthed heading 305°. A piping trestle and roa approximately 2,650 m. long, leads to the shore where the process plant and storage tanks are located.

The jetty head comprises a loading platform (10 m. above chart datum), a utilities building, 4 breasting dolphins and 6 mooring dolphins. The dolphins are inter-connected by walkways. The distance between the 2 outermost dolphins is 340 m., between the 2 innermost breasting dolphins 42 m. and between the two outermost breasting dolphins 97 m.

On the loading platform there are 2×12 in. loading arms for loading Pentane Plus and discharge of dirty ballast/slops, 4×12 in. loading arms for loading/vapour return of Propane and Butane and 1×8 in. loading arm for bunkering (Rate – MFO 400 cu.m.p.h. and MDO 300 cu.m.p.h.). (For distance and disposition of loading arms see schematic layout). The LPG loading arms are fitted with an Emergency Release System (ERS). All loading arms except the bunker arms are fitted with an Emergency Shutdown System (ESD). Both ERS and ESD can be actuated automatically or manually. For detailed information about these systems you are referred to the separate letter on ESD/ERS handed over to you by the Terminal Representative. The Master is to ensure that the personnel responsible for cargo operations are fully familiar with these systems.

On the Western end of the loading platform is a gangway tower with a 1.5 ton crane forming a integral part of this tower. On the Eastern end of the platform there is a tower mounted firewater and foam monitor. This monitor can be controlled manually or remotely from the jetty head or from the foot of the jetty aided by a television monitor.

An additional manually controlled firewater monitor is situated on each of the 2 inner breasting dolphins. In addition to this, water spray deluge systems are covering the loading arms area, the gangway, the surge drum area and the utilities building. Gas detection equipment is strategically placed near the loading arms and will give alarm in case of inadvertent gas escape. The loading arms area and tanker manifold area are monitored by closed circuit television from the control room situated in the utilities building on the jetty and from the main control room.

On the Eastern side of the loading platform is a boat landing stage where the mooring boats can tie-up.

Draft: The minimum water depth alongside the jetty is 15 m. (49.2 ft.) below chart datum (C.D.). However, the Deep Water Channel imposes draft limitations on vessels departing from and entering the Port of Jebel Dhanna – Ruwais:

Also see Section "A" – "Restrictions".

Moorings: When at berth, vessels must be moored to the entire satisfaction of the Pilot. Vessels will normally berth port side alongside on a heading of 305°. The breasting dolphins are each equipped with 1,250 KN double quick release hooks and a power operated capstan. The mooring dolphins are each equipped with 1,250 KN triple quick release hooks and power operated capstan.

Vessels must be ready at all times to put out extra moorings as requested by Terminal Personnel or dictated by weather changes. It is the Master's responsibility to ensure that vessel's mooring lines are checked frequently to prevent excessive movement of the vessel in berth, which could activate the ESD/ERS systems and/or cause severe damage to the loading arms and other terminal equipment.

Experience has shown that wholly synthetic moorings have too much elasticity and allow the vessel to range or drift away from the berth during periods of adverse weather.

Therefore the moorings should preferably be all steel wires without use of nylon tails.

As it is recognised that some vessels are not fitted out with complete steel wire moorings, such vessels may use synthetic moorings for head or stern ropes, but breasting and spring moorings are to be steel wires. However, mooring lines leading to the same mooring dolphin should either be all steel wire or all synthetic fibre.

NOTE: (October 1982). With immediate effect all vessels calling at the GASCO NGL Jetty are to be fitted with wires, for spring lines. Vessels unable to comply will be subjected to an inspection of mooring ropes by the Pilot on arrival and will be berthed only if Pilot is satisfied with the mooring lines available. Pilot inspection of mooring lines will be carried out only during daylight hours.

The breasting dolphin's fender design criteria are based on providing for berthing energies acting in the horizontal plane for maximum displacement of 95,000 tonnes with an approach angle to the berthing line of 7° at a contact velocity of 15 cm. per second.

Yokohama Fenders protrude approximately 2.9 m. from the face of the loading deck, they provide for 100% contact of fenders on the vessel's perpendicular mid-body at light and loaded drafts, for the full range of vessel sizes.

Tension Winches: Vessels equipped with automatic tension winches should not use the automatic device and set the manual brake on these winches.

BALLAST: The jetty is equipped with dirty ballast/slops reception facilities. Tankers discharging dirty ballast/slops ashore will use the Pentane plus loading arms from where a 24 in. pipe-line runs to tanks in the Refinery adjacent to the LPG plant. The maximum ballast reception rate is 1,500 cu.m./hr. Prior to arrival the Master is to advise GASCO how much dirty ballast/slops he expects to discharge to the shore facilities.

When the vessel arrives with clean ballast for overside discharge, the ballast water must be clean and a declaration to this effect needs to be signed by the Master and delivered to the Terminal Representative. There is a danger of violating pollution regulation if ballast taken on in polluted water is discharged in port. If it is necessary to take on ballast in polluted areas, this should be discharged during passage and replaced by cleaner ballast.

Ashes, oil, oily water, garbage or other refuse must not be discharged overboard in port waters. Scuppers must be effectively plugged and leakage or spillage of oil aboard ship must not be swept or washed overboard whilst in Port waters.

It is essential that the vessel is adequately ballasted to ensure safe handling and manoeuvring. Please comply with the Pilot's requests as to ballast quantity and disposition.

There must be no cleaning of boiler tubes whilst the ship is in port.

POLLUTION: Abu Dhabi Gas Industries Ltd. (GASCO) follows a clean seas policy and in this respect the Harbour Master is authorised by the Port Authority to inspect the vessel's "Oil Record Book" referred to in the International Convention for the Prevention of Pollution from Ships, 1973. Any vessel, the Master of which does not allow inspection of the "Oil Record Book," will be refused the use of the Company facilities at Ruwais.

If it is found that the information entered in the "Oil Record Book" is not in accordance with the requirements of the Convention the matter will be reported to the appropriate authority.

It is an offence to discharge dirty ballast, pump bilges or discharge refuse within the Port limits.

The Harbour Master, or his nominee, is authorised to take samples, in accordance with an approved procedure, of ballast water to be discharged, or being discharged at Ruwais. Should test carried out on these samples indicate an average oil in water content of more than 15 p.p.m. then this may be used in evidence in any proceedings against you brought by the Port Authority in accordance with the Law.

In the event of your vessel discharging dirty ballast or spilling oil, cost for cleaning the pollution, third party claims and other expenses and fines shall be borne by the vessel.

COOLDOWN OF GAS CARRIERS: Vessels, when presenting themselves to load at GASCO terminal should in all cases be ready to load in all respects. For a gas carrier this means that the cargo tank atmosphere should be compatible with the product to be loaded and the cargo tank temperature close to the temperature of the product to be loaded (Propane −45°C, Butane −8°C).

Notwithstanding the above and providing notice is given well in advance, GASCO may, in exceptional cases, accept gas carriers not fully cooled-down. Each occasion will be considered separately giving due regard to the shipping programme and any other circumstances or restrictions.

GASCO will not accept any responsibility for the failure by the Master of any gas carrier loading at Ruwais to take appropriate action to receive cold liquefied gas, prevent any damage to his vessel and jetty installation and/or injury to his crew or Terminal personnel.

VENTING: During the loading of Pentane Plus, vessels should only allow vapours to escape via the agreed venting arrangement. If there is little wind movement, vapour may persist on deck. When there is a wind, it may, in crossing a deck house or structure, create a low pressure on the lee side thereby causing vapour to be carried towards the house or structure.

Either of these wind conditions may result in high local vapour concentration and, if so, it may be necessary to stop loading while the conditions persist.

Gas carriers are not allowed to have any vapours escape to atmosphere. During loading the pressure in the cargo tanks should be controlled by the use of their reliquefaction plant or by the use of the vapour return line to the shore. The control room should be notified prior to returning vapour ashore via the vapour return line and before stopping the return of vapour ashore.

Your attention is drawn to the information, as provided to you by the Terminal, on the properties and dangers of the cargo to be loaded on board your vessel, together with the actions required in case of an accident.

LOADING: *Loading Arms:* The LPG and Pentane Plus loading arms presentation flanges are 12 in. ANSI – 150 – flat face spiral groove.

For centre to centre distances and disposition of the loading arms, see "Plan Section". The LPG arms operating envelope parameters are as follows:

Vertical plane : From 7.7 m. to 24.0 m. above chart datum.
Horizontal plane : From 4.1 m. to 8.7 m. off the jetty face over the full vertical plane.
Safety Provision : Horizontal plane drift of 4.6 m. on either side of the centre line.
Lateral plane drift of 4.6 m. outside the normal operating box envelope.

All four LPG loading arms can be connected to ships' manifold with a centre to centre spacing range of 1.6 m. to 3.5 m. for the full envelope including the outer drift envelope box.

The Pentane Plus loading arms operating envelopes are as follows:

Vertical plane : From 2.3 m. to 20.75 m. above chart datum.
Horizontal plane : From 6.4 m. to 9.3 m. off the jetty face over the full vertical plane.
Safety Provision : Horizontal plane drift of 4.6 m. on either side of the centre line.
Lateral plane drift of 4.6 m. outside the normal operating box envelope.

The Pentane Plus loading arms can be connected to ships' manifolds with a centre to centre spacing range of 0.6 m. to 2.1 m. for the full envelope including the outer drift envelope box.

Notwithstanding the above, the loading arms are fitted with ESD systems and additionally the LPG arms with ERS which is actuated before the loading arms reach the outer limits of their envelopes.

The LPG loading arms are linked to the shore system which provides the following flexibility:

Loading arms are numbered from the gangway tower to East.
No. 1 – Propane or Vapour return
No. 2 – Propane – Butane or Vapour Return
No. 3 – Propane – Butane or Vapour Return
No. 4 – Butane or Vapour Return

After berthing you are required to remove the blind flanges from the manifold connections to be used for loading and to indicate which product is to be loaded through them and which connections are to be used for the Vapour Return lines, if required. The connection/disconnection of the 12 in. ANSI 150 loading arms and 8 in. ANSI 150 bunker arm will be carried out by Terminal personnel. If your manifold sizes do not correspond with the loading/bunker arms, you are requested to provide and fit the appropriate reduction pieces accordingly. Masters of gas carriers are to ensure that the reduction pieces and gaskets used are suitable for loading of cryogenic cargoes.

Communications: To maintain necessary communications permanently during cargo operations and also in emergencies, you will be provided with a handie-talkie and a telephone.

We require that the handie-talkie is at all times attended to by the officer responsible for cargo operations. The handie-talkie enables the officer to communicate directly with the main control room and the jetty control room.

Furthermore, a telephone will be placed on your vessel. It is advisable that this telephone is located in such a way that it is guarded most of the time. Additionally a console for activating the ESD and ERS will be put on board.

A ship's crew member, able to converse in English, must be present near the ship's manifold at all times. The loading arm and ship's manifold area are covered by closed circuit televisions from the jetty control room and main control room.

Emergency Procedures: In case of an **emergency on board** your vessel, we require you to take the following action:

Raise the appropriate alarm and take the required action

Inform the Terminal via handie-talkie, telephone and jetty attendant or by activating the ESD or ERS system (see cautions on ESD/ERS information letter).

Cease all cargo operations immediately and shut-down cargo system completely.

Prepare to vacate the berth.

In case of an **emergency ashore,** we require you to take the following action:

Cease cargo operations immediately and shut-down cargo systems completely.

Stand-by on handie-talkie and telephone and keep contact with jetty attendant.

Stand-by to give any assistance.

Prepare to vacate the berth.

NOTE: The shore installation has been equipped with a range of safety devices and emergency shutdown systems, these could be activated automatically or manually from the jetty or on board the vessel as the situation will call. All shutdowns are preceded or accompanied by an alarm.

Loading Operations: The maximum loading rates for each product are as follows:

Product	*Tons/hr.*	*cu.m./hr.*
Propane	1,760	3,000
Butane	1,800	3,000
Pentane Plus	2,910	4,270

Propane and Butane can be loaded simultaneously. Loading rates can be adjusted either by stopping/starting one or more pumps or by opening/closing of the recirculation valves on the loading platform.

After berthing the terminal representative will discuss with you the loading operations and emergency procedures. You are reminded that the responsibility as to the quantity of cargo to be loaded, rests with you as Master of the vessel and no overage may be sent back ashore.

Whilst alongside the jetty, ships should be ready to move under their own power in the event of their breaking adrift, catching fire or emergencies. No repairs are to be carried out whilst alongside which would immobilise the ship or impair her fire-fighting efficiency.

CAUTION: The loading rates are controlled on shore and due to the long pipe-lines from the shore product tanks to the jetty head, and the high loading rates, an extremely dangerous situation can arise if ship's valves are closed against the flow of liquids, which could lead to pressure surges liable to cause the blowing out of pipe-line gaskets and/or severe damage to the loading arms.

Loading rates, loading rate reductions and stopping of cargo procedures will be discussed with you prior to commencement of loading.

While alongside the jetty, no craft are allowed alongside the vessel. The lowering of lifeboats whilst alongside the jetty is strictly prohibited except in emergencies.

Immediately after completion of loading the loading arms will be disconnected and the vessel must be ready to proceed to sea or anchorage as directed.

STORES: The taking-on and/or landing of stores and ship's spares over the jetty is not allowed.

SHORE LEAVE: Crew members are not permitted shore leave.

SIGNALS: Vessels, whilst alongside the GASCO NGL-jetty, shall, in addition to those described in the port regulations, display the following signals: by day: a red flag, by night: a red light visible from all directions.

SHIP OPERATOR'S REPORT: February 1982

The following criteria for gas carriers programmed to load propane/butane at Ruwais Terminal.

1. Tanks' atmosphere compatible with product to be loaded.
2. Tanks' temperature close to temperature of product to be loaded (Propane − 42°C, Butane − 6°C).
3. Distance between ship's side and 12 in. manifold connections between 4.1 m. and 8.7 m.
4. Height of manifold above chart datum between 7.7 m. and 24.0 m.
5. Maximum height of railing i.w.c. manifold above chart datum 21.8 m.
6. Centre to centre distances between manifold connections between 1.1 m. and 3.5 m. if manifold connections centre to centre distances are between 1.1 m. and 1.6 m. only one grade can be loaded at the same time.
7. Vessel not to have carried ammonia on previous two voyages.
8. Vessel to inform GASCO Ruwais not less than 48 hours prior to arrival of disposition of manifold connections from bow to stern indicating which connections to be used for propane, butane, vapour and liquid and also the centre distances between them.
also
9. Master should confirm ETA at 72, 48 and 24 hours prior to arriva to Gasha Tower by telex/cable.
10. Master to call Jebel Dhanna Pilot and Agent Jebel Dhanna or VHF Channel 9 or 16 four hours prior to arrival. Gasha buoy is in positio Lat. 24° 25′ 46″ N., Long. 52° 34′ 26″ E.
11. Please advise Agents vessel's call sign or telex no., d.w.t. i long tons, g.r.t., n.r.t., arrival draft, loading rate, etc.

SHIPMASTER'S REPORT: December 1981 (Vessel loading propane butane, g.r.t. 45,000, d.w.t. 56,000, draft 13.1 m., capacity 79,970 cu.m.)

Ruwais lies in the same general port area that encompasses Jebe Dhanna and at the moment consists of a petroleum products jetty and another to the S.E. which handles Pentanes and LPG.

Further again to the S.E. there is more port development for a ammonia/fertiliser berth and dry-cargo berths.

Ruwais is administered by ADPPOC, Abu Dhabi Petroleum Ports Operating Company, while the LPG berth comes under the immediate control of GASCO, Abu Dhabi Gas Industries Ltd.

The LPG loading platform is situated in position: Lat. 24° 09.8′ N. Long. 52° 43.3′ E., the trend of the platform and mooring dolphins being about 305° True, more or less in line with the current flow.

Approach: The vessel should have B.A. Charts 3778, 3779, 3780 and the recommended track on these should be followed for arrival and departure since it provides adequate water for a vessel of this size and draft. The route is well marked with large buoys and light floats which show up well visually and on the radar. An approach in poor visibility should thus be possible and made with confidence.

See Pilot Books and "Guide to Port Entry".

A waiting anchorage is provided off Ghasha buoy.

Pilotage: Pilots board off 'Ghasha' Buoy from launch of about 12/16 m. length; at the moment two launches are in commission.

Pilot ladder required about 1 m. above the water.

The length of pilotage to the first line ashore is about 3.5 hours.

Communications: Through Bahrain Radio. There is considerable evidence pointing to huge delays in cables between this radio station and the eventual recipient.

Before arrival the Agents sent a comprehensive questionnaire requesting safety checks and ship information. This is a standard cable and originates from GASCO.

VHF contact originally made on Channel 16 with the Pilots and Port Control, but their usual working frequency is Channel 9.

On boarding the Pilot issues a copy of the Port Regulations which should be studied prior to berthing.

Berth: This consists of the loading platform and mooring dolphins at the end of a 3 km. trestle. Minimum reported depth alongside is 15 m. and this was borne out by echo sounder on arrival and departure.

The jetty head consists of the loading platform, 42 m. long with two breasting dolphins at each end. Beyond these are the mooring dolphins three forward and aft, the total length of the mooring system being 340 m., thus providing adequate moorings for most vessels.

The loading platform carries seven Chicksans, two for Pentane, one for bunkers (yet to be commissioned) and four for LPG. There is a contro building on the berth together with closed circuit TV, gas detecting equipment and fire fighting monitors.

The loading arms are all 12 in. 150 ASA, although shore personne boarded and fitted special pieces between our manifold/reducers and the Chicksan. All Chicksans are fitted with automatic quick release and this will operate if the vessel surges more than 4 m. (two for'd and two metres aft) from her moored position. An automatic shutdown system is also fitted and the vessel is provided with a control box for these together with comprehensive instructions. A time of 10 secs. is quoted from operation to complete shutdown and emergency release.

There is provision for two vapour return lines and two loading lines within the four Chicksan configuration and these are interchangeable to a degree.

Ship/shore communication is provided by the terminal who place on board a Stornophone for that purpose.

Mooring: Wires only are recommended but there were no objections to our all polypropylene supply. The normal 3.2.2 was recommended and there is a large mooring boat to assist. Dolphins are fitted with quick release hooks.

Springs must be on mooring winches and the use of self tensioning winches is not allowed.

There are powerful tugs (3,300 h.p.) available for berthing.

Cooldown: There exist rather loose requirements for cooling down but it was no problem to explain to the Superintendent that this vessel could load into 'warm' tanks. If a vessel were to arrive under inerted tanks the situation may be rather different and it appears that the vessel would then leave the berth to cooldown.

Gangway: Ship's gangway should be turned in for berthing, a shore gangway is provided.

N.O.R.: Agent advised me to tender Notice of Readiness at the time of passing the Ghasha Buoy.

E.D.P.: There is no Early Departure Procedure, the Master must sign Bills of Lading before sailing. Allow three to four hours after completion of loading to complete all paperwork.

Load Rates: Invariably quoted in cu.m.p.h. Maximum for each product being quoted as Propane 3,000 cu.m.p.h., Butane 3,000 cu.m.p.h. The plant were able to supply at a very low initial rate at the commencement of loading.

Note: The Propane loaded at this call was very warm, −38°/−39.5°C The Loading Superintendents did not find this amiss and the reported temperature in the shore tanks is about −40°C. There was a slight drop in temperature at the manifold after sunset.

Butane loading temperature was about 0°/−1°C.

Cargo Survey: Watson Gray attended on behalf of Charterers to gauge ship's tanks and their figures agreed closely with our own. However there was a huge discrepancy (618 tonnes) between our figures and those from ullaging and flow meter readings ashore (Propane). Ship wa in excess of the shore tonnage. Ship was under shore figures for Butane by about 35 tonnes.

Protest noted over cargo temperature and quantities. Vessel was given Outward Clearance only on issuing Agents with a letter of Authority to sign Bills of Lading.

Density: Water density 1031.

General:

Stores: Not available.

Shore Leave: Definitely not allowed under any circumstances other than extreme medical urgency.

Relief/Repatriation: Not possible.

Lloyd's Surveyor: A minimum of seven days' notice required.

Repairs: There are no repair facilities available. Whilst alongside main engines must be kept in immediate readiness.

Lifeboats: Permission *must* be sought from Port Authorities to carry out lifeboat drills.

Bonded Stores: No restrictions on tobacco. All alcohol should be collected and sealed. The Customs may allow a token issue (six cases of beer for the ship) but this is not to be relied upon. All cameras have to be collected and placed under seal.

Medical: Unless in cases of extreme urgency, totally unavailable.

Rat Guards: Must be fitted to all moorings.

Fresh Water: Not available.

Walport Films: Exchanges readily available with usual notice.

Entering Inwards: After the vessel's cargo nomination has been accepted she is allowed an "acceptance period" of three days in which to arrive at the port. Apparently this runs from 24 hours, BEFORE the day of acceptance to 48 hours afterwards. Thus we arrived 7.5 hours after the expiration of our acceptance period and a vessel arriving 20 hours later received priority. This should be brought to the notice of Owners or Charterers, before arrival.

Papers: 1 copy Crew Declaration.
1 copy Bonded Stores List.
2 copies Crew List and Maritime Declaration of Health.

Bonded stores' seal checked on sailing. Customs checked both bars.

Note: Abu Dhabi operates a boycott against Israel and South Africa. Suez Canal Transit is excepted.

The Master has to sign an undertaking to the effect that the cargo will not be discharged at a port under boycott and is given a form to be posted to Abu Dhabi from the discharge port as proof.

(E) RUWAIS FERTILISER INDUSTRIES (FERTIL)

The bulk cargo terminal (FERTIL) at Ruwais comprises a 512 m. long jetty with in line berths to suit the export of bulk/bagged Urea and Liquid Ammonia. Three mooring dolphins at the seaward end of the jetty serve a Liquid Ammonia berth. Max. draft is 11 m., a 500 m. turning circle is provided off the jetty and vessels will normally be berthed port side alongside with ship providing its own access. Mooring lines should preferably be all steel wires. If this is not possible ropes and wires are not to be led to the same dolphin. A shore deballasting system is provided.

Provision has been made along the jetty for bag and bulk conveyors to load vessels with urea from a fertiliser plant 1 km. inshore.

The loading of ammonia is carried out from a loading arm at the North end of the jetty where vessels can berth using 3×100 ton capacity mooring dolphins.

OPERATOR: ADPPOC is the service contractor.

LOCATION: The jetty alignment and conveyor main setting out line is 10° West of North. The seaward limit of the jetty works are defined by the Northernmost mooring dolphin.

The terminal is located in 12 m. of water, due East of the NGL Jetty, and West of the Construction Wharf and is approached from a deep water channel serving other Ruwais jetties.

A turning basin is located N.E. of the jetty and is of 500 m. diameter and has a minimum dredged depth of 12 m. below chart datum.

Vessels will normally be berthed against fender piles alongside the jetty on a heading of 350°.

NOTICE: *Ship's Arrival Advice:* It is strongly requested that full details of the vessel including the number of crew and their nationalities should be advised to us. This information is required by the oil installations protection unit. In the absence of this information the protection unit would refuse permission for berthing of the ship. Therefore, you must ensure timely availability of this information so that it can be forwarded to the authorities. Any delay caused in berthing due to non-availability of information shall be to your account.

Further, please note that the above information should be made available as soon as the ship is nominated but not later than 24 hours after the nomination is confirmed. *Signed*: Plant Manager, Fertil.

BERTHING: *Jetty:* The jetty is designed for berthing combinations of vessels up to 2 fully laden 200 m. long (25,000 d.w.t.) bulk cargo vessels along its Eastern side. Provision is made at the Northern end of the jetty for the loading of liquid ammonia.

The jetty deck is of concrete construction and is supported by vertical 1 m. diameter tubular steel pipes.

Two turnround areas for jetty traffic are provided, one mid-way along the jetty, the other at the Northern end.

The jetty is designed to support up to 3 ship loaders with a backing conveyor system and up to 3×300 mm. diameter liquid ammonia lines.

The 3 mooring dolphins at the Northern end of the jetty serve the Ammonia Berth and each has a bollard capacity of 100 tonnes and is connected to the jetty by a system of concrete walkways.

The jetty and dolphins have a deck level 7.4 m. above Jebel Dhanna Chart Datum.

The minimum dredged depth at the berth is 12 m. below Chart Datum.

Fenders: The fender system has a design capacity of 55 tonne metres per fender pile and the recommended berthing angle is 5°. The fender system absorbs energy by deflection of single 1,300 mm. diameter tubular steel cantilever piles and twin Bridgestone Cell units which have a frontal frame 4.2 m. high by 1.7 m. wide.

The fender face is set 4 m. seaward of the jetty deck edge.

The fender spacing is generally 15 m. along the main length of jetty and this extends to 31 m. for the Northern fenders located East of the mooring dolphins.

The fenders are suitable for vessels between 5,000 d.w.t. and 25,000 d.w.t.

Mooring: Ship lines will be taken to 100 ton "Bean Type" mooring bollards located along the cope edge of the jetty. The general bollard spacing is 15 m. whilst at the shore end this extends to 30 m.

100 ton "Bean Type" bollards are positioned on the 3 mooring dolphins located at the seaward end of the jetty. Ships' lines may be taken to the dolphins by boat or via the concrete walkways provided from the jetty deck.

Landing Stage: A landing stage for small harbour craft is located adjacent to the jetty near Pile Bent 55, some 600 m. South of the outermost dolphin.

Access Ladders: Access ladders to water level are provided on the fender piles at a spacing of 60 m. All mooring dolphins are provided with access ladders.

Services: Provision has been made for future electrical and mechanical services in the jetty by ducts cast into the concrete deck or provision for hanger supports beneath the deck.

Loader Rails: A flat bottom loader rail having a gauge of 11 m. is secured to the concrete deck by Molyneaux Clips. Buffer stops are provided at both the inshore and offshore limit of the rail. Provision has been made for the future extension shorewards of the loader rail.

Approach From Shore: The approach to the jetty is via a dual carriageway off the Corniche Road. The access road leading to the jetty is 600 m. long and 8 m. wide and bounded on one side by the export conveyor housing.

Breakwaters: Rubble mound breakwaters protect the cooling water intake channel located West of the jetty.

Rubble mound reclamation bunds built just landward of the reef define the land area.

A rock armoured cooling water outfall channel is located within the reclamation and located mid-way between the jetty and construction wharf.

LOADING: *Urea Loading Operation Procedure:* Firstly, the Jetty Supervisor, after the arrival of the vessel, and after getting Clearance Certificate, will discuss the necessary loading sequence for keeping the vessel trim with ship's Cargo Officer.

When the sequence of operation has been agreed, the Jetty Supervisor will inform operational group in Bagging Control Room and shiploaders of the sequence required.

On receipt of this information, Bagging Control Operators will pre-set the bag counters or scales and line up other conveyors and machines depending upon the method of shipping required (i.e. bagged or bulk product) to the quantity agreed with the ship Cargo Master. Meanwhile, the Shiploader Operator will have positioned his machine ready for loading into the appropriate cargo hold defined by the sequence of operation.

Jetty Supervisor/Shiploader Operator will then give signal as "Shiploader in Loading Position" and Bagging Control Room Operator will start sending bag or bulk urea to jetty.

The pre-set bag counters or belt weighers will trip the conveyor system (excluding the jetty conveyors) when the pre-set capacity has been realised. The signal to start again will be given by the "Shiploader Running" signal. On receipt of this signal in the Bagging Control Room, the shiploader will have traversed to its new loading position and will be ready for the next batch of product.

Photocells are provided at the end of telescopic conveyor to indicate actual quantity of the bags loaded in ship hold. A cumulative reading (in numbers) is recorded in ship-loader operator's cabin.

For bulk urea loading, urea going to jetty conveyor is measured by weighing scales inside the Bagging Building. The weighing scale has load cells and belt speed detector for measuring the flow rate. The feed rate is indicated and also totalised cumulatively at Bagging Control Room, and also at the local control panel of weighing scale.

Normal operational shut-down shall be sequential and initiated from Bagging Control Room.

(F) ADNOC RUWAIS SULPHUR HANDLING TERMINAL

The ADNOC Ruwais Sulphur Handling Terminal is situated at the East of the existing Fertil's Bulk Cargo Terminal at Ruwais and consists of an overall water length of 350 m., which lies in a S.E. direction at the existing jetty. This facility will accommodate at the present, the export of only granulated sulphur in bulk into bulk cargo vessels between the range of 5,000 d.w.t. to 25,000 d.w.t.

The overall berthing arrangement includes 3 mooring dolphins and six breasting piles. The 2 centre breasting piles are equipped with quick release hooks for receiving vessels spring lines.

The loading of bulk sulphur is carried out by the telescopic boom of the quadrant shiploader which has 123 m. long travelling arc, having a design loading capacity of 3,000 tonnes per day.

OPERATOR: ADPPOC is the service contractor to ADNOC.

AGENT: National Shipping Gulf Agency Co. (Abu Dhabi) Ltd., Jebel Dhanna, United Arab Emirates. Tel: (971-52)72214. Cables: "Confidence", Abu Dhabi. Telex: Abu Dhabi 22248 ("Gacauh EM"). Fax: Abu Dhabi 339350.

KHOR FAKKAN, Sharjah: 25.22 N. 56.22 E. **(See Plan)**

PORT LIMITS: See Plan of Khor Fakkan on B.A. Chart No. 3518.
DOCUMENTS: The following documents must be in the possession of the ship's Master on arrival, or must be forwarded to ship's Agent prior to arrival:
Immigration: board on arrival
Crew Lists (2 copies)
Passenger Lists (2 copies)
Passports/Seaman's Identity Cards
Customs:
Crew Lists (2 copies)
Passenger Lists (2 copies)
Cargo Manifests (2 copies)
List of Alcoholic Beverages (2 copies)
Port Operator:
Certificate of Registry (1 copy) on request
Classification Certificates (1 copy) on request
The following documents should be handed to the Port Operator by the ship's Agent at least 24 hours prior to the vessel's arrival.
Cargo Plan (1 copy)
Discharge List (1 copy)
Transhipment List (1 copy)
Dangerous Cargo Manifest (1 copy)
Refrigerated Container Manifest (1copy)
PILOTAGE: Pilotage is compulsory for all ships proceeding beyond the Fairway Buoy. Port Khor Fakkan operates a 24 hour, 7 day a week pilotage service. Vessels approaching the Port should await Pilot to seaward of the Fairway Buoy. The extremity of the breakwater (Lat. 25° 21′ 28″ N., Long. 56° 22′ 43″ E.) is marked by a white occulting light visible 10 miles.

"Gulf Pilot Khor Fakkan" on VHF Channel 16. Also on 2182, 2638, 2738, 3270, 3710 and 4136.3 kHz.
ANCHORAGE: A limited number of vessels may anchor in Khor Fakkan Bay to the North of the fairway with the prior approval of the Port Operator. Otherwise, anchoring not permitted within 12 miles of Khor Fakkan as the area is a prime tourist area.
MAX. SIZE: Max. draft entering and leaving is 39 ft., range max. 3.0 m., height of wharf at HW 1.8 m.

No restrictions on LOA.
HEALTH: Normal quarantine regulations apply. Radio Pratique will be granted on receipt of radio message from Master via his Agent, stating that no serious illness has occurred during the preceding 30 days.

All crew members must be in possession of valid cholera certificate. The Health Officer will board when the vessel is alongside.
RADIO: Bahrain Radio A9M.
Notice of Arrival: Vessel should advise its Agent ETA Port Khor Fakkan, giving draft, LOA and intended cargo operations to be performed at least 72 hours prior to arrival and confirm 48 hours and 24 hours prior to arrival.

Agents should arrange berthing and labour with the Port Operator. Vessel should contact Port Khor Fakkan Signal Station on VHF Channel 16 when within range.
VHF: Khor Fakkan Harbour Office can be contacted on Channel 16. All movement in and out of the harbour shall be notified to the control and permission to proceed obtained for each movement.
TUGS: 2 tugs of 2,100 h.p. each

BERTHING: Length of berth 430 m. Depth alongside 12.0 m. at LW. Mooring gangs and berthing launches are provided.
Port Equipment: 2×40 ton Mitsubishi gantry cranes; 4×40 ton electric transtainers; yard tractors and trailers. Additional equipment such as forklifts, mobile cranes, pallets and barges available on request from the Port Operator.
Storage Facilities: The terminal comprises an area of 100,000 sq. m. and is capable of handling 150,000 t.e.u.s per year.
Container Freight Station: A container freight station is available at Port Khalid, Sharjah close to the main highway linking Sharjah with its West coast neighbours.
Priority: Given to Container and Ro-Ro vessels.
STEVEDORES: *Working Hours:* The port will work on a 24 hour, 7 day a week basis ashore and afloat. Additional charges will apply outside normal working hours which are defined as follows:
Saturday to Thursday except Public Holidays (0600 – 2200 hrs.).

Normal working hours are subject to change during Ramadan when working hours will be at the discretion of the Port Operator. Requirements for port labour must be submitted by ship's Agent to the Port Operator by 1600 hrs. previous day.
MEDICAL: Upon application to ship's Agent, medical examination of crew members can be arranged. Personnel will either be sent to private doctor or to Public Health Department as circumstances dictate. Serious cases will be referred to Government Hospital Doctor.
FRESH WATER: Fresh water is obtainable. Agents must notify the tonnage required 48 hours prior to ship's arrival.
FUEL: Limited gas oil facilities only at present.
REPAIRS: Marine engineering workshops capable of handling most repairs are available.
SURVEYORS: Services are available upon request.
REPATRIATION: Proximity of Sharjah International Airport will permit efficient crew changes and repatriation. Offshore crew change facilities can be arranged.

Transit visas are not required for crew changes. Ship's passengers require a valid visa for transit or temporary stay.
AIRPORT: Sharjah and Dubai.
TIME: GMT plus 4 hours. Permanent.
BANKS: British Bank of the Middle East, P.O.Box 10030, Khor Fakkan, U.A.E. *Telex:* 89011 Bbmefj EM (stating for KFK.)

Grindlays Bank Ltd., P.O. Box 10149, Khor Fakkan, U.A.E. *Telex:* 89025 Grnly EM.

STORING: At anchorage – by off-shore crew change boats. Alongsi – by truck alongside ship. Fork lift trucks and local labour availabl required.
SHORE LEAVE: Shore leave is permitted.
GENERAL: Pollution: The provisions of the Khor Fakkan Maritime La shall apply with respect to the operation of vessels in Khor Fakka coastal waters.

Garbage disposal services are provided by the Port Operator and a compulsory.

Ships' Chandlers: Complete chandlering facilities are availab handling provisions, laundry and bonded stores.

Water for Labour: A supply of potable water is to be made availab to port labour working on board a vessel.
DEVELOPMENTS: An additional 2 gantry cranes with 40 tons capaci will be installed in 1990.

The quay is to be extended by 900 ft., completion expected in 199

SHIPMASTER'S REPORT: January 1986

If vessel calling for bunkers only Port Control insist that vessel ancho at least 4 miles off the Fairway Buoy. No Agent or port entry pape required in this case. If however, stores are taken or any crew membe changed, an Agent must be appointed and port entry papers complete

AUTHORITY: Sharjah Ports Authority, Port Khor Fakkan, P.O.Bo 10542, Khor Fakkan, U.A.E. *Tel:* Khor Fakkan 85324/85027. *Tele* 89023 SEAGUL EM. *Cables:* Mina Khor Fakkan. *Contact:* Captain Abd Razik El Sharif, Harbour Master.
Port Operator: Khor Fakkan Container Terminal Ltd., (A Division Gulftainer), P.O.Box 10326, Khor Fakkan, U.A.E. *Tel:* 85604 *Telex:* 89064 Servic EM. *Contact:* N. Anderson, Terminal Manager.

AGENT: See "Sharjah".

MINA SAQR, Ras Al Khaimah: 25.59 N. 56.03 E. **(See Pla**

PORT LIMITS: "Mina Saqr" and its limits include all waters, installatio and the creek of Hanna bounded within 3 mile radius to seaward fro the main breakwater light in position Lat. 25° 58′ 48.35″ N., Lon 56° 02′ 43.7″ E.
LOCATION: The Port of Mina Saqr is situated 15 miles by sea a 22 km. by road North of Ras Al Khaimah. On Chart BA. 2888 it is 1 k North of Hanna Creek in Lat. 25° 58′ N., Long. 56° 03.5′ E. Jubail Harim (6,843 ft.) overlooks the port, and is 10 miles East. The port i bounded by main and lee breakwater.
DOCUMENTS: Following documents to be forwarded to the Agents a least 7 days prior to the vessel's arrival:
3 copies Dangerous Cargo List.
2 copies Stowage Plans.
2 copies Hatch List.
6 copies Cargo Manifests.
1 copy each of Bills of Lading.

On vessels arrival, 4 copies of Crew Lists, 4 copies of Vaccinatio Lists, Crew Health Certificates, Ship's Certificates, etc. to be kept rea for inspection by the Officers.
PILOTAGE: Pilotage is compulsory. Pilot may board from launch or b tug at Approach Buoy (R and W pillar buoy Int. Qk. Fl.) in positio Lat. 26° 00′ N., Long. 56° 02′ E. and in all cases a pilot ladder shou be provided and a lee given. Pilotage service available 24 hours. Leadi light PEL on 20 m. high tower, Red 3°, White 4°, Green 3°.

Master to contact "Ras Al Khaimah Port Control" on VHF Chann 16 at least 2 hours prior to arrival. ETA cables to be sent to the "Harbo Master MINASAQR Ras Al Khaimah" and also to Agents. Vessels t keep listening watch on VHF Channel 16 and await instructions fro port.
ANCHORAGE: The area bounded by the port limits and to seaward the main breakwater has been reputed as an area with good holdi ground. The co-ordinates of the anchorage on Chart B.A. 3737 are
1 Lat. 25° 58′ 36″ N., Long. 56° 01′ 48″ E.
2 Lat. 25° 59′ 24″ N., Long. 55° 59′ 02″ E.
3 Lat. 26° 01′ 12″ N., Long. 56° 02′ 11″ E.

Depths are from 20 m. to 28 m.
MAX. SIZE: No restrictions on breadth of a vessel but length not exceed 244 m. for easy berthing. Permissible draft in all the berths 11.5 m. Range of tide is maximum 1.6 m.
HEALTH: Normal quarantine regulations apply and Pratique is gran subject to Port Health Authorities' approval. The Health Officer boa the ship only when vessel alongside. Suspected disease or fever o board vessel to be reported to Harbour Master by cable prior arrival an await instructions.
RADIO: All cables to be routed through Bahrain Radio. Vessels sho cable their Agent, at least 72 hours prior to arrival, the ETA, LO expected draft on arrival, cargo and hatchwise stowage.
VHF: Port equipped with VHF Radio standby Channel 16 with oth working Channels, port working Channel 67. Port Signal Station i manned 24 hours a day and should be contacted at least 2 hours p to vessel's arrival. Vessels should report the ETA, LOA, draft, detail cargo to be discharged, stowage, etc.
RADAR: Port will be equipped with radar by 1991.
TUGS: Tugs join the vessel at anchorage, the practice being to sec alongside, using ship's lines. Derricks should be swung in and gangwa hoisted. Tugs are fitted with VHF.

BERTHING: The harbour and entrance channel is 12.2 m. MLWST. A draft limit is imposed of 11.5 m. The harbour provides 165 acres of sheltered water and is enclosed by main and lee breakwaters. Deep water quays totalling 1,690 m. in length will provide berthing facilities for 8 ships. Included in this are 2 Ro/Ro ramps. Plans are now being developed for the installation of a container crane and supporting equipment.

The small boat harbour and fishing harbour provide a further 725 m. of quay, and offer a dredged depth of 4.5 m.

All the 8 berths, including 2 Ro/Ro berths are now in operation.

Distance between quay and water level maximum 3.8 m. at LW and 2.2 m. at HW.

Discharging to be carried out using ship's gear. All berths are general cargo berths. Berth Nos. 3 and 5 have ramps for Ro/Ro vessels.

CRANES: Shore crane available at any berth after November 1990, Max. capacity 47 tons at 29 m. and 29.5 tons capacity at 41 m. radius, to handle containers loaded up to 36 tons under automatic spreader, as well as bulk materials with 8.5 cu.m. max. grab capacity at maximum of 41 m. outreach, and 4 mobile cranes 35 tons capacity available for small ships up to 7,000 tons d.w.t.

BULK CARGO FACILITIES: No special berth allocated for discharge of bulk cargo. Bulk cargoes handled at present are iron ore, gypsum, bauxite, clinker and aggregates, and vessels with these cargoes are allotted any of the general cargo berths subject to availability. No conveyor system or special equipment exist at present and as such cargo is discharged using vessel's derricks.

SPECIALISED CARGO HANDLING FACILITIES: 2 berths, Nos. 3 and 5 with ramps to accommodate Ro/Ro vessels. There is also one berth for bulk cement loading (Berth No.7). Length 180 m. Max. draft 11.5 m., rate of loading cement with hoses is 600 t.p.h. maximum.

An automatic moving shiploader for aggregate and limestone has been installed on Berth No. 5, length 200 m. Max. draft 11.5 m. alongside. The shiploader maximum loading rate is 1,500 t.p.h.

STEVEDORES: Advance ETA cable to be sent by Master to the vessels' Agents to order required gangs to work on board vessels. Labour gangs are supplied by RAK Stevedoring Company. Telex No. 99129 RSC EM. Fax: (077) 67363., (who can be contacted via the Signal Station) and the gangs work on board the vessel directly under the supervision of the vessel's Officers RAK Stevedoring Company accepting no responsibility whatsoever for any damage either to the vessel or its cargo.

Working Hours: 0700 – 1400 hrs. and 1500 – 2100 hrs.

MEDICAL: Advisable for Agents to receive at least 24 hours' advance notice of required medical attention but can also attend to this at short notice. Hospital facilities are available. Officers/Crew should have valid Cholera and Yellow Fever Certificates.

TANKERS: No tanker berth in port. Tankers will discharge at Berths No. 1, 2 and 3 through bunker line – this will be fuel and diesel oils only. Fuel line 12 in., diesel line 8 in. and 6 in. hose. SBM offshore for loading crude oil (see "Hulaylah Terminal").

DENSITY: 1024 – 1028.

FRESH WATER: Fresh water available in Berths No. 1 to 6 with 2 points to service tanks fore and aft as required on a 24 hour basis. Cost of water will be Dh. 7/– per ton.

FUEL: Fuel oil, marine diesel oil, and gas oil can be supplied through RAK Refuelling (Shell) or E.G.P.C. Telephone and telex numbers are available through the Port Signal Station. All sizes of reducers are available and pumping rates are fuel oil 200 t.p.h. and gas oil 250 t.p.h. - 300 t.p.h., subject to vessel's receiving capacity. Presently there are 6 bunker points in Berths No. 1, 2 and 3.

Marine lubricants of all brands can also be supplied provided nomination through the suppliers is received sufficiently in advance.

FIRE PRECAUTIONS: The port has its own auxiliary fire brigade and, when required, the services of the Ras Al Khaimah Fire Brigade are available.

CONSULS: None at this port but most of the consulates can be contacted at Abu Dhabi or Dubai.

REPAIRS: Small repairs can be carried out in the port, but major work can only be carried out by companies in Dubai.

DRY DOCK: No dry dock in Mina Saqr. The nearest drydocks are at Ajman and Dubai.

SURVEYORS: Draft, on-off hire and Bunker surveys are arranged through the Port Authority. All Classification Societies, Salvage Associations and cargo inspection companies are available in Dubai and Sharjah.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

HATCHES: Opening/closing of the hatches to be carried out by the crew with the assistance of the stevedores, if necessary.

CUSTOMS ALLOWANCES: Normally, bonded stores are not sealed by the Customs Authorities. However, only limited stock should be left with the Officers/crew for their consumption on board vessel and the rest should be kept locked under the custody of the Master. Sale of bonded stores is strictly prohibited and persons indulging in this will be punished according to local custom.

REPATRIATION: Efficient crew changes and repatriation can be carried out on receipt of advance information.

AIRPORT: Ras Al Khaimah International Airport, situated about 45 km. South of Mina Saqr, operate daily flights to various destinations.

TIME: Local time is GMT plus 4 hours.

HOLIDAYS: Normal Muslim holidays during which time port working hours will be restricted. Fridays are the weekly holidays.

POLICE/AMBULANCE/FIRE: All police, fire and ambulance emergencies should be notified on 999. General telephone numbers are: 29351 for Police, 26668 for Ambulance and 21212 for Fire.

TELEPHONES: No telephones available for placing on board vessels. However, a telephone is available in the Port Signal Station 24 hours a day.

For international calls, Agent's offices situated outside port area should be used. Ras Al Khaimah has excellent communication to most countries as it has its own earth satellite station.

SERVICES: Ship chandlers, laundry, exchange of films, etc. available in Ras Al Khaimah. Radio/radar repairs, tank cleaning equipment, scamping (underwater cleaning) facilities, etc. can be arranged. Garbage reception facilities available.

BANKS: National Bank of Ras Al Khaimah, Bank of Melli Iran, United Arab Bank, National Bank of Abu Dhabi, Bank of Baroda, Bank of Oman, Bank of Credit & Commerce, British Bank of Middle East, Bank du Caire, Commercial Bank of Dubai, Bank of Arab Coast, Middle East Bank and Bank Libanaise pour le Commerce.

STORING: See "Prelims".

1. By truck or barge.
2. No restrictions.
3. Yes.
4. Yes.
5. None.
6. Yes.

SHORE LEAVE: Can be granted and for this purpose the Agents should hand over a Crew List to the Immigration Department who will issue shore passes in exchange for Seaman's Book or Passport. Prior to vessel's departure, Master to ensure that all shore passes are handed over to the Agents who will surrender them to the Immigration Department, Seaman's Books/Passports will then be returned. Agents should advise Immigration Department by letter if any crew changes to be effected.

REGULATIONS: None.

DELAYS: No berthing delays.

AUTHORITY: Ras Al Khaimah Port Services, P.O.Box 5130, Ras Al Khaimah, U.A.E. *Tel:* 66444 (4 lines), Cargo Section Tel. 66904. . *Telex:* 99280 EM. *FAX:* (077) 672773. *Cable:* Minasaqr. *Contact:* Captain Hazem Raouf Assaad, Port Manager.

AGENT: International Shipping Agencies Co. (Ras Al Khaimah) Pvt. Ltd., P.O.Box 5162, Ras Al Khaimah, U.A.E. Cables: "Isaship", Ras Al Khaimah. Telex: 99226 ("Isarak EM"). Tel: 21266, 21966. After office hours 52449.

Operators of ship-servicing and supply organisation: Crew changes, mail, spares and/or delivery of provisions undertaken at sea without deviation to serviced vessel.

Owners and Masters should contact G.A.C. Dubai by cable or telex regarding servicing requirements. Rendezvous positions are selected by Shipmaster as follows: Off Dubai, at any Latitude along meridian 55° East, or off Fujairah at any Longitude along parallel 25° 10′ North.

MINA ZAYED, Abu Dhabi: 24.32 N. 54.23 E. (See Plan)

COURTESY FLAG: Vessels calling at ports in the Emirate of Abu Dhabi should fly the flag of the United Arab Emirates as a courtesy flag.

DOCUMENTS: 5 copies of Cargo Manifest are required, with full cargo particulars, such as Bill of Lading number, marks/numbers, description, weight and measurement and IMO Class if any. It is essential that all this information against consignee/notify parties name, full contact address is given on the Manifest for each consignment. The Manifests should reach the Agent prior to arrival of vessel in order to be submitted to the Port Authorities 48 hours before the ship's arrival.

Also stowage particulars should be submitted with the Manifest in order that the Agent may advise the Port Authority of the equipment and labour required for efficient handling of the vessel.

Customs Require:
1 copy Crew List.
1 copy Stores List.
Immigration Require:
2 copies Crew List.
2 copies Passenger List, if any.
Quarantine Require:
Crew List
International Health Certificate.
Vaccination List.

PILOTAGE: Pilotage is compulsory for all vessels entering/leaving Mina Zayed. Pilotage 24 hours. Pilot will board incoming vessels within a radius of 1 nautical mile seaward of the Fairway Buoy (Lat. 24° 39.15′ N., Long. 54° 14.1′ E.). Ships should wait for Pilot in the area stated above and not enter the channel unless instructions to the contrary are given.

ANCHORAGE: Recommended anchorage for ships over draft of 9.45 m. is approximately 1 mile N.E. of Abu Dhabi Racon and for ships up to 9.45 m. draft approximately 0.9 miles S.W. of "Z 11" in position Lat. 24° 35.5′ N., Long. 54° 18.93′ E.

MAX. SIZE: Largest vessel up to draft 13.0 m. at general cargo berths, 13.0 m. at Container Terminal, no restriction on beam or length.

Max. rise and fall of tide is 2.0 m.

RADIO: Vessels are to give their ETAs by cable through Muscat or Bahrain Radio, addressed to "Port Authorities – Port Zayed, Harbour Office" at least 72 hours prior arrival. Port Control Tower equipped with HF transceiver operating on 2 frequencies and continuous watch on 2182 kHz.

VHF: Port Control Tower on VHF Channels 16, 12, 11, 9 and 6.

TUGS: 4 harbour tugs available, 2×2,400 h.p. and 2×1,250 h.p. Tugs fitted with VHF.

BERTHING: 21 deep water berths with a total quay length of 4,300 m. Berths No. 1, 2, 3 and 4 Container Terminal with depth 10.5 m. to 13.0 m.; Berths No. 5, 6, 7, 8 and 9 with depth 9.5 m.; Berths No. 10, 11, 12 and 13 with depth 6.0 m.; Berths No. 14, 15, 16, 17, 18 and 19 with depth 11.5 m.; Berths No. 20 and 21 with depth 10.5 m.

Storage: The Port has 13 closed storage sheds over an area of 102,300 sq.m. There are also 9 open sheds with a total area of 45,000 sq.m. and an open area (paved) of 1,104,000 sq.m. for the stacking or storage of various types of cargo such as timber, steel, construction materials and cars.

CRANES: Cranes for discharging available. Mobile cranes from 5 – 150 tons available. 3 container cranes 40 tons, fork-lift trucks and trailers, 2×40 tons straddle carriers.

CONTAINER HANDLING FACILITIES: *Container and Ro/Ro Facilities:* Container Terminal has 4 berths with a total length of 800 m. Two berths have a depth of 13.0 m. and 2 berths have a depth of 10.5 m. The berths are equipped with 3 Krupp modern container cranes of 40 tons capacity with an outreach of 39 m. 2×40 ton rail-mounted yard cranes, 2×40 tons, 2×15 tons, 2×8 tons Forklift trucks, 2×40 ton straddle carriers, 25 HK stacking containers, which accommodate 15,000 TEU's and there is a large LCL Terminal and a large area set aside for Ro/Ro equipment. 148 reefer plugs (480 volt, 32 amp), workshop for maintenance and repair of cranes and other equipment. Computer equipped control tower, radio network linking cranes, other equipment and offices and sheds.

BULK HANDLING FACILITIES: Bulk grain silo at Berth No. 19 has a storage capacity of 60,000 tons with discharge rate of 240 t.p.h.

STEVEDORES: Skilled manpower available for all kinds of cargo operations.

Working Hours: Working hours for stevedoring from 0700-2100 hrs. plus overtime on request.

Cargo is also handled on Fridays.

Container Terminal works 24 hours, 7 days a week.

MEDICAL: Fully equipped Government hospital, most medicines available. Private clinics available.

TANKERS: See "Das Island", "Umm Al Nar" and "Jebel Dhanna – Ruwais".

FRESH WATER: Available at all berths, or by barges.

FUEL: Diesel oil and gas oil is available by barges.

FIRE PRECAUTIONS: Port Zayed Fire Brigade is available 24 hours a day. The harbour tugs are fitted with fire-fighting equipment.

SURVEYORS: Lloyd's Agents: Abu Dhabi Maritime & Mercantile International, P.O.Box 247, Abu Dhabi, Tel: (2) 323131. Telex: 22245.

LAUNDRY: Reasonably good laundries available.

PROVISIONS: Can be arranged through ship's Agent.

AIRPORT: Abu Dhabi International Airport is 40 km. There are daily flights to all Gulf State Countries.

TIME: GMT plus 4 hours.

HOLIDAYS: Friday is weekly holiday. Cargo movement generally not affected by holidays.

SHORE LEAVE: Permitted. A permit can be obtained from Immigration Department. Absolutely necessary that every crew member be in possession of valid Seaman's Book.

GENERAL: *Vessels discharging cargo at anchorage:* Anchorage ETA required: The Port Authority should like to draw the attention of all shipping agencies in Abu Dhabi, to supply the Traffic Department with the date of arrival of ships which are going to discharge their cargo at anchor.

To enable the Traffic Department to take the necessary action and to render the required facilities, it is necessary that manifests, documents relating to cargo and the date of arrival should be forwarded 48 hours before the actual arrival of ships.

DEVELOPMENTS: Fishing harbour under construction South of the Dhow Harbour.

AUTHORITY: Abu Dhabi Sea Port Authority, P.O.Box 422, Abu Dhabi, U.A.E., *Tel:* 725600. *Telex:* 22731 Prtex EM. *FAX:* 771023.

Officials: H.E. Hadef Mohd. Houfan Al-Mansouri, Under Secretary.
Mr. Mubarak Mohd. Al Bu-Ainain, Director General.
Captain Said Darwish Al-Rumeithy, Harbour Master.
Mr. Brayek Awad Amer Al-Mehri, Container Terminal Manager.
Mr. Salem Sultan Al-Meheirbi, Deputy Traffic Manager.

AGENT: National Shipping Gulf Agency Co. (Abu Dhabi) Ltd., P.O.B. 377, Abu Dhabi, U.A.E. Cables: "Confidence", Abu Dhabi. Tel. 334300 (10 lines). After office hours Tel: 790381, 216613. Fax: 339350. Radio: Marine VHF radio, stand-by on Channel 16 (156.8 MHz), Call sign "Confidence, Abu Dhabi". Telex: 22248 ("Gacauh EM").

MUBAREK TERMINAL, Sharjah: 25.49 N. 55.11 E. **(See Plan)**

LOCATION: The Mubarek Oil Terminal is situated off the island of Abu Musa, and is under the jurisdiction of the Emirate of Sharjah and operated by the Crescent Petroleum Company.

DOCUMENTS: One Crew List and valid Health Certificate.

EARLY DEPARTURE PROCEDURE: In force. Vessel's Agent signs all documents on behalf of the Master including Bills of Lading.

PILOTAGE: Vessels to be moored, anchored or manoeuvred at Mubarek Oil Terminal will be boarded by Company Mooring Master in the close vicinity of the suggested anchorage area. Vessels must not enter the restricted limits of the terminal unless a Company Mooring Master is on board.

Ships are requested to have a pilot ladder safely and securely rigged and ready for immediate use and long enough to reach the Company Mooring Master's launch. A combination of pilot ladder and ship's accommodation ladder so arranged that personnel can first use pilot ladder until part way up the vessel's side and then transfer to the accommodation ladder is recommended, especially on very large ships. There should be adequate lighting at night. Vessels will provide a lee for the Company Mooring Master's launch when boarding and leaving.

The Company Mooring Master may require the vessel to anchor at any time he deems it necessary for the safety of the vessel or moorings or both or for infringement of the terminal regulations.

The Company Mooring Master shall be the sole authority as to when the terminal is open or closed for normal working due to weather conditions.

NAVIGATION AIDS: A floating oil storage vessel *Martontree* (110,000 d.w.t.) is used for storage of crude oil and for accommodation and headquarters of terminal personnel lies permanently moored to the SPM in position 25° 49′ N., 55° 10′ E. The *Martontree* is equipped with normal navigational warning lights and aids as required by convention.

A fixed oil production platform, incorporating crude oil treating facilities rises approximately 50 ft. above water at Lat. 25° 50′ 43″ N. Long. 55° 11′ 49″ E. Said structures are equipped with 1 clear light and a fog horn, each with characteristics Mo(U) 30 secs. A permanently fixed flare structure (tripod) rises 150 ft. (flare tip) above water at Lat. 25° 50′ 56″ N., Long. 55° 12′ 00″ E., approximately 037°, 1,716 ft from the oil production platform. In addition, there are numerous oil well head structures within the restricted area described below. All structures have standard navigation aids with characteristics the same as mentioned above.

READINESS: Notice of Readiness will not be accepted at time of arrival unless the vessel is in all respects ready to load. Arrival time will be considered the time the Company Mooring Master boards the vessel or the time the vessel is within the approved anchorage area, whichever occurs first. Notice of Readiness is to be in English.

ANCHORAGE: An anchorage area diameter 6,000 ft. has been established with the centre in position Lat. 25° 46′ 45″ N. Long. 55° 13′ 13″ E.

RESTRICTED AREA: A restricted area of approx. 38 square miles has been established with a boundary formed by an imaginary line from:
(a) 25° 54′ 26″ N., 55° 13′ 49″ E. in a W.S.W. direction to
(b) 25° 15′ 14″ N., 55° 07′ 19″ E. thence in a S.S.E. direction to
(c) 25° 46′ 33″ N., 55° 09′ 37″ E. thence in a E.N.E. direction to
(d) 25° 49′ 44″ N., 55° 16′ 08″ E. thence in a N.N.W. direction to the position above.

RESTRICTIONS: Max. distance bow to manifold 580 ft.

MAX. SIZE: 250,000 d.w.t.

HEALTH: When arriving fly "Q" flag by day, and red over white light at night for quarantine service.

RADIO: Initial communication by radio between ship and Crescent Petroleum Company should be via Bahrain Radio, call sign "A9M" operating on a 24 hour basis or directly by telex to 68015 CRESPT EM.

Company Mooring Master will have sole control of radio installations during the period a vessel is manoeuvring or moored, and no radio transmissions will be permitted on board ship except by the express permission of the Mooring Master in each case, only the Mooring Master may transmit on Channels 71 and 17 during the period he is on board. He will have a VHF radio telephone with him.

Mubarek Oil Terminal Radio Station call sign "Crescent – 2 particulars are as follows:

Operated by Crescent Petroleum Company, Sharjah, position: Lat. 25° 49′ N., Long. 55° 10′ E.

Frequencies: Channels 71 and 17 on VHF.

Hours of operation: 24 hours per day.

Mubarek Oil Terminal Control Centre keeps continuous watch on VHF radio telephone Channel 71. Vessel approaching the terminal not having Channel 71 will be contacted on Channel 16 when the terminal will request her to switch to an alternate channel.

Channel 17 is reserved for communications between ships at moorings and Mubarek Oil Terminal Movements Control Centre. This is a safety measure since oil flow to ships is controlled through Channel 17, which therefore must be clear at all times in case of need to stop oil flow for any cause.

Channel 16 is for calling and safety use only.

It is most important that ships establish communications with the terminal not less than 72 hours prior to arrival at the terminal giving ETA. Further ETA signals should be sent when the vessel is 24 hours, 12 hours and 4 hours distant, or any time a change of 1 hour in original ETA occurs. These messages should state specifically whether ETA is given in GMT or Local Time. The 72 hour signal should include the following:

ETA.
Last Port of Call.
If any Sickness on Board.
If vessel has Clean Bill of Health.
Cargo quantity and Grades expected to be lifted in long tons.

The 12 hour signal should include definite indication as to whether the vessel is ready to load or not and should also include information on the time she will require to discharge ballast after arrival. Precise time of arrival should be given when the ship is 4 hours distant from the terminal.

Unreasonable insufficiency or inaccuracy in ETA messages may alter the order of berthing of ships to the advantage of those ships giving sufficient and accurate ETA messages. Acceptance of Notice of Readiness will also be affected by such insufficiency or inaccuracy.

On receipt of first signal from a vessel, terminal will transmit a message to her giving preliminary requirements of terminal. Masters are urged to comply with this in all details in order to facilitate vessel turnaround and government formalities.

TUGS: The Company maintains launches to assist in mooring and unmooring vessels. These are under the direct supervision and control of the Company Mooring Master.

BERTHING: Vessels to load crude oil cargo will be normally accepted and berthed in chronological order of arrival provided such vessels have current nomination for cargo valid at the time of tender, carry clean ballast if any, and have cargo tanks in a fit condition to receive cargo. Also, they must be in all respects properly equipped and ready to moor. Should berthing be delayed on account of bad weather, vessels will keep their position in line.

Vessels required to leave the terminal area on account of bad weather should keep in contact with the terminal via the Company radio station at Mubarek Oil Terminal, call sign Crescent-2, in order that they may be available when the weather is fit for resumption of operations. The Company reserves the right to load vessels out of turn following the return of good weather, to the extent that such loading "out of turn does not materially delay the loading of other vessels in line. Further the Company reserves the right to decline to moor a specific vessel if its condition or facilities are unsafe for mooring or loading even though the terminal may be open to other vessels.

The Company Terminal Superintendent's decision on this will be final.

Mooring: Mooring is by the "Tandem" method, with the bow of the export tanker moored to the stern of the storage tanker *Martontree*. Manoeuvring to the berth is effected with the aid of 2 tugs. The mooring rope is a standard 21 in. circumference × 200 ft. nylon SPM rope, fitted with a 3 in. OCIMF chafe chain.

After mooring, a tug will be made fast to the stern of the export tanker, and tension will be maintained in the "Tandem" mooring at all times.

Average loading rate is 16,000 b.p.h.

EQUIPMENT: Vessels must have suitable winches or capstans in good operating condition on the forecastle deck.

All vessels should have ready messenger lines on forecastle head for bringing the mooring line aboard from single point mooring.

Mooring winches on forecastle head for handling 1×12 in. circumference synthetic fibre floating pick-up line.

Adequate mooring bitts to secure mooring line. A bow stopper or Smit type connection is preferable.

Hose lifting winch, derrick and gear rigged for 7.5 tons.

HOSES: After the vessel is securely moored the cargo hose will be hoisted on the starboard side. The hose is lifted by ship's gear and crew, and all connecting of the hose will be done by them. The lifting derrick, equipment tackle, etc., should be topped off and ready on arrival. Terminal loading hose is fitted with ASA 150 pound flat face 12 in. "Camlock" coupling and ships should have adapters and fittings to enable this hose to be connected to the ship's manifold. The Company Mooring Master advises the ship's personnel in hose lifting and connecting procedure; however, a deck officer must be present and must direct the ship's crew in all handling. The Company Mooring Master may reject a ship for unsatisfactory hose handling.

Do not close valves against crude flow.

Emergency flow stop signal if all communications fail will be a continuous sounding of the ship's whistle from either export tanker or *Martontree*.

CARGO SPECIFICATIONS: Mubarek Condensate Blend: Approximate API 46°.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: Various consulates are located in Abu Dhabi and Dubai.

REPAIRS: No repairs, painting, etc., are to be made while berthing unberthing or in the berth.

CUSTOMS: Cigarettes, cigars, tobacco, matches, spirits, wines, beers, perfume, arms, ammunition and possibly other items have to be locked up under Customs seal from time of arrival of ship until time of leaving territorial waters.

TIME: Local time is GMT plus 4 hours throughout the year.

SERVICES: No supplies of any kind and no medical services (except in case of emergency and subject to a doctor being available), or other services are available at Mubarek Oil Terminal.

SHORE LEAVE: Not permitted.

GENERAL: *Light Dues:* The Middle East Navigation Aids Service (MENAS) charges light dues according to the size of the vessel and the number of visits to the Gulf during the year.

Positively no provision is made for dirty ballast: Any ship arriving with dirty ballast will be rejected and all costs accruing therefrom will be to the ship's account. Notice of Readiness shall not be accepted until vessel returns with clean ballast and tanks fit to receive cargo. She will on second arrival tender a new notice of readiness to load.

Fire towing wires required fore and aft.

No swimming permitted whilst vessel in berth.

No fishing permitted at the berth or within the restricted navigation area.

SHIPMASTER'S REPORT: December 1979 (Updated 1988).

Pilotage: Pilot flies out from Sharjah by helicopter and he carries out all entry procedures. He will also take mail ashore for delivery to vessel's Agents. Mail must be placed in one envelope, addressed to Agents and marked ship's mail.

Tankers: Loading rate commences at 1,000 t.p.h. and when everything satisfactory increased to max. 2,000 t.p.h. Normal parcel is 500,000 bbls. ±0.0%. If vessel requires a plus % then give a Note of Protest to the Pilot.

AUTHORITY: Crescent Petroleum Company, P.O.Box 211, Sharjah, U.A.E. *Tel:* Sharjah 543000. *Telex:* 68015 Crespt EM. *Cables:* "Crespt Sharjah". *Contact:* Mr. N. Pacic, Operations Manager.

AGENT: Gulf Agency Co. (Sharjah) W.L.L., P.O.B. 435, Sharjah, U.A.E. Cables "Confidence", Sharjah. Telex 68019 ("Gacshj EM"). Telephone: 544446. After office hours 354249. Fax:524091.

MUBARRAS ISLAND, Abu Dhabi: 24.26. N. 53.32 E (HALAT AL MUBARRAS) (See Plan)

DOCUMENTS:
- 2 Crew Lists.
- 2 Passenger Lists.
- 2 Manifests.
- 1 International Maritime Declaration of Health.

FLAG: All vessels calling at Mubarras are required to fly the national flag of U.A.E. which are available from ship's Agent.

LOCATION: Mubarras Island is located approximately Lat. 24° 28′ N., Long. 53° 22′ E., some 55 miles West of Port of Abu Dhabi.

The island constitutes export terminal of crude oil produced by Abu Dhabi Oil Company Limited (Japan). Crude oil produced from the Company's Mubarras oilfield is transported to Central Facilities Platform (CFP) situated approximately 19 miles E.N.E. of Mubarras Island by 4 in. to 14 in. flowlines, thence relayed by a 18 in. transmission line to the Island. The Company has tank storage for 2,238,000 barrels of crude oil on the island.

Tanker loading is accomplished by means of a single-buoy-mooring (SBM) system installed about 8 miles offshore East of the Island.

Average API Gravity of crude oil to be located is 36.5° and flash point is below 35° Fahrenheit.

PORT LIMITS: The port area of Mubarras and its approaches cover the area bounded by straight lines connecting the following points:

(a)	Lat. 24° 30.0′ N.,	Long. 53° 36.0′ E.
(b)	Lat. 24° 24.0′ N.,	Long. 53° 36.0′ E.
(c)	Lat. 24° 24.0′ N.,	Long. 53° 27.0′ E.
(d)	Lat. 24° 26.7′ N.,	Long. 53° 21.7′ E.
(e)	Lat. 24° 30.0′ N.,	Long. 53° 21.7′ E.

Masters of all vessels entering the Port must follow instruction from the Company's Port Master as to approaches, anchoring, berthing and unberthing.

APPROACHES: *Approaches to Mubarras:* Japanese Charts No. 3173 and No. 3174 cover the approaches to Mubarras. For tankers arriving at Mubarras without necessary charts full information shall be given by telegram if a request is sent to "Confidence" Abu Dhabi via "A9M" Bahrain Radio a few days before arrival.

Alternatively, if the vessel has VHF, the buoy positions shall be given to her upon request to "Mubarras Terminal" as she approaches but prior notice of requiring this service should be given in the vessel's arrival message.

Charts: The following charts are recommended for use in Abu Dhabi waters:

Japanese Charts No. 3173 and 3174
British Admiralty Charts No. 3733, 3734, 2889 and 3716.

Approaches to Mubarras – Navigational Aids:

Buoy Nos.	*Latitude North*	*Longitude East*	*Colour*	*Light Character*
Mubarras Approach	24° 57.00′	53° 18.39′	Red	Fl. R.ev. 5 sec.
Mubarras Entry	24° 52.34′	53° 18.42′	Red	Fl. R.ev. 10 sec.
1	24° 49.44′	53° 17.29′	Green	Fl. G.ev. 10 sec.

13	24° 27.33′	53° 38.17′	Green	Fl. G.ev. 5 sec.
14	24° 26.17′	53° 37.00′	Red	Fl. R.ev. 3 sec.
15	24° 26.38′	53° 36.63′	Green	Fl. G.ev. 3 sec.
17	24° 26.00′	53° 33.00′	Green	Fl. G.ev. 2 sec.

Note: Green coloured and green flashing buoys are showing the starboard side of the channel.

Red coloured and red flashing buoys are showing the port side of the channel.

"Mubarras Approach", Mubarras Entry, No. 1, No. 3, No. 4, No. 5, No. 6, No. 7, No. 8, No. 9, No. 10, No. 12, No. 13 and No. 15.

How to Steer in the Mubarras Channel: (Inward)

Point Nos.	*Position*		*Course (°True)*	*Dist. (miles)*
	Lat. North	*Long. East*		
1	24° 57.00′	53° 17.80′		
			180	7.45
2	24° 49.55′	53° 17.80′		
			144	6.55
3	24° 44.30′	53° 22.05′		
			120	10.55
4	24° 39.00′	53° 32.00′		
			123	8.90
5	24° 34.10′	53° 40.30′		
			176	4.00
6	24° 30.20′	53° 40.70′		
			214	3.50
7	24° 27.30′	53° 38.55′		
			240	2.20
8	24° 26.20′	53° 36.40′		
			261	3.10
9	24° 25.70′	53° 33.05′		
			Total Distance:	46.25

Anchorage Position	Lat. 24° 26.80′ N.	Long. 53° 34.00′ E.
S.B.M. Position	Lat. 24° 25.98′ N.	Long. 53° 31.54′ E.

Navigation in Shallow Waters: There are some shoals with depth of 14.9 m. (49 ft.) in the area between Buoys No. 14 and No. 15. Masters of outgoing vessels should pay due consideration to the effect of squat at speed on vessel's draft in the shallow water, bearing in mind vessel's trim.

Conspicuous Marks: Quick flash white navigation lights (visibility range 5 miles) are fixed on following platforms and the flare stacks adjacent to each platform are visible from distance:

MR-6 Platform	Lat. 24° 35′ 44″ N.	Long. 53° 43′ 53″ E.
CFP	Lat. 24° 30′ 09″ N.	Long. 53° 42′ 09″ E.
AA Platform	Lat. 24° 26′ 10″ N.	Long. 53° 39′ 55″ E.

PILOTAGE: Pilot is provided by the Oil Company at the request of the vessel's Master based on express understanding and condition that he is aboard the vessel for the purpose of assisting the Master and becomes, for such purpose, the servant of the owners of the vessel.

It is recommended that the Master of the vessel calling at Mubarras for the first time requests Pilot to go aboard the vessel for both inward and outward passage of the channel. The Pilot will normally board the vessel in the vicinity of Buoy No. 5 and will advise the Master on approaches to the berth and he will remain on board to act as Mooring Master and direct loading operations.

Mooring Master: The Mooring Master provided by the Company will undertake pilotage, mooring and unmooring of the tankers.

The Mooring Master shall board vessels to be moored at SBM in the anchorage area or in the vicinity of Buoy No. 17. The Mooring Master will advise the Master of vessel on approaches to the SBM, mooring, unmooring, connecting and disconnecting hoses and all other operations within the port area. All manoeuvring of vessels within the port area shall be done only in accordance with the advice of the Mooring Master, subject to the understanding that in all cases and circumstances the Master of the vessel shall remain solely responsible for the safety and proper manoeuvring of the tanker. Master or one of his qualified deck officers must be on the bridge at all times while the vessel is being manoeuvred.

ANCHORAGE: The tanker anchorage is within 0.5 miles radius of Lat. 24° 26.8′ N., Long. 53° 34′ E. Depth of water varies from 15.5 to 18 m. (50 ft. to 59 ft.). The sea bed all around the anchorage is coral with approximately 6 ft. of loose sand. Holding is poor and a vessel is advised to pay out at least six shackles of chain.

Vessels will be advised by radio of a suitable anchorage if both anchorage and the berth are not immediately available. Vessels should under no circumstances anchor or wait at the South area of Lat. 24° 57′ N. without obtaining prior approval of the Port Master.

Anchorage for Dry-cargo Ships: Anchorage for dry-cargo ships is directed by Port Master by VHF radio.

Prohibited Area for Navigation and Anchorage: The area within 1.15 miles radius from CFP is prohibited for navigation and anchorage. No vessels shall anchor within the range of 1.5 miles from submarine pipe-lines.

MAX. SIZE: See "Approaches" – depth over shoal areas; also see "Tides".

HEALTH: Vessels arriving at Mubarras Terminal must carry the usual Bills of Health for ports visited on the voyage. Masters of vessels are requested to inform the Company if there is any person ill on board or if there has been sickness within the week prior to arrival.

Pratique is usually granted by Port Medical Officer through the Mooring Master or Agency Clerk.

RADIO: *Notice of Arrival:* Vessels should advise their ETA Mubarras at least 72 hours and again 24 hours before arrival through normal radio service. As an alternative to the route through Bahrain Radio Station (A9M) vessels may send their first message through Singapore or Bombay.

Confirmation of ETA should be made a few hours before arrival at "Approach Buoy" by calling "Mubarras Terminal" on Channel 16 VHF. After anchoring, vessels should advise their time of anchoring through VHF and thereafter maintain a continuous listening watch on Channel 16 until the Company's Mooring Master boards.

Tankers bound for Mubarras should advise their ETA and other information 72, 48 and 24 hours before arrival.

Vessels may find it helpful to route their first message through Singapore, Bombay or Bahrain Radio Station. All cables should be addressed to the Company through ship's Agent.

The first message should be sent according to the following form, but any items which are the same with a recent previous voyage to this port may be omitted.

(1) ETA Mubarras.
(2) Last Port.
(3) Next Port.
(4) Deballasting time.
(5) Quantity of cargo required.
(6) Maximum loading rate.
(7) Diameter of cargo manifold.
(8) Distance from manifold to ship's side.
(9) Derrick capacity.
(10) Diameter of fairlead.
(11) Name of Master.
(12) Number of crew.
(13) Whether Pilot is required or not.

Radio Station in Mubarras Terminal Office.

Short-range communication to Mubarras Terminal Office can be made by calling "Mubarras Terminal" on VHF radio telephone. Vessels should inform the office with their ETA preferably when they pass the Strait of Hormuz. After anchoring, vessels should advise anchoring time and maintain a listening watch on Channel 16 until Mooring Master boards.

Call Sign: "Mubarras Terminal".

Frequency:	*Reception*	*Transmission*
F3	Channel 16	Channel 10, 12, 14

Operating Periods: Round the clock.

BALLAST: All vessels arriving at this port are required to have on board sufficient clean ballast to give a safe draft for manoeuvring purposes. Vessels arriving with insufficient ballast may be required to increase the quantity, should the Mooring Master consider that it would not be safe to berth the vessel for loading. As a general rule, vessels shall not start discharging ballast until mooring is completed.

Upon completion of deballasting the Mooring Master will inspect the tanks. If the tanks are not satisfactory, he may require further pumping until such time as they meet the required standard.

It is strictly prohibited to discharge oil, oily water or other refuse that may result in pollution of the sea. International oil pollution regulations must be strictly observed by all vessels. *The terminal does not have facilities to receive oily ballast.*

TUGS: One tug/workboat is always available for use for mari operations at this port and one mooring boat is available during loadin

BERTH: *Position of Buoy:* Lat. 24° 25.98′ N., Long. 53° 31.54′ E.

Depth of Water: 15.5 m. (50.85 ft.).

The berth is a single-buoy-mooring system consisting of a buo 44.32 ft. (13.5 m.) in diameter, moored to 6 pendant legs of 3 in. hig strength chain shackled to anchor piles at a radius of 855 ft. (260 m.) and having a rotating deck carrying the pipe-line and moorin connections.

One 32 in. crude oil line has been laid approximately 52,500 f (16 km.) from the shore to a position close under the buoy. From th underwater manifold the crude oil goes to the buoy through a 20 in underwater hose. The connection between turntable piping of SBM an tanker manifold consists of 1 hose string composed of 24 in. and 20 in (Length 770 ft.) floating hoses and 2 hose strings composed of 16 in (Length 120 ft.) tail hoses.

LOADING: The maximum loading rate of crude oil is 32,700 bbls./hr or 5,200 kl./hr.

Notice of Readiness: The Master of each vessel should present a Notice of Readiness to load to the Company's Mooring Master who wi sign it on behalf of the Company.

The Notice of Readiness should be tendered at the time of the vessel's arrival at the tanker anchorage area, which is, in principle, understoo to be either the time of dropping the anchor in the anchorage, or, if the vessel does not anchor, the time that the Mooring Master boards t commence berthing.

The vessel, however, is prohibited from berthing unless she reaches Buoy No. 5 at least 5 hours before the sunset, and Notice of Readiness will not be accepted until the next sunrise even if the vessel has already anchored in the tanker anchorage area.

Notice of Readiness will not be accepted during periods when the port is closed. The port is "closed" when the weather is such that it is too rough for incoming tankers to berth. The decision regarding the opening and closing of the port will rest with Port Master.

When the vessel is ready in all respects for loading the ship's officer must inform the Mooring Master who will transmit the necessary messages to the control room on shore. Mooring Master is authorised to control all the loading operations.

All cargo documents and shore figures are usually prepared on board and the Mooring Master will sign the documents on behalf of the company

MOORING: The Company reserves the right to refuse to accept fo berthing or loading any vessels considered unsuitable by reason o inadequate or unsatisfactory mooring equipment, insufficient derric capacity, unusual manifold connection, inability to comply with the Safety Regulations, or any circumstances which would create unusual risk t the Company's berth, facilities, personnel and equipment whatsoever.

Preparation: Before Mooring Master boards, vessels should have ready the following:

(a) Jacob's Ladder on lee side.
(b) Hawser 1 each at fore and aft deck, polypropylene if possible.
(c) 1 steel crowbar.
(d) Port derrick with double wire rigged for minimum lift 5 tons.

After vessel is anchored, the Company's mooring and hose connectio crew will board and pick up mooring and hose connectio materials from tug/workboat. Vessel is requested to provide windlas and winch operators.

Mooring at Berth: Unless pilotage is required the Mooring Master wi board the arriving vessels in the anchorage area. Vessels are requeste to have pilot ladder safely and securely rigged ready for immediate us and long enough to meet the Mooring Master's launch. Vessels shoul have their crew standing by ready to receive mooring and hose connection materials and should maintain a lee until this is complete Mooring Master will instruct the crew in the setting up of the forwar mooring.

2 bollard ropes are made fast round the port bitts with their attache shackles about 5 ft. inboard from the fairleads as far forward as possible The size of the fairlead opening should be at least 300 mm. (12 in.) t prevent chain from jamming in the fairleads.

Attached to the mooring connections on the buoy are two 18 in. nylo ropes (144 mm. dia., breaking strain 250 tons). These ropes are 50 m long, and have at their free end a length of stud link chain which include enlarged end link for receiving the shackles used on the deck of th tanker. From the outer end of this chain there are connected 2 moorin lines consisting of pick-up wires, pick-up ropes and a towing rope (por side only). The nylon rope is supported by "doughnut" floats and th chain is hung by large plastic buoys 5 ft. in diameter and coloured re and yellow.

Hose Connection: After completion of mooring the boat which has bee holding the hoses clear during berthing will bring the floating hose t the ship's side and connect the derrick runner to the balance buoy. These are lifted aboard one by one and connected by distance piece whic was already connected to vessel's manifold by hose connection crew during mooring operation.

Unmooring: After the hose disconnection is completed, mooring rope are slacked off and then dropped into the water. Tug/work-boat will com alongside either before or after the vessel backs off the berth, whicheve is convenient, and will receive mooring and hose connection materials

TIDES: The maximum tidal range in this area is 6 ft., the average tida range at the Spring tide 3 ft. and the Chart Datum is 0.7 ft. below ISLW Tidal stream is variable according to the place and the lay of the lan But the flowing tide usually runs South-Eastwards and ebbing tide North Westwards. Speed of a current is around 2 knots at the highest.

"Tide and Current Table" is published annually by the Compan applicable to Mubarras and the surrounding area, and will be obtaine on application to the Company.

WEATHER: Local weather at Mubarras is almost similar to that of Jeb Dhanna and Abu Dhabi City, being extremely hot and humid in Summe Temperature sometimes soars as high as 50° Centigrade with almo 100 per cent humidity in July and August.

MEDICAL: The Company operates a small clinic at Mubarras. Master may obtain medical attention for ship's personnel from the ship's Agent who may in the case of serious illness or injury recommend treatment at the Abu Dhabi government hospital. The ship owner will be charged for all expenses incurred.

FRESH WATER: Not available at Mubarras except in case of extreme emergency.

FUEL: Not available.

FIRE-FIGHTING: Tug/workboat stationed at Mubarras Island is equipped for fire fighting and is usually on emergency stand-by during tanker loading operations.

CONSULS: No consular business is available at Mubarras. However, various countries have representations in Abu Dhabi.

REPAIRS: There are no repair facilities at Mubarras. However, radar and electronics repairs are available in Abu Dhabi and technicians can be sent to Mubarras for repairs through notifying the ship's Agent.

SURVEYORS: Lloyd's, ABS, Veritas Surveyors are available in Abu Dhabi and they can be brought in if ample notice is given to ship's Agent.

CUSTOMS: Under normal circumstances Customs Officers do not board tankers at this port but upon arrival the Master is required to submit to the Customs through the ship's Agent a manifest of any cargo to be landed at Mubarras.

After loading is completed the Mooring Master will sign on behalf of Customs an Outward Manifest and issue the port clearance. These will be handed to the Master by the Agent.

REPATRIATION: Not possible.

TIME: Local standard time at Abu Dhabi is GMT plus 4 hours throughout year.

GENERAL: *Engine:* The main engines and all gear must be in an operable condition and in a state of immediate readiness whilst the vessel is on the berth.

Stores: Provisions and deck stores not available.

Divers: The services of the Company diver may be available to vessels where it is essential that a diver's services are required to enable a vessel to sail. All requests for such services should be routed through the ship's Agent to the Port Master.

Currency: All currencies approved except Israeli.

Mail: Mail can be received and sent through ship's Agent.

Dry Cargo Discharge: A "T" shaped jetty at Mubarras Island can accommodate a vessel with maximum 12 ft. draft. Discharge of dry cargo must be arranged well in advance through ship's Agent in Abu Dhabi who will supply labour and barges from Abu Dhabi. No gear whatsoever is available at Mubarras.

SAFETY:

No Smoking: Smoking on board the ship is strictly prohibited except in the smoking room situated in the aft accommodation and which has been jointly agreed between the Mooring Master and the Master.

The responsibility for the strict observance of the safety of these rooms rests with the ship, and the Company reserves the right to prohibit smoking in these rooms also should situation require at any time.

Accommodation: All accommodation doors, port holes and ventilators must be closed during loading operations, and doors and openings to machinery spaces in vicinity of ship's tanks are also to be closed.

Galley and Boiler Fires: As a general rule, the use of galley and boiler is not permitted. However, those appropriately equipped are considered safe for use, and their use will be mutually agreed between the Master and the Mooring Master.

Radio Equipment: Radio, radar or other electronic equipment must not be energized while the ship is on the berth.

Air-conditioning Units: For safety, it is preferable that these units recirculate the air within the accommodation but their use when drawing air from outside the accommodation may be permitted provided that the Master and the Mooring Master agree that no danger exists. Should any gas be detected within the accommodation or should there be any danger of gas within the accommodation these units must be stopped and the intakes closed. Window-type air-conditioners are forbidden at all times.

Ship's Fire-fighting Equipment: This equipment must be in constant readiness at all times with sufficient people on board for its efficient operation.

Fire Watches: While the vessel is within the port area a continuous and efficient fire watch shall be maintained on deck and in the engine room by the ship's crew. Fire-fighting equipment shall be in instant readiness throughout the vessel and additional extinguishers must be available at the loading manifold while hoses are being connected and disconnected. Water should be available on deck service lines at all times and fire hoses connected at all fire stations for immediate use.

Swimming: No swimming in the sea berth area is permitted while vessels are on berth.

AUTHORITY: Abu Dhabi Oil Co. Ltd. (Japan), P.O.Box 630, Abu Dhabi, United Arab Emirates. *Tel:* Abu Dhabi 661100. *Telex:* 22260 Adoco EM. *Cables:* "Oiljapan Abu Dhabi". *Contact:* Mr. A. Yamashiro, Manager – Marine & Transport.

AGENT: National Shipping Gulf Agency Co. (Abu Dhabi) Ltd. are appointed by Abu Dhabi Oil Co. Ltd. (Japan) as exclusive shipping Agents for all vessels calling at Halat Al Mubarras Terminal. The address particulars are as follows:

National Shipping Gulf Agency Co. (Abu Dhabi) Ltd., P.O.B. 377, Abu Dhabi, United Arab Emirates, Cables: "Confidence", Abu Dhabi. Telex: 22248 ("Gacauh EM"). Tel.: 334300 (10 lines). Fax: 339350. After office hours 216613.

ETA messages shall be sent to National Shipping Gulf Agency Co. (Abu Dhabi) Ltd., cable address: "Confidence", Abu Dhabi, via Dammam Radio.

Under favourable weather and transmitting conditions communication can also be performed over the VHF radio on the following frequencies: standing by on Channel 16 (156.8 MHz) and transmitting on Channel 10, call sign "Confidence", Abu Dhabi.

PORT RASHID, Dubai: 25.16 N. 55.16 E. (See Plan)

FLAG: U.A.E.

DOCUMENTS: The following should be airmailed to Agent to arrive 48 hours prior to arrival of vessel.

8 Dangerous Cargo Lists.
3 Stowage Plans.
3 Hatch Lists.
8 Cargo Manifests.
1 each Bill of Lading.
3 Crew Lists.

Radio Officer's Report: May 1989.

Agent: 5 copies Crew List.

Customs:

2 copies Crew Declaration.
2 copies Goods in the Care of the Master (i.e. Foreign Currency).
2 copies Drugs and Firearms Declarations.
2 copies Bonded Stores List.

Quarantine:

1 copy Maritime Declaration of Health.
1 copy Vaccination List.

Immigration:

Officials will not board the ship. Shore passes are obligatory and can be obtained at the main gate. The Agent will provide the shore pass request forms and photographs if needed. Our ship was at the container terminal so this might be different to other parts of the port.

APPROACHES: Black and white Pillar Buoy, flashing every 10 secs. in position Lat. 25° 21′ N., Long. 55° 14′ E. Marked "Dubai Approach".

Main light in position Lat. 25° 13.5′ N., Long. 55° 17.3′ E. (Situated on top of the Dubai Trade Centre) Gp. Fl. (2) white every 30 secs. 157 m. above MHWST. Visible 30 miles. Also Racon Beacon with signal "TC".

Main leading lights on main breakwater front Position Lat. 25° 16.3′ N., Long. 55° 16.0′ E. Qk. Fl. every 0.5 secs. Rear Lat. 25° 15.5′ N., Long. 55° 16.0′ E. Occ. every 2 secs. Breakwater Entrance. Lee light Fl. (R) every 2.5 secs. Main light Gp. Fl. (2) green every 30 secs.

PILOTAGE: Compulsory. Pilot will board 24 hours a day, from a launch and a regulation pilot ladder must be provided, with manropes, and a lee given. Large vessels calling should provide an accommodation ladder with its lower platform within about 12 ft. above the waterline and a pilot ladder rigged on ship's side adjacent to the accommodation ladder platform.

The Master must sign the indemnity form provided by the Pilot before entering the harbour.

ANCHORAGE: Vessels should contact Dubai Port Control VHF, Channel 16 shifting to a working Channel as instructed. Failing instructions they should anchor approximately 2 miles from the port entrance. Holding ground – Generally poor.

RESTRICTIONS: Minimum depth in channel 13 m. Max. rise and fall 2.0 m.

Vessels not working cargo immediately may enter port at the discretion of the Port Authority. Vessels may leave at any time.

MAX. SIZE: Depth alongside at Port Rashid Container Terminal is 13 m. and the tide is not expected to go as low as zero height on average more than 55 days in any one year. Therefore, Port Rashid Authority are prepared to berth vessels up to 42 ft. draft, at minimum speed at all times, provided vessels can discharge in such a manner as not to trim so as to cause an increase in maximum draft.

Maximum draft at general cargo berths is 37.7 ft. Depths of water at general cargo berths varies from 30.5 ft. – 37.7 ft.

Vessels in excess of 850 ft. length overall will be berthed at the Harbour Master's discretion.

Port Rashid Authority consider that keel clearance is at the Master's discretion, and are prepared to berth vessels with minimum of 6 in. keel clearance.

RADIO: The Port Signal Station (call sign "Dubai Port Control") is fully equipped with VHF radio and watch is maintained 24 hours per day on Channel 16, switching to Channel 12 for port operations.

The Signal Station is situated at the seaward end of Berth No. 1 at a height of 57 ft. above sea level.

Vessels should contact the signal station by VHF Channel 16 and request berthing instructions.

Vessels should advise their Agents the arrival time, LOA, draft and position of bunkering points should bunkers be required. Amended ETA should be advised by VHF. Vessels Agents will in turn pass on the above information to the Port Authority.

HEALTH: Normal quarantine regulations apply and Pratique can be given by the Pilot on cargo vessels, always subject to the Health Authorities approval. Health Authorities only board when the vessel is alongside, except in the case of a suspected ship.

BERTHING:

Berth No.	*Length*	*Depth of Water (MLWS)*	
1-4	4×573 ft. (2,294 ft.)	No. 1	33 ft.
		No. 2	32 ft.
3-4			30 ft. 6 in.
5	600 ft.		30 ft. 6 in.
6-10	5×601 ft. (3,008 ft.)	No. 6-8	30 ft. 6 in.
		No. 9-10	35 ft.
11-15	5×599 ft. (2,996 ft.)		30 ft. 6 in.
16	700 ft.		37.7 ft.
17-24	8×600 ft. (4,864 ft.)		37.7 ft.
25	490 ft.		37.7 ft.
26-27	2×515 ft. (1,031 ft.)		37.7 ft.
28-30	3×597 ft. (1,792 ft.)		37.7 ft.
31-32	2×717 ft. (1,434 ft.)	No. 31	37.7 ft.
		No. 32	42 ft.
33-35	3×993 ft. (2,981 ft.)		42 ft.
S.O.T.			37.7 ft.
Depth over pipeline			37.7 ft.

General Cargo: 30 deep water berths with 17 storage sheds (each 120 m. × 60 m.) adjacent are available plus a coastal berth for small craft and vessels with less than 6.10 m. (20 ft.) draft. All berths are backed by extensive hard surface yard storage area.

Container Terminal: Comprising of Berths 31-35 with quay length of 1,350 m. served by 2×Tango 90 gantry and 2×Mitsubishi gantry cranes of 31 ton capacity and 2×Mitsubishi gantry cranes of 41 tons capacity. Storage area of 45 hectares with 8×CFS sheds on terminal of 400×200 ft. each.

Depth alongside: 13 m.

Working hours: 0700 to 1830 and 1830 to 0700 daily.

20 straddle carriers radio linked to controller 34 terminal/Ro-Ro tractors.

3×25 ton forklifts (2 Ro-Ro masted)

120×roll trailers

Bunkers and water available alongside.

Computer controlled stacking areas and container tracking available to Agents/Owners.

TUGS: Three tugs of 2,400 h.p. are available with fire-fighting, pollution and salvage facilities, the practice being to secure alongside with 2 tug ropes therefore, gangway and derricks should be secured in-board.

Tugs are fitted with VHF. Contact should be made via Dubai Port Control or the Harbour Master.

CARGO HANDLING: *General Cargo Working hours:* Saturday – Thursday, 1st shift: 0700 – 1400 hrs. Special shift: 1400 – 1600 hrs.; 2nd shift: 1830 – 0030 hrs. Special shift: 0030 – 0530 hrs.

Container Terminal: Shift arrangement. 0700-1830, 1830-0700, seven days a week, 365 days a year.

Working hours are at the discretion of the Port Operations Manager. Cargo is handled on Fridays and most Public Holidays. The Port Operations Manager may require full night work or special shifts in the interest of the Port. Overtime charges apply to all shifts worked outside of Normal 0700 hrs. – 1400 hrs. Saturday to Thursday, and all shifts worked on Fridays and Public Holidays.

Refrigerated cargoes should be stowed consignment by consignment, to facilitate discharge and Direct Delivery to consignees.

Each general cargo berth is provided with fork-lift trucks and tractor units and trailers.

Pallets are provided free of charge to assist cargo handling.

STEVEDORES: Ship's gangs are available for distribution to vessels through Agents, vessels should advise their requirements before arrival. The gangs board and operate under the supervision of ship's officers. No quay cranes are provided, so ship's derricks/cranes must be used.

MEDICAL: A comprehensive range of medical and dental services are available at Dubai.

TANKERS: Berth operated by Shell Markets (M.E.) Ltd. Capable of taking vessels up to 260 m. long. Max. draft 11.3 m., vessels of 11.3 m. but not over 11.6 m. draft may be berthed by arrangement with the Harbour Master at HW.

FRESH WATER: Available at all berths. Rate 20 t.p.h. per hose.

FUEL: Shell Bunker Fuels are available at Berths No. 1 to 4, 6 to 9 and 17 to 35 in addition to Tanker Berth and include fuel oil, thin fuel oils, diesel and gasoil, pumping rate 300 t.p.h.: 48 hours' notice should be given to local Agents or Shell Markets (M.E.) Ltd., P.O.Box 307, Dubai. Tel: 450451; Telex: 5478 DB; Cables: Shell Dubai. Marine Lubricants and chemicals are available for delivery to the ship.

Delivery of fuel oil and gas oil at the Petroleum Jetty via 12 in. loading line at up to 500 long t.p.h.

CONSULS:

Belgium
China

REPAIRS: All types of deck and engine-room repairs available.

Container repair yard located near container terminal.

DRY DOCK: *Dubai Dry Dock:* A complete ship repair facility East of Port Rashid. Vessels up to 1,000,000 d.w.t. can be docked. Approach areas dredged to 11.5 m. enclosed by breakwater.

Dock No. 1 370 m.×66 m. (350,000 tonnes)
No. 2 525 m.×100 m. (1,000,000 tonnes)
No. 3 415 m.×80 m. (500,000 tonnes)

Dockside Cranes:

2×120 tonnes Safe working load at 65.5 m. radius.
1× 25 tonnes Safe working load at 80.0 m. radius.
2× 15 tonnes Safe working load at 70.0 m. radius.

Tank Cleaning: Facilities available.

SURVEYORS: Cargo, Ship, Classification Societies and Salvage Association Surveyors available locally.

JOINING/REPATRIATION: Arriving crew holding valid Seaman's Book can be cleared from the airport and placed on board on the strength of a guarantee letter from the Agent to the Immigration Office.

According to the Immigration Regulation in force Agent is required to furnish the following Passport particulars to the Authorities for arranging the Transit Visa:

Full Name.
Father's Name.
Passport Number.
Place and Date of Issue.
Date of Expiry.
Place and Date of Birth.
Profession shown in the Passport.

At times Agent receives incomplete details and there were instances when Agent had to collect the full details from the transit passenger himself to process the application prior to his clearance.

It is absolutely essential that wives wishing to join their husbands onboard vessels off Dubai or Fujairah must carry a photocopy of their husband's Seaman's Book.

This is essential as if a photocopy of the husband's Seaman's Boo cannot be shown to the Immigration Authorities, the wife will b repatriated immediately.

Repatriating crew can be brought ashore with a similar guarantee tendering the air ticket to the Port Immigration Office. They must b picked up from the ship 24 hours prior to departure.

Persons with South African entry stamps on their travel documents will not be allowed to enter the United Arab Emirates.

AIRPORT: International airport, 3.2 km.

EMERGENCY CO-ORDINATION CENTRE: Coastguard located adjacent port. Tel: 450520.

TELEPHONES: Situated in sheds, no connection made to vessels.

SHIP SUPPLY SERVICE: Crew changes, delivery of ship's mail, stores, spares, etc., can be effected by service boats off Dubai or Fujairah. Service is carried out by Gulf Agency Co. (Dubai) Pvt. Ltd. See "Agent".

STORING: Complete shipchandling facilities available at short notice (via Agent).

SHORE LEAVE: Agents collect all passports on vessel's arrival together with 3 copies of Crew List. Temporary shore leave passes are issued by the Immigration Office against Passports and Crew Lists.

DEVELOPMENTS: Expansion of the Container Terminal Yard to incorporate areas of land presently outside the Terminal and proposal to increase gantry cranes and provision of additional CFS shed facilities awaiting authority to proceed.

AUTHORITY: Port Rashid Authority, P.O. Box 2149, Dubai, U.A.E. *Tel:* 451545 (PABX all depts.) *Telex:* 47530 ("Pra Em"). *FAX:* 450934 *Contact:* D. Gibbons, General Manager.

AGENT: Gulf Agency Co. (Dubai) Pvt. Ltd. P.O.B. 2404, Dubai, U.A.E. Cables: "Confidence", Dubai. Tel: (971-4) 457555 (12 lines – 24 hour service). After office hours 480424, 440193, 582859. Telex: 45448 45809 ("Gacdb Em"). Fax: 457202. Radio: Marine VHF radio, stand-by on Channel 16 (156.8 MHz) and SSB 2182 kHz, Call sign "Confidence Dubai".

Operators of ship-servicing and supply organisation: Crew changes, mail, spares and/or delivery of provisions undertaken at sea without deviation to serviced vessel.

Owners and Masters should contact G.A.C. Dubai by cable or telex regarding servicing requirements. Rendezvous positions are selected by Shipmaster.

RAS AL-KHAIMAH: 25.45 N. 56.01 E.

There is a jetty, length 100 m., suitable for berthing smaller vessels which is protected by a breakwater, and dredged to a depth of 3 m.

This is a small port for very small vessels only. *All* cargo vessels with cargo for Ras Al-Khaimah should assume discharge/loading will be carried out in Mina Saqr. For all other information, see entry for Mina Saqr.

Also see "Mina Saqr".

AUTHORITY: Ras Al-Khaimah Port Services, P.O.Box 5130 Ras Al-Khaimah, U.A.E. *Tel:* 66444. *Telex:* 99280. *Cables:* Minasaqr *Contact:* Captain Hazem Raouf Assaad, Port Manager.

AGENT: See "Mina Saqr".

SHARJAH (Mina Khalid): 25.22 N. 55.24 E. (See Plan)

DOCUMENTS: The following documents must be in the possession of the ship's Master on arrival or must be forwarded to ship's Agent prior to ship's arrival:

Immigration: The U.A.E. Immigration Department's office in Port Khalid, Sharjah operates 24 hours, 7 days per week. Master to submit Crew List, photographs of each crew member (photos not returned) and Passports/C.D.C. to Immigration Office on arrival. Passport/C.D.C. will be returned to vessel before sailing. Joining/leaving crew must report to the Immigration Office before proceeding to vessel/airport.

Customs:

2 Crew Lists.
2 Passenger Lists.
2 List of Alcoholic Beverages.
2 Cargo Manifests.

Port Operations:

2 Cargo Manifests.
2 Dangerous Goods List.
2 Stowage Plans.
Certificate of Registration.
Classification Certificates.

The original of all the ship's Certificates shall be produced to any Port Official on demand. Where a ship is more than 15 years old, a valid Certificate of Condition issued by a recognised Surveyor shall be on board.

Where Certificates are found to be invalid, the ship may be removed from the Port Area, at ship's expense and re-entry permitted only after validity has been established.

Failure to produce any Certificate to a Port Official when demanded renders the Master liable to a fine of up to Dh. 5000, and the removal of the ship from the Port Area.

PILOTAGE: Pilotage is compulsory for all ships entering and leaving the deep water harbour. On entry, Pilots will board to seaward of the Fairway Buoy; a pilot ladder should be provided. Port Khalid operates a 24 hour, 7 day week pilotage service. Notice is required before 2200 hrs. for pilotage requirements between 2400 hrs. and 0600 hrs.

ANCHORAGE: The Fairway Buoy in position Lat. 25° 22.9′ N. Long. 55° 22.9′ E. is a red and white pillar, Isophase every 6 secs. Vessels approaching should await Pilot to seaward of Fairway Buoy, anchoring if necessary.

Protected Anchorage: A limited number of vessels may anchor at moorings within the deep water harbour with prior approval of the Port Operator.

MAX. SIZE: Approach channel dredged to 12.0 m. MLLW. Max. draft 11.5 m.

HEALTH: Normal Quarantine Regulations apply.

Radio Pratique will be granted on receipt of radio message from Master, via his Agent, stating that no serious illness has occured during the preceding 30 days. All crew members must be in possession of valid cholera certificates. The Health Officer will only board when the vessel is alongside.

RADIO: *Notice of Arrival:*

Vessels should advise their Agent ETA Port Khalid, giving draft, LOA, and intended cargo operations to be performed, at least 72 hours prior to arrival.

Agents should arrange berthing and labour with the Port Operator.

VHF: Vessels should contact Port signal station on VHF Channel 16 (call sign "Sharjah Port Control") when within range. Working Channels 6, 12, 11, 74 and 67.

TUGS: Tug services are available for all ships entering the deep water harbour. At the discretion of the Port Operator ships may be obliged to use the services of a tug or tugs.

Tugs are fitted with VHF.

The harbour tugs are fitted with fire fighting hoses and monitors and foam tanks.

BERTHING: Arrangements made with Harbour Master by ship's Agent for necessary berthing as required.

Berth No.	*Depth at MLLW*	*Usage*
1A	11.5 m.	Containers
1	10.5 m.	Containers
2	10.5 m.	Containers
3	8.5 m.	General Cargo
4	8.5 m.	General Cargo
5	9.5 m.	General Cargo/Ro-Ro
6	9.5 m.	General Cargo/Ro-Ro
7	9.5 m.	General Cargo/Ro-Ro
8	8.5 m.	Reefer
9	8.5 m.	General Cargo/Reefer
10	8.5 m.	General Cargo
11	9.5 m.	General Cargo

Total length Berths No. 1A, 1 and 2 – 575 m. Total length Berths No. 3, 4, 5, and 6 – 725 m. Deep water Berth No. 6 – 274 m. Berth No. 7 – 220 m.

Total length Berths No. 8 and 9 – 360 m. Berth No. 10 – 210 m. Berth No. 11 – 195 m.

Equipment: The Sharjah Container Terminal (SCT) which comprises Berths No. 1A, 1 & 2 in the deep water harbour is equipped with 2 Liebherr T115 35 tonne gantry cranes; 2 Valmet 30 tons SWL transtainers. SISU TV10 tugmaster tractor units for Ro-Ro top lift container handlers and forklifts; LCL facilities available; 44 reefer points for containers. These berths are also equipped with specialised equipment to handle containers in the storage area. Each berth is provided with fork lift trucks, trailers and yard hustlers to facilitate the movement of cargo. Pallets are available to assist cargo handling. 2 heavy lift mobile cranes of 40 tons and 90 tons capacity are available on request from the Port Operator. Other equipment, including cranes, trailers, etc., will be made available upon request to the Port Operator with 24 hours' notice.

Lighterage; Lighterage services are available.

Storage Facilities: Storage facilities consists of 11 sheds (2 of which are located in the Container Terminal area) having an area under roof of 28,000 sq.m. In addition, hard surfaced yards and Sharjah Container Terminal Stacking/Packing area provide extensive storage capacity.

Cold Store: A 5,000 ton capacity cold store (frozen and chilled) is located at Berth No. 8 with mechanical handling from ship's hold to store. Second cold store of 3,500 tons capacity also available.

STEVEDORES: The port will operate on a 24 hour, 7 day week basis ashore and afloat. Additional charges will apply outside normal working hours which are defined as follows:

Saturday to Thursday except public holidays.

First shift	0600 to 1400 hrs.
Second shift	1400 to 2200 hrs.
Third shift	2200 to 0600 hrs.

Overtime Rate Applicable:

General Cargo/Container Vessels: 3rd shift, Fridays and holidays.
Reefer Cargo Vessels: Fridays and holidays.
Car Carriers: Nil.

Normal working hours are subject to change during Ramadan, when working hours will be at the discretion of the Port Operator.

Requirements for port labour must be submitted by ship's Agent to the Port Operator by 1600 hrs. for work during the first shift on the following day and by 1100 hrs. on the same day for work during the second and third shifts.

MEDICAL: Upon application to ship's Agent, medical examination of crew members can be arranged. Personnel will either be sent to private Doctor or to Public Health Department, as circumstances dictate. Serious cases will be referred to Government Hospital Doctor. Distance to Al Qassemi Hospital in Sharjah is 8 km.

TANKERS: Tanker jetty situated in harbour on main breakwater. Max. size 60,000 d.w.t. Max. draft 9.5 m. Limited bunkering facilities.

DENSITY: 1025/1028.

FUEL: Deliveries of fuel oil, gas oil or blends may be arranged through vessel's Agents. Marine lubricants will be delivered to ship's side. Both services require 48 hours' notice.

FRESH WATER: Fresh water is obtainable at all berths.

REPAIRS: Good facilities for repairs. Divers available. Largest vessel for repairs 220,000 d.w.t.

DRY DOCKS: None.

SURVEYORS: Services are available upon request.

REPATRIATION: Proximity of Sharjah International Airport will permit efficient crew changes and repatriation. Off-shore crew changes facilities can be arranged.

Transit visas are not required for crew changes. Ship's passengers require a valid visa for transit or temporary stay.

AIRPORT: Dubai and Sharjah. Distance to Sharjah International Airport is 15 km.

HOLIDAYS: The following are days that will be observed as public holidays. Premium tariff rates will apply on these days.

1st January	New Year's Day
*22nd February	Ascension of the Prophet Night
*26th April	Eid al Fitr
*27th April	
*28th April	
*2nd July	Eid al Adha
*3rd July	
*4th July	
*5th July	
*23rd July	Hiriji New Year
11th October	Prophet's Birthday (Eid al Mawled)
2nd & 3rd December	U.A.E. National Day

*Dates are subject to change from year to year.

TIME: GMT plus 4 hours. Permanent.

SHORE LEAVE: Shore leave is permitted for crew members (0800 hrs. – 2000 hrs.) provided identification card or seaman's papers are deposited with Immigration office situated in the port and collected upon return. Also see "Documents."

GENERAL: *Pollution:* The provisions of the Sharjah Maritime Law shall apply with respect to the operation of vessels in Sharjah Coastal Waters. Garbage disposal services are provided by the Port Operator and are compulsory.

Ship's Chandlers: Complete ship chandlering facilities are available, handling provisions, laundry and bonded stores.

Chart: B.A. Chart No. 3714.

National Restrictions: No alcoholic beverages, explosives, firearms or contaminated food.

AUTHORITY: Sharjah Port Authority, P.O.Box 510, Sharjah, U.A.E. *Tel:* (06) 541666. *Telex:* Seagul EM 68138. *FAX:* (06) 541425. *Cables:* Seagul. *Contact:* Sheikh Saud Bin Khalid Al Qasimi, Chairman of Ports and Customs. Sheikh Abdul Rehman Bin Salem Al Qasimi, Deputy Chairman of Ports and Customs. Abdul Aziz Suleiman Al Sarkal, Director General of Ports. Mr A. Ashcroft, Port Engineer. Captain Mohammed Saleh – Port Operations Manager. Captain Maghdad Al Suwedy, Harbour Master. Mr. Simon Keen – Marketing Manager.

AGENT: Gulf Agency Co. (Sharjah) W.L.L., P.O.B. 435, Sharjah, U.A.E. Cables: "Confidence" Sharjah. Tel.: 544446. After office hours 354249. Telex: 68019 ("Gacshj EM"). Fax: 524091. Radio: Marine VHF radio, stand-by on Channel 16 (156.8 MHz). Call sign: "Confidence" Sharjah.

Air-freighted spare parts and ships' mail to Sharjah should be addressed to GAC Sharjah, but sent to Sharjah International Airport or Dubai Airport marked "Ship's Stores In Transit for M/S . . ." Certificates of Origin should follow the airwaybill or in cases of emergency be sent to GAC Sharjah, soonest after shipment. Cable "Confidence" Sharjah, of flight details and airwaybill number.

UMM AL NAR, Abu Dhabi: 24.27 N. 54.29 E.

(See Plan)

LOCATION: The Umm Al Nar Petroleum Port is situated at the South Eastern tip of Abu Dhabi Island and consists of 2 island type berths connected to the shore through a causeway. Vessels will use Mina Zayed and Khawer Al-Bhagi navigation channels to the Port. The total length of both channels is 16 nautical miles. Vessels will berth port or starboard side to, at the discretion of the Pilot.

APPROACHES: *Water Depths:*

The channel depths are as follows:

(a) 13.0 m. for Mina Zayed navigation channel.

(b) 11.0 m. for Khawer Al Bhagi navigation channel keeping in mind that all levels are relative to C.D.

MAX. SIZE: The 2 jetties have been equipped with marine facilities to accommodate vessels having the following characteristics:

Max. size of vessel	30,000 d.w.t.
Min. Size of vessel	5,000 d.w.t.
Length overall	170 m.
Beam (max.)	26.50 m.
Draft (max.)	9.25 m.

HEALTH: Masters will be required to produce the standard International Bill of Health.

RADIO: *Arrival Telegram Ship/Shore:* On ship's arrival at the pilot station, a telegram shall be passed to the refinery through the ship's Agent with the following information:

ETA at berth.
Arrival draft.
Estimated departure draft.
Quantity and type of Cargo/Cargoes.
Vessel's maximum loading/discharging rate.
Quantity of dirty ballast and discharging rate.
Quantity of clean ballast to be discharged overboard and time required.
Size of manifold.
Are reducers to 6 in., 8 in. and 10 in. available on board?
Any vessel's requirements.
Master's Name.

BERTHING: Umm Al Nar Refinery Jetty consists of 2 berths, each of which accommodates vessels in the range of 5,000 d.w.t. to 30,000 d.w.t. and is provided with the following facilities:

(a) Loading platform.
(b) 4 mooring dolphins.
(c) 5 breasting dolphins (with 2.16 m. berthing line).
(d) 4 × 60 ton quick release hooks with capstan.
(e) 2 × 30 ton bollards.
(f) Hydraulically operated gangway.
(g) 2 fire-fighting monitor towers.

Each platform is provided with 6 loading arms having the following flexibility:

*No.**	*Size of Flanges inches*	*Cargo Flexibility*	*Max. Rate cu.m./hr.*
1	6	Lub. oil	400
2	8	A.T.K.	1,000
3	6	Straight Run Residue	500
4	8	Mogas	1,000
5	10	Gas oil/Naphtha	1,500
6	10	Straight Run Residue/Ballast	1,000
7	3	Fresh water	13

*The loading arm numbers are from the gangway side.

Berthing Aids: Umm Al Nar Refinery Jetties are equipped with navigational aids to allow safe navigation during day and night, namely:

(a) 2 white coloured leading lights to affix navigation for channel's centre line, placed ashore at 5.0 m. and 11.0 m. above the ground level.
(b) 6 navigation lights with radar reflectors to define basin limits.
(c) Each jetty is provided with 4 red coloured lanterns, 2 at each end, at 5.0 m. above deck level. This is in addition to the operational flood lights.
(d) Each mooring dolphin is provided with flood lighting.

Moorings: When at berth, vessels must be moored to the entire satisfaction of the Pilot. The breasting dolphins are each equipped with 60 ton quick release hooks and a power operated capstan. the mooring dolphins are each equipped with 60 ton quick release hook and a power operated capstan.

Vessels must be ready at all times to put out extra moorings as requested by terminal personnel, or as dictated by weather changes. It is the Master's responsibility to ensure that vessel's mooring lines are checked frequently to prevent excessive movement of the vessel in berth, which could activate the ESD/ERS systems and/or cause severe damage to the loading arms and other terminal equipment.

LOADING/UNLOADING: Also see "Berthing."

(i) The Master must give the Terminal a "Stand By" warning 10 minutes before being ready to commence loading or discharging.
(ii) Upon "Commence Loading" from the Master or his deputy only 1 pump will be used to ensure a slow flow rate until it is established that all systems are operating correctly and pressures are constant. Full loading rate may then be ordered.
(iii) The vessel's cargo tanks shall be inspected prior to and during loading and should it be found that tanks are not tight all loading shall cease, the vessel be rejected and further loading refused. The vessel will not be accepted later until satisfactory evidence of repair is produced duly certified by ABS, Lloyd's or other officially accredited classification society or surveyor.
(iv) During the hours of darkness vessels loading/discharging products, lub. oil or ballast shall rig overside lights to illuminate the surface of the sea around the ship to the Terminal Operators satisfaction to ensure that any oily products on the surface may be detected quickly and early action taken as appropriate.

Deballasting: The jetties are equipped with dirty ballast/slops receiving facilties. Vessel discharging dirty ballasts/slops ashore will use the deballasting arm. The maximum ballast reception rate is 1,000 cu.m./hr. Prior to arrival the Master is to advise Umm Al Nar Refinery (through the arrival telegram) how much dirty ballast/slops on board to be discharged to the shore facilities. (A "Declaration Letter" is provided for Master's signature) accepting clean ballast for overside discharge is subject to a declaration signed by the Master and delivered to the terminal representative.

Communications: To maintain the necessary continuous communications between refinery, vessels and shore control rooms during cargo operations and also in emergencies, the vessel will be provided with a walkie-talkie set. It is required that this set must remain at all times with the officer responsible for the cargo operation.

FRESH WATER: Fresh water is obtainable at Refinery berths and should be arranged through the Ship's Agent.

FUEL: No Bunker facilities in Umm Al Nar Refinery Terminal.

GENERAL: *Customs:* Custom's officers will board the ship on arrival and prior to sailing for necessary port clearance.

Stores and Provisions: Stores and provisions are not permitted to be loaded at Refinery berths and must be taken on board in the anchorage.

South Basin: The South Basin has been closed for shipping recently due to its proximity to the intakes of the Power Station.

AUTHORITY: Petroleum Ports Authority – ADNOC, P.O.Box 89 Abu Dhabi, U.A.E. *Tel:* 6023450/1 and 6026386. *Telex:* 22215 ADNO EM. *FAX:* 6026213. *Contact:* Captain H. Masri, PPA – Manage Captain A. M. Massoud, Port Officer.

AGENT: See "Mina Zayed".

ZIRKU ISLAND, Jazttzarakku Island, Abu Dhabi: 24.52 N. 53.04 E. (See Plan

LOCATION: Zirku Island is located at 24° 52′ N., 53° 04′ E approximately 75 nautical miles W.N.W. of Abu Dhabi.

It is 5 km. long and 2.5 km. wide.

A zone of very rugged hills with ridges is located in the N.N.W. wi an elevated point of 163 m. and a low flat sandy and dusty zone in th S.S.E. where the airport lies.

(A) SERVICE HARBOUR
(B) OIL TERMINAL

(A) SERVICE HARBOUR

PORT LIMITS:

(a) Lat. 25° 03.0′ N., Long. 52° 53.3′ E.
(b) Lat. 25° 00.0′ N., Long. 52° 53.3′ E.
(c) Lat. 24° 48.9′ N., Long. 53° 04.8′ E.
(d) Lat. 24° 48.9′ N., Long. 53° 11.0′ E.
(e) Lat. 24° 56.8′ N., Long. 53° 11.0′ E.
(f) Lat. 25° 03.0′ N., Long. 53° 04.4′ E.

Refer to British Admiralty Chart 3778.

NAVIGATION: *Manoeuvring and Navigation:* All vessels shou manoeuvre and navigate within the port in accordance with th International Regulations for the Prevention of Collision at Sea.

Lights and Shapes: All vessels should exhibit such lights and/or daytim marks as defined by International Regulations for the Prevention o Collisions at Sea.

Special attention should be paid by vessels, barges or tugs moore or anchored in the vicinity of the jetties which should show at night th lights defined in these regulations.

High Tide Manoeuvres: Deep draft vessels and barges will be berthe at high tide only.

Shallow Water: While proceeding to the jetties, Masters should pa sharp attention to navigation due to the presence of shallow wat existing in the vicinity.

Caution: Masters should consider the possibility of having less wat than predicted by tide tables after a long period of bad weather.

Harbour Facilities: No tugs or mooring launches are presently availab accordingly, vessels calling at Zirku harbour should have very goo manoeuvrability.

Navigation Aids:

1. Flashing lighthouse (Zirku, Zarakuh or Zarqa) located at the to of the pylon on the hill.
Height = 200.86 m.
Lat. 24° 53.0′ N. Long. 53° 04.1′ E.
One flash every 10 seconds.

2. Flashing lighthouse at the end of the sea water intake.
Lat. 24° 53.0′ N. Long. 53° 05.3′ E.
Height = 9 m.
V.Q. (3) 5 secs.

3. Flashing lighthouse at the end of the main jetty.
Lat. 24° 52.3′ N. Long. 53° 05.5′ E.
Flash = Fixed and flashing (1) 10 secs.
Height = 11 m.
Colour = Green.
Obscured approximately 70° – 150° (80°).

4. *Aero Lights* (occasional).
Located on the airport control tower (green).
Lat. 24° 51.6′ N. Long. 53° 04.6′ E.
Located on the hill (red).
Lat. 24° 52.5′ N. Long. 53° 04.1′ E.
Height = 67 m.

5. *Two Flares:*
Lat. 24° 52.5′ N. Long. 53° 04.3′ E.
Height = 145 m.
Fixed red lights.

6. *Pylon on the hill top.*
Height = 200 m.
Fixed red lights.

7. *Anchorage Buoy.*
Lat. 24° 51.3′ N. Long. 53° 06.9′ E.
Yellow cylindrical.
Flashing yellow (1) 5 secs.

8. *Zirku Flare Platform "ZFP".*
Lat. 24° 51.5′ N. Long. 53° 02.6′ E.
Height = 85 m.
Mo "U" every 15 sec.
Range = 15 miles.

ANCHORAGE:
Waiting Anchorage: Small vessels and barges waiting for a berth alongside the main jetty can anchor beyond 0.5 mile in the S.S.E. of the end of existing jetty in approximately 7 m. of water depth.

Three fixed mooring buoys without lights have been installed at around 0.7 mile in the South and S.E. of the main jetty.

Sharp lookout must be kept when navigating in these areas.

An anchoring buoy (yellow Fl. (1) 5 secs.) has been installed in position: Lat. 24° 51.3′ N., Long. 53° 07.0′ E. marking the N.E. corner of the waiting anchorage area (see Admiralty Chart 3778).

Prohibited Anchorage Areas: To avoid the underwater oil pipe-lines being damaged, prohibited anchorage areas are defined as follows:

0.5 nautical miles on each side of the M.O.L. (Main Oil Line) input line.

0.5 nautical miles on each side of the loading lines.

0.5 nautical miles on each side of the SATAH lines.

M.O.L. input line from Zakum field comes ashore on the middle of the East Coast.

Loading lines to the oil terminal SPMs leave the Island from the N.N.W. point of the Island.

Anchorage Berths and Moorings: All vessels or barges entering the port should occupy such anchorage berth or mooring as may be directed by the Port Supervisor and shall move to any other anchorage, berth or mooring as and when required by this authority.

No vessel or barge shall shift or change the anchorage, berth or mooring allotted without Port Supervisor authorisation except if instructed to do so.

No claim will be accepted by Company for berthing or mooring due to arrival priority.

RADIO: International VHF Channels 64, 68 and 19 have been allotted to "Zirku Island Traffic". Permanent watch maintained by "Zirku Island" on Channel 68, semi-duplex for vessels to Zirku Island and vice versa.

When contact established, change to Channel 64.

Channel 68 is to be used for ship to ship calling and conversation.

ARRIVAL ADVICE: *Notice of Arrival:* Vessels and barges calling at Zirku harbour should advise their ETA at least 48 hours before their arrival by telex to Zirku Marine.

In case of change of the scheduled ETA by more than 6 hours Zirku Marine should be informed by the same way.

Confirmation of ETA should be sent a few hours before arrival at Zirku as soon as a radio link can be set up on VHF Channel 62 or 68 with "Zirku Island" radio room.

Berthing prospects will be given to incoming ships by "Zirku Marine" at this time. If the vessel is instructed to anchor, she must keep a permanent watch on VHF Channel 16, 62 or 68.

During berthing operations contact will be set up with "Zirku Marine" on VHF Channel 68.

Arrival Message: The first message should be sent according to the following form but any items which are the same as a recent previous voyage to this port may be omitted.

Name of vessel (tug or barge):
ETA Zirku.
Type of vessel.
Length.
Width.
Max. draft on arrival.
Cargo loaded (briefly).
Contractor charterer.
Name of Master.
Coming from and ETD.

BERTHING: Zirku Island Harbour is a private port, hence only vessels and barges chartered by the Company Zadco (Zakum Development Company), acting on behalf of ADNOC (Abu Dhabi National Oil Company) and its contractors are allowed to moor alongside the jetties.

Jetties: The main jetty located on the East coast of the Island is allotted to the general supplying of the Island and the transit of equipment for the Company.

Temporary jetty "A" (on the South of the Island) is now completely silted up.

Temporary jetty "B" (on the West of the Island) is now deteriorating and no longer in use.

Vessels: Contractors shall charter tugs, barges, landing crafts, supply boats, etc. whose dimensions, weight and draft are suitable to the existing jetty.

Emergency use: Other craft may use this harbour only in emergency and must immediately report their arrival to the Port Supervisor.

All craft using the harbour are subject to the control of the port operating company representative. (Zirku Marine Superintendent or his deputy) and the Port Petroleum Authority (Port Officer)

Berth Occupancy: The Port Supervisor will define the allocation of berth in accordance with the Company's requirements of priority upon Manager's recommendations.

Contractors should start discharging as soon as vessel or barge is berthed and should unload until all the cargo has been discharged.

Contractors should not store their cargo on the jetty. They must remove it as unloading proceeds.

Vessels and barges should leave as soon as the handling of cargo is completed in order to free the quays. The Port Supervisor can order vessels and barges to leave the quay at any time (even though not completely unloaded), so they must be able to move, therefore barge shall keep a tug alongside during the whole time of unloading.

BERTHING FACILITIES: *Main Jetty:* The main jetty located on the East coast of the island is approximately 1,200 m. long and orientated N.W./S.E.

The quay at the end of the main jetty has a water depth of 2 m. and is 12.5 m. long (41 ft.) at the inward end; 2.3 m.×40.5 m. long (132 ft.) in the centre and 3 m.×57 m. long (187 ft.) at the seaward end (water depth is calculated under chart datum C.D.)

The quay is fitted with 8×30 ton bollards, 12 pairs of rubber fenders from a level of 1.50 below C.D. to top of quay level and 3 steel ladders running from a level of 1.50 m. below C.D. to the top of quay level.

The quay available for berthing is 110 m. long (360 ft.) orientated N.W./S.E. as is the main jetty breakwater.

At the inward end a 20 m. long quay orientated S.W./N.E. is available for small launches though badly equipped with mooring points.

The Port Supervisor Office and Police ward room are located on the top part of the jetty. The jetty working area has been asphalted.

CRANES: Mobile cranes up to 100 tons are available.

Contractors have to supply the Island with their own mobile equipment to discharge vessels and barges, if not previously arranged with Company.

As soon as the unloading is completed users should remove their mobile equipment to keep the jetty area clear.

Location of Cranes: The main quay can bear anywhere a 30 ton crane (up to 45 tons for exceptional cases). For heavy loads two locations are defined as follows:

100 tons crane: one rectangle of which axle is situated at 15 m. from the inward end of the quay.

300 tons crane: the centre of the crane must be situated at 15 m. from the edges of the jetty seaward end.

MEDICAL: A medical officer is resident on the Island for emergency cases only. The Company maintains a small hospital.

FRESH WATER/FUEL:
Water and Fuel Loading and Unloading Critical Area:

Connection pipes are located on the inward and outward ends of the quay.

Inward end of the quay is fitted with 3 in. and 1 in. diesel oil connections and with 3 in. fresh water connection.

The outward end of the quay is fitted with 3 in. connections for fresh water and diesel oil and 8 in. line for fresh water. The Ship's Master should apply the safety rules and inform Zirku Marine about any unsafe conditions.

Ships coming for diesel oil or fresh water should be fitted with sufficient length of hoses to be connected to the Island fixed pipe.

A safety ball valve is required on shore and diesel oil hose.

SAFETY: *Reporting of emergency:* Should any vessel be in danger through fire, explosion, collision or whatsoever cause, the Master should immediately report the fact to the Port Supervisor and Port Officer (Petroleum Port Authority) by VHF Channel 62 or 68.

When alongside the main jetty they can report through the shore telephone system located on the jetty. Grey for Island Network, Red for Safety.

Phone Numbers:
Day and Night: Safety 56333
Radio Room 56666/56403
Clinic 56222.
Day: Marine Superintendent 56400.
Port Officer (PPA) 56471

Fire fighting equipment: There are 2 monitors and 3 hydrants supplied by a 12 in. pipe able to reach any point of the main jetty on emergency call.

Ship's fire fighting equipment: This equipment must be in constant readiness at all times with sufficient skillful personnel on board for its efficient operation.

Particular safety requirements for vessels unloading inflammable products:

All cargo/bunker tank lids must be closed.

A fire fighting hose must be ready for use and supplied with water near the piping and connection on the deck.

In the same way extinguishers must be disposed on the deck.

Cargo/bunker hoses must be properly rigged without leakage.

Cargo tanks being discharged and open to atmosphere must be fitted with an agreed venting system.

Foam and/or dry powder monitors, if fitted, shall be ready for use.

Portable fire extinguishers, shall be conveniently placed for use near the ship's hoses' connection.

A checking will be performed by the Safety Supervisor jointly with the Port Supervisor and the vessel's Master, and a form will be signed by the same, after which offloading of said hazardous cargo will be authorized.

EMERGENCY: *Emergency moving of vessels:* In case of accident vessels shall be able to move quickly, so no repairs to engines are allowed when alongside for self propelled vessels. Barges shall keep a tug alongside during the whole time of unloading.

WEATHER: *Winds:* Four kinds of winds on the Islnd: The most frequent (54% of the time) are named Shamals they blow from W.N.W. to N. principally in Winter. From N.N.E. to E.N.E. some 20% of the time the Noshi. Local effects of Monsoon, the Kaus blows from E. to S. 17% of the time.

Finally, during the Winter only, and 9% of the time blows from W.S.W. to W. the Suhaili.

Tides: Around Zirku Island the tide is of mixed type with small diurnal predominance, however this semi diurnal effect is not of great significance and for all practical purposes it can be taken that there is only one high water and one low water per day.

The mean spring tide range is approximately 1.2 m. The maximal range would be of about 1.4 m. The mean usual range would be 0.9 m.

Zirku Island tide prediction supplied by operating company, copy can be obtained from Marine Zirku.

There is a tide recorder on the main jetty. Tidal information also available from Zirku Marine on VHF, Channel 68.

Tidal Currents: At Zirku Island tidal currents are semi diurnal roughly flow runs from West to East and Ebb runs from East to West. Eddies are created at vicinity of any obstacle, (breakwater, jetties etc.) especially close to the South sandy end of the island. Currents can reach a speed of 2 knots. It is expected that these data are profoundly changed by winds, especially Shamal.

SHORE LEAVE: No person may go on shore without authorisation from the Zirku Police Authority and only if handed a shore leave or permanent authorisation card.

GENERAL: *Marks:* Name or number and draft marks should be readable from the jetties.

Unsuitable Vessels: The Port Officer reserves the right to refuse berthing and unloading of any vessels considered unsuitable by reason of inadequate or unsatisfactory mooring equipment, insufficient derrick capacity, insufficient fender protection, overloading, inability to comply with the safety regulations or any circumstances which would create unusual risk to the Company's jetties, quays, facilities, personnel and equipment whatsoever.

Prevention of Sea Pollution: It is strictly prohibited to discharge or throw overboard oil, oily water, chemicals, ashes, bilge water or other refuse within the port limits that may result in pollution of the sea.

International oil pollution conventions must be strictly observed by all vessels or crafts.

The Master of any vessel contravening this rule so as to cause pollution shall be charged with an offence against these rules and upon conviction be liable to a fine and shall be incurred in the removal of such pollution.

The harbour users, Contractors and all vessel Masters, before leaving and/or sailing should make sure that jetty area is clean and all their refuse has been removed.

National Courtesy Flag: All vessels calling at Zirku are required to fly their national flag and the national flag of Abu Dhabi.

Swimming & Diving: No person shall swim or dive from or near any vessel or alongside quay or berth.

No person shall engage in diving with the assistance of breathing apparatus within the above mentioned areas without the permission or instruction from the Port Authority.

(B) OIL TERMINAL

PORT LIMITS: The port area of Zirku Petroleum Port covers the area bounded by straight lines connecting the following points:

A:	Lat. 25° 03′ N. Long. 52° 53.3′ E.	B:	Lat. 25° 00′ N. Long. 52° 53.3′ E.
C:	Lat. 24° 48.9′ N. Long. 53° 04.8′ E.	D:	Lat. 24° 48.9′ N. Long. 53° 11′ E.
E:	Lat. 24° 56.8′ N. Long. 53° 11′ E.	F:	Lat. 25° 03′ N. Long. 53° 04.4′ E.

Masters of all vessels entering the port must follow instructions given by the Company's Marine Superintendent as to approach, anchoring, berthing and unberthing.

DOCUMENTS: On arrival the tanker should prepare the following documents to be handed over to the different authorities coming on board:

Tanker Enquiry Form (ZADCO Form).
Navigation Aids Dues Certificate (M.E.N.A.S. Form).
Notice of Readiness.
Crew List.
Certificate of Registry.
Load Line Certificate.
Safety Certificate (Equipment).
Oil Liability TOVALOP/CLC.
Derat Certificate.
Radio Certificate.
International Oil Pollution Prevention Certificate.
Suez Canal Tonnage Certificate.
Panama Canal Tonnage Certificate.

PILOTAGE:

1. *General:* On arrival and on departure the pilotage is compulsory within the Port Limits. The Company reserves the right to render the pilotage compulsory through the departure route for any reason. Nevertheless, upon Masters request Zirku Pilots could assist any tanker on Zirku Departure Route to and from Buoy No. 6 (Lat. 25° 13′ N., Long. 52° 59′ E.). Within Port Limits and on Zirku Departure Route the speed *shall not exceed 8 knots.*

2. *Direct Berthing:* Instructions for berthing having been received by voice communication the tanker should proceed to the agreed Pilot boarding point.

3. *Waiting:* In case of a berth not being available, the approaching tanker will be instructed to proceed to an anchorage area and anchor at the agreed location. The tanker will wait at this allotted location until further instructions.

4. *On Departure:* A Pilot will assist loaded tanker as stipulated in No. 1 above.

5. *Pilot Access:* The Pilot access should be in good condition, safe, clean and ready. Pilot ladders constructed of light material such as aluminium will not be accepted. Where the freeboard exceeds 10 m. the vessel should have a combination of accommodation ladder and pilot ladder rigged. The bottom of the accommodation ladder shall be at least 7 m. above the water line.

6. *Pilot Embarkation:* To embark the Pilot safely, the incoming tanker should reduce speed (no more than 5 knots), make a good lee to minimise adverse weather conditions and take the way off. On the tanker's deck the boarding of the Mooring/Loading Master should be attended by at least one officer and one A.B.

7. *Pilot Boat:*

Name	Jarada
Engine	2×955 h.p.
Speed	20 knots
Marked	Zirku Pilot
Fibre Glass Hull	

NAVIGATION AIDS:

Separation Scheme: A traffic separation scheme between Zakum Fie and Umm Shaif Field crosses the port area.

This scheme includes:
(a) A separation zone, 0.75 nautical miles wide.
(b) A traffic lane for Westbound traffic, 1.25 nautical miles wide.
(c) A traffic lane for Eastbound traffic, 1.25 nautical miles wide.

The main traffic directions are: 050° – 230°
072° – 252°

This scheme is marked by the following two light buoys.

1. Zakum Middle
Lat. 25° 59.15′ N. Long. 53° 08.50′ E.
R.W.V.S. Pillar L.Fl. 10 sec.

2. Zakum West
Lat. 24° 56.60′ N. Long. 52° 59.85′ E.
R.W.V.S. ISO 6 sec.

Reference Charts: British Admiralty 3733, 3952, 2889, 3778.

Zirku Island:

Zirku, Zarakuh or Zarqa beacon:
Lat. 24° 53.0′ N. Long. 53° 04.2′ E.
Fl. 10 sec. 22 miles Height 200 m.

Main Jetty:
Lat. 24° 52.2′ N. Long. 53° 05.4′ E.
Fixed Green 7 miles and Flash 10 sec. Height 11 m. 9 M.

Sea Water Intake:
Lat. 24° 53′ N. Long. 53° 05.3′ E.
3 Fl. W. 5 sec. Height 9 m.

Radio Tower:
Lat. 24° 53′ N. Long. 53° 04.1′ E.
Fixed Red light – Height 198 m.

Zirku Flare Platform 'ZFP':
Lat. 24° 51.5′ N. Long. 53° 02.6′ E.
Flashing White light, morse "U" every 15 sec. Range 15 miles.

Flares:
Lat. 24° 52.5′ N. Long. 53° 04.3′ E.
Fixed Red light – Height 145 m.

Repeater Platform:
Lat. 25° 01.7′ N. Long. 52° 55.7′ E.
2 White flashing lights Morse "U" 15 sec. at level +18 m.
2 Red lights at level +34 m.
2 Red lights at level +51 m.
Horn Morse "U" every 30 sec.

Isolated Danger Mark:
Capped well-head.
Lat. 24° 59.8′ N. Long. 52° 57.1′ E.
Black-Red-Black – Pillar Fl. 2.5 sec.

Navigation Warning within Port Limits:

All vessels transiting through the Zarakkuh Port Limits are to follo the following procedures:

1. Vessels transiting along the Separation Zone may do so as norma

2. Vessels intending to cross the Separation Zone Northwards mus inform Zarakkuh Radio on Channels 16 or 68 of their intention and follo the instructions given.

3. Vessels Southbound, intending to cross the Northern Port Limits must inform Zarakkuh Radio of their intention on Channels 16 or 68 an follow the instructions given.

4. No vessel is to pass between Buoy No. 1 (Lat. 25° 02′ N., Long 53° 00.8′ E.) and the oil loading terminal or enter the no unauthorise entry limts around the oil loading terminal or the Repeater Towe (Lat. 25° 01′ 42″ N., Long. 52° 55′ 40″ E.), or "ZFP" (Lat. 24° 51.5′ N. Long. 53° 02.6′ E.).

MAX. SIZE: The SPMs are suitable for berthing tankers fro 30,000 d.w.t. up to 350,000 d.w.t. loaded at 80% of their capacity.

The max. draft allowed for departure is 21 m.

ANCHORAGES: *Small Vessels Anchorage:* Located close to Zirku Ma Jetty is designated for small vessels to service harbour.

1 Yellow buoy Fl. 5 sec. in N.E. corner (Lat. 24° 51.3′ N. Long. 53° 06.9′ E.).

Limits: Lat. 24° 51.3′ N. Lat. 24° 50.0′ N.
Long. 53° 07.0′ E. Long. 53° 07.0′ E.
and
Lat. 24° 51.3′ N. Lat. 24° 50.0′ N.
Long. 53° 05.4′ E. Long. 53° 05.4′ E.

Tankers East Anchorage:

Limits: Lat. 24° 56.8′ N. Lat. 24° 54.8′ N.
Long. 53° 11′ E. Long. 53° 11′ E.
and
Lat. 24° 56.8′ N. Lat. 24° 54.8′ N.
Long. 53° 07.8′ E. Long. 53° 07.8′ E.

Tankers North Anchorage:

Limits: Lat. 25° 03′ N. Lat. 25° 00′ N.
Long. 53° 02.2′ E. Long. 53° 02.2′ E.
and
Lat. 25° 03′ N. Lat. 25° 00′ N.
Long. 53° 04.4′ E. Long. 53° 04.4′ E.

where 2 buoys are installed at Eastern corners. Colour yellow – Flas yellow 5 sec.

This area is designated for incoming and outgoing deep draft tanke

Prohibited Anchorage Area: Anchorage within Port Limits, outsi waiting anchorage areas is prohibited. Exceptional authorisation may b given by the Port Officer.

Sea-bed: The sea-bed in the Terminal area is rock, covered by a fe inches of loose sand. Some patches of coral can be found. Holding poor and vessels are advised to pay out more cable than usual.

RADIO: Messages can be sent to the Company by the following mea

Telex or Telegram through Bahrain Radio addressed to ZADC Marine. Telex No.: 22948 ZDCAUH EM. Cable: ZIR Marine.

Voice communication to "Zirku Marine" by SSB. Operation Mode A3 Upper Side Band within a range of approximately 250 km.

Permanent watch on carrier frequency: 2036.4 kHz.

Talking on standard Marine Duplex HF Channel: 405, 605, 828

Notice of Arrival: Arrival Message shall be sent to ZADCO Marine 96 hours before arrival at the Port Limits.

Confirmation shall be given 72 hours, 48 hours, 24 hours, and 6 hours from ETA.

Voice contact shall be made with "Zirku Marine" by SSB or VHF 6 hours prior to arrival.

Arrival Message: Arrival Message should contain the following:

Vessel's name and Master's Name/Abu Dhabi Agent's Name/Port of Registry/n.r.t.
ETA Port Limits
Arrival drafts/Departure draft forward and aft
Quantity of ballast
Estimated deballasting time
Possibility of simultaneous operation/permanent ballast
Cargo required
Maximum loading rate and IGS operative.
Part cargo and slops/to comingle
Derrick capacity/No. and size of manifolds/mooring brackets
Last Port of call and next Port/EDP accepted
Direction of approach

VHF: Voice communication to "Zirku Marine" by VHF Channels: 16, 19, 64 and 68. Channel 68 is used by the Pilots.

Permanent simultaneous watch maintained on these Channels.

Arrival: VHF contact should be made with Zirku Marine requesting instructions.

Once contact has been established through Channel 16 further conversation should be conducted on either Channel 64 or 62 upon operator's instructions.

Pilot/Loading Master on board: Although he will bring on board his own VHF communication units with private frequencies, the tanker VHF should remain operational at all times.

At Anchorage: Permanent watch should be kept on Channel 16 and on other Channels (64 or 68) as requested by the Zirku Marine operator.

Traffic Separation: North-bound vessels intending to cross the Separation Scheme, and South-bound vessels intending to cross the North port limit, should report their intention on Channels 16 or 68 and follow instructions.

TUGS: A tug of 2×1,500 h.p. and a mooring launch of 2×275 h.p. will assist the berthing.

SPMs: The terminal of Zirku Petroleum Port is located about 8 nautical miles N.N.W. of Zirku Island and consists of two single Point Mooring buoys whose exact coordinates are as follows:

SPM "Alpha"	Lat. 25° 00′ 32″ N.	Long. 52° 59′ 02″ E.
SPM "Bravo"	Lat. 25° 01′ 36″ N.	Long. 52° 59′ 30″ E.

A small mooring buoy for small craft is in position: 0.3 miles West of No. 1 channel buoy.

SPM Description: Both buoys are identical.

Buoy Body: The buoy is a circular steel structure with a diameter of approximately 12.5 m. It has a rotating assembly. The colour is orange.

Hoses: The buoy is equipped with 2×20 in. floating hoses with a 16 in. tail end hose connection. The outer hose string is 296 m. and the inner one 285 m. Each string is equipped with winker lights.

Hawser: The mooring systems consist of a single 18 in. circumference grommet hawser of double braided nylon, with an overall length of 53.4 m., ended by a short length of 76 mm. diameter chafe chain.

Light: The buoy is fitted with a navigation light emitting a Morse "U" flashing signal every 15 seconds visual on 360° up to a 5 nautical miles range.

Fog Horn: Fitted on the buoy, emits a Morse "U" blast every 30 seconds and is activated when necessary by a remote control system.

Radar Reflector: A radar reflector is installed on the buoy structure.

Water Depth: The minimum water depth in the vicinity of the SPM Buoys is 27 m. above chart datum.

MOORING: All vessels arriving at this port are required to have adequate draft and trim for safe manoeuvring purposes. The propeller should be completely immersed. The recommended trim for manoeuvring in ballast is 3.0 m. List will not be tolerated.

Tanker Material Equipment: The tanker must have the port side derrick rigged for lifting the shore equipment on board, the minimum derrick capacity shall be 10 tons.

A good messenger line of approximately 4 in. circumference nylon line to be ready on the forecastle.

The forecastle should be fitted with Smit or Chain Stopper type brackets, strong mooring bitts and Panama Leads.

Terminal Material Equipment: One basket will be lifted on board with hose connection equipment and tanker mooring equipment if necessary.

Procedure: Full power must be available on tankers' main engine.

Once the optimum approach route has been selected the tug will pull away the hose strings and the tanker will proceed toward the buoy at a suitable speed.

When approximately 300 m. from the buoy the mooring launch will be instructed to bend on the messenger line from the Panama Lead to the mooring hawser pick up line.

The tanker will be brought to a dead stop at 60 m. from the buoy.

The chafe chain will then be winched aboard and secured.

Once the tanker is secured, the tug will pass its towline to the tanker's stern and then maintain tension on the towline throughout, to avoid any buoy kissing.

Emergency Fire Wire: All ships shall have a fire wire hanging from the bow and the stern to enable tugs to immediately connect in case of emergency – Circumference of wire to be at least 6 in.

Weather Limits: Mooring operation can be carried out in up to 25 knots wind speed and significant waves up to 5 ft.

HOSE CONNECTION: *Terminal Connection Team:* After mooring is completed, the hose connection team will board, to assist the crew.

Tanker Connection Team: An officer should attend the hoses with at least 3 deck hands and 1 boatswain. In addition one skilful winchman will be required.

Tanker Material Required: Miscellaneous tools, shackles, wires, ropes plus fire hose and extinguisher should be ready close to the manifold. The area around the manifold should remain free of all equipment to enable safe hose handling.

Terminal Material Supplied: 16 in. to 16 in. Spool pieces. Chain hoists, tirfors, gaskets, wrenches, flange bolt sets, butterfly valve handles, set of miscellaneous chains, ropes, slings, etc.

Flange size: The tail end hose flange size is a 16 in. camlock coupling. Before berthing the tanker manifold should be ready for direct connection, blind flange removed, and 16 in. to 16 in. spool piece fitted.

The two tanker manifold connections should be chosen in such a way that access to both flanges is possible.

Procedure: Having completed the mooring operation, the mooring launch will proceed to the end of the floating hoses to tow them to a position beneath the tanker's derrick hook.

The inner (or shorter) of the hoses will be lifted above deck level and the end swung inboard.

The hose will be lifted by such length to match the distance between the rail and the tanker manifold, then held with snubbing chains and the hose end lowered and connected to the manifold flanges.

The same operation will be performed on the outer (or longer) one.

LOADING: *Rate:* The maximum loading rate will be 12,500 cu.m.p.h. using both hoses.

Care will be taken not to exceed the rated working pressure to be supported by the hoses which is 15.5 bars (225 p.s.i.).

Procedure: Once the hoses have been connected and checked, the butterfly valves opened and the tanker pipe network set up, the Loading Master can give the go-ahead upon request from the Chief Officer and pumping will commence at slow speed at the beginning (by gravity), approximately 7,000 bbls./p.h., then the rate increased up to the rate requested by the Chief Officer.

An inspection of the floating hose strings and the buoy, including waters around the terminal, should also be made during the first few minutes of cargo transfer to ensure there is no leakage.

Once reached, the flow rate will be maintained until further instruction is given by the Chief Officer to the Mooring/Loading Master.

Valve Closure: No valves which will stop or seriously impair or reduce the flow rate of oil from the shore pumps are to be operated without prior agreement with the shore control room (ZCC) through the Loading Master.

10 minutes' notice should be given to the Loading Master for reducing the loading rate or stopping.

The practice of throttling back on the ship's cargo valves is to be avoided. If a lower rate is required, the shore is to be advised and the pumping rate will be reduced to the required level.

The Master will be held liable for any damage arising from the sudden cessation of flow caused by default of the ship.

It cannot be over-emphasised that to do so can be extremely dangerous and cause extensive damage to equipment in addition to possible oil pollution.

Failure of Communication: In case of failure of communications between the Loading Master and Zirku Control Room (ZCC), the loading will be automatically stopped.

Accommodation: Cabins: Two single cabins on board the tanker must be allotted to the Mooring/Loading Master and his Assistant.

Terminal Team: A rest room must be allotted to the hose connection team (3/4 people) should they be required to stay on board by the Mooring/Loading Master. This will only be the case in adverse weather conditions.

Working Location: The working location of the Mooring/Loading Master is the cargo control room.

A portable unit of around 25 kgs. will be installed in this room and operate from either a 110/115 v. or 220/240 v., 50/60 kHz. supply, such a socket must be available in the cargo control room.

Terminal Personnel: As long as the tanker is secured to the Buoy a permanent watch will be performed by the Mooring/Loading Master and/or his assistant in the cargo control room with the portable unit.

Contact will be permanently kept with the Zirku Control Room (ZCC) private VHF Channel.

Tanker Personnel: A tanker officer speaking English should be permanently on duty with the Mooring/Loading Master. The Chief Officer must be available at any time during the deballasting and loading operations (room and telephone number).

In addition to the tanker officer at least two crew members will be in contact with control room through adequate W/T and must be on duty permanently on the deck keeping watch on the tanker and terminal equipment.

Accommodation ladder will be continuously adjusted by the crewmen with regard to the sea state and tanker draft to provide safe access to the deck at any time of the operations.

Ullages: Ullage measurements shoud be taken by remote gauge while loading.

Opening the tank ullage lids should be avoided.

When necessity involves opening the lids the Mooring/Loading Master's approval must first be obtained.

The Mooring/Loading Master will check and approve the ullage report according to ullage measurements.

Characteristics:
API: around 34.5
S.G.: around 0.85
Temperature 20°C. to 35°C.

More accurate characteristics will be transmitted to the tanker on arrival.

BALLAST: *Quantity:* Tankers arriving at Zirku Petroleum Port for berthing should keep onboard at least 30% of their d.w.t. as ballast until further instructions received from the Mooring/Loading Master.

Tankers capable of deballasting and loading simultaneously should have on board a total of not less than the 30% d.w.t. requested for berthing so that in normal circumstances they will not be flying light whilst moored at the buoy.

Vessels arriving with insufficient ballast may be required to increase the quantity, should the Mooring/Loading Master consider it necessary.

Quality: Vessels arriving with ballast on board to be discharged into the sea must ensure that the ballast, lines and pumps are clean and free from oil before commencing discharge. If necessary the initial quantity and the drainings should be pumped into the slop-tank. A permanent deck watch shall be kept during this operation with overside lights displayed at night on both sides of the vessel at the discharge points.

Deballasting Facilities: There are no deballasting facilities at Zirku Terminal for receiving dirty ballast.

UNMOORING/DEPARTURE: As soon as the loading operation is completed, the vessel will vacate the berth.

The tanker's cargo manifold valves and butterfly valves at the hose end will be closed. The hoses once disconnected will be swung outboard and lowered to the water with the derrick and released.

The tanker will leave the terminal by slipping the mooring. Once the mooring is slipped, the tanker will put the engines astern, drop back until clear of the floating hose, and then steam clear of the terminal.

The mooring launch will be positioned to tow the floating hoses clear, where necessary. The tug will help the tanker to clear the terminal if so required by the Mooring/Loading Master. The mooring connection team will disembark at this stage and the terminal equipment be lowered into the tug. It will be necessary to make a lee to perform these operations safely.

Waiting Area: In the case of no "Early Departure Procedure" arrangements having been made, the tanker will be anchored in one of the anchorage areas waiting for cargo, documents which will be sent by the pilot boat as soon as possible.

In case of the tanker being delayed from sailing for any reason (engine repairs, waiting order, etc) the Mooring/Loading Master will disembark once securely anchored.

When the tanker is ready to sail through the North Departure Route, 2 hours' notice will be given to the Mooring/Loading Master.

Departure Route: Any deep draft tanker leaving Zirku Petroleum Port will proceed through the following departure route at a speed not exceeding 8 knots.

Buoy No. 1	Lat. 25° 02′ N. Long. 53° 00.8′ E.
East Mark	BYB VQ(3)5s.
Buoy No. 2	Lat. 25° 04.4′ N. Long. 53° 02.4′ E.

Buoy No. 6	Lat. 25° 13.0′ N. Long 52° 58.9′ E.
West Mark	YBY VQ(9) 10s.

To Das Channel Buoy No. 10. Leave to starboard.

MEDICAL: Although a medical officer is resident on Zirku Island, consultations will be possible only on an emergency basis.

DENSITY: The salinities are high as a result of the high rate of evaporation.

At the terminal, the water density depending on the sea temperature ranges from 1030 to 1035.

SERVICES: Following services are NOT available at Zirku Petroleum Port:

- Bunkers.
- Fresh Water.
- Food.
- Engine Repairs.
- Deratisation.
- Shore leave for the crew.
- Crew changes.

WEATHER: *Seasons:* Two principal seasons can be distinguished in the Gulf. The cool "Winter" season extends from mid November to mid March and the hot "Summer" season from mid May to mid September. The two intermediate periods are transitional and the weather experienced may have either Summer or Winter characteristics.

Winds: The most frequent (54% of the time) is named 'Shamaal' and blows from W.N.W. to N. principally in Winter. The 'Noshi' blows from N.N.E. to E.N.E. for 20% of the time.

Local effects of Monsoon, called the 'Kaus', blows from E. to S. 17% of the time.

Finally, during Winter only, the 'Suhaili', blows for 9% of the time from W.S.W. to W.

The strength of these winds is approximately proportional to their probability of occurrence but at their strongest they can give rise to sandstorms and rough seas for several consecutive days.

Temperature: The extreme monthly mean values of air temperature are 20°C in February and 34°C in August with a lowest minimum of 9°C and a highest maximum of 44°C during the same months.

Tides: Around Zirku Island the tide is variable with small diurnal predominance. However this semi diurnal effect is not of great significance and for all practical purposes it can be said that there is only one high water and one low water per day.

The maximum range is about 1.5 m.

The mean usual range is 1.0 m.

Currents: At the terminal tidal currents are semi diurnal.

The current speed reaches 1 knot regularly at each tide.

Roughly the flood runs S.W. and the ebb N.E. but the turn of tide is very slow when the current directions are variable.

Predictions may be found to be considerably influenced by strong winds, especially the 'Shamaal'.

GENERAL: *Navigation Aids Dues:* The light dues for the Gulf navigational aids will be levied for the account of M.E.N.A.S.

These dues will be paid once per voyage at the first port of call in the Gulf.

Masters are requested to keep the receipt as a voucher if requested by any other Port authority within the Gulf.

Agency: Ship-owners must have their own representative Agency i Abu Dhabi.

Zadco will be acting as a sub-Agency to liaise with the main Agency in Abu Dhabi for all queries regarding mail, telexes, medical assistance letters of Protest etc.

AUTHORITY: Petroleum Ports Authority – ADNOC, P.O.Box 898, Abu Dhabi, U.A.E. *Tel:* Abu Dhabi 6023450/1 or 6056471. *Telex:* 22948 ZDC AUH EM – Zirku. *FAX:* 6056472. *Contact:* Captain H. Masri, PPA - Manager. Captain N. Murshed and Captain M. Abu Shahba, Zirku – Por Officers.

United Kingdom

HEALTH – ALL PORTS:

PORT HEALTH (The Public Health (Ships) Regulations)

1. Simpler procedures for health clearance of ships arriving in the United Kingdom came into operation with effect from 1st April 1978.

2. Under these new rules the Master of a ship arriving from a foreign port must report to the Port Health Authority†

(1) The occurrence on board during the voyage* of
- (a) death, other than by accident,
- (b) illness where the person or persons concerned
  - (i) has or had a temperature of 38°C or greater which was accompanied by a rash, glandular swelling or jaundice, or persisting for more than 48 hours;
  - (ii) has or had diarrhoea severe enough to interfere with work or normal activities, or

(2) the presence on board of
- (a) a person suffering from an infectious disease or who has symptoms which may indicate the presence of infectious disease
- (b) any animal or captive bird of any species including rodents and poultry, or mortality or illness among such animals or birds.

(3) any other circumstances which are likely to cause the spread of infectious disease.

If there is nothing to report under any of these headings the Master has no need to obtain health clearance unless an authorised officer otherwise directs. A proportion of ships will be boarded and checked. If any of the conditions in (1)a (1)b and (2)a or (3) have occurred permission (Free Pratique) from an authorised officer will be necessary before disembarkation or commencing operation.

3. If the Master has something to report under 2 above he must:

(1) send a radio message not more than 12 hours and where practicable not less than 4 hours before arrival, giving the relevant information, to the Port Health Authority

or, if the ship is not equipped with a radio transmitter, notify the Port Health Authority, wherever practicable before arrival and otherwise immediately on arrival;

(2) show or give the appropriate day or night signal when the ship enters the jurisdiction of the Port Health Authority (the codes are set out below);

(3) Until "Free Pratique" for health purposes has been given see to it that no person, other than Pilot, Customs officers, Immigration officer or authorised officer boards or leaves the ship without the permission of the medical officer;

(4) complete a Maritime Declaration of Health and arrange for it to be handed to the authorised officer.

In relation to the presence or illness of animals on board, etc., the requirements at (2), (3) and (4) do not apply but where plague has occurred or is suspected amongst rats or mice or there has been abnormal mortality among them, a Maritime Declaration of Health should be completed.

The requirement at 3(4) above does not apply to a ship which has come directly from a port in the excepted area of the Council of Europe i.e., Belgium, Denmark, France, Germany F.R., Greece, the Irish Republic, Italy, Netherlands, Norway, Portugal, Spain and the United Kingdom.

4. Where it is necessary to obtain "Free Pratique" for health purposes the Master should have already to hand the authorised officer, a list of passengers and crew leaving the ship together with the addresses they are going to in the United Kingdom.

5. An authorised officer may, in circumstances other than those set out above, direct that the Master shall complete a Maritime Declaration of Health and that the Master shall apply restrictions on boarding or leaving the ship.

6. The Master of a ship that has met another ship, which has proceeded from a foreign port, or has met an off-shore installation, is required to comply with the rules in paragraphs 2-3 (but if the ship has proceeded from an excepted port a Maritime Declaration of Health need not be completed).

7. If the Port Health Authority† is satisfied that the Master of a ship was aware, or should have been aware, of conditions and failed to report them then action may be taken under the Public Health legislation which may result, on summary conviction, to a maximum fine of £2,000.

† Or the local Authority responsible for Port Health Control.

* If more than 4 weeks have elapsed since the voyage began it will suffice to give particulars for the last 4 weeks.

INTERNATIONAL CODE OF SIGNALS
PRATIQUE MESSAGES

ZS	My vessel is "healthy" and I request Free Pratique	Q
	*I require Health Clearance	QQ
ZT	My Maritime Declaration of Health has negative answers to the six health questions.	
ZU	My Maritime Declaration of Health has a positive answer to question(s)..........(indicated by appropriate number(s)).	
ZV	I believe I have been in an infected area during the last thirty days.	
ZW	I require Port Medical Officer.	
	ZW1 Port Medical Officer will be available at (time indicated).	
ZX	You should make the appropriate Pratique signal.	
ZY	You have Pratique.	
ZZ	You should proceed to anchorage for Health Clearance (at place indicated).	
	ZZ1 Where is the anchorage for Health Clearance?	
	I have a doctor on board.	AL
	Have you a doctor?	AM

*By night, a red light over a white light may be shown, where it can best be seen, by vessels requiring Health Clearance. These lights should *only* be about 2 m. (6 ft.) apart, should be exhibited within the precincts of a port, and should be visible all round the horizon *as nearly as possible*.

Health Clearance may be given in three ways:
- a) Wholly in plain language.
- b) Partly in the above signal code, remainder in plain language.
- c) Wholly in the above signal code.

Issued by the Health Departments of the United Kingdom.

GENERAL:

Regulations for tankers entering or leaving ports in the United Kingdom:

Application of the Regulations: The British Government have issued the following regulations, which came into force on 15th October, 1981, applicable to tankers of 1,600 g.r.t. and over of any nationality which:

Have a cargo of chemicals, gas or oil in bulk, or;

Have not been declared gas free after having carried such a cargo.

Reports: Before entering the limits of any harbour a report must be made to the Harbour Master of that harbour giving the following information:
- (a) Name and call sign.
- (b) Country of register.
- (c) Length, draft and beam.
- (d) Destination. (This may not be the same as the harbour through which the tanker is passing).
- (e) ETA at pilot station or harbour limits.
- (f) Brief description of cargo and quantity in tonnes.
- (g) Is vessel fitted with inert gas system?
- (h) If inert gas system is fitted, is it operational?
- (i) Have cargo tanks been rendered non-inflammable?
- (j) Has a certificate been issued that the vessel complies with the IMO Codes for the Construction and Equipment of Ships carrying:
  - (i) Dangerous chemicals in bulk, or;
  - (ii) Liquefied gases in bulk?
- (k) Any defect in the hull, machinery, or equipment which may:
  - (i) affect the safe manoeuvrability of the tanker or;
  - (ii) affect the safety of other vessels in the vicinity of the harbour, or;
  - (iii) constitute a hazard to the marine environment, or;
  - (iv) constitute a hazard to persons or property in the vicinity of the harbour.

Any changes to the above which occur before entering the harbour limits or while within those limits must be notified to the Harbour Master.

Check List: A Check List is required by the Pilot and the Harbour Master giving the following information:

Details and classification of the vessel.

State of machinery, anchor, fire-fighting, navigational and radio equipment.

State of Safety Certificates and other documents.

Details of officers' Certificates of Competence.

Check List Forms can be obtained from Department of Transport Marine Offices at the following ports: Aberdeen, Avonmouth, Belfast, Cardiff, Dover, Falmouth, Glasgow, Great Yarmouth, Greenock, Hull, Leith, Liverpool, London, Middlesbrough, Milford Haven, Newcastle, Plymouth, Shetland (Mossbank), Swansea.

SHIP MOVEMENT REPORTING: Notice to Mariners No. 631/1986.

Ship Movement Reporting in the English Channel and Dover Strait.

From 1st July, 1986, a revised message format is to be used in the voluntary ship movement reporting system for the English Channel and Dover Strait (MAREP). The changes will bring the MAREP system into agreement with the General Principles for Ship Reporting Systems adopted by the International Maritime Organisation (IMO).

This Notice gives the new message format and also includes amendments to the description of the MAREP system which was given in former Notice No. 1520/81.

Ship Movement Reporting (MAREP):

Introduction:

(1) The objective of the MAREP scheme is to assist the Mariner, to improve safety of navigation in the English Channel and Dover Strait, and to reduce the risk of pollution of the coasts of the United Kingdom and France in this area. Participation in the scheme is voluntary and the International Maritime Organisation (IMO), through its Maritime Safety Committee, has recommended that ships to which the scheme applies should participate. The transmission of reports is free of charge.

(2) The MAREP scheme provides for certain categories of ships to report-in to a number of designated shore stations in the area of the Traffic Separation Schemes and associated Inshore Traffic Zones off Ushant, off Casquets and in the Dover Strait. Broadcasts will be made by shore stations on a regular basis and as required and will include information on any known situations which could affect the safe navigation of ships in these Traffic Separation Schemes or associated Inshore Traffic Zones.

(3) Ships with certain defects and ships in other categories are also invited to report when elsewhere in the English Channel.

Participation:

(4) Ships of the following categories intending to enter the areas described in paragraph 5 below are invited to participate:
- (a) All loaded oil and chemical tankers and loaded gas carriers of 1,600 g.r.t. and over.
- (b) Any ship "not under command" or at anchor in a traffic sparation scheme or associated inshore zone.
- (c) Any ship "restricted in her ability to manoeuvre", ships engaged in towing, deep draft ships, or ships with a defect in their propulsion or steering.
- (d) Any ship with a defect in those navigational aids which could adversely affect her navigation under prevailing conditions.

When to Report:

(5) Ships mentioned above are invited to report to the designated shore stations (paragraph 8 below) when intending to enter:

(a) The Traffic Separation Schemes off Ushant and off Casquets, or their associated inshore traffic zones:

(i) Reports should be made at a distance of 10 nautical miles before entering the area described in (a) above.

(b) The Traffic Separation Scheme in the Dover Strait or the associated inshore traffic zones:

(i) On proceeding Eastward into this Scheme or its associated inshore traffic zones when arriving within 2 nautical miles of a line joining the Royal Sovereign Light Tower and Bassurelle Light Buoy and extended to the French coast.

(ii) When proceeding Southwestward, when arriving within 2 nautical miles of a line from North Foreland extended through the Falls Light Vessel to the Belgian coast.

(iii) When departing from a port within the associated inshore traffic zones.

(6) The phrase "entering a Traffic Separation Scheme" covers ships intending to use the traffic separation lanes, joining them from the side, or crossing the Schemes as described in Rule 10(b) and (c) of the International Regulations for Preventing Collisions at Sea, 1972.

(7) Any ship not under command or any ship of the categories described in paragraph 4(c) and (d) above wherever it is in the English Channel area (East of a line joining Ushant S.W. Buoy and Bishop Rock Lighthouse and West of the line described in paragraph 5(b) (ii) above) is invited to report to a shore station. These ships may be asked to make subsequent pre-arranged reports to shore stations.

Reports and Shore Stations:

(8) Ships with no defects should make a Position Report (POSREP). Ships with defects, i.e. when not under command, with a defect in propulsion or steering or as described in paragraph 4(d) above should make a Defect Report (DEFREP). Where appropriate a subsequent Change Report (CHANGEREP) should be made. Reports in the English language should be transmitted by VHF using the format at the Appendix and using for guidance the IMO Standard Marine Navigational Vocabulary and the International Code. The reports should be made to the following designated shore stations:

	Traffic Separation Zone	*MAREP Receiving Station*	*VHF Frequency*
(a)	Ushant	Ouessant Traffic	16 – 11
(b)	Casquets	Jobourg Traffic	16 – 11
		Portland Coastguard	16 – 69

Channel 11 should be used for calling and working Ouessant and Jobourg Traffic, but these stations should be called outside the times set for broadcasts in paragraph 10.

Channel 69 should be used for calling and working Portland Coastguard.

(c)	Dover Strait	Gris Nez Traffic	16 – 69
		Dover Coastguard	16 – 69

Channel 69 should be used for calling and working these stations.

(d) Ships requiring further information or assistance may be transferred by the Centres at Ushant, Jobourg and Gris Nez Traffic to Channel 79 and by Dover Coastguard to Channel 80.

(9) Ships referred to in paragraph 7 should make their report to the nearest designated station. If unable to make contact with any of these stations the report should be made through a Coast Radio Station and addressed to one of the designated stations.

Information Broadcasts:

(10) Routine broadcasts will be made by the Centres at Ushant, Jobourg, Gris Nez and Dover on VHF Channel 11 with additional routine broadcasts in restricted visibility at the following times:

	Clear Weather	*Restricted Visibility*
Ushant Traffic	H+10	H+25
	H+40	H+55
Jobourg Traffic	H+20	H+05
	H+50	H+35
Gris Nez Traffic	H+10	H+25
Dover Coastguard	H+40	H+55

(11) Urgent broadcasts will be transmitted as necessary at any time.

(12) All broadcasts will be preceded by a forewarning on VHF Channel 16.

(13) Broadcasts will cover navigational and traffic information of immediate interest and information on movements of ships which appear to be navigating within a traffic separation scheme contrary to the requirements of Rule 10 of the International Collision Regulations.

Ship's Radio Watch:

(14) In order to derive the fullest benefit from the MAREP scheme a continuous watch should be maintained between routine broadcasts on VHF Channel 16 (and on Channel 11 where two channel reception is available).

Caution

(15) It is emphasised that the MAREP scheme does not absolve the Master from his sole responsibility for the safe conduct of his ship.

APPENDIX:

Ship Reporting System:

System Identifier	MAREP	
Type of Report	POSREP	(Position Report) or
	DEFREP	(Defect Report) or
	CHANGEREP	(Change Report)

Heading	*Text*	*Explanation or Example*
Identification of message	MAREP	
Type of message		POSREP
Identity of ship	ALFA+name of ship plus call sign	
Group date/hour	BRAVO+6 figure (Zulu)	Date of month: 2 figures. Hours and minutes: 4 figures
Position	CHARLIE+Latitude and Longitude	Latitude: 4 figures followed by N or S Longitude: 5 figures followed by E or W
	or CHARLIE+name of port of departure	If the vessel is sailing from a port in the coastal zone
	or DELTA+bearing – distance in relation to a sea mark	Bearing: 3 figures in degrees. Distance: 2 figures in miles from land sea mark indicated
True Course	ECHO+true course	3 figures in degrees from North
Speed	FOXTROT+speed in knots and tenths of knots	3 figures
Destination	INDIA+name of port of destination and probable time of arrival	
Radio-Communications	MIKE+VHF Channel number	Give number of VHF Channel monitored and if applicable number of second Channel monitored
Draft	OSCAR+maximum present draft	4 figures in metres and centimetres
Cargo	PAPA+industrial name of product or IMDG Code No.+quantity	Nature of cargo. Quantity expressed in tonnes
Navigational Restrictions	QUEBEC+brief description in clear	Stopped, moored, hampered by draft; generally any restriction on manoeuvrability
Additional Comments	X-RAY+brief particulars	Any other information which may be useful.

Note: The headings QUEBEC and X-RAY can be omitted when there is nothing to report.

ABERDEEN: 57.09 N. 02.03 W. (See Plan)

DOCUMENTS:

1 Maritime Declaration of Health.
1 Crew's Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Light Certificate.
1 Port Dues Certificate.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British ships only.
Load-line Certificate.
Safety Equipment Certificate.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.

In addition, Manifests and Bills of Lading are usually sent to Agent direc from loading port.

PILOTAGE: Aberdeen has a Compulsory Pilotage District and there ar 10 licensed Pilots. Boatage service, although not compulsory, i available. There are 10 licensed boatmen.

There is a Navigation Control Service equipped with harbou surveillance radar which is operated by Navigation Control Officers wh operate on a 24 hour basis.

RESTRICTIONS: Navigation Channel: Max. designed width 33.5 m., max. designed depth at HWOST 10.25 m. Traffic signals regulate the movement of vessels in the Navigation Channel.

Entrance to Victoria Dock, depth at MLWS 6.6 m., clear width at entrance 43 m.

MAX. SIZE: Assuming no siltation the port can accommodate vessels up to 160 m. in length, 24.4 m. beam and drawing up to 9.3 m. at MHWS or 8.3 at MHWN. Larger vessels may be accepted after consultation with the Harbour Master. A vessel 166 m. in length has ben handled.

HEALTH: Foreign arrivals to complete Maritime Declaration of Health. They are cleared immediately on arrival by either a port doctor or an Officer of H.M. Customs depending on where the ship comes from and whether there is sickness on board.

Vessels arriving from ports within accepted area (N. European ports) and coastal arrivals need not present Declaration in all cases; when there is sickness on board the Port Health Authority must be informed preferably not more than 12 hours and not less than 3 hours before arrival.

Also see "Health – All Ports" before first UK port.

VHF: There is a VHF radio communications system which operates on Channels 6, 11, 12 and 16.

BERTHING: Tidal:

	Length	*Depth* MHWS
Tidal Harbour	732 m.	9.3 – 10.3 m.
Albert Basin	1,806 m.	8.7 – 13.6 m.
River Dee (Navigable)	913 m.	8.4 – 10.8 m.
River Dee Dock	417 m.	9.3 – 10.8 m.
Upper Dock	463 m.	9.0 – 10.3 m.
Victoria Dock	1,532 m.	10.3 – 13.6 m.

Deep-Water Berths:

No. 1 Atlantic Wharf: This is 146 m. long with 9.3 m. at MLWS. Two-storey transit shed. Excellent road and rail connection.

No. 2 Pacific Wharf: This is 160 m. long with 9.9 m. at MLWS. Open quay. 2×6 ton and 1×50 ton electric portal cranes capable of handling heavy lifts and containers. 1×3,000 t.p.d. grain conveyor (Private), outreach of boom 27 m.

No. 3 Waterloo Quay: This is 180 m. long with 9.9 m. at MLWS. 2×20 ton cranes at Waterloo Quay West. Ro-Ro service operated by P&O to Shetland.

No. 4 Regent Quay East: This is 228 m. long with 9.9 m. at MLWS. Two transit sheds. 2×8 ton level luffing electric portal cranes capable of handling 11 tons at 25 m. radius. Excellent road connections. Forest products terminal in operation.

FRESH WATER: This service is provided by the Grampian Region Water Services and is available at all quays.

REPAIRS: Ship repairing facilities and shipping supplies are offered by a number of private firms and individuals with premises beside the harbour.

DRY DOCKS: (Pontoon Docks).

	Overall Length (m.)	*Breadth at Entrance* (m.)	*Depth on Blocks* (m.)	*Lifting Capacity*
No. 1	55	8.8	4.9	700 tonnes
No. 4	64	11.6	5.5	1,000 tonnes

There is also 1 privately owned slipway and 1 drydock.

SURVEYORS: Lloyd's and Det Norske Veritas.

MEDICAL: Doctors and hospitals facilities available. Agents should be advised in advance of any medical attention required.

CUSTOMS ALLOWANCES: At the discretion of Local Customs Inspector. Normal allowances are equivalent to 8 oz. of tobacco per man and equivalent to 1 bottle of wine per man. Allowances may be halved for home trade vessels. Vessels in port for more than 3 or 4 days may receive extra allowances.

CONSULS:
Danish Consulate, 59 Marischal Street, Aberdeen. Tel: 589921.
Faroes Commercial Attache, 150 Market Street, Aberdeen. Tel: 592777.
Finnish Consulate, 59 Marischal Street, Aberdeen. Tel: 589921.
French Consulate, (Home address) Corrennie, Sauchen. Tel: (03303) 257.
German Consulate, 12 Albert Street, Aberdeen. Tel: 634467.
Icelandic Consulate, 59 Marischal Street, Aberdeen. Tel: 589921.
Italian Consulate, 6 King Street, Aberdeen. Tel: 640916/647135.
Netherlands Consulate, 16 Union Terrace, Aberdeen. Tel. 639106.
Norwegian Consulate, 59 Marischal Street, Aberdeen. Tel: 589921.
Swedish Consulate, 59 Marischal Street, Aberdeen. Tel: 589921.

AIRPORT: International airport nearby at Dyce. There are frequent daily jet services to London operated by British Airways, and in addition British Airways also operate services to Edinburgh, Glasgow, Prestwick, Wick, Orkney and Shetland. There are also services to Manchester and Birmingham.

Air U.K. operate direct services from Aberdeen to Amsterdam, Bergen, London (Stansted), Stavanger, Edinburgh, Leeds/Bradford, Humberside, Norwich and Teesside.

TIME: BST is GMT plus 1 hour. GMT during Winter months.

HOLIDAYS: 1st and 2nd January; Spring Holiday (variable date); Summer Holiday (variable date); September Holiday (variable date); Christmas Day (25th December).

POLICE/AMBULANCE/FIRE: Dial 999 from any telephone and ask for service required.

TELEPHONES: There are berths at which GPO telephone service can be made available to vessels. All operational posts are linked by telephone network.

AUTHORITY: Aberdeen Harbour Board, 16 Regent Quay, Aberdeen AB9 1SS, United Kingdom. *Tel:* (0224) 592571. *Telex:* 73324. FAX: (0224) 571507. *Contact:* J. R. Turner, General Manager. Captain B. Atkinson, Harbour Master.

AMLWCH: 53.27 N. 04.20 W.

S.B.M. DISCHARGE FACILITY CEASED OPERATIONS IN 1988. BUOY REMOVED.

ARBROATH: 56.33 N. 02.35 W. (See Plan)

APPROACHES: Arbroath, situated between Dundee and Montrose, has been recently downgraded from a commercial port to a fishing harbour.

There is a bar 400 m. S.E. of the Piers, depth 0.609 m. LWS, which is dangerous in heavy Easterly weather.

MAX. SIZE: Largest vessel, 65 m. length, 4 m. draft.

BERTHING: Outer harbour has an area of 1.5 ha., depth of 4.57 m. at HWST. Length of quayage 451 m.

Inner harbour has an area of 1 ha. Length of quayage 390 m.

FRESH WATER: Available.

FUEL: Diesel available.

AIRPORT: Dundee, 29 km.

REPAIRS: Can be carried out at repair yard.

DRY DOCKS: None. Patent Slipway 122 m. long. Length of cradle 32.6 m. Lifting power 150 tonnes.

POLICE/AMBULANCE/FIRE: Dial 999.

Arbroath Harbour is a station for a R.N.L.I. Lifeboat "Shoreline" and an inshore inflatable boat.

AUTHORITY: Tayside Regional Council, Harbour Office, Arbroath Harbour, Tayside, DD11 1PD. *Tel:* Arbroath (0241) 72166. *Contact:* Captain G.D. Easton, Harbour Master.

ARDROSSAN: 55.38 N. 04.49 W. (See Plan)

DOCUMENTS: Normal documents required:
- Customs Documents.
- Health Documents.
- Crew List.
- Passenger List.
- Ship's Papers, etc.

PILOTAGE: Pilotage compulsory for vessels over 80 m. LOA. Pilotage operated by Clyde Pilotage Authority. Pilot boards off Little Cumbrae Island. Pilot boat on VHF Channels 16 and 14.

24 hours notice required and amendment if ETA changes.

ANCHORAGE: In 12 to 15 fathoms 1 mile S.W. of breakwater.

RESTRICTIONS: 3 red lights vertically day and night above Port Control Tower (see "Plan") indicates "Port Closed".

MAX. SIZE: Eglinton Dock approx. 420 ft. by 57 ft. by 16 ft./18 ft. (depending on tide). North Montgomerie Pier Tanker Berth – max. length 575 ft., max. draft, up to 70 ft. beam, 23 ft./26 ft.; over 70 ft. beam, 22 ft./25 ft.

HEALTH: All vessels requiring attention of Medical Officer shall show flag signal ZW by day, or between sunset and sunrise, either morse signal ZW by lamp, or a red light over a white light, not more than 6 ft. apart. Other vessels shall show flag signal "Q" by day, or between sunset and sunrise either morse signal Q by lamp or a red over a white light, not more than 6 ft. apart.

Certificate of Pratique will be issued by Customs Boarding Officer on receiving a satisfactory and fully completed Maritime Declaration of Health. No further formalities required at subsequent ports of call in the U.K.

Also see "Health – All Ports" before first U.K. port.

RADIO: VHF Channels 12, 14, and 16. Radio telephone via Portpatrick.

TUGS: On application to Clyde Tug Owners.

BERTHING: No special requirements except with draft over 16 ft. when vessel may be delayed waiting for tide.

STEVEDORES: Orders to be given by 1130 hrs. previous day.

MEDICAL: No advance notice required unless medical attention is necessary immediately on vessel's arrival. No hospital facilities in Ardrossan, nearest hospitals being at Irvine, 6 miles and Kilmarnock 16 miles.

TANKERS: No facilities.

DENSITY: 1025.

FRESH WATER: Available continually at all berths.

FUEL: Marine oils available by road tanker.

FIRE PRECAUTIONS: Patrolman required for hazardous cargoes.

CONSULS: Norwegian Vice Consulate, Danish Vice Consulate: C.A. Mair (Shipping) Ltd., Winton Buildings, Ardrossan. Tel. Ardrossan 605284.

REPAIRS: Limited repair facilities.

GANGWAY/DECK WATCHMEN: Recommended.

OPENING/CLOSING HATCHES: Opened and closed by crew.

CERTIFICATES: Following Certificates are requested: Load Line, Safety Radio, Safety Equipment, Safety Construction, Derat, and Current Trinity House Light Bills.

CUSTOMS ALLOWANCES: Standard U.K. allowances.

REPATRIATION: Customs Boarding Officer acts for Immigration Dept. and arrangements for repatriation can be arranged in conjunction with ship's Agent.

AIRPORTS: Prestwick 18 miles. Glasgow 25 miles.

TIME: BST, that is GMT plus 1 hour. GMT in Winter months.

HOLIDAYS: 1st and 2nd January; Easter Monday; May Day, First Monday in May; Third Monday in July; First Monday in October; Christmas Day and Boxing Day. Cargo work may be available on certain holidays by special arrangement.
POLICE/AMBULANCE/FIRE: Police Tel. Saltcoats 63966; Ambulance, Fire: Ask telephone operator.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
DEVELOPMENTS: Roll-on/Roll-off berth for specialised traffic.
AUTHORITY: Ardrossan Harbour Company Limited, Harbour Office, Ardrossan, Ayrshire, KA22 8DB, United Kingdom. *Tel:* (0294) 63972-4. *Telex:* 777954. *Contact:* Captain D. Gillespie, Managing Director and Harbour Master.

AYR: 55.28 N. 04.38 W. (See Plan)
TROON: 55.33 N. 04.40 W. (See Plan)

LOCATION: *Ayr:* On the West coast of Scotland, at the mouth of the River Ayr.
Troon: 14.5 km. (9 miles) North along the coast from Ayr.
DOCUMENTS:
Customs Require:
2 copies Form XS1.
Ship's Register.
Load-line Certificate.
Safety Radio Certificate.
Passenger List.
Crew List.
Port Health Require:
Derat Certificate.
Agents Require:
1 copy Form XS4.
Bills of Lading.
2 copies Manifest.
PILOTAGE: Compulsory for vessels over 65 m. LOA. Pilot boards off Bar Light Buoy. 24 hours' notice of ETA required for Pilot via Agent or Dock Authority. Ayr Pilots listen on Channel 16 and work on Channel 14 VHF. VHF watch hours: 24 hours, 7 days a week.
ANCHORAGE: To Pilot's advice. Easterly winds Ayr Bay, Westerly gales anchor East side of Arran Island.
RESTRICTIONS: Draft restriction at LW. Enter on Pilot's advice.
MAX. SIZE: Dock: Length 95 m. Max. draft 6.00 m. River (Ayr): Length depending on berth. Max. draft 6.20 m. Max. length for turning 110 m.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: VHF radio only, operating on Channel 14 and listening on Channel 16.
TUGS: 1 tug of 5 tonnes bollard pull.
RADAR: No radar station.
BERTHING:

Troon:					
Tidal	366	6.0	55	12.2	—
Outer	1,372	7.0	146	No restriction	6.2

Storage and Warehousing Facilities: Open storage space totalling 2.7 hectares.
Cranage and Mechanical Handling: 2 mobile cranes 3 tonnes; 1 mobile crane 35 tonnes, 8 mechanical shovels from 0.5 to 5.0 cu.m. capacity. 2 conveyors loading speed 300 – 650 tonnes/p.h. There is also a fixed coaling appliance capable of loading 600 tonnes/p.h. 2 forklifts 2.7 tonnes, 1 forklift 8.2 tonnes, 2 forklifts 5 tonnes, 1 forklift 4 tonnes.
STEVEDORES: 24 hours notice of ETA should be given to stevedores.
Port Working Hours: Monday-Thursday 0800 – 1700 hrs., Friday 0800 – 1600 hrs. Overtime by arrangement.
Saturday 0600 – 1200 hrs. Sunday 0800 – 1700 hrs. Any other hours by arrangement.
MEDICAL: Hospital facilities nearby in town.
DENSITY: Varies according to weather.
FRESH WATER: Available at all berths.
FUEL: All grades available, 24 hours notice.
REPAIRS: Most engine and deck repairs available.
DRY DOCKS: Two at Troon, Ailsa–Perth Ltd.
No. 1 Dock: 85.3 m. long, 11 m. wide, 3.5 m. depth over sill.
No. 2 Dock: 140.4 m. long, 17 m. wide, 4.7 m. depth over sill.
GANGWAY/DECK WATCHMEN: Deck watchman required; may be supplied by arrangement with stevedores.
OPENING/CLOSING HATCHES: Performed by ship's crew.
AIRPORT: Glasgow.
Air UK flights from Edinburgh to Aberdeen, Amsterdam, Leeds/Bradford, London (Gatwick and Stansted) and Norwich.
TIME: GMT plus 1 hour, reverting to GMT in Winter months.
HOLIDAYS: Christmas Day and Boxing Day.
POLICE/AMBULANCE/FIRE: Dial 999, and ask for service required.
TELEPHONES: No connection on board vessel.
SERVICES: Special arrangements can be made for tank washing and compass adjusting through Glasgow.
SHORE LEAVE: No restrictions on shore leave.
IDENTIFICATION CARDS: Seamen's identity cards should be carried.
AUTHORITY: Associated British Ports – Ayr & Troon, Port Office, Ayr KA8 8AH, United Kingdom. *Tel:* (0292) 281687. *Telex:* 778853 Kenny G. *FAX:* (0292) 287787. *Cables:* Dainnex Ayr. *Contact:* P.J.Condliffe, Port Manager. Captain N.Brown, Harbour Master.

BANGOR: 54.39 N. 05.40 W. (See Plan)

PORT LIMITS: A line drawn from Wilson's Point to Luke's Point.
DOCUMENTS: Standard U.K. documentation.
PILOTAGE: Not compulsory but advisable if unfamiliar with the area. Pilot may be obtained from the pilot station at Carrickfergus after ca on VHF Channel 16.
ANCHORAGES: 2 cables off North Breakwater or in Ballyholme Ba with offshore winds.
RESTRICTIONS: Due to limited amount of berthing facilities, permissio should be sought from the Harbour Master before entering the Harbou
MAX. SIZE: LOA 70 m. Draft 4.0 m. at HWOST. Vessels of up to 75 m. in length are able to berth at the New Centre Pier, which is a steel piled structure with a depth alongside of 2.9 m. at LW.
HEALTH: Standard regulations apply. Vessels should inform Port Health Officer Belfast of any sickness on board.
VHF: A listening watch is kept on VHF Channel 11 throughout 24 hours.
TUGS: Can be ordered from Belfast if required. Work boat of 28 h.p. available.
BERTHING: See "Max. Size" and "Developments".
BRIDGES: None.
STEVEDORES: None locally.
MEDICAL: Full hospital facilities available.
TANKERS: No facilities.
FRESH WATER: Available on Central Pier.
FUEL: Petrol and diesel available from tank on pier or by road tanker.
CONSULS: Nearest at Belfast.
REPAIRS: Minor repairs only.
SURVEYORS: Available from Belfast.
GANGWAY/DECK WATCHMEN: Not usually available.
HATCHES: Opening/closing done by ship's crew.
CUSTOMS ALLOWANCES: U.K. Regulations apply.
CARGO GEAR: The harbour's 5 tonne crawler crane has been removed, and in future vessels will have to use their own cargo gear, or hire one of the available mobile road cranes in the district.
REPATRIATION: Can be arranged by Agent.
AIRPORT: Aldergrove Airport, or Belfast City Airport (12 miles).
TIME: GMT plus 1 hour from late March – late October. GMT for res of year.
POLICE/AMBULANCE/FIRE: Dial 999.
TELEPHONES: Cannot be placed on board. Several in vicinity of berth.
SHORE LEAVE: No restrictions.
DELAYS: Berthing times will depend on the arrival drafts and fishing traffic.
DEVELOPMENTS: The new North Breakwater runs in a Northwesterly direction with seaward side built of S.H.E.D. units, and the sheltered S.W. side of corrugated steel piling, where safe berthing is available over a distance of 95 m. with a minimum depth of 3.7 m. at LW.
A 600 berth marina has been constructed in the inner harbour, where the minimum depth is approximately 2.0 m. at LW.
AUTHORITY: North Down Borough Council, Town Hall, Castle Grounds Bangor, Co. Down, Northern Ireland BT20 4BT. *Tel:* (0247) 270371. *Contact:* Andrew Jaggers, Harbour Manager, Bangor Marina, Bangor BT20 5ED. Tel: (0247) 453297. Fax: (0247) 453450.

BARROW-IN-FURNESS: 54.07 N. 03.14 W. (See Plan)

PORT LIMITS: The seaward boundaries of the port extend from Scar Channel in the North to Lightning Knoll Buoy in the South (Position - Lat. 53° 59.8′ N., Long. 03° 14.2′ W.).
DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
Health Declaration.
Ship's Certificates and Cargo Documents.
PILOTAGE: Pilot boards at Lightning Knoll Buoy, using Pilot cutter usually 2 or 3 hours before high water.
Barrow Pilot Vessel on VHF Channels 16 and 12. Vessels bound fo Barrow should communicate their ETA at the Pilot Station through the local Agents or to the Harbour Master Barrow, at least 12 hours before arrival.
ANCHORAGE: At Lightning Knoll Buoy, depth of 10 m. at LW. I adverse weather conditions vessels proceed to Ramsey Bay, 70 km away, for shelter.
RESTRICTIONS: A new dock entrance is under construction which wi be completed early in 1991. The new entrance will allow access fro 2.5 hours before H.W. until 1 hour after H.W. The width of the ne entrance will be 36.6 m. with a sill 3.0 m. below L.A.T. Access to th port, which is protected from the prevailing Westerly winds by Waln Island, is gained from the Irish Sea through the harbour along the wel defined Walney Channel. The depth of water on the New Ramsden Doc entrance sill can range from 13.00 m. at high water springs to 9.4 m. a high water neaps.
MAX. SIZE: Length approx. 200 m. Beam 35 m. Draft according to tid
HEALTH: Vessels arriving from abroad are given Pratique by Custom Boarding Officers. In case of suspected disease or fever on board not Agent prior arrival. Agent will advise Port Health Authorities.
Also see "Health – All Ports" before first U.K. port.
RADIO: Local stations: Anglesey Radio, Port Patrick Radio.
VHF: Port VHF service. Call sign 'Ramsden Dock Radio'. Channel 1 (156.8 MHz) Calling and Safety. Channel 12 (156.6 MHz) Po Operations.

TUGS: Liverpool tugs available on request. Notice required.

BERTHING:

Docks	Water area in Hectares	Width of entrance
Ramsden	22.5	30.48 m.
Buccleuch	13.0	30.48 m.
Devonshire	5.0	24.4 m.

Walney Channel Deep-water Berth: 140 m.×25 m.×8 m. depth.

Ramsden includes: Ramsden Dock Basin with 3 berths with a total quayage of 378 m., taking vessels of up to 9.15 m. draft, and Anchor Line Basin with three berths 256 m., 152.4 m., and 274.3 m., long respectively, taking vessels of up to 7.3 m. draft. Anchor Line berth equipped for Ro/Ro traffic.

DENSITY: 1015 to 1025.

FRESH WATER: Available from quayside hydrants.

FUEL: Can be obtained from bunkering facility at No. 3 Berth, Ramsden Dock Basin.

CONSULS: Netherlands, Portugal, Spain (Vice-Consul) represented by James Fisher & Sons PLC. Tel. Barrow-in-Furness 22323.

GANGWAY/DECK WATCHMEN: Compulsory.

OPENING/CLOSING HATCHES: Handled by ship's crew.

AIRPORT: Manchester Airport.

TIME: As for other UK ports.

HOLIDAYS: As for other ports in England.

POLICE/AMBULANCE/FIRE: In emergency Tel. 999; for enquiries and other calls – Police: Barrow 824532; Ambulance: Carlisle (0228) 20345; Fire Service: Barrow 821363.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Seaman's Book or Passport required by non-British crew.

DEVELOPMENTS: Walney Channel and the approaches to Barrow are to be dredged during 1991 to provide deeper access for the new dock entrance.

AUTHORITY: Associated British Ports – Barrow and Silloth, Port Office, Ramsden Dock Road, Barrow-in-Furness, Cumbria, LA14 2TW. Tel: (0229) 822911. *FAX:* (0229) 835822. *Contact:* Captain J.W. Green, Port Manager and Harbour Master.

BARRY: 51.24 N. 03.16 W. (See Plan)

DOCUMENTS: Required for arrival:

C.142	2 Copies	Crew Declaration
C.14	3 Copies	Stores Declaration
C.13	2 Copies	General Declaration (completed by Agent)
C.16	2 Copies	Cargo Inward Declaration
C.74	1 Copy	Master's Authority (Agent's complete)
C.1320	2 Copies	Cargo in un-registered spaces.

These documents are to be completed and presented with copies of manifests and ship's documents at the time of report.

PILOTAGE: Telegraphic address of pilot station: A.B.P. Pilots, Pier Head, Barry Docks. Amount of advance notice of ETA required: 24 hours. Final confirmation to be given by VHF or R/T when within 2 hours of pilot station. VHF channel or frequency to be used when contacting pilot boat or pilot station: VHF Channel 16 thence working Channels 6, 8, 10, 11, 22.

Pilot boat: Motor launch black hull with "Pilot" in white on same. White superstructure. Light or sound signals to be made by vessels requiring a Pilot: flag "G" over numeral "6" flown by day, or "6" sounded on whistle or siren; flashed by lamp at night.

Exact area where pilot boat is located normally between Nash Point and Breaksea Lanby Buoy. Smaller vessels may be boarded in Barry Roads.

ANCHORAGE: Barry Roads, 10 fathoms, safe anchorage. Large vessels should anchor West of Breaksea Lanby Buoy. Small vessels 0.75 mile S.E. of Barry Dock Entrance.

RESTRICTIONS: Entrance only 4 hours before HW to 4 hours after HW.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Barry Docks Radio, Channels 10 and 11.

VHF: Channels 16, 10, 11 and 22.

TUGS: Join vessel at Barry Roads. Tug's or ship's lines utilised.

BERTHING:

Dock	Quay Length (Total) (m.)	Normal Depth of Water (m.)	Max. Size of Vessel Length (m.)	Beam (m.)	Draft (m.)	Max. d.w.t.
No. 1 Dock	2,894	9.8	178	23	9.1	23,000
No. 2 Dock	(9,490 ft.)	9.8	178	23	9.1	23,000
No. 3 Dock Basin		Semi-tidal	178	23	9.1	23,000

Vessels up to 22.9 m. beam can be accepted on favourable tides. Max. 23,000 d.w.t. with draft of 9.1 m.

Storage and Warehousing Facilities: 3,700 sq.m. transit shed and 1,860 sq.m. temperature controlled holding store within dock basin. No. 2 Dock provides a further 2 transit sheds totalling 7,413 sq.m. Additional covered storage within the port area comprises 4 sheds totalling 7,686 sq.m. (82,650 sq. ft.). Ample open storage space is also available.

Cranage and Mechanical Handling: Basin: 4 × 6 tonne. No. 2 dock, South Side: 4 × 6 tonne and 2 × 5 tonne. Berth No. 31: 5 × 10/11.5 tonne grabbing cranes.

Forklift Trucks: 32 of varying capacities up to 25 tonnes.

Pallet Trucks: 41 × 2 ton capacity.

Specialised Facilities:

(i) One of the largest tank storage facilities in Britain with tank capacity of more than 260,000 tonnes suitable for oil, chemicals, and natural gas.

(ii) 2 fixed Ro/Ro berths, located in No. 2 Dock and No. 3 Dock Basin. These are backed by 4 hectares (10 acres) of land for marshalling and storage of vehicles.

(iii) The port is licensed to handle explosives both in dock and at specially approved anchorages.

(iv) A bulk loading conveyor installed at No. 2 Dock is capable of handling coal and coke at a speed of 450 tonnes per hour and is served by road and rail, with stocking areas.

(v) Windward Terminal: Banana Terminal used by Geest Industries. 6,400 sq.m. of storage area (temperature controlled). 4 × 6 ton quay cranes. Terminal can accommodate vessels of 10,000 d.w.t.

BRIDGES: Bridge swung to vessel's requirements.

STEVEDORES: An early ETA essential. Enables planning to be effected in conjunction with other work in port.

Port Working Hours: Monday – Thursday: 0700 – 1630 hrs. Friday 0700 – 1530 hrs.

Daily and weekend overtime available and shiftwork can also be arranged on request.

MEDICAL: Hospital facilities available. Advance notice desirable.

TANKERS: 6 tanker berths, maximum draft 28 ft.

DENSITY: Density 1020.

FRESH WATER: 15/20 t.p.h. per hose.

FUEL: By barge or road transport.

CONSULS: None. Many located at Cardiff 8 miles East of Barry.

REPAIRS: All types of repair undertaken by private ship repairers.

DRY DOCKS: One dry dock, length 286.5 m. and width 23.9 m. – not in use.

GANGWAY/DECK WATCHMEN: The services of watchmen provided at discretion of Shipowner or Agent.

OPENING/CLOSING HATCHES: Work normally undertaken by ship's crew but the port will, if requested, provide a crane to assist in this work on completion of a "Hatch beam form". Riggers may be employed on this work at request of shipowner.

CUSTOMS ALLOWANCES: Refer to Customs. Tel: Cardiff 488088.

REPATRIATION: All facilities available.

AIRPORT: Cardiff (Wales) Airport, 4 miles, served by regular airlines.

TIME: GMT, except late March – late October when British Summertime (GMT plus 1 hour) is in operation.

HOLIDAYS: Bank Holidays. Arrangements made to work if essential.

POLICE/AMBULANCE/FIRE: Call operator by dialling 999.

TELEPHONES: At main berths.

IDENTIFICATION CARDS: Not needed by Port Authority.

SHIP SUPPLY SERVICE: A Ship Supply Service could be provided by Cory Ship Towage with their tugs at Cardiff if required. Address: Cory Ship Towage Ltd., S.E. Wales Office, Alexandra Dock, Newport, Gwent. NP9 2NP. Tel: Newport 56835/6.

AUTHORITY: Associated British Ports, Pierhead Building, Bute Docks, Cardiff, South Glamorgan CF1 5TH. *Tel:* (0222) 471311. *Telex:* 498542. *FAX:* (0222) 471100. *Contact:* Mr. B. J. Harding, Port Manager, Cardiff and Barry. N.G. Glenton, Operations Manager. Captain R.S. Grubb, Dock and Harbour Master.

BELFAST: 54.36 N. 05.56 W. (See Plan)

DOCUMENTS:

1 Passenger and Crew List for Immigration.

1 Crew Declaration C142 (for H.M. Customs).

1 List of Ship's Stores (for H.M. Customs).

1 Maritime Declaration of Health.

1 Cargo Manifest.

PILOTAGE: Pilotage compulsory for vessels over 100 m. LOA in the Outer Harbour and vessels over 75 m. in the Inner Harbour. Pilot station is situated at Belfast. It is manned continuously. Vessels requiring a Pilot should give as much advance notice as possible of ETA, but in any case not less than 2 hours. Pilots may be ordered through:

Port Operations Station, Tel. Belfast 781143 or VHF Channel 12.

Belfast Harbour Office, Tel. Belfast 234422 Ext. 231, 0900 – 1700 hrs. Monday-Friday.

There are two motor launches servicing Pilots. "Pilot Boat I" is 33 ft. long and "Mabel Helen" is 46 ft. 8 in. long. Both vessels are painted black with word Pilot in white letters on each side.

Pilot launches may be contacted on VHF Channel 12.

Usual international signals should be made for a Pilot. Pilots board from 1.5 to 2 miles S.E. of Carrickfergus. In poor visibility the pilot launch makes a sound signal of 4 short blasts. Vessels may be led into calm water before boarding.

ANCHORAGES: Safe anchorages, according to draft and size of vessel are available through Belfast Lough East of a line from Carrickfergus to Grey Point.

RESTRICTIONS: Intended depths in the entrance channels: Victoria Channel, sea to Refinery berths – 30 ft. below datum. Refinery to Thomson Wharf – 26 ft. below datum.

Musgrave Channel, 24 ft. below datum.

Herdman Channel, 21 ft. below datum.

MAX. SIZE: Vessels' size is restricted only by depth of water available. See "Restrictions", "Berthing" and "Tankers".

HEALTH: Use International Code quarantine signals. Master of a ship approaching a port in Northern Ireland from a foreign port other than an excepted port must ascertain state of health of all persons on board, and must fill in and sign Declaration of Health. It should be completed and ready to deliver to the Customs Officer, or authorised officer of the Port Health Authority, whichever first boards the ship.

If any suspected diseases on board, Free Pratique will not be granted by Her Majesty's Customs until the ship has been visited by the Port Medical Officer. Therefore in these cases notify "Portelth Belfast" by radio in advance.

Also see "Health – All Ports" before first U.K. port.

RADIO: The best station for messages, cables, etc., is Port Patrick, call signal GPK.

VHF: Belfast Port Operation and Information Service is situated at Port Control Office, located North of Richardson's Wharf in Herdman Channel. A continuous watch is maintained on VHF on Channel 12. Call sign is Belfast Harbour Radio.

TUGS: Tugs are owned by Cory Ship Towage Ltd., Tel. Belfast 743278. They are fitted with VHF Channels 16, 14, 12, 8 and 6. Tugs normally meet inward bound vessels in vicinity of No. 20 beacon. Use of tugs' lines is optional. Charge for use of each tug line is £15.

BERTHING: The following berths are equipped for handling containers or drive-on, drive-off traffic:

Berth	*Max. draft (ft.)*
Victoria Terminal 1 Ro/Ro	24
Donegall Quay 2 (1×35 tonne Scotch derrick)	18
Donegall Quay 4	18
Donegall Quay 5 (No cranes)	18
Ballast Quay (1×25 tonne derrick crane) also Ro/Ro and 600 ton heavy Ro/Ro pad	18
York Dock A (No cranes)	24
York Dock 1 and 2 (New self-contained container terminal, 2×30 ton transporter cranes)	24
Herdman Channel West (2×30 tonne transporter cranes)	18
Gotto Wharf (2×30 tonne transporter cranes)	21
Stormont Wharf 2 (200 tonne cantilever crane)	28
Pollock Dock 7 (1×35 tonne derrick crane)	28

Numerous general cargo berths and cranage from 3 – 15 tonnes.

Unitank Storage Co. Ltd. have constructed a bulk liquid terminal for the storage of petroleum, chemical products, etc. Special tankers ship liquid gas to the storage installation of Calor Kosangas (Northern Ireland) Ltd. at Musgrave Channel.

STEVEDORES: Two schooling times per day for stevedoring gangs – 0800 and 1300 hrs. Gangs for all week-end work are schooled at 1300 hrs. on Fridays.

MEDICAL: All kinds of medical treatment are available. Agent should be given as much notice as possible for arrangements to be made.

TANKERS: Tankers have to observe (i) Belfast Harbour Commissioners By-Laws for loading, discharging, etc., of petroleum spirit. (ii) Chamber of Shipping Tanker Safety Code. (iii) The Merchant Shipping (Tankers) (EEC requirements) Regulations 1981.

6,000 tons of tank washings can be processed at B.P. Oil Berth No. 4. *Tanker Berths:* Oil Berth No. 4 – 35 ft. Oil Berth No. 1 – 28 ft. Oil Berth No. 2 – 28 ft. Oil Berth No. 3 – 28 ft.

DENSITY: Average density of water in Inner Harbour is about 1012, and Outer Harbour is about 1024.

FRESH WATER: Available at almost all berths. Delivery is by hose at a rate of approx. 30 t.p.h. Arrangements can be made through Dept. of Environment (Water Services Division). Tel. 746581.

FUEL: All grades of fuel oil are available by road tanker only. 48 hours' advance notice of requirements should be given.

FIRE PRECAUTIONS: Special precautions for vessels carrying petroleum, explosives, calcium carbide and dangerous goods are set out in the appropriate by-laws. A copy of general port fire notice, delivered to all ships on arrival.

Also see "Tankers".

CONSULS:

Belgium	Hillsborough 682671
Denmark	Belfast 230581
Dominican Republic	Belfast 230321
France	Belfast 660325
Germany F.R.	Ballymena 41412
Greece	Belfast 242242

Spain	Belfast 227571
Sweden	Belfast 230581
Switzerland	Carrickfergus 61195
U.S.A.	Belfast 228239

REPAIRS: All types of deck and engine repairs are possible.

DRY DOCKS: Belfast Dry Dock, length of floor 1,100 ft. breadth of floor 167 ft., breadth of entrance 165 ft., level of sill 26 ft. 6 in. below datum.

Harland and Wolff Building Dock, length of floor 1,825 ft., breadth of floor and entrance 305 ft., level of sill 16 ft. 10 in. below datum.

Two other dry docks available.

GANGWAY/DECK WATCHMEN: Normally, a member of ship's company acts as watchman. Shore watchmen may be obtained through Agent.

OPENING/CLOSING HATCHES: Conventional beams and hatches and slab hatches are opened and closed by stevedores. MacGregor or patent steel hatches are worked by ship's personnel. Ship's personnel required to work all types of hatches at grain silos.

CERTIFICATES: Register. Radio Certificate. Load Line Certificate. Safety Equipment Certificate. Safety Construction Certificate. Light Bills. Passenger Certificate if applicable. Chain Register. Derat Certificate.

CUSTOMS ALLOWANCES: Tobacco: 8 oz. tobacco are permitted per man and issues are made at 8 day intervals. Wine and/or Spirits: Wine, beer and spirit issues are made, in moderation, at 4 day intervals.

REPATRIATIONS: Crew may be changed and repatriations arranged. Immigration must be informed.

AIRPORT: Aldergrove Airport is approximately 17 miles from Belfast. There are daily flights to all parts of United Kingdom. Belfast Harbour Airport has daily flights to several U.K. cities.

Air UK flights to Leeds/Bradford.

TIME: British Standard Time is kept, that is GMT plus 1 hour. Reverting to GMT in Winter months.

HOLIDAYS: Stevedore holidays are 1st January, 17th March, Easter Monday and Easter Tuesday, 12th and 13th July and 25th and 26th December.

POLICE/AMBULANCE/FIRE: All can be contacted by telephoning 999 and ask for services required. Additionally: Fire Brigade Belfast 222222; Ambulance Belfast 241212; Harbour Police Belfast 232235; *or* through Belfast Harbour Radio on VHF Channel 12.

TELEPHONE: Telephone can be placed on board at certain berths.

SERVICES: All principal makes of radio, radar and gyro equipment can be serviced. Compass adjusting and D/F calibration can be carried out.

SHORE LEAVE: Normally no restrictions on shore leave.

IDENTIFICATION CARDS: Seamen's identity cards required.

AUTHORITY: Belfast Harbour Commissioners, Corporation Square, Belfast BT1 3AL. *Tel:* (0232) 234422. *Telex:* 74204. *FAX:* (0232) 242663. *Contact:* Captain Hugh O'Byrne, Harbour Master. Mr. G. Irwin, Chief Executive. Mr. J. F. McNamee, Chief Engineer. Mr. S. Sweeney, Operations Manager.

BLYTH: 55.08 N. 01.30 W. (See Plan)

DOCUMENTS:

Certificate of Registry.
Load Line Certificate.
Wireless Telegraphy and/or Safety Radio Certificate.
Safety Equipment.
Ship Construction.
Light Dues Payments.
Bills of Lading, Manifest and Stowage Plan usually sent in advance of vessel.
List of Members of Crew (of ship arriving in U.K.) who are aliens or were engaged outside U.K. (Home Office Form I.B.6A). Passenger form to be completed when reporting vessel's arrival from foreign ports.

PILOTAGE: Call by VHF Channels 12 and 16 when approximately 1 hour off port. Pilot boats black hull with words "Pilot" on hull or superstructure. Letters in white. Fly International Pilot Flag at masthead and at night show International Light Signals for pilot boat on station.

Vessel requiring Pilot sounds 2 short and 3 long blasts or exhibits International Code Flag "G". By night flashes International Code Signal "G" or "PT". Pilot boats operate and will board within radius of 2 miles of East Pier Lighthouse, or further, weather permitting. Pilots board at Pier end area during adverse weather.

ANCHORAGES: No anchorages within harbour – in good weather vessels can anchor off port East of Fairway Buoy.

RESTRICTIONS: No night restrictions. Entry according to draft. Channel dredged to 7.6 m. LAT and approaches 8.5 m. LAT. Upper River and South Harbour 6.7 m. LAT. Rise of tide 4.3 m. Springs, 2.1 m. Neaps.

MAX. SIZE: Bulk carriers up to 22,500 d.w.t. discharge at Alcan (U.K.) Limited Terminal. Max. draft 9.8 m. LOA 190 m.

For other berths max. length 190 m., draft 8.5 m.

HEALTH: International quarantine signals to be used. Pratique will be granted by Customs or Port Health Officer if Maritime Health Declaration is clean. If suspected diseases on board radio "Portelth Blyth" in advance advising details.

Also see "Health – All Ports" before first U.K. port.

RADIO: Cullercoats Radio.

VHF: Details of movements within port given over VHF from Port Control Office (Tel: (0670)-352678). Calling Channel 16, working Channel 12.

TUGS: Normally join vessel at harbour entrance. Extra charge for use of tugs lines.

BERTHING: Alcan Bulk Alumina Terminal, dredged depth alongside 10.4 m. LAT. Alcan is offering the use of its ship unloading terminal at Blyth Harbour to other firms requiring bulk cargo unloading facilities.

North Quay, South Harbour, depth alongside 8.5 m. LAT.

Coal-loading berths and waiting berths, 5.2 m. to 8.5 m. LAT. West Quay, dredged depth 7.0 m. LAT (Sto-Ro/Ro-Ro Terminal "Blyth Progress"). South Side Berths, dredged depth 8.6 m. LAT. Wimbourne Quay (Sto-Ro Terminal – "Link Blyth" – Pontoon) dredged depth 6.7 m. LAT.

STEVEDORES: Blyth Harbour Commission, Traffic Department, South Harbour, Blyth. Tel. (0670) 352066. ETA requested day before arrival

MEDICAL: Notice not necessary but advisable. Hospital facilities available. Inoculation, vaccinations and/or certificates not specifically required.

DENSITY: Sea water. Fresh water effect negligible.

FRESH WATER: Obtainable from shore hydrants. Rate of delivery varies from 10 t.p.h. – 50 t.p.h. according to location.

FUEL: BHC operate a bunkering Agency on behalf of Shell UK Ltd. 24 hours notice usually required. Grade – gas oil.

CONSULS: Denmark, Norway, Netherlands.

REPAIRS: All types of deck and engine repairs possible.

GANGWAY/DECK WATCHMEN: Not usually employed as these duties are carried out by the crews.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CUSTOMS ALLOWANCES: Tobacco: 50/250 grammes. Wine/Spirit: Wine up to 0.75 litres. Spirits up to 0.375 litres.

REPATRIATION: Can be arranged by H.M. Immigration Office, Blyth.

AIRPORT: 24 km. Served by regular airlines.

TIME: BST is GMT plus 1 hour. GMT in Winter months.

HOLIDAYS: Christmas Day; New Year's Day; Good Friday; Easter Monday; May Day (first Monday in May); Spring Bank Holiday (last Monday in May) and Late Summer Holiday. Cargo work can be arranged on these days by request.

POLICE/AMBULANCE/FIRE: Tel: 999.

TELEPHONES: Can be fixed aboard by arrangement.

IDENTIFICATION CARDS: Seaman's Book or Passport desirable.

AUTHORITY: Blyth Harbour Commission, 79 Bridge Street, Blyth, Northumberland NE24 2AW, United Kingdom. *Tel:* (0670) 352066. *Telex:* 537567. *FAX:* (0670) 368540. *Contact:* P. J. Camp, General Manager.

BOSTON: 52.58 N. 00.02 W.

DOCUMENTS: Usual U.K. requirements.

PILOTAGE: Compulsory for all vessels greater than 50 g.r.t. Pilot boards at Clay Hole from launch in the approaches to River Witham or at Boston Roads (non-compulsory). Pilot Office Tel: 0205-362114.

ANCHORAGES: Vessels awaiting tide anchor to South of Buoy No. 9 in depths of 7.3 m.

Anchorages available in Boston Deeps, depths 5.5 m. to 9.1 m.

RESTRICTIONS: Entrance to dock normally restricted to 2.5 hours before and 1.5 hours after HW.

Lock Dimensions: Length 91.4 m., width 13.6 m., depth on sill 5.4 m. MHWN; 7.5 m. MHWS.

Sill clearance of 1.5 m. normally required.

MAX. SIZE: Dock: Length 100 m. Riverside quays: Length 90 m. Larger vessels may be accepted, tides permitting.

HEALTH: Normal U.K. procedure. Port Health Officer, Tel: 0205-363271.

VHF: Port radio station maintains VHF watch (Channels 16 and 12) during office hours and from 2.5 hours before till 1.5 hours after HW.

TUGS: 1 tug available, 7 tons bollard pull.

BERTHING: *Boston Dock:*
North Quay: Length 251 m.
South Quay: Length 257 m. Transit shed 2,787 sq.m.
West Quay: Length 137 m. Transit shed 2,160 sq.m.
Two Ro/Ro ramps.

Riverside Quay: Length 750 m. Transit shed 1,765 sq.m. Berths dry out at LW.

CRANES: At Boston Dock:
4×6 tonnes electric portal cranes.
1×25 tonnes Scotch Derrick.
8 mobile cranes.
At Riverside Quay: 1×7.5 tonnes electric portal crane.
Forklifts available at both Boston Dock and Riverside Quay.

BULK CARGO FACILITIES: Two silos for grain, each capable of storing 5,000 tonnes.
(i) King's Lynn Silos at Riverside Quay, with 2 loading towers.
(ii) Witham Wharf, opposite Riverside Quay. Privately owned.

Lingrain Silos: There is a 46,000 tonne grain silo adjacent to Dock and connected to North Quay. 2×500 t.p.h. mobile shiploaders available.

SPECIALISED CARGO-HANDLING FACILITIES: Containers are discharged at South Quay, using a 25 tonne Scotch Derrick and by a 35 ton container gantry on the North Quay. 20 ft. and 40 ft. containers are handled.

Container handling yard (1.2 ha.) with 30 tonne top lift truck available.

BRIDGES: A power cable with 150 ft. vertical clearance exists to East of lock.

STEVEDORES: Several local companies can supply stevedores.

MEDICAL: Doctors, dentists and hospital available locally.

FRESH WATER: Available.

FUEL: Available from road tankers. Contact Agents to make arrangements.

CONSULS: Denmark, Vice-Consul; Netherlands, Vice-Consul; and Norway, Vice-Consul.

REPAIRS: Can be undertaken by local companies. Divers available.

CUSTOMS ALLOWANCES: Usual U.K. Regulations. H.M. Customs, Tel: 0205-363070.

TIME: GMT; Summertime kept from late March – late October (GMT plus 1 hour).

POLICE/AMBULANCE/FIRE: Dial 999 for emergency service.

AUTHORITY: Port of Boston Ltd., Dock Office, Boston PE21 6BN. Tel: 0205-365571. *Telex:* 378114 Bosdock G. *FAX:* 0205–310126. Cables: Neptune, Boston. *Contact:* Captain B.D.C.Franklin, Harbour Master. Tel: 0205-362328 (direct).

BRAEFOOT BAY: 56.02 N. 03.19 W. (See Plan)

Braefoot Bay Marine Terminal is a facility shared between Exxonchem Olefins Inc. and Shell U.K. Exploration and Production as the shipping point for the products of the Mossmorran gas fractionation complex situated approximately 7 km. inshore from the Terminal. The Terminal is located on the Fife Shore of the River Forth between the communities of Dalgety Bay and Aberdour and separated from the main shipping fairway by the Island of Inchcolm.

The Eastern jetty is operated by Exxonchem Olefins and exports ethylene in ships between 2,400 cu.m. and 12,000 cu.m. capacity.

The Western jetty is operated by Shell U.K. Exploration and Production for the export of propane, butane, and natural gasoline in ships of up to approximately 60,000 cu.m.

Each jetty carries out loading operations independently, while the co-ordination and administration of marine activities is the responsibility of the Terminal Supervisor who is the local senior representative for Braefoot Bay Marine Terminal appointed by Shell U.K. Exploration and Production and acting on behalf of itself and Exxonchem Olefins Inc. with direct responsibility for the Management of all ship related activities at Braefoot Bay.

DOCUMENTS: See "Leith".

PILOTAGE: Pilotage is compulsory for all vessels calling at or sailing from Braefoot Bay Marine Terminal.

Pilots are licensed by the Forth Pilotage Authority and must be ordered for both inward and outward passages.

Vessels bound for the Forth must confirm their ETA 2 hours before arrival at pilot station.

Pilots may be contacted by calling "Forth Pilots" on VHF Channel 16 and working on VHF Channel 14.

ANCHORAGE: Vessels requiring anchorage in the Forth Estuary (other than in emergency) should apply to the Forth Navigation Service (Harbour Master) for direction to a designated anchorage.

APPROACHES: "General Directions for Navigation in the River and Firth of Forth" are published by the Forth Ports Authority and administered by the Forth Navigation Service. Vessels entering or navigating the Forth must notify Forth Navigation Service 24 hours before entering and 1 hour before leaving a berth, of their proposed intentions and obtain subsequent clearance to carry out such intentions. Forth Navigation Service can be contacted on VHF Channels 16 and 12.

RESTRICTIONS:

(a) All movements are subject to the directions of the Forth Navigation Service.

Pilotage is compulsory for all ships arriving at, or departing from Braefoot Bay Marine Terminal.

(b) Vessels will not be accepted for berthing at Braefoot Bay, and departures will not be authorised unless visibility is at least 0.5 nautical miles at Braefoot Bay jetties, that is to say that by day, the Haystack Rock shall be visible; by night No. 3 or No. 4 buoys shall be visible from the jetties.

(c) (i) Tankers of or greater than 145 m. length (approx. 12,000 cu.m. capacity) shall berth port side to the jetties on slack water or flood tide only. It is a requirement of Shell Expro and the Forth Ports Authority that such tankers shall only approach the Terminal through the Western channel of Mortimer's Deep.

(ii) Tankers bound for the Eastern (Ethylene) jetty of less than 145 m. overall length may (at the discretion of the Terminal Supervisor) be allowed to berth starboard side to the jetty on slack water or ebb tide only. It is agreed with the Forth Ports Authority that tankers of less than 145 m. berthing in this manner may approach the Terminal through the Eastern channel of Mortimer's Deep.

(iii) It is a requirement of the Forth Ports Authority that all tankers departing from the Terminal shall do so through the Eastern channel from Mortimer's Deep. Vessels which have berthed as in (ii) above will therefore be required to "swing" on departure and may only do so provided that they are assisted by at least 2 tugs unless the vessels can satisfy the Ports Authority and the Terminal Supervisor that in the particular circumstances 1 tug would be sufficient.

Also see "Regulations".

MAX. SIZE: Western jetty: Depth 15.0 m. Eastern jetty: Depth 10.0 m.

Eastern exit channel bar depth (Hawkcraig Point leading line) – least depth by sounding 9.5 m., swept depth 8.5 m. below chart datum.

HEALTH: See "Health – All Ports" before first U.K. Port.

RADIO: *Pre-arrival information:*

Masters must send ETAs at least 72 hours in advance of arrival and thereafter advise of any variation of more than 12 hours.

Confirmation ETA should be sent at least 24 hours in advance of arrival and thereafter advise of any variation of more than 4 hours. (When voyage duration is less than 72 hours, Masters should send ETA as soon as possible.)

A standard pre-arrival message will be sent to each gas carrier requesting the following information/confirmation. A similar message (excluding items (a) to (g)) will be sent to Natural Gasoline Tankers.

Quote:

(a) Remotely operated valves: through a complete open/closed cycle, ensure proper functioning and ascertain valve type (ball, gate, etc.) and actual valve closing times.

Remote valves must close within 30 seconds of operation but so that the final 20% of closure takes at least 6 seconds.

(b) Gas detection system operational and set (high or low sensors) and calibrated for the cargo to be loaded.

(c) Cargo transfer emergency stops tested from all locations to ensure correct operations of valves, alarms and interlocks.

(d) Ensure operation of the tank high level and pressure alarms and interlocks.

(e) Where adjustable setting safety valves are installed, confirm they are set for the cargo to be received.

(f) Confirm fire fighting equipment including water spray system fully operational and tested.

(g) Manifold Configuration and presentation (forward to aft) e.g. LVVL. It is most important that the specific duty (ethylene, propane, etc., liquid or vapour return) of each presentation flange is known to the terminal at least 24 hours prior to the ship's arrival. Delays consequential on non compliance with this requirement will be for ship's account.

(h) Advice that only clean sea water ballast can be discharged at this terminal.

(i) Previous 3 cargoes.

(j) Arrival draft.

(k) Sailing draft.

(l) *For first time callers – manifold configuration:*
  - (i) Size rating and standard of connecting flanges, e.g. 12 in. Ansi 150/8 in. Ansi 300/6 in. Ansi 300
  - (ii) Distance of manifold centre line from bow
  - (iii) Height above uppermost continuous deck
  - (iv) Distance of manifold from ship's side
  - (v) Maximum loaded draft
  - (vi) Minimum draft while at berth
  - (vii) Distance from face to support (max. acceptable is 1,200 mm.)
  - (viii) Height of manifold above keel
  - (ix) Distance between manifold flange centres.

(m) Details of ANY DEFECTS IN VESSEL OR EQUIPMENT affecting cargo operations or manoeuverability or confirmation that there are no known defects.

Unquote.

Note: The foregoing information is required in addition to the pre-arrival information requirements of the Forth Ports Authority – SI.1077 Merchant Shipping (Tankers) (EEC Requirement) 1981 refers.

Telex: A telex machine is sited in the Braefoot Bay control room for incoming messages only, the number is 728245 Moship G, and is operable 24 hours per day. This telex number may be used to receive urgent information concerning ship movements and cargoes. Messages should normally be transmitted through the ship's agent.

VHF: "Braefoot Terminal" maintains a listening watch on VHF from at least 2 hours before vessel's ETA on Channel 16 and may work on Channels 15, 44, 48, 69 or 73. (Channel 69 is normally reserved for jetty mooring towing operations.)

RADAR: Port and Estuary Radar Service operated by Forth Navigation Service. (See "Leith").

TUGS: Only tugs licensed by the Forth Ports Authority to do so, may operate at Braefoot Bay Marine Terminal.

Availability of tugs is assured by Forth Estuary Towage Ltd., provided at least 24 hours' notice of requirements is given in accordance with the agreed ordering and call out procedures set out in the published Tariff. Tug orders may be placed through ships' Agents, the terminal or direct to Forth Estuary Towage Ltd., Leith. 24 hours' notice of towage requirements is necessary for programming tug commitments and obtaining priority for service. In the event of ship delays within the 24 hours' notice period, cancellation or ETA adjustment for service previously ordered will not be subject to charge, provided that adjustment notice is received during normal working hours and that the tugs have not left their normal berths to attend on the vessel's original order.

The tugs available are as follows:

2×12 tonne bollard pull Voith Schneider.
2×19 tonne bollard pull Voith Schneider.
1×27 tonne bollard pull Voith Schneider.

As a guide to ordering in advance and to avoid delays it is strongly recommended that the following table is regarded as minimum requirements for tug assistance:

Size of Ship	*Tugs (tonnes-bollard pull)*
40-60,000 cu.m. berthing	1×27 tbp+2×19 tbp
40-60,000 cu.m. sailing	1×27 tbp+1×19 tbp
20-40,000 cu.m. berthing/sailing	2×19 tbp
6-20,000 cu.m. berthing/sailing	2×12 tbp

Masters of smaller vessels who do not anticipate requiring tug assistance for berthing/unberthing may order an escort/standby tug.

Tugs attending vessels will normally rendezvous with arriving ships in the area Inchkeith Island to Burntisland Roads and also escort departing ships to that area.

Out of hours and in emergency tugs may be contacted through the Forth Navigation Service Duty Officer on VHF Channel 16.

Boatmen: Only Boatmen approved by the Companies and licensed by the Forth Ports Authority to do so, may operate at Braefoot Bay Marine Terminal.

Availability of mooring boats is assured by C. & R. Briggs Ltd., providing at least 24 hours' notice is given, through ships' Agents, the terminal or direct to C. & R. Briggs, Burntisland. Telex: 727377 Crbcom G.

Pre-ordered mooring boats will be in attendance at the terminal 30 minutes in advance of the arranged berthing/departure time and can be contacted on VHF radio. In the event of the ship delay within the 24 hours' notice period, cancellation or adjustment for services previously ordered will be without charge provided that adjustment notice is received between 0900 hrs. and 1630 hrs. Monday to Friday and that the mooring boats have not left their base to attend on the vessel's original order.

MOORING:

(a) Vessels unable to make fast alongside the Braefoot Bay Terminal jetties with an all wires, or wires with synthetic rope tails mooring system may be required to provide additional restraint by doubling or using both ends of certain mooring lines.

A minimum of 2 spring lines of the same material (preferably wire) shall be used at each end of the vessel.

(b) Mooring lines used in any particular direction of service (head/stern lines, breast lines, springs) shall be of similar breaking strength and material. Under no circumstances will a mixture of wire and synthet ropes in the same direction of service and to the same dolphin b acceptable except where a synthetic rope has been used as "first li ashore" for positioning purposes, then this may be excluded in th consideration of the final mooring plan.

(c) If conditions as in (a) cannot be complied with, the loading arm will not be connected until alternative arrangements have been agree with the Terminal Supervisor.

(d) Once moored, ships' winches must be secured with the brake hardened up. Winches must not be left on Automatic Tension.

(e) Masters of vessels are responsible for ensuring that:
  - (i) their vessels are safely secured in accordance with th preceding paragraphs.
  - (ii) a strict watch is kept on their vessel's moorings and that the are tended as required to prevent slack or overtaut lines an undue movement of the vessel.
  - (iii) their vessel's mooring ropes or wires are secured only to th proper fixtures provided for that purpose.

BERTHING: *Pre-Operations Meeting and Inspection:*

Before any operations commence a meeting will take place betwee the Terminal Supervision and the Ship's Master (or his authorise deputy). They will:

(a) Complete/carry out the ship/shore Safety Check Lists and Safe Inspection in accordance with the O.C.I.M.F. Standards if required.

(b) Discuss any deficiencies shown up by (a) above and agree an additional precautions required. The terminal reserves the right to refus to load or discharge a vessel if the required standards are not met.

(c) Complete a loading/discharge plan that includes:

Connecting/disconnecting procedures
Quantities and grades of cargo to be loaded/discharged
Loading/discharge rates (see "Loading" – Pressure Surges)
Deballasting procedure (see "Ballast")
Vapour return procedure
Cool down procedure (if required)
Maximum permitted pressure at ship's rail
Location of Emergency Stop Buttons/use of Umbilical Cord
Ensure that ship has on board data sheets for product bein handled
Emergency Procedures (see "Safety").

(d) Check the previous cargo record (last 3 cargoes) and agree tha ships' tanks are ready to receive product.

The Companies reserve the right to:
  - (i) Sample and analyse the condition of ships' tanks or quality o cargo and ballast tanks before commencing to load o discharge.
  - (ii) Instruct a third party independent surveyor for the samplin and measurement of cargo and/or tanks, the costs for whic will be for the account of the Jetty Operating Company.
  - (iii) Place approved portable equipment on board as required fo sampling, testing or communication purposes during loadin discharging operations.
  - (iv) Refuse to load product and/or accept return vapour whe ships' tanks are not within specification for product to b loaded.

Reasonable Notice of these requirements will be given.

BERTHING FACILITIES: Western Jetty:

Jetty Operating Company: Shell U.K. Exploration & Production.

Manifold Limitations: B.F.O. 8 in. and LPG/Gasoline 12 in. 150 AS flanged presentations arms.

	Max.	*Min.*
Manifold height above water line	19.65 m.	5.15 m.
Manifold set back from ship side	9.6 m.	3.00 m.

For multiple 12 in. arm connections the minimum centre to centr adjacent connection distance is 1.3 m.

L.P.G. 8 in. 300 ASA flanged presentation arms.

	Max.	*Min.*
Manifold height from water line	11.15 m.	1.95 m.
Manifold set back from ship side	8.6 m.	2.00 m.

For connection of 2×8 in. arms the minimum centre to centre adjace connection distance is 0.75 m.

N.B. For connection to any arm: Distance between ship's outboa presentation flange and first ship's manifold piping support must no exceed 1,200 mm. to prevent cantilever overstressing of ship's pipin

Product/Vapour Return: LPG: Vapour return arm will be connecte before loading operations commence to enable vessels to return vapou to storage tanks or to flare.

Vapour return may go to flare subject to the quality being acceptab to Shell Expro but always provided the oxygen content of such vapou return to flare does not exceed 4.0% vol. max. as may be establishe under the pre-operations meeting/inspection. (See "Berthing" (d)).

Shell Expro at its sole discretion may accept vapour return to stora always subject to the quality being acceptable to Shell Expro an normally provided the previous 3 cargoes were LPG and also that su vapour does not contain more than:

(i) 0.3% vol. oxygen
(ii) 0.5% vol. non condensible gas
(iii) 0.5% vol. propylene
(iv) 0.1% vol. butadiene
(v) 10 ppm ammonia
(vi) 10 ppm VCM
(vii) 5 ppm water vapour

However, Shell Expro at its sole discretion may accept vapour fro any vessel to shore storage provided that the quality of such vapour acceptable to Shell Expro. When appropriate ships returning vapour shore storage will be automatically credited for such returns.

LPG Loading/Vapour return rates available to ships via each pair loading arms are:

via 12 in. loading arms, up to 3,000 cu.m./hr. per product
8 in. loading arms, up to 1,100 cu.m./hr.

Simultaneous loading of propane and butane is available on 12 arms only.

NOTE: Propane/Butane is delivered to ships in fully refrigerated state, i.e. approx. −42°C/−5°C as appropriate. There are no cargo heating facilities at this terminal.

Natural Gasoline: Natural gasoline loading is via No. 4 (12 in.) loading arm with rate of up to 2,000 cu.m./hr. available.

Bunker Fuel Oil (when available): Bunker fuel oil is loaded/discharged through No. 7 (8 in.) flanged loading arm only at a rate of up to 350 cu.m./hr.

Marine Diesel (when available): Marine diesel is handled through a 3 in. flexible hose only, at a rate of up to 30 cu.m./hr.

Eastern Jetty:

Jetty Operating Company: Exxonchem Olefins Incorporated.

Manifold Limitations: Ethylene 6 in. 300 ASA flanged presentation arms.

	Max.	*Min.*
Manifold height above water line	11.2 m.	2.75 m.
Manifold set back from ship side	4.6 m.	0.85 m.

For connection of 2 arms the minimum centre to centre adjacent connection distance is 0.75 m. The maximum distance is 1.5 m.

Ethylene: Vapour return arm will be connected before loading operations commence to enable vessels to return vapour to storage tanks or flare. Vapour return may go to flare always provided the oxygen content of such vapour to flare does not exceed 4.0% vol. max. as may be established under the pre-operations meeting/inspection. (See "Berthing" (d)).

Exxonchem Olefins Inc. at its sole discretion may accept vapour return to storage always subject to the quality being acceptable to Exxonchem Olefins Inc. and provided that the last cargo was ethylene or that vessel has been purged with ethylene vapour to the satisfaction of Exxonchem Olefins Inc.

A loading rate of up to 250 tonnes/p.h. is available to vessels.

LOADING:

Marine Loading Arms: All products (with the exception of marine diesel) are delivered to ships via marine loading 'hard arm' units which are individually fitted with Emergency Release Systems (ERS).

The emergency release systems consist of two ball valves located above the presentation flange. Only after closure of the ball valves, the hydraulic clamp between the ball valve opens, leaving one ball valve closing off the ship's manifold and the other closing off the loading arm. The loading arm then returns to the parking position.

On hearing 'ERS' alarm (a flashing red beacon with oscillating tone) all staff should vacate the vicinity of the manifold/loading arms. The emergency release system will be manually initiated from onshore or AUTOMATICALLY in the case of over extension of the loading arms, e.g. if ship drifting outside the loading arm envelope.

Pressure Surge Precautions: Non-routine closing of the loading systems, automatic intervention or 'fail-safe' closure of shipboard Emergency Shut Down (ESD) valves can generate dangerous surge pressures. A careful check of ship's ESD system will be made prior to loading. The Master (or his deputy) will be asked to operate the system to enable timing of the valves and may be requested to have valves adjusted according to the provisions of the IMO Codes for Ships Carrying Liquified Gases in Bulk. The Terminal Operating Companies reserve the right to restrict loading rates if valve closing times are not compatible with rates otherwise agreed. Excess loading times caused by such a restriction will be charged to the ship if port time/lay time is exceeded.

The shore system is designed to withstand the high surge pressures which can be generated and safe emergency shut down will be accomplished by using the shore ESD pendant control provided to vessels.

In the event of an emergency the pendant 'ESD' must be activated which will immediately result in:

1. Shore pumps close
2. On shore delivery valves close.

ONLY THEN MAY THE VESSEL MANUALLY ACTIVATE ITS OWN ESD SHIPS MUST NEVER CLOSE VALVES AGAINST THE SHORE LOADING PUMPS

Masters are referred to ICS Safety Guide (Liquified Gas) paras, 1.8.2 and 4.5.2 and the International Safety Guide for Oil Tankers and Terminals para 7.3

Operational Procedures: The Loading/Discharge Plan and operation must comply with the following procedures:

(a) The Company will be responsible for connecting/disconnecting loading arms/hoses to the agreed ship's presentation flanges as indicated by the responsible ship's officer.

(b) The Loading Arms are normally purged and remain under Nitrogen between loading operations. Vessels must, therefore, be prepared to receive a small volume of Nitrogen vapour at the commencement of loading operations. (0.5 cu.m. at the Eastern jetty, 10 cu.m. at the Western jetty.)

(c) The responsible terminal representative and ship's officer will agree that systems are correctly lined up before transfer operations begin.

The terminal staff will pressurise the loading arm with Nitrogen against the ship's manifold valve and the loading arm connection will be tested for leaks. When manifold has been proven 'tight' the loading arm will be depressurised and transfer commenced at the agreed starting rate.

Loading must be commenced slowly to avoid rapid pressure build up. When liquid flow is established the terminal will increase rate as requested by the ship up to the agreed maximum bulk rate.

(d) During transfer operations ship will confirm with the shore at suitable intervals that they are in agreement with the quantity of product actually transferred and the quantity/time estimated to complete the operation.

(e) EXCEPT IN EMERGENCY VENTING OF LPG OR ETHYLENE VAPOURS TO ATMOSPHERE IS PROHIBITED AT BRAEFOOT BAY.

All such displaced vapour must be reliquified on board by ship's systems or returned to shore via the vapour line.

During loading of liquified gas carriers the jetty operator must be advised of and log the ship's tank pressure every half hour.

The LPG/ethylene return vapour line will in any case be connected and available for pressure relief.

Displaced Natural Gasoline vapour shall only be vented to atmosphere via the ship's elevated or collective fixed vent system, as agreed in the ship/shore check list.

(f) During transfer operations

- (i) An Operator/Technician will remain on the jetty at all times.
- (ii) A responsible English speaking ship's officer equipped with an approved portable UHF radio tuned to the agreed ship/shore communication channel shall be on duty at all times.
- (iii) A responsible member of the ship's crew capable of understanding and relaying the jetty Operator/Technician's communications to the Responsible Ship's Officer shall be stationed on deck so that he can:
  - (a) observe the manifold connections
  - (b) observe the gangway
  - (c) exchange visual/vocal signals with the jetty Operator/Technician.
- (iv) The ship must inform the terminal and the terminal must advise the ship of any deviation from the agreed Loading/Discharge Plan.

(g) At least 15 minutes' notice must be given of transfer rate changes (including "topping off") being required except in emergency when the requirements of "Pressure Surge Precautions" (see above) must be observed.

(h) If for any reason there is an unusual evolution or accumulation of gas, loading shall be stopped or the loading rate into a particular tank reduced at the discretion of either the Terminal Supervision or responsible Ship's Officer.

(i) The vessel must by day fly Flag 'B' of the International Code, and by night exhibit an all round red light.

(j) Prior to, and on completion of loading/discharging an Operating Company representative will witness ship's dips/ullages and obtain from the Master the quantity loaded according to ship's figures.

(k) Operations shall be stopped during electrical storms in the vicinity of the ship and all cargo valves shall be closed. During periods of high winds (gusting to 40 knots or over), and/or on the instruction of either the Harbour Master or Terminal Supervision, operations shall be stopped and the loading arms disconnected. For ships with a presentation flange of 4 in. this will be 27 knot gusts and for 6 in. and above 40 knot gusts as maximum limits but which may be reduced according to prevailing circumstances.

At suitable intervals with regard to the estimated duration of cargo transfer the responsible Terminal Representative and Ship's Officer will carry out a repetitive check and confirm that:

The Safety Check List remains valid
Operational procedures are satisfactory
Jetty Regulations are not being contravened.

BALLAST: *Avoidance of Pollution:*

(a) No oil or mixture containing oil shall be discharged or allowed to escape from a vessel while at the terminal, the approaches or in the River and Firth of Forth.

No garbage, or other materials, either liquid or solid shall be discharged overboard from a vessel, but shall be retained in suitable receptacles on board or arrangements made for disposal ashore.

(b) Discharge overboard of the clean ballast contained in the cargo tanks of clean petroleum product tankers is permitted, but only after inspection has been carried out by the Terminal Supervisor, who shall also obtain the approval of the Harbour Master prior to commencement of such ballast discharge. Discharge of clean segregated ballast water overboard is permitted subject to approval and/or inspection by the Terminal Supervisor.

The Forth Ports Authority Harbour Master will be informed if inspection either before or during discharge shows ballast water is contaminated and such discharge shall immediately cease.

Except as herein specified, all ballast water other than that contained in segregated ballast tanks shall be retained on board.

DIRTY BALLAST CANNOT BE DISCHARGED AT THIS TERMINAL

(c) By arrangement with the Terminal Supervisor oily residues and bilge slops may be discharged ashore via flexible hose provided that such discharge is not concurrent with product transfer via hard arms and that delays so incurred are for ship's own account if port time/laytime is exceeded.

The onshore oily slops reception tank has a limited handling capacity and in no case will slops quantities in excess of 100 tonnes be accepted from any one vessel. Slops transfer to this facility for ships at the Eastern jetty is via a 20 cu.m. holding tank and transfer rates limited to 5 tonnes per hour.

(d) Prior to Oil (including Natural Gasoline) or slops transfer the Anti-Pollution Check List must be completed and no leakage or spillage shall be swept or allowed to leak overboard. Swabs or sawdust used for mopping up spillages must be brought ashore for destruction.

Any leakage or spillage must be reported immediately to the Terminal Supervisor and operations suspended until the leakage or spillage has been cleaned up to the satisfaction of the Terminal Supervisor and the Harbour Master. The Terminal Supervisor may mobilise resources to assist in the containment and cleaning of pollution caused by a ship, without the authority of the Master but in such action he shall be considered to be acting on behalf of the Master and with his approval.

It is statutory requirement that any pollution be immediately reported to the Harbour Master.

MEDICAL: Doctors and Hospitals in Kirkcaldy and Inverkeithing.

DENSITY: 1015 – 1025 (depending on rainfall).

FRESH WATER: Potable fresh water is normally available from hydrants at each jetty. Ships requiring water are responsible for supplying and connecting their own hoses to the jetty hydrant as indicated available by the jetty operator. A nominal charge may be made for water in which case a ship's officer may witness shore meter readings as the Master will be required to authorise water bill for payment of charges by the ship's Agent.

FUEL: B.F.O. and Marine Gas Oil (if and when available) can only be supplied to ships loading at the Western (LPG) jetty. Requests for bunkers must be notified as early as possible and confirmed in the ETA notices through ship's Agent.

CONSULS: See "Leith".

REPAIRS/DRY DOCKS: See "Grangemouth".

AIRPORT: Edinburgh Airport 30 miles.

POLICE/AMBULANCE/FIRE: Control have a direct line.

TELEPHONES: A public pay telephone is located at the jetty trestleway root.

Smoking is expressly prohibited in the telephone kiosk, infringements by individuals of this regulation will necessitate withdrawal of the facility.

STORING: *General cargo, bunkering and stores handling:*

(a) No general cargo including petroleum in drums or other containers, or liquified gas in cylinders shall be handled during:

(i) Loading or transfer of LPG, Ethylene or Natural Gasoline
(ii) Gas freeing, purging or tank cleaning

Note: Bunker services are not available to ships calling at the Eastern Jetty.

(b) The handling of ship's stores and bunkers (if available) may be permitted during operations but only with the permission of both the Terminal Supervisor and the Master of the Vessel and provided that:

(i) the cargo operations remain adequately supervised.
(ii) any cargo operation which may allow vapours to escape on deck should be stopped whilst stores are being handled e.g. pumping of strippings to an after tank or sampling/ullaging gasoline tanks or disconnection of loading arms, etc.
(iii) Drums of oil paint, steel plates and any other heavy metal parts which may cause a spark, should be landed on rubber or other suitable matting and not directly onto vessel's steel deck. These items may not be dragged or rolled along the deck.

(c) Gas cylinders must not be rolled along the deck of a vessel or jetty.

(d) The jetty cranes are for hose-handling and other jetty purposes. They may only be operated by Terminal Staff and may only assist in loading items of ship stores provided that Terminal Staff are available to operate a crane without detriment to their other duties.

(e) Under no circumstances will stores delivery vehicles be allowed on the jetty head or approach beyond the designated points for setting down of ship stores. One vehicle only at a time is permitted to visit a vessel. Other vehicles scheduled to deliver stores must queue outside the main gate until given permission to enter. Waiting vehicles will park in such a manner that no obstruction for emergency vehicle entry through the main gate will result.

The size and weight of ship stores delivered by road vehicle are to be such as they can always be physically *manhandled* and carted between the set down point and ship by delivery staff or ship's crew. Larger deliveries of stores and heavy items of equipment may be loaded from a barge by an arrangement with Agents or chandlers and subject to safety regulations.

These services are readily available in the area, though of course, delays due to storing or bunkering are for vessel's own account where laytime/port time is exceeded.

Note: Vessels at anchor may be stored by barge/boatmen of their own choice but vessels alongside must be stored by licensed boatmen (C & R Briggs Ltd.) See "Tugs".

SAFETY: *Emergency Signals:*

(a) Fire and onshore emergency alarm.

1. At the Western Jetty: Intermittent siren.
2. At the Eastern Jetty: Continuous warble.

In the event of siren failure alarm will be sounded by air horns.

(b) Onshore emergency (other than fire).

1. At the Western Jetty: Air Horns.
2. At the Eastern Jetty: Air Horns.

(c) Shipboard emergency (or reported from ship): At least 6 blasts, each of not less than 10 seconds duration.

NOTE: Onshore, alarm may be raised by activating one of the "Break Glass" fire alarms situated at numerous points throughout the terminal – this will also automatically activate the jetty spray systems.

Actions in Event of Emergency:

Ashore: Sound alarm signal.

Terminal staff will communicate with you via:

1. The UHF portable radio (supplied on arrival).
2. The jetty operator.
3. The jetty loudspeaker system.
4. The Marine VHF Channel 16.

In any emergency terminal staff will shut down loading operations, may activate fixed water spray system and implement the Terminal Emergency Plan as appropriate to the incident:

Aboard: Sound alarm signal.

Inform terminal by communications systems as listed above. You must be prepared to:

1. Cease all cargo operations.
2. Close all cargo valves.
3. Disconnect ship to shore pipe-lines (shore hard loading arms may be emergency disconnected by terminal staff).
4. Move your ship (engines to immediate readiness) subject to the overriding control of the Harbour Master.

Emergency Towing Wires: Emergency towing wires of adequate strength and condition must be positioned on both the offshore bow and quarter of the ship with the towing eyes maintained just above water level.

They must be properly made fast on the ship's bollards while having sufficient slack flaked out on deck for effective towing, the slack being secured from running free by rope yarns or other easily broken means.

Emergency Precautions: In order to meet emergencies ships must:

(a) Retain sufficient suitable crew members on board at all times to man emergency services and to move the ship if so directed by Terminal or Port Authority personnel.

(b) Have adequate emergency equipment and fire fighting appliances, including main emergency fire pumps, ready for immediate use with pressure maintained on the fire main while alongside. The appliances will include at least:

(i) Two fire hoses, fitted with jet/fog nozzles, uncoiled and connected to the fire main on the main deck.
(ii) Portable fire extinguishers, of the dry chemical type, conveniently placed near the ship's fire manifold.
(iii) An International Ship/Shore Connection available at an agreed position on the ship's fire main for ready connection to the shore main.
(iv) Where a vessel is equipped with a fixed dry powder system, hoses should be run out and control boxes open for access.
(v) The ship's offshore lifeboat shall be rigged ready for lowering and use as an emergency escape.

A pilot ladder or accommodation ladder shall be rigged or positioned on the outboard side of the vessel ready for immediate lowering as a means of escape in the event of an emergency.

In the event of an emergency the Master must proceed as agreed in the "Pre-operations Meeting and Inspection".

State of Readiness and Engine Immobilisation:

(a) The ship must be able to move under its own power at short notice.

(b) Repairs or other work which may immobilise the vessel shall not be commenced without the prior approval in writing of the Terminal Supervisor who shall also obtain the approval of the Harbour Master.

Such approvals will not be granted except where unavoidable repair breakdown occurs and may be conditional on the Master hiring sufficient standby tugs to move the vessel if so required.

(c) Should immobilisation as in (b) above occur and prior approval having been impossible, the respective jetty Operating Companies reserve the right to order tug or tugs as above on the Master's behalf.

Vehicle and Personnel Access and Security:

(a) Only authorised persons or those with entry permits issued by the Terminal Management will be allowed through the terminal security gates.

Ship's personnel must have a temporary pass signed by the Master or his deputy for clearance with the security guard at the entrance gate.

Masters will be provided with a supply of suitable pass forms by the Terminal Supervision. The Master or ship's Agent are required to furnish a list of chandlers, services, new crew and authorised visitors expected during the ship's stay at the terminal.

Persons who have not been authorised or notified as above will be refused entry to the terminal until the Security Guard has been given clearance from the Terminal Supervision.

(b) As pedestrians (other than plant employees and authorised personnel) are not normally allowed passage through the terminal, a limited fixed schedule transport service may be provided between the shore end of the jetty trestleways and a local destination after consultation and agreement between the Terminal Supervision and the Ship's Master. Extra journeys by the approved transport service must be ordered by direct arrangement with the contractor and the Terminal Supervision advised accordingly.

(c) Visiting vehicles are not normally allowed beyond the gatehouse parking area and must not proceed onto the jetty trestleways without the express permission of the Terminal Supervisor. No vehicle may proceed past any "NO ENTRY" sign indicating that Class A petroleum is being handled or that petroleum vapour may be present.

Vehicles and their contents which are permitted to enter the Marine Terminal do so at the owners' risk and drivers must obey all traffic signs, plant traffic regulations, or directions given by Terminal Staff. Such vehicles shall not be parked in position obstructing fire hydrants, roadside alarms or other traffic. If parked, keys will be left in ignition, the ignition switched off and the doors unlocked. If required, any unattended vehicle may be moved by Terminal Staff.

(d) In the interests of Safety and Security any vehicle or person entering or leaving the terminal is liable to be searched for contraband material or unauthorised persons. Acceptance of this requirement is a condition of entry. Persons who appear to be intoxicated will not be allowed access to or from ships at the terminal unless escorted by a responsible Ship's Officer.

Personnel Access to/from Ships:

(a) When available, access between jetty and vessel will be provided by the Company by means of a gangway tower structure. The operation of such gangway will be the responsibility of the jetty Operating Company, but Masters shall ensure that personnel can safely transfer between the ship's main deck and the gangway. When, for any reason, the gangway tower is not available, Masters of vessels shall provide a means of safe access between jetty and ship, which shall when necessary include an upper platform and bulwark ladder to provide safe access to the ship's deck. The means of access shall be provided with stanchions, guard ropes, securing lines and safety netting, shall be adequately illuminated and shall be maintained in a clean and well tended condition.

A lifebuoy with at least 25 m. of lifeline attached shall be positioned on the vessel near the gangway.

(b) No person other than H.M. Customs and Excise, Port Health Authorities, Pilots or other H.M. Customs Authorised personnel is allowed to board or disembark from a vessel berthing at the Marine Terminal from a foreign port until Clearance and the Master's permission has been obtained.

(c) Boarding and disembarking shall be by gangway only except in emergency.

Scuppers and Drip Trays: During transfer of bunker fuels, gas oil or natural gasoline, deck scuppers and drain holes must be suitably plugged and accumulated water drained off as required. Scuppers should otherwise remain open during LPG or ethylene loading operations.

Drip trays must be placed under connections and likewise drained of accumulated water.

Prior to transfer of any oil product the ANTI-POLLUTION CHECK LIST MUST BE COMPLETED.

Portable R/T Sets, Hand Lamps and Electrical Equipment: Portable R/T sets, lamps and hand lamps, electric or otherwise shall not be used unless of an approved type (e.g. B.A.S.E.E.F.A.).

The use of portable electric lamps and equipment on wandering electric cables is prohibited in any cargo or adjacent ballast space, pumproom, cofferdam, bunker compartment, hold or anywhere over the cargo tanks.

Portable domestic radios, photographic flash equipment, electronic calculators, tape recorders or any other battery powered equipment of non-approved type shall not be used on the main deck nor in any other place where petroleum gases may be encountered.

Ship's Radio and Radar Equipment: Except for VHF telephone equipment, ship's main radio station transmission equipment, including emergency transmitters, shall not be used while the ship is within 400 m. of the terminal. While berthed at the terminal, the transmitting aerials shall be disconnected and earthed.

Ship's radar installation having a peak pulse in excess of 60 kW shall not be operated while the vessel is within 300 m. of the terminal and no radar installation shall be operated during cargo or ballast transfer operations while alongside the terminal berths, except as may be permitted under "Repair Work", see "Safety".

Repair Work: Repair work involving either hot or cold work or the use of naked lights is prohibited unless the permission of the Terminal Supervisor has been requested and granted in writing and the conditions and precautions required by the Terminal Supervisor are rigidly observed.

Repair work includes but is not restricted to boiler tube clearing, chipping and scraping, hull painting, testing or servicing of electrical equipment (including radar and radio installations).

If permission is granted a list of shore workmen employed on the vessel must be given to the Terminal Supervisor before work commences.

(The Harbour Master's permission is also required in the case of hot work and certain repair work including test transmissions of radio or radar equipment.)

Tank Cleaning/Gas Freeing: Tank cleaning, inerting, purging or gas freeing may not be carried out at this terminal except under specific circumstances when approval in writing is granted in advance or under a repair work permit as in "Repair Work" above.

Movements of Tugs and Other Craft: During berthing, unberthing and cargo handling operations no vessel or small craft shall be allowed alongside the vessel unless authorised by the Terminal Supervisor and agreed by the Master.

When tugs or authorised craft are alongside or assisting a vessel, all cargo system openings must be closed unless tanks are gas free.

GENERAL:

Forth Ports Authority/Dockyard Port of Rosyth: The Forth Ports Authority is the controlling body for the waters of the Firth of Forth in conjunction with the Ministry of Defence through the Queen's Harbour Master Rosyth.

The Rules as to Navigating in the dockyard port of Rosyth are published under the Dockyard Port of Rosyth Order 1975 and are summarised as a note to the "River of Firth of Forth Byelaws". As general information, the Rules impose a speed limit of 12 knots on vessels exceeding 120 m. in length and 15 knots on vessels less than 120 m. in length.

The Rules also detail the signals for prohibition of movement in the "Protected Channel" (being approximately the Main Fairway in a Westerly direction from Buoy No. 13, passing South of Inchcolm Island) to Rosyth Dockyard and the signals (3 red lights in a vertical line or black cylinder by day) denoting one of Her Majesty's vessels underway, and from which, other vessels shall keep clear (within the Dockyard Port).

Copies of the "River and Firth of Forth Byelaws" and "Directions for Navigation" may be obtained from the Forth Ports Authority, Shipping Agents or on request to the Terminal Supervision.

Tides: The predicted tides in the Forth Estuary may be significantly affected by weather conditions, e.g. strong winds from N.N.E. through E. to E.S.E., or heavy rainfall.

The range for Spring Tides is 5.0 m., the range for Neap Tides is 2.5 m.

The Highest Astronomical Tide is 6.3 m. The Lowest Astronomical Tide is 0.0 m.

The breasting line of the jetties at Braefoot Bay is 075°/255° and the direction of tidal flow is approximately 260° on the Flood and 066° on the Ebb with maximum rates of 2.6 knots (Springs) and 1.3 knots (Neaps).

Shipping Agents: Masters are requested to confirm their Agents' name in any direct communication to the Terminal.

Communications:

UHF Radio: The terminal will supply an approved UHF hand set radio to the vessel Master or his deputy for use during the loading operation. The radio will be used for contact with the Terminal Staff during normal loading operation and for notification of an emergency condition.

The hand set radio must be returned to the Terminal representative at the time the departure documents are delivered on board.

Acknowledgement of the return of the hand set radio will be noted on the vessel's copy of the "Master's Receipt for Shipping Documents".

Klaxon: Each jetty is equipped with air horns for audible alarm of fire, and an oscillating tone siren for imminent E.R.S. activation. One short blast may be sounded if required to gain attention of ship's deck personnel if there is an urgent need for communication.

REGULATIONS: *Rules for the Movement of Tankers using Braefoot LPG Terminal:*

1. Every tanker destined for the terminal shall regulate its approach so as not to arrive before the agreed berthing time.
2. When a tanker is turning from the channel for deep draft vessels into Mortimer's Deep to approach the terminal from S.W., no other vessel shall enter that section of the channel between No. 15 light-buoy and a line joining Hound Point and Hopeward Point; or when turning into Mortimer's Deep to approach the terminal from the East, no other vessel shall enter that section of the channel between Nos. 7 and 11 light-buoys.
3. When any tanker is leaving the terminal it shall do so, except in an emergency, in an Easterly direction.
4. When a tanker having left the terminal is entering the channel for deep draft vessels from Mortimer's Deep in an Easterly direction, no other vessel shall enter that section of the channel between Nos. 7 and 11 lightbuoys. In addition if such a tanker is loaded with liquified gas and is more than 145 m. in length, no other vessel, whether navigating within or without the channel for deep draft vessels, shall approach within 1 mile of the tanker while it is within that section of the channel between No. 13 light buoy and Fairway light buoy at 3° W.
5. When tankers are navigating within or without the channel for deep draft vessels between Fairway light buoy and a line joining Hound Point and Hopeward Point it may be necessary to hold or slow down other vessels. Inward bound vessels may be directed to a holding area North of No. 3 light buoy until an outward bound tanker is sufficiently far downstream.
6. No vessel shall enter Mortimer's Deep when the terminal is occupied or when a tanker is manoeuvring in the area, except that a second tanker may enter and berth when the first tanker is securely berthed.
7. Radio transmissions and the operation of radar are prohibited in the vicinity of the terminal, except that a vessel's normal equipment may be tested provided that a source of ignition is not present and that the Chief Harbour Master's permission has been obtained.

Ship's radar equipment having a peak pulse of less than 60 kW. may be operated for berthing and unberthing and at times when cargo operations are not taking place.

SHIPMASTER'S REPORT: November 1984 (updated 1990).

Vessel called at Braefoot Bay Marine Terminal for the purpose of loading LPG (Butane).

The terminal is operated by Shell Expro and Exxonchem Olefins, and is located 3 miles East of the Forth Railway Bridge on the North side of the Firth.

Port Limits: Within the area of the Firth of Forth Navigation Authority.

Documents:

Register and Light dues.
All Safety Certificates.
Derat Certificate.
Health Declaration.
Cargo Documents.
Last Port Clearance or Coastwise Documents.
2 copies C.13 Customs General Declaration.
3 copies C.14 Customs Stores Declaration.
2 copies C.142 Customs Crew Declaration.
6 copies Crew Lists.
2 copies Ship's Stores Lists.

Pilotage: Compulsory in the Firth of Forth. Pilot boards at Fairway Buoy in position 56° 03.5′ N., 03° 00′ W. VHF Channel 16. 24 hours' advance notice required.

Anchorage: Allocated by Forth Navigation Service, usually Aberlady Bay.

Restrictions: Vessels enter Mortimer's Deep from the West, leave to the East, in what is called clockwise navigation.

Therefore berthing is done on the start of the flood, turning off Buoy No. 17, ensuring, especially in a Westerly wind, that the tide has really started to flood.

Sail an hour before high water to cross the bar at about the top of the flood.

The Exxon jetty may, however, allow berthing/entry from the East for smaller vessels.

Max. Size: Shell Jetty 60,000 cu.m. Esso Jetty 12,000 cu.m.

Health: See 'Health – All Ports' before first UK port.

Radio: Wick GKR.

VHF: Forth Navigation Service Channel 71 (working on Channel 20) controls traffic and reporting in points.

Braefoot Terminal: Channels 69 and 73.
Tugs: Channel 69.
Public Channels: Forth Radio Channels 16 and 24.

Radar: Forth Navigation Service locates vessels at Port Limits, and checks identity by VHF.

Ships Radars are to be switched off within 300 m. of the terminal and must not be switched on whilst alongside, except for pre-sailing checks provided loading operations have been completed.

Tugs: Join the vessel off Inchkeith and make fast (tugs lines) before Oxcar. 5 tugs are available, 1×27 tonne, 2×19 tonne and 2×12 tonnes bollard pull. Larger vessels use 3 tugs for berthing (1×27 tonne, 2×19 tonnes) and 2 tugs for sailing (1×27 tonne, 1×19 tonne).

In an emergency tugs take 1.5 hours to reach the vessel.

Berth: Rate of loading Butane, 1,900 cu.m./p.h.

Shore gangway used.

Medical: Good facilities nearby at Dunfermline and Kirkcaldy.

Density: 1025.

Fresh Water: Available ex-mains for nominal fee.

Fuel: M.D.O. available (max. loading rate 40 cu.m./p.h.), only at the Shell jetty.

Fire Precautions: Normal for LPG – 3 allocated onboard smoking areas.

Consuls: Numerous in Edinburgh. If vessel bound for U.S.A. then Consulate requires 48 hours to visa 2 Crew Lists, thus these should be left behind with the Agent who will arrange for express delivery to the discharge port.
Gangway/Deck Watchmen: Not necessary.
Customs Allowances: Normal U.K. Regulations apply.
Repatriation/Airport: Edinburgh Airport nearby has shuttle flights at one to two hour intervals to London Heathrow.
Time: GMT plus 1 hour (BST) in Summer months.
Police/Ambulance/Fire: Telephone 999.
Emergency Co-ordination Centre: VHF Channel 16, Forth Navigation Service and/or Forth Coastguard.
Telephones: None onboard, Public Pay phone at jetty root.
Storing: Stores have to be manhandled/hand trucked along 200 m. of jetty before lifting onboard with jetty crane. Alternatively they can be delivered by barge, but not concurrent with cargo and liable to weather delays.

Only Diesel engined stores lorries are permitted in the terminal and Ship Chandlers and Laundries should be made well aware of this.
Shore Leave: Permitted, but personnel are not allowed to walk through the installation and so rely very much on the Marine Officer on duty for a lift to the gatehouse.
Identification Cards: Shore passes are issued.

If visitors for the ship's complement are expected, it is wise to leave a list with Security at the terminal gate, to expedite their boarding.
Regulations: 72 hours in advance of arrival send to Agents, asking them to relay same, questionnaire replies to Harbour Master Forth Ports and also to Braefoot Terminal. (See "Radio" – pre-arrival information and "General" before first UK port.)
General: Laundry facilities are available, good quality.

AUTHORITY: Shell U.K. Exploration and Production, P.O.Box 16, Mossmorran, Cowdenbeath, Fife, KY4 8EL. *Tel:* (0383) 892000. *Telex:* 728244 Moshell G. Shipping Department 728245 Moship G. *Contact:* Captain D.J. Pringle, Terminal Supervisor.

BRIDLINGTON: 54.05 N. 00.12 W.

DOCUMENTS:

- Crew List.
- Passengers List.
- Ship's Register.
- Customs Documents.
- Manifests.
- Bills of Lading.
- Ship's papers.

PILOTAGE: Vessels approach within 0.25 mile, flying "G" Flag. Local fishermen act as Pilots and board approx. 1 hour prior to berthing time.
ANCHORAGES: For small vessels of not more than 12 ft. draft, 1 mile S.E. of harbour. Deeper-drafted vessels 3 miles East of Harbour. Good holding grounds except in heavy weather from East to South.
RESTRICTIONS: In accordance with state of tide and draft restrictions.
HEALTH: Pratique required from all vessels other than from a British port. "Q" Flag to be flown.

Also see "Health – All Ports" before first U.K. port.
RADIO: Humber Radio Station is the best for a vessel to route ETA, etc.
VHF: Call sign "Bridlington Harbour". Call on Channel 16. Working 12 and 14.
TUGS: None available.
BERTHING: No cargo vessels. Fishing harbour handles fishing vessels and yachts.
MEDICAL: Agents require advance notice of required medical attention. Hospital facilities available. Relevant medical information, i.e. fever, etc., required.
DENSITY: Sea water.
FRESH WATER: Unlimited quantity available. Delivery from shore pipeline at the rate of 3 t.p.h.
FUEL: All grades available. Delivery by road tankers.
CONSULS: No local Consuls. Nearest port of availability is Hull.
REPAIRS: Limited engine and deck repairs.
REPATRIATION: No facilities exist for crew change.
AIRPORT: Yeadon, 45 miles, served by regular airlines.
HOLIDAYS: Normal Bank Holidays. Fish landings can be worked on these days.
POLICE/AMBULANCE/FIRE: Police Bridlington 672222; Ambulance 0482 – 881198; Fire 73585.
TELEPHONES: No arrangements exist for placing telephones aboard.
SHORE LEAVE: Crew members allowed ashore.
IDENTIFICATION CARDS: Not required.
AUTHORITY: Bridlington Harbour Commissioners, Harbour Office, Harbour Road, Bridlington, Yorkshire YO15 2NR, United Kingdom. *Tel:* (0262) 670148/9. *FAX:* (0262) 602041. *Contact:* G. W. Wallis, Harbour Master.

BRISTOL (Avonmouth): 51.30 N. 02.42 W. (See Plan

DOCUMENTS:

- 1 Maritime Declaration of Health.
- 1 Vaccination Certificate.
- 1 Crew's Effects List.
- 2 Ship's Report by Master.
- 1 Home Office Form I.B.6.
- 1 Stores List.
- 1 Certificate of Deck Cargo tonnage.
- 1 Grain Certificate.
- 1 Light Certificate.
- 1 Port Dues Certificate.
- 1 Passenger List.
- 1 Landing Card for each passenger.
- Ship's Certificate of Registry.
- Derat or Derat Exemption Certificate.
- Mercantile Marine Office Certificate (British ships only).

In addition, Manifests and Bills of Lading are usually sent to Agent direc from loading port.
PILOTAGE: Compulsory for vessels of 85 m. LOA and over and fo vessels carrying dangerous substances in bulk of 70 m. LOA and over.

Boarding and landing station is one mile North of Breaksea Lanby. Pilots board from 50 ft. motor pilot boat, black hull, white superstructure "Bristol and Gloucester Pilots" in white letters amidships, operating from Barry Harbour. Pilots can also board or clear at Ilfracombe. VHF Channe 16 calling, 6 working.
Pilot ordering: Tel: (0272) 822257. Fax: (0272) 235320. Telegraphic Address: "Brispilot Avonmouth". Details of rates and other particulars available from Haven Master, R.E. Dock Entrance, Avonmouth.
Dock pilotage: Pilotage all docks from locks to berth available but no compulsory.
ANCHORAGES: Barry Road affords good anchorage in moderate weather for vessels awaiting a Pilot.
APPROACHES: *Cautionary Advice:* Several points should be borne i mind.

Tides in the Bristol Channel are strong (up to 5 knots at Springs) an their effect must be allowed for accordingly.

Vessels should slow down in ample time before reaching the pilo station.

From the English and Welsh Grounds Lightfloat inwards, navigation becomes more difficult as the channel for deep draft vessels narrows. Traffic is heavier and more congested with vessels entering and leaving the docks, some of which are small vessels without Pilots.
RESTRICTIONS: Royal Portbury and Royal Edward Locks are manned from 4.5 hours before to 3.5 hours after HW.
MAX. SIZE: *Royal Portbury:* Max. length 950 ft., max. beam 130 ft. draft 40 ft.
Royal Edward: Max. length 690 ft., max. beam 95 ft., draft 34 ft.
Avonmouth Dock through Junction Cut from Royal Edward: Max. leng 560 ft., max. beam 75 ft., draft 26 ft. 6 in.

Note: The above quoted drafts are for tides that reach below Mean High Water i.e. on many tides a greater draft could be accommodated on a few tides vessels of the quoted draft would be neaped.
HEALTH: Foreign arrivals are required to complete Maritime Declaratio of Health and to report to Port Health Authority by radio, sickness, pri to arrival if possible, otherwise report on arrival at dock entrance.

Onus of reporting sickness is the personal responsibility of the Master.

All vessels are required to report the presence of animals or birds aboard vessel and any disease amongst such animals or birds.

Vessels arriving from ports within the excepted area and coast arrivals need not present Declaration, but when there is sickness o board Port Health Authority must be informed.

Also see "Health – All Ports" before first U.K. port.
RADIO: Lands End (HF, VHF), Ilfracombe (HF, VHF), Celtic (VHF).
Pre-Arrival Information: Vessels complying with Dangerous Substance and Tanker Reporting Regulations should do so through ships' agent or by Tel. (0272) 224494 or by Fax (0272) 235320 or by Telex 4424 PBAAM G marked "Urgent Attention Avonmouth Signal Station", or b Telegraph "Brispilot Avonmouth".
VESSEL TRAFFIC SERVICE: For estuary and port approaches: Calli and Working: VHF Channel 12, alternative Working Channels 9 and 1 Call sign "Avonmouth Radio". Vessels should report on passi Breaksea Lanby, English and Welsh Grounds Light Float and Welsh Hook Buoy. Radar coverage of King Road area maintained. VTS wi provide on request radar, tide, weather, navigational warnings and traf information. Vessels should maintain continuous listening watch on VHF Channel 12 whilst in tidal waters.

Port Operations Service for lock working and enclosed docks: Calli and Working: VHF Channel 14. Call signs: "Royal Portbury Dock Radi or "Royal Edward Dock Radio" as required.
TUGS: Ships for Royal Portbury Docks are normally met by tugs We of Portishead.

Other vessels docking on flood tide normally meet tugs at old oil je to Northward of the entrance lock. Vessels docking on ebb tide, tu join between Firefly and Cockburn Buoys. Ship's line always used.
BERTHING: Boatmen and Hobblers should be ordered to take lines lock and on berth unless vessel intends to use own crew.

In general, conventional and combi vessels are handled Avonmouth, with Royal Portbury catering for unit load traffic, Ro Ro dedicated user traffic.
Avonmouth, Royal Edward Docks: There is 12,320 ft. of operatio quay at the Royal Edward Dock, Avonmouth, including dry and liq bulk berths with a self contained oil basin containing 8 berths, 4 of wh are equipped with common user pipe-line systems. The majori berths are equipped with shore cranes.

Recent developments include a 5 acre metal reclamation termina Chepstow-based Bird Group of Companies, a 14 acre LPG termina B.P Gas and new cement import and distribution facility for Cas Cement.

Royal Portbury Dock: The Port of Bristol's modern Royal Portbury Dock is equipped to handle Lo/Lo and Ro/Ro traffic. The 575 m. (2 berth) Gordano Quay has 2×45 tonne gantry cranes and is backed by 59 acres of paved area for unit loads and forest products. 250,0000 sq.ft. of covered storage is also available on Berth No. 2.

St. George's Quay, Berth No. 3, has a Ro/Ro cut out and 13 acres of paving, which extends into Berth No. 4. Berth No. 4 also has a Ro/Ro cut out ramp and limited paved area.

United Molasses Company, a Division of Tate & Lyle Ltd., operates an import and distribution depot with a tankage capacity of 53,000 tonnes. This development is situated behind Berth No. 4, where Redland Plasterboard have constructed a £25 million plasterboard manufacturing terminal on a 30 acre site. Work on the site was completed in September 1989.

Two large vehicle handling terminals are adjacent to the Dock. Abbey Hill have expanded their Portbury Terminal by 10 acres to 35 acres, while Nissan UK, on the other side of the Port's motorway access road, have expanded by 5 acres to 25 acres.

Recent developments on the Portbury Estate include new factories for Ashton Corrugated (Southern) and Christies Panel Products, and the retail giant ASDA, who have built a regional distribution centre on a 20 acre site. These new developments join a large cold store owned by Frigoscandia, an animal compounding mill for BOCM-Silcock Ltd. and the Peter Lane Group's transport and distribution depot.

CRANES: Various types up to 12.5 tonnes at Avonmouth together with one 150 tonne floating crane. At Royal Portbury, 2×45 tonne gantry container cranes.

BRIDGES: Avonmouth Docks. Junction between Avonmouth Dock and Royal Edward available at all times if necessary by arrangement with Dock Master.

STEVEDORES: At least 24 hours notice required in order that necessary labour may be allocated.

MEDICAL: Absolutely necessary for Agent to have as much notice as possible of any medical attention required. All facilities available.

DENSITY: Avonmouth Docks: Average density 1012 to 1015; in the river fluctuates according to tides.

FRESH WATER: Available at most berths, 24 hours a day from hoses connected to standpipe. Delivery rate 25 – 30 t.p.h.

FUEL: Most grades available – 24 hours notice required.

FIRE PRECAUTIONS: According to local laws, available on request.

CONSULS:

Belgian Consul
Chilean Consul
Danish Consul
French Consular Agent
Finnish Vice Consul
German F.R. Consul
Greek Consul
Italian Consular Agent
Netherlands Vice Consul
Norwegian Vice Consul
Spanish Vice Consul
Swedish Vice Consul

REPAIRS: All types of repairs are carried out. Contact Bristol Ship Repairers Ltd., Graving Dock Works, Royal Edward Dock, Avonmouth, Bristol BS11 9AZ. Tel: Avonmouth (0272) 823422/5. Telex: 498477 Drydok G.

DRY DOCK:

	Total length	*Length over blocks*	*Width of Entrance*	*Depth of water on sill*
Avonmouth Docks	875 ft.	850 ft.	100 ft.	32 ft.

GANGWAY/DECK WATCHMEN: Not absolutely necessary – Available if required.

OPENING/CLOSING HATCHES: If crew open hatches on the first day then they must continue to do so whilst vessel is discharging/loading, otherwise dockers attend to this.

CERTIFICATES:

Load Line Certificate.
Safety Equipment Certificate.
Lloyd's Construction Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.

CUSTOMS ALLOWANCES: Current allowance for crew members of British and foreign ships in British waters.:

Tobacco: (incl. cigars and cigarettes) – 30 grammes (1 oz.)
Spirits: (incl. liqueurs, perfume and toilet water) – 0.185 litre (0.75 of a bottle) of which not more than half may be perfume
Wine: 1.5 litres (2 bottles)

REPATRIATION: Repatriation can be effected to all parts of world.

AIRPORT: Local airport approximately 12 miles away. London can be reached in 1.5 hours by train.

TIME: BST is GMT plus 1 hour. GMT in Winter months.

HOLIDAYS: New Year's Day; Easter (varies); May Day; Spring Bank Holiday (last Monday in May): Summer Bank Holiday (varies, usually last Monday in August); Christmas Day (25th December); Boxing Day (26th December). Work can be arranged on these holidays, except 25th/26th December.

POLICE/AMBULANCE/FIRE: *Royal Portbury and Avonmouth Docks:* Dock services can be contacted by dialling 222/333 on port's exchange or 822591 on British Telecom exchange.

Otherwise dial 999 on British Telecom. Exchange for national emergency services.

MARINE RESCUE CO-ORDINATION CENTRE: H.M. Coastguard, Mumbles, Swansea, West Glamorgan. Tel: (0792) 66534.

TELEPHONES: Can be put on board at most berths.

BANKS: National Westminster Bank Ltd., 1 Gloucester Road, Avonmouth. Tel: 823991.

Barclays Bank Ltd., Gloucester Road, Avonmouth. Tel: 822814.

Midland Bank Ltd., 7 Gloucester Road, Avonmouth. Tel: 822106, 828637.

Lloyds Bank Ltd., 265 Avonmouth Road, Avonmouth. Tel: 827191/2. (Major international banks located in Bristol's finance sector centred mainly around the "Corn Street" locality).

SHIP SUPPLY SERVICE: At Avonmouth limited services could be provided by the tug company, Cory-King, Towage, Tel: (0272) 822021.

The Pilotage Authority occasionally assists with sick crew members, limited numbers of personnel and small packages. Tel: (0272) 822354.

AGENT: Lovell, Hodder, Whitwell Ltd., Junction Cut, Avonmouth Docks, Avonmouth, Bristol BS11 9BH. Cables: "James Avonmouth". Tel. (0272) 823671. After office hours: (0272) 822855. Telex 44168, 44718.

BRIXHAM: 50.24 N. 03.30 W. (See Plan)

PORT LIMITS: The area below the level of high water enclosed by:

(a) An imaginary line drawn from Shoalstone Point in the Parish of Brixham, extending in a W.N.Westerly direction for a distance of 6,500 ft. or thereabouts, until it intersects the imaginary line next described:

(b) An imaginary line drawn from the centre of the Old Quarry at O.S. Ref. SX91445723, in a N.Easterly direction for a distance of 3,000 ft., or thereabouts, until it intersects the imaginary line first described, and:

(c) The land line of the coast from the centre of Old Quarry aforesaid to the said Shoalstone Point.

DOCUMENTS:

1 Crew List,
1 Passenger List,
2 General Declarations (Customs),
1 Health Document,
1 Manifest,
1 Each Bill of Lading,
1 Ship's Papers,
1 Ship's Certificates,
or
as for other small U.K. Ports.

PILOTAGE: Competant Harbour Authority (C.H.A.) pilot. Tel. Brixham (0803) 882214. If no reply after hours, Tel. Brixham (0803) 882060.

DEEP SEA AND COASTAL PILOTAGE: Pilots for all European and U.K. ports including the Baltic.

Ships requiring a Pilot at Brixham should cable at least 48 hours before arrival to "Hutchinson, Gravesend" or "Hammond, Dover" advising and updating ETA Brixham.

2 hours before arrival Brixham – contact "Brixham Pilots" on VHF Channel 9. Pilots board by fast launch 1 mile N.E. Berry Head (or by arrangement). Pilot boats, length 40 ft. and 50 ft., black hull, orange wheelhouse, with "Pilot" in black on wheelhouse. Listening VHF Channel 9.

Also see "London" – Pilotage.

ANCHORAGES: In Torbay or outside port limits. Contact pilot station on VHF Channel 9 for advice.

MAX. SIZE: Unlimited at anchor. Also see "Berthing".

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Landsend Radio/Niton Radio/Portishead Radio.

VHF: Brixham Coastguard – Channel 16.

Harbour Office – "Brixham Port Radio" – Channels 16 and 14.

Pilots and/or Agents – "Brixham Pilots" – Channel 9.

TUGS: By arrangement.

BERTHING: Small coastal vessels in inner harbour by arrangement with Harbour Master, however M.F.V.'s have priority for berthing. Prince William Marina is situated in S.E. corner of outer harbour (see "plan"). Tel. Brixham (0803) 882711 or VHF Channel 37.

MEDICAL: Contact Brixham and Torbay Shipping Agents.

DENSITY: 1025.

FRESH WATER/FUEL: Available by arrangement.

REPAIRS: Electronic, gyro, engine welding, plumbing by local firms.

SURVEYORS: West Marine Surveyors & Consultants Limited, Consulting Marine Surveyors, Engineers & Naval Architects, Totnes, Devon. Tel: Totnes (0803) 865810, 865835. Telex: 42962 Survey G.

REPATRIATION: See "Services".

AIRPORT: Exeter 35 miles away, Plymouth 34 miles away (daily flights to/from London).

POLICE/AMBULANCE/FIRE: Brixham 2231 or 3065 or 999.

SERVICES: No tank cleaning.

Torbay and Brixham Shipping Agents Ltd. (0803) 882214. Telex: 42737. Cables: Dencade. VHF: Channel 9 and 16. Services offered: Boarding and landing deepsea and river pilots, technicians/service engineers, superintendents, repair squads, surveyors, crew changes, full repatriation facilities, medical assistance, divers/underwater inspections, chemist, charts/publications, compass adjuster, spares, stores, provisions, engine/radio/radar/gyro repairs.

Small loads and personnel by fast launch.

Supply boats/barge facilities for storing.

Vessels serviced off-limits, underway or safe deep water anchorage.

SHORE LEAVE: Allowed.

AUTHORITY: Borough of Torbay, Town Hall, Torquay, TQ1 3DR, United Kingdom. *Tel:* (0803) 296244, ext. 356. *Telex:* 42929. *FAX:* 0803-26244, ext. 337. *Contact:* Captain R. Wells, Harbour's Administrator. Captain R. Knowles, Harbour Master.

BUCKIE: 57.41 N. 02.57 W. (See Plan)

PILOTAGE: Pilots keep VHF watch (Channel 16) 1 hour prior to arrival of vessel.
ANCHORAGES: 1 mile West of West Mucks Beacon.
RESTRICTIONS: Vessels with max. draft berth/sail at HW only.
MAX. SIZE: LOA 82 m., beam 12 m., draft 4.5 m.
BERTHING: Depth at entrance 3.3 m. below LAT. Depth alongside 5.2 m. below LAT.
FRESH WATER: Available.
FUEL: Available.
REPAIRS: Deck, engine, radio and radar repairs undertaken.
AIRPORT: Dyce (Aberdeen), 55 miles away.
AUTHORITY: Harbour Master – Buckie, Harbour Office, 28B Commercial Road, Buckie AB5 1UN. *Tel:* 0542 – 31700. *Telex:* 739148 (Ref-328). *FAX:* 0542–34742. *Cables:* "Harbourmaster". *Contact:* Captain W. F. Wood, Harbour Master.

Grampian Regional Council, Woodhill House, Westburn Road, Aberdeen AB9 2LU.

BUDE: 50.50 N. 04.33 W. (See Plan)

DOCUMENTS/HEALTH/CONSULS: Port not equipped to accept vessels from abroad.
PILOTAGE: Not normally available (special arrangements may be made).
ANCHORAGES: Outer Harbour dries out at half tide.

Inner Harbour (Canal) 8 ft. draft maximum.

MAX. SIZE: Inner Harbour (Entry via Lock): Length 90 ft. Beam 25 ft. Draft 8 ft.
RADIO: MF Ilfracombe Radio. VHF Severn and Celtic Radio.
VHF: Bude Harbour Office listens on VHF Channel 16 when a vessel is expected.
FRESH WATER: Available via 0.5 in. hose pipe.
TELEPHONE NUMBERS: Harbour Master Bude 353111 (Office), Bude 353531 (Home), Coastguard Falmouth (0326) 317575*, Police Bude 352131.

*Nearest Coastguard.

GENERAL: Port little used by commercial shipping.
SPECIAL REGULATIONS: Entry to the Harbour is made by leaving Chapel Rock (linked to the Main Land by a Breakwater) to starboard. Head towards the Lock in the Channel marked by 2 pairs of Leading Beacons.

The outer pair of Beacons, bearing 075° 30′ (T) consist of a front mark – white Spar with Yellow Diamond Topmark, rear mark – white flag staff, both on cliff top on North side of Harbour.

The inner pair of Beacons, bearing 131° 30′ (T) consist of a front beacon – white Pile Beacon with Yellow Triangle Topmark, rear beacon – white spar with Yellow Triangle Topmark, placed 0.5 cable West of Lock Entrance.

The approach to Bude, either from the North or South, should be made from a S.W. direct direction in line with the first pair of Leading Marks.

Immediately on passing Barrel Rock (0.5 cable North of Chapel Rock and marked by a Beacon Barrel) turn to starboard and pick up the inner pair of Leading Marks from which the Lock is clearly visible.

Entry to the Harbour at night not recommended.

Heavy ground swell and breaking seas may prohibit entry and exit.

The Harbour dries out at each Tide and entry of vessels is normally restricted to 2 hours either side of High Water.

For Locking, 18 ft. minimum of water above Chart Datum is required to Lock. A heavy swell may also prohibit the operation of the Lock.

Prior notification of arrival should be made to the Harbour Master if possible.

AUTHORITY: North Cornwall District Council, Kingshill Industrial Estate, Bude, Cornwall EX23 8QN, United Kingdom. *Tel:* Bude (0288) 353111. *Contact:* W. Cloke, Harbour Master/Beach Safety Officer.

BURNTISLAND: 56.03 N. 03.14 W. (See Plan)

DOCUMENTS: See "Leith".
PILOTAGE: Compulsory. See "Leith".
RESTRICTIONS: Dock gates normally opened from 3 hours before HW until HW.
MAX. SIZE: Width of dock gate 18.2 m. Max. width through gates 16.8 m. Max. depth 8.6 m. MHWS.
RADIO: See "Leith".
RADAR/VHF: Through Forth Navigation Service from Leith.
TUGS: Available from Leith.
BERTHING: 443 m. of quayage at East Dock. Depth 8.6 m. MHWS.
CRANES: 2×10 tonnes grabbing cranes. Mobile cranes available.
BULK CARGO FACILITIES: Bauxite vessels discharge into 2×8,000 tonne barges at anchor. The barges are unloaded by shore cranes in the East Dock.
STEVEDORES: Local company supplies labour.
REPAIRS: Fabrication yard situated in West Dock. 2×300 ft.×85 ft. bays, depth 19 ft.
AUTHORITY: Forth Ports Authority. All enquiries to Forth Ports Authority, Dock Office, Methil. *Tel:* (0333) 26725. *Telex:* 72208. *FAX:* (0333) 24873. *Contact (at Methil):* Captain T. S. Sutherland, Port Superintendent. *Tel:* Leven (0333) 26725.

CALEDONIAN CANAL: 57.27 N. 04.18 W.

PORT LIMITS: Craft are considered to be within the Canal when they have entered the sea lock structures.
DOCUMENTS: Masters of craft on through passage must report to the Sea Lock Office at Corpach with the ship's measurement certificates to enable toll declaration to be made. Masters of craft on partial passage starting and returning to the East coast should report to the Clachnaharry Canal Office.
PILOTAGE: Approach pilotage compulsory at Inverness end. Contact Inverness Pilots by Link Call through Inverness 232845 or 235264 (Ships of NRT under 100 tons are exempted). Pilotage within the Canal and West approaches optional. For Pilotage into Corpach from the West contact Mr. H. McKinnon at Corpach by Link Call to Corpach 304 and for Canal Pilotage, by Link Call to Caledonian Canal Office, Inverness 233140.
RESTRICTIONS: Entrances to sea locks restricted for 2 hours either side of LW springs. There is generally no restriction at LW neaps. The Canal is operated on normal manning from 0800 hrs. until 1700 hrs (Sundays excepted).
MAX. SIZE: 48.77 m. (160 ft.) length overall × 10.67 m. (35 ft.) beam × 2.74 m. (9 ft.) draft fresh water or, alternatively, 45.72 m. (150 ft.) × 10.67 m. (35 ft.) × 4.11 m. (13 ft. 6 in.) draft fresh water.

Corpach sea lock will admit craft to the Corpach Basin only of size 61.87 m. (203 ft.) length overall × 10.67 m. (35 ft.) beam × 4.11 m. (13 ft. 6 in.) draft fresh water.

All dimensions are overall and *NOT* moulded.

HEALTH: Vessels from foreign ports will be boarded by the Customs Immigration/Health at the sea locks and they should fly the appropriate international flags on approach.

Also see "Health – All Ports" before first U.K. port.

RADIO: Western approaches via Oban Radio. Eastern approaches via Wick or Stonehaven Radio.
VHF: VHF at Corpach Sea Lock. Call Sign "Corpach Dock".
RADAR: None.
TUGS: A Canal tug is available if required. Service should not be required on normal passage.
BERTHING: At Corpach Old and New Wharves (limited Customs approval). At Inverness Glenmhor and Glen Albyn Wharves below Muirton and Upper Muirton Wharf at the top of Muirton. Water depth available for craft having 4.110 m. (13 ft. 6 in.). Normally ships gear or road mobile cranes used.
BRIDGES: Road and rail swing bridges are operated to permit the passage of craft. Headroom restricted to 36.576 m. (120 ft.) by overhead electric cables near Inverness.

Kessock Bridge at Inverness: Headroom restricted to 28.96 m. (95 ft.) over HW springs.

STEVEDORES: Traffic to Scottish Pulp and Paper Mills at Corpach unloaded by Pulp Mill gangs. Elsewhere arranged through Shipping Agent.
MEDICAL: Normal General Practitioners service available at main centres along the Canal. Full Hospital facilities at Inverness.
FRESH WATER: Fire hose supply available at Glen Albyn Wharf Inverness. Small domestic supplies available at the main lock flights.
FUEL: Available by road tanker from principal oil companies by telephoning Shell, Inverness 238850 or Fort William 2404; Esso Inverness 237222 or Fort William 2903.
REPAIRS/DRY DOCK: Limited repairing facilities at the Inverness Boatbuilding, Inverness.

Dry dock facilities at Lochaber Marine, Corpach.

AIRPORT: Highlands and Islands domestic flights from Inverness (Dalcross).
POLICE/FIRE/AMBULANCE: Emergency calls to these services on 999.
GENERAL: The Caledonian Canal is part of the Customs Port of Inverness.
AUTHORITY: British Waterways Board. Caledonian Canal Office Clachnaharry, Inverness IV3 ~~6RA~~ 5LS. *Tel:* Inverness (0463) 23314 *FAX:* (0463) 710942.
Contact: At Corpach: Mr. ~~N. Rix~~ P. KENNEDY. Tel: (03977) 249. At Inverness: Mr. ~~Tait~~. Tel: (0463) 233140.

CAMPBELTOWN: 55.25 N. 05.36 W. (See Plan)

DOCUMENTS: 2 Crew Lists; 2 Passenger Lists; 1 Store List; 1 Personal Effect List; Ship's Register; 1 Manifest or Bill of Lading.
PILOTAGE: Although *not* in Clyde Port Authority area, where large vessels are concerned, it is advisable to have the services of a qualified Clyde River Pilot or where applicable a Certificated Naval Pilot. As neither are based in Campbeltown, it is essential that at least 24 hours notice be given to Agent, when required.
ANCHORAGE: For large vessels in 6 to 10 fathoms in the area between the Orange leading lights and the Methe Bank Buoy, for smaller vessels a wider area can be used but South side of loch best holding.
HEALTH: Normal UK Port requirements. In event of disease or fever prior notice should be given to Agent.

Also see "Health – All Ports" before first U.K. port.

RADIO: All messages through normal coastal stations or by radio telephones via Portpatrick Radio when nearer port. Cables should be addressed to Agents.
RADAR/VHF: No port radar service. Direct contact with Harbour Authority on VHF Channels 12, 13 and 14. P.O.L. Depot, Campbeltown can be called on 30 – 40 mile radius on Channels 6, 12, 18. Same channels for tugs, lying off port, when arranged previously.

TUGS: Must be ordered at least 24 hours beforehand as they come from Glasgow area further North on River Clyde. Precise requirements concerning arrival/departure times requested owing to heavy costs entailed for waiting time.
BULK CARGO FACILITIES: Berth for vessel up to 230 ft. in length with maximum permissible draft 12 ft. (Salt water). Discharge by shore crane, Maximum lifting 5 tons.
SPECIALISED CARGO HANDLING FACILITIES: One berth for Roll-on/Roll-off ferry inside harbour, max. draft of vessel 12 ft. General cargo discharged.
STEVEDORES: Agents arrange all cargo discharges, including mechanical handling. Portable cranes only available. Ship's gear used when available to minimise costs.
MEDICAL: One casualty hospital available. Serious casualties transferred to Glasgow either by air or road, according to condition. Five local doctors.
TANKERS: All intended arrivals should be notified to Officer-in-Charge, P.O.L. Depot, Campbeltown (Tel. No. 0586/2226) at earliest.
P.O.L. Jetty, minimum depth, 40 ft. One discharging berth available.
FRESH WATER: Available at all times, delivery by hose.
FUEL: Marine gas oil supplied on commercial quay. Naval requirements by arrangement with P.O.L. depot.
REPAIRS: Minimal repairs only. Notify Agent as early as possible.
SURVEYORS: Arrange through shipping Agents.
GANGWAY/DECK WATCHMEN: Available but not compulsory.
OPENING/CLOSING HATCHES: Ship's option.
CARGO GEAR: See "Stevedores". Ship's gear preferred where possible.
REPATRIATION: Air service available once daily in forenoon, except Sunday.
AIRPORT: Machrihanish – 3 miles distant.
TIME: GMT. GMT plus 1 hour in Summer.
HOLIDAYS: New Years Day (1st January) Christmas Day, Boxing Day, 3 Statutory Local Holidays, Annual Holidays 1st fortnight in August.
Work can be carried out by arrangement with Stevedores.
POLICE/AMBULANCE/FIRE: Dial 999.
EMERGENCY CO-ORDINATION CENTRE: Coastguard, New Quay, Campbeltown, Tel: 2770.
TELEPHONES: By arrangement.
SERVICES: Laundry/Dry Cleaner, Minimal Radar/Radio, VHF Repairs. No tank-cleaning equipment available or compass adjusting.
IDENTIFICATION CARDS: Not required. P.O.L. Depot request production of Seamen's Cards.
BANKS: Bank of Scotland, 9 Longrow, Campbeltown Tel: 2274.
Royal Bank of Scotland, 11 Castlehill, Campbeltown Tel: 3617.
Clydesdale Bank, 19 Longrow, Campbeltown Tel: 2130.
SHORE LEAVE: After clearing inwards, crew members are allowed to go ashore without special permission.
GENERAL: Basin of the Clyde Lat. 55° 25′ 0″ N., Long. 5° 35′ 30″ W.
Yacht pontoons will be available by Spring 1990, to the North of the Old Quay
Tides: Spring rise 8.9 ft; Neap rise 7.5 ft.; depth at sea entrance, 12 ft. low water spring tide; there is a rise of 8 ft. in spring tide in harbour.
AUTHORITY: Strathclyde Regional Council, Harbour Office, Old Quay, Campbeltown. *Tel:* Campbeltown (0586) 20365 or 52552. *Contact:* Mr. A. Stewart, Harbour Master, Campbeltown.
P.O.L. Depot, Campbeltown. Officer-in-Charge, Kilkerran Road, Campbeltown.

CARDIFF: 51.29 N. 03.10 W. (See Plan)

PORT LIMITS: A vessel is considered as "arrived" when it is in the lock.
DOCUMENTS: Documentation required for arrival:

C142	2 copies	Crew Declaration
C14	3 copies	Stores Declaration
C13	2 copies	General Declaration (completed by Agent)
C16	2 copies	Cargo Inward Declaration
C74	1 copy	Master's Authority (Agents complete)
C1320	2 copies	Cargo in un-registered spaces

These documents are to be completed and presented with copies of manifests and ship's documents at the time of report.
PILOTAGE: Channel pilotage and dock pilotage not compulsory except for vessels carrying passengers. Pilots embark from pilot cutters operating from Barry Harbour.
A.B.P. Pilot cutters are marked with "Pilots" in white on each side and operate radio continuous watch on VHF. Signal for pilot cutter – numeral "7" on whistle or siren. Telegraphic address: Barry (telex). Minimum of 24 hours notice required of ETA. VHF Channels 16, 9, 14 and 11.
ANCHORAGE: Barry Roads: Good anchorages in moderate weather in depths from 5 to 6 fathoms (9.1 m. to 11 m.) about 0.5 miles S.W. of the entrance to Barry Docks. Clay bottom.
RESTRICTIONS: Entry to docks restricted to a period of 4 hours before and 3 hours after high tide, according to size and draft of vessel.
Entrance lock 850 ft. length, 90 ft. wide.
MAX. SIZE:
Queen Alexandra Dock: LOA 650 ft., beam 88 ft. 3 in., max. draft 34 ft.
Roath Dock: LOA 650 ft., beam 85 ft. 6 in., max. draft 33 ft.
Vessels near maximum dimensions may be accepted on certain tides after consultation with the Dock and Harbour Master.
HEALTH: Maritime Declaration of Health to be made to Port Authority or Customs Officer, whoever boards ship first. In event of contagious fever on board, Port Health Authority must be advised by radio before arrival. No Pratique necessary if vessel is entering port from another port in U.K.
Also see "Health – All Ports" before first U.K. port.
RADIO: Ilfracombe Radio and Portishead Radio.
VHF: A port operation VHF service maintained at dock entrance during tidal hours. Call sign "Cardiff Radio" calling on Channel 16 and operating on Channel 14 or Channel 11. There is also "Severn Radio".
TUGS: Tugs normally join vessel 0.5 mile to seaward of Outer Wrach Channel Buoy, and arrangements for attendance of tugs should be made through ship's Agent.
BERTHING: Arranged through Dock and Harbour Master, and berths within docks are flat quays. Rise and fall usually varies up to 1 ft.

Dock	*Quay Length (Total) (m.)*	*Normal Depth of Water (m.)*	*Max. Size of Vessel Length (m.)*	*Beam (m.)*	*Draft (m.)*	*Approx. d.w.t.*
Queen Alexandra	2,234	11.3	198.12	26.9	10.37	33,000
Roath Dock and	2,181	11.0	198.12	26.06	10.37	33,000
Roath Basin	1,174	11.0	158.00	21.30	8.50	18,000

Storage and Warehousing Facilities: Quayside: 5 transit sheds – 32,810 sq.m. (351,050 sq.ft.).
Back sheds: 13,870 sq.m. (149,280 sq.ft.).
Open storage: 8.7 hectares (21.5 acres) with a further 17.4 hectares (43 acres) managed by independent terminal operators.
Cranage and Mechanical Handling: Crane capacity: 1×15 tonnes; 8×7.5 tonnes; 3×5 tonnes; 7×3 tonnes.
2 additional 10 tonne grabbing cranes are provided by a terminal operator within the docks. The port provides a fleet of fork lift trucks for quayside cargo handling ranging from 4,000 lb. to 88,000 lb. capacity.
SPECIALISED CARGO HANDLING FACILITIES:
(i) Cold Storage: King's Wharf Cold Store, managed by the International Cold Storage Co. Ltd. has a capacity of approximately 12,000 tonnes and can operate with temperatures down to −23°C.
(ii) Cool Storage: Cool store with a capacity of approximately 60,000 cartons at any one time. The store is equipped with cooling machinery to maintain temperatures at 50°F – 55°F. (10°C – 13°C.).
(iii) Timber Terminals: Bulk carriers received at deep water berths, discharge of 2,000 cu.m. of timber in a single gang shift, large hardstanding storage areas plus covered accommodation for woodpulp and specialised timber products.
(iv) Combi Vessels: A modern front loading truck of 40 tonne capacity, capable of stowing containers three-high, available for handling.
(v) Bulk Cargoes: 1 grain loading appliance.
(vi) 2 Scrap Berths.
BRIDGES: Bridges throughout the port can be operated on tide times.
STEVEDORES: Arrangements for employment of stevedores undertaken by A.B.P. through ship's Agent.
Port Working Hours:

	Day Work	*Shift Work*
Monday – Friday	0700 – 1630	0600 – 1400
		1400 – 2200
Saturday	0700 – 1130	0600 – 1000
		1000 – 1400
Sunday	0600 – 1400	0600 – 1400
		1400 – 2200

Vessels may also choose to work 0700 – 1630 (2 hours extra to finish if need be), Monday – Friday.
MEDICAL: All facilities available. Agents should be advised in advance if medical services required.
TANKERS: 2 tanker berths available, one in Queen Alexandra Dock and one in Roath Dock. Special instructions are issued to Master on arrival at port. Average discharge approximately 448 cu.m.p.h.
DENSITY: 1008-1018.
FRESH WATER: Available 24 hours daily from quayside, delivery 20 t.p.h. maximum.
FUEL: Fuel of all grades available.
FIRE PRECAUTIONS: For tankers, strict fire precautions required in accordance with latest safety procedures.
Emergency Action – Fire: In the event of an outbreak of fire (no matter how small) immediately dial 999 on the ship-to-shore telephone. When the operator answers, say "Fire", and wait until you are connected to the Fire Station Control. Then repeat: "Fire at Berth, (name of berth)". In event of the ship-to-shore telephone being inaccessible or out of order, use short blasts on ship's siren to alert Police and Port Authority. VHF can be used on tide times.
REPAIRS: All types of repairs possible.
DRY DOCKS:

	Length	*Width at Entrance*
Bute Dry Dock	182 m. (597 ft.)	21.7 m. (71 ft.)

Bute Dry Dock owned and operated by Bristol Channel Ship Repairs Ltd.
GANGWAY/DECK WATCHMEN: Performed by ship's crew and necessary for tankers.
OPENING/CLOSING HATCHES: Carried out by ship's crew.
CUSTOMS ALLOWANCES: Usual U.K. allowances.
REPATRIATION: Facilities exist to exchange crews and repatriate to any part of world.
AIRPORT: Airport 11 miles from Cardiff, serving other airports to all parts of world.
TIME: GMT. GMT plus 1 hour in Summer.
HOLIDAYS: New Year's Day; Good Friday; Easter Monday; Whit Monday (Spring Holiday); May Day (1st Monday in May); August (Summer Holiday) one day; Christmas Day; Boxing Day.
POLICE/AMBULANCE/FIRE: Dial 999 on public telephone service and ask for service required, or short blasts on ship's siren to alert Dock and Harbour Master.
TELEPHONES: Ship/Shore telephone supplied at certain berths – service organized through ship's Agent.
IDENTIFICATION CARDS: Not needed.
SHIP SUPPLY SERVICE: A Ship Supply Service could be provided by Cory Ship Towage with their Tugs at Cardiff if required. Address: Cory Ship Towage Ltd., S.E. Wales Office, Alexandra Dock, Newport, Gwent. NP9 2NP. Tel: Newport 56835/6.

GENERAL: Cardiff is a port which has very big range of tides and important that accurate ETAs and max. drafts supplied by ship's Master in order that Agent may place orders for tugs and Pilots in sufficient time to be in attendance when required.
AUTHORITY: Associated British Ports – Cardiff and Barry, Pierhead Building, Bute Docks, Cardiff, South Glamorgan CF1 5TH, United Kingdom. *Tel:* (0222) 471311. *Telex:* 498542 ABPCB G. *FAX:* (0222) 471100. *Contact:* B. J. Harding, Port Manager. J.P.L. Davey, Operations Manager. Captain R.S. Grubb, Dock and Harbour Master.

CARRICKFERGUS: 54.43 N. 05.48 W. (See Plan)

PORT LIMITS: No. 1 Buoy Belfast Lough.
DOCUMENTS:
2 Crew Lists,
2 Passenger Lists,
1 Stores List,
1 Personal effects List,
Ships Register,
1 Manifest or Bill of Lading.
PILOTAGE: Port Pilotage not compulsory but advisable. Pilots based at Carrickfergus Harbour. All Pilotage carried out by Belfast Pilots. Pilots board at No. 1 Buoy, Belfast Lough. Pilots can be contacted by VHF Channel 12.
ETA Messages: Advise Agents at least 24 hours before arrival through any British Coast Station and Pilots not less than 1 hour before arrival. (A) ETA No. 1 Buoy (B) ETA GMT or BST (C) Draft SW.
ANCHORAGE: Midway between Harbour and Greypoint.
HEALTH: No Certificates required, in event of disease contact Agents. Also see "Health – All Ports" before first U.K. port.
RADAR/VHF: No Port Radar Service. Harbour VHF Channels 14, 12 and 16 operated approximately 3 hours before HW to 1 hour after if ships are due. Contact Harbour on Channel 16.
TUGS: Tug available in harbour. Notice required 30 minutes.
BERTHING: Harbour Tidal:

Depth alongside all berths MHWST	4.88 m.
Depth alongside all berths MLWST	1.83 m.
Max. draft of vessels	4.88 m.
Max. Beam of vessels	12.20 m.
Width at entrance	19.80 m.
Quays:	
Length of Commercial Quay	278 m.
No. 1 Berth (Caustic Acid)	64 m.
No. 2 Berth (Tanker Berth)	74 m.
No. 3 Berth (Most bulk cargoes)	76 m.
No. 4 Berth (Coal,Sulphur, Meal, etc.)	64 m.

Vessels discharging take bottom on soft mud.
Average discharge 2 grabs 150 t.p.h. at No. 3 and 4 Berth.
STEVEDORES: Provided by Messrs. John Kelly Ltd., Tel: 62612. Telex: 74210 and Kane Shipping, Tel: 51999.
MEDICAL: One hospital available.
TANKERS: Discharge controlled by Texaco Ltd., as plant is owned by, them privately. Rate of discharge approximately 200 t.p.h. 2×8 in. diameter pipes and 1×6 in. pipe.
Usual safety precautions prevail.
Tankers not to enter port without permission of Harbour Master.
Max. draft MHWST 4.88 m.
DENSITY: 1024.
FRESH WATER: Supplied alongside quay approximately 10 t.p.h.
FUEL: Supplied by road tankers. All grades available from major Oil Companies.
CONSULS: None. Most countries are represented at Port of Belfast approximately 9 miles from harbour.
REPAIRS: Light repairs and welding only major repairs can be arranged at Belfast.
DRY DOCKS: None. Nearest at Belfast.
SURVEYORS: Most Classification Societies based at Belfast.
GANGWAY/DECK WATCHMEN: Not compulsory.
OPENING/CLOSING HATCHES: All vessels by crew.
CERTIFICATES: Ship's Register on arrival.
CUSTOMS ALLOWANCES: 200 cigarettes each crew member. Spirit, wine, etc., at discretion of Water Guard.
CARGO GEAR: Three crawler mounted diesel grab cranes, 3,100 kg. and 3,045 kg.
REPATRIATION: Good facilities for crew changes. Good railway and bus services.
AIRPORT: Belfast Airport approximately 22 miles served by regular lines.
TIME: GMT, plus 1 hour in Summertime.
HOLIDAYS: New Years Day, Easter Monday and Tuesday. 12th and 13th July, Christmas Day and Boxing Day.
POLICE/FIRE/AMBULANCE: Carrickfergus 62021.
TELEPHONES: Not possible to place on board. Good phone service convenient to ships.
SERVICES: All services readily available from Port of Belfast.
SHORE LEAVE: After clearing inwards no restriction on shore leave.
IDENTIFICATION CARDS: Not required.
SHIP SUPPLY SERVICE: Off-shore service operated from the Port of Carrickfergus by 2 tugs, the "Ceres" and "Cobh".

Lagan Marine Services, 2 Downhill Park, Newtownabbey, Co. Antrim, BT36 6TX, Northern Ireland. Tel: Glengormley 2353, Belfast 746051.
AUTHORITY: Carrickfergus Borough Council and Harbour Master, Town Hall, Carrickfergus, Co. Antrim, BT38 7DN. *Tel:* (09603) 51604 (Council) 51292 (Harbour Master). *Contact:* Captain R. S. Heddles, Harbour Master/Manager.

CASTLETOWN, Isle of Man: 54.04 N. 04.40 W.

PORT LIMITS: Castletown Bay, North of line between Scarlet Point an Langness Lighthouse.
DOCUMENTS: Same as U.K.
PILOTAGE: If required, Pilot will board East of can buoy in bay.
ANCHORAGE: About 2 cables East of red can buoy. Exposed t S.-S.W.'ly weather.
RESTRICTIONS: Berthing at HW only. Max. draft 11.5 ft. Springs, 9.5 f Neaps.
MAX. SIZE: LOA 170 ft., beam 27.5 ft., draft subject to tides.
HEALTH: Same as U.K. ports.
VHF: Calling Channel 16, working Channel 12. Listening only whe vessels due.
TUGS: None.
BERTHING: 4 berths, 170 ft. max. length. All dry out.
CRANES: Mobile crane, SWL 7.5 tons available.
BRIDGES: At entrance to Inner Harbour. Opened on request.
STEVEDORES: 24 hours notice should be given to Agent.
MEDICAL: Full hospital facilities available.
TANKERS: No facilities.
DENSITY: 1025.
FRESH WATER: Available ex-hydrant at all berths.
FUEL: Diesel available.
FIRE PRECAUTIONS: Usual.
CONSULS: None.
REPAIRS: Minor repairs only.
DRY DOCKS: None.
SURVEYORS: I.O.M. Harbour Board, Marine Administration. Tel: (0624 23813. Telex: 629335 Iomhar G.
HATCHES: Crew or stevedores to operate hatches.
CUSTOMS ALLOWANCES: Same as U.K.
CARGO GEAR: Ship's gear or mobile crane used.
AIRPORT: 2 miles away. Daily flights to U.K. and Eire.
TIME: GMT and BST.
HOLIDAYS: December 25th and 26th, January 1st and 2nd, Goo Friday, Easter Monday, Spring Bank Holiday, July 5th and August Ban Holiday.
POLICE/AMBULANCE/FIRE: Police – Tel: 0624-822222. Ambulance Fire – Tel: 999.
EMERGENCY CO-ORDINATION CENTRE: Liverpool Coastguard Tel: 051-9313341.
SERVICES: Compass adjusting.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Seaman's Book sufficient.
AUTHORITY: Department of Highways, Ports and Properties, Harbour Division, Sea Terminal Buildings, P.O.Box 11, Douglas, Isle of Man *Tel:* (0624) 23813 (extension 153). *Telex:* 629335 Iomhar G *FAX:* (0624) 27238. *Contact:* Captain W.B. Kinley, Chief Harbour Maste (I.O.M.).

CLYDE PORT (Including Glasgow, Greenock, Finnart an Hunterston): 55.51 N. 04.16 W. (See Plan

PORT LIMITS: For limits of jurisdiction see "Plans" – "Firth of Clyd and Sea Lochs".
DOCUMENTS: Following required on arrival:
3 Crew Lists on IMO Standard Form.
3 General Declarations. Customs Form C13.
3 Ships Stores Declarations. Customs Form C14.
2 Cargo Manifests. Customs Form C16.
1 Personal Effects Declaration. Customs Form C142.
1 Declaration of Health.
Bills of Lading.
Register.
Load Line Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Safety Construction Certificate.
Derat or Derat Exemption Certificate.
PILOTAGE: Compulsory pilotage.
1. 'The Seaward Limit of Compulsory Pilotage' means an imagina line commencing at the intersection of the line of Longitude 05° 06' W with the North shore of Loch Striven, and then proceeding due Sou to the North shore of the Island of Bute, and by the same line o Longitude, from the South shore of the Island of Bute, to the Latitud of Gull Point on Little Cumbrae Island; thence by a line extending du East (T) to Gull Point; thence by a line proceeding in the direction 143 (T) for a distance of 7 nautical miles; and thence by a line proceedi in the direction 053° (T) to the Northern boundary of the Harbour o Saltcoats.

'The Landward Limit of Compulsory Pilotage' means the West side o Albert Bridge in the City of Glasgow.

'The Upper Pilotage Area' means that part of the River and Firth o Clyde, which lies between the landward limit of Compulsory Pilota and an imaginary line between Estuary Control Tower, Greenock a Ardmore Head.

'The Middle Pilotage Area' means that part of the Firth of Clyde a including the Gare Loch, Loch Long, Loch Goil and the Holy Lo contained within the area bounded by an imaginary line from Estua Control Tower, Greenock to Ardmore Head, and an imaginary line fro Kempock Point due West to the Cowal shore.

The Lower Pilotage Area' means that part of the Firth of Clyde and Loch Striven within the area bounded by an imaginary line from Kempock Point due West to the Cowal shore and the seaward limit of Compulsory Pilotage.

The Compulsory Pilotage District' means that part of the area of jurisdiction of the Clyde Port Authority as defined in the Clyde Port Authority Confirmation Act 1965 and subsequent amendment(s) contained between the seaward limit of Compulsory Pilotage and the landward limit of Compulsory Pilotage.

2. All vessels of 25 m. length overall (LOA), carrying in excess of 12 passengers while navigating within the jurisdiction of the Clyde Port Authority, shall engage the services of an authorised Clyde Pilot, other than if the Master or First Mate of the vessel has been granted a Pilotage Exemption Certificate by Clyde Port Authority.

3. All vessels over 80 m. length overall (LOA), carrying dangerous substances as defined in the Dangerous Substances in Harbour Areas Regulations, 1987, in bulk, and all vessels which are not gas free, shall engage the services of a licensed Clyde Pilot while navigating within the limits of the Compulsory Pilotage District, other than if the Master or First Mate of the vessel has been granted a Pilotage Exemption Certificate by the Clyde Port Authority.

4. A vessel not carrying passengers navigating within the Compulsory Pilotage District and complying with the following conditions shall be exempt from Compulsory Pilotage:

In the *Upper Pilotage Area*, a vessel not exceeding 25 m. length overall (LOA).

In the *Middle Pilotage Area*, a vessel not exceeding 60 m. length overall (LOA), provided that a vessel in transit through the area to or from an anchorage or berth in Loch Long, shall be exempt from Compulsory Pilotage if not exceeding 80 m. length overall (LOA).

In the *Lower Pilotage Area*, a vessel not exceeding 80 m. length overall (LOA), provided that a vessel in transit through the area and neither proceeding to or from a berth or anchorage within the area, shall be exempt from Compulsory Pilotage if not exceeding 120 m. length overall (LOA).

5. The Clyde Port Authority directs that vessels, which are subject to Compulsory Pilotage as aforementioned, shall:

(1) Give such notice of estimated time of arrival or departure as may be required by Clyde Port Authority Notice to Mariners or other appropriate notification. Failure to provide such notice, or failure to arrive or depart within 2 hours of the notified time, will be penalised by a charge in accordance with that specified in the Authority's Schedule of Charges.

(2) Board or disembark a Pilot at a previously arranged location determined by the Pilotage Area to be served and weather conditions prevailing.

ANCHORAGES: Anchorages are available for vessels of all drafts in the Tail of the Bank area (off Greenock) and lower Firth of Clyde.

Anchorages are allocated by Clyde Port Estuary Radio. The anchorage positions are shown on Admiralty Charts Nos. 1907 and 1994.

RESTRICTIONS: Vessels entering the river channel are restricted to a maximum fresh water draft of 32 ft. Entry time for deeply laden vessels is dependent on the rise of tide.

Damaged vessels and vessels that are not in class must have a current Seaworthy Certificate and prior permission from the Harbour Master before entering the area of jurisdiction of the port.

MAX. SIZE: As agreed by Clyde Port Authority for berths in Glasgow and Greenock and subject to consideration of particular circumstances prevailing in each case.

HEALTH: Masters should report by radio to "Portelth Glasgow" any infectious illness which has occurred, or which has been suspected, during the voyage.

Also see "Health – All Ports" before first U.K. port.

RADIO: Traffic should be routed through any British coast station.

VHF: Clyde Port Estuary on Channels 16, 14, 12 and 11 for all communications regarding pilotage and navigation.

RADAR: There is no port radar.

TUGS: As required by Master and under advice of the Pilot. Tug's lines are always used.

BERTHING: *General Cargo:* Discharged and loaded at Shieldhall Riverside Quay and King George V Dock, Glasgow.

Forest Products and Container Vessels: Handled at Greenock Terminal where 2 ships can work simultaneously. Berth is equipped with 1×40 ton and 2×35 ton transporter cranes with an outreach of 105 ft. beyond the line of the cope. The quay is 1,200 ft. long with a depth of 42 ft. at LWOST.

Ro-Ro Units: Can be handled at King George V Dock, Glasgow and at James Watt Dock and Garvel Basin, Greenock.

BULK HANDLING FACILITIES: Iron ore and coal are handled at Hunterston Terminal where discharging vessels up to 350,000 d.w.t. and loading vessels up to 70,000 d.w.tonnes can be accommodated. Depth alongside up to 29 m. Max. draft 26.0 m. 2 unloaders, rates up to 3,000 tonnes per hour for ore and 1,000 tonnes per hour for coal.

Scrap iron and minerals are handled at Rothesay Dock (Clydebank) and Meadowside Quay (Glasgow) where vessels up to 535 ft. in length with a draft of 31 ft. in fresh water can be accommodated. With prior arrangement vessel in excess of 535 ft. may be accepted.

Sugar and molasses are handled at James Watt Dock, Greenock. Vessels using the dock are restricted to a salt water draft of 27 ft. 9 in. and a beam of 70 ft. The max. length accepted for sugar vessels is 550 ft. and for molasses vessels 500 ft.

Grain is grab discharged at Meadowside Quay (Glasgow) to the 132,000 tonne granary which is situated behind the dockside goods sheds. Max. draft for vessels using Meadowside Quay is 32 ft. in fresh water.

CRANES: Cranes presently in use by Clyde Port Authority at Glasgow are: 4×5 tons, 2×10 tons, 1×25 tons, 1×30 tons, 1×35 tons, 1×160 tons.

BRIDGES: Erskine Bridge which spans the navigable river channel has a 180 ft. working clearance above MHWS.

STEVEDORES: Arranged by ship's Agent in accordance with Master's advice of ETA.

MEDICAL: Full medical and hospital facilities available.

TANKERS: BP Oil Ltd.: Privately operated crude oil terminal at Finnart.

The terminal is located on the East side of Loch Long (Lat. 56° 07′ N., Long. 04° 50′ W.) 25 miles from the pilot station off Little Cumbrae. There are 2 berths of which No. 3 accommodates about 300,000 d.w.t. tankers with a max. draft 75 ft. and No. 2 Berth, to the S.W., is used for about 200,000 d.w.t. with a max. draft 54.5 ft. and smaller tankers.

Berth Approach and Berthing: The berths are well sheltered, the water in Loch Long is deep and, with little tidal flow, berthing can be done at any state of the tide.

Berthing is done only in daylight, but ships can sail at any time. Vessels are turned about 0.5 miles seaward with tug assistance and backed up to the berth port side to, head out.

Tugs push on the off-shore side to breast the vessel alongside until secured.

Moorings: Ship's moorings are landed by launches. The usual pattern of moorings at Berth No. 3 is 5 head ropes, 5 stern ropes, 1 ship's breast rope at each end and 2 backsprings at each end to the jetty head. A 5.5 in. wire with "braidline" tail is provided by the shore as an additional breast mooring at each end. All ship's ropes are secured to quick release hooks.

At Berth No. 2 vessels secure to bollards with 4 head ropes, 4 stern ropes and 1 backspring at each end to the jetty head. A shore wire is provided at each end as a breast mooring.

Gangway: At Berth No. 3 a shore gangway is provided. At Berth No. 2 the ship must provide a safe gangway. Access to and from the ship must be by the gangway only.

Limitation on Height of Ship's Manifold: Prior notice must be given to the terminal if the height of the ship's manifold will exceed 68 ft. above waterline.

Cargo Handling: Each berth has the following Woodfield Combination hose/booms: 4 for crude oil (10 in. on Berth No. 2, 16 in. on Berth No. 3),

and 2 for fuel oil imports and bunkering (8 in. on Berth No. 2, 10 in. on Berth No. 3). These connect with tankfarm by 2×12 in. fuel oil pipe-lines and 14×12 in., 24 in., 42 in. crude oil pipe-lines.

The maximum pressure allowed is 200 p.s.i.

There are facilities for loading lube oils.

Ballast and Slops: There is no facility for receiving dirty ballast or slops at the terminal. The tank cleaning berth at Greenock is no longer in operation.

Density of Water: The specific gravity averages 1.012 at the berths.

Services: No bunkers are available over the jetty. Ample prior notice is required for delivery by barge. Fuel and diesel oils are delivered by a barge with a fuel oil capacity of 440 tons and a diesel oil capacity of 118 tons. A 6 in. hose is used and the barge delivers both grades at 100 t.p.h.

Fresh water, of good soft quality, is piped to the berths at 50 t.p.h. Maximum quantity is 500 tons.

Normal domestic services, stores, laundry, etc. may be handled over the jetty with permission of the Terminal Authority.

A 1.5 ton crane is available for use at the berths.

A coin-operated telephone will be put on board, upon request.

Esso: Located at Bowling. This is a privately owned product distribution terminal, located 11 miles from Kempock Point (Gourock Pilots) and 9 miles up the River Clyde on the North Bank. It comprises 2 marginal jetties seaward of the silted up Dunglass Basin as well as quayside berths for small coasters and barges above the basin.

Jetty No. 1 was brought into service after major reconstruction in 1974. Jetty No. 2, down river, is silting up and has no facilities. It is only used in an emergency.

The acceptable size of tankers in low-flash service is limited by a maximum LOA of 550 ft. (560 ft. with thruster fore and aft) which can be turned off Dunglass Basin as low-flash tankers are not permitted in the river above Bowling. Max. draft 31 ft.

Tankers, other than low-flash, up to 600 ft. with connections at mid length are acceptable. Such vessels have to turn off Rothesay Dock 4.5 miles up river, only in daylight, and by prior arrangement.

Moorings: Normal complement of mooring lines is 6 at each end, i.e., 2 backsprings, 2 breast ropes, 2 head/stern lines each end.

Cautionary Note: Moorings need to be carefully tended at all times but particularly while other vessels are passing along the channel.

Although all vessels are required to pass the terminal at dead slow speed, the effect of their passing tends to cause moored tankers to range in the berths. Moorings have been known to part.

Gangway: The vessel must provide a safe gangway and access to and from the vessel must be by the gangway only.

Manifold Preparation: Unless the vessel is to turn before berthing, the port side manifold should be prepared by removing blanks to present 8 in. ASA flanges. All off-shore manifolds and connections not required for use must be securely blanked. All derricks, stays, radio aerials, etc., should be clear of the manifold area.

Cargo Handling: The jetty is fitted with 8 in. ASA 150 EMCO Wheaton hard arms, 3 for black oils which connect with 16 in. and 12 in. pipe-lines, and 4 for clean grades which are connected on the jetty head with 12 in. product pipe-lines.

There are 3 connections for lube oils, which are handled by 6 in. flexible hoses.

There is no bunker connection on the jetty. Also, there is no facility for receiving ballast or slops at the terminal. Tankfarm is located within a mile or so of the jetty and mostly at sea level, but a few clean oil tanks stand about 100 ft. above sea level.

Maximum pressure allowed on black/clean oil arms is 100 p.s.i. Maximum pressure allowed on lube hoses is 50 p.s.i.

If wind speed reaches 30 – 35 m.p.h., then cargo operations will be stopped, arms drained, disconnected and secured.

Services: No bunkers are available over the jetty. Prior notice is required for delivery by barge.

Fuel and diesel oils are delivered by a barge with a fuel oil capacity of 440 tons and a diesel oil capacity of 118 tons. A 6 in. hose is used and the barge delivers both grades at 100 t.p.h.

Fresh water is piped to the berth at 20 t.p.h.

Normal domestic service (stores, laundry) up to 1 ton loads can be handled over the jetty. Heavier loads require arrangement of a barge.

Departure: Ample warning required for Pilot and tugs.

Normal practice is for vessels in ballast to unberth and proceed slightly up river and swing in the turning area off Dunglass Basin at 1 hour before HW, on the last of flood.

Cautionary Note: The turning area is reasonably restricted and great care should be exercised in keeping vessel's speed to a minimum as well as making sure vessel is in correct turning position before commencing swing.

DENSITY: Glasgow – Fresh; Greenock – Brackish; Hunterston – Salt.

FRESH WATER: Available by hose at all berths operated by the Clyde Port Authority.

FUEL: Most major oil companies are represented in Glasgow. All grades of bunker oil can be supplied by barge or road tanker and by pipeline at Bowling Terminal.

FIRE PRECAUTIONS: Masters of vessels at the Authority's berths are given, on arrival, a copy of the Port Fire Protection Regulations.

Oil tanker berths are privately owned and the operators issue their own Fire Regulations.

CONSULS:

Belgium
Brazil
Canada
Cyprus
Denmark
Domincan Republic
Ecuador
Finland
Gambia
Germany F.R.
Greece
Iceland
India
Italy
Netherlands
Norway
Panama
Peru
Philippines
Poland
Portugal
Spain
South Africa
Sweden
Thailand
Uruguay

REPAIRS: All types of repairs can be effected in the area.

DRY DOCKS: Largest dry dock is 1,000 ft. long with 145 ft. clear width at entrance.

In addition there are 4 other smaller dry docks in the Glasgow and Greenock area and 2 Patent slipways at Renfrew (1×1,000 tons and 1×125 tons).

SURVEYORS: The following are represented in the area: Lloyd's Register of Shipping, Norske Veritas Register of Shipping, Bureau Veritas Register of Shipping, American Bureau of Shipping, The Salvage Association.

In addition, a number of independent marine and cargo surveyors are available.

GANGWAY/DECK WATCHMEN: Shore watchmen are available from private contractors but need only be engaged at the discretion of the Master.

HATCHES: Opening and closing of hatches may be carried out by ship's crew.

CUSTOMS ALLOWANCES: Standard United Kingdom allowances.

CARGO GEAR: Under normal circumstances, cargo is handled by shore equipment.

REPATRIATION: Repatriation can be arranged to all countries.

AIRPORT: Glasgow Airport (12 miles from city centre) and Prestwick Airport (30 miles from city centre) are both served by a number of major airlines.

Air UK have flights from Glasgow to Amsterdam and London (Gatwick and Stanstead).

TIME: GMT, but British Summer Time (1 hour ahead of GMT) in force during the Summer.

HOLIDAYS: Details of official dock holidays on which cargo work cannot be arranged can be obtained from the Marketing Department of the Port Authority, on request.

POLICE/AMBULANCE/FIRE: Can be called on the public telephone system by dialling 999 or by contacting Clyde Port Estuary Radio on VHF Channel 16.

EMERGENCY CO-ORDINATION CENTRE: H.M. Coast Guard (Marine Rescue and Co-Ordination Centre), Navy Buildings, Eldon Street, Greenock. Tel: (0475) 29988. Telex: 777006.

TELEPHONES: British Telecom can supply telephones at most berths. Agent will arrange and advise costs.

SERVICES: Facilities are available for repairs and service to radio equipment and navigation aids. A compass adjuster is based at Glasgow.

There are no facilities for cleaning oil tankers, but small quantities of oil/sludge may be removed by road vehicles.

BANKS: All National and many European and International banks have branches in Glasgow.

SHORE LEAVE: Shore leave is at Master's discretion.

IDENTIFICATION CARDS: Not required to be carried.

REGULATIONS: Tankers having on board or having carried cargo with a flashpoint below 73°F are prohibited from proceeding East of Bowling.

Special regulations apply to the handling and transit of explosives.

There are special requirements in force regarding the production of a gas free certificate for OBO and ore/oil vessels calling at Hunterston Ore/Coal Terminal.

It is a requirement of the Clyde Port Authority that every vessel in excess of 1,600 g.r.t., constructed or adapted for the carriage of oil, chemicals or gas in bulk, complies with the reporting procedures as specified in Statutory Instrument 1981 No. 1077, entitled, The Merchant Shipping (Tankers) (EEC Requirements) Regulations 1981.

SHIP SUPPLY SERVICE: *Surface Craft:* Clyde Marine Motoring Co. Ltd., Princes Pier, Greenock, Renfrewshire.

COLCHESTER: 51.54 N. 00.55 E. (See Plan

PORT LIMITS: Brightlingsea Anchorage.

DOCUMENTS: As normal British port.

PILOTAGE: If Pilot required from Sunk to Brightlingsea, as much notice as possible should be given to Harwich Pilots by R/T or VHF Channe 16/9. Pilots board near Sunk Light Vessel. ETA's for ships proceeding directly to Brightlingsea can be passed through Harwich, which has a far greater range than Colchester. River pilots can also be ordered directly via "Colchester Harbour Radio", if during operating hours or Channel 68.

ANCHORAGES: Off Brightlingsea, in 3 to 4 fathoms.

RESTRICTIONS: Vessels with deck cargoes of timber, and vessels which are large for the port not worked at night.

MAX. SIZE: Max. length at Colchester, 200 ft. Max. length at Rowhedge and Wivenhoe, 250 ft. Berthing arranged for larger vessels up to 280 ft at Rowhedge and Wivenhoe, depending on type. Max. draft a Colchester, 12 ft. 06 in. Spring tides, 8 ft. 06 in. Neap tides. Max. draf at Rowhedge and Wivenhoe, 14 ft. 06 in. Spring tides, 10 ft. Neap tides

HEALTH: Normal procedure. Any abnormal conditions advise Harbou Master. Pratique automatic if from U.K. port.

Also see "Health – All Ports" before first U.K. port.

RADIO: North Foreland Radio, Humber Radio or Niton Radio. 2182 kHz

VHF: "Colchester Harbour Radio", VHF Channel 68. Office hours watch plus tide time watch when ships expected. Vessels should call when approaching port anchorage, giving deepest draft, and keep listening watch on Channel 68 when manoeuvring.

RADAR: None.

TUGS: Small motor tug available through Harbour Master. Private tugs also available.

BERTHING: 1,000 ft. of private quays. 3,200 ft. of public (corporation quays. All berths use shore equipment and handle all cargoes. Por dries at LW. (Berths at Wivenhoe 450 ft., at Rowhedge 500 ft. additiona to above.)

CRANES: A number of 4 ton – 6 ton mobile cranes.

BULK CARGO FACILITIES: Bulk cargoes handled at most berths 3 grain silos.

STEVEDORES: Arranged by Local Agents. Average rate for all cargoes 100 t.p.h.

MEDICAL: Advance notice if possible. Hospital available.

TANKERS: No facilities.

DENSITY: Density varies with tide, average 1015.

FRESH WATER: Fresh water points on quays, rate approximately 9 tonnes/p.h., cost £13.0 to £25.0, based on size of vessel.

FUEL: All fuel deliveries by road tanker.

FIRE PRECAUTIONS: None.

CONSULS: None.

REPAIRS: No facilities.

SURVEYORS: Lloyd's Agent (W. Fieldgate & Son) or ship's Agent ca arrange.

GANGWAY/DECK WATCHMEN: Not normally required.

OPENING/CLOSING HATCHES: By crew.

CUSTOMS ALLOWANCES: British standard allowance.

CARGO GEAR: Shore gear, no heavy lifts.

REPATRIATION: Arranged by Agents.

AIRPORT: London 70 miles. Stansted 30 miles.

TIME: GMT. GMT plus 1 hour in Summer.

HOLIDAYS: Normal British holidays, work sometimes arranged.

POLICE/AMBULANCE/FIRE: Tel. 999.

EMERGENCY CO-ORDINATION CENTRE: U.K. Coastguard – Dial 99 or VHF Channel 16 or Tel: Walton-on-Naze 5518.

TELEPHONES: None.

SERVICES: Compass adjusting arranged by Agents.

BANKS: Barclays, Midland, Nat-West, Lloyd's and Williams & Glyn a have branches in the town.

STORING: See "Prelims".

1. By truck.
2. Not applicable.
3. Yes, subject to cargo handling.
4. Yes
5. Normal U.K. Requirements.
6. Yes.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required.

DELAYS: Normally tidal delays only.

AUTHORITY: Colchester Borough Council, Harbour Office, Hythe Qua Colchester, Essex, United Kingdom. *Tel:* Colchester (0206) 5758 *Contact:* Captain R.H. Mackman, Harbour Master. Captain L. Stre Deputy Harbour Master.

COLERAINE: 55.08 N. 06.40 W. (See Plan)

PORT LIMITS: 5.5 mile tidal stretch of the River Bann to the river entrance.

River entrance: 55° 10′ N., 06° 46′ W.

DOCUMENTS: Normal U.K. requirements.

PILOTAGE: Compulsory, order through Agents or direct from Harbour Office or Pilot. 24 hours notice preferred. Pilot Station, Portstewart Bay. Pilot boat call sign "S. G. Martin", call on Channel 12, working Channel 12.

ANCHORAGES: Vessels awaiting tide can anchor in Portstewart Bay in offshore winds or in Skerry Roads, East of Portrush.

RESTRICTIONS: The port is tidal and deeper vessels are restricted to high tides. Limited night working.

MAX. SIZE: The recommended maximums are 80 m. length, 12.2 m. breadth and 4.3 m. draft.

HEALTH: Normal U.K. procedure.

TUGS: Not normally required, nearest available tug is at Londonderry Harbour.

BERTHING: Main Quay 900 ft., 2 detached wharves 140 ft. and 150 ft. and separate Oil Jetty. Max. draft vessels may ground safely on mud at LWST.

CRANES: Two Priestman Lion 35 grabbing cranes for bulk coal, etc. One NCK Pentland for bags, pallets, etc. 1×35 ton Henderson derrick crane for containers or heavier lifts.

SPECIALISED CARGO HANDLING FACILITIES: No facilities for Ro/Ro traffic.

BRIDGES: A railway bridge with 60 ft. lifting span crosses the river 0.5 miles down stream from the Harbour.

STEVEDORES: Messrs Wm. Dalzell & Sons Ltd. Tel: (0265) 54365. Telex: 74512. Fax: (0265) 58230.

MEDICAL: Full hospital/medical facilities available.

DENSITY: Varies between fresh and salt, depending on weather and tide conditions.

FRESH WATER: Fresh water is available from mains hydrants at all berths.

FUEL: All grades available, 48 hours notice advisable.

REPAIRS: Local engineers can carry out most repairs. Divers also available for underwater work.

DRY DOCKS: None.

HATCHES: Hatches normally opened or closed by the crew.

AIRPORT: Belfast International (Aldergrove) 40 miles. Belfast (harbour airport) 60 miles, Eglinton, 24 miles.

HOLIDAYS: 1st January, Easter Monday/Tuesday, May Day, 12th/13th July, Last Monday in August, 25th/26th December.

POLICE/AMBULANCE/FIRE: Tel: 999 in emergencies.

DELAYS: Vessels may be delayed by swell at the river entrance in very bad weather conditions.

AUTHORITY: Coleraine Harbour Commissioners, The Harbour Office, The Quay, Coleraine BT52 1BJ, Co. Londonderry. *Tel:* 0265-42012. *Contact:* W. R. Dalzell, Harbour Master.

COWES (including Newport, Isle of Wight): 50.46 N. 01.18 W.

PORT LIMITS: As shown on British Admiralty Charts.

DOCUMENTS: As for "Portsmouth".

PILOTAGE: Pilotage is compulsory for vessels of 50 m. and above in length overall and passenger vessels of 20 m. and above in length overall whilst carrying more than 12 passengers/sub-standard ships.

Boarding/landing points for Cowes Pilots: Vessels up to 61 m. in length overall, in vicinity of Prince Consort Buoy. Vessels of 61 m. and above in length overall (bound to/from Cowes): (a) Western Limit ABP Southampton, in vicinity of Gurnard North Cardinal Buoy. (b) Eastern Inner Limit ABP Southampton (North Sturbridge Buoy).

Note: 6 hours (minimum) notice required.

Cowes Pilots also conduct vessels to berths in Newport Harbour area of jurisdiction.

Pilots board from launches "Thosbro"/"Blaavand", which are equipped with multi-channel VHF radio. A Pilot can be obtained by making a link call to Isle of Wight (0983) 292812 or 292501 (24 hour service). During office hours Pilots can be obtained by link call to the Harbour Office Cowes (0983) 293952 or by VHF radio ("Cowes Harbour Radio") Channel 16/69. After office hours telephone (0983) 295733/293812/292033.

Note: Vessels of 61 m. to 150 m. in length overall may board an ABP Southampton Pilot on a voluntary basis at the Eastern Outer Limit (Nab Tower). For boarding/notification arrangements see "Southampton". Such vessels preceding into Cowes Harbour/River Medina will board a Cowes Pilot in the vicinity of the Prince Consort Buoy.

ANCHORAGES: Vessels waiting to proceed to Cowes or Newport should anchor within the area bounded by Old Castle Point, "Prince Consort" light-buoy and the harbour entrance light-buoy. The prohibited anchorage on either side of the leading line must be respected, and vessels must not obstruct the fairway into Cowes, nor the deep water channel used by large vessels bound for Southampton. The mooring buoy is reserved for the Trinity House lighthouse tender and naval vessels. Mooring chains run East and West for 500 ft. from each of these mooring buoys. Tidal streams in the anchorage are strong. Cowes is an international yachting centre, and the anchorage is often crowded with small craft, especially during July, August and September.

Cowes Roads anchorage, North of the deep water channel, is used by large vessels waiting to berth in Southampton Water, taking bunkers or changing crews.

MAX. SIZE: Cowes – 300 ft. long, 17 ft. draft at HWS. Vessels must expect to take the bottom in soft mud at LW. Newport – 150 ft. long, 8 ft. draft. Newport Harbour practically dries out at LW.

RESTRICTIONS: Tankers may load and discharge at all times, subject to the Petroleum Acts.

FLOATING BRIDGE: A chain ferry plies between East and West Cowes. An all-round amber light is shown from the leading end of the bridge when under way. Approaching vessels should sound 1 prolonged blast on the whistle when not less than 0.5 mile away. The bridge gives way to all river traffic. The chains of the ferry are at least 2 ft. above the river bottom in mid-channel at all times.

HEALTH: See "Portsmouth".

RADIO/VHF: See "Southampton" for Sea Pilot communications. See "Pilotage" for local communications.

Commercial vessels should establish contact with Floating Bridge, call sign "Cowes Chain Ferry", on VHF Channel 69 before passing, both inward and outward.

Southampton VTS, the port operations and radar station for the port of Southampton, will often assist in cases of difficulty, although there is no obligation for them to do so and they accept no responsibility. Southampton VTS on VHF Channels 16, 14, 12, 11, 10, 18, 20 and 22. Medium frequency through Niton Radio.

TUGS: Harbour tug (3.5 ton bollard pull) and tow-boat launches are available to assist vessels.

BERTHING: *Medina Wharf:* Vessels 17 ft., Spring draft, LOA 270 ft. Loading and unloading bulk cargoes of stone, coal, fertilisers, grain, etc. *Kingston Wharf:* As for Medina Wharf, above.

STEVEDORES: By arrangement with Agent and wharf owners. Normal working hours: 0800 – 1700 hrs. Monday to Friday. Overtime on Saturdays, etc., by arrangement. No work on public holidays.

MEDICAL: All medical facilities are available. Agent should be given advance notice of requirements. If call is solely to land sick personnel, see "Southampton" entry.

DENSITY: Cowes – 1025 salt water.

Newport – varies according to amount of recent rainfall and state of tide.

FRESH WATER: Available on all commercial wharves.

FUEL: Fuel and Diesel oil available by arrangement with Agent.

CRANES: Hammerhead crane at Souter Shipyard Ltd., 50 tons. Medina Wharf: 2 grabbing cranes of 4.5 cu.m. for bulk cargoes.

OPENING/CLOSING HATCHES: By ship's crew.

REPAIRS: All hull and engine repairs undertaken to vessels capable of Cowes entry. Graving dock for ships up to 200 ft. in length and 14 ft. draft.

SERVICES: Compass adjuster, radar and radio mechanics available locally. Charts and general stores available locally.

SHIP SUPPLY SERVICE: *Thomas Bros.:* 2×40 ft. launches (20 knots) available throughout 24 hours for stores – 12 persons – liberty boats, surveys, etc., and marine contract work – U.K. and Northern France. Tel: (0983) 293812.

Solent Cruises: 2×45 ft. fast vessels with twin screw, D.O.T. Load Line Exemption, able to carry up to 89 persons (reduced number in Winter).

Solent Cruises are contractors to the local authorities for the transfer of sick persons from the Isle of Wight to the mainland.

Contact on VHF Channel 16, (Jenny Lee – 2 RAH) when afloat or Telephone Isle of Wight (0983) 64602.

A 24 hour service is offered for transport of personnel, stores and passengers.

Marine Support and Towage Limited: Tel: (0983) 295369, 296424, 297363 (24 hours). Office (0983) 296934.

Details of Vessels:

Name	*Length*	*General Description and Capabilities*
Roperunner	33 ft.	Heavily fendered steel work launch, used for running mooring ropes/wires for large vessels 6,000 tons – 250,000 tons. Large open after work space, forward wheelhouse. Fitted with radar and multi-channel VHF radio. 120 h.p. diesel, 1 ton bollard pull. Speed 8 knots.
A. Stopford	40 ft.	Keith Nelson twin screw diesel fast launch, for personnel transport and light storage duties, open after cockpit with towage facility. Licenced for 12 passengers. 2×145 h.p. diesels. Speed 16 knots – 18 knots. Fitted with radar, VHF radio and echo sounder.
Beaver	32 ft.	Steel work launch used for running mooring ropes/wires and towage. Large open after work space, forward wheel house. Fitted with multi-channel VHF radio, radar pending, diesel engine, 2 tonne bollard pull.
Trio	47 ft.	Steel work launch used for running mooring ropes/wires and towage duties. Fitted with radar and multi-channel VHF radio, diesel engine, 4 tonne bollard pull.

Above vessels are available on hourly, daily or long term charter, U.K. coast or continent. Company is experienced in offshore back-up, ship supply, etc. A 24 hour office facility call out is maintained.

St. Helens Laundry Ltd.: Tel: (0983) 872250, 873731.

Able to supply laundry and dry cleaning services to any vessels at Southampton Docks, Fawley Terminal, Netley, The Solent, Portsmouth Harbour or Docks, and the St. Helens Roads and Nab Anchorages.

OIL POLLUTION: Cowes and the Solent are world-famous yachting centres. Pollution is dealt with severely.

AUTHORITY: Cowes Harbour Commissioners, Harbour Office, Town Quay, Cowes, Isle of Wight, PO31 7AS. *Tel:* (0983) 293952. *FAX:* (0983) 290018. *Contact:* Captain H. N. J. Wrigley, Harbour Master/Chief Executive Officer.

CROMARTY FIRTH PORT (See Plan)

(A) INVERGORDON/EVANTON: 57.41 N. 04.10 W.
(B) NIGG OIL TERMINAL: 57.41 N. 04.02 W.

(A) INVERGORDON/EVANTON

DOCUMENTS: *At Boarding on arrival:*
1 copy Maritime Health Declaration and Derat Exemption.
Form I.S.6 – List of members of the crew who are aliens or who were engaged outside the United Kingdom. (in duplicate).
Form C.13 – General Declaration (in duplicate).
Cargo Manifest (in duplicate).
Form C.142 – Crew Declaration (in duplicate).
Form C.196 Coastwise Shipping (Transire).
Form C.44d Coastwise removal of uncleared foreign cargo.
Delivery of forms. When a vessel is not boarded by a Customs Officer on arrival, 1 copy of each of the forms listed must be delivered by the Master or his authorised agent to the proper place at the port of arrival. The Regulations require delivery of these forms within 3 hours of the vessel's arrival at the place of loading or unloading. The second copy of Forms C.13 and C.142 must be retained on board by the Master or other responsible officer for use by Customs Officers who may subsequently visit the vessel.
Certificate of Registry.
Certificate of British Tonnage.
Light Dues Certificate relating to the vessel.
To the Agent:
Bills of Lading.
Cargo Manifests.

PILOTAGE: Pilotage available 24 hours. Vessels under 300 g.r.t. are exempt. Cruising station of pilot boat is the Cromarty Lighthouse where Pilot will board. Pilot boat painted black hull, white upper structure.

Pilot boards from tug at Fairway Buoy for large tankers and oil rigs.

Approaching vessels may give their ETA to pilot station via VHF Channel 16, when in the vicinity of 30 miles, but a 24 hour notice will be required. In the event of bad weather, vessels will be guided by Pilot launch to safety where Pilot will board. Watch kept on VHF Channels 16 and 11 (24 hours) by Cromarty Firth Port Authority. Call sign "Cromarty Firth Port Control". Local weather forecasts available.

ANCHORAGES: Large tankers anchor 1 mile South of Fairway Buoy (L. Fl. 10 secs. Racon). Main anchorage West of Cromarty Ness Light.

RESTRICTIONS: Vessels bound for Invergordon or Evanton with a draft over 43 ft. are not handled at low water.

MAX. SIZE: Max. permissible length 900 ft., max. draft 40 ft.

Nigg Oil Terminal: See "Section B".

HEALTH: International quarantine signals to be used. Advise "Portelth Dingwall" in advance if any suspected diseases on board.

Also see "Health – All Ports" before first U.K. port.

RADIO: Vessels approaching from North should pass their ETA cable via Wick Radio GKR 431, and vessels approaching from East via Stonehaven Radio GND 458 to their Agents.

VHF: Link calls through Cromarty Radio (based at Wick) Channel 16 and working Channel 28 and 84. Also see "Pilotage".

TUGS: Caledonian Towage Co. Ltd. – Tel: Invergordon 852611. Suitable tugs up to 50 tonnes bollard pull stationed at the port which work in conjunction with Pilots. Tug's lines used.

BERTHING: *Admiralty Wharf:* The wharf is the property of M.O.D. (Navy), however the berths are used regularly by commercial vessels.

Berths 1 and 2 (Outer South): Lengths 443 ft. Max. draft 36 ft. Max. LOA 900 ft. Also see "Tankers".

Berth 3: Max. draft 18 ft. Max. LOA 290 ft.

Berth 6: Max. draft 18 ft. Max. LOA 200 ft.

British Alcan Pier: Outer Berth: Length 318 ft. Dredged depth 38 ft. MLWS (1974). Max. berthing length 750 ft. approx. using dolphins. (50,000 d.w.t.)

Inner Berth: Length 200 ft. Depth 20 ft. MLWS (1974).

Invergordon Oilfield Support Base, Invergordon: Front berth 150 m., side berth 60 m. Front dredged to 8.9 m. below C.D. Side 5.5 m. minimum. Bunkers diesel – see "Fuel".

Queen's Dock: Length 150 m. Depth at Chart Datum 12.0 m. Also see "Developments".

Highland Deephaven – Evanton: Berthing face length 35 m. Minimum dredged depth 6.4 m. at Chart Datum. Berthing is mainly used by pipe-spooling vessel "Apache" for mooring stern on to berth. Berth also used for conventional coasters and supply vessels up to about 80 m. length and 6.0 m. draft.

CRANES: Mobile cranes up to a maximum 130 tonnes available from stevedoring firms, plus crane-barge of up to 200 tonnes capacity from Caledonian Towage.

STEVEDORES: F. Lyons (Stevedores and crane hirers) – Burghead STD (0343) 835360. James Jack (Stevedores and crane hirers) – Tel: Invergordon (0349) 853939. Bannerman Bros. (Stevedores and crane hirers) – Tel: (0862) 2322, 2412.

MEDICAL: Medical cases can be dealt with at short notice through local Agent. Hospital facilities available.

TANKERS: Vessels up to 800 ft. Max. draft 36 ft. may use Admiralty Wharf, Berths 1 and 2 combined. Also see "Section – B".

DENSITY: 1022.

FRESH WATER: Obtainable alongside quay. Rate of delivery 30 t.p.h., each hydrant. Rate of delivery at Supply Base is 80 t.p.h.

FUEL: This can be ordered through local Agent, delivery by road tanker, or ex-quay at Invergordon Supply Base (up to 2,500 tonnes of diesel). Heavy fuel is available by arrangement ex-quay at Admiralty Pier.

REPAIRS: General repairs undertaken by Cromarty Firth Engineering Co. Ltd. – Tel: Evanton 830551; MacKay & MacLeod – Tel: Evanton 830363 and James Jack (Eng.) Ltd. – Tel: (0349) 853939. Scottish Rig Repairers – Tel: Invergordon 852788.

GANGWAY/DECK WATCHMEN: Ship's gangway and safety ne required. Watchmen from ship's personnel.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CERTIFICATES: The following Certificates are required to be held o board for production when required:
International Load Line Certificate.
International Tonnage Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Oil Pollution Prevention Certificate.
Oil Pollution Insurance Certificate (Tankers).

CUSTOMS ALLOWANCES: Following quantities are generally left ou for use on board by each member of crew:

Ships arriving from foreign ports within Home Trade Limits: Tobacco 125 gm. (4 oz. or 100 cigarettes). Spirits 0.185 litre (0.25 bottle), wine 0.375 litre (0.5 bottle).

All other ships from foreign ports: Tobacco 250 gm. (8 oz. or 20 cigarettes). Spirits 0.375 litre (0.5 bottle), wine 0.75 litre (1 bottle).

REPATRIATION: Can be arranged.

AIRPORT: Dalcross Airport at Inverness, flights by British Airways, Da Air and Loganair, distance from Invergordon 30 miles.

TIME: British Summer Time, 1 hour advanced on GMT. GMT in Winter months.

HOLIDAYS: 1st and 2nd January and Christmas Day. These holidays can be worked by arrangement.

POLICE/AMBULANCE/FIRE: Police, tel. Invergordon 852222 or dia 999; Ambulance, arrangements through local doctor, tel. Invergordon 852522; Fire Station, dial 999 and ask for their service.

TELEPHONES: H.M. ships only. Other vessels by arrangement a Supply Base.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required.

GENERAL: Permit must be obtained from Port Authority or Ministry o Defence when burning or welding is to be carried out at Admiralty Pie

DEVELOPMENTS: The newly completed Queen's Dock, opened in lat 1987, includes warehousing and nearly 30 acres of lay down area fo cargoes such as timber, coal, scrap, containers, etc. A Ro-Ro Berth is planned.

(B) NIGG OIL TERMINAL

LOCATION: Nigg Oil Terminal operated by B.P., provides shippin facilities for crude oil piped ashore from the Beatrice Field in the Mora Firth. The terminal is located on the North side of the Cromarty Firth i approximate position Lat. 57° 41.5′ N., Long. 4° 02.5′ W. and comprises a single berth jetty linked to the shore by a trestled roadway.

PILOTAGE: Pilotage is compulsory. Invergordon Pilot will board from a tug at the Fairway Buoy. Call "Invergordon Pilots" on VHF Channels 1 or 11, working on Channel 13.

ANCHORAGE: The recommended anchorage for vessels awaiting a berth is 1 mile South of the fairway buoy in approximate positio Lat. 57° 40′ N., Long. 3° 54′ W. An anchorage within the Cromarty Fir may be made available by the Port Authority.

RESTRICTIONS: *Depth alongside berth:* A minimum depth of water o 21 m. below chart datum is available alongside the berth.

Channel depths: The least depth in the approaches to the terminal i March 1988 was 15.1 m. below C.D. and occurred in the buoyed fairwa approximately 0.5 nautical miles within the port limits. Loaded tankers may sail with a draft up to 17.5 m. dependent on the tide. Advice shoul be sought from Cromarty Firth Port Authority prior to vessel's arrival.

Tidal range: M.L.W.S. 0.8 m., M.H.W.S. 4.3 m.

Tidal restrictions: Subject to draft, vessels will be able to berth and sa at any state of the tide, possibly excepting Spring ebbs. Berthing hea Eastwards is to be preferred.

MAX. SIZE: *Length restrictions at berth:* Max. 290 m. LOA. Minimu 190 m. LOA. *Max. displacement:* 157,500 tonnes.

VHF:

Communications:	Port Authority	Channel 11 & 16
	Port Emergency	Channel 11
	Invergordon Pilot	Channel 13
	Tugs	Channel 13
	Pollution Control	Channel 10
	Nigg Oil Terminal	Channels 49, 50

Portable VHF/UHF sets: These must not be used within the Termina Area unless they are classed as "intrinsically safe". The Terminal wi lend approved VHF equipment if necessary.

TUGS: Berthing and unberthing operations will be assisted by a minimum of 2 tugs of 50 tons and 38 tons bollard pull respectively. A relief tug of 40 tons bollard pull may be substituted for either of these tugs. A third tug of 34 tons bollard pull will also be available if required. The vessel's agent will arrange for tugs as required by the Master. A firefighting tug will remain on standby at all times when a tanker is a the Nigg Oil Terminal Jetty. Whilst underway within Port limits a 1 tu escort is required.

BERTHING: *Berthing velocity:* Vessels must not exceed a berthing velocity of 20 ft./min., regardless of displacement, and should aim t achieve a berthing velocity of less than 10ft./min. (i.e. 2 flashing gree lights.).

Mooring arrangements: The Plan (see "Plan") depicts a mooring arrangement for a typical 80,000 d.w.t. vessel. Similar configurations will be employed for all vessels in the range 40,000/160,000 d.w.t.

Seebeck quick release mooring hooks are fitted on all dolphins.

Each mooring dolphin is fitted with a 3-hook assembly; each hook 100 tonnes capacity.

Each berthing dolphin is fitted with a 2-hook assembly; each hook 100 tonnes capacity.

The 50 tonnes bollards at the corners of the jetty head are for use b small craft only.

LOADING: *Loading arms:* 3×16 in. Emco Wheaton loading arms, each designed to ANSI 150 lb. pressure rating, are installed on the jetty head. Each arm may be used either for deballasting or for loading and these operations can take place concurrently provided that the terminal approves the system of onboard separation.

The minimum acceptable ship's figure size is 12 in. Nominal Bore. The M.I.B. couplings can be adjusted to 12 in., 14 in. or 16 in. flange sizes. Vessels must present manifold flanges with a minimum clearance of 8 in. behind the flange and 3 ft. axial clearance around the centre of the flange face in order to provide adequate clearance for the coupling jaws. If necessary spool pieces must be fitted. Flanges of steel or nodular iron must be presented. Cast iron manifold materials are not acceptable. The vessel's manifold connections must remain within an envelope between 2.85 m. and 6.1 m. off the berthing face and between 4.6 m. and 25.6 m. above chart datum.

If ranging or drift-off exceeding 2.7 m. occurs the coupling ball valves will close and the couplings will automatically disconnect.

If sustained wind speeds exceed 35 knots loading operations will stop and arms will be drained. Arms will be disconnected if wind speeds exceed 40 knots.

Loading rates and pressures: Loading rates of 50,000 bbls.p.h. are attainable utilising 2 loading arms. the maximum pressure permitted at the ship's rail is 128 p.s.i.

Ballast reception: Ballast water reception facilities are available at the Terminal. Ballast must not be discharged overboard within the port. Vessels not having segregated ballast tanks must deballast ashore. Vessels with segregated ballast must retain their ballast onboard for inspection and analysis after berthing, and disposal of this ballast is subject to the results of this inspection and analysis. Permission will not be granted for the overboard discharge of segregated ballast with an oil content in excess of 5 parts per million.

FRESH WATER: Fresh water is available on request from the Terminal from a connection on the jetty head. Approximate maximum delivery rate is 30 t.p.h.

FUEL: Bunkers are not available at Nigg Oil Terminal but may be available at Invergordon (See Section "A").

REPAIRS: Repairs may only be commenced upon receipt of a work permit signed by the Terminal Superintendent. Immobilisation of a vessel alongside the jetty is only permitted with the written permission of the Terminal Superintendent and of the Port Authority.

Readiness to vacate berth: Engines and all other essential equipment of vessels alongside the jetty must be maintained in a state of readiness for vacating the berth at short notice.

STORING: Loading of stores onto a vessel alongside the jetty may be carried out only with the specific permission of the Terminal Superintendent and in a manner and at a time approved by him.

SHORE LEAVE: A pass system will operate. Shore leave will normally be by launch from the jetty launch landing pontoon. Shore leave arrangements are the responsibility of the vessel's Master and will normally be made by the ship's Agent. Details of the arrangements are to be provided to the Terminal Superintendent.

GENERAL: *Loading Master:* A B.P. Loading Master remains on board the vessel at all times during the vessel's stay at Nigg Oil Terminal.

Permanent watch: During operations a responsible member of the ship's crew must be stationed in the vicinity of the manifold.

Smoking: No smoking is permitted in the Terminal Area or on the weather deck of any vessel in the Terminal Area. Smoking may be permitted at the Master's discretion in two onboard locations, to be approved by the Terminal Superintendent.

Emergency: In the event of an emergency any assistance required must be summoned via the Terminal Control Room.

Craft alongside: Craft may not lie alongside a vessel at the jetty without the written permission of both the Master of the vessel and the Terminal Superintendent.

Refuse: No refuse or waste may be disposed of overboard from a vessel within the Port.

I.S.G.O.T.T.: Vessels must be provided with a copy and be familiar with the contents of the International Safety Guide for Oil Tankers and Terminals. Reference copies are available on temporary loan from the Terminal.

Important telephone numbers:

Nigg Oil Terminal: Nigg (086 285) 631.
Cromarty Firth Port Authority: Invergordon (0349) 852308.

AUTHORITY: Cromarty Firth Port Authority, Port Office, Shore Road, Invergordon, Ross-shire IV18 0HD. *Tel:* Invergordon (0349) 852308. Telex: 75263. *FAX:* (0349) 852308, ext. 36. *Contact:* Captain D. R. F. Miller, Harbour Master. Captain P. J. Taylor, Port Manager. Captain I. Dunderdale, Deputy Harbour Master. Captain W. Thomas, Pilot/Marine Officer. Captain N. Robertson, Pilot/Marine Officer.

DARTMOUTH (Including Totnes): 50.21 N. 03.34 W. (See Plan)

PORT LIMITS: A line from Inner Froward Point to Combe Point.

DOCUMENTS: Normal documents for U.K. ports.

PILOTAGE: No direct radio contact with Pilots. Contact local Agent, Harbour Authority or Berry Head Coastguard Station who will telephone Pilot.

Pilot station 5 cables S.S.E. Castle Ledge Conical Buoy.

ANCHORAGE: Anchor at pilot station.

MAX. SIZE: Max. length 500 ft., max. draft 28 ft.

HEALTH: Pratique granted by Customs on arrival.

Also see "Health – All Ports" before first U.K. port.

RADIO: Route cables, etc., through Niton or Lands End Radio Stations.

VHF: Watch maintained on Channel 11, 0900 – 1700 hrs. during weekdays. Call sign "Dartnav".

TUGS: Tugs can be arranged.

BERTHING: All berthing on midstream buoys.

Totnes: Max. Size: At Spring Tides coasters of about 1,000 tons up to 240 ft. LOA and drawing 12.5 ft. proceed up river to the Baltic Wharf which lies half a mile below Totnes Bridge.

Berthing: 750 ft. quay. Dries out all tides.

MEDICAL: All medical services are available; if possible give notice of requirement.

DENSITY: Normally salt. 1025.

FRESH WATER: Available at the South Embankment.

FUEL: Diesel available by barge.

FIRE PRECAUTIONS: Normal.

GANGWAY/DECK WATCHMEN: It is advisable to have watchmen.

OPENING/CLOSING HATCHES: Crew open.

CARGO GEAR: Ship's gear.

REPAIRS: All repairs unless of a major or underwater type can be carried out.

SURVEYORS: West Marine Surveyors & Consultants Limited, Consulting Marine Surveyors, Engineers & Naval Architects, The Old Custom House, Brixham, South Devon. Tel: Brixham (STD 080 45) 2604. After normal office hours tel: 0803 842925. Cables: Surveyor, Brixham. Telex: 42962 – Survey G.

REPATRIATION: Facilities exist.

AIRPORT: 35 miles from Exeter airport. Internal and short range Continental flights.

TELEPHONES: Not normally available, except for H.M. ships.

HOLIDAYS: Not applicable.

POLICE/AMBULANCE/FIRE: Dial 999 for emergencies. Local hospital adjacent to Harbour Office.

SHORE LEAVE: Permitted. Seaman's Book adequate.

GENERAL: Dartmouth does not now operate as a commercial port except for small vessels up to about 800 d.w.t. en route to Totnes, although the harbour is suitable for ships of 18,000 d.w.t., and mooring buoys are available for such vessels.

Lay-up facilities available for vessels up to 22,000 tons displacement.

AUTHORITY: Dart Harbour and Navigation Authority, The Old Post Office, South Embankment, Dartmouth, Devon TQ6 9BH. *Tel:* Dartmouth 2337/3767. *Cables:* "Harbour Master Dartmouth". *FAX:* 08043-5430. *Contact:* Captain C. J. Moore, Harbour Master.

DOUGLAS, Isle of Man: 54.09 N. 04.28 W. (See Plan)

PORT LIMITS: That part of the coast including all creeks, bays and headlands from HW mark Ordinary Spring Tides which extends from Port Soderick Landing Jetty (Lat. 54° 07′ 24″ N., Long. 04° 31′ 48″ W.) in a Northerly direction to the most Easterly point of Clay Head (Lat. 54° 11′ 42″ N., Long. 04° 23′ 05″ W.) thence in a straight line drawn in a 135° True (S.E.) direction for 3 nautical miles, thence in a straight line drawn to a position 3.5 nautical miles 135° True (S.E.) from Port Soderick Landing Jetty, thence in a straight line drawn to Port Soderick Landing Jetty.

All shipping entering the above defined area should contact Douglas Radio on Channel 16 VHF.

DOCUMENTS: Same as for all U.K. Ports.

PILOTAGE: Not compulsory. Arrangements usually made at least 24 hours before vessels' arrival, through Ships' Agent, or to Harbour Master, Douglas – Tel: 23813. Call Douglas Radio on Channel 16 and then transfer to Channel 12 for instructions 1 to 2 hours before ETA Douglas Bay.

RESTRICTIONS: Enter only on Harbour Master's instructions.

Traffic Signals: International Port Traffic Signals (see Admiralty Notice to Mariners 568/83) are exhibited when required, by day and night, from a mast at the head of Victoria Pier, visible from seaward and from inside the harbour, as follows:

Signal	*Meaning*
3 fixed red lights, disposed vertically	Vessels may not proceed
Fixed green, white, green lights, disposed vertically	A vessel having received specific permission by RT may proceed
3 fixed green lights disposed vertically	All vessels may proceed

Supplementary signals will be exhibited simultaneously in lights from a panel on the roof of a building near the head of Victoria Pier, visible from seaward and from inside the harbour, as follows:

Signal	*Meaning*
Red St. Andrew's Cross	Vessels unless specified may not proceed
White arrow	Vessels may proceed in the direction indicated

The panel will have a flashing orange light at each top corner.

ANCHORAGES: In Douglas Bay:

Douglas Head bearing 196° (T) 7 cables in 6 fathoms.
" " " 199° (T) 9.3 cables in 7 fathoms.
" " " 200° (T) 8 cables in 6.5 fathoms
" " " 212° (T) 7.9 cables in 10 fathoms

MAX. SIZE: Max. size of cross channel vessels 350 ft. LOA, draft 13 ft.

Max. size of cargo vessels 190 ft. LOA, draft 12 ft. Spring tides, 9 ft. Neaps to Inner Harbour, dries out at LW.

Max. size of tankers 230 ft. LOA, draft 13 ft. at LWOST.

HEALTH: See "Health – All ports" before first U.K. port.

RADIO: Port Patrick for vessels coming from North. Anglesey for vessels coming from South.

VHF: Douglas Harbour Radio manned at all times. Channel 16 and 12 only.

RADAR: Port Radar available for use in fog or when required. Used with Channel 12 VHF.
TUGS: One tug with bollard pull of 4 tons operated by Laxey Towing Company Ltd. Tug fitted with VHF.
BERTHING: Passenger vessels – 6 berths for vessels of 350 ft. in length, 13 ft. draft LWST at Victoria Pier and King Edward Pier.

Office Berth – vessels 225 ft. LOA, draft 13 ft., dries out at LW.

Cargo Vessels – Battery Pier berth vessels 180 ft. LOA with draft 12 ft. aft, 8 ft. forward at LWST.

Coffee Palace Berth will accommodate vessels of 190 ft. LOA, draft 12 ft. Springs, 9 ft. Neaps, dries out at LW.

Market Berth same as Coffee Palace Berth.

Battery Pier – Tankers up to 290 ft. LOA, draft 5.0 m. at LWOST. Berth at inner end of Battery Pier for vessels of up to 180 ft. LOA, draft 12 ft. aft, 8 ft. forward at LWOST. Discharging of cargo vessels and container vessels can be done by shore crane.

All berths at Douglas are salt water.
CRANES: The cranes are 5 ton mobile cranes, capable of lifting about 2 tons – 3 tons when working at full radius. One mobile grab crane.
BULK CARGO FACILITIES: Bulk cargoes of coal and scrap metal are handled at Coffee Palace and Market Berths described above, and timber at Victoria Pier.

Rate of discharge for coal about 60 t.p.h. – 70 t.p.h. by grab crane.
SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro service operated to Victoria Pier by I.O.M. Steam Packet Co.

Ro/Ro cargo service operated by Isle of Man Steam Packet Co. to King Edward VIII Pier.

LPG cargoes are handled at inner end of Battery Pier as described above.
BRIDGES: Swing Bridge only to Inner Harbour.
STEVEDORES: Advice required to Ship's Agent. Rate of discharge – cement 60 t.p.h.; coal 60 – 70 t.p.h.
MEDICAL: Advise Agent when possible, alternatively contact Harbour Master with advance warning. Hospital available.
TANKERS: Tankers pipe-lines 6 in. Tanker berth at Battery Pier – Max. draft. 5.0 m. at LW Spring tides. Discharging rate 180 t.p.h. – 200 t.p.h.
DENSITY: Density of water salt (1025).
FRESH WATER: Fresh water available on request to Agent or Harbour Master.
FUEL: Fuel delivered by road tanker only. Contact Manx Petroleum or Esso.
FIRE PRECAUTIONS: Fire precautions as normal.
CONSULS: None.
REPAIRS: Limited facilities only.
DRY DOCKS: None.
SURVEYORS: Four I.O.M. Marine Department Surveyors.
GANGWAY/DECK WATCHMEN: Could be arranged by Agent.
OPENING/CLOSING HATCHES: Handled by crew.
CUSTOMS ALLOWANCES: Same as U.K.
CARGO GEAR: Cargo can be discharged by ship's own gear or mobile cranes.
REPATRIATION: Repatriation only done through arrangement with Agents.
AIRPORT: Ronaldsway Airport 8 miles from Douglas and served by regular airlines.
TIME: Same as U.K.
HOLIDAYS: Good Friday, Easter Monday, Spring Holiday, T.T. Friday (1st week in June), Tynwald Day (5th July), August Holiday, Christmas Day, Boxing Day, New Year's Day.
TELEPHONES: Connections to ships can be arranged at passenger piers.
POLICE/AMBULANCE/FIRE: Police Tel: 26222; Ambulance Tel: 73661; Fire Brigade Tel: 73333.
EMERGENCY CO-ORDINATION CENTRE: H.M. Coastguard, Liverpool. Tel: 051 9313341.
STORING: See "Prelims".

1. By truck.
2. Not applicable.
3. Trucks can go alongside vessels except tankers when working cargo or ballasting.
4. Fork lift trucks could be permitted.
5. U.K. Customs regulations.
6. Storing usually done by crew.

SERVICES: None.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Identification Cards not required for British Ships. Same as U.K.
SHIP SUPPLY SERVICE:

1. General Marine Services Limited (Tel: (0624) 22364 or 28904), who operate the pilot launch and ship to shore transfers of personnel, stores, etc. This launch is kept afloat and a 24 hour-service is available.

2. Laxey Towing Company Limited operate one tug of 420 h.p. Tel: (0624) 23556; after hours (0624) 781724.

There is no helicopter service on the Island.
REGULATIONS: No unusual regulations.
DELAYS: Delays can be expected due to tidal conditions, or awaiting a berth; also delays caused by N.E. gales, which make Douglas Outer Harbour untenable.
AUTHORITY: Isle of Man Department of Highways, Ports and Properties, Harbours Division, Sea Terminal Building, P.O.Box 11, Douglas, Isle of Man. *Tel:* (0624) 23813, Ext. 153. *Telex:* 629335 Iomharg. *FAX:* 0624-27238. *Contact:* Captain W. B. Kinley, Chief Harbour Master (I.O.M.).

DOVER: 51.07 N. 01.18 E. (See Plan

PORT LIMITS: The seaward boundary of the Port extends 1 mile both the Eastern and Western entrances.
DOCUMENTS: Required on arrival:

Crew List H.O. Form I.S.6. or IMO FAL Form 5 (in duplicate).
Crew Declaration Form C.142 (in duplicate).
Ship's General Declaration (in duplicate) C13.
Ship's Surplus Stores Declaration (in triplicate) C14.
Derat Certificate available for inspection.

It is required to report and clear a vessel at Customs House remaining in port more than 24 hours for loading and discharging carg or embarking and disembarking passengers, with following:

Passenger List. Cargo Manifests (2 copies). Ship's documents.
PILOTAGE: Requests for pilotage are normally made by local agent Pilotage is compulsory for all ships navigating within the Dover Pilotag Area (defined as port limits above) subject to the following exception
(a) Ships of less than 20 m. overall, fishing boats of less than 47.5 m H.M. Ships and foreign war ships.
(b) Ships (other than those referred to in (a) above) of less than 80 m overall length, provided that any such ship is either not carryin dangerous substances in bulk or not substandard or in any wa hampered.

All ships subject to compulsory pilotage shall board or land pilots or close to the seaward limit of the Dover Pilotage area.
DEEP SEA AND COASTAL PILOTS: For Channel, North Sea an British Coast.

Contact agency 48 hours before arrival by radio, giving ETA Dove and destination port(s).

Agencies are: "Hutchinson Gravesend" and "Hammond Dover".

On approaching Dover contact Port Control by VHF for instruction

Pilots will also board at any U.K. or continental port as required.
ANCHORAGE: Limited space available in Outer Harbour. Contact Po Control in advance for instructions.

The Outer Harbour comprises an area of approximately 600 acre The Northern extremity indicated by two buoys 'East' and 'West' and intermediate marker buoys, the Southern extremity denoted by a lin through the Southern most tip of the Prince of Wales Pier and th Southern most tip of the Eastern Arm. The Eastern boundary is forme by a S.E.'ly line drawn through East Buoy and the Western boundary formed by a S.E.'ly line drawn through West Buoy.

The maximum depth at MLWS is 7.3 m.
RESTRICTIONS: Attention is drawn to the strict requirement of obtainin permission from Port Control to enter or leave the harbour.

It will be noted that although the traffic control signal may be exhibite for entry/departure, every vessel manoeuvring to enter or leave the po is required to obtain specific permission to enter or leave, as the cas may be.

Vessels awaiting permission to proceed should keep at a safe distanc of at least 1.5 miles clear of the entrance until so authorise Responsibility for entering or leaving with caution and the safe navigatio of each vessel subsequent to the receipt of permission to procee continues to remain the responsibility of the Master.
Explosives – Dangerous Cargo: Declaration is to be made an permission obtained prior to entering the harbour. Dover Harbour Boar is not compellable to receive within the harbour any articles which their opinion would endanger safety of harbour or vessels or goods.
HEALTH: Pratique, obtained by radio via Coastguard Station givin name of ship, ports of call during voyage, nature of cargo, number crew and passengers, port of destination and Agent, condition and heal of all on board with details of any sickness. Coastwise vessels from U. ports have automatic Pratique.

Also see "Health – All Ports" before first U.K. port.
RADIO: Vessels from East use North Foreland Radio call sign GNF an vessels from Westward use Niton Radio call sign GNI.
RADAR/VHF: Port Control and Admiralty Pier Signal Station are fitte with radar and VHF, vessels can make initial contact with "Dover Po Control" on VHF Channels 74, 16 and 12. Operational frequency Channel 74. See "Pilotage".
TUGS: Two tugs of 2,900 h.p. each. Tug names 'Deft' and 'Dextrou Twin engined Voith Schneider. Tugs will normally join vessels insid harbour entrance, but may meet vessels outside by arrangement. Tug rope used. Tug charges on application from Dover Harbour Board.
BERTHING: All berths in the Outer Harbour can be reached at all time There are 3 berths available on the Eastern Arm fitted with Yokoham fenders, depth at MLWS is 8.5 m. Berths are used for lay-by, genera cargo and vessels taking water, stores and crew changes. Late in 19 a new berth will be available on the South Jetty of the Eastern Dock There will be 200 m. of quay available with a depth of 8.5 m. at MLW There will also be 4,000 sq.m. of cargo shed and open storage spac

Those berths in the Wellington and Granville Docks can normally reached from 1 hour before each high water. All berthing requiremen are allocated by Port Control.
Western Docks: This comprises the International Hoverport, Je Terminal, the Admiralty Pier, and Train Ferry Berth, the Inner Harbou Tidal Basin incorporating the tug haven, Granville and Wellington Dock
Granville Dock: This dock is non-tidal and comprises an area 4.5 acres with depths of water of 21 ft. (6.4 m.) at MHWS, 17 ft. (5.2 m at MHWN. The entrance is 65 ft. (19.8 m.) wide and depth on the sil MHWS is 21 ft. (6.4 m.). Transit sheds and open storage space available at the Dockside.

Berth No.	*Length* (m.)		
1/2	146	Fruit/Veg/General	Portal cranes
3	76	Fruit/Veg/General	Portal cranes
4	40	Lay-by/Ro/Ro	
5	73	For lay-by only (no hot work)	
6	137	Grain	No cranes
7	96	Coal/Limestone/Coke/Pumice (leased to Cory Bros.)	

Wellington Dock: This dock is non-tidal and comprises an area of 8 acres with depth of water 15 ft. (4.6 m.) at MHWS, 11 ft. (3.4 m.) at MHWN. The entrance is 70 ft. (21.3 m.) wide and depth on the sill at MHWS is 15 ft. (4.6 m.). Transit sheds and open storage space are available. A slipway 567 ft. (173 m.) in length is capable of taking private and commercial vessels on its cradle, up to 53.3 m. in length.

Berth No.	*Length* (m.)	
8	93	Private
9	51	Lay-by/Grain
10	98	Lay-by/Grain
11	38	Private
12	116	Sand/Ballast
13	79	Private
14	103	Private
15	110	Fruit/Veg/General No cranes (mobile only)

Prince of Wales Pier: This separates the inner and outer harbours. Please note that berthing alongside the Prince of Wales Pier is only permitted by special arrangement with the Harbour Superintendent.

Hoverport: All hovercraft services operate from the Hoverport adjacent to and West of the Prince of Wales Pier. "Hoverspeed" operate daily services for passengers and accompanied cars to Boulogne and Calais.

Admiralty Pier: Length 4,140 ft. (1,260 m.), with depths alongside ranging from 6.0 m. to 9.1 m.

There is one single width, single deck, multi-purpose Ro-Ro berth, other berths are used for passenger only services and for lay-bys.

At 150 m. from the base of the Admiralty Pier a jetty 75 m. in length has been constructed, to provide a breakwater for the jetfoil terminal contained to the North of this jetty. The entrance to the jetfoil terminal has been dredged to a depth of 5.0 m. below chart datum. Jetfoils operate daily services to Ostend for foot passengers only.

Train Ferry Berth: Situated on the Admiralty Pier and is operated by Sealink UK for British Rail and SNCF. Trains run direct into the ferries which operate daily services of passengers and freight to Dunkirk throughout the year.

Tidal Basin: This forms the entrance to the Wellington and Granville Docks and is entered between the Admiralty and Prince of Wales Piers. It comprises an area of approximately 12 acres.

The entrance is 140 ft. (42.7 m.) wide, with a depth of 10.8 m. at MHWS. There are 2 berths in the Tidal Basin, Nos. 16 and 17. No. 16 has a length of 300 ft. (91 m.). No. 17, length 360 ft. (110 m.) used for berthing small boats.

A tug haven has been constructed in the Tidal Basin adjacent to Clarence Quay. The jetty 45 m. in length is positioned perpendicular and to the Southern end of Clarence Quay. To the North of the new breakwater is positioned a pontoon 90 m. long parallel to Clarence Quay, providing berths for all harbour craft including the 2 tugs, dredger, patrol launch, work boats and RNLI Lifeboat. Private berth users will not be allowed to use the berth without express permission from the Harbour Superintendent or Duty Marine Officer.

Eastern Docks:

The docks comprise the Eastern Arm and Car Ferry Berths.

Car Ferry and Freight Terminal: Operated by Dover Harbour Board. Berth No. 1, situated at the North end of the Eastern Arm, is a general purpose Ro-Ro berth for all classes of Ro-Ro vessels.

Berths No. 2 and 3, situated either side of Pier A are for large Ro-Ro ferries of length 168 m. and beam 28 m. with double deck and double width loading bridges. Berth No. 4 being situated to the Westward on Pier 'B', Berths No. 5 and 6 situated at Pier 'C', with double lane loading bridges of 23 m. plus covered passenger bridges. The car ferry/freight berths provide berthing for vessels up to 150 m. in length with depths of water of 7.0 m. at MLWS. Berths are connected with loading bridges to enable cars, coaches and freight to drive on direct on board the vessels, operating to Calais, Boulogne, Ostend and Zeebrugge. Shore facilities provide modern reception buildings, a new passenger handling complex, Customs clearance halls, restaurant, banking facilities, shipping operators' offices, spacious assembly car parks.

BULK HANDLING FACILITIES: 2×550 t.p.h. shiploaders for grain operated by Dover Stevedoring Co. Ltd.

CRANES: *Enclosed Docks:* There are 5 electrical portal cranes of SWL 3 tonnes installed at Berths 1, 2 and 3 in the Granville Dock also 2 mobile cranes SWL 20 tonnes available for cargo handling. The 2 mobile cranes may be employed for other duties. Hire charges on application to Dover Harbour Board.

Eastern Docks: Two container gantries, 2 × 20 tonnes SWL are available for hire. Late in 1990 these gantries will be replaced by 1×40 tonnes SWL gantry. Similarly, there will be 2×40 tonnes mobile cranes available. Hire charges are available from Dover Harbour Board.

CARGO HANDLING FACILITIES: Seven berths equipped for handling scheduled Ro/Ro traffic.

STEVEDORES: No particular ETA required as ship's Agent makes all necessary arrangements.

MEDICAL: Medical assistance can be arranged by Agent to vessels passing Dover Harbour. Doctor will board a vessel in English Channel or on arrival at anchorage in Outer Harbour. Hospital facilities are available.

DENSITY: 1020.

FRESH WATER: Available to all vessels by pipe-line 25 t.p.h.

FUEL: Gas oil available from Shell Mex & B.P. Ltd., and Esso. 24 hours notice required.

CONSULS:

France	Dover 204080
Italy	Folkestone 53692
Denmark Finland Germany F.R. Iceland Netherlands Norway Spain Sweden	Dover 201201 (office) Dover 203333 (night)

REPAIRS: Facilities available for minor engine repairs. Radio and Radar repairs also possible.

GANGWAY/DECK WATCHMEN: Supplied on request.

OPENING/CLOSING HATCHES: By crew.

CERTIFICATES: Certificates to be obtained for foreign clearance: Register, Load Line, Safety Construction, Passenger and Safety Equipment.

REPATRIATION: All facilities exist.

AIRPORT: Most repatriations by air through London/Gatwick and London/Heathrow.

TIME: Local time: BST (British Summer Time) 1 hour in advance of GMT. Reverting to GMT in Winter months (late March to late October).

HOLIDAYS: Official holidays: 1st January; Good Friday; Easter Monday; May Day Holiday; Spring Holiday (end May); August Bank Holiday; Christmas Day; Boxing Day.

The port is open every day for cargo and passengers, except Christmas Day.

POLICE/AMBULANCE/FIRE: Dial 999.

TELEPHONES: Not available.

BANKS:

Barclays Bank Ltd., Tel: Dover 214516.

Lloyd's Bank Ltd., Tel: Dover 240808.

Midland Bank Ltd., Tel: Dover 201131.

National Westminster Bank Ltd., Tel: Dover 201308.

National Westminster Bank Ltd., (Car Ferry Terminal, Eastern Docks), Tel: Dover 201474 or 202744.

Trustee Savings Bank, Tel: Dover 202037.

SERVICES: Repairs to radar equipment, compass adjusting, supply of charts and crew changes can be arranged outside Dover Harbour through local Agents at all times.

SHIP SUPPLY SERVICE: The Dover Motorboat Co. Limited, a Hammond subsidiary, operates a 24 hours a day launch service to provide vessels off the port with Pilots and stores, etc., telephone (0304) 206809 or alternatively call the Dover Harbour Board Port Control on VHF Channel 74 to contact the Dover Motorboat Co. and allocate a working channel.

SHORE LEAVE: Allowed, subject to Port Passes (see "Identification Cards").

IDENTIFICATION CARDS: Are necessary, plus passes for ship's personnel at Eastern Arm berths having to pass through Eastern Docks Terminal. Passes obtainable from Mooring Party foreman.

AUTHORITY: Dover Harbour Board, Harbour House, Dover, Kent CT17 9BU, United Kingdom. *Tel:* Dover (0304) 240400. *Telex:* (Harbour House) 965619, (Eastern Docks – 24 hours) 965620. *FAX:* (0304) 240465. *Cables:* Harboard, Dover. *Contact:* Captain P.R. White, Manager – Marine Operations.

AGENT: George Hammond (Shipping) Ltd., Limekiln Street, Dover, Kent CT17 9EE. Tel: (0304) 201201, (0304) 203333 after hours. Telex: 96115. Fax: (0304) 240374. Lloyd's Agent and Agent for leading P & I Clubs.

DUNBAR: 56.01 N. 02.31 W. (See Plan)

PORT LIMITS: A line drawn across seaward end of entrance channel.

DOCUMENTS: Standard U.K. documents.

PILOTAGE: Local pilotage may be obtained.

APPROACHES: Leading lights bearing 198°, occulting green 6 secs.

ANCHORAGES: Safe anchorage in Castle Bay except in Northerly gales.

RESTRICTIONS: No berthing if heavy swell entering harbour.

MAX. SIZE: LOA 50 m., draft 4 m. at HWS. Vessels lie aground on sandy bottom at LW.

HEALTH: Standard U.K. procedure.

RADIO: Forth Radio.

VHF: None.

RADAR: None.

TUGS: None.

BERTHING: Prior permission must be obtained for vessels of 20 m. LOA or greater.

Cargo unloaded by ship's own gear.

CRANES: None.

MEDICAL: No medical facilities at harbour.

FRESH WATER: Available on quayside by hose connection.

FUEL: From road tanker by prior arrangement.

CONSULS: None.

REPAIRS: Minor repairs possible.

SURVEYORS: Lloyd's at Leith Docks.

GANGWAY/DECK WATCHMEN: By arrangement with Harbour Master.

CARGO GEAR: By ship's gear or mobile crane (by arrangement with Harbour Master).

AIRPORT: Edinburgh (Turnhouse) 35 miles.

TIME: GMT. GMT plus 1 hour in Summer (late March – late October).

HOLIDAYS: None.

POLICE/AMBULANCE/FIRE: Dial 999 in an emergency. Police, Tel: Dunbar 62718; Ambulance, Tel: Haddington 3307.

BANKS: Local branches of Bank of Scotland and Royal Bank of Scotland only.

STORING: Small quantities of stores can be loaded from quay. Trucks can come alongside at quay.

EMERGENCY CO-ORDINATION CENTRE: H.M. Coastguard, Maritime Rescue Sub-Centre, Forth District, Crail. Tel: Crail 666.

AUTHORITY: Department of Water and Drainage, Lothian Regional Council, Alderston House, Haddington, East Lothian EH41 3SY. *Tel:* Haddington 4131. *Telex:* 727 586. *Contact:* T. Brown, Harbour Master, *Tel:* Dunbar 63005.

DUNDEE: 56.28 N. 02.57 W. **(See Plan)**

PORT LIMITS: A vessel is considered to be an "arrived ship" when:
(a) For berthing turn-arrival at Fairway Buoy.
(b) For Laytime – usually "off or at the berth" and subject to Charter-Party terms.

DOCUMENTS:
3 Crew Lists.
3 Passenger Lists.
1 Tobacco Manifest.
1 Health Declaration.
Cargo Manifests.
Bills of Lading.
Derat Certificate.
Lights Certificate.

HEALTH: Health Declaration on arrival – if clean, automatic Pratique. Suspect disease as per international requirements. Pratique automatic if already called at another port.

Also see "Health – All ports" before first U.K. port.

RADIO: Any UK coast station. Nearest stations – Stonehaven and Forth.

VHF: See "Pilotage" and "Tugs".

TUGS: Towage is operated by the Authority's tug – 'Abertay' (1,280 h.p. Bollard pull 17 tons). Tug joins vessel in the vicinity of West Ferry. Tug operates on Channels 16, 12 and 6. Tug lines optional, charge made if tugs lines used.

PILOTAGE: The port is approached by a well-defined main channel with up-to-date navigational aids. To provide information on navigation and safety the Authority operates a Port Control Service which maintains a 24 hour listening watch on VHF Channel 16 (156.8 MHz) and also operates on Channels 12 and 6.

Pilotage is compulsory in Dundee Pilotage District. Pilots board incoming vessels within a 3-mile radius seaward of Tay Fairway Buoy or as close to as weather permits. The pilot boat is only on sea station when shipping is expected and accurate ETAs are essential.

ETA should be given 6 hours before arrival either by radiotelephone link call to Dundee Port Control 24121 or by radiotelegram to "Dockyard Dundee" Dundee or by telex 76644 Dpa G. Amendments should be made up to 2 hours before the original ETA. When within VHF range (approx. 25 miles from Tay Fairway Buoy) ETAs may be confirmed by contacting "Dundee Harbour Radio" on Channel 16 and transferring to Channel 12 to pass messages.

Pilot boats, when on station, keep a listening watch on Channel 16 and transfer to Channel 6 (156.3 MHz) to pass messages.

ANCHORAGES: Pilots are instructed where to anchor vessels. There are 3 deep-water anchorages to accommodate vessels up to 28 ft. draft. Two anchorages for vessels up to 22 ft. draft, and other minor anchorages.

RESTRICTIONS: Tide and draft 28.5 ft. at MHWS. Vessels enter 2 hours before HW. 26 ft. at MHWN. Vessels enter 2 hours before HW.

MAX. SIZE: Length 600 ft./700 ft., beam 90 ft., draft 28.5 ft.

BERTHING: See "Table" below.
Deep-drafted vessels must arrive at the Fairway Buoy at least 2 hours before HW to berth on same tide.

Wharves	*Length*	*Depth MLWS*	*Cranes No.*	*Capacity*	*Type*	*Shed Accommodation*	*Other Facilities*

---

CARGO HANDLING FACILITIES: All types of general cargo are handled, including packaged timber and side-loading of forest products. Grab facilities for bulk material. 4 conveyors are arranged for grain and suitable bulk materials.

Cold Storage: Private cold storage in the vicinity of the port is accessible on application.

Containers: Container handling with ship's gear or mobile cranes and stevedores' transporters.

Cranage: Wide range of cranage, both mobile and portal, with grabbing facilities. Heavy lifts up to 100 tonnes can be arranged.

Grain Handling: Grab facilities. 5 conveyors are available.

Grain Storage: Temporary shed accommodation leased by Grainfax.

Minerals Handling: Lander hydraulic grabs. Pressure discharge of cement and barytes.

Sheds: All riverside berths are equipped with transit sheds not less than 30.5 m. wide, fronted by broad concrete aprons. Total shed area is 37,075 sq.m. Within the harbour area there is extensive storage area and warehouse facilities.

Ro/Ro Berth: At Eastern Wharf. Accepts vessels up to 25 m. beam with stern ramps up to 12.5 m. wide. Linkspan single-lane carriageway 4 m. wide. Road vehicles up to 42 tonnes. Trailer park adjacent. Also 2 Secure Trailer Parks.

STEVEDORES: One ETA to Agent or port suffices for all services.

Full stevedoring facilities are arranged by Dundee Port Authority.

MEDICAL: Advance notice required for ordinary medication for arrivals week-ends. Hospitals and casualty stations available.

TANKERS: Diameter of hoses – 10 in. Slop discharge facilities not available. One tanker berth with depth 9.5 m. at M.L.W.S. One coastal tanker berth with depth 7.0 m.

DENSITY: 1010 at MLWS. 1015 at MHWS.

FRESH WATER: Available, 24 hour service. Delivery, hose from quays. Rate, 30 t.p.h.

FUEL: Bunkering by direct pipe-line is readily available to vessels up to 300 ft. (92 m.) in length with 18 ft. (5.5 m.) draft or by road tanker to any vessel. Large quantities of any fuel type by coastal tanker, subject to 3 or 4 days' notice.

FIRE PRECAUTIONS: Regulations are handed to Master on arrival.

CONSULS:

Denmark	23044	Netherlands	23111
Finland	23111	Norway	23044
France	21252	Sweden	21061
Italy	65222		

REPAIRS: Dundee can offer fitting-out wharves and heavy lift capacity. Various local firms undertake engine and electrical repairs to vessels. Construction, repair and maintenance services for the offshore o industry are now well developed.

DRY DOCKS: None.

SURVEYORS: Lloyd's and D.O.T.

GANGWAY/DECK WATCHMEN: Recommended for large vessels.

OPENING/CLOSING HATCHES: By crew.

CERTIFICATES: As required by Department of Transport (Lifesaving Radio, Registry, Drugs, Crew Agreement, Load Line) also Derat.

CUSTOMS ALLOWANCES: Foreign-going: 25 cigarettes or 1 o tobacco per day. 8 days allowance granted. Home trade: same as fo foreign-going but only 4 days allowance granted. Spirits: quarter pint per day for 4 days, further issue granted after 4 days for foreign-going only.

REPATRIATIONS: Facilities exist.

AIRPORT: Dundee Airport: Only U.K. flights and charter flights available

TIME: British Standard Time (GMT plus 1 hour). GMT in Winter months

HOLIDAYS: 1st, 2nd and 3rd January; 2nd Monday April; 1st Monday in May; Last Monday July; 1st Monday October; Christmas Day and 26th December.
POLICE/AMBULANCE/FIRE: Tel: 999.
TELEPHONES: Quay telephones installed.
SHORE LEAVE: At the discretion of the Master.
IDENTIFICATION CARDS: Not required.
GENERAL:
Electric Power: Electric power to vessels available at repair berths.
Fire Fighting: Tayside Fire Brigade Services.
Mooring: The Authority provide boatmen's services for the mooring and unmooring of ships.
Motor Vehicle Compounds: An area of acre which can be extended.
Navigation Lights: The main estuarial approach light is the Abertay Lightfloat supported by port and starboard buoys marking the main channel as detailed in Admiralty Chart 1481.
Passenger Cruise Liners: Dundee is a port of call for passenger cruise liners at riverside berths. The city has quick access to some of Scotland's finest scenery and places of historic interest.
Policing: Effective security is provided by Tayside Police.
Ships Stores: Ship supplies are offered by a number of private firms with premises adjacent to the harbour. These include the special requirements of the offshore oil industry.
Steelyards: The port has 3 road transport weighbridges and portable weighbridges in sheds for sampling, etc.
Tidal Reference: Tide heights are related to Lowest Astronomical Tide (Admiralty Chart Datum).
Range of tides at HWN – 4 m. (12 ft.).
Range of tides at HWS – 5.2 m. (17 ft.).
REGULATIONS: Absolutely no smoking, penalty £50.
AUTHORITY: Dundee Port Authority, Harbour Chambers, Dock Street, Dundee DD1 3HW, United Kingdom. *Tel:* (0382) 24121. *Telex:* 76644 DPA G. *FAX:* (0382) 200834. *Cables:* Dockyard, Dundee. *Contact:* John J. Watson, Chief Executive. Captain G.T. Dobbie, Harbour Master/Operations Director.

DUNOON: 55.57 N. 04.55 W. (See Plan)

Priority is given to the ferry services using this pier, although other shipping may use the facility.

The wharf has two access arms to shore and an adjustable Ro/Ro link span for side loading vessels. The main berth is 150 m. long with a depth of 4.3 m. below Chart Datum. Fresh water is available. VHF Channels 16, 12 and 31 are available, call sign "Dunoon Pier".
AUTHORITY: Strathclyde Regional Council (SRC), Department of Roads, Strathclyde House, 20 India Street, Glasgow G2 4PF. *Tel:* 041-227-2475. *Contact:* D. Carruthers, Director. Piermaster, *Tel:* 0369 2652.

Strathclyde Regional Council (Roads Dept.), Manse Brae, Lochgilphead, Argyll PA31 8RD. *Tel:* 0546-2233/2882. *FAX:* 0546-2233. *Contact:* The Divisional Engineer.

FALMOUTH: 50.09 N. 05.04 W. (See Plan)

DOCUMENTS:
2 Crew's Effects Lists (C142).
1 Home Office Form IMO FAL Form 5.
2 General Declarations (C13).
Declaration of Cargo (if applicable).
1 Certificate of Deck Cargo Tonnage (if applicable).
Light Certificate if applicable.
1 Port Dues Certificate
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British ships only.
Load-line Certificate.
Safety Equipment and Construction Certificates, Radio Certificate.
Derat Certificate.
Agents to complete Health Arrival Report.

The Crew Effects Lists (C142) and the General Declarations (C13) must be delivered to the Customs Officer if boarded on arrival. If not boarded on arrival one copy of each must be delivered to the designated post box at the Customs House within 3 hours of arrival.
PILOTAGE: This is a compulsory pilotage district with certain exemptions. The Pilot will board from a boat, 3 miles South of St. Anthony's Lighthouse. Pilots maintain VHF watch on Channel 16 and can be contacted through coast stations throughout 24 hours – Call sign "Falmouth Pilot Radio"; preferred working frequency Channel 9 or Vodaphone (0836) 661668.
ANCHORAGES: Vessels in excess of 203 m. usually anchor in Falmouth Bay. Other vessels in outer harbour. Mooring Buoys available.
MAX. SIZE: See "Tankers".
HEALTH: See "Health – All ports" before first U.K. port.
VHF: Falmouth Harbour Radio (office hours) Channels 16, 14, 13 and 12.
TUGS: 4 tugs available. On call during working hours and outside of hours when required if advance notice given. Tug's lines are to be used.
BERTHING:

Name	*Length of Wharf* (m.)	*Length of Berth* (m.)	*Depth (at C.D.) Alongside* (m.)
County Wharf	204.0	160.0	8.8
Duchy Wharf	235.5	190.0	8.8
Western Wharf	342.5	342.5	6.1 – 7.3 (Cat)
Kings Jetty			
South Side	246.0	183.0	7.3
North Side	240.5	192.0	7.3
Empire Jetty			
South Side	203.5	122.0	7.3
North Side	206.0	168.0	5.5

South Side	159.0	152.0	6.4
North Side	189.5	189.5	7.3
Northern Arm			
South Side	209.5	198.0	6.1
North Side	209.5	209.5	6.1
Eastern Breakwater	291.0	150.0	8.5
		180.0	7.3
		210.0	5.3

13 deep-water berths. Combined frontage 8,000 ft. Vessels of 920 ft. have been accommodated. Draft LWOST 5.5 m. – 8.85 m. depending on berth.
CARGO HANDLING FACILITIES: 25 ton dockside crane, grab cranes and elevators. 100,000 sq.ft. warehousing and 4 acres open storage.
Cross Roads Buoy and St. Just Moorings: Max. size of vessel normally permissable on the Cross Roads Buoy, except by special arrangement with the Harbour Master: LOA: 183 m. (600.5 ft.): Draft: No limit. Anchor cable size: 77 mm. SQ (U2) steel.

Max. size of vessel on fore and aft St. Just Mooring normally permissable except by special arrangement with the Harbour Master: Length overall: 205 m. (672.5 ft.) Draft: No limit. Anchor cable size: 82 mm. SQ (U2) steel.
Caldy and Frigate Buoys: Max. size of vessel normally permissable on either of these buoys except by special arrangement with the Harbour Master: Length overall: 61 m. (200 ft.) Draft: 3.5 m. (11.5 ft.). Anchor cable size: 28 mm. SQ (U2) steel.
Offshore Exploration: Falmouth Docks and Engineering Co. operates an offshore supply base with all services and on an exclusive basis.
STEVEDORES: Falmouth Cargo Handling: Tel: (0326) 212100. Telex: 45175. Fax: (0326) 211674.
MEDICAL: Doctors and hospital facilities available. Agents should be advised in advance of any medical attention required.
TANKERS: 3 Tankers berth at Eastern Breakwater provided draft not more than 8.3 m. There is a tank-cleaning installation available. Tankers of 256 m. with draft 17 ft. forward and 23 ft. aft have been accommodated at Eastern wharf.

Coastal Tankers berth at Boyers Cellars, max. draft 4.9 m.
FUEL AND FRESH WATER: Full marine bunkers service by Falmouth Oil Services (Tel: (0326) 211333). Gas oil is available and water is piped on the Dock Company wharves. At the repair berths, or in Carrick Roads or Falmouth Bay, bunkers and water must be delivered by barge. Water by tug in Carrick Roads or Falmouth Bay.
CONSULS: Denmark, France, Germany F.R., Greece, Netherlands, Norway and Spain represented by G. C. Fox & Co.
REPAIRS: All ship repairs can be carried out by A & P Appledore (Falmouth) Ltd.
DRY DOCKS: A & P Appledore (Falmouth) Ltd. (Tel: (0326) 212100).

Total wharf space: 2,438 m. Minimum depths alongside 6.10 m. to 8.53 m. LWOST. 24 hour access.
Cranage up to 48 tons.
Services: Electricity, water, steam and air.
Gas-freeing and tank cleaning facilities.
Bunkering.

Dry Docks	*Length* (m.)	*Breadth* (m.)	*Depth on sill at HWOST* (m.)
No. 1	169	22.9	7.9
Queen Elizabeth Dock	259	39.6	11.0
No. 3	229	26.8	8.5
No. 4	198	26.2	8.2

Dry docks can accommodate vessels up to 100,000 d.w.t.

Repairs can be carried out at 13 deep-water berths and in deep-water harbour.

Engineering, fabrication and electrical services; grit blasting and high pressure water-washing. Sea-going maintenance teams.

Personnel experienced in handling all types of cargo, including explosives. Rail links to berths. Open storage, warehousing and office accommodation. Diving services. Management and secretarial services. Helicopter Pad. Security – 24 hour patrol.
GANGWAY/DECK WATCHMEN: Available in shipyard on request.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CUSTOMS ALLOWANCES: Usual U.K. allowances.
REPATRIATION: Facilities available.
AIRPORTS: London (Heathrow) one hour by air from Newquay Airport, or 4.5 hours by train from Truro.
Distances from Falmouth: Newquay – 28 miles. Bristol – 183 miles. London – 277 miles.
TIME: British Standard Time is GMT. British Summer Time – GMT plus 1 hour (Summer).
HOLIDAYS: 1st January; Good Friday (variable date); Easter Monday (variable date); Spring Bank Holiday (variable date); August Bank Holiday (variable date); Christmas Day (25th December); Boxing Day (26th December).
POLICE/AMBULANCE/FIRE: Dial 999 from any telephone and ask for service required. Or County Police, Falmouth 72231; Dock Police, Falmouth 212100; County Fire Service, Falmouth 314274; Docks Fire Service, Falmouth 212100; Ambulance, Truro 978181.

EMERGENCY CO-ORDINATION CENTRE: Coastguard MRCC, dial 999 or Falmouth 317575 or VHF Channel 16 – Falmouth Coastguard.
TELEPHONES: Can be placed on board in dry dock and most repair berths but not at Eastern Oil Wharf.
SERVICES: *Storing:* Storing by sea or alongside and no restrictions on vehicle access at most berths.
Tank Cleaning: Full tank cleaning service and slops receipt service available on the Eastern Jetty.
SHORE LEAVE: Granted.
AUTHORITY: Port of Falmouth, Falmouth Harbour Commissioners, 44 Arwenack Street, Falmouth TR11 3JQ. *Tel:* (0326) 211376. *FAX:* (0326) 211352. *Telex:* 45349 Falhar G. *Contact:* Captain D. G. Banks, Chief Executive and Harbour Master.

FELIXSTOWE: 51.57 N. 01.21 E. (See Plan)

DOCUMENTS:
Stores List.
Crew List.
Health Declaration.
Manifests.
Bills of Lading.
Ship's papers, including Register, Load Line Certificate, Safety Equipment Certificate, Radio Certificate, U.K. Light Dues, if any.

PILOTAGE: PROCEDURE AND INFORMATION ON ETAs/ETDs FOR SHIPS REQUIRING THE SERVICES OF AN AUTHORISED PILOT:
Arrival Notification: Ships bound for the Haven Ports of Harwich, Felixstowe, Ipswich and Mistley and requiring a Pilot, shall notify Harwich Operations Control, 8 hours in advance, giving the ETA at the Harwich Approach Buoy (Lat. 51° 56.4′ N., Long. 01° 31.2′ E.), gross tonnage, maximum draft, departure port and destination port.

Confirmation of ETA should be given at least 3 hours before arrival at Harwich Approach Buoy.

Failure to provide the ETA and subsequent confirmation could result in delay to the ship.

In the case of a ship engaged in the short sea trade, the initial ETA may be passed at the time of leaving the last port of call, if passage time is less than 8 hours.

A ship having complied with the above conditions and then having anchored before embarking a Pilot must give Harwich Operations Control adequate notice of requiring the services of a Pilot. Failure to give such notice could result in delay to the ship.

Requests from inward-bound ships for the services of a Pilot for the Rivers Blackwater, Colne, Crouch or Roach may also be passed though Harwich Operations Control.
Departure Notification: Outward-bound ships, or ships moving within the compulsory Area, which require the services of a Pilot, shall give at least 2 hours' notice of their Estimated Time of Departure.
Boarding and Landing Arrangements: The pilot boarding point for inward bound ships will be within the voluntary pilotage area, (see below), such that the Pilot is boarded in good time before entering the Compulsory Area.

The boarding position will be agreed with Harwich Operations Control, having due regard to the size and draft of the ship and the prevailing circumstances.

The normal boarding point will be in the vicinity of the Harwich Approach Buoy, but deep-draft ships may, by arrangement, board their pilots near the Sunk Light Vessel or the Mid-Bawdsey Buoy, depending on their point of entry into the Compulsory Area.

Boarding and landing will take place from pilot launches operating from Harwich Harbour. The launches will have the word "HAVEN PILOTS" on the side of the wheelhouse, fly the pilot flag by day and, at night, exhibit lights and signals in accordance with Rule 29 of the International Regulations for Preventing Collisions at Sea.

If the pilot launch is unable to operate in the normal locations due to stress of weather, or other unforeseen circumstances, alternative arrangements will be advised by Harwich Operations Control.
GEOGRAPHICAL LIMITS OF THE HAVEN PORTS PILOTAGE AREA (THE COMPULSORY AREA):
The area bounded by the following limits:
(a) As much of the River Orwell as lies below Ipswich Dock.
(b) As far up the River Stour as the tide flows.
(c) To seaward of Landguard Point, the area bounded as follows:
  (i) In an Easterly direction as far as 01° 24′ E.
  (ii) In a Southerly direction as far as 51° 54.5′ N.
  (iii) In a Northerly direction as far as 51° 57.4′ N.

Voluntary Pilotage: The Board will provide pilotage upon request in the area to seaward of the compulsory Area as far as a line drawn between the following points:
(a) Bawdsey Cliff – Lat. 52° 00′ N., Long. 01° 26′ E.
(b) Lat. 52° 00′ N., Long. 01° 41′ E.
(c) Lat. 51° 49′ N., Long. 01° 41′ E.
(d) Lat. 51° 49′ N., Long. 01° 15′ E.

ANCHORAGES: For vessels needing to anchor at the Sunk to await Pilot or berthing:
(i) Recommended Deep Water Anchorage approximately 2.5 miles East of Sunk Light Vessel.
(ii) King's Channel Anchorage approximately 3 miles S.W. of Light Vessel.

For vessels proceeding via Cork:
(i) Recommended Deep Water Anchorage at the Bawdsey Anchorage.
(ii) The Cork Anchorage North of the Harwich Channel Approaches.

Inside Harwich Harbour are the:
(i) Inner Anchorage, South of the Pitching Ground Buoy.
(ii) For small vessels, the Shelf and River Stour Anchorages.

Information on all these anchorages is available from Harwich Harbour Radio VHF Channel 71. See "Radar/VHF" – "Harbour Operations Service".

APPROACHES: Traffic Regulatory Systems in effect. Details of current harbour Bye-laws and General Directions for navigation available. See "Radar/VHF" – "Harbour Operations Service".

RESTRICTIONS: Approach Channel dredged to 11.0 m. (below Chart Datum). Deepest water alongside is 13.4 m. (C.D.) at Trinity Container Terminal. At least 0.3 m. keel clearance (except Landguard which is 0.5 m.) required at all times between channel bed and keel of vessel.

MAX. SIZE: General cargo vessels: Dock Basin 44.2 m. wide entrance. Depth 6.4 m. (C.D.). No lock gates. Suitable vessels able to leave on any state of tide.
North Quay: 195 m. in length.
South Quay: 186 m. in length.
East Quay: 131 m. in length.

Container Vessels: Landguard Container Terminal, depth 11.9 m. (C.D.) for 280 m. of quay, 9.75 m. (C.D.) for remainder. At Dooley Container Terminal, depth 11.6 m. (C.D.). Walton Container Terminal, depth 11.9 m. (C.D.). Trinity Terminal to the North of Walton Container Terminal, depth of 13.4 m. (C.D.).

Ro/Ro vessels Ferry Terminal: Ro/Ro Bridge No. 1: Vessels up to 184.6 m. overall, depth 7.3 m. (C.D.). Ro/Ro Bridge No. 2: Vessels up to 151.0 m. length, depth 7.3 m. (C.D.) Ro/Ro Bridge No. 3: Vessels up to 137.2 m. length, depth 7.3 m. (C.D.). Ro/Ro Bridge No. 4: Depth 9.75 m. (C.D.). Vessels up to 213 m. overall.

Tanker Jetty: Vessels 180 m. overall, depth 9.7 m. (C.D.).

All berths subject to siltation between maintenance dredging periods.

HEALTH: Pratique flag in daylight and lighted signals in darkness to be displayed by vessel on arrival. Health Declaration to be given in writing or verbally by Master on arrival. If disease suspected, then report to pilot station who will advise Health Authorities.

Also see "Health – All ports" before first U.K. port.

RADIO: North Foreland, Humber, Niton (or any other radio station convenient to vessel's position).

RADAR/VHF: *Harbour Operations Service:* An Operations Service is operated by the Harwich Haven Authority Pilots, and is provided from the Harbour Master's Office, Navigation House, Harwich on a 24-hour basis to provide all vessels using the harbour with navigational information and advice. The following facilities are available:

VHF Radio:	Channel 16	Safety.
	Channel 9	Pilotage and ETAs.
	Channel 71	VTS and Reporting.
	Channel 6	Pilot Launches.
	Channel 69	Tugs.
	Channel 20	Harwich Radar Assistance.
	Channel 11	Harbour Craft.
Telephone:	0255 243000	Harbour Operations.
	0255 243111	Pilot Orders.
Telex:	98472 HAROPS G.	
Fax:	0255 241325	

Dangerous substances in Harbour Areas notifications should be sent by telex or fax 24 hours prior to arrival or at time of leaving last port.

The centre is equipped with comprehensive radio and telecommunications, advanced radar surveillance displays, VHF and direction finding equipment, electronic tide gauges, and wind instruments, to provide full and up to date navigational information to seafarers.

All vessels over 50 gross tons must carry suitable VHF R/T equipment, capable of communicating with the Harwich Harbour Operations Service (call sign "Harwich Harbour Radio") and must maintain a listening watch on Channel 71 (156.575 MHz) while navigating within the harbour and approaches. Vessels entering or leaving the harbour must contact the Operations Service for permission to navigate through the area, in accordance with the procedures laid down in current Harwich Harbour General Directions for Navigation.

Traffic regulatory procedures exist with respect to the Harwich Deep Water Channel and within other areas of the harbour, depending on circumstances. The Harbour Operations Service will keep vessels suitably advised.

TUGS: Up to 5 tugs (Up to 40 tons bollard pull) and 1 reserve tug join vessels in Harwich Approaches, or where ordered by Pilot. Tugs listen on Channel 16 and Channel 71 (24 hours). Main tug working Channel when engaged in towing is Channel 69.

In addition 3 dock tugs up to 11 tons bollard pull are available. Contact on Channel 71 or via Harbour Operations.

BERTHING: All berthing information available through Harbour Operations via Harwich Harbour Radio, who have direct links to Berthing Master's Office at the Port of Felixstowe.

STEVEDORES: 24 hours notice required by Agent to advise stevedores of vessel's ETA, in order to arrange berthing and allocation of labour. All stevedoring arranged between Dock Company and vessel's Agent.

MEDICAL: Prior notice desirable through Agent to arrange attention. All services available.

CONTAINER TERMINALS:

	Depth of Water at C.D.	*Quay Length in metres (ft.)*	*Quayside Cranes*	*Park Gantry Cranes*	*Forklift Trucks*	*Towing Units*	*Port Trailers*	*Remarks*
Landguard Container Terminal	11.9 m. for 280 m. of quay and 9.7 m. for remainder (dredged annually)	469.4 (1,540) 3 container berths	3×40 ton and 2×30 ton capacity cranes.	8 Paceco Transtainer cranes with a 35 ton capacity. (Rubber tyred with automatic lifting frame for containers.)	97 forklifts with a capacity of up to 40 tons, including 17 Short Mast Trucks, 49 paper clamp attachments. 12 pallet trucks, with a capacity of up to 2 tons.	112 elevating fifth wheel tug units.	338 fifth wheel trailers with a capacity of up to 50 tons.	This equipment also in the Dock Basin and Northern Roll-on/Roll-off Terminals.
Dooley Container Terminal	11.6 m. (dredged annually)	244 m. (800 ft.) container quay	2 container cranes with 40 ton capacity	5 Paceco Transtainer cranes with a 35 ton capacity. (Rubber tyred with automatic lifting frame for containers).				
Walton Container Terminal	11.9 m. (dredged annually)	305 m. (1,000 ft.) container quay	3 container cranes with 40 ton capacity	7 Paceco Transtainer cranes with a 35 ton capacity. (Rubber tyred with automatic lifting frame for containers).		16 elevating fifth wheel tug units.	24 fifth wheel trailers with a capacity of up to 50 tons.	
Trinity Container Terminal	13.4 m.	550 m.	7×40 tonne container cranes.	26×35 ton rubber tyred gantries.				

Rail Facilities: All berths are served by rail including 2 Freightliner Terminals, 1 of which serves the Landguard Container Terminal, the second the Walton, Dooley and Trinity Container Terminals.

CARGO HANDLING FACILITIES: *General Cargo Division:* Mobile pneumatic grain discharger, discharge rate 30 t.p.h. into silo with capacity of 3,500 tons.

Mobile cranes, capacity 27.5 tons. Scotch derrick crane, capacity 32 tons at 90 ft. radius.

Roll-on/Roll-off Division: No. 1 Berth: P & O European Ferries Terminal. Upper and Lower deck loading ramps. Electric travelling crane, capacity 32 tons at 110 ft., depth 23.3 ft.

No. 2 Berth: P & O European Ferries Terminal: One hydraulic loading ramp designed to carry loads up to 140 tons. Upper loading ramp designed to carry loads up to 32 tons. Least depth 25.3 ft. LWOST.

No. 3 Berth: Hydraulic loading ramp designed to carry two lanes of traffic with loads up to 140 tons. Electric travelling crane with capacity of 35 tons at 95 ft. radius, least depth 25.3 ft.

No. 4 Berth: Allows a combination of Roll-on/Roll-off and container vessels to be accommodated. The hydraulic loading ramp is designed to carry two lanes of traffic with loads of up to 140 tons.

TANKERS: 4 in. and 6 in. connections. No slop facilities, except as required by MARPOL Regulations. No facilities for gas freeing alongside or in harbour.

One tanker berth available. Vessels up to 183 m. overall, 25,000 d.w.t. and max. draft 9.1 m. at C.D.

DENSITY: 1025 salt water.

FRESH WATER: Pipe-line connections to all quays. Delivery approx. 20 t.p.h. Barge service available for supplies to vessels at anchor.

FUEL: Marine diesel and gas oil available, pipe-line and barge delivery. 24 hours notice required.

FIRE PRECAUTIONS: Standard precautions at all berths.

CONSULS: Royal Norwegian Vice-Consul Ipswich (9) 59281; Royal Swedish Vice-Consul Felixstowe 278844; Icelandic Vice-Consul Felixstowe 285651/4; Netherlands and Germany F.R. Harwich 6666.

REPAIRS: Facilities exist for small repairs only.

DRY DOCKS: None available.

GANGWAY/DECK WATCHMEN: Not compulsory. If required, cost negotiable.

OPENING/CLOSING HATCHES: Work undertaken by crew.

CERTIFICATES:

Valid Derrick and Rigging Certificates.
Ship's Register.
Load Line.
Safety Equipment.
Radio.
Derat.
Construction.
(Light Dues Receipts).

CUSTOMS ALLOWANCES: 100 cigarettes or equivalent in tobacco or cigars per man. 1 bottle spirits.

REPATRIATION: All facilities available.

AIRPORTS: Ipswich – 10 miles; Southend – 70 miles; Heathrow – 90 miles. International flights.

Air UK flights from Norwich to Aberdeen, Amsterdam, Bergen, Edinburgh, Humberside, Leeds/Bradford and Teesside. Internal and continental flights from Ipswich.

TIME: GMT. In Summer months, April to October, time advanced 1 hour.

HOLIDAYS: All normal Bank Holidays, but official notification of port closures for such holidays is given well in advance of relevant dates.

POLICE/FIRE/AMBULANCE: Emergency points on all quays. Tel. 4300 or, outside dock area, 999.

TELEPHONES: Shore connections available by prior arrangement for vessels on regular trades.

SERVICES: Most services available for dry cargo vessels, but no special tank cleaning or tank washing facilities for tankers.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Not necessary if in possession of Seaman's Book or Passport.

GENERAL: ETA to Agent required 72 hours, 48 hours, and 24 hours prior arrival.

AUTHORITY: Felixstowe Dock & Railway Co.. European House, The Dock, Felixstowe, Suffolk IP11 8TB. *Tel:* Felixstowe (0394) 604500. *Cables:* Dock, Felixstowe. *Telex:* 98277 or 98535 (Operations). *Contact:* R. O. Guille, Chairman/Managing Director. M. M. Begg, Operations Director. Captain J. M. Bubb, Portmaster.

FISHGUARD: 52.01 N. 04.58 W. (See Plan)

DOCUMENTS: See "Cardiff".

PILOTAGE: Local Pilot available on request. Pilotage compulsory.

ANCHORAGES: Eastward of a line joining Northern and Eastern breakwaters.

MAX. SIZE: Max. draft 18 ft.

HEALTH: See "Health – All ports" before first U.K. port.

RADIO/VHF: Fishguard Radio, VHF Channel 16 and 14.

TUGS: None.

FACILITIES: Stern loading, car and Roll-on/Roll-off Ferry Port. Also Lift-on/Lift-off crane of 22 tons.

CRANES: 1×6 tons and 1×22 tons.

STEVEDORES: No stevedores – vessels worked by Sealink British Ferries staff.

MEDICAL: Doctors available. Hospital facilities 16 miles away.

DENSITY: 1025.

FRESH WATER: Available alongside quay.

FUEL: Available with prior warning.

GANGWAY/DECK WATCHMEN: Ship's crew.

OPENING/CLOSING HATCHES: Crew.

REPAIRS: Minor repairs by Sealink workshops and contractors.

SURVEYORS:

1. Cargo Surveyor: Captain D. Hughes, tel: Fishguard 873880.
2. Lloyd's Surveyor: Tel: Milford Haven (06462) 4811.

CUSTOMS ALLOWANCES: (Crew allowance) 40 cigarettes. No wine or spirits unless proceeding on leave.

AIRPORT: Cardiff, Swansea and Haverfordwest.

POLICE/FIRE/AMBULANCE: Dial 999. British Rail police and Sealink Port Supervisor on duty 24 hours.

EMERGENCY CO-ORDINATION CENTRE: Coastguard – Tel: Dale 218.

BANKS: Barclays Bank, The Square, Fishguard, Dyfed. Tel: Fishguard 873226. No telex.

Midland Bank, West Street, Fishguard, Dyfed. Tel: Fishguard 872232. No telex.

Lloyds Bank, West Street, Fishguard, Dyfed. Tel: Fishguard 872309. No telex.

STORING: See "Prelims".

1. Vessel can be stored by barge or truck, limited space of approximately 15 ft. width available for trucks.
2. Loading of stores can be carried out from barge with ships equipment.
3. Trucks of limited size can proceed alongside berth.
4. Fork lifts can be used to handle stores.
5. Prior notification to local customs,
6. Sealink can assist with stores if given prior notification.

SHORE LEAVE: Allowed.

AUTHORITY: Sealink UK Ltd., Fishguard Harbour, Dyfed, SA64 0BU, South Wales. *Tel:* Fishguard (0348) 872881. *Telex:* 48167. *FAX:* (0348) 872229. *Contact:* C.B.Fenemore, General Manager. S.F.Buhlman, Ship Manager. M.J.Connellan, Port Manager.

FLEETWOOD: 53.55 N. 03.00 W. (See Plan)

LOCATION: The Port of Fleetwood is situated on the Lancashire coast approximately 38 km. (24 miles) North West of Preston and 42 km. (26 miles) South West of Lancaster.

DOCUMENTS:
Manifests.
Bills of Lading.
Ship's papers.
Crew Lists.
Customs Documents.
Health Documents.

PILOTAGE: Pilot to be picked up off No. 1 Fairway Buoy. Ordered through ship's Agent giving 24 hours notice of ETA.

ANCHORAGES: Good anchorage in outer limits of harbour in Lune Deeps in 14 fathoms.

RESTRICTIONS: Vessels under power must not navigate any portion of this harbour above Buoy No. 11 at a greater rate of speed than is necessary to navigate safely, also on passing other vessels, either steam or sail, hopper barges, pontoons in tow, etc., in the channels outside the above mentioned Buoy No. 11 and within harbour limits due care must be taken to pass them at a rate of speed that will not cause risk from displacement or what is commonly called "backwash", and that all vessels must be navigated in this harbour strictly in conformity with Rule 9 (Narrow channels) contained in the Collision Regulations for Preventing Collisions at Sea, 1972.

Vessels bound into Fleetwood must not enter the river without being sure they have sufficient depth of water to ensure their getting to the quays or piers to which they are bound.

In the event of any vessel grounding on the "Tiger's Tail" or in any other part of the Fleetwood Harbour, the Master shall not attempt to refloat the vessel by reversing the engines, or by any other means whatsoever, until all incoming vessels following have passed the stranded vessel and the channel is clear of shipping.

Locks are normally open from 2 hours before HW to 1 hour after HW.

MAX. SIZE: (Within enclosed docks): 107 m. LOA: 14.1 m. beam.

So far as draft is concerned, allowances have to be made for clearing the lock invert. These allowances vary according to the beam of the ship and the following scale may be taken as a guide:

Beam of Vessel (m.)	*Clearance Required* (m.)
11.28	0.69
13.41	1.22
14.02	2.21
14.17 maximum	3.12

HEALTH: See "Health – All ports" before first U.K. port.

RADIO: VHF Port Operations and Information Service. Call sign: Fleetwood Harbour Radio Channel 16 (156.80 MHz): Calling and Safety. Channels 11 and 12: Port Operations.

All movements of vessels arriving for and sailing from the Harbour and Docks are controlled by the Harbour Master using the VHF Port Operations and Information Service located in the Harbour Master's Office on the West side of Fleetwood Harbour. (Lat. 53° 55′ 30″ N., Long 3° 00′ 12″ W.). This service is operated for the 24 hour period, and vessels must maintain a listening watch when approaching or leaving the Port. Messages must be restricted to matters appertaining to general navigation, berthing instructions and the safety of ships or persons within the Port Area. Messages of any other nature will not be accepted.

TUGS: Tug service available.

BERTHING: Under normal conditions the lock gates operate for 2 hours before to one hour after HW.

There is a Roll-on/Roll-off berth in the harbour. This is a twice daily service to Larne for wheeled vehicles and trailer loads and a daily service to Warrenpoint.

Dock	*Quay Length (Total)* (m.)	*Depth of Water (Absolute Min.)* (m.)	*Max. Size of Vessel Length* (m.)	*Beam* (m.)	*Draft* (m.)	*Approx. d.w.t.*
Wyre Dock	823	5.5	107	14.1	5.5	3,500
Fish Dock	800	5.5	107	14.1	5.5	3,500
Harbour/	To suit vessel					
Ro-Ro Berth	150	4.5	152	20.3	4.2	5,000
Isle of Man Berth	91	As required	107	—	4.2	—

Storage and Warehousing Facilities: One covered transit shed totalling 720 sq.m. (8,000 sq.ft.) is located on the Wyre Dock quayside. Ample open storage space is available within the docks estate.

Fish Dock: Modern facilities for fish handling, marketing and processing are available operated by Fish Handling (Fleetwood) Ltd. and a large number of wholesale fish merchants.

Ro-Ro Berths: Separate berths handling Irish Sea and Isle of Man freight and passenger ferry services are located within the port. Ample land is available for development of Ro-Ro business.

Offshore Supply Facilities: The port has been used as a supply base for oil exploration in the Irish Sea and facilities for offshore operations include a helicopter pad.

MEDICAL: Ship's Agent will organise medical attention if required.

DENSITY: 1015 at half tide; 1025 at high water.

FRESH WATER: Fresh water available through stand pipes. Charge according to consumption (sliding scale).

FUEL: All grades of fuel available.

FIRE PRECAUTIONS: No specific requirement outside usual "No smoking" precautions.

GANGWAY/DECK WATCHMEN: Ship's watchmen required.

OPENING/CLOSING HATCHES: Normally carried out by crew.

REPAIRS: 2 slipways located in Fish Dock with lifting capacities of 1,050 tons and 50 tons respectively.

REPATRIATION: Arranged through ship's Agent.

AIRPORT: Squires Gate, Blackpool, 10 miles away.

TIME: GMT in Winter. GMT plus 1 hour in Summer months.

HOLIDAYS: Christmas Day and Boxing Day; New Years Day; Goo Friday and Easter Monday; Spring Bank Holiday; May 1st; Autumn Ban Holiday.

POLICE/AMBULANCE/FIRE: Police 999; Ambulance 999; Fire 999.

TELEPHONES: Can be arranged through Post Office.

SERVICES: Compass adjusting.

SHORE LEAVE: Crew members are allowed ashore.

AUTHORITY: Associated British Ports – Fleetwood, Dock Office, Wyr Dock, Fleetwood, Lancs. FY7 6PP. *Tel:* (03917) 2323/6. *Telex:* 67729 *FAX:* (03917) 77549. *Contact:* N. Pounder, Port Manager. Captain P.L Sherry, Pilot/Harbour Master.

FOSDYKE BRIDGE: 52.52 N. 00.02 W.

PILOTAGE: A joint service for the two ports is provided in conjunctio with the Port of Boston Authority. Tel: 0205-362114. VHF Channels 1 and 12.

APPROACHES: Common approach channel shared with Port o Boston.

MAX. SIZE: Spring tides: Draft up to 5.0 m.; LOA 58 m. (exceptional *with prior approval* 59 m. – 60 m.).

Lowest Neap tides: Draft 2.8 m.; LOA 50 m. – 52 m.

VHF: Fosdyke Port Radio operates on Channel 14. A listening watch i maintained during shipping movements on the River Welland.

TUGS: Service operated by wharfingers.

BERTHING: Private wharf 69.50 m. long giving 2 berths alongside situated on North bank of river, operated by Port of Fosdyke Ltd.

FRESH WATER: Available.

AUTHORITY: Port of Fosdyke Ltd., Fosdyke Bridge, Boston, Lincs PE20 2DB. *Tel:* Fosdyke (0205-85) 240. *Telex:* 37208. *FAX:* 0205 85400. *Contact:* Port Manager/Assistant Harbour Master.

AGENT: Welland Ships' Agents, Fosdyke Bridge, Fosdyke, Boston Lincs. PE20 2DB. Tel: (0205-85) 240. Telex: 37208. Fax: 0205-8540 Contact: R. A. Waterfield, Manager. Tel: 0945-583181 (Home).

FOWEY: 50.20 N. 04.39 W. (See Plan

PORT LIMITS: The whole of the Fowey River to a line across th entrance to the harbour. A vessel is considered to have arrived o entering the harbour unless she is anchored just outside by the Pilot t await suitable conditions for entering, in which case she is considere to have arrived on being so anchored.

DOCUMENTS:
Crew and Passenger Lists are essential, using IMO forms.
Aliens List is essential.
List of Bonded Stores, including beer.
List of Personal Dutiable Articles owned by Crew.
Bill of Health, if available.
Derat Certificate.
Manifest of all cargo on board.
Copies of Bills of Lading.
Stowage plan, if available.
Normal Ship's Papers.

PILOTAGE: Compulsory within the harbour limits. Vessel requiring Pi gives ETA as far in advance as possible to Agent. Vessel displa normal signals off port. VHF calling Channel 16, working Channel Pilot cutter (LOA 55 ft.) has a black hull and orange upperworks. Th Pilot boards off entrance. Vessels can anchor South of entrance i necessary.

Pilots VHF station open for messages from arriving ships up to 2 hou before time of ETA received by Agent.

RESTRICTIONS: Vessels can enter at any time, if their draft is les than 18 ft. Otherwise according to tide. Depth of ship channel at LWOS – 22 ft.

MAX. SIZE: LOA 540 ft., beam 60 ft. Loaded draft of 28 ft. Vessels o this draft have to be handled at or near high water.

Vessels up to 540 ft. in length are handled, but subject to pri consultation with the Harbour Master and owners of the loading berth

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Land's End Radio, Niton, or Portishead.

VHF: For arriving vessels see "Pilotage".

Fowey Harbour Commissioners "Fowey Harbour Radio" calli Channel 16, working Channel 12, ECC Ports Ltd., loading berth operators, "Fowey Port Radio", calling Channel 16, working Channel 1

TUGS: Three diesel tugs are available and normally join vessels o entering entrance. Ship's lines usually used. No tug required for vesse under 90 m. in length under normal conditions. Only 1 tug required f vessels under 100 m. length. Two tugs required for vessels over 100 m length. Harbour Master may require particular vessels to enter with tu assistance.

BERTHING: Vessels waiting for berths are normally moored, using th own anchor with their stern to a buoy. On the berth, vessels require lo ropes.

Berth	*Max. LOA (approx.)* (m.)	*Depth of Water at LWOST* (m.)
Jetty No. 3	110	7.0
Jetty No. 4	120	7.3
Jetty No. 5/6	170	6.7
Jetty No. 8	140	8.5

CARGO FACILITIES: The port is specially equipped to handle china clay and ball clay in bulk and to a limited extent in bags. Occasional cargoes of timber are handled. Discharge is by mobile crane. There are 5 berths. Berth No. 4 has a bulk conveyor capable of handling up to about 330 t.p.h., Berth No. 6 up to 500 t.p.h. and Berth No. 8 up to 1,000 t.p.h. Berth No. 3 for liquid slurry coal only. 6 tonne and 3 tonne mobile cranes are available.
STEVEDORES: Earliest ETA possible is required, especially when a vessel arrives over week-end.
MEDICAL: If Medical Officer is required on arrival, advise Agent earliest opportunity. Hospital facilities are available.
DENSITY: River fully salt at all states of the tide.
FRESH WATER: Available at all jetties, delivered by hose and rate very variable.
FUEL: Gas oil only available by Shell bunker barge or by road. As much notice as possible is advisable.
CONSULS:
Finland J. A. Samuel, c/o S.C.U.K. Ltd., Fowey. Tel. 072683–3161
France J. A. Samuel, c/o S.C.U.K. Ltd., Fowey. Tel. 072683–3161
Denmark J. A. Samuel, c/o S.C.U.K. Ltd., Fowey. Tel. 072683–3161
Netherland J. A. Samuel, c/o S.C.U.K. Ltd., Fowey. Tel. 072683–3161
REPAIRS: Fowey Harbour Commissioners have repair facilities for minor repairs and welding.
SURVEYORS: West Marine Surveyors & Consultants Ltd., Consulting Marine Surveyors, Engineers & Naval Architects, The Old Custom House, Brixham, South Devon. Tel: Brixham (080 45) 2604. After normal office hours: Tel: 0803 842925. Cables: Surveyor, Brixham. Telex: 42962 Survey G.
GANGWAY/DECK WATCHMEN: Not normally employed.
OPENING/CLOSING HATCHES: Carried out by crew.
CUSTOMS ALLOWANCES: 200 cigarettes *or* 100 cigarillos *or* 50 cigars or 250 grams tobacco. Drink over 22% alcohol 0.5 litre *or* under 22% alcohol 1 litre *or* 1 litre fortified sparkling wine. 2 litres still wine. 50 grams perfume. 0.25 litre toilet water. Half this allowance for vessels arriving from home trade ports which for this purpose is from Elbe/Brest range of ports.
REPATRIATION: Facilities exist.
HOLIDAYS: Saturdays, Sundays, and all Public Holidays.
POLICE/AMBULANCE/FIRE: Telephone 999 or VHF Channel 16.
TELEPHONES: No arrangements made for connection on board.
SERVICES: Compass adjusting can be arranged.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not needed.
DELAYS: There is a possibility of delay in heavy rain.
AUTHORITY: Fowey Harbour Commissioners, Albert Quay, Fowey, Cornwall PL23 1AJ. *Tel:* (072683) 2471/2. *FAX:* (072683) 3738. *Contact:* Captain M. J. Sutherland, Chief Executive and Harbour Master. Captain A. E. Woollam, Assistant Harbour Master.

GARSTON: 53.21 N. 02.54 W. (See Plan)

LOCATION: On the North bank of the River Mersey, 6 miles from Liverpool city centre.
DOCUMENTS, HEALTH: and all general information, refer to "Liverpool".
RESTRICTIONS: Locking into/out of Garston commences 3 hours before HW and ceases 3 hours after for vessels of 250 ft. in length or under. Vessels over this length must enter when the river and dock are level – about 1 hour before HW to half an hour after.
MAX. SIZE: Length 500 ft., beam 63 ft., draft 27 ft.
RADIO: As Liverpool.
VHF: Stalbridge Pierhead is linked to the Mersey Docks & Harbour Co. Port Operation Radio/Telephone system. Docking and berthing instructions may be obtained through Channel 20 (call sign "Garston Docks"). Information will also be conveyed through these Channels or through Anglesey Radio on MF R/T.
BERTHING:

Dock	*Quay Length (Total) (m.)*	*Maximum Size of Vessel*			
		Length (m.)	*Beam (m.)*	*Approx Draft (m.)*	*d.w.t.*
Stalbridge Dock	975	152	19.2	8.3	10,000
Old & North Docks	1,405	Old 152	19.2	5.5	5,000
		North 122	19.2	5.5	5,000

Storage and Warehousing: Garston provides a covered transit shed 32,614 sq.ft. (3,031 sq.m.) in area, located on the North Dock and a warehouse 5,005 sq.ft. (465 sq.m.) at Stalbridge Dock. Also see "Developments".
Dock Facilities:
Stalbridge Dock:

	No.	*Capacity*
Cranes	1 (Scotch Derrick)	32 tonnes
	2	10 tonnes
	2	7.5 tonnes
	2	6 tonnes

Two belt loading coal shipping appliances loading capacity 500 tonnes per hour.
High capacity fork and clamp lift trucks available.
Old & North Docks:

	No.	*Capacity*
Cranes	1 (Scotch Derrick)	32 tonnes
	2	7.5 tonnes
	2	6 tonnes

CONTAINER FACILITIES: North Dock Container Berth in operation, equipped with 2×35 tonne transporter cranes and back-up facilities.
STEVEDORES: *Port Working Hours:* Monday – Thursday: 0800 – 1700. Friday 0800 – 1600 (overtime by arrangement). Saturday and Sunday 0800 – 1700 by arrangement through port stevedoring companies.
Conventional Cargoes:
(a) Garston Port Stevedores Ltd.,
Dock Road, Garston, Liverpool.
Telephone: 051 427 3835
Fax: 051 427 8110
(b) Mersey Stevedores Ltd.,
Johnsons Lane, Widnes, Cheshire.
Telephone: 051 495 1040
Fax: 051 495 1044
Telex: 628370
(c) North West Stevedores Ltd.,
26-30 South Road, Weston Point, Runcorn, Cheshire.
Telephone: 0928 575926
Fax: 0928 568150
Telex: 629201/627400
Container Cargoes:
(d) Coastal Containers Ltd.
Telephone: 051 427 7082
DENSITY: 1025.
FRESH WATER: Available Monday to Friday 0800 to 1600 hrs. All watering required outside of these hours is by arrangement and must be paid for at overtime rates. Rate of delivery, 10 t.p.h.
OPENING/CLOSING HATCHES: Hatches to be opened and closed by the crew except on request.
AIRPORT: Liverpool Airport, 1 mile distant.
HOLIDAYS: Normal English Bank Holidays. Vessels can be worked on these days but this involves additional payment.
POLICE/FIRE/AMBULANCE: Dial 999 and ask for service required.
TELEPHONES: No connection can be made to vessels. Shore base facilities.
DEVELOPMENTS: Provision of additional covered storage facility at New Dock Road (866 sq.m.) plus a timber storage area (open air).
AUTHORITY: Associated British Ports – Garston, Port Office, Dock Road, Garston, Liverpool L19 2JW. *Tel:* (051-427) 5971. *Telex:* 628706. *FAX:* (051–427) 5971, Ext. 246. *Contact:* A. Winfield, Port Manager.

GIRVAN: 55.15 N. 04.51 W. (See Plan)

DOCUMENTS: Normal U.K. documentation. H.M. Customs attendance obtained by contacting Harbour Master.
PILOTAGE: By local fishermen only – contact Harbour Master.
ANCHORAGES: To seaward clear of channel approaches. This area is hazardous in gales, particularly from the N.W.
RESTRICTIONS: Draft occasionally restricted at MLWS due to siltation. Harbour Master will advise on water depths available.
MAX. SIZE: LOA 50 m., beam 9 m., draft 3.5 m. Vessels with max. draft will only be moved at or near HW.
HEALTH: Under H.M. Customs control.
RADIO: ETA messages, etc. via Portpatrick Radio Station, Call on 2182 kHz – VHF Channel 16 (British ships may call on 2381 kHz but listen on 1792 kHz).
VHF: Harbour VHF ship to shore available 0900 – 1700 hrs. daily, Monday to Friday inclusive. Calling: Channel 16; Working: Channel 12.
TUGS: None.
BERTHING: South Pier Quay: 107 m. long, depth 2.1 m. MLWS.
Ailsa Berth: 49 m. long, depth 2.2 m. MLWS.
Fish Wharf: 42 m. long, depth 2.1 m. MLWS.
Fish Quay: 62 m. long, depth 2.2 m. MLWS.
Note: Fish Wharf and Fish Quay used only for fishing vessels.
CRANES: No port cranes available. Mobile cranes can be hired from local companies.
MEDICAL: Small local hospital, contact Harbour Master for assistance.
DENSITY: Water brackish, being sea water with fresh water river discharge.
FRESH WATER: Available.
FUEL: Diesel fuel only.
FIRE PRECAUTIONS: Normal safety procedures.
CONSULS: None, nearest at Glasgow.
REPAIRS: Small engine and deck gear repairs may be carried out alongside.
DRY DOCKS: None. 2 slipways, max. length of vessel which can be slipped, 21 m. – 33 m. overall.
SURVEYORS: Not available.
GANGWAY/DECK WATCHMEN: None. If desired would have to come from ship's crew.
HATCHES: Worked by crews.
CUSTOMS ALLOWANCES: Apply to H.M. Customs Officers.
CARGO GEAR: Hire-in mobile cranes or ship's own gear.
REPATRIATION: No arrangements.
AIRPORT: Prestwick, distance 38.4 km. North Atlantic services only. Glasgow, distance 91 km. Internal U.K./Europe/Scandinavian services.
TIME: Winter – GMT. Summer – March to October, British Summer Time i.e. 1 hour ahead of GMT (dates as announced).
HOLIDAYS: Cargo working unlikely on Christmas Day and New Year's Day.
POLICE/FIRE/AMBULANCE: In emergency dial 999 otherwise telephone numbers are: Police: Girvan (0465) 3587. Fire: Ayr (0292) 267471. Ambulance: Girvan (0465) 2571.
EMERGENCY CO-ORDINATION CENTRE: Marine Rescue Co-ordination Centre, (H.M. Coastguard), Greenock. Tel: Greenock (0475) 29014 or 29988. Telex: 777006.
TELEPHONES: No ship links.

SERVICES: No special services available locally. Compass adjuster available from Glasgow.
REGULATIONS: No unusual regulations.
DELAYS: Normal breakdown/weather delays.
BANKS: Local banks only.
STORING: See "Prelims".
3. Yes.
4. Yes.
There is no accommodation for storage.
SHIP SUPPLY SERVICE: The units used for supply are small motor vessels approximately 10 m. long. They are licenced to carry up to 12 passengers under the D.O.T. Regulations. They are limited to operating up to 3 miles off-shore, with an extension for operating supply services to Ailsa Craig.

The operators are:
1. Alexander Ingram, 5 Shalloch Square, Girvan. Tel: Girvan 2320.
2. John McCrindle, 7 Harbour Street, Girvan. Tel: Girvan 3219.

SHORE LEAVE: Unrestricted after Customs clearance.
IDENTIFICATION CARDS: Clear requirements with Customs.
GENERAL: The harbour is formed at the mouth of the river known as "Water of Girvan". The water in the channel and basin is, therefore, a mixture of sea and fresh water.

A breakwater protects the inner part of the channel on the North side. A timber and steel sheet pile jetty protects the basin from river scour. Access is hazardous in N.W. gales.

In 1988 the harbour channel was deepened to give a minimum depth of water of 3 m. at MLWS. Siltation is a continuing problem and the depth available has been reduced as noted in previous sections.

The harbour is primarily a fishing port. However, it is used regularly by small tankers and cargo vessels of the coasting type, bringing in raw materials for local industry. As may be noted, berthing accommodation is very restricted.
AUTHORITY: Strathclyde Regional Council, Department of Roads, 15 Links Road, Prestwick KA9 1QG. *Tel:* Prestwick (0292) 76716. *FAX:* (0292) 671455 *Contact:* Mr. Neil McProvan.Mr. R Lietch, Harbour Master,Girvan. *Tel:* Girvan (0465) 3648.

GLENSANDA: 56.34 N. 05.32 W. (See Plan)

LOCATION: Glensanda is on the Western shore of Loch Linnhe some 9 miles North of Oban in approximate position 56° 34′ N., 05° 32′ W. Glensanda is over 6 miles along a track from the nearest road and that road is only a narrow highland lane, thus it is necessary to appreciate that Glensanda is remote and that its services are severely restricted. The only commodity that can be supplied at Glensanda is crushed granite.
PORT LIMITS: The limits of the Company's jurisdiction are from position 56° 35.862′ N., 05° 29.982′ W. on the shore, S.E. to position 56° 34.826′ N., 05° 27.922′ W., then S.W. to position 56° 31.165′ N., 05° 33.975′ W., then N.W. to the shore at position 56° 31.839′ N., 05° 35.312′ W.
DOCUMENTS: Usual U.K. requirements. Customs attend from Oban.
PILOTAGE: The pilot boarding station is one mile off Port Donain on the Isle of Mull (in about 56° 24′ N., 05° 37′ W.). If Masters are willing, they may enter Loch Linnhe and take the Pilot at Glensanda's Southern harbour limit (in about 56° 31′ N., 05° 35′ W.). Pilot boards vessels under 10,000 tonnes d.w.t. at the Inner Pilot Station in Loch Linnhe. Thus the position for boarding the Pilot reflects the Master's wishes and judgement. Masters are required to inform Glensanda of their decisions in this respect. Certain ships are not to berth or unberth without the Pilot being on board. Vessels should not enter Glensanda's harbour limits without the Harbour Master's express permission.

Vessels to call Pilot on VHF Channel 14 when they are one hour from the pilot station.
APPROACHES: The approaches to Glensanda Harbour and to the berth are deep and clear. The port is well served by a Pilot, a tug, mooring launches, lighthouses and beacons. Generally ships will enter Glensanda Harbour in Loch Linnhe through the Firth of Lorne between the islands of Mull and Lismore. Smaller ships can safely enter Loch Linnhe through the Sound of Mull.
ANCHORAGE: If the berth cannot take the ship for any reason there are many sheltered and safe anchorages in the vicinity. The Harbour Master recommends anchorages:
South of Lismore at 56° 27′ N., 05° 33′ W. (depth 35 m.)
West of Lismore at 56° 32.5′ N., 05° 31′ W. (depth 60 m.)
RESTRICTIONS: Berthing is generally restricted to the hours of daylight, unless the Harbour Master considers conditions for manoeuvring off the berth in the dark are acceptable. Unberthing is performed without regard to light.
MAX. SIZE: Panamax or 100,000 d.w.t. – 120,000 d.w.t. part load.
VHF: The Quarry Office and Pilot maintain watch on Channel 14.
TUGS: 1 tug available (25 ton bollard pull). The tug is only available to large vessels without bow thrusters.
RADIO: Masters should keep Glensanda well informed of their approach with notices to the Glensanda Harbour Master (cable address "Glensanda Oban") 5 days, 3 days, 2 days and 1 day prior to arrival. Over the last 3 days these ETA's should be timed to reach Glensanda for their opening (0700 hrs.) to permit their day's work to be planned and to be ready for the ship.

Ships are asked to guard Portishead Radio Station whilst on passage to Glensanda as the Agent and Harbour Master will use that station by preference should they have a message for the ship.

Masters are especially asked to telex Yeoman (Morvern) Ltd. (See "Authority") with the following details from their previous port:
1. Ship's particulars.
(a)Ship's name.
(b)Master's name.
(c)Flag.
(d)Radio call sign.
(e)Satcom number.
(f) Marine telex number.
(g)Summer deadweight.
(h)Gross registered tonnage.
(i) Number of hatches.
2. Proposed Stowage.
(a)Tonnage to be loaded in each hold.
(b)Grade to be loaded in each hold.
(c)Sequence and Tonnages in which each hold is to be loaded.
3. Pilot Station.
Advise if the Pilot is to board off Port Donain (3 miles South of Lismore) or at Glensanda's Southern harbour limits. This decision can be revised as the ship approaches Glensanda to reflect current conditions.

BERTHING: The depth of water at the berth is at least 12.3 m. at chart datum. To this depth may be added the rise of tide in the range of 0.2 m. at low water to a maximum of 4.4 m. at high water (spring tides).
LOADING: *Conditions:* The matter of ballast is of particular interest as manoeuvrability must be maintained.

The air draft of the ship loading arm can be raised to 21 m. above the highest high tide, so high that there is no need to ballast deeply to get a ship below it.

The shiploader is intended to load at 6,000 tonnes per hour and has almost to achieve this speed if demurrage is to be avoided on some contracts of affreightment.

It is Glensanda's experience that large bulk carriers (i.e. Panamax class) can berth and rapidly deballast if they approach with their peak tanks, ballast hold and top wing tanks full and their double bottom ballast tanks empty. If the ballast hold is needed for cargo, it is of no concern if its tank top is damp or even has puddles when it is loaded.
CARGO: The aggregate is manufactured in 4 basic grades, by diameter
(a) 1.5 in. – 0.75 in. – for rail ballast.
(b) 0.75 in. – 0.375 in. – for concrete.
(c) 0.375 in. – 0.1875 in. – for road surfacing.
(d) 0.1875 in. – dust – for various uses.

These basic grades are frequently mixed to form special categories for specific requirements. The final grades must not be co-mingled. For each final grade, hold separation is required.

Base Grades Diameter (in.)	*Stowage Factors* (Tonnes per cu.m.)	*Angles of Repose*
(a) 1.5 – 0.75	1.44	36°
(b) 0.75 – 0.375	1.45	38°
(c) 0.375 – 0.1875	1.46	39°
(d) 0.1875 – dust	1.65	43°

(i.e. every grade stows at about 21 cu.ft. to 25 cu.ft. per long ton).

For loading aggregate, holds may be damp, as the material is immune to fresh water. On completion of loading, hatches are to be covered to reduce the weight of rain water in the cargo. However, salt water is an unacceptable contaminant and must be avoided. Hatches must be watertight.

The cargo is loaded by automated shiploader. This machine can span the full length and width of all the hatches of a 60,000 ton – 70,000 ton bulk carrier without having to shift the ship. The loader operates at up to 6,000 tonnes an hour and can distribute the cargo without peaks forming. It is operated from the deck of the ship by radio control allowing direct contact between the ship's staff and the loading supervisor.

Loading is performed around the clock on every day of the year except for Christmas Day and New Year's Day. Rain will not interrupt loading but the shiploader will cease work if the wind speed exceeds 48 knots.

Holds are inspected for cleanliness by Glensanda's staff and must be approved before the Notice of Readiness is accepted and permission to start loading is given. Glensanda's Inspectors will be checking to determine that there are no traces of any previous cargoes or loose scale. Some cargoes, such as coal, petcoke, bauxite, alumina, sulphur and salt, can seriously devalue aggregate and any traces of these materials is unacceptable. Although hold washing is not always necessary, for some grades of aggregate and for some trades it is unavoidable. A covering Letter of Instruction will be issued when hold washing is considered necessary. Holds may be washed with salt water and need not necessarily be dry for loading to start. Thus the ballast hold can be loaded as soon as it has been pumped out.
MEDICAL: Emergency medical services are available. Glensanda has a small airstrip and aircraft for emergency evacuation. The Yeoman staff includes a first aid man and a doctor is available from Oban's small hospital and Port Appin.
DENSITY: 1023 – 1025.
FRESH WATER: Not available.
FUEL: Not available.
SURVEYORS: If required, surveyors attend from Glasgow.
Belt weight figures used for Bill of Lading.
REPAIRS: Repairs are not to be contemplated, partly because the weather can rapidly deteriorate and partly because there is no service for repairs in the vicinity.
REPATRIATION: Not recommended.
HOLIDAYS: Christmas Day and New Year.
GENERAL: *Visitors:* To visit Glensanda, other than by ship, needs Yeoman's co-operation. Visitors can take a train to Oban or fly to Glasgow and take a car to Yeoman's Rhugh Garbh depot which is some 10 miles North of Oban on the A828 main road towards Fort William. Yeoman's passenger launches ply on a regular schedule between Rhugh Garbh and the Glensanda Quarry. This journey takes about 30 minutes to cover the 8 miles down Loch Creran and across Loch Linnhe to the quarry.

Harbour Conditions: Loch Linnhe is free of swell as its approaches are well protected by the islands of Mull and Lismore.

The waters of Glensanda Harbour are virtually free of tidal streams at any depth. A sluggish stream of up to 1 knot has been irregularly observed during the fall ebb of spring tides.

Glensanda's times of high and low water are observed to follow closely those of Oban. Glensanda has a tide pole clearly visible from the berth. It is noticeable that the level of high water stands for about 90 minutes after each high tide before falling rapidly.

Wind observations have been made from a meteorological station set on a knoll some half a mile from the berth. At the berth the Harbour Master believes winds are less strong and more inclined to blow from the N.E. or S.W. It is difficult to draw any conclusions, but Glensanda is a windy place. Winds tend to vary in strength and direction in an unpredictable manner though S.W. and N.E. winds do predominate. The berth lies along this S.W./N.E. axis.

Services: Glensanda ought not to be depended upon for any services except those to cover the immediate work in hand of loading aggregate.

Cash: By prior arrangement and transfer, the Agent can supply the Master with cash, in Sterling, on arrival.

Notary: A local Oban Notary can accept Notices of Protest, though the time taken to reach his office and to return to the ship may delay vessel's sailing.

AGENCY: *The Glensanda Harbour Agent:* Morvern Shipping Agency Limited, Rhugh Garbh Depot, Barcaldine, Oban, Argyll, Scotland PA37 1SE. Tel: (063 173) 441. Telex: 777792. FAX: (063 173) 460. Cables: "Glensanda Oban".

The Quarry Office maintains radio watch on VHF Channel 14 during office hours and around the clock when a ship is approaching or is in the port.

The Glensanda Harbour Master shares these communication facilities with the Agent. The Harbour Master's Office and home telephone number is (063 173) 537. He may be reached on VHF radio by calling "Glensanda Harbour Master".

The Agent can provide Masters with details of any other services that are required. H.M. Customs attend ships in the normal manner. Masters can always contact emergency services if the Agent is not available through the Oban Coastguard on VHF Channel 16.

AUTHORITY: Yeoman (Morvern) Limited, Rhugh Garbh Depot, Barcaldine, Oban, Argyll, PA37 1SE. *Tel:* Office (063 173) 441. *Telex:* 777792. *FAX:* (063 173) 460. *Contact:* Captain J.A.Jackson, Harbour Master. Tel: (063 173) 537.

GOOLE: 53.42 N. 00.50 W. (See Plan)

PORT LIMITS: Goole is a river port with Conservancy jurisdiction to the junction of rivers Humber, Ouse, Trent. However, laytime commences from commencement of next normal working shift after ship is on berth and ship's Agent has issued "Notice of Readiness". This may be 0800 hrs. or 1300 hrs. dependent on time of issue of notice.

Precedence of order of arrival of vessels is determined by arrival time at Ocean Lock Entrance – Goole Docks.

DOCUMENTS:

Bills of Lading/Manifests (prepared by Agents at port of origin).
"Imperfect" Customs Entry.
Request (to work vessel).
*Request for Immigration Officer to be in attendance – if carrying passengers.
*Crew List to Immigration Officer (for foreign personnel).
Ship's Register.

*Ship's Agent will normally notify Immigration Officer.

PILOTAGE: Compulsory from Spurn to Goole, except for vessels claiming exemption by reason of length or by possession of a Pilotage Exemption Certificate.

ANCHORAGES: Bull Anchorage on chart of Humber Estuary, or in Hull Roads, otherwise only on advice of Pilot.

RESTRICTIONS: State of tide, Springs or Neaps. Port entered during tidal hours, 3 hours 30 minutes before HW to 1 hour (approx.) after HW, according to draft. Pilots will advise.

Locks: 3 entrance locks, largest being 104 m. long and 24.4 m. wide. Depth on sill 8.0 m. (MHWS) and 6.0 m. (MHWN).

MAX. SIZE: Subject to suitable tides, vessels of approximately 100 m. overall length, 5.5 m. draft, 24 m. beam and 4,500 d.w.t. (approx.) can be accepted. It should be noted that vessels with a beam in excess of 13.4 m. will find certain berths in the port inaccessible due to bridgeway restrictions.

HEALTH: Pratique issued by H.M. Customs Waterguard (in absence of Port Health Official). Pratique accepted when entering after calling at another port in the U.K.

Also see "Health – All Ports" before first U.K. port.

TUGS: Tugs available but not normally used. If required, to be arranged through Ship's Agent.

BERTHING: Berthing instructions given to vessel on arrival at entrance locks. No specific requirements.

RADIO: Via Humber Radio, call sign GKZ – call on Channel 16. Give ship's name and call sign and pass message.

VHF:

Station	*Call Sign*	*Channel No.*	*Operational Times*	*Remarks*
Vessel Traffic Services Humber, Queen Elizabeth Dock, Hedon Road, Hull	"Vee Tee Ess Humber"	16 12	Continuous watch maintained	Calling and safety. Navigation and safety information etc. for Rivers Humber, Ouse and Trent.
Blacktoft Jetty	"Blacktoft Jetty Radio"	14	3 hours before HW Goole until 1 hour after HW Goole	Port Operations and berthing instructions for Blacktoft.
Goole Docks	"Goole Docks Radio"	14	Continuous watch maintained	Port operations and docking instructions for Goole.

Also see "Hull".

SPECIALISED CARGO HANDLING FACILITIES: Boothferry Terminal for specialised container handling, 26,000 sq.m. hard standing and sheds, equipped with 4 heavy duty fork lift trucks, 32 tonne Scotch derrick crane, a mobile port tower (container crane) and a 70 tonne capacity crawler crane.

1 mobile shiploading conveyor for grain, rate 100 t.p.h.

12×7.5 tonne and 5×6 tonne quay cranes, equipped with suitable grabs for sand, ores, fertilisers, coal, grain, sulphur, scrap, etc.

5 mobile cranes up to 40 tonne capacity and fleet of forklift trucks with capacities up to 35 tonnes and capable of lifting 20 ft., 30 ft. and 40 ft. containers.

1×32 tonne Scotch derrick crane for container handling at Stanhope Dock.

50 tonne electric travelling crane for heavy lifts.

2 Ro/Ro ramps for abnormal loads of up to 450 tonnes – otherwise no special facilities needed as water is maintained at a constant level.

Some bulk liquids (creosote, tar), direct to or from road tanker vehicles.

Timmgrain Ltd. operate 2 separate silo facilities which give 12,000 tonnes of storage capacity for grain, maize, maize products, etc.

Damac Bulk Handling Ltd. operate 2×3,000 tonne silos for cement cargoes. Discharge rate 180 tonnes per hour.

STEVEDORES: Arrangements made by ship's Agent who should be given ample notice of time of arrival of vessel.

Port Working Hours:

	Monday to Thursday	0800 – 1200	1300 – 1700
	Friday	0800 – 1200	1300 – 1600
Overtime	Monday to Thursday	0700 – 0800	1700 – 2000
	Friday	0700 – 0800	1600 – 1900
	Saturday	0700 – 1200	
	Sunday	0700 – 1200	1300 – 1700

MEDICAL: Ship's Agent will arrange for attendance of doctor on notification. Doctor's, dentists and hospital services available. Ship's Agent can arrange service required.

DENSITY: Water in Goole Docks is fresh water and is maintained at constant level. Entry is by locks. Density 1000.

FRESH WATER: Delivery by water-boat through hose-pipes. Rate 30 t.p.h.

FUEL: All grades available on reasonable notice being given to Ship's Agent.

FIRE PRECAUTIONS: No specific precautions unless there are exceptional circumstances, when special arrangements can be made with local Fire Service.

CONSULS: France, Netherlands and Denmark.

REPAIRS: All types of deck and engine repairs possible by local ship repairers.

DRY DOCKS: Dry Dock No. 2: 91 m. length, 15.2 m. width at entrance, 4.75 m. depth on sill. One other dry dock. The water in the wet docks at Goole is maintained at a constant level and all dry docks are entered direct from the wet docks.

GANGWAY/DECK WATCHMEN: Necessary. Usually provided from crew. Otherwise by negotiation locally.

OPENING/CLOSING HATCHES: Responsibility of crew.

SHIP CERTIFICATES:

Ship's Register (including load-line)
Ship's Gear Certificates (when gear is used in port)
Radio Safety
Life-Saving
Light Dues
Change of Articles
Derat Certificate

CARGO GEAR: Normally not required, as ample port facilities available.

REPATRIATION: Arranged by Ship's Agent.

AIRPORT: Humberside Airport. Daily services to Amsterdam, Aberdeen, Bergen, Edinburgh, Newcastle, Norwich, Stavanger and Teeside.

TIME: GMT in Winter; GMT plus 1 hour in Summer months.

HOLIDAYS: Good Friday; Easter Monday; May Day; Spring Bank Holiday (last Monday in May); late Summer Bank Holiday (last Monday in August); Christmas Day; Boxing Day and New Years Day. No cargo working on these days.

POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required.

EMERGENCY CO-ORDINATION CENTRE: Contact Port Manager's office.

BANKS: Midland Bank, Tel: 762401. Barclays Bank, Tel: 762431. National Westminster Bank, Tel: 4541.

TELEPHONES: No arrangements for ship connection.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: May be required to be produced to Immigration Officer or H.M. Customs Offical, especially in the case of foreign flags.

REGULATIONS: Visitors to vessels require permits from Port Authority and Master or ship's Agent. Smoking not permitted ashore in dock area.

AUTHORITY: Associated British Ports – Goole, East Parade, Goole, North Humberside, DN14 5RB. *Tel:* (0405) 762691 (6 lines). *Telex:* 57626. *FAX:* (0405) 767419. *Contact:* C. Silvester, Port Manager.

GRANGEMOUTH: 56.01 N. 03.43 W. (See Plan)

PORT LIMITS: At Grangemouth a vessel is not considered to be an "arrived vessel" until she is tied up at the allocated berth.
DOCUMENTS:

1 Crew List.
1 Passenger List.
1 List of all high duty goods in crew's possession.
1 Cargo Manifest.
All Valid Certificates.

PILOTAGE: Compulsory in river. Pilot boards at Inchkeith. Pilot boat on VHF, also see "Radio".
ANCHORAGES: North of Grangemouth West Buoy, 2 fathoms. Charleston Roads 5 fathoms. East of Inchkeith, up to 8 fathoms.
RESTRICTIONS: 24 hour locking system in operation depending on draft. The height of the tide must always be taken into account when dealing with larger vessels.
MAX. SIZE: Dry cargo vessels: Length 600 ft., beam 90 ft. Tankers: Length 575 ft., beam 90 ft. Draft according to state of tide. Vessels other than tankers max. draft 25 ft. 6 in. Tankers, up to 34 ft. max. draft.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Wick, Stonehaven and Cullercoats coastal stations and Forth Radio.

Port VHF (FM) Communications: Station: Lock Control Office, Lock Entrance, Grangemouth. This centre will maintain a continuous watch. Call sign: Grangemouth Docks.

Channel 16 (156.8) calling and safety. All vessels should maintain a listening watch on this Channel and use it to establish contact with Grangemouth Docks. Once contact is established the Duty Operator will request vessels to shift to the Port Operations Channel.

Channel 14 (156.7 MHz), Port Operations. A working Channel restricted to messages relating to the movement and safety of ships, and in emergency, to the safety of persons.

Channel 10 (156.6 MHz), Inter-ship. A working Channel for tug-to-tug and tug-to-bridge communications.

Channel 6 (156.3 MHz), Inter-ship. A working Channel for communication with other vessels.

Channel 9 (156.5 MHz). A working Channel for tug to tug and tow to tow communications.

No message of a personal character or messages of any other nature than those pertaining to the general navigation and safety of ships and persons within the Port Area can be accepted.

TUGS: Tugs can join vessel at Hen and Chicken Buoy or Lock Gates and should be pre-booked. Tugs' lines used. 2×25 ton bollard pull tugs available.
BERTHING: The water in Grangemouth Docks is maintained at the same level by impounding pumps. On passing through the lock entrance berthing is allocated according to the nature of the cargo and draft of vessel.

The depth of water available at the berths varies in each dock, the max. depths being approx.: Grange Dock 26 ft.; Carron Dock 23 ft.; Old Dock 17 ft.

CARGO HANDLING FACILITIES: Bulk cargoes can be handled at most berths within the port. The East Wall berth has 4×10 ton grabbing cranes, 2×7.5 tonne mobile cranes are available. Other berths have 10 and 6 ton cranes. 1×35 tonne Scotch derrick. Container berth is 1,000 ft. long and has 2×32 ton transporter cranes.

A Ro-Ro berth in operation. Liquid chemicals and LPG Carriers are handled at the LPG berth and BP jetties. No. 1 North Jetty, which is a common user jetty handles chemicals.

STEVEDORES: No particular advice necessary to stevedores. Essential, however, advise Agent 24 hours prior arrival, who will advise stevedores.
MEDICAL: No advance notice necessary. Hospital facilities available in immediate district.
TANKERS: B.P. Refinery (Grangemouth) Limited. Private jetties in Eastern Channel. South Side Jetties "J2" and "J3" 34 ft. "J4" and "J5" 19 ft. 6 in. North Side Jetties "E1" and "E2" 34 ft. No. 1 North Side Jetty, pipe-lines connected to Ross Chemical and Storage Co. are 1.5 in. nitrogen line, 6 in. chemical line, 10 in. heavy fuel line, 2 in. fresh water supply, 8 in. motor spirit line, 8 in. gas oil line. Draft at No. 1 North 32 ft. 6 in.
DENSITY: 1019 average.
FRESH WATER: Available in most berths. Watermen supervise delivery on request. Delivery rate varies depending on berth.
FUEL: All grades available from oil installations.
GANGWAY/DECK WATCHMEN: Not necessary but can be done by ship's personnel.
OPENING/CLOSING HATCHES: Custom of port is crew open and close hatches but stevedores will do so if required.
CUSTOMS ALLOWANCES: At the discretion of Local Customs Inspector. Normal allowances are equivalent of 5 ounces tobacco per man and equivalent of 1 bottle of wine per man. Allowances may be halved for home trade vessels. Vessels in port more than 3 or 4 days may receive extra allowances.
CERTIFICATES: For Customs Clearance valid Certificates in respect of radio, load-line, construction, safety equipment, deratisation, necessary.
CONSULS: Norwegian, Danish and Swedish Consuls available locally.
REPAIRS: All types of repairs can be carried out afloat.
DRY DOCKS: Carron Dry Dock: Length 350 ft., breadth 50 ft., depth 22 ft.
SURVEYORS:

(1) Macleod & McAllister Ltd., Old Granary Office, Meadowside Quay, Glasgow G11.
(2) Thomas Nicol and Son, 11 Bothwell Street, Glasgow G2.
(3) S. A. Greer & Co., 15 North Claremont Street, Glasgow G3.
(4) E. K. Wallace & Son Ltd., 11 Bothwell Street, Glasgow G2.
(5) Lloyd's Register of Shipping, 27 Thistle Street, Edinburgh.

REPATRIATION: All facilities exist.
AIRPORT: 1 hour from Glasgow and Edinburgh airports where numerous connections for London thence world wide travel.
TIME: British Standard Time (1 hour ahead of GMT). GMT during Winter months.
HOLIDAYS: First 3 weekdays in January; 1st Monday May; 3rd Monday July; 2nd Monday September; Christmas Day and 26th December.
POLICE/AMBULANCE/FIRE: In public telephone dial 999 and ask for appropriate service. With dock circuit telephone dial 222 and ask for Police/Fire/Ambulance.
EMERGENCY CO-ORDINATION: Coastguard Fifeness Tel: 033 35 666. Major Port Emergencies are controlled by the Police dial 999 or contact through Harbourmaster Grangemouth Tel: 486839.
SERVICES: Compass adjusting, calibrating, etc., can be done in river. No equipment for tank cleaning but can accept tank washings ashore.
BANKS: Royal Bank of Scotland, La Porte Precinct, Grangemouth.

Bank of Scotland, La Porte Precinct, Grangemouth.

STORING: See "Prelims".

Vessels may be stored by trucks alongside dry cargo berths. There are no facilities for storing, by trucks, vessels berthed at jetties in Eastern Channel.

Trucks may, by prior arrangement, proceed alongside dry cargo berths to store vessels.

Stevedores fork lifts may be employed to handle ship's stores.

Customs regulations are in force for stores remaining on board. Details of stores, including bonded goods such as spirits, etc., must be supplied to Customs on arrival, and a constant check is kept whilst the ship is in Port. Regarding stores loaded aboard, any bonded goods must be presented to Customs for inspection and approval. Restricted amounts only are permitted.

Local riggers may be employed for storing.

SHORE LEAVE: Allowed.
AUTHORITY: Forth Ports Authority, Dock Office, Grangemouth, Stirlingshire FK3 8UE. *Tel:* (0324) 482591. *Telex:* 777432. *FAX:* (0324) 665106. *Contact:* A. McEwen, Port Manager.

GRANTON: 55.59 N. 03.13 W. (See Plan)

DOCUMENTS: See "Leith".
PILOTAGE: Pilot station Firth of Forth located at Granton, boarding station West of Fairway Buoy at Longitude 3° West. Contact with pilot cutters can be made on VHF Channel 16 and R/T 2182 kHz. Pilotage not compulsory for vessels passing South of Inchkeith Island.
ANCHORAGES: Good holding ground at Leith roadstead 8 m. – 19 m. at C.D. Request should be made to Forth Navigation Service for suitable anchorage position.
RESTRICTIONS: The entrance between the breakwaters is 103 m. in width. The rise of tide, 5.182 m. at Springs and 3.658 m. at Neaps, permits the entry or exit of vessels up to 7.07 m. draft at HW.

A red flag bearing St. George's Cross exhibited at the Middle Pier Head signifies that vessels should not enter the harbour until the flag is lowered.

HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Forth, Stonehaven and Cullercoats radio stations.
RADAR/VHF: Port and estuary radar service. Contact should be made with "Leith Harbour Radio" for berthing instructions on VHF Channel 12. Forth Navigation Service should be contacted on VHF Channel 71 by all vessels passing Forth Ports Authority seaward limit (line joining North and South Carr Beacons), working on Channels 20 and 12.
TUGS: Sound signal for vessels requiring tug services is four long blasts. Tugs, if required, join the vessel in the roads. Tugs towing gear available and compulsory.
BERTHING: Middle Pier: Quayage 210 m. max. depth 5.1 m. LWOST. In addition, there is a 122 m. crosspiece at the end of the pier where depth of water is 5.1 m. LWOST. Ro-Ro ramp available.
West Pier: Closed to all traffic.
MEDICAL: No advance notice of medical attention required. All hospital facilities available.
TANKERS: Jetty closed.
FRESH WATER: Available alongside at all berths.
FUEL: All grades available subject 24 hours notice in advance.
CONSULS: See "Leith".
REPAIRS: Facilities available for all minor repairs.
AIRPORT: Edinburgh Airport, served by regular airlines, situated about 6 miles away.
HOLIDAYS: Public holidays observed annually: Third Monday in April; third Monday in September; Christmas Day (25th December); 26th December; 1st, 2nd and 3rd January.
AUTHORITY: Forth Ports Authority, Port Office, Tower Place, Leith, Edinburgh EH6 7DB. *Tel:* (031) 554 4343. *Telex:* 72681. *FAX:* (031) 553 7462. *Cables:* "Harbour Leith". *Contact:* Mr. T.J. Skinner, Port Manager, Leith and Granton.

GREAT YARMOUTH: 52.34 N. 01.44 E. (See Plan)

DOCUMENTS: Usual U.K. requirements.
PILOTAGE: A 24-hour service is provided, subject to 2 hours' notice. Pilots can be contacted on VHF Channel 12.
RESTRICTIONS: When large or awkward vessels are navigating within the port, it may be necessary to hold or slow down other vessels.

TRAFFIC CONTROL SIGNALS:

By Night:

(a) When entrance to the Haven is *prohibited* 3 fixed red lights vertically disposed (3 F.R (vert)) 2.0 m. apart, will be exhibited on the South Pier brick building, the lower being at a height of 11.0 m. above MHWS, arc of visibility 235° (T) through 270° (T) to 295° (T) from seaward.

In the event of it not being possible to exhibit these lights, the night signal for prohibiting entrance to the Haven will be the extinguishing of: The Brush Light, the Leading Lights, the Main Light and the South Pier Lights and/or as advised by Yarmouth Port Radio on VHF Channel 12.

(b) Control of vessels proceeding South down the Haven:
3 fixed red lights vertically disposed (3 F.R. (vert)) 2.0 m. apart are exhibited on the North side of the White Port Control Office Gorleston at the root of the South Pier, to indicate that NO vessel when proceeding down the Haven is to come South of the lifeboat shed on the Gorleston side of the river.

In the event of failure of these lights vessels will be advised by Yarmouth Port Radio on VHF Channel 12.

By Day:

(c) The lights as described in (a) when entrance to the Haven is prohibited also the lights as described in (b) for controlling vessels proceeding South down the Haven will also be exhibited during the day. In the event of failure, vessels will be advised by Yarmouth Port Radio on VHF Channel 12.

TIDAL SIGNAL: When the tide is flooding between the piers, a quick flash amber (Q.Am) is exhibited on the South Pier brick building, arc of visibility from 235° (T) through 270° (T) to 295° (T) from seaward.

Also see "Bridges".

MAX. SIZE: Max. length 138 m., max. draft 5.7 m. HWOST.

With a tidal range of only 1.9 m. and a minimum entrance depth of 4.3 m., Great Yarmouth can be used by vessels up to 4,000 d.w.t. and with a length of up to 120 m. at any time.

HEALTH: Usual U.K. procedure. Contact Port Health Officer for Derat, Fumigation, Quarantine or Livestock Quarantine.

VHF: Masters of vessels intending to enter the harbour must notify the Harbour Master at least 8 hours before arriving off South Pier, giving ETA, max. draft, gross tonnage, any dangerous cargo and last port of call. Masters must also obtain clearance before starting to navigate through the entrance between the piers.

Where possible, VHF radio-telephone must be used for giving information and obtaining clearance to navigate from the Harbour Master. The following VHF Channels and frequencies are used: 9, 11, 12 and 16.

Yarmouth Radio keeps a continuous watch on Channels 12 and 16. The Haven Bridge operates on Channel 12.

Reporting: All vessels over 50 g.r.t. and any others fitted with VHF must report to Yarmouth Radio when passing Ocean Terminal, Atlas Berth and Turntide Jetty (Breydon Water), giving direction of travel.

TUGS: The port's 550 h.p. tug *Hector Read* has a bollard pull of nearly 7 tonnes and can be used for all harbour work. It is fully equipped with salvage and fire fighting pumps. Contact should be made through the Harbour Master.

BERTHING:

East Side:

Bowling Green Wharf: Length 80 m. Bulk cargoes.
South Quay: Length 475 m. General cargo and Lay-By.
Mayer Newman: Length 98 m. Scrap cargoes.
ABC Wharf: Length 123 m. Repairs afloat.
Atlas Berth: Length 125 m. Ro/Ro berth.
Wood Group Berth: Length 356 m. Offshore vessels and bunkering.
Milpark Berth: Length 59 m. Offshore vessels.
Phillips Berth: Length 85 m. Offshore vessels.
GY Warehousing: Length 158 m. General cargo and offshore vessels.
Ocean Terminal: Length 123 m. Common user Ro/Ro terminal.
Amoco Berth: Length 135 m. Offshore vessels.
East Quay: Length 260 m. General and bulk cargoes.
CEGB Quays: Length 182 m. Offshore and lay-by berths.
B.P. Berths: Length 227 m. Tanker and Bunker berths.
Ventureforth Marine Base: Length 320 m. Offshore vessels.

West Side:

Clarkes Quay: Orfeur & Bellin. Length 78 m. Wheat and timber imports.
Bunns Quay: Length 125 m. Fertiliser imports.
Southtown Wharf: Length 73 m. General and bulk cargoes.
British Gas berth: Length 76 m. Offshore vessels.
Turmerics Berth: Length 170 m. Fabrication Yard.
Portland Wharf: Length 120 m. Offshore vessels.
Richards Shipbuilders: Length 152 m. Ship construction repair yard.
Palgrave Browns: Length 225 m. General and bulk cargoes.
Yeoman Berth: Length 179 m. General and bulk cargoes.
Bollard Quay: Length 394 m. General cargoes and lay-by.
Gas House/EAE Quay: Length 370 m. Offshore vessels and general cargoes.

CRANES: The Port Authority have 5 mobile cranes, including 3 that can lift up to 24 tonnes and 2 that can lift 3.5 tonnes. All are equipped with grabs and hooks. Cranes can also be hired from several local companies.

BRIDGES:

Haven Bridge Lights:

1. Western Buttress: At both the North and South ends, 2 fixed red lights vertically disposed (2 F.R. (vert)).
2. Eastern Buttress: At both the North and South ends, 2 fixed green lights vertically disposed (2 F.G. (vert)).
3. At Centre Span: On both the North and South sides, a fixed red light (F.R.).
4. Traffic Control Signals: By Day and Night.

When *passage* through the bridge is *prohibited* from the South going upriver, 3 fixed red lights vertically disposed (3 F.R. (vert)) will be exhibited above the Eastern Buttress.

When *passage* through the bridge is *prohibited* from the North going downriver, 3 fixed red lights vertically disposed (3 F.R. (vert)) will be exhibited above the Western Buttress.

In the event of failure of these lights, vessels will be advised by the Haven Bridge Master on VHF Channel 12.

Breydon Bridge Lights:

1. Southern Buttress: On both the upriver and downriver ends, 2 flash red lights vertically disposed every 5 seconds (2 Fl.R. 5s (vert)).
2. Southern Dolphins: On both the upriver and downriver, 2 fixed red lights vertically disposed (2 F.R. (vert)).
3. North Buttress: On both the upriver and downriver ends, 2 flash green lights vertically disposed every 5 seconds (2 Fl.G.5s (vert)).
4. Northern Dolphins: On both the upriver and downriver dolphins, 2 fixed green lights vertically disposed (2 F.G. (vert)).
5. At Centre Span: On both the upriver and downriver sides, a fixed amber light (F.Am.).
6. When the bridge is lifted above a 45° angle, on each side near the end of the lifting span, a fixed red light is exhibited (F.R.) (Aircraft warning light).
7. Traffic Control Signals: By day and night.

When *passage* through the bridge is *prohibited* going West upriver on to Breydon Water, 3 fixed red lights vertically disposed (3 F.R. (vert)) will be exhibited on the main structure of the bridge on the Southern Buttress.

When *passage* through the bridge is *prohibited* going East downriver towards Haven Bridge, 3 fixed red lights vertically disposed (3 F.R. (vert)) will be exhibited above the Control Building.

In the event of failure of these lights, vessels will be advised by the Breydon Bridge Operator on VHF Channel 12.

8. Restricted Visibility – Fog Signal: This is a horn which gives 2 blasts every 30 seconds (2 Bl.ev 30s).

STEVEDORES: There are various stevedoring companies offering a full range of services for offshore and cargo vessels.

MEDICAL: Doctors and dentists can be arranged through Agents. Hospital facilities available.

FRESH WATER: Water, drinking or fresh, is available on the public quays. Those currently in use are East Quay, Bollard Quay, South Quay and Ocean Terminal.

FUEL: BP operate a bunkering facility with a delivery rate for gas oil at up to 50 tons/hr. Storage capacity of about 10,200 tons of which about a third is available for marine use.

Shell operate a bunkering facility with a gas oil delivery rate of up to 100 t.p.h. Storage capacity about 3,000 tons.

Ventureforth operate a bunkering facility with a gas oil delivery rate of up to 50 t.p.h. Storage capacity 1,200 tons.

CONSULS: Belgium: Consul, Harwich. Tel: (0255) 252101.
Denmark: Vice-Consul, Great Yarmouth. Tel: 856831.
Finland: London Embassy. Tel: (071) 235-9531.
France: Consul, London. Tel: (071) 581-5292.
Italy: London Embassy. Tel: (071) 235-8643.
Netherlands: Vice-Consul, Great Yarmouth. Tel: 856831.
Norway: Vice-Consul, Great Yarmouth. Tel: 850431.
Spain: London Embassy. Tel: (071) 235-5555.
Sweden: Consul, Felixstowe. Tel: (0394) 673884.

REPAIRS: Several ship repair companies are located in Great Yarmouth and most types of repairs can be undertaken.

DRY DOCKS: Richards (Shipbuilders) repairs ships up to 85 m. long and 12.5 m. beam. Sill depth 4.4 m. at MST. Also a shipbuilding berth.

SURVEYORS: Both Marine and Cargo Surveyors can be arranged through the Agent.

AIRPORT: Flights are available by helicopter and light aircraft from North Denes Airfield, 5 km. from the North of the town.

Air U.K. operate scheduled daily flights from Norwich to British and Continental destinations.

TIME: GMT. Summertime (GMT plus 1 hour) kept from March to October.

POLICE/AMBULANCE/FIRE: Dial 999 in an emergency.

EMERGENCY CO-ORDINATION CENTRE: H.M. Coastguard, Tel: 851338.

SERVICES: Compass adjusting can be carried out.

As this port services the oil industry, many types of oil-related services are available from several companies.

BANKS: Barclays Bank plc. Tel: Gt. Yarmouth 856266.
Lloyd's Bank plc. Tel: Gt. Yarmouth 855177.
Midland Bank plc. Tel: Gt. Yarmouth 843631.
National Westminster Bank plc. Tel: Gt. Yarmouth 857521.

DEVELOPMENTS: There are plans for the development of an outer harbour.

AUTHORITY: Great Yarmouth Port Authority, 20/21 South Quay, Great Yarmouth, Norfolk NR30 2RE. *Tel:* (0493) 855151. *FAX:* (0493) 653464. *Telex:* 975102 (Gyportg). *Contact:* M. C. M. Boon, Chief Executive. Captain A. Goodlad, Harbour Master (Tel: (0493) 663476).

GRIMSBY: 53.34 N. 00.04 W. (See Plan)

VESSEL TRAFFIC SERVICES HUMBER: See "Hull".

NOTICES: See "Hull".

DOCUMENTS: See "Immingham".

PILOTAGE: See "Immingham".

ANCHORAGES: Hawke and Sunk Roads, Haile, Spurn and Bull Anchorages. See "Hull". The Pilots will advise where to proceed to anchor and also provide Pilot.

RESTRICTIONS: See "Berthing" – entrance locks.

MAX. SIZE: Maximum breadth 20.6 m., maximum length of vessel that can be locked 81.7 m. but vessels of greater length can enter docks on HW when all lock gates are open. 0.91 m. clearance under the keel is required. Vessels having a draft of 5.8 m. can normally enter the docks on any tide when the height of water is sufficient to allow 0.91 m. clearance. Vessels with 6.4 m. draft can be taken on spring tides. Vessels can enter usually approx. 3 hours before and 2.5 hours after high water.

Commercial Docks: Max. LOA 145 m., draft 5.8 m., beam 20.6 m.

Fish Docks: Max. LOA 73 m., draft 5.5 m., beam 12.8 m.

HEALTH: Master has to report any "Reportable" illness as detailed in Form "Port 38" to "Porthealth Grimsby". Also see "Health – All Ports" before first U.K. port.

RADIO: Humber Radio, 2182 kHz, or VHF Channel 16. Also see "Hull".

VHF: See "Hull" – Vessel Traffic Services Humber.

TUGS: Normally join in Grimsby roads. Optional whether use ship's or tug's lines. Tugs operate from Immingham so plenty of notice required.

BERTHING: *Grimsby Docks:*

	Commercial Docks	Fish Docks
Entrance Locks:		
Length	90.0 m.	21.4 m.
Width	21.4 m.	13.0 m.
Sill level MHWN	6.8 m.	6.8 m.
Quay cranes	11 electric – capacity 3 to 7.5 tonnes	
	2 mobile cranes – capacity 20 tonnes for ship discharge	1 mobile – capacity 15 tonnes

There are 2 Ro/Ro berths in the Royal Dock, one to/from Esbjerg and a second to/from Norway. There is also one in the Alexandra Dock for motor vehicles.

There is a Lo/Lo Terminal operated by Humber Terminals Ltd. on the West side of the Royal Dock. It is equipped with a 35 ton gantry crane. Present users are Geest North Sea Line with 3 sailings per week to/from Rotterdam and Floatline with 2 sailings a week to Netherlands/Sweden.

STEVEDORES: Vessels are allocated labour in order of arrival so it is only necessary to give the Agent the ETA preferably before noon on the previous day. Normal working hours 0800 – 1700 hrs., Friday 0800 – 1600 hrs. Overtime can be worked 1700 – 1900 hrs. Monday to Thursday. On Saturdays and Sundays as required.

MEDICAL: Hospitals and all other medical facilities are readily available. If immediate attention is required on arrival please advise Agent by radio or telegram.

FRESH WATER: Available at all quays. Rate approx. 20 t.p.h.

FUEL: Normal gas and diesel oils available by both road and barge with at least 24 hours notice. This is also quayside tankage in fish docks.

CONSULS:

Belgium, Vice-Consul	Hull	27464
Denmark, Vice-Consul	Grimsby	357521
Dominican Republic	Grimsby	359101
Finland, Consul	Immingham	571387
France, Consular Agent	Grimsby	47221
Germany F.R.	Hull	25781
Greece, Vice-Consul	Hull	224151
Iceland	Grimsby	357543
Netherlands, Vice-Consul	Immingham	76246
Norway, Vice-Consul	Hull	224151
Sweden, Vice-Consul	Immingham	571387

REPAIRS: Facilities are available for all deck and engine repairs.

DRY DOCKS: Nearest at Immingham.

SURVEYORS: See "Immingham".

GANGWAY/DECK WATCHMEN: Not necessary, but the service is available if Master requires it.

OPENING/CLOSING HATCHES: Responsibility of the crew. The hatch beams can be removed and replaced by the shore cranes but there is an extra charge for this operation.

CUSTOMS ALLOWANCES: 200 cigarettes per 8 days. 1 bottle wine and 1 bottle spirits per 4 days. All seals to be broken.

CARGO GEAR: In accordance with the regulations laid down by H.M. Factories Inspector.

REPATRIATION: Can be arranged if required.

AIRPORT: Humberside, 15 miles from Grimsby, daily service to Amsterdam (3 flights daily), Bergen, Stavanger, Norwich and Aberdeen. Easy access to all major airports via rail, etc.

Leeds Bradford Airport, 3 flights daily to Amsterdam, Aberdeen, Belfast, Norwich, Paris and Edinburgh. One flight to Dublin.

HOLIDAYS: New Year's Day; Christmas Day; Boxing Day; Good Friday; Easter Sunday and Monday; May Day; Spring Bank Holiday (end May); Late Summer Bank Holiday (end August). All except Christmas Day, New Year's Day, Good Friday and May Day can be worked as overtime if sufficient staff are willing.

POLICE/AMBULANCE/FIRE: Port Security 352713; Grimsby Police – Grimsby 359171. Emergency – Police/Fire/Ambulance 999.

EMERGENCY CO-ORDINATION CENTRE: See "Immingham".

TELEPHONES: Not available for connection on board.

SERVICES: Compass adjusting, tank cleaning, etc., are available.

BANKS: See "Immingham".

STORING: See "Immingham".

SHORE LEAVE: Crew are allowed ashore.

IDENTIFICATION CARDS: Some sort of identification whilst crew a ashore is advisable. (Seaman's Book or Passport).

GENERAL: The Grimsby Dock Master can be contacted on VH Channel 16 and then change to Channel 18 or 9 for speaking.

AUTHORITY: Associated British Ports, Port Office, Cleethorpe Roa Grimsby, South Humberside DN31 3LL. *Tel:* (0472) 35918 *Telex:* 52250. *FAX:* (0472) 348275. *Contact:* D. Dunn, Port Manager.

HARTLEPOOL: 54.42 N. 01.12 W. (See Plan

PORT LIMITS: The Port facilities extend from Hartlepool Fairway Buo to all berths.

Arrival Time is accepted as time of passing Hartlepool Dock Head o time of anchoring in Hartlepool Bay.

DOCUMENTS: *Ship's Official Papers including:*

Ship's Register.
Ship's Construction Certificate.
Load Line Certificate.
Derat Certificate.
Safety Equipment Certificate.
Radio Equipment Certificate.
U.K. Light Dues Certificate.
Crew List.
Bills of Lading, Manifest and Stowage Plan (Usually sent in advance
Ship's Stores List.

PILOTAGE: Call by VHF when 2 hours from port and again 30 minutes before arrival. 2 hours required for sailing. VHF Channel 16, 14, 12, 9 8 and 6. Tel. No. 0642 - 485648.

Pilotage compulsory for:

(a) Vessels of 95 m. LOA and over navigating in Victoria Harbour.
(b) Vessels of 85 m. LOA and over navigating in Impounded Docks.
(c) Vessels requiring services of a tug.

Pilot usually boards in vicinity of Longscar Buoy from a cutter showin the usual international signals.

ANCHORAGE: N.E. of Longscar Buoy but special care must be exercised in vicinity of prohibited anchorages near Ekofisk Oil Pipe-line and River Tees Fairway.

RESTRICTIONS: Small vessels can berth in outer harbour at any stat of tide. Deep draft vessels enter in accordance with tide.

Vessels for the enclosed docks enter or depart from 3 hours befor High Water to 1 hour after High Water.

Entrance Channel 1.1 km. long., 65 m. wide. Nominal dredged dept 5.7 m. below LAT.

MAX. SIZE: Overall length 190 m. Beam 30.5 m. reduced draft of 7.92 m Vessels approaching any of the max. sizes must consult Dock Maste in advance.

Keel clearance of 1.2 m. required.

HEALTH: New Regulations. The Public Health (Ships) Regulations i force.

Also see "Health – All Ports" before first U.K. port.

RADIO: Cullercoats Radio.

VHF: VHF radio watch kept on Channels 16 and 12, working Channe 12.

V.H.F. Station	*Call Sign*	*Channel*
Dock Master's Office	"Hartlepool Harbour Radio"	16,12,11,8.
Tugs "Hart" and "Stranton"	Tug Name	All frequencies
Tees Bay Pilot Cutter	"Tees Bay Pilot"	67,16,14,12,9,6.

TUGS: Two twin screw diesel (1,200 h.p.) tugs available during tida periods. Tugs ropes available at extra charge.

BERTHING: Victoria Harbour, Deep Water Berth. Length 295 m. Dept 9.5 LAT. Equipped with 5 × 10 tonne cranes. Ro/Ro pontoon available

Victoria Quay: Length 150 m., depth 9.5 m. 3 × 10 ton cranes an 1 × 25 ton crane.

Entrance to the enclosed docks at Hartlepool is by 'The Nort entrance, Victoria Harbour, which has a depth of water 8.18 m. on th sill at MHWST the entrance width is 21.33 m.

North Basin (Non-Tidal): Length of Dock 182.87 m. Depth on sill is 3.1 m below LAT. No Cranes.

Roll-on/Roll-off berths. Max. LOA 152.5 m. Max. beam 20.5 m Max. draft 6.25 m. 1 berth at N.W. corner and 1 berth at N.E. corner.

Central Dock (Non-Tidal): Length of Dock 301.73 m. Width of Entranc 21.33 m. Depth alongside is 2.5 m. below LAT. No Cranes.

West Quay – Conveyor: A dry cargo bulk loading appliance capable o loading any cargo of sizes up to 3 in. cube into vessels of 8,000 tonnes carrying capacity or less, according to tidal conditions prevailing at th entrance locks.

North-West Corner and South-West Corner: Roll-on/Roll-off Berths Max. length of vessel 152 m. Max. beam 20.4 m. Max. draft 6.25 m

Union Dock (Non-Tidal): 8 Cranes 3 tonnes – 10 tonnes. Length o quayage 1,551.94 m. Width of Entrance 20.32 m. Depth of Water o 2.2 m. below LAT.

Roll-on/Roll-off berth to handle loads of up to 450 tonnes. Max. lengt of vessel 91.4 m. Max. beam 20.1 m. Max. draft 5.79 m. Bulk roa vehicle chute.

Bulk Loading Gravity Spout: Maximum vessel 7,500 tonnes d.w.t.

Bulk discharge hopper: Maximum vessel approximately 5,000 tonne d.w.t.

STEVEDORES: All stevedoring undertaken by Port Authority on day work basis with voluntary overtime available (including week-ends). Shift working can also be provided.
MEDICAL: Full hospital and emergency services available at all times. Shore Telephone No. 999 or call on VHF 16.
DENSITY: 1025.
FRESH WATER: Available from shore hydrants at 20 t.p.h. Quantities up to 50 tons available by tug.
FUEL: Available by road and bunkering vessels.
CONSULS:

Belgium
Denmark
Finland
French Consular Agency
Germany F.R.
Netherlands
Norway
Portugal
Sweden

REPAIRS: Deck and engine repairs available.
SURVEYORS: Hull and cargo surveyors available through Shipping Agent.
GANGWAY/DECK WATCHMEN: Available by private arrangement through Agents.
HATCHES: To be opened and closed by ship's crew.
AIRPORT: Teesside Airport nearby with regular U.K. and Continental Services.
TIME: GMT and BST (GMT plus 1 hour) during Summer months.
HOLIDAYS: Normal Bank Holidays.
EMERGENCY CO-ORDINATION CENTRE: Tees Harbour Office.
STORING: See "Prelims".

1. Yes.
2. Yes – no regulations concerning storing.
3. Yes.
4. Yes.
5. Normal standing regulations.
6. Yes.

IDENTIFICATION CARDS: Seaman's Book or Passport advisable.
GENERAL: *Charts:* B.A. Charts No. 2566 and 2567.
Tidal and Weather Information: Strong winds from the N.W. through N. to N.E. increases tides. The flood tide sets S.S.E. on the coast, therefore strong S.E. winds depress the heights of the tides.
Tidal Variations:

M.H.W.S.	5.05 m.	M.H.W.N.	4.01 m.
M.L.W.S.	0.75 m.	M.L.W.N.	1.75 m.

DEVELOPMENTS: Construction of New Irvines Quay to commence in April 1990 (See "Plan").
AUTHORITY: Tees and Hartlepool Port Authority – Hartlepool Docks, Middleton Road, Hartlepool, Cleveland TS24 0SE. *Tel:* Hartlepool (0429) 276771. *Telex:* 58669. *FAX:* (0429) 222291. *Contact:* N. Britton, Director. Captain A. Kirk, Dock Master.

HARWICH (Including Parkeston Quay and Navyard Wharf): 51.56 N. 01.15 E. (See Plan)

The Harbour Authority is the Harwich Haven Authority whose jurisdiction extends from the Shipwash Bank to the mouth of the River Orwell on one hand and as far up the River Stour as the tide flows on the other.

The Harbour Master's Office is at Navigation House, Angel Gate, Harwich (Tel: (0255) 243030. Telex: 987304), at which is based the Harwich Harbour Operations Service maintained on a 24 hour basis.

The Harbour Operations Service (Call sign "Harwich Harbour Radio") maintains a listening watch on Channel 16, and operates on Channel 71.

The service is equipped with surveillance radar, radar information is available on request.

British Rail, at Parkeston Quay, keep a 24 hour listening watch on Channel 16 and work on Channel 18.
DOCUMENTS:

1 Home Officer Form 1.B.6 may be obtained from H.M. Customs Boarding Officer.
1 C.142 Crew Declaration List.
1 Maritime Declaration of Health ("Q" Flag procedure).
2 Ship's Report by Master.
1 Stores List.
1 Certificate of Deck Cargo Tonnage (if carried).
1 Grain Certificate (if carried).
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List required by vessels other than packet vessels.
1 Landing Card for each passenger.
1 Ship's Certificate of Registry.
1 Mercantile Marine Office Certificate – for British vessels only.
1 Load Line Certificate.
1 Safety Equipment Certificate.
1 Lloyd's Certificate.
1 Derat Exemption Certificate.
1 Ship's Register.
1 Lights Bill.
1 Radio Safety Certificate.

In addition Manifests and Bills of Lading are usually sent to Agent direct from loading port.

Dangerous Goods: Notification is required to Harwich Harbour VTS 24 hours in advance of the vessel's arrival at the port. Notification may be made by the following means:
(1) By facsimile – Fax No. (0255) 241325.
(2) By telex – Telex No. 98472.
(3) By post/courier to: Harwich Haven Authority,
Harbour House,
Angel Gate,
Harwich,
Essex CO12 3EJ.
(4) By telephone – (0255) 243000 (24 hour number).
PILOTAGE: PROCEDURE AND INFORMATION ON ETAs/ETDs FOR SHIPS REQUIRING THE SERVICES OF AN AUTHORISED PILOT:
Arrival Notification: Ships bound for the Haven Ports of Harwich, Felixstowe, Ipswich and Mistley and requiring a Pilot, shall notify Harwich Operations Control, 8 hours in advance, giving the ETA at the Harwich Approach Buoy (Lat. 51° 56.4′ N., Long. 01° 31.2′ E.), gross tonnage, maximum draft, departure port and destination port.

Confirmation of ETA should be given at least 3 hours before arrival at Harwich Approach Buoy.

Failure to provide the ETA and subsequent confirmation could result in delay to the ship.

In the case of a ship engaged in the short sea trade, the initial ETA may be passed at the time of leaving the last port of call, if passage time is less than 8 hours.

A ship having complied with the above conditions and then having anchored before embarking a Pilot must give Harwich Operations Control adequate notice of requiring the services of a Pilot. Failure to give such notice could result in delay to the ship.

Requests from inward-bound ships for the services of a Pilot for the Rivers Blackwater, Colne, Crouch or Roach may also be passed though Harwich Operations Control.
Departure Notification: Outward-bound ships, or ships moving within the compulsory Area, which require the services of a Pilot, shall give at least 2 hours' notice of their Estimated Time of Departure.
Boarding and Landing Arrangements: The pilot boarding point for inward bound ships will be within the voluntary pilotage area, such that the Pilot is boarded in good time before entering the Compulsory Area.

The boarding position will be agreed with Harwich Operations Control, having due regard to the size and draft of the ship and the prevailing circumstances.

The normal boarding point will be in the vicinity of the Harwich Approach Buoy, but deep-draft ships may, by arrangement, board their pilots near the Sunk Light Vessel or the Mid-Bawdsey Buoy, depending on their point of entry into the Compulsory Area.

Boarding and landing will take place from pilot launches operating from Harwich Harbour. The launches will have the word "HAVEN PILOTS" on the side of the wheelhouse, fly the pilot flag by day and, at night, exhibit lights and signals in accordance with Rule 29 of the International Regulations for Preventing Collisions at Sea.

If the pilot launch is unable to operate in the normal locations due to stress of weather, or other unforeseen circumstances, alternative arrangements will be advised by Harwich Operations Control.
GEOGRAPHICAL LIMITS OF THE HAVEN PORTS PILOTAGE AREA (THE COMPULSORY AREA):
The area bounded by the following limits:

(a) As much of the River Orwell as lies below Ipswich Dock.
(b) As far up the River Stour as the tide flows.
(c) To seaward of Landguard Point, the area bounded as follows:
    (i) In an Easterly direction as far as 01° 24′ E.
    (ii) In a Southerly direction as far as 51° 54.5′ N.
    (iii) In a Northerly direction as far as 51° 57.4′ N.

Voluntary Pilotage: The Board will provide pilotage upon request in the area to seaward of the Compulsory Area as far as a line drawn between the following points:

(a) Bawdsey Cliff – Lat. 52° 00′ N., Long. 01° 26′ E.
(b) Lat. 52° 00′ N., Long. 01° 41′ E.
(c) Lat. 51° 49′ N., Long. 01° 41′ E.
(d) Lat. 51° 49′ N., Long. 01° 15′ E.

APPROACHES: Traffic Regulatory System in effect.
ANCHORAGES:

Erwarton: Situated to the North and West of Parkeston Quay with an average depth of 5.5 m. at LW.

Parkeston: Situated to the North of Parkeston Quay, with an average depth of 5.5 m. at LW.

Shelf: Situated on the Western side of the main Channel between the North and South Shelf Buoys. Average depth of 3.7 m. at LW.

Inner: Situated at the Pitching Ground. Average depth 8.0 m. at LW.

Cork: Situated to the North of the Harwich Channel. Area approx. 2 miles×1 mile. Average depth 6.5 m.
RESTRICTIONS: Normal max. draft allowed alongside the berths at Parkeston Quay is 26 ft.

Normal cargo working at Parkeston Quay ceases at 2200 hrs., but berthing and night work by arrangement at any time.
MAX. SIZE: Normal max. permissible length 500 ft. Arrangements for larger vessels can be made. Normal max. permissible breadth for Roll-on/Roll-off is 75 ft. Normal max. permissible draft – 20 ft. The height of the tide does not restrict a vessel berthing alongside the quay if her draft is within 20 ft.
HEALTH: Maritime Declaration of Health required ("Q" Flag procedure). Obtain Pratique through H.M. Customs Boarding Officer if no sickness on board.

If there is sickness on board the Customs Official will notify the Duty Port Medical Officer.

If the vessel is from another port in the U.K. Pratique is automatic.

Also see "Health – All Ports" before first U.K. port.
RADIO: North Foreland Radio (call sign GNF) or Humber Radio (call sign GKZ) are the most convenient stations to pass ETA cables, etc., to Agents or receivers

VHF: *Port Operations:*

VHF:	Channel 16	Safety.
	Channel 9	Pilotage and ETAs.
	Channel 71	VTS and Reporting.
	Channel 6	Pilot Launches.
	Channel 69	Tugs.
	Channel 20	Harwich Radar Assistance.
	Channel 11	Harbour Craft.
Telephone:	0255 243000	Harbour Operations.
	0255 243111	Pilot Orders.
Telex:	98472 HAROPS G.	
Fax:	0255 241325	

Dangerous substances in Harbour Areas notifications should be sent by telex or fax 24 hours prior to arrival or at time of leaving last port.

TUGS: 6 tugs are available in Harwich Harbour for use in the area. M.T. "Alfred", M.T. "Brightwell", M.T. "Crosby", M.T. "Ganges" and M.T. "Victoria" 40 tons bollard pull and M.T. "Egerton", 18 tons bollard pull. Tugs' lines usually used.

24-hour service, 7 days per week. Constant watch on Channel 16 VHF. Additional tugs up to 2,250 h.p. can be obtained from London at 24 hours' notice.

BERTHING: There are 8 berths at Parkeston Quay, of which 2 are Portal Ro-Ro berths and 2 Pontoon Ro-Ro berths. Normally max. draft permissible alongside is 20 ft.

Berthing, etc., by arrangement. Applications for berths must be made through the Shipping or Port Manager, British Rail, Parkeston Quay, giving as much advance notice as possible. Also see "Navyard, Harwich" before "Authority".

STEVEDORES: All labour at Parkeston Quay are members of National Union of Railwaymen, and arrangements for their use must be made through the Shipping and Port Manager, British Rail, Parkeston Quay.

MEDICAL: Prior notice through British Rail, Parkeston Quay, desirable to arrange attention. All services are available.

TANKERS: A berth is available for tankers for the purpose of discharging and loading to the local oil refinery.

DENSITY: 1025 (sea water).

FRESH WATER: Fresh water can be supplied from quayside hydrants.

FUEL: Can be arranged by either barge or road tanker.

CONSULS: Dutch, German F.R., Danish, Belgian.

REPAIRS: Minor repairs can be carried out by British Rail workshops at Parkeston Quay. As much advance notice as possible required.

GANGWAY/DECK WATCHMEN: Watchmen are not provided or required by the port, but ships may use their own watchmen.

OPENING/CLOSING HATCHES: To be carried out by ship's crew.

CARGO GEAR: There are 2 transporter cranes, 30 tons SWL and 4×30 ton Goliath rubber tyred gantries. A 35 ton gantry crane is available at Parkeston Quay.

REPATRIATION: All facilities available.

AIRPORT: Nearest is Ipswich, 22 miles; Southend, 70 miles.

HOLIDAYS: All normal Bank Holidays. Only passengers and car travellers are dealt with at Parkeston Quay on these days. Freightliners sail only if loaded before the holiday. Train ferries operate normal services.

POLICE/FIRE/AMBULANCE: Dial 999 and ask for service required.

TELEPHONES: Arrangements can be made, with advance notice given.

SHIP SUPPLY SERVICE:

The Alexandra Towing Co. (Felixstowe) Ltd., The Dock Office, Felixstowe Dock, Felixstowe, Suffolk.

Felixarc Marine, Felixstowe Dock, Felixstowe, Suffolk.

Orwell & Harwich Navigation Co., The Quay, Harwich, Essex.

IDENTIFICATION CARDS: Seaman's Identity Cards sufficient.

DEVELOPMENTS: Eastern end of Parkeston Quay to be lengthened in due course to provide more container berths.

NAVYARD, HARWICH:

Operators: Harwich Dock Co. Ltd. Telephone: Harwich 241341. Telex: 98229. Listens on VHF Channel 16, working Channel 22.

Berths:

Berth No. 1: Length 42 m.
Berth No. 3: Length 160 m., depth 8.6 m.
Berth No. 4: Length 90 m., depth 4.5 m.
Berth No. 5: Length 160 m., depth 6.5 m.
(Berths 3, 4 and 5 equipped with Ro/Ro ramps).

Stevedores:

All labour at Navyard is employed by Harwich Dock Co. Ltd. Berths and labour must be booked through Operations Manager (24 hour service available).

Cargo Equipment:

2 Ransome Rapier NCK 60 mobile cranes – capacity 35 tonnes.

Other equipment includes 14 tugmasters, 10 forklifts to 25 tonnes.

Other Services:

Telephones, fresh water, bunkers, medical services can all be arranged. Harwich Dock Company Ltd., provides ships and goods agency services at this and other ports.

AUTHORITY: Harwich Haven Authority, Navigation House, Angel Gate, Harwich CO12 3EJ. *Tel:* (0255) Harwich 243303. *Telex:* 987304. *FAX:* (0255) 240933. *Contact:* Captain R. W. Shaw, Harbour Master.

HEYSHAM: 54.02 N. 02.55 W. (See Plan)

DOCUMENTS: As for other British ports plus Walney Light Dues.

PILOTAGE: Heysham Pilots. Compulsory for all vessels over 50 m LOA.

ANCHORAGES: Heysham Lake. 0.5 mile W.N.W. of No. 1 Buoy. Position: Lat. 53° 59.6′ N., Long. 3° 00.0′ W. Depth: 40 ft. at LW.

RESTRICTIONS: Entry possible at all states of tide. Harbour maintained at 4.1 m. below Admiralty chart datum of chart No. 2010.

MAX. SIZE: 525 ft. (160 m.) length, draft 17 ft.

HEALTH: See "Health – All Ports" before first UK port.

RADIO: Heysham Harbour Radio, VHF Channels 16, 14 and 74.

TUGS: None available.

BERTHING: Vessels may be berthed at any time. 1 Ro/Ro ramp, 1 berth exclusively for gas base, 1 general cargo berth North Quay, 2 general cargo berths South Quay and 1 berth West Quay.

CRANES: 1×30 ton portal crane on North Quay; 1×23 tonne portal crane, 4×7.5 ton portal cranes and 1×10 tonnes on South Quay.

DENSITY: Salt water.

FRESH WATER: Available from the quays.

FUEL: Gas oil by road vehicle.

REPAIRS: Small repairs possible, no docking facilities.

GANGWAY/DECK WATCHMEN: Ship's watchmen required.

AIRPORT: Nearest, Liverpool and Manchester; 60 miles.

PROVISIONS: Available locally.

POLICE/AMBULANCE/FIRE: Telephone 999 in emergency.

SHORE LEAVE: No restrictions on landing.

AUTHORITY: Heysham Port Ltd., Heysham, Lancs. LA3 2XF. Tel Heysham (0524) 852373, 852284. *Telex:* 65260. *FAX:* (0524) 853301. *Contact:* Captain P.A.Read, Port Manager. P.L.Fenton, General Manager.

HOLYHEAD: 53.19 N. 04.41 W. (See Plan)

DOCUMENTS:

1 Crew List and where applicable a Passenger List.
1 Pratique issued by Customs.
1 Crew Declaration (C.142 for H.M. Customs).
1 List of Consumable Stores (tobacco, snuff, alcohol).
1 Declaration of Health.
1 Cargo Manifest.
1 Ship's Report.

PILOTAGE: Pilotage compulsory under Sealink Harbours Holyhead Authority. Local Pilot available on request.

ANCHORAGES – PROHIBITED ANCHORAGE: The breakwater affords partial shelter to the outer anchorage and complete protection to New Harbour; there are depths of up to 12.0 m. in the former and of up to 12.0 m. in the latter.

The accommodation for vessels of deep draft in New Harbour is limited. Small vessels should always proceed into New Harbour and anchor in the S.W. part, leaving the outer part and the roadstead for large vessels. The bottom is hard, overlaid with mud but the holding ground is sufficiently good if an adequate amount of cable is veered. During Easterly winds an uncomfortable sea is raised; vessels may then obtain shelter in the Eastern part of outer anchorage. Anchorage is prohibited within 1.5 cables on either side of the track followed by Passenger Ferries from the head of the breakwater to the entrance to Old Harbour; the limits of this area are shown on charts.

MAX. SIZE:

Inner Harbour: Restricted to vessels of 4.5 m. draft and vessels exceeding this draft will only be accepted after consultation with the Port Manager or Harbour Master.

New Harbour: Vessels of approximately 60,000 tons can be accepted alongside the Anglesey Aluminium Jetty where the berth is dredged to 13.5 m. at L.A.T.

Ro-Ro vessels up to 150 m. length and 7.0 m. draft accepted.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Holyhead Radio, VHF Channel 16, No Port Radar.

TUGS: Available through Agents. Tugs up to 1,375 h.p.

BERTHING: By prior arrangement with the Port Manager.

Ferry Ramps and Services: There are 2 berths available in the port which are used by Sealink Multi-purpose (Car and Ro/Ro traffic) ferries. The main one is termed the 'Station Berth' and as its name implies is an integral part of the rail station complex offering quick and easy rail ship interchange with all the necessary H.M. Customs, passenger waiting and ticket checking facilities. Two mechanical gangways are available. A similar berth is available at Salt Island (Admiralty Pier) with again passenger waiting and H.M. Customs clearance facilities available on the spot. Transfer for rail passengers can be made by connecting coaches.

	Station Berth	*Salt Island Berth*
Maximum length of ship accepted	130 m.	140 m.
Datum depth of water available	4.6 m.	4.6 m.
Ramp width	3.4 m.	3.0 m.
Maximum weight of vehicles over ramp	40 tonnes	30 tonnes
Maximum width of vehicles at ramp	3.7 m.	3.5 m.

General Cargo Handling: General Cargo berth is heavily used for exports of Aluminium ingots, steel, powdered chemicals and various other commodities. Imports include fertiliser, timber and steel. Staff are available to handle ship at all times with prior arrangement.

Cranage facilities on offer include:–

73 ton rough terrain road mobile.
Mobile 25 ton crane.
11 ton yard crane.

Cranes are usually hired out including drivers.

Quotes supplied upon request.

One or two mobile cranes, together with a fleet of fork lift trucks and other handling equipment are available. There is ample storage space available as a back up to this berth, and if necessary, covered storage can be provided in the 'Pontoon House' with 2,000 cu.m. capacity.

Length of berth	170 m.	(total quayage)
Depth of water available	4.4 m.	datum

CONTAINER HANDLING FACILITIES:

Sealink Container Terminal berth is used by Sealink Container Shipping Services to Dublin and Belfast. There is, however, spare capacity for other operators' ships and services. A regular twice weekly service has been operated by the Ford Motor Company between Holyhead and Cork for example. In addition Sealink have handled over 70 other Container ships for lines such as OCL, DART and CAST.

Sealink have 2×30 ton Wellman Transporter cranes for ship to shore movements and 2×30 ton Goliath cranes for rail to road transfer. The storage capacity of the Terminal is around 600 TEUs. Customs clearance is available on the spot, serviced by Sealink. Sealink's own fleet of lorries and trailers feed the cranes and ship discharge/loading rates of over 30 containers per hour are normal.

Daily Freightliner services operate to Manchester, Birmingham, London, Cardiff, Liverpool and Felixstowe. Special train movements can be arranged as required. Alternatively, road movements can be accepted or arranged.

Length of berth	135 m.
Datum depth of water available	4.8 m.

STEVEDORES: No stevedores. Vessels loaded and discharged by Sealink dock porters. Outside vessels berthing at Public Quay can be discharged and loaded by making prior arrangements with Agent.

MEDICAL: Medical Officer available. Stanley Sailors Hospital situated in close proximity to Harbour.

DENSITY: Salt water (1025).

FRESH WATER: Available at all berths within the Inner Harbour and alongside Anglesey Aluminium Jetty.

FUEL: Fuel oil and diesel oil available provided that adequate warning is given to Agent. Only 1 berth available for bunkering of large vessels of deep draft alongside Anglesey Aluminium Jetty.

Prior arrangements must be made with Sealink Harbours Ltd. in conjunction with Anglesey Aluminium Metals Ltd., telephone Holyhead 3333.

No oiling barge available for bunkering vessels at anchor.

GANGWAY/DECK WATCHMEN: Required at all times when vessels are in port.

REPAIRS: Repairs can be carried out by Sealink Harbours Ltd. workshops.

DRY DOCK: Closed until further notice. Length 124 m., breadth 20.5 m., depth on sill 6.0 m. at Spring tides.

SURVEYORS: Cargo Inspectors can be contacted, if required.

Surveyors representing Lloyd's Register, Bureau Veritas, etc., can be contacted on request.

AIRPORT: RAF Station Valley, Anglesey (6 miles away).

HOLIDAYS: Saturdays, Sundays and all Public holidays.

POLICE/AMBULANCE/FIRE: Tel. 999.

EMERGENCY CO-ORDINATION CENTRE: Maritime Rescue Sub-Centre, Coastguard. Tel: 0407-2051.

TELEPHONES: No telephone connection for outside vessels. Public telephone within port limits.

SERVICES: Compass adjusting can be arranged. Agency can be arranged through Port Authority.

BANKS: British banks only available in the Holyhead area, exchange facilities are provided.

STORING: See "Prelims".

1. Vessels can be stored by barge or truck, usually by truck.
2. Vessels can be stored during loading or discharging.
3. Trucks can proceed alongside at the berth.
4. Forklift trucks can be used to handle stores.
5. Customs Regulations, where applicable, in force.
6. Local riggers can be employed, if necessary.

SHORE LEAVE: Allowed.

AUTHORITY: Sealink Harbours Limited, Sealink House, Turkey Shore Road, Holyhead, Gwynedd LL65 2DD. *Tel:* (0407) 50421. FAX: (0407) 5118. *Telex:* 61283. *Contact:* T.M. Rielly, Port Manager. D.E. Ing, Harbour Master. R. Parry, Operations Manager. D.M.E. Lindsay, Container Terminal Manager.

HOUND POINT: 56.00 N. 03.22 W. (See Plan)

LOCATION: The terminal is operated by B.P.

Position of terminal Lat. 56° 00′ 20″ N., Long. 03° 21′ 45″ W.

DOCUMENTS:

1 Crew List.
1 Passenger List.
1 Crew's Effects List.
1 Stores List.
All valid Certificates.

PILOTAGE: Pilotage in Firth of Forth is compulsory. Contact "Forth Pilot" VHF Channel 16. Pilot boards large vessels in vicinity of Fairway Buoy 56° 03.5′ N., 03° 00′ W. as there is limited depth and manoeuvring space at normal Pilot boarding ground East of Inchkeith. For large vessels in ballast, Pilots require gangway/pilot ladder combination rig.

ANCHORAGE: When vessel has to wait for Pilot, berth or tide, "Forth Navigation Service" will assign anchorage. These anchorages are in a line E.S.E. to S.W. of Fairway Buoy. Good holding ground at anchorages.

RESTRICTIONS: Vessels will be berthed at slack water – flood or ebb – only. The same in most cases for unberthing.

MAX. SIZE: Vessels up to 300,000 d.w.t. can berth at Hound Point Terminal with no defined restriction on LOA. Vessels berth starboard side alongside, heading East.

Max. permitted loading draft 20.72 m. (Neap tides) 21.64 m. (Spring tides). Minimum depth alongside terminal 25.0 m.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: *Arrival advice:* For advance notice refer to Charterer's instructions.

RADAR/VHF: Estuary radar service. VHF contact can be made with Forth Navigation Service Channel 71, working Channels 20 and 12. Hound Point Terminal operates VHF Channel 9; B.P. Grangemouth VHF Channel 16 (calling) and Channel 19.

TUGS: 4 tugs of 35 tonnes bollard pull available. Tugs ropes are used.

BERTHING: Hound Point Terminal (leased and operated by British Petroleum) is a Sea Island in the Firth of Forth about 13 miles from Fairway Buoy. The approach channel from Fairway Buoy to berth is marked by buoys and has a guaranteed minimum depth of 66 ft. at LWST.

Maximum of 4 loading arms of 16 in. available for deballasting and/or loading. Loading rate about 8,000 t.p.h. by gravity and with 2 arms connected. This rate decreases as tank level drops.

When 4 arms are connected loading rate can be as high as 18,000 t.p.h. by means of booster pumps.

Facilities to receive any amount of dirty ballast are available. Discharge through 16 in. loading arms into 24 in. line with minimum of 5 kg./sq.cm. back pressure.

No need to prepare ship's derricks unless stores are taken on board. API of cargo about 36.7.

Berthing and Unberthing: The number of tugs employed will vary according to the size of the vessel and the prevailing weather conditions. Under normal conditions tankers in excess of 120,000 d.w.t. will use 4 tugs berthing and 2 tugs unberthing and ships of less than 120,000 d.w.t. will use 2 – 3 tugs berthing and 2 unberthing.

Berthing is undertaken during daylight or darkness at LWS and in normal circumstances vessels will berth heading East.

Minimum acceptable visibility for berthing and unberthing is 1 mile.

Berthing will not be attempted if the wind is in excess of 20 knots (Force 5) blowing onto or off the berth from a direction up to 45° either side of a line at right angles to the longitudinal axis of the berth, or if in excess of 30 knots (Force 7) from any other direction.

Berthing will not be attempted if the current is in excess of 1 knot, and a similar 1 knot flood limit applies to the unberthing of vessels if berthed heading West. The unberthing of vessels in excess of 54 ft. draft will also be restricted by the tidal rise, otherwise, any other limit conditions will be assessed at the time of unberthing, the controlling depth being 19.2 m. (65 ft.) in the Approach Channel.

Approach to the berth is made after having stopped some 200 m. off and parallel to the berthing line. Normal practice is for tugs to swing the vessel in this position prior to berthing starboard side to.

Speed of approach equipment is provided to assist in ensuring a safe speed during the final breasting in manoeuvre. The equipment operates a display panel which indicates the distance each end of the vessel is off the berthing fenders by means of 2 white bar lights which diminish in length as the vessel approaches. Speed of approach for each end of the vessel is indicated by 2 "traffic light" systems which show:

Flashing Red – dangerous speed, 8 cm./sec. and above.
Flashing Amber – marginally safe speed, 5 – 8 cm./sec.
Steady Green – safe speed, 5 cm./sec. and below.

A stand-by fire tug on 15 minutes notice will remain in attendance at the specially provided buoy mooring while the berth is occupied.

Safe Mooring Guidelines: The following table shows recommended mooring layouts:

200,000 – 300,000 d.w.t.
- 4 head/breast lines.
- 4 stern/breast lines.
- 2 spring lines forward and aft.

100,000 d.w.t.
- 2 head and stern lines.
- 2 breast lines forward and aft.
- 2 spring lines forward and aft.

50,000 d.w.t.
- 2 head and stern lines.
- 2 breast lines forward and aft.
- 1 spring line forward and aft.

These layouts do not include synthetic first lines ashore used for manoeuvring vessels equipped with wire mooring systems into position.

The attention of the Master is particularly directed to the following:

(a) Shore moorings are available from each of the mooring dolphins and it is strongly recommended that all vessels should make use of them. Shore moorings are also available from the outer breasting dolphins to supplement the ship's backsprings if required.

(b) Masters shall ensure that mooring lines are in good condition and free of visible defects. Winch brakes or securing devices should be in efficient operating order and should have a holding power at least 60% the breaking load of the mooring lines. A number of vessels are known to have mooring winches with brakes designed to yield as low as 25% of the mooring line breaking load, and this considerably reduces a vessel's mooring capability. It is therefore most important that the holding power of a vessel's mooring winch brakes is advised to the terminal, together with any known defects in a vessel's mooring equipment in order that possibly more limiting "Action Guidelines" may be agreed.

(c) If mixed moorings of wire and fibre lines are used it is important that due to the differing elasticity of these materials their use in the same direction of restraint should be avoided.

(d) As soon as a vessel is secured, brakes on all mooring winches must be firmly applied. Winches shall not be left on automatic tensioning. Full steam pressure must be maintained on deck and available to all mooring winches throughout the period the vessel is alongside. On split drum mooring winches only one layer of rope shall be permitted on the working half of the drum.

(e) An efficient watch must be maintained on the vessel's moorings (including any shore wires used) to ensure that all lines are properly tensioned and tended when required.

(f) The flow booms are vulnerable to damage should a vessel rang or move off the berth and it is essential that a vessel shall b held securely alongside throughout the period in the bert Particular care should be exercised to ensure sufficien transverse restraint from the breast line moorings.

(g) The terminal is entitled to stop operations and/or summon tug if it appears that a vessel's movement will endanger the flo booms, or in the absence of an alert and efficient deck watch.

(h) All vessels arriving at Hound Point in ballast should, in order t facilitate manoeuvring ability, have their propeller complete immersed. In addition to this requirement, vessels betwee 50,000 d.w.t. and 120,000 d.w.t. should be trimmed not exceedin 10 ft. by the stern, and vessels over 120,000 d.w.t. not exceedin 12 ft. by the stern.

(i) The ship's accommodation ladder is to be rigged on offshore side for use as a secondary means of escape in the event of a emergency at the terminal. The lower end of the ladder must b maintained about 5 ft. above sea level and adquately lit at nigh

(j) Displacement is not to exceed 150,000 tons.

DENSITY: 1020 – 1025.

FRESH WATER: Not available.

CONSULS: See "Leith".

TIME: GMT in Winter. GMT plus 1 hour in Summer.

GENERAL: Outside the Firth of Forth, clear of the land on the South side, streams are weak, spring rate up to 1 knot, but at spring tide th velocity at the terminal is up to 3.5 knots (Refer to Tidal Stream Atlas)

AUTHORITY: Forth Ports Authority, Port Office, Tower Place, Leith Edinburgh EH6 7DB. *Tel:* (031) 554 4343. *Telex:* 72681. *Cables* "Harbour Leith". *Contact:* Captain A. R. C. Childs, Chief Harbour Maste – Firth of Forth.

HULL: 53.44 N. 00.14 W. (See Plan)

VESSEL TRAFFIC SERVICES HUMBER:

The Humber Ports Operation and Information Service operates radar surveillance between Spurn and Humber Bridge, and VHF (FM) radio telephone service available to all vessels navigating the Rivers Humber, Ouse, and Trent from the Queen Elizabeth Dock.

A continuous watch is maintained on Channels 10, 12, 14, 16 and 52. The call sign is "VEE TEE ESS" Humber. The telephone number is Hull 0482 – 701787. Telegraphic address "Humberops". Telex: 597656. Fax: 0482-795221.

The Service provides information regarding the arrival, berthing, anchoring and departure of vessels and also information on navigational aids, navigation generally, visibility, and the safety of vessels and persons. Tidal information, including the height of tide at Spurn Pilot Jetty, Immingham, Hull, Humber Bridge, Blacktoft and Keadby, is also available on request. Messages of any other nature and messages of a personal character cannot and will not be accepted. Messages of this kind should be passed through the British Telecom Ships Telephone Service via "Grimsby Radio" on Channel 27.

Other VHF (FM) Stations situated on the River Humber and the Channels used are shown in the Appendix to this Notice. These Stations provide direct communication between a vessel and the Dock or Pier Master at the place of destination. In general, vessels should obtain their navigation and safety information from the Vessel Traffic Services Humber and their berthing, docking and other pre-arrival information from the Station serving their destination.

A general broadcast giving weather reports, tidal information and navigational warnings is made by the Vessel Traffic Services Humber on Channel 12 every 2 hours commencing at 0103 hrs., prior notification being given on Channel 16.

Procedure:

(i) Vessels fitted with appropriate VHF R/T equipment or approaching the Humber should set watch on Channel 16.

(ii) Vessels wishing to communicate with the pilot station should cal "Spurn Pilot" on Channel 16 and shift to Channel 14 for exchange of traffic.

(iii) On entering and before sailing or moving in the Humber, vessels should call "VEE TEE ESS" Humber on Channel 16. When contact is established they will be requested to transfer t Channel 12 for exchange of arrival or departure information Watch should then be resumed on Channel 16 and 12.

(iv) Vessels wishing to communicate with the Station serving their destination should do so at the appropriate time on the Channels shown in the Appendix, reporting their departure from Channe 12 to "VEE TEE ESS" Humber. Vessels are advised that, when communicating with these Stations, contact with the Vesse Traffic Services Humber can only be re-established throug Channels 16 and 12 and it is particularly advisable to maintain a listening watch on Channel 16 whenever practicable in the event of unforeseen circumstances developing in the River.

All times in messages should be given in local time using the 24 hou notation.

To achieve the full advantage of efficient communication, stric telephone discipline and attention to procedure, particularly on the Calling Channel, is imperative. The operating procedure should be i accordance with that laid down in Chapters VI and VII of the G.P.O Handbook for Radio Operators (1975 Edition, with Supplements).

These services will be offered and will be rendered on the conditio that neither the Associated British Ports, nor any of its servants o Agents, shall be liable to any person for loss or damage of any kind howsoever caused or arising whether as a result of negligence o otherwise or as a result of the non-availability of the services.

NOTICES:

GENERAL DIRECTIONS FOR NAVIGATION IN THE HUMBER: PROCEDURE AND INSTRUCTIONS FOR SHIPS USING THE RIVER HUMBER

1. *Time of arrival. ETA:*

1.1 Ship Owners, Masters and Agents are required to inform the Associated British Ports of the Estimated Time of Arrival of their vessels as per the General Directions together with relevant information regarding draft, air draft if proceeding under the Humber Bridge, EEC Check Lists, hazardous cargo, last port of call, nationality of vessel. In this context the Associated British Ports means the Dock Master at the particular port to which the vessel is bound, the Vessel Traffic Services Humber and the Pilot Office at Spurn. Reference British Transport Docks Board Notice to Mariners Nos. 2 and 3 of 1974.

1.2 Ship Owners or Agents are requested to inform the Masters of their vessels of the importance of amending ETA's as necessary due to changing circumstances. Such amendments can be passed to the Associated British Ports by radio through Grimsby Radio either in the form of a link call or telegram.

1.3 Within the Associated British Ports organisation Vessel Traffic Services Humber will disseminate relevant information received to all interested parties.

1.4 Within the river any message related to the movement and safety of vessels will be passed by Vessel Traffic Services Humber to the vessel concerned and Ship Owners and Agents may avail themselves of this service at any time.

2. *Time of Departure. ETD:*

2.1 In order to maintain a complete and up to the minute picture of traffic movement Dock Masters are requested to notify the Vessel Traffic Services Humber of the intended time and actual time of departure of vessels from their docks. This information should be passed by land line. Exchange of information thus engendered should ensure that all Officers of the Associated British Ports are fully informed of traffic movements. In the case of berths not under the jurisdiction of a Dock Master (e.g. wharves on the River Trent), requests for services of Pilots on Telex No. 527393 Spilot g duplicated to Telex No. 597656 Vtshumg.

3. *Navigation of the river:*

3.1 Vessels entering the river should communicate with the Vessel Traffic Services Humber (VHF Channels 16 and 12). A two way exchange of information is essential to ensure the smooth flow of traffic on the Humber necessary for the safety of vessels using the ports. In addition the Vessel Traffic Services Humber can fully advise Owners, Agents and Dock Masters, etc., as to the movement on the river of the vessels in which they are interested. Vessels approaching their destinations desirous of communication with the station serving their destination should do so as per the instructions in Notice to Mariners No. 3 of 1974.

4. *Completion of passage or departure from river:*

4.1 Inward bound vessels should on completion of their passage report to Vessel Traffic Services Humber indicating the closing down of their station. R/T should not be used whilst laid alongside in dock.

4.2 On departure from the river vessels are requested to report the disembarking of their Pilots and their intention of proceeding to sea.

4.3 All reported departures from normal traffic movement (e.g. engine failures, vessels weather bound at Spurn etc.), will be disseminated by the Vessel Traffic Services Humber to the appropriate authorities.

DOCUMENTS:

1 Maritime Declaration of Health.
1 Crew's Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing card for each passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British Ships only.
Load Line Certificate.
Safety Equipment Certificate.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.
EEC Check List.

In addition Manifests and Bills of Lading are usually sent to Agents direct from the loading port.

PILOTAGE: Compulsory. *Humber Pilotage District – Spurn Pilot Station:* Mariners are advised that the Pilotage Control Station (Tel: 0964-650392; Telex: 527393 Spilot G) is established on the Spurn Peninsula in a position Lat. 53° 34′ 29″ N., Long. 00° 06′ 48″ E.

The station is manned at all times with a Pilot Master in attendance and vessels bound to the Humber requiring the services of Humber Pilots must give advance notice by signal through a G.P.O. Coast Station or by telex to the Spurn Pilot Station giving ETA at the seaward limits of the Humber Pilotage District, draft, and destination at least 12 hours in advance. Any adjustment to the time should be given at least 2 hours before arrival.

Vessels wishing to communicate direct with the Spurn Pilot Station by VHF radiotelephony may if within VHF range (approximately 20 miles) call "Spurn Pilot" on VHF Channel 16 and after contact transfer to Channel 14 for passing messages.

(Note: Attempts to establish communication on VHF at extreme range can cause unnecessary interference).

All requests for Pilots for ports or berths on the Humber, Ouse or Trent will be processed from Pilotage Control Station at Spurn (Telex: 527393 Spilot G. Tel: 0964-650392).

Compliance with this procedure will ensure, as far as possible, the shipping of Pilots without delay.

ANCHORAGES: The undermentioned anchorages have been designated for the use of sea-going vessels. Masters are asked to co-operate by using these anchorages and to avoid anchoring in the Fairway or elsewhere.

Spurn Anchorage for vessels awaiting Pilot, Bull Anchorage for vessels awaiting berth and vessels outward (awaiting orders, etc.), Hawk Anchorage for small vessels and vessels sheltering and Haile Anchorage for vessels carrying explosives.

Spurn Anchorage. From position "A" 121° distant 3.65 miles from Spurn Lighthouse, in a 125° direction 1.60 miles; thence in a 020° direction 0.60 mile; thence in a 077° direction 1.00 mile; thence in a 347° direction 0.70 mile; and thence in a 257° direction 2.40 miles to position "A".

Haile Anchorage: (Explosives): From position A, 216° distant 2.18 miles from Spurn High Lighthouse in a 284° direction 0.77 mile; thence in a 139° direction 0.80 mile; and thence in a 027° direction 0.46 mile to position A.

Bull Anchorage: From Position "A", 193° distance 2.1 miles from Spurn High Lighthouse, in a 090° direction 1.96 miles thence in a 294° direction 1.76 miles, thence in a 274° direction 0.93 miles, thence in a 206° direction 1.0 miles, thence in a 116° direction 0.88 miles, thence in a 026° direction 0.55 miles to Position "A".

Hawk Anchorage:

(1) Lat. 53° 35′ 00″ N., Long. 00° 04′ 14″ E.
(2) Lat. 53° 36′ 16″ N., Long. 00° 01′ 33″ E.
(3) Lat. 53° 36′09″ N., Long. 00° 00′ 52″ W.
(4) Lat. 53° 34′ 51″ N., Long. 00° 04′ 02″ E.

RESTRICTIONS: Vessels may be accepted through the day and night, the only restrictions on the larger vessels being influence of tides together with the undermentioned physical limitations. The larger deep drafted vessels are usually docked from 3 hours before HW until HW, with similar restrictions on vessels sailing. Ships drawing up to 19 ft. can have access to the docks over the full 24 hours on Neap tides and can be docked/undocked over an 18 hour period on Spring tides.

Locks	*Entrance lock*		*Depth of water on sill*	
	Length	*Width*	*at MHWS*	*at MHWN*
	321m.	m.	m.	m.
King George Dock	228	25.7	12.75	11.25
Albert and William Wright Docks	97	24.3	8.52	7.02
			at MLWS	
Salt End Jetty Number 1	tidal		10.64	
Salt End Jetty Number 3	tidal		10.64	
Alexandra Dock	167	25.7	10.20	8.70

MAX. SIZE: The maximum permissible dimensions for a general cargo/bulk carrier vessel (excluding tankers) requiring a berth in the enclosed docks are as follows: King George & Queen Elizabeth Docks, length 196 m., beam 25.5 m., draft 9.5 m. at Neaps, up to 10.4 m. at Springs.

A vessel of LOA 222 m. recently entered King George Dock by special arrangement.

HEALTH: Pratique is normally automatic. In case of suspected illness, death on board or the presence of captive birds or animals on board, Master must radio the Hull and Goole Port Health Authority through the Post Office or Coastal Radio Stations not more than 12 hours or less than 4 hours before arrival using the following telegraphic address "Portealth Hull" or through the Vessel Traffic Services Humber using call sign "Vee Tee Ess" Humber on VHF Radio Channel 12. The usual flag or light signals should be shown except where only animals are present and Free Pratique should be obtained from the Hull and Goole Port Health Authority.

RADIO: Portishead Radio – call sign GKL but when within 200 miles of the Humber can go through Grimsby Radio – call sign GKZ.

VHF: See "Vessel Traffic Services Humber".

TUGS: Head boat normally joins vessel in vicinity of Salt End, about 2 miles from dock, and the other tug or tugs connect with vessel when approaching the dock. Where vessel supplies own ropes for towage these to be good stout hawsers. Wire ropes will not be accepted. There is a charge for use of tug's hawsers.

BERTHING:

Dock or Jetty	*Length of Operational Quays* (m.)	*Normal Depth* (m.)	
Alexander Dock	4,082	6.5	Tidal
King George	3,423	11.5	Impounded
Queen Elizabeth	1,646	11.5	
Albert and William Wright	3,453	HW	
Salt End Jetty No. 1	79	9.8	At C.D. which is at L.A.T.
Salt End Jetty No. 2	121	9.8	
Riverside Quay	325	4.8	

CONTAINER FACILITIES: Container terminal at Queen Elizabeth Dock equipped with 3 container gantry cranes of 35 tonnes, 40 tonnes and 45 tonnes capacity, 5 rubber-tyred gantries and a fleet of tractors and trailers.

Ro/Ro container services operated from King George and Queen Elizabeth Docks.

BULK HANDLING FACILITIES: Cargill UK operate a grain storage and export facility for vessels up to 34,000 d.w.t. Loading rate 1,200 tonnes/h. Storage capacity 60,000 tonnes. The facility can handle vessels with length 650 ft., beam 83 ft. and draft 32 ft.

Edible oil storage available.

CRANES: 41×3-10 tonnes, 2×32 tonnes and 1×35 tonnes capacity.

STEVEDORES: Enable Agent order gangs important receive accurate ETA. See "Holidays".

Working hours: 24 hours a day.

MEDICAL: Necessary for Agents to be advised of any urgent cases of illness in order that they can arrange for a doctor or if necessary an ambulance to be available immediately on berthing. Hospital facilities available.

If vessel required to remain in river awaiting berth, arrangements can be made for any serious case to be taken from vessel by lifeboat and conveyed to Grimsby for immediate treatment.

TANKERS: The Oil terminal at Salt End handles refined or semi-refined chemical, liquefied ammonia and petroleum products which are transferred from the vessel along the oil jetties through a series of chemical and service pipes which range from 4 in. for chemicals, 8 in. and 12 in. for spirit, 16 in. for fuel oils and molasses and 8 in. (300 ASA) for ammonia.

There are 2 tanker berths at Salt End and maximum dimensions of vessels are length 214 m., draft 10.4 m. Max. size 40,000 d.w.t.

Berthing Operations: Vessels normally berth on a rising tide from 2.5 hours before HW, swinging off berth and mooring port side to jetty. Late arrivals may be taken on up to 1 hour after HW, berthing starboard side to jetty but this is subject to tidal and weather conditions prevailing at time.

Moorings are to dolphins and buoys and normally consist of a minimum 2 head lines (to buoys), 2 stern lines (to dolphins), 2 breast lines forward (to buoys), 2 breast lines aft (to dolphins), 2 springs forward (to jetty), 2 springs aft (to jetty).

Cargo Handling and Requirements: Ship's derricks are needed to assist in hose connection. Shore hoses have 6 in., 8 in. and 10 in. 150 ASA flanges.

Discharge rates are governed by a maximum back pressure of 7 kg. (100 p.s.i.).

Facilities and Services:

Fresh water available.

Ship's gangway required.

Public telephone situated at jetty head.

No deballast or slop facilities are available.

Unberthing: Normally up to one hour either side of HW or LW slack.

DENSITY: 1013/1015.

FRESH WATER: King George and Queen Elizabeth Docks. Rate of delivery – 15 t.p.h. Also available at Salt End if berth vacant, at 50 t.p.h.

At Albert Dock water is delivered by water boat.

If water required urgently after 1700 hrs. weekdays or on Saturdays or Sundays Agents must be notified in good time to enable them order men out.

FUEL: Fuel oil available, viscosity up to 3,500 secs. Redwood. Gas oil and diesel also available. At least 24 hours notice required. Delivered by barge or road tanker.

FIRE PRECAUTIONS: Masters receive an emergency services dock plan with an explanatory leaflet.

CONSULS:

REPAIRS: Facilities available for all types of deck and engine repai

DRY DOCKS:

Wm. Wright Dock.

Net length	137.0 m.
Width at cope level	25.9 m.
Width at entrance.	15.2 m.
Depth of water on sill MHWS	6.6 m.
Depth of water on sill MHWN	5.1 m.

GANGWAY/DECK WATCHMEN: Watchmen available if required b Master.

OPENING/CLOSING HATCHES: Can be carried out by stevedore when ordered. Ship charged with actual cost, but ship's crew may d so if required.

CUSTOMS ALLOWANCES: Foreign trade – max. allowance 0.5 l cigarettes or cigars or tobacco. Home Trade – (Elbe/Brest limits) hal the above. Wine and/or Spirits. Foreign Trade – 1 pint – opened. Home Trade – (Elbe/Brest limits) half the above allowance.

CARGO GEAR: When working with ship's gear a Register of Machiner Chains and Wire Ropes, etc., with all Test Certificates and record o inspections to be produced to the stevedores before work commence

REPATRIATION: Crew changes can be effected and repatriatio arranged by sea or air.

AIRPORT: Humberside Airport. Air UK operate flights to Aberdee Amsterdam, Bergen, Norwich, Stavanger and Teesside.

TIME: BST (British Standard Time) GMT plus 1 hour, GMT during winte months.

HOLIDAYS: New Year's Day; Good Friday (movable Holiday); Easte Monday (movable Holiday); May Day (1st Monday after May 1st.); Sprin Holiday (last Monday in May); Bank Holiday (last Monday in August Christmas Day (25th December); Boxing Day (26th December).

POLICE/AMBULANCE/FIRE: Emergency Calls – Police – Fire – Ambulance – Coastguard – Dial 999 and ask the operator for the servic required, or by VHF Channels 16 or 12 to VTS Humber.

TELEPHONES: Can be placed on board at the majority of berths i King George and Queen Elizabeth Docks.

SERVICES: Tank cleaning, facilities for discharge of tank washings sl (residue), compass adjusting, etc., available.

SHORE LEAVE: Crew members allowed ashore.

DEVELOPMENTS: The Alexandra Dock, which closed in 1982, is to re open in July 1991 to cater for increased trade using the port.

Parliamentary powers have also been granted allowing A.B.P. t construct 3 riverside Ro/Ro berths adjacent to King George and Quee Elizabeth Docks.

PILOTAGE: Compulsory.

Humber Pilotage District – Spurn Pilot Station: A Pilotage Contr Station (Tel. No. 096–46–392; Telex No. 527393) is established on th Spurn Peninsula in a position Lat. 53° 34′ 29″ N., Long. 00° 06′ 48″ E

The station is manned at all times with a Pilot Master in attendan and vessels bound to the Humber requiring the services of Humber Pil must give advance notice by signal through a Coast Station to the Spu Pilot Station giving ETA at the seaward limits of the Humber Pilota District, draft, and destination at least 12 hours in advance. An adjustment to the time should be given at least 2 hours before arriva

Vessels wishing to communicate direct with the Spurn Pilot Statio by VHF radio telephony may if within VHF range (approximat 20 miles) call "Spurn Pilot" on VHF Channel 16 and after contact transf to Channel 14 for passing messages.

(Note: Attempts to establish communication on VHF at extreme rang can cause unnecessary interference).

Inward vessels bound for ports up river of Hull desiring to pick up Goole or Trent Pilot in Hull Roads should give at least two hours advan notice of their ETA in Hull Roads to the Vessel Traffic Services Humbe on VHF Channels 16 or 12 or through a Coast Station (telegra address "Humberops") or by telex No. 527656.

Compliance with this procedure will ensure, as far as possible, th shipping of Pilots without delay.

ANCHORAGES: "Hawk", "Bull" and "Haile Explosives Anchorage".

The Pilot station will advise where to proceed to anchor and also provide Pilot. See "Hull".

RESTRICTIONS: No restrictions, vessels may enter the harbour day or night. Max. draft for entering harbour 10.36 m. HW. Compulsory Pilots boarding Spurn Light-vessel, decide whether vessel shall proceed up river or anchor and await suitable state of tide.

MAX. SIZE: Also see "Tetney Terminal" and Immingham Oil Terminal under "Tankers".

Immingham Dock: Max. length 198 m., breadth 26.2 m., draft 10.36 m. on density 1010.

HEALTH: Master to report any "Reportable" illness as detailed in form "Port 38" to "Porthealth Immingham".

See "Health – All Ports" before first U.K. port.

RADIO: Humber Radio – 2182 kHz or VHF Channel 16. Dock Master VHF Channel 16. Tankers use Channel 19.

VHF: See "Hull" – Vessel Traffic Services Humber.

TUGS: Will join vessel off dock entrance, optional use of tow lines. If using tug's tow lines, charge for this service, depending on vessel's length.

BERTHING: Unless Master or Agent indicates preference, the Port Authorities will decide which side alongside. River Pilot deciding in conjunction with Dock Master most suitable berthing time for harbour and river installations.

Ro/Ro Terminals: The enclosed dock system incorporates 2 Ro/Ro freight terminals: 1×4 berth facility is operated by Exxtor while a second single berth terminal is available on a common user basis.

BULK HANDLING FACILITIES: Immingham Bulk Terminal:

British Steel Plc Ore Terminal: Adjoins B.C.C. Terminal. Max. length 1,095 ft., max. draft subject to approach channel, 43 ft. – 46 ft. Two appliances for discharging, rate 2,000 tonnes per hour each. Max. fresh air draft 15.8 m.

British Coal Corporation: Adjoins B.S. Plc Ore Terminal, length – no restriction up to 600 ft. thereafter dependent on vessel using ore berth. Draft average 40 ft.

One appliance for coal loading, rate 4,000 tonnes per hour.

Additional Information:

Fresh water available at 15 tonnes per hour.

Storing of vessels by prior arrangement with Jetty Control, due to restricted access.

Continuous cargo operations.

Jetty Control VHF Channels 9, 68 and 89.

Telex No. 52607. Fax. No. 0469-571750.

Grain: 2×500 t.p.h. shiploaders available.

CRANES: 16 electric cranes 3 – 20 tonnes capacity.

1×40 ton crane at Exxtor berths.

STEVEDORES: Firm ETA to Agent required if possible before noon on previous day before arrival.

Working Hours: Monday – Thursday, 0800 – 1700 hrs.; Friday, 0800 – 1600 hrs.; overtime by arrangement.

MEDICAL: No advance notice necessary for medical treatment as all hospital facilities available.

TANKERS: Also see "Tetney Terminal".

Immingham Oil Terminal: Berths No. 1 & 2: Up to 280,000 d.w.t. with part cargo conducive with Humber dredged channel. Length up to 1,100 ft., breadth, no restriction, draft depends on height of water in channel, average 42 ft. Four 12 in. lines for crude oil. Two 12 in. lines for fuel oil and three 10 in. lines for white oils. One 8 in. line for fuel oil bunkers.

Finger Pier: 8 in. loading arms for fuel and white oils

Mooring Operations: Large vessels normally berth at HW port side to jetty. Ideally, vessels of maximum size should stop off jetty and approach beam on at rates of no more than 20 ft. per minute. Number of tugs depends on vessel size.

There is no fixed doppler or berth approach rate indicators installed on jetty.

Normal mooring pattern is indicated in the "Plan Section".

Berthing is normally postponed if winds reach Force 7 from any direction from S.E. through South to N.W. and less if from N.W. through North to S.E.

Unberthing: Due to the strong tidal currents which develop in the vicinity, vessels normally sail on or around HW or LW slack.

Maximum size vessels, having made fast their tugs, come off the berth bodily, and swing in a position just to the S.E. of the terminal.

Eastern Jetty: Max. Length approx. 650 ft. breadth, no restriction, draft depends on LW, range 27 ft. to 36 ft. Lines 10 in., 8 in., 6 in. depends on Receivers. Bunker line available.

Western Jetty: Max. Length approx. 800 ft. breadth, no restriction, draft depends on LW, range 27 ft. to 36 ft.

Berthing Operations: (Eastern and Western Jetties): Normal berthing time for vessels is not more than 1 hour either side of HW or LW slack.

Vessels berth either port or starboard side to jetty depending on weather and tidal conditions prevailing at time.

Jetties are of wooden piling and fender construction and consequently care should be taken to ensure vessel does not land too heavily when berthing.

Draft restrictions can be calculated by taking the BTDB predictions on the outer sill at Immingham for LW and adding 0.5 m. (1.6 ft.).

Normal mooring pattern is 3 headlines, 3 sternlines, 2 breastlines forward, 2 breastlines aft, 2 springs forward and 2 springs aft.

Unberthing; Normal sailing time, in view of strong tidal conditions which develop, is at HW or LW slack or up to one hour either side of these times.

Killingholme North: Max. length 580 ft., beam, no restriction. Draft 30 ft. 6 in. One 8 in. line. One 4 in. bunker line.

Berthing Operations: Normal berthing time for vessels is at HW or LW slack and not more than 1 hour either side of these times. Vessels berth either port or starboard side to jetty depending on weather or tidal conditions prevailing. The mooring pattern is similar to that used at Immingham East and West Jetties (see above).

Unberthing: Normally up to one hour either side of HW or LW slack.

Killingholme South: Max. length 800 ft.; beam, no restriction. Max. draft will be advised. 10 in. loading arms. Bunkers by barge.

Berthing Operation: Vessels berth at H.W. or L.W. (if draft acceptable).

Unberthing: One hour before H.W. or at L.W. (if draft acceptable).

LPG FACILITIES: Humber Gas Terminal located at South Killingholme.

Max. Vessel Size: LOA – 280 m. (Min. 65 m.). Beam – No restriction. Capacity – 80,000 cu.m. (L.P.G) or 55,000 d.w.t. (white oil)

Max. Draft: No restriction at HW. Berth dredged to 12 m. LAT with guaranteed depth of 10 m. below LAT alongside at all times. Mud bottom on berth. Capable of future dredging to 14.8 m below LAT.

Tidal Range: Springs – 6.4 m. (21 ft.) (approx.) Neaps – 3.2 m. (10.5 ft.) (approx.)

Max. Tidal Ebb Speed: Springs – 4.5 – 5 knots. Neaps – 2.54 – 3 knots.

Approach to Berth: Sunk Dredged Channel and Main Channel. Two Channels are marked by light buoys and light floats. Pilotage compulsory.

Jetty Berth: 6 facing fenders. 6 mooring dolphins (3 Fore/3 Aft). Minimum flat side vessel – 32 m. with manifolds midships.

Presentation Arm: 1 × 10 in. L.P.G and 1×10 in. white oil.

Jetty Pipe-lines: 1×14 in. L.P.G., 2×10 in. and 2×12 in. white oil lines.

Cargo Handling Rates: L.P.G. exports – 2×300 cu.m.p.h. pumps. L.P.G. imports – Butane up to 1,500 cu.m.p.h. Propane up to 1,000 cu.m.p.h., depending on Jetty sea water heater to warm product. White oil exports – up to 1,200 cu.m.p.h.

Fresh Water: Available from berth.

Bunkers: Available only by barge.

Stores: Limited access to Jetty. Rigid vehicles only but no parking facility at Jetty Head. (Always refer to Agent).

DENSITY: In harbour 1010.

FRESH WATER: Available all berths by hose. Rate of delivery 20 t.p.h.

FUEL: 24 hours notice required. All grades available.

FIRE PRECAUTIONS: Copy of these regulations handed to the Master on arrival.

CONSULS:

Finland	Immingham 573187	Netherlands	Immingham 76246
Denmark	Grimsby 357521	Norway	Hull 224151
Greece	Hull 224151	Sweden	Immingham 571387

REPAIRS: All major repairs possible.

DRY DOCKS: Length 225.6 m., width at entrance 17.1 m.

SURVEYORS: Classification/P&I and cargo surveyors available.

GANGWAY/DECK WATCHMEN: Watchmen not usually employed, but left to the discretion of the Master.

OPENING/CLOSING HATCHES: See "Grimsby".

CERTIFICATES:

Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Safety Construction and any British Light Dues Receipts.
Derat Certificate.
Oil Pollution Certificate (Tankers).

CUSTOMS ALLOWANCES: 8 days – 200 cigarettes per person approx. Wine/spirits, 4 days – 0.25 pt. per day; this depends on the Customs Officer's discretion.

CARGO GEAR: This must comply with the Department of Employment and Productivity regulations. Normally discharge carried out by shore cranes, although overside berths available.

REPATRIATION: All facilities exist for dealing with crews and passengers.

AIRPORTS: Leeds Bradford Airport and Humberside Airport for Amsterdam (3 flights from each daily), Aberdeen and London for International destinations.

TIME: GMT. Summertime, GMT plus 1 hour.

HOLIDAYS: See "Grimsby".

POLICE/AMBULANCE/FIRE: Port Security – 72067, 72068. County Police – Immingham 76444. Ambulance; County – Cleethorpes 692912. Fire; 999 ask for Fire.

EMERGENCY CO-ORDINATION CENTRE: Humber Estuary, Humber Ports Operations and Information Service. Tel: Hull 35599 – Hull Radio on VHF Channels 16 and 12.

TELEPHONES: Public telephones available.

BANKS: All major U.K. Banks have branches in the area.

STORING: See "Prelims".

1, 2, 3. It is normal practice for such stores to be delivered to ships side at in-dock berths by road vehicles. At the Eastern and Western River Jetties at Immingham, however, vehicles are not permitted and the approximate distances fom the root of the Jetties to ships side is from 400 m. to 500 m. South Kilingholme Jetty – access by foot only.

4. Fork lift trucks could be used at in-dock berths, if necessary.

If proceeding to NCB/BSC or Immingham Oil Terminals – check with Terminal Authorities.

IDENTIFICATION CARDS: Seaman's Book or Passport sufficient for crew members going ashore.

DEVELOPMENTS: A deep water bulk cargo terminal is planned for North Killingholme. If permission is given for construction it is estimated that the terminal will be operational in 1991. Vessels up to 65,000 d.w.t. will be handled.

AUTHORITY: Associated British Ports, Port Office, Cleethorpe Road, Grimsby, South Humberside DN31 3LL. *Tel:* (0472) 359181. *Telex:* 52250. *FAX:* (0472) 48275. *Contact:* D. Dunn, Port Manager.

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
Customs and Excise and Health Documents.
Manifest.
Bills of Lading, etc.

PILOTAGE: Compulsory for all vessels over 50 g.r.t. Apply direct to Agent or to Pilot, telephone Inverness 232845. ETA 24 hours. Pilot equipped with VHF. Pilot cutter blue launch with letter "P". Pilot station Munlochy Buoy. Location of anchorage while awaiting Pilot – Munlochy Buoy.

ANCHORAGES: Munlochy Buoy in 5 – 8 fathoms. Beauly Basin in 15 fathoms.

RESTRICTIONS: Vessels may enter and leave from 2 hours before HW until 2 hours after HW.

MAX. SIZE: Ship max. 360 ft. length, 20 ft. draft, high water springs. 18 ft. draft, high water neaps

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Wick Radio.

VHF: Harbour Office on VHF Channels 16, 14 and 12 during office hours.

TUGS: Available from Invergordon.

BERTHING: *Longman Quay:* Length 180 m. Depth 5.0 m L.A.T.
Thornbush Quay: Length 156 m. Depth 3.0 m L.A.T.
New Citadel Quay, Old Citadel Quay and *Central Quay:* Each about 100 m. in length, and *Shore Street Quay*, about 150 m. in length, form a continuous length of quayside on the East side of the harbour at its upper end; there are depths of 3 m. alongside. L.A.T.

BRIDGES: Kessock Road Bridge, max. clearance 29 m. at MHWST.

STEVEDORES: Arrange through Agent. 24 hours notice required.

MEDICAL: Doctor available.

DENSITY: 1002.

FRESH WATER: Available on demand, 5 t.p.h., ex-hose on quay.

FUEL: Marine diesel and petroleum on request.

CONSULS: Sweden (Mr. John Fraser), Tel: Inverness 238366.

REPAIRS: Thornbush Slipway Tel: 243585.

GANGWAY/DECK WATCHMEN: Supplied by ship.

OPENING/CLOSING HATCHES: Done by crew.

CUSTOMS ALLOWANCES: Tobacco/Wines/Spirits. Usual amount allowed by Customs and Excise.

REPATRIATION: Facilities available.

AIRPORT: Dalcross, 7 miles from Inverness.

HOLIDAYS: 1st and 2nd January; Easter Monday; July Bank holiday; First Monday in October; and Christmas Day. All official holidays, cargo work can be arranged on these days.

POLICE/AMBULANCE/FIRE: Police Inverness 239191; Fire Brigade Inverness 222722; Ambulance Inverness 231511.

TELEPHONES: Adjacent to quays.

SHORE LEAVE: Unrestricted.

IDENTIFICATION CARDS: None.

AUTHORITY: Inverness Harbour Trust, Harbour Office, Longman Drive, Inverness IV1 1SU, Scotland. *Tel:* (0463) 233291. *FAX:* 0463-235085. *Contact:* Captain J.B. Fairgrieve, Harbour Master.

IPSWICH: 52.03 N. 01.10 E. (See Plan)

DOCUMENTS: Masters can conclude all documentation in port. Ship's Agent will give the necessary advice.

PILOTAGE: On behalf of the Ipswich Port Authority. Pilotage Authority – Harwich Haven Authority.
Compulsory Area: River Orwell and Harwich Harbour as far seaward as the following outer boundaries:
Eastwards to Longitude 01° 24′ E.
Southwards to Latitude 51° 54.5′ S.
Northwards to Latitude 51° 57.4′ N.

Pilotage is compulsory for all vessels over 50 m. LOA navigating within this area except H.M. Ships and vessels of less than 100 m. LOA operating exclusively within the port area.

Boarding Point: Boarding and landing of pilots is carried out by fast launches operating from Harwich. The boarding position will be outside the compulsory area, and must be agreed with Harwich Harbour Operations, having regard to the size and draft of the ship, and other prevailing circumstances.

ETA's/ETD's: Inward vessels to give 8 hours Notice of Arrival at Harwich Approach Buoy, (Latitude 51° 56.4′ N., Longitude 01° 31.2′ E.), together with details of Gross Tonnage/Gross Register Tonnage, Draft (Maximum), Departure Port and Destination.

Confirmation of ETA required 3 hours before arrival.

Outward vessels must give a minimum of 2 hours' notice before sailing from or moving within the compulsory area.

Communications: Call sign "Harwich Harbour Radio", VHF Channel 9.

VHF Radio:	Channel 16	Safety
	Channel 9	Pilotage and ETAs
	Channel 71	VTS and Reporting
	Channel 6	Pilot Launches
	Channel 69	Tugs
	Channel 20	Harwich Radar Assistance
	Channel 11	Harbour Craft

Telephone:	(0255) 243000 Harbour Operations, or (0255) 243111 Pilot Orders.
Telex:	98472 HAROPS - G.
Fax:	(0255) 241325.
Pilot Launches:	VHF Channels 6 and 71.
Director of Pilotage:	Captain I.T.Whale, Tel: (0255) 243030.
Ipswich Harbour Master:	Captain G.C.Jones, Tel: (0473) 231010 (manned 24 hours).

ANCHORAGES: No anchorages within port. All vessels will procee direct to berth, otherwise anchorage provided in Harwich Harbour or a indicated by Harwich Harbour Radio (VHF Channel 71).

RESTRICTIONS: Up to 80 m. in length the lowest permissible U.K.C is 0.75 m. Over 80 m. and up to 110 m. in length the lowest permissib U.K.C. is 1.0 m. Over 110 m. in length by special arrangemen (U.K.C.=Under Keel Clearance).

See "Notices" – "Guidelines – Vessels Navigating the River Orwel and the Port of Ipswich" and "Dangerous Substances in Harbour Area Regulations".

MAX.SIZE: LOA 140 m., draft 7.7 m. (inward) and draft 7.4 m. (outward both on a 3.6 m. tide.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Masters to contact ship's Agent through North Forelan Humber, Niton or Portishead depending on position of vessel. All these radio stations hold cable addresses and staff telephone numbers o Agents.

VHF: A 24 hour VHF radio facility is in operation. Vessels arriving shoul contact "Ipswich Port Radio" on VHF Channel 16 on entering the Rive Orwell and report and/or maintain a listening watch as instructed Channels 14 and 12 will be used for the passing of messages which should be restricted to the safety of navigation or persons.

TUGS: Vessels of 110 m. in length and up to 130 m. will use 1 tug Vessels of 130 m. in length and over will use 2 tugs.

Special consideration may be given to vessels fitted with bow thrus facilities trading regularly to the port.

BERTHING: Vessels bound for berths in the Wet Dock should arrive o the lock 2 hours before HW.
Power Station Quay: Length 143 m.
Depth of water alongside: 7.5 m., subject to silting.
Approach channel: 5.6 m. below chart datum.
Cliff Quay: Length: 3,250 ft (990 m.).
Depth of water alongside: 8.2 m. below Chart Datum. Subject to silting
Approach Channel: 5.6 m. below Chart Datum.
Cranes: 8 portal jib cranes from 3 tonnes to 35 tonnes lifting capacity A Karrilift container gantry is also available.

Largest vessel which can be accommodated: 460 ft. (140.2 m.) overal in length, 25 ft. 6 in. (7.7 m.) draft inwards, 24 ft. 6 in. (7.4 m.) outwards

The Quay handles containers and heavy lifts up to 35 tonnes and i particularly well equipped to handle cargoes direct to and from both roa and rail transport. The South end has been developed as a moder terminal for handling all types of general cargo, including containers flats, palletised units and bulk cargoes. Spacious modern transit sheds and a container park are sited on part of this Quay. Vessels up t 25 ft. 6 in. (7.7 m.) draft can be handled at the terminal.

Grain Terminal: Located at Cliff Quay. Capable of handling vessels u to 10,000 tonnes capacity at a loading rate of 550 t.p.h. (malt) and 700 t.p.h. (other grain products). Grain silo capacity 11,000 tonnes.

Container Terminal: The terminal has a 40 tonne ship to shore luffing crane and 2 shoreside gantries with 1-9-1 configuration.

West Bank Terminals: These terminals provide 3 berths with a total qua frontage of 310 m. and are dredged to 5.8 m. below Chart Datum 2 container berths are backed up by 5.5 hectares of hardstanding including a transit shed of 2,750 sq.m. floor area. The berths are serve by portal cranes of 40 tonnes, 37.5 tonnes and 10 tonnes capacity and are adjacent to a Freightliner Terminal offering daily services and incorporated into the Railfreight Speedlink network.

A Ro-Ro berth is backed up by 7 hectares of hardstanding. The bridge ramp is designed to carry a load of 180 tonnes with maximum axle loads of 45 tonnes. The ramp has a carriageway of 36.9 m. long×7 m. wide and can handle traffic at all states of the tide.

The Dock: The dock is situated within the town of Ipswich. It is some 26.25 acres (10.63 hectares) in extent and is approached by an entranc lock.

NAVIGATION - THE ENCLOSED DOCK, ISPWICH

VHF Radio: The Lock Master is equipped with VHF Marine Radio and may be contacted through the Orwell Navigation Service (Ipswich Por Radio) on Channel 14.

Maximum Size Vessels that can:

(a) Lock In or Out:	80.76 m. LOA and 14.50 m. beam.
(b) Enter the Dock:	114 m. LOA and 14.50 m. beam. (Vessels over 80.76 m. LOA can only enter the Dock when the Outer and Inner Lock-gates are open, that is for approximately one hour prior to HW on most tides but this is not guaranteed).
(c) Maximum Draft:	Owing to the shape of the Lock Pit, modern vessels require a minimum Under Keel Clearance depending upon their beam. To ascertain the maximum permissible draft add the following to the height of the Tide above Chart Datum at time of entry.

Vessel's Beam

(m.)	(m.)
12.00	+2.09
12.50	+1.81
13.00	+1.59
13.50	+1.43
14.00	+1.28
14.50	+1.17

Notwithstanding the above, the maximum draft for any vessel i the enclosed dock is 5.50 m.

Locking Times:
(i) Commercial Vessels:
May Lock In or Out from 2 hours before HW to 40 minutes afte HW.
Special arrangements may be made for vessels to enter or leav one hour either side of these times, subject to the Lock Maste being advised during the preceeding tide, there being sufficie water and at additional cost to the User.

(ii) Non-Commercial Vessels:
Should enter or leave the Dock from one hour to quarter hour prior to HW, if possible.

Entry Signals:
Lights fixed above the Orwell Navigation Service Building on the East-side of the Lock indicate to vessels whether the Lock is open or closed for entry from the River or the Dock as appropriate.

ONE RED LIGHT *Lock closed* to vessels entry.
ONE GREEN LIGHT *Lock open* for vessels entry.

Flood Protection Gates:
These gates are closed when the tide level is 4.6 m. or more above Chart Datum. During this period the Dock Entrance is closed to navigation.

Inside, in addition to some 2,700 ft. (823 m.) of private quays owned by merchants having warehouses or mills adjoining, where small vessels can berth, there are the following quays owned by the Authority:

(i) *South West Quay:* This quay is 800 ft. (244 m.) in length with a depth of 19 ft. (5.79 m.) of water alongside at mean dock level. The quay is served by 3 modern 7.5 tonne portal electric travelling cranes and mobiles as required.

(ii) *Timber, Public Warehouse,* and *End Quays* total 940 ft. (286 m.) in length and have a depth of water alongside varying from 12 ft. (3.65 m.) to 20 ft. (6.09 m.). Public warehouse is served by mobile cranes capable of lifting up to 5 tonnes.

(iii) *Tovell's Wharf* is a 600 ft. (183 m.) reinforced concrete quay with 22 ft. (6.70 m.) of water alongside. It is served by mobile cranes up to 5 tonnes lifting capacity.

(iv) *Orwell Quay* is 775 ft. (236 m.) in length, with 18 ft. (5.48 m.) of water alongside and includes a Ro/Ro berth. One transit shed, with a floor area of 10,100 sq.m. is situated immediately behind the quay apron together with further extensive covered and open areas.

BRIDGES: The River Orwell Bridge has a clearance of 38.8 m. above MHWOST (43.07 m. above Chart Datum).

Masters of larger vessels are advised to check their air drafts and if in any doubt contact their Agent or the Ipswich Port Authority before proceeding up the River Orwell.

STEVEDORES: Ship's Master normally advises his Agent of his ETA, distribution of cargo on board, and all relevant details. The Agent passes this information to Stevedores.

MEDICAL: All medical facilities available in port. Vessels requiring medical assistance on arrival should advise all details by radio telephone or in their ETA cables.

TANKERS: It is desirable that when Master of a tanker gives an ETA he also indicates the size of pipe-line, size of connection and discharging point in order that necessary arrangements can be made at discharging point of receiving oil terminal. There are no slop facilities at Port of Ipswich, however arrangements can be made, through the Port Authority (Tel: (0473) 231010) for firms using road tank vehicles to remove sludge or oily-waste. All cleaning and gas-free operations must be carried out outside precincts of the Harwich Harbour Board. Only one tanker berth at Ipswich but there are 6 intake points on quay and it is usual for 3 coastal tankers to be accommodated, depending on the overall length and berth availability. A maximum draft on the berth of 23 ft. (7 m.) subject to silting.

Also see "Notice".

DENSITY: Approximately 1020, depending on the amount of fresh water in river due to heavy rain.

FRESH WATER: Available at all quays. Delivery by hose through meter at 10 t.p.h.

FUEL:
Gas oil 35 secs. Redwood.
Light fuel oil 200 secs. Redwood.
Medium fuel oil heated 950 secs. Redwood.
Heavy fuel oil heated 3,500 secs. Redwood.
At least 24 hours' notice required.

CONSULS: Vice-Consul for Sweden and Vice-Consul for Norway. Tel: (0473) 59281.

REPAIRS: Only small repairs on board.

SURVEYORS: Lloyd's Register, Tel: (0502) 81117.

GANGWAY/DECK WATCHMEN: No watchmen required by Port Authority, but sufficient men available at all times to move vessels, if necessary.

OPENING/CLOSING HATCHES: Hatches opened and closed by ship's crew.

CERTIFICATES:
Following certificates are required by Agents in order to arrange Customs Clearance:
Ship's Register.
Radio Certificate.
Load Line Certificate.
Safety Equipment Certificate.
Derat Certificate.
British Tonnage Certificate, if required.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes, or equivalent in tobacco, per man. Wine and/or Spirits, 1 bottle per man.

CARGO GEAR: Cargo working gear is supplied by stevedores. Normally, quayside cranes are used for discharging and loading. In event of cargo gear being used in port, Ship's Gear Certificate, duly certifying that all gear has been examined and is in every way workable and suitable for discharge and/or loading of cargo, is to be produced.

REPATRIATION: Facilities exist at port for effecting crew changing and arranging repatriation.

AIRPORT: Ipswich Airport is 2 miles from the port. Charter flights available for ship's crew. Tel: (0473) 70111.

HOLIDAYS: Normal holidays for English ports.

TIME: GMT in Winter months. Summer time, GMT plus 1 hour.

POLICE/AMBULANCE/FIRE: In emergency dial 999. Otherwise Police – Ipswich (0473) 725363.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required as long as each crew member has in his possession a Seaman's Book and/or Passport.

NOTICES: *Guide Lines – Vessels Navigating the River Orwell and the Port of Ipswich (B.A. Chart No. 2693).*

1. *Length and Under Keel Clearance (UKC):*
Vessels up to 80 m. LOA – lowest permissible UKC 0.75 m.
Vessels between 80 m. LOA – 140 m. LOA – lowest permissible UKC 1.0 m.
Vessels over 140 m. will only be accepted by special arrangement with the Harbour Master.
Air draft under the Orwell Bridge is 43.07 m. above Chart Datum.

2. *Towage:*
Up River from Buoy No. 5, vessels between 110 m. LOA and 130 m. LOA – 1 Tug. Vessels 130 m. LOA and above – 2 Tugs.
Special consideration may be given by the Harbour Master to vessels fitted with bow thrust facilities which trade frequently to the Port of Ipswich.

3. *Speed:*
A Master of a vessel will at all times navigate with caution and at such speed that no damage to the environment, or hazard will be created to other craft which may be navigating or moored in the vicinity.
The speed of vessels must be reduced to the minimum consistent with safe navigation when passing the yacht anchorages at Pin Mill, Woolverstone and other places, or other vessels moored, or dredgers operating; or works of repair, maintenance or construction in progress within the Harbour and from a point abreast of East Fen Buoy to the Lock Gates and while within the Dock.
The maximum speed for vessels under 50 g.r.t. shall be deemed to be 6 knots.

4. *Position Reporting:*
(a) A Master shall report to the Orwell Navigation Service on VHF Channel 14/12.
   (i) On entering the River approaching Buoy No. 1.
   Passing Buoy No. 4.
   Passing Cathouse.
   Passing Buoy No. 9.
   When secure on berth.
   If any such vessel is in a damaged condition which renders such vessel in any way unseaworthy, or inhibits the vessel's ability to manoeuvre, full particulars of the damage shall be given in such report.**
   ***Note:* The Harbour Master on receiving a report from a Master of a vessel may give directions to the Master of such vessel under powers in that behalf given by Section 59 (2) of the Ipswich Dock Act 1971.
   (ii) On leaving the Port, report to the Orwell Navigation Service at the following positions:
   Prior to leaving the berth
   On clearing berth and proceeding
   Passing Cathouse Buoy
   Passing Buoy No. 4
   Passing Buoy No. 2
   Immediately before leaving the Port.
   (iii) While navigating within the Port at all times maintain a listening watch as directed by Orwell Navigation Service.
(b) If such vessel is not fitted with VHF radio-telephone or is fitted with one which is not operational at the time of entry into the Port or departure from a berth therein, on arrival at a berth owned or occupied by the Authority, prior to leaving a berth in the Port and before moving from one berth to another, report to the Orwell Navigation Service in person or by telephone.

5. *Restrictions (Navigational):*
(a) Inward Bound Vessels:
To satisfy the conditions in 5/1 and 5/2, Masters and/or Pilots of Inward bound vessels *must* contact the Orwell Navigation Service and liaise, if necessary, with any outward bound vessel.
(b) Outward Bound Vessels:
The Master and/or Pilot of outward bound vessels *must* ascertain the position in the Channel from the Orwell Navigation Service, prior to leaving the berth and liaise, if necessary, with any Inward bound vessel.
(1) Vessels over 90 m. LOA:
A vessel of 90 m. LOA or more, *must not pass* or *overtake* another vessel of 90 m. LOA or more in the River Orwell between the Butt Buoy and the Port of Ipswich.
(2) Petroleum Tankers and Chemical Tankers with Hazardous Cargo:
These vessels may navigate at any time (subject to the above and to tidal constraint if appropriate) provided that:
   (i) Between one hour after sunset to one hour before sunrise there is no opposing traffic on the River above the Butt Buoy, the size or draft of which would present a potential hazard.
   (ii) Weather and visibility conditions are of a standard acceptable to the Master and the Pilot concerned.

6. *Sound Signals:*
In addition to the Sound Signals required to be made by the Regulations for the Prevention of Collisions at Sea, the following signals will be used by vessels navigating in the River Orwell:
4 short blasts followed by 1 short blast = Vessel swinging to starboard.
4 short blasts followed by 2 short blasts = Vessel swinging to port.
1 long blast, given when approaching the Woolverstone and Pin Mill areas between the hours of sunrise and sunset. (Inward bound vessels between Buoys No. 4 and 5, and outward bound vessels when passing Buoy No. 7.).
1 long blast when leaving Cliff Quay or West Bank berths during daylight hours on Saturdays and Sundays.

7. Nothing in these Guide Lines will remove from any Pilot the right to advise Masters against navigating in the River if in the professional opinion of the Pilot a proposed course of action is considered to be imprudent.
8. Notwithstanding anything contained in the generality of these or other arrangements regarding the navigation of the River Orwell, vessels of over 140 m. LOA may, under certain special circumstances and conditions, navigate in the River subject to prior consultation with the Ipswich Harbour Master.
9. Nothing in these Guide Lines shall preclude the Ipswich Port Authority Harbour Master, after consultation, if relevant, with the Haven Pilots, from giving consideration to the exemption of a specific vessel from any of the conditions and requirements hereinbefore mentioned.

Signed: Harbour Master
Date: 1st February 1990.

Dangerous Substances in Harbour Areas Regulations 1987:

1. A Ship Master; Agent; Transport Operator; Contractor or any person who intends to bring a dangerous substance, as defined in Regulation 1(a) of the Merchant Shipping (Dangerous Goods) Regulations 1981, into the Harbour or Harbour Area of the Port of Ipswich, either from Inland or from the Sea, is required under the above regulations to give the Harbour Master and the Berth Operator advance notice of their intention.

   The Harbour Master reserves the right to refuse transit through the Harbour Area of certain highly dangerous substances, or to require them to be handled direct to or from transport into a vessel or vice versa.
2. Notification should be made to both the Harbour Master and the Berth Operator from 14 days to 24 hours prior to the goods entering the Harbour Area. However, under certain circumstances the following may apply:

   Inward Cargoes: Harbour Master's Information.

   In the case of ship reporting Inward from Continental passage, where it is impracticable to comply with the foregoing, then the maximum notice possible should be given but *never less* than *6 hours*.

   This to include R O B (Remaining on board) Dangerous Substances in transit through the Port.

   This information to be telexed to No. 98642 or Fax to (0473) 230915 at the Orwell Navigation Service (Port Radio) and should also be sent to the Berth Operator.

   Export Cargoes: Berth Operator's Information.

   In cases where it is not possible to comply with the above regulation, a lesser notification *may* by accepted but *never less* than *12 hours* prior to the arrival of the goods in the Harbour Area.

   This information to be transmitted to the Berth involved (Berth Operators – See No. 3).
3. *Berth Operators:*

Ipswich Port Authority: West Bank – Ro-Ro and Container Terminal (excluding Cast Berth).

Fax:	(0473) 602266
Telex – ONS:	98642 For internal transmission to Berth
Letter by hand	Ipswich Port Authority
or GPO:	(Dangerous Substances Notification) West Bank Terminal Office Wherstead Road Ipswich IP2 8LY.
Telephone:	Enquiries/Notification (0473) 231010. Ext. 200/297.

Ipswich Port Authority: East Bank – Cliff Quay and Dock

Fax:	(0473) 232064
Telex – ONS:	98642 For internal transmission to Berth
Letter by hand	Ipswich Port Authority
or GPO:	(Dangerous Substances Notification) Superintendents Office c/o No. 1 Stevedores Office Cliff Quay Ipswich IP3 0BS
Telephone:	Enquiries/Notification (0473) 231010. Ext.265.

Cast Terminal

Telephone:	(0473) 690593
Fax:	(0473) 688202
Telex:	988891
Letter by hand	Cast Terminal (UK) Ltd
or GPO:	(Dangerous Substances Notification) Cast Terminal Wherstead Road Ipswich IP2 8NB

4. *Notification:*

   Notification must include full details of Dangerous Substance to be presented into the Harbour Area, which should be given in the following format.
   - (a) Name of Agent and/or Operator presenting the notification.
   - (b) Name of Vessel.
   - (c) Berth.
   - (d) Date/Time due.
   - (e) Dangerous Substance.
   - (f) UN Number/Flash Point.
   - (g) Quantity.
   - (h) Method of Packaging.
   - (i) Transport Company involved.
5. *Radio Active Substances and Explosives:*

   Radio Active Substances and Explosives which are subject to the Port's Licence may only be brought into the Harbour Area after prior booking and by agreement with the Harbour Master and the Berth Operator as to the type, quantities and dates of transit in line with the foregoing.
6. *Other Regulations:*

   A Dangerous Substance brought into the Harbour or Harbo Area under the Merchant Shipping (Dangerous Good Regulations 1981, must also conform to the following regulatio

   International Maritime Organisation – Dangerous Goods Cod Classification, Packaging and Labelling of Dangerou Substances Regulations 1984.

   Dangerous Substances (Conveyance by Road in Roa Tankers and Tank Containers) Regulations 1981.

   The Classification and Labelling of Explosives Regulatio 1983.

   Radioactive Substances (Carriage by Road, GB Regulatio 1974). Regulations for the Safe Transport of Radioacti Materials. – Ionising Radiation Legislation 1985.

   International Carriage of Dangerous Goods by Rail (RID).

   International Carriage of Dangerous Goods by Road (ADR Geneva 1957.

   Road Traffic (Carriage of Explosives) Regulations 1989.
7. *Documentation:*

   When Dangerous Substances arrive at the Harbour Area, th Ipswich Port Authority will require, in addition to the Unit Loa Note/Interchange Note, the following:
   - (1) Dangerous Substance Documentation Showing:
     - (a) IMO Class.
     - (b) The UN Number.
     - (c) The correct Chemical name of substance – Trade Nam not acceptable.
     - (d) Flash Point (if applicable).
     - (e) The number and type of packages and, if explosive, th nett explosive content.
     - (f) Emergency contact telephone number.
   - (2) Labelling:

     The Packages/Unit to be labelled in accordance with the IMDG Code and old label/s to be removed.
   - (3) Certificates and Licences:

     If Radioactive Substances, the appropriate packagi certificates and Licences.

Signed: Harbour Master.
Date: 6th November 1989.

DEVELOPMENTS: Main channel at Harwich presently being dredge to 1.0 m.

AUTHORITY: Ipswich Port Authority, Old Custom House, Key Stree Ipswich IP4 1BY. *Tel:* (0473) 231010. *Telex:* 988787 (Head Office 98642 (Operations). *FAX:* (0473) 230914. *Contact:* A. J. Hanso Commercial Manager. Captain G. C. Jones, Harbour Master.

KING'S LYNN: 52.45 N. 00.24 E. (See Plan

DOCUMENTS:

Pilot Note to be filled in and signed by the Master on completion pilotage services both inwards and outwards.

Cargo tonnage return to be completed by the ship's Agent.

PILOTAGE: Pilotage is compulsory between an East-to-West li through King's Lynn Buoy No. 3 in the Wash and the Freebridge King's Lynn.

Vessels may be boarded from pilot cutter in the Wash from appro 2.5 hours before HW between King's Lynn Buoy No. 1, the Sunk Bu and Roaring Middle Light Float. Unless prevented by weather breakdown a pilot cutter cruises between King's Lynn No. 1 Light Bu and the Sunk Light Buoy approx. 2.5 hours before HW until such tim as it is too late for a vessel to transit the Approach Channel on that tid

Requests for a Pilot sent at least 24 hours before the service required (with amendments if necessary up to 14 hours before) to th Pilot Office, Common Staith, King's Lynn (Tel: King's Lynn 773411 telegrams "Conservator" King's Lynn) or through local Agent. The Pil Office is at the Harbour Office and maintains VHF R/T watch Channels 16 and 14 from 0900 – 1700 hrs. Monday to Friday and fro 4 hours before HW until 1 hour after HW on each tide after 1700 hr and before 0900 hrs. The pilot cutter listens on Channel 16 when station and is fitted with Channels 14, 12, 11 and 6 as working channe

Pilot launches "United" and "Denver" are 40 ft. fibre glass craft wi blue hulls, white superstructure and orange tops to the wheelhouses. the event of bad weather the pilot launch on duty will fore-run vesse into Cork Hole (Lat. 52° 53′ N., Long. 00° 24′ E.) before boarding Pilo

Requests for Pilots for ships in port, should be made to the Pilot Offic at least 2 hours before the Pilot is required to attend the ship. The signa to be used or displayed where the services of a Pilot are required accordance with the provisions of the Merchant Shipping (Pilot Signa Order, 1970.

ANCHORAGE: In the Wash vessels anchor within an area bounded the Roaring Middie Light Float and the King's Lynn No. 1 Light Bu and the Sunk Light Buoy. Anchoring close to Buoy No. 1 in sufficie depth of water assists early boarding of Pilots. Depth of water 20 minimum.

RESTRICTIONS: King's Lynn Harbour is situated on the River Gre Ouse about 2 miles inland from its mouth, at the S.E. corner of th Wash.

The shipping channel in the approaches to King's Lynn and i approaches in the Wash is subject to changes in depth and direction published on Admiralty Charts.

Harbour Master will advise in advance upon the suitability of vesse and tides.

All ship movements are at HW, times in accordance with a positi list maintained at the Harbour Office on the basis of information suppl in advance from Masters of vessels and their Agents.

At the Docks entrance lock docking signals are exhibited from a sig mast.

MAX. SIZE: Max. dimension for vessels entering the Harbour Berths: Length 315 ft. (Berth No. 6, South Quay), beam 45 ft., draft 11 ft., on lowest Neap tides, and 18 ft. on highest Spring tides. Access over high tide only. Harbour Master to be consulted for vessels approaching these limits. Larger vessels can be accommodated within the enclosed docks (see below).
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: The King's Lynn Conservancy Board operates in the River Great Ouse and its approaches in the Wash, a VHF (FM) port operations and information radio-telephone service in the International Maritime Band, call signs: "King's Lynn Harbour Radio" (Channels 16, 14, 12 and 11); "King's Lynn Pilots" (Channels 16, 14, 12, 11 and 6).

Associated British Ports operates a docks operations and information service, call sign: "King's Lynn Docks Radio" (Channels 16, 14 and 11).
TUGS: Controlled by King's Lynn Conservancy Board and in attendance at the discretion of the Board's Harbour Master. Vessels joined in the Wash Approaches and/or lower reach of River Great Ouse (Marsh Cut). Vessels should provide own hawsers. If ordered, tug hawser available.

Harbour Master may require any vessel to use and employ a tugboat.
BERTHING: *Alexandra Dock:* Size 780 ft. × 310 ft. Approached from the River Great Ouse and King's Lynn Harbour by a lock. Vessels of length 119 m. and beam 13.80 m. can be accepted. The depth of water on sill is 22 ft. to 26 ft. (Springs) and 18 ft. (Neaps).
Bentinck Dock: Size 1,000 ft. × 400 ft. Connected with the Alexandra Dock by a passage and gates over which pass 2 swing bridges. Also double-sided jetty 235 ft. long. Container storage terminal with 42 ton capacity forklift.

The quays of the 2 docks have a water frontage of approximately 1 mile and provide a total of 16 berths.

Quay cranes available up to 32 tonnes.
South Quay (King's Lynn Harbour): Grain loading and discharging facilities at South Quay Berth No. 6. Lay-by facilities at South Quay Berth No. 1. Ships berthing at South Quay take the ground at LW.
STEVEDORES: Associated British Ports within enclosed docks. Gangs usually can be provided at minimum notice. Main commodities and handling rates: timber (200 cu.m. pre-pack, pre-slung, per gang-hour), steel coils (250 tons per gang-hour), tinplate (90 tons per gang-hour), grain (200 t.p.h. per gang hour), also Ro/Ro and container handling.
TANKERS: 3 tanker berths in enclosed docks. Discharge from vessels is to 6 in. connecting pipes feeding 8 in. pipes to storage tanks.
MEDICAL: It is advisable to give advance notice of required medical attendance via Agent. In emergency the Harbour Office will pass on requests received over the VHF R/T Port Operations and Information Service. For other medical information, refer to the Port Medical Officer of Health and H.M. Customs.
FRESH WATER: Available on all berths through 4 in. pipes off hydrants from public supply.
FUEL: Available at berths alongside King's Lynn Harbour on 24 hours previous notice. Light-grade fuel oil, gas oil, petrol and paraffin only.
OPENING/CLOSING HATCHES: Done by crew. Cranes available for heavy beams.
GANGWAY/DECK WATCHMEN: Vessels responsible for providing own gangways at King's Lynn Harbour berths, where the Regulations require the Master or other person having the care of any ship or other craft to have a proper number of hands on board to attend moorings and to comply with all the requirements and directions of the Harbour Master or his Deputy or Assistants.
CONSULS: Vice-Consul for the Netherlands and Germany F.R.
REPAIRS: Limited facilities only available locally for hull and engine repairs.
AIRPORT: Charter flights and some regular flights, from Cambridge and Norwich airports about 45 miles from King's Lynn. Regular flights from London (Heathrow) about 100 miles from King's Lynn.
HOLIDAYS: Cargo work usually available at overtime rates on Saturday and Sundays and on all public holidays.
POLICE/AMBULANCE/FIRE: In emergency dial 999 and ask for the service required. Normal service: Police – King's Lynn 761311; Ambulance – King's Lynn 773503 or 773910; Fire Service – King's Lynn 775163.
AUTHORITY: The King's Lynn Conservancy Board, Harbour Office, Common Staith, King's Lynn, Norfolk PE30 1LL. *Tel:* (0553) 773411. *Telex:* 817588. *Cables:* "Conservator" King's Lynn. *FAX:* (0553) 768185. *Contact:* M. J. Kiddle, General Manager. Captain D. W. Garside, Harbour Master and Pilot Master.

Associated British Ports, – King's Lynn, St. Ann's Fort, King's Lynn, Norfolk PE30 2EU. *Tel:* King's Lynn (0553) 691555. *Telex:* 81368. *FAX:* (0553) 761335. *Contact:* D. George, Port Manager. N. S. H. Palmer, Assistant Port Manager.

KIRKCALDY: 56.07 N. 03.09 W. (See Plan)

DOCUMENTS/PILOTAGE: See "Leith".
RESTRICTIONS: Dock gates open for 2 hours before HW until HW.
MAX. SIZE: Vessels of 1,500 d.w.t. regularly use the port. Width at dock gates 15.2 m. Depth 4.8 m. Max. width to enter 14.6 m.
RADIO: See "Leith".
VHF/RADAR: Forth Navigation Service from Leith or Methil Harbour Radio.
TUGS: Towage available.
BERTHING: 494 m. of berthing space available in dock.
CRANES: Mobile cranes available.
BULK CARGO FACILITIES: Privately owned grain discharge plant.
STEVEDORES: Available from Methil.
AUTHORITY: Forth Ports Authority, Dock Office, Methil KY8 3RE. *Tel:* (0333) 26725. *Telex:* 72208. *FAX:* (0333) 24873. *Contact:* Captain T.S. Sutherland, Port Superintendent.

KIRKWALL: 58.59 N. 02.58 W. (See Plan)

PORT LIMITS: See "Plan".
DOCUMENTS:
Maritime Declaration of Health.
Vaccination List.
Immigration Form H.O. Form IS6.
Crew List – 2 copies.
Ship's Stores List.
Crew Personal Effects Declaration. Customs Form C142.
Last Port Clearance.
Ship's Register.
Load Line Certificate.
Safety Construction Certificate.
Safety Radio and Safety Equipment Certificates.
Derat Certificate.
Previous British Light Dues Receipt.

Customs and Health: Customs, Immigration, Health and Agent will embark at anchor in Kirkwall Bay or alongside pier.

PILOTAGE: Non-compulsory except for passenger vessels over 65 m. LOA and all other vessels over 80 m. LOA. Pilotage limits same as harbour limits. 15 licensed Pilots available. Arrange through Harbour Authority Office, Scapa. Tel: 0856-3636. VHF Channel 16. Telex: 75475 or by local Agents.

ANCHORAGES: Two areas. See "Plan".

RESTRICTIONS: Kirkwall Pier tidal berthing restrictions on draft. See "Berthing".

MAX. SIZE: See "Berthing".

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Coast station call sign "Orkney Radio" (Wick Radio). Call Channel 16 VHF, working Channel 26 VHF.

VHF: Continuous watch Channel 16 VHF, call sign "Orkney Harbour Radio". Working on Channels 9, 10, 11 and 20 from 0800–1700 hrs. weekdays and when vessel expected. "Kirkwall Harbour Radio" Channel 16 VHF, working Channel 12.

RADAR: No facilities at Kirkwall Harbour.

TUGS: No tugs available.
BERTHING: See "Plan" for berths.

	Depth (m.)	*Length* (m.)	*Max. Draft at L.A.T.* (m.)	
East "1"	5.2	75	4.5	
East "2"	4.6	75	4.0	
West "1"	5.2	60	5.0	
West "2"	3.8	54	3.6	
West "3"	3.2	55	3.0	(Tanker berth – no petrol)
Basin	3.0	46	2.5	

Tidal Reference: Range 3.0 m. at Springs and 2.0 m. at Neaps.
Cargoes: Load/discharge ship's gear and mobile crane. Cargoes: Bulk, general, livestock, fuel oils (not petrol), passengers.
CRANES: 2 Jones mobile cranes with grabs. S.W.L. 11 tons at 12 ft. radius and 2.75 tons at 40 ft. radius. 1 crane 40 tons at 12 ft. radius and 11.2 tons at 40 ft. radius.
STEVEDORES: Kirkwall Port Employers Association have 25 dockers available. Contact local stevedores for detailed information.
MEDICAL: Medical and dental services are available by arrangement. Hospital facilities are available at Balfour Hospital at Kirkwall.
DENSITY: 1025.
FRESH WATER: Available at all berths by 51 mm. mains supply. May be restricted in dry periods. 0.71p per tonne.
FUEL: Available by road tanker only from Esso – Shell/B.P.
FIRE PRECAUTIONS: Standard precautions. Local fire brigade.
CONSULS: Denmark, Netherlands, Norway, Germany F.R.
REPAIRS: Several small engineering firms can carry out minor repairs.
DRY DOCKS: None.
SURVEYORS: Not available.
GANGWAY/DECK WATCHMEN: Not available.
HATCHES: Opening/closing by crew.
CUSTOMS ALLOWANCES: As per British Customs scales.
REPATRIATION/TRAVEL: There are daily air services during the week to Aberdeen, Inverness, Glasgow and Edinburgh from Kirkwall Airport. There is no service on Sunday. There is a daily ferry service from Stromness to Scrabster to connect with British Rail. During the Winter months there is no service on Sunday.
AIRPORT: Approximately 4 miles from Kirkwall. Airlines: British Airways and Logan Air.
TIME: GMT. BST (GMT plus 1 hour) March – October.
HOLIDAYS: Public holidays vary except for Christmas and New Year (25th and 26th December, 1st and 2nd January).
POLICE/AMBULANCE/FIRE: Emergency – 999. Police: 2241. Ambulance: 2763.
EMERGENCY CO-ORDINATION CENTRE: Coast Guard: Tel. 3268. Telex: 75211.
SERVICES: Radio/radar technicians, divers, charts, etc., all available. Contact Agents.
BANKS:

Bank of Scotland, 56 Albert Street, Kirkwall. Tel: 0856-2169.

Bank of Scotland, 99 Victoria Street, Stromness. Tel: 0856-850238.

Clydesdale Bank plc, 3 Broad Street, Kirkwall KW15 1DH. Tel: 0856-3237.

The Royal Bank of Scotland plc, P.O.Box 6, 1 Victoria Street, Kirkwall. Tel: 0856-2718. Telex: 75327.

The Royal Bank of Scotland plc, P.O.Box 1, 3 Victoria Street, Stromness. Tel: 0856-850217.
SHORE LEAVE: No restrictions.
DELAYS: Stevedores also work Stromness when required, delays to vessels at Kirkwall can be expected due to lack of labour.

DEVELOPMENTS: Proposed extension to Kirkwall main pier, no details available at present.
AUTHORITY: Department of Harbours, Orkney Islands Council, Harbour Authority Building, Scapa, Orkney KW15 1SD. *Tel:* 0856-3636. *Telex:* 75475. *FAX:* 0856-3012. *Contact:* Captain R.C. Sclater, Director of Harbours.

LARNE: 54.51 N. 05.48 W. (See Plan)

DOCUMENTS: See "Belfast".
PILOTAGE: Not compulsory. Private Pilots available through Ships' Agents. Pilots board off Fairway Buoy. Contacted through Port Information Service on Channel 16, Call Sign 'Larne Harbour'. ETA 3 hours and 1 hour in advance, giving name, nationality, length, draft and gross tonnage. For Ballylumford Power Station call Belfast Pilots on VHF Channel 12.
Berths arranged by Harbour Master in advance.
ANCHORAGES: Inner anchorage at Larne up to 9 m. Anchorage outside Fairway Buoy in 11 m.
MAX. SIZE: Draft dependent on berth but max. 22 ft. 03 in. (6.8 m.) at Mac Kean Quay. Oil tankers proceed to Ballylumford Power Station which lies across Larne Lough directly opposite Larne Harbour. Approach channel has a minimum depth of 30 ft. below datum and berth has 35 ft. below datum.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Portishead/Portpatrick.
VHF: Port Information Service maintains continuous watch on Channels 14 and 16. Call sign 'Larne Harbour'. The service provides information regarding arrival, berthing, anchoring, departure and movements of vessels. Also information including pilots, wind direction and strength, visibility, tidal information, etc.
TUGS: 1×18 ton, 1×7 ton and 1×3.5 ton bollard pull tugs are stationed at Larne. Tugs from Belfast serve oil tankers to Ballylumford.
BERTHING: 1 berth equipped with 2×5 ton cranes for grabbing and general cargo work. 2 berths are equipped with cranes of 32 tons and 35 tons capacity for handling containers. 4 berths (3 twin level ramps for vessels up to 170 m.) are equipped with Ro/Ro ramps, capable of taking loads up to 180 tons and ships up to 24 m. beam.
STEVEDORES: Larne Harbour Ltd. carry out all the stevedoring. 24 hours' notice required for arrangements. Normal hours 0800 — 1700. Overtime by arrangement.
Main commodities: Fertiliser in bulk (150 t.p.h.), palletised fertiliser (200 t.p.h.), pulp (200 t.p.h.), steel plates and general cargo, etc.
MEDICAL: No advance notice required. Ample hospital facilities available within near vicinity.
TANKERS: For Ballylumford, see "Max. Size".
DENSITY: 1025.
FRESH WATER: Available at all berths. Order through Agent. Rate 15 t.p.h.
FUEL: Bunkering carried out by road tanker. Major grades of bunker fuel, diesel and marine lubes can be obtained through suppliers.
CONSULS: Consuls in Belfast (20 miles) can be contacted through ship's Agent.
REPAIRS: Small repairs by local firms. Major repairs by Belfast firms.
DRY DOCKS: See "Belfast".
GANGWAY/DECK WATCHMEN: Ship's gangway. Watchmen by arrangement with Agents.
OPENING/CLOSING HATCHES: Performed by ship's crew.
CUSTOMS ALLOWANCES: Usual allowances as per H. M. Customs and Excise.
CERTIFICATES:
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Load Line Certificate.
Ship's Register.
Derat Certificate.
REPATRIATION: Crew changes and repatriation without difficulty by sea and air.
AIRPORT: Belfast International Airport and Belfast Harbour Airport 20 miles distant. Frequent flights to all parts of U.K.
HOLIDAYS: Christmas Day and New Year's Day. No cargo worked on these days, except by special arrangement.
POLICE/FIRE/AMBULANCE: Dial 999 and ask for Emergency service required. Also through Port Information Service on VHF Channels 14 and 16.
TELEPHONES: Placed on Cross Channel vessels. Public telephones in port area.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
SHIP SUPPLY SERVICE: John McLoughlin & Son (Shipping) Ltd., North End, The Harbour, Larne. Tel: Larne 73785 & 74085.
Ship supply and personnel transfer to ships alongside or at anchor.
AUTHORITY: Larne Harbour Ltd., 9, Olderfleet Road, Larne BT40 1AS, County Antrim, Northern Ireland. *Tel:* (0574) 79221. *Telex:* 747814. *FAX:* (0574) 74610. *Contact:* Captain A.K.W. Gardiner, Harbour Master/ Operations Superintendent. D.P. Galway, General Manager.

LEITH: 55.59 N. 03.10 W. (See Plan

DOCUMENTS:
2 Report Forms (C. 13). } One Combined
3 Stores Declarations (C. 14). } Form
2 Crew Declarations (C. 142).
2 Crew Lists
2 Passenger Lists
Also additional forms for specific circumstances, e.g. deck cargo, hazardous cargo, livestock etc.
Light Dues: £3.06 per 10 n.r.t. for 7 visits in any one year, coastwise o foreign.
(Also see "Glasgow".)
PILOTAGE: Pilot station Firth of Forth located at Granton, boarding station West of Fairway Buoy at Long. 3° West. Contact with pilot cutter can be made on VHF Channel 16 (working Channel 14) and radio telephone 2182. Pilotage not compulsory for vessels approaching Sout of Inchkeith Island.
Large vessels are normally docked 1.5 hours before HW. Vessels u to 20 ft. draft, dock at any time.
ANCHORAGES: Good holding ground at Inchkeith Island and Lei roadstead, depths 8 m. – 19 m. at C.D. Request should be made t Forth Navigation Service (calling on Channel 71, working on Channe 20). Other anchorages as per Admiralty Charts of the area.
APPROACHES: *Cautionary Advice:* Tidal streams set across th approach channel with rates up to 1.5 knots (in a 080/260° (T) direction) Great care should be exercised in ensuring sufficient set is allowed t maintain the correct approach course when slowed down in the channe immediately prior to entering the locks.
RESTRICTIONS: None. Vessels can enter harbour day or night.
Lock: Entrance to the port is from the Firth of Forth through the entranc lock which is 259 m. long and 31.6 m. wide between fenders, depth ove the outer sill MHWST 12.239 m. Maximum dimensions: LOA 210 m, beam 30 m.
The lock is operated 24 hours a day, 7 days a week with the exceptio of December 25th and January 1st, when it is operated in emergencies only.
MAX.SIZE: Governed by draft of vessels. Max. permissible dra alongside in Imperial Dock 9.1 m. and in Western Harbour 9.7 m. in dock water density is 1015.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Forth, Stonehaven and Cullercoats Radio Stations.
RADAR/VHF: Port and Estuary radar service. VHF contact can be mad with Leith Harbour Radio on Channel 16. Forth Navigation Service mus be contacted on VHF Channel 71 by vessels entering Forth Por Authority Seaward Limit (line joining North and South Carr Beacons working Channels 20 and 12.
TUGS: 4 tugs, 12-30 tonnes bollard pull. Attend inward-bound vesse in Leith roads. Tug's towline available and compulsory. Tugs on VHF Channels 16, 6, 8, 11, 12 and 14.
CRANES: 1×9 tonnes, 1×7.5 tonnes and 1×3 tonnes mobile diese cranes. Also see "Berthing".
BULK HANDLING FACILITIES: See "Berthing".
Grain Storage: Imperial Basin: 55,880 tonnes. Western Harbour (privat 53,848 tonnes.
STEVEDORES: ETA advices given by Master to ship's Agent an conveyed by them to stevedores.
MEDICAL: No advance notice of medical attention required. All hospit facilities available.
TANKERS: 1 tanker berth – max. permissible draft 9.15 m. in dock wate of density 1015. Discharge lines 10 in. and 8 in. (see "Berthing") No slop discharge facilities. 1 tanker berth for distillates with 8 in. lin and 4 in. bunker line.
DENSITY: 1015.
FRESH WATER: Available alongside at all berths.
FUEL: All grades available subject to 24 hours notice in advance.
GANGWAY/DECK WATCHMEN: Usually supplied by ship but sho watchmen arrangeable by special agreement.
OPENING/CLOSING HATCHES: Custom of the port is that this wo is normally carried out by ship's crew.
CERTIFICATES:
Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Cargo Construction.
Derat Certificates.
Light Dues receipt.
CUSTOMS ALLOWANCES: Usual amounts allowed by Customs an Excise.
CARGO GEAR: No additional requirements necessary to comply fu with local safety regulations as all gear supplied by stevedores.
REPATRIATION: All facilities available for effecting crew changes an repatriation by sea, air and rail.
AIRPORT: Edinburgh Airport served by regular airlines and locate approx. 9 miles from Leith.
TIME: British Standard Time, GMT plus 1 hour. GMT in Winter months
HOLIDAYS: Public holidays observed annually: 3rd Monday in Apr 3rd Monday in September; Christmas Day (25th December); 26t December; 1st, 2nd, and 3rd January. Cargo work can be arranged o public holidays except 25th December and 1st and 2nd January.
POLICE/AMBULANCE/FIRE: Tel. 999 and ask for service required o call Leith Harbour Radio on VHF Channels 16 and 12.
TELEPHONES: Can be arranged with G.P.O.
SERVICES: Compass adjusting facilities available.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
DELAYS: Minimal delays in berthing, loading and discharging.

REPAIRS: Facilities available to carry out all types of deck and engine repairs.

DRY DOCKS: Largest dry dock "Imperial", length 167.6 m. width of entrance 21.3 m. depth over blocks at 7.7 m. also 2 smaller dry docks.

AUTHORITY: Forth Ports Authority, Port Office, Tower Place, Leith, Edinburgh EH6 7DB. *Tel:* (031) 554 4343. *Telex:* 72681. *FAX:* (031) 563-7462. *Cables:* Harbour Leith. *Contact:* Mr. T. Skinner, Port Manager, Leith & Granton.

LERWICK: 60.09 N. 01.08 W. (See Plan)

PORT LIMITS: All waters contained within the following boundaries including Dales Voe and Aith Voe.

Straight line drawn from the N.E. extremity of Hawks Ness (Lat. 60° 13′ 27″ N., Long. 1° 10′ 00″ W. approx.) in an East Southeasterly direction to the N.E. extremity of Green Holm and thence in a Southeasterly direction to the N.E. extremity of Score Head in the island of Bressay. Thence in a Westerly and Southerly direction along the HW mark of all foreshores to Kirkabister Ness thence in a Westerly direction to the Southern extremity of Ness of Trebister. Thence along high water mark of all foreshores in a generally Northerly direction to Hawks Ness.

BUOYAGE: Buoyage in Lerwick Harbour is IALA System "A".

DOCUMENTS: See "London".

PILOTAGE: *Pilot Office:* At foot of Victoria Pier in Harbour Master's Office. Lat. 60° 09′ N., Long. 1° 08′ W. Limits of Pilotage District similar to Port limits given above. Licenced Pilots always available on 24 hour service subject to following correct procedure given below.

Call Sign: Lerwick Harbour Radio.
Frequencies: Calling: VHF Channel 16. Working: VHF Channel 12. Pilot Cutter: VHF Channels 6, 11, 12 and 16.
Port Control: Fitted with VHF Channels 11, 12 and 16. Continuous watch is maintained 24 hours per day, 7 days per week on Channel 16 except when working vessels on Channel 12.
Procedure: The Port Control Office controls the movement of all vessels arriving or departing by either entrance and all movement within the harbour from public or private quays or supply bases, whether such vessels are under the control of Pilots or not.

(a) Vessels requiring pilotage should arrange with Agent not less than 24 hours before arrival. Vessels without Agent should contact Lerwick Harbour Master through Coast Radio Stations not less than 24 hours before arrival. Vessels leaving ports less than 24 hours steaming away should advise time of sailing, projected speed and ETA at time of leaving last Port. Vessels inward from Continental Shelf should advise time of leaving location, projected speed and ETA at time of leaving last location. Amended ETAs should be advised 2 hours before the time given in the last transmitted ETA. VHF contact should be made with Lerwick Harbour Radio while still 1 hour away when final pilotage and berthing arrangements will be made. Port control cannot guarantee a Pilot on station unless 1 hour's notice is given.

(b) ETA messages should also contain information on which harbour entrance is to be used, draft and length overall. Vessels entering by the South entrance will be boarded West of Kirkabister Lighthouse or near Knab Point if weather conditions are unsuitable. Vessels entering by the North entrance will be boarded abeam of the Green Holm and 0.5 miles N.E. of Beosetter Holm. If boarding conditions in this area are unsuitable the South entrance must be used.

(c) "Knab", 18 m. Dark blue hull, white upperworks. Pilot boat and tug, can be used for towing, bollard pull 8 tons.

(d) Outward vessels should call the Port Control 1 hour before departure when information on traffic movement will be given and arrangements for pilotage will be made. When moving within the harbour all vessels should maintain a continuous listening watch on Channel 16. All vessels moving within the harbour should report to the Port Control immediately prior to leaving the berth or anchorage, whether a Pilot is on board or not.

(e) Pilotage compulsory for oil tankers over 1,600 g.r.t. and for all vessels over 3,000 g.r.t. in the Inner Harbour defined by; in the North, a straight line between Rova Head and the Ness of Beosetter, and in the South, a straight line between the Knab and Taing of Ham.

(f) Telephone number of Lerwick Harbour Master and pilot station is Lerwick 3462.

ANCHORAGE: Ample anchorages in harbour roads.
Inner South Harbour depth up to 60 ft.
Breiwick Bay (Inner South Harbour) depth up to 90 ft.

MAX. SIZE: Vessels up to 20 ft. draft and 320 ft. long alongside berth as routine. Vessels of greater length and for draft may be accommodated alongside after discussion with Harbour Master. Anchorages available for any size of vessel subject to prior consultation with Harbour Master, if above 10,000 g.r.t. No mooring buoys available.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Nearest Coast Radio Station "Shetland Radio" Frequency and other details as for "Wick Radio" except for VHF working Channel which is Channel 27.
"Lerwick Harbour Radio" see "Pilotage".

TUGS: A new tug of 25 tons bollard pull is available. The pilot cutter will also give towage assistance.

BERTHING: Berths are available for the handling of most cargoes including Roll-on/Roll-off and arrangement should be made through Agents well in advance of arrival. No berths available for handling liquid chemicals. Mobile cranes available from Harbour Authority up to 30 tons capacity or through private operators to 110 tons capacity.

	Length of Quay (ft.)	*Depth* (ft.)
South Harbour	3,000	10 – 35
Shell & B.P. Bases, Holmsgarth	1,000	15 – 25
Holmsgarth, 5 berths, including 2 Ro–Ro	3,000	18 – 35
O.I.L. (Shetland) Ltd.	2,656	18 – 24
Dales Voe Rig Repair Base	164	41

STEVEDORES: Arranged through Agent.

MEDICAL: Medical aid can be arranged through Agent or Coastguard at any time day or night.

TANKERS: BP Oil have their own discharging berth. Tankers are also able to discharge at various offshore oil industry supply berths

DENSITY: Density 1025 at all states of tide.

FRESH WATER: Available at most berths, 65 t.p.h. to 100 t.p.h. No water boat.

FUEL: Gas oil available on demand.

FIRE PRECAUTIONS: No-smoking regulations in operation inside all transit sheds. Usual tanker terminal regulations in operation. Handling of explosives covered by local Bye-Law.

CONSULS:

LIVERPOOL: 53.28 N. 03.02 W. (See Plan

DOCUMENTS: Required on arrival, Crew List Form I.B.6 to be completed; this list to include all passengers and any British subjects who joined vessel outside of U.K. If any person falling into this categor should be on board they must not leave until permission to land is granted by Immigration Officer.

Customs Form C.142, Declaration of goods obtained abroad or durin a voyage, must be completed and signed by Master, and each crew member. Health Declaration must be completed. Above forms shou be obtained from Pilot.

Manifest and Bills of Lading should be forwarded to vessel's Agen so as to be available before vessels arrival.

Ship's Papers Required:
Ship's Register.
Certificate for British Tonnage (if issued).
Safety Equipment Certificate.
Safety Radio Certificate.
Safety Construction Certificate.
International Load Line Certificate.
Derat Exemption Certificate.

PILOTAGE: Pilotage is compulsory for all vessels navigating within the Port of Liverpool (as defined in the M.D. & H.C. Act 1971). The M.D. H.C. is also empowered to act on behalf of Garston Docks for Pilotage Directions. The following vessels shall be exempt from Compulsor Pilotage:

1. Any vessels belonging to Her Majesty.
2. Any vessel which has a Gross Registered Tonnage of less tha 1,600 g.r.t., provided that this exemption shall not apply to any suc vessel which is:-
   (a) Carrying hazardous cargoes.
   (b) The navigation of which is, in the opinion of the compan affected by a defect in or damage to the vessel or he equipment, or inadequacy of the Master or crew.
   (c) Navigating solely to adjust her compasses within the Port limits

Attention is drawn to the General Directions for Navigation in the Por of Liverpool No. 4, the Pilotage Directions 4:1 and the Mersey Channe Collision Rules.

Boarding Position: The normal boarding position will be in the vicin of the Bar Lanby Buoy, but vessels may, by arrangement, board the Pilots at Point Lynas. Both stations are served by launches controlle from "Port Operations Control" in Liverpool. The Control Centre operate on VHF Channel 11 (and 9, 12 or 16) with the call sign 'Liverpool Pilo The Pilot launches will show the appropriate Pilot Flag or Lights and w have the words "Liverpool Pilot" painted on the superstructure.

Inward Bound Vessels: Vessels requiring a Pilot must give not less tha 24 hours notice before the expected time of arrival of the relevant vesse at the Pilot Station at which the Pilot is to be boarded; via Agents, vi G.P.O. Coast Stations to the Liverpool Pilotage Control Centre, or vi telex to 626264 P.T.O.P.S. Liverpool and ETA's must be kept up-date Penalty charges are made for non-compliance with the ETA Regulatio (Reference Pilotage Directions No. 7).

Outward Bound Vessels: Vessels requiring a Pilot must give not le than 3 hours notice before the expected time of departure of the releva vessel to the Port Operations Control Centre, between the hours 0800 hrs. to 1630 hrs. on weekdays and 0800 hrs. to 1200 hrs. o Saturdays, Sundays and Bank Holidays.

ANCHORAGE: In the event of berths not being readily available vessels, normally they must wait at the Mersey Bar Anchorage which in the open roadstead. There are river anchorages, but these are o usually for vessels about to enter the dock system.

RESTRICTIONS: No restrictions on night entry, except VLCCs, tidal restrictions depend on vessel's draft and to which berth vessel proceeding, larger vessels usually have to wait for HW.

MAX. SIZE: Tranmere: up to 41 ft. (12.5 m.) draft dependent on tide. Birkenhead: Up to 28 ft. 6 in. (8.68 m.) draft.

Liverpool Docks: Up to 42 ft. (12.8 m.) draft.

Royal Seaforth Dock: 42 ft. (12.8 m.) of water depth, up to 75,000 d.w.t.

HEALTH: Maritime Declaration of Health Form must be completed and handed to Customs Officer or Port Health Officer, whoever first boards ship. This form is obtainable from Pilot. In event of any suspected disease or fever on board, or if ship has called during last 4 weeks at any port in Brazil, China, Indo-China, India, Pakistan, Myanmar (Burma), Colombia and the port of Dar-es-Salaam, West African ports between Lat. 20° North and 20° South, the Master should, prior to entering port, make radio contact with Liverpool Port Health Authority, via Portishead Radio or Port Radar Station (Signal "Portelth Liverpool") giving them following information:

1. Name of Ship. 2. Date of departure from and name of last infected port. 3. Number, ages and sex of any cases of infectious diseases or other relevant information. 4. Expected time of arrival at Rock Light.

Before reaching the Rock Light, if medical clearance has not been obtained, the following signal must be displayed: By day – fly the flag signal "Z W". By night – show red light over white light.

When medical clearance is obtained Pratique will be issued at discretion of Customs Officer.

If there is no suspected disease on board and vessel has not called at any of the above ports listed, Master can radio for Free Pratique. Unless otherwise instructed, Customs Officer will again issue Pratique.

Vessels arriving from another U.K. port do not require Pratique or health clearance.

Also see "Health – All Ports" before first U.K. port.

RADIO: Portishead Radio, call sign: GKL; Landsend Radio, call sign: GDL; Wick Radio, call sign: GKR; but on approaching Liverpool, the local radio station is Anglesey Radio, call sign: GLV.

RADAR/VHF: VTS operational. Vessels should establish contact by VHF/RT with the Port Operations Control, call sign "Mersey Radio", before sailing and inward bound when within VHF/RT range and not later than when in the vicinity of the Bar Lighted Buoy.

Harbour Radar: The radar coverage extends seaward over Liverpool Bay for a radius of 20 miles from the station and in the River Mersey as far South as the approaches to the Manchester Ship Canal.

Vessels entering or leaving the Port in conditions of low visibility can, on request, be supplied with continuous information of their position whilst navigating in the river or sea channels.

A general situation and movement statement, giving all intended movements inwards and outwards for the Port of Liverpool, Eastham, Garston and Cammell Lairds and approximate times at the dock entrance or river berth, together with a list of Local Navigation warnings in force, latest weather reports and area forecast, is broadcast on Channel 9 at 3 hours before each HW. This full statement is repeated with any amendments and the disposition of the River Anchorages North and South at 2 hours before each HW.

Any local navigation warning, gale warnings and amendments to gale warnings are broadcast on receipt on Channel 12.

A full list of navigation warnings and gale warnings is broadcast on Channel 9 every 4 hours, commencing at 0001 hrs. No separate broadcast of this list is made during the period from 4 hours before HW to 1 hour before HW as such warnings are included in the General Situation and Movement Statement.

Docking Instructions: The VHF/RT Stations at the Dock Entrances and Stages are provided to facilitate docking and berthing operations and to provide direct communication between the Dock Master or Stage Master and a vessel. The Range of these stations is limited to a distance of 6 miles to 8 miles.

Tug Communications: Channels 8 and 10 are reserved for tug communications and should not be used for any other purpose. Due to the heavy working of these Channels, especially at tide time, and in order to minimise interference, vessels and their tugs when communicating to one another on VHF/RT, should, when possible transmit on reduced power.

Large Vessels Swinging: Vessels of 150 m. or over in length intending to swing in the river should give advance notice of at least 10 minutes to Mersey Radio of their intentions so that Mersey Radio can broadcast on Channel 12 a swinging warning to all ships.

Port VHF Radio Telephone Communications System:

Station	*Call Sign*	*Hague Channel Number*	*Remarks*
Liverpool Port Operations Control	Mersey Radio	16	Calling and safety
		12	Port Operations – Calling and navigation.
		9	Port Operations and routine broadcasts
		18,22	Port Operations and Radar information
		19	Radar information and general, for tanker traffic for Tranmere only.
			A continuous watch is kept on Channels 16 & 12 at Port Radar Station
Gladstone Dock Master's Office	Gladstone Dock	5	Port Operations and Docking Instructions.
Langton Dock Master's Office	Langton Dock	21	
Alfred Dock Master's Office	Alfred Dock	5	
Tranmere Stage Master's Office	Tranmere Stage	19	
Associated British Ports			
Garston Dock Master's Office	Garston Dock	20	Port Operations and Docking Instructions.
M.D.C.			
Canning	Canning Dock	37	Berthing Instructions
Manchester Ship Canal			
Eastham Locks Office	Eastham Locks	7	Port Operations and Docking Instructions
M.D. & H.C. Pilot Stations			
Point Lynas Shore Station	Lynas Pilot	16	Calling and safety
		9	Ship to shore.
Liverpool Control Centre	Liverpool Pilot	16	Initial calling
		12	Initial calling
		11	Calling & ship to shore

Local Priority Messages: A vessel which has an urgent message to transmit to Mersey Radio concerning urgent navigation matters and which message should receive priority over normal Port Operations R/T Communications, should indicate the urgency of the message by prefixing the call sign of the Port Operations Control with the spoken word "PRIORITY" i.e. "PRIORITY MERSEY RADIO" repeated 3 times followed by normal procedure.

In special circumstances such as the launch of a vessel or in an emergency such as a wreck, it may be necessary temporarily to establish a patrol for the control of traffic. Vessels will be warned of the existence of any such patrol by "Mersey Radio" and any such patrol vessels or launches will maintain a listening watch on Channel 12 and communicate with other vessels on Channel 6.

R/T Procedure

Channels to be used for Calling and for Preparatory Signals: Mersey Radio and ship stations will call on Channel 12. Channel 16 should only be used for distress, urgency or safety communications.

Channels for Reply: Calls received on Channel 12 should be replied to on the same Channel, but if calls are received on Channel 16, replies should be made on this Channel.

Indication of the Channel to be used for Radio Telephone Traffic: When communication has been established on Channel 12 between a ship and "Mersey Radio", the shore station will indicate the Channel to be used for passing and receiving information if Channel 12 is busy.

Times: All times in messages should be given in local time, i.e. BST or GMT, using the 24 hour notation.

R/T Discipline: To ensure that the full advantage of efficient communication is achieved, strict telephone discipline and attention to procedure, particularly on the calling Channel is imperative. Channel 16 must only be used for establishing contact between ship and shore or ship and ship, and must not be used for the passing of messages except in cases of distress within Port limits. Channel 12 should be used for establishing contact between ship and shore or ship and ship.

Sequence of R/T Communication for Vessels Entering the River Mersey:

(i) Vessels wishing to communicate with the Liverpool Pilotage District Point Lynas Shore Station should call "Lynas Pilot" on Channel 9. Channel 16 shall only be used in case of difficulty in establishing initial contact.

(ii) Vessels wishing to communicate with the Liverpool Pilotage Control Centre should call "Liverpool Pilot" on Channel 11. Channels 16 and 12 should only be used in cases of difficulty in establishing initial contact.

(iii) When within VHF R/T range and not later than when in the vicinity of the Bar Lighted Buoy the vessel should establish contact with Mersey Radio on Channel 12 and pass her arrival information on Channel 12 or other Channel indicated by Mersey Radio, watch should be kept on Channel 12 unless instructed to remain on another working Channel for Port Operational reasons. A vessel at anchor at the Bar anchorage should keep watch on Channels 16 and 12.

(iv) Vessels requiring radar information or assistance will be requested to shift to Channel 18 or 22.

(v) Vessels should inform Mersey Radio when they are ceasing to keep a listening watch on Channel 12. If they are shifting to a tug or a dock entrance or Tranmere Oil Stage Channel they should inform Mersey Radio of such intention.

Vessels Sailing from the River Mersey: Vessels, on sailing from any Stage or Dock, should establish contact with Mersey Radio on Channel 12 and then maintain watch on that Channel unless instructed to remain on another working Channel for Port Operational reasons. Vessels requiring radar information or assistance will be requested to work on Channel 18 or 22.

TUGS: Join vessel after passing Rock Light. Normally use tug's lines but optional. Charge for tug's hawsers.

BERTHING: 35 general cargo berths.

BULK CARGO FACILITIES: *Grain Berths:* Royal Seaforth Grain Terminal accommodates ships of up to 75,000 d.w.t. up to 260 m. overall length and 12.8 m. draft. Discharge is by 2 marine towers at up to 2,000 tonnes p.h. into 133,000 tonnes capacity silo. 2×750 tonnes per hour dischargers (Buhler) for animal feedstuffs at Berth S.2, storage capacity 30,000 tonnes. 1 × 220 tonnes per hour Vigan pneumatic discharger for heavy grains and animal feedstuffs ex-small vessels up to 4,000 d.w.t.

Export grain berth at South 2 Gladstone Dock for vessels up to 75,000 d.w.t., 250 m. LOA and 12.5 m. draft. Loading is by Fyson elevator at an average of 800 tonnes per hour.

Other grain berths include Birkenhead East Tower Berth accommodating vessels up to 150 m., draft 8.7 m.

Grab Cargoes: (Minerals, ores, coal, meals, etc.).

N.3 Huskisson Branch Dock: 2 berths for vessels up to 9.5 m. draft, each equipped with 4 grab cranes.

S.E.2 Alexandra Dock: Vessels up to 8.84 m. draft, equipped with 3 grabbing cranes for handling animal feeding stuffs; discharge to road via hoppers and direct by conveyor to silo storage.

E. Bramley Moore: 2 × 5 tonnes grabbing cranes for handling vessels up to 3,000 tonnes d.w.t. and 5.8 m. draft. Discharge direct to road vehicles.

North Bidston Dock: Quay length 305 m., 8.7 m. draft, max. length 192 m., 3 transporters each with an hourly digging capacity of 350 tonnes discharging to road or rail via 175 tonnes hoppers or into coasters or barges.

Cavendish Quay: 2 × 20 tonnes level luffing jib cranes with a grabbing capacity of 15 tonnes. Each designed to handle up to 450 t.p.h. Loading to road or rail with 2 × 100 tonnes capacity mobile weigh hoppers.

Duke St. Wharf: Vessels up to 8.7 m. draft discharged by 2 × 7.5 tonnes electric level luffing cranes.

S.2 Gladstone Dock: Bulk terminal with length 250 m. and depth 12.5 m. The terminal will handle Panamax (75,000 tonnes) vessels with 3 grab cranes.

BULK LIQUID FACILITIES: *Tranmere:* Petroleum oils at Tranmere South Stage, accommodating tankers up to 115,000 tons displacement, max. draft 11.1 m. plus height of tide and Tranmere North Stage accommodating tankers after lightening up to 210,000 tons displacement, max. draft 12.0 m. plus height of tide. Facilities operated by Shell U.K. Ltd.

Cautionary Advice: Vessels which are required to pump over the tide must discharge so as to reach, 30 minutes before LW, a draft not greater than 41 ft. plus height of LW at the North stage, or 38 ft. plus height of LW at the South stage. (These figures may vary slightly from time to time and should be checked with the Berthing Master).

Liverpool: N.2 Gladstone (edible oils berth, total quay length 175 m., 12.8 m. draft).

S.1 Canada (edible oils and molasses, up to 213 m. length, 9.75 m. draft).

S.E. Nelson (wines and spirits, for vessels up to 99.1 m. length, 6 m. draft).

Birkenhead: N. Alfred (8.6 m. draft, edible oils).

Ilchester Wharf (8.6 m. draft).

E. Lewis (edible oils, bulk chemicals and molasses for vessels up to 192 m. in length, 8.7 m. draft).

SPECIALISED CARGO HANDLING FACILITIES: *Containers:* The container terminal at Royal Seaforth Dock has a continuous quay 1,100 m. in length, served by 6 gantry cranes up to 40 tons capacity and a fleet of straddle carriers working to a 22 ha. container park supported by a 26 ha. back-up area. Tractor trailer units are used to feed the integral Freightliner Rail Terminal.

Containers can also be handled at all general cargo berths.

Timber and Forest Products: At the Royal Seaforth Timber Terminal, 793 m. of continuous quay are served by 4 × 10 tonnes cranes discharging packaged timber to a 26 ha. stacking and back-up area. 3 sheds provide covered storage of 16,000 sq.m. for plywood, pulp-kiln-dried timber.

Ro/Ro: There are 12 berths in the port with Ro/Ro ramp facilities; Royal Seaforth, S.3, S.6 and S.10; Gladstone No. 3, North Hornby. N.W. Alexandra, E. Langton, N.E. 3 Canada, S.E. Nelson, S.E. Trafalgar, S.W. Princes and S. Bidston (Birkenhead).

Heavy and Indivisible Loads: Good road access and specialised facilities include 3 berths strengthened to accept loads of up to 300, 400 and 1,000 tonnes respectively. 250 tonne capacity sea-going floating crane.

STEVEDORES: Earliest possible ETA to be given to arrange gangs.

MEDICAL: If doctor is required to attend immediately on arrival of vessel, prior notice will be required, but generally doctor is arranged for most convenient time after vessel's arrival.

Hospitalisation is available, but seamen will only be admitted if immediate treatment is required. It is preferred for foreign seamen requiring hospital treatment to be repatriated, if able to travel.

Dentist available by appointment only.

TANKERS: See "Bulk Liquid Facilities".

DENSITY: River Mersey salt water. Docks approximately 1024.

FRESH WATER: Available at all berths, ex-quay. No water barges available. Rate of delivery 15-20 t.p.h.

FUEL: Most major oil companies are represented and can supply range of fuels of various viscosities. Notice required depends on the berth at which vessel is lying as bunkers are supplied ex-lighter at most berths. Notice required can vary depending on availability of barges, but generally at least 3 to 4 days notice is required.

FIRE PRECAUTIONS: Tankers may not carry out repairs whilst at discharging berth unless permission is obtained from Harbour Authorities. Fire precautions notice is placed on board by Harbour Authorities.

CONSULS: The following countries have representatives in Liverpool:

Dominican Republic	Finland	Panama
Ecuador	France	Thailand
El Salvador	Germany F.R.	

REPAIRS: All types of deck and engine repairs can be carried out.

DRY DOCKS: Largest (Cammel Laird) – length 950 ft. × 140 ft. Also 7 smaller dry docks (M.D.H.C., Wright and Beyer, and Mannings Marine).

SURVEYORS: (1) Caleb Brett and other companies available.
(2) Lloyds, A.B.S. and B.V. are available.

GANGWAY/DECK WATCHMEN: Watchmen not necessary but available if required.

OPENING/CLOSING HATCHES: Carried out by ship's crew for bulk cargoes and by stevedores for general cargoes.

CERTIFICATES:
Register/Certificate of Measurement.
Certificate of British Tonnage (if issued).
Safety Radio Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Load Line Certificate.
Derat Certificate.
Cargo Gear Test Certificates.

CUSTOMS ALLOWANCES: Crew members who remain on vess during vessel's stay in port may be allowed, under certain condition to keep, for their own use on board, small quantities of any tobacc spirits and other goods declared on Customs Form C.142. The amou allowed depends on the number of days the vessel is in port.

CARGO GEAR: Cargo Gear Certificates must be produced with th necessary up-to-date endorsement.

REPATRIATION: Can be effected, but must be arranged through Agen so that Immigration Clearance can be arranged.

AIRPORT: City Centre to Airport approximately 7 miles, regular servic to London for international connections.

Regular Services from Liverpool Airport to:

Aberdeen	Air Ecosse
Amsterdam	Genair
Belfast	British Midland
Brussels	Jersey European Airways
Cork	Jersey European Airways
Dublin	Jersey European Airways
Dublin	Air Lingus
Isle of Man	British Midland
Jersey	British Midland
Gatwick	Genair
Heathrow	British Midland
Stansted	Jersey European Airways
Newquay (Cornwall)	Genair

(The above are all passenger services with the exception of Dublin whic is mainly freight).

TIME: British Standard Time, which is 1 hour in advance of Greenwic Mean Time, reverting to GMT in Winter months.

HOLIDAYS: Good Friday; Easter Monday (movable); 1st Monday i May; last Monday in May; last Monday in August or first Monday i September, whichever may be closest to August 31st. December 25th 26th and New Year's Day. Weekly holidays Saturday, Sunday. Carg can be worked on official holidays, other than 25th-26th December, als arrangements can be made for cargo to be worked on Sundays.

POLICE/AMBULANCE/FIRE: Telephone 999, ask for service required

EMERGENCY CO-ORDINATION CENTRE: "Liverpool Coast Guard" Tel: Liverpool (051) 931-3341/43.

TELEPHONES: A temporary telephone can be placed on board vessel, at most berths, whilst in port.

SERVICES: Compass adjusting, D.F. calibration can be arranged.

BANKS: Allied Irish Bank Ltd, 5/9 Renshaw Street, Liverpool 1; Banc Exterior C A, 6 Victoria Street, Liverpool 1; Bank of Credit & Commerce International (Overseas Ltd), 41 Castle Street, Liverpool 2; Bank o Ireland, 25 Victoria Street, Liverpool 1; *Citibank Trust Ltd, Towe Buildings, 22 Water Street, Liverpool 2; *American Express International Travel Agents, Lord Street, Liverpool 2.

*Not Banks as such but possibly undertake closely allied functions.

STORING: See "Prelims".

1. All vessels can be stored by either barge or truck.
2. Barge storing at Tranmere Oil Stages is restricted to "Approved barges.
3. Trucks do not always have direct access to vessels by driving alon quayside. Approach may be via sheds.
4. Forklift trucks can be used in most cases.
5. As per British Customs Regulations.
6. Riggers can be employed.

SHORE LEAVE: All bona fide crew members may be granted tempora shore leave during the vessel's stay in port, on condition that they leav in the same ship. This permission does not apply to any alien membe of the crew who is refused leave to land by an Immigration Officer, o to whom an Immigration Officer has given notice prohibiting him fro landing without leave.

IDENTIFICATION CARDS: Not required.

SHIP SUPPLY SERVICE: Alexandra Towing Co. Ltd., Cast Chambers, 43, Castle Street, Liverpool 2. Tel: 051-227 2151.

Carmet Tug Co. Ltd., Lock Head, Bromborough, Wirral. Tel: 051-64 5579.

Rea Towing Co. Ltd., Odyssey Works, Corporation Road, Birkenhead Merseyside. Tel: 051-647 6263.

In addition the Port of Liverpool has the Buoyage Tender and Salvag vessel "Vigilant" which has fire fighting capability and is Classed 10 A1 for River Mersey and Liverpool Bay Service.

DEVELOPMENTS: Floating crane "Mersey Mammouth" with capac 250 tonnes operational.

AUTHORITY: The Mersey Docks and Harbour Company, Port o Liverpool Building, Pier Head, Liverpool L3 1BZ. *Tel:* (051) 200-202 *Telex:* 627013 MDH G. *Contact:* Captain J.F. Whiteside, Mari Operations Manager (*Tel:* (051) 700-2114).

LOCHMADDY: 57.36 N. 07.11 W.

PORT LIMITS: Westward of a line running Southward from Weave Point to Leacham Madadh.

PILOTAGE: Pilot can be arranged if required. VHF Channels 16 an 12. Tel: 087 63 337/282/226.

ANCHORAGES: Available in Lochmaddy Bay.

RADIO: Skye Radio.

VHF: Lochmaddy Harbour on Channels 16 and 12.

RADAR: No radar service.

TUGS: None.

BERTHING: Length of berth 370 ft. (South Face). Depths alongside a LWS: East end 6.0 m., West end 4.5 m.

Length of berth 180 ft. (North Face). Depth alongside at LWS 4.0 m.

CRANES: Available by arrangement. 10 ton lift.
BULK CARGO/SPECIALISED CARGO-HANDLING FACILITIES: Ro–Ro Linkspan at North West end of South Face berth on pier.
BRIDGES: None.
MEDICAL: Doctor and hospital available.
TANKERS: No facilities.
DENSITY: Salt water.
FUEL: Gas oil available. Tel. 087 94 238.
FIRE PRECAUTIONS: None.
CONSULS: None.
REPAIRS/DRY DOCKS/SURVEYORS: None.
GANGWAY/DECK WATCHMEN: Available if required.
HATCHES: Opening/closing carried out by crew.
AIRPORT: 20 miles to Benbecula Airport.
POLICE/AMBULANCE/FIRE: Police Tel: 087-63-328. Ambulance Tel: 087-63-324. Fire Tel: 0463-222722.
SERVICES: None.
BANKS: Bank of Scotland Tel: 087-63-323 or 266.
SHIP SUPPLY SERVICE: Crew members, and essential stores can be transported between ship and shore at Lochmaddy by launch. Ships requiring such service should contact Harbour Office. VHF Channel 16 or Telephone 087-63-337 or 282, and at night 087-63-226.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Not required.
REGULATIONS: None.
AUTHORITY: Western Isles Islands Council, Council Offices, Stornoway, Isle of Lewis. *Tel:* 0851–3773. *FAX:* 0851-5349. *Contact:* Captain A. Frater, Harbour Master. Home tel: 0851-870268. Captain C. Macleod, Assistant Harbour Master. Tel: 0870-2425
Local Authority: The Port Manager, Harbour Office, Lochmaddy, Isle of North Uist. *Tel:* Office 087-63-337 and 087-63-282. After Hours 087-63-226. *Telex:* 777273. *FAX:* 087-63-412. *Contact:* U.I.M. Robertson, Port Manager.

LONDON and Thames District: 51.30 N. 0.05 W. (See Plan)

PORT LIMITS: The seaward limit means lines drawn from Lat. 51° 37′ 00″ N., Long. 00° 57′ 19″ E. (Foulness Point in the County of Essex) to Lat. 51° 46′ 05″ N., Long. 01° 20′ 32″ E. (Gunfleet old lighthouse) and thence to Lat. 51° 26′ 36″ N., Long. 01° 25′ 30″ E. and thence to Lat. 51° 24′ 55″ N., Long. 00° 54′ 21″ E. (Warden Point in the County of Kent).

An arrived ship is considered (subject to Charter Party terms) to have arrived when vessel is instructed to anchor at a designated anchorage, as ordered by the Port Authority, if berth where vessel's operations are to be carried out is not available. Otherwise when vessel is alongside. Usual anchorage for larger vessels is below Southend, which is allocated to vessels by the Port Authority.

DOCUMENTS:
1 copy of H.M. Customs and Excise Form C.142 to be completed showing each crew members declaration as to the amount of cigarettes, tobacco, spirits, wine, radios, lighters, etc., belonging to them on board the ship to enable Customs to ascertain if in conformity or excess of requirements.
1 copy of IMO Crew List.
1 copy of List of Passengers on board, showing names, place of joining vessel, passport details.
Ship's Register to be available for inspection on arrival.
List of space occupied by cargo in unregistered spaces.
Chief Engineer's declaration as to the quantity of fuel carried in double bottom tanks.
Details of any livestock on board.
Ship's Stores Declaration arrival Form C.14 to be completed.
Details of previous ports of call.

PILOTAGE:
Compulsory Pilotage Area: Lines drawn from Latitude 51° 37′ N., Longitude 00° 57.32′ E. (Foulness Point in the County of Essex) to Latitude 51° 46.08′ N., Longitude 01° 20.53′ E. (Gunfleet Old Lighthouse), thence to Latitude 51° 48′ N. Longitude 01° 40′ E. (Long Sand Head), thence to Latitude 51° 36′ N., Longitude 01° 23.08′ E., thence to Latitude 51° 26.6′ N., Longitude 01° 25.5′ E. and thence to Latitude 51° 24.92′ N., Longitude 00° 54.35′ E. (Warden Point in the County of Kent).

Port of London Notice to Mariners No. 60 of 1988:

The Port of London Authority, (a competent harbour authority under the Pilotage Act 1987), in exercise of their powers under Section 7 of that Act, intend to direct that on and after 1st October 1988 pilotage shall be compulsory for all ships of 50 m. or more in length overall when navigating between London Bridge and the Seaward Limits of the Port of London.

On and after that date, a ship which is being navigated in the compulsory area and in circumstances in which pilotage is compulsory for it, must be under the pilotage of:-
(a) an authorised pilot, or
(b) a person who is bona fide the Master or First Mate of the ship and possesses a Pilotage Exemption Certificate granted by the Port of London Authority in respect of the area (or a specified part thereof) and ship.

2. PROCEDURE FOR OBTAINING THE SERVICES OF AN AUTHORISED PILOT.

It is imperative that good notice is given of the requirement for the services of a pilot. To comply with the compulsory procedure, an order for a pilot must relate to the time that the pilot is required at the Boarding Point, whether inward bound or departing from the Port. If the pilot service is unable to supply a pilot, due to stress of weather or other unforeseen circumstances, due allowance will be made. Ships' Owners or Masters who fail to provide the proper information in a timely manner may be liable to a surcharge and may cause a delay to the ship.

2.1 Folkestone Pilot Station:

At midnight on 30th September 1988, the Folkestone Pilot Station closed and thereafter any ship bound for a port in the former London Pilotage District will NOT be able to place an order for a pilot on that station.

2.2 ETAs for Inward Bound Ships:

Ships requiring the services of an authorised pilot at the N.E. Spit, Sunk, Warps or Gravesend Pilot Stations must make a provisional notification of arrival to the Thames Navigation Service, at Gravesend, *24 hours in advance,* stating the ETA at the appropriate boarding/landing station, GRT/GT, length overall, draft and destination (name of berth or anchorage). This notification may be in the form of a provisional order and will not incur surcharge penalties.

Confirmation of the above information must be given to the Thames Navigation Service *not later than 8 hours in advance.* (This constitutes the COMPULSORY NOTICE after which time a surcharge may be imposed).

Up to 4 hours in advance, any change in ETA must be notified to the Thames Navigation Service. Thereafter, any further changes and the final confirmation of ETA must be given when the ship is in VHF radio contact with the appropriate Pilot Station.

Ships engaged in short sea voyages may give notice of the Compulsory ETA at the time of leaving the previous port, where this is less than the above Compulsory Notice.

Should the services of an authorised pilot be cancelled within 4 hours of the confirmed ETA, a cancellation charge will be made.

2.3 ETDs for Outward Bound Ships, Ships Proceeding from One Berth to Another or Ships Moving from an Anchorage:

Ships requiring the services of an authorised pilot to depart from a berth, buoy or pier, in the Port of London, move from one berth to another, or to move from an anchorage, must notify the Thames Navigation Service *24 hours in advance,* giving their ETD from the berth, buoy, pier or anchorage, GRT/GT, length overall, draft, destination and landing point. This notification may be in the form of a provisional order and will not incur surcharge penalties.

Confirmation must be given to the Thames Navigation Service *not later than 4 hours in advance* (this constitutes the COMPULSORY NOTICE, after which time a surcharge may be imposed). Thereafter, changes to the ETD must be notified to the Thames Navigation Service until 2 hours before sailing when contact should be made direct to the Gravesend Pilot Station by VHF radio or telephone.

Should the services of an authorised pilot be cancelled within 3 hours of the confirmed ETD, a cancellation charge will be made.

2.4 Ships Anchoring in the Port of London:

Ships required to anchor before proceeding to their berth, must confirm with the Duty Pilot at the Gravesend Pilot Station by VHF radio, that the pilot may remain on board until the ship is required to get underway. No arrangement may be made with any individual pilots.

Under normal circumstances, when a ship anchors for an extended period, the pilot will disembark and be replaced by another pilot when the ship proceeds.

Inward or outward bound ships required to anchor and which have used the services of an authorised pilot must, as soon as is practicable, advise the Gravesend Pilot Station on VHF radio of their ETA at the anchorage in order to land the pilot. When a pilot is required to move from the anchorage, the ship must comply with the requirements of paragraph 2.3 above.

2.5 Ships Requiring Pilots to Join or Disembark at Continental Ports:

Shipowners/Agents wishing a pilot to board the ship at a Continental Port or to remain on board to a Continental Port must obtain the approval of the Pilotage Manager at the Gravesend Pilot Station (Tel. Gravesend (0474) 356646) *not later than 5 days* before the service is required. Charges for this service will be published by the P.L.A. No arrangements may be made with individual pilots.

Should the services of an Authorised Pilot be cancelled within 2 days prior to the date required to join the ship at a Continental Port, a cancellation fee will be made.

Pilots authorised by the Port of London Authority may only act as pilots within the Port of London Compulsory Pilotage Area. The Port of London Authority will not grant such pilots a Deep Sea Pilotage Certificate.

2.6 Berthing Pilots:

Ships of 160 m. or more in length overall are required to employ the services of an Authorised Berthing Pilot when berthing or unberthing at the oil wharves or jetties at Shellhaven, Coryton, Canvey Island or the Canvey Methane Terminal.

3. BOARDING AND LANDING POINTS FOR SHIPS BOUND TO OR FROM THE PORT OF LONDON.

Boarding and landing of pilots will be carried out by launches operating from Harwich (Sunk Light Vessel), Ramsgate (N.E. Spit Buoy), Sheerness (in the vicinity of the Warps to the East of Sea Reach No. 1 Buoy) and Gravesend as appropriate. Pilot boats have a black hull, the word "Pilots" on the side of the wheelhouse and fly a pilot flag by day and by night display the signals required by Rule 29 of the International Regulations for Preventing Collisions at Sea. Under normal circumstances, these pilot launches operate from their respective bases to ship and land pilots.

3.1 Folkestone Pilot Station:
From midnight on 30th September 1988, the use of Folkestone Pilot Station as a boarding and landing station ceased. Thereafter, the only stations operating a boarding and landing service for vessels entering or leaving the Port of London will be:-

3.2 N.E. Spit Buoy:
Ships approaching the Port of London from the East and South or departing to ports to the East or South will normally ship and land their pilots (provided by launch from Ramsgate) in the general vicinity of N.E. Spit Buoy and the Elbow Buoy, the charted location being Lat. 51° 25′ N., Long. 01° 30′ E. Ships from or to the ports referred to in this paragraph, which are constrained by reasons of their draft from using the Edinburgh Channels, may embark their pilot at N.E. Spit or proceed direct to the Sunk boarding and landing station.

3.3 Sunk Light Vessel:
Ships approaching the Port of London from the North and North Easterly directions or departing to the same area will normally ship and land their pilots (provided by launch from Harwich) in the vicinity of the Sunk Light Vessel, charted location being Lat. 51° 51′ N., Long. 01° 35′ E.

3.4 Warps: Ships which are exempt from compulsory pilotage for Areas 1 & 2, as defined in the Port of London General Requirements for Pilotage Exemption Certificates, will normally ship and land their pilots (provided by launch from Sheerness) in the vicinity of the Warps and to the East of Sea Reach No. 1 Buoy. Ships requiring this service should call the Gravesend Pilot Station.

3.5 Gravesend: Ships which are exempt from Compulsory Pilotage for Areas 1 & 3 or 2 & 3, as defined in the Port of London General Requirements for Pilotage Exemption Certificates, will normally ship and land their pilots at Gravesend off the Royal Terrace Pier.

4. SHIPPING OR LANDING A PILOT.
Mariners will appreciate the need to provide a satisfactory lee when shipping or landing a pilot and may be requested by the pilot launch to change speed and course to enable the operation to be carried out safely.

5. ADVERSE WEATHER CONDITIONS.
When a pilot launch is unable to operate in the normal location due to adverse weather conditions, or any other unforeseen circumstances, information will be broadcast on the service available by the appropriate pilot station on VHF radio and Pilotage Information Messages will be broadcast by Coast Radio Stations. Subject to permission being granted by the Duty Officer at Thames Navigation Service, nominated inward bound ships may proceed to the Warps Boarding Station under controlled conditions from the Thames Navigation Service. Similarly, nominated outward ships may land their pilots in the same area and proceed under the same controlled conditions.

6. SHIPS CLAIMING EXEMPTION FROM COMPULSORY PILOTAGE.
Ships claiming exemption from Compulsory Pilotage, as defined in the General Requirements for Pilotage Exemption Certificates, must notify the Thames Navigation Service *24 hours in advance* of their intention to claim exemption, giving ETA/ETD as appropriate, ship's name, GRT/GT, length overall, maximum draft, name, initials and Exemption Certificate Number of the Master or 1st Mate who will be piloting the ship on that voyage. Failure to provide this information will necessitate the ship taking the services of an Authorised Pilot and could involve the ship in a delay as well as the imposition of a surcharge on the pilotage dues. Ships arriving from ports less than 24 hours distant must provide the information immediately after departure from that port.

7. COMMUNICATIONS.
The Thames Navigation Service operates 24 hours a day and is the new centre for all initial orders for pilots. It is equipped with VHF radio, telephones, telex and facsimile equipment.

Long range ETAs from ships at sea may be passed through a United Kingdom Coast Radio Station by M.F or VHF radio telephone, telex or telegraph addressed to "Thames Navigation, Gravesend".

The Gravesend Pilot Station operates 24 hours per day and is the administration centre for all pilotage services and is able to provide advice to Shipowners/Agents on all pilotage arrangements. It is equipped with VHF radio, telephones, telex and facsimile equipment.

7.1 Thames Navigation Service (Gravesend):

(i) Gravesend:

Call Sign	Gravesend Radio
VHF Radio Channels	16, 12, 09, 18 and 20
Telephone	Gravesend (0474) 560311/2/3 Gravesend (0474) 357724/5
Telex	262880 Platns G
Facsimile (Group 3)	Gravesend (0474) 352996

8. NOTE.
The attention of Masters is drawn to General Directions for Navigatio in the Port of London 1975, and to Sections 15, 16, 17, 18, 19, 20 and 2 of the Pilotage Act 1987.

ISSUED BY:
The Chief Harbour Master,
Port of London Authority,
Thames House, St. Andrews Road,
Tilbury, Essex, RM18 7JH.

Pilot Ladders: Instances of the use of unsatisfactory and unsafe pilo ladders continue to be reported by Port of London Pilots.

Faulty ladders endanger the lives of Pilots.

Instructions have been issued to all Port of London Pilots to repor immediately any pilot ladders which do not comply strictly with the provisions of the Merchant Shipping (Pilot Ladders) Rules 1965, the Merchant Shipping (Pilot Ladders) (Amendment) Rules 1971 and the Merchant Shipping (Pilot Ladders) (Amendment) Rules 1972.

Masters of ships are reminded of their obligation to comply with the statutory rules and are requested also to comply with the followin recommendations, ensuring that:

1. The Officer responsible for the embarkation and disembarkatio of the Pilot is a Watch-keeping Deck Officer.
2. The ladder is in one length and does not consist of two or mor lengths shackled or lashed together.
3. The ladder is secure.
4. The ladder is used solely for embarking and disembarking Pilots
5. A light is provided so that the pilot ladder overside and also th position where the Pilot boards the ship is adequately lit.
6. The ladder is clean and free from oil and grease.
7. Means are provided to enable the Pilot to pass safely an conveniently from the head of the ladder into the ship or on to the ship deck. Where portable stanchions and accompanying bulwark ste ladders are used for this purpose, the portable stanchions *must* be rigid secured to the ship's structure against being unshipped and supporte at not less than 2 points to prevent lateral movement, and the bulwar step ladder should also be independently attached and firmly secured The stanchions should be of reasonable height and adequately cappe to allow firm grip. *Under no circumstances should a stanchion o handrail be attached to the bulwark step ladder.*
8. The ladder is in good condition and its treads remain horizonta The treads are to have a rough upper surface.
9. The length of the ladder does not exceed 30 ft. Whenever th distance from sea level to a point of access to the ship is more tha 30 ft., access from the pilot ladder to the ship must be by means of a accommodation ladder or other equally safe and convenient means.
10. The ladder is rigged so that each step rests firmly against th ship's side.
11. Spreaders are provided not more than 10 ft. apart to prevent th ladder twisting.
12. 2 manropes and a safety line are provided; and a lifebuoy wi self-igniting light is available.
13. The ladder is rigged well clear of discharges and water outlets and at a place where most lee can be given to the Pilot Vessel.
14. Where a pilot hoist is used a ladder must be at hand ready fo use in case the hoist fails.

The Masters of small, "all-aft" ships, in which the main deck i frequently awash when a Pilot is being shipped or landed, or of any typ of ship in which the bulwark rails are below the deck of the pilot vess coming alongside, are asked to provide a boarding platform on eac side of the forward end of the raised quarter deck and on the same lev as that deck.

The platform should be easily accessible from the quarter deck an should have adequate handrails, those on the outboard side bein portable. Fittings should also be provided for the rigging of a pilot ladde When a pilot ladder is rigged from a boarding platform the top rung o the ladder should not be less than 12 in. nor more than 15 in. below th level of the platform. The top of the ladder should be secured at leas 3 ft. 6 in. above the platform in such a way as to make a safe handho for the Pilot entering or leaving the platform.

If a pilot ladder is unsafe a Pilot may refuse to board, thus delayin the ship. If the ladder is unsatisfactory for boarding the Master of th ship renders himself liable to a fine of double the amount of the pilota dues involved, for failure to comply with the Pilotage Act 1913; and i the ladder does not meet the statutory requirements, the Master rende himself liable to a fine not exceeding £50 in accordance with th Merchant Shipping Act 1984.

RESTRICTIONS: Certain restrictions are placed on the navigation of vessels carrying petroleum, chemicals, explosives and other hazardous commodities (See "Notices").

Vessels which are carrying any of the above mentioned cargoes should call Gravesend for details of these restrictions and ascertain whether it is permitted for them to navigate.

Notwithstanding any of the aforementioned restrictions, all vessels should comply with the "General Directions for Navigation in the Port of London 1975". (Copies obtained from the Chief Harbour Master, Port of London Authority, Thames House, Tilbury Docks, Essex RM18 7JH.)

The tides at London Bridge have a range of 4.6 m. at Mean Neaps and 6.6 m. at Mean Springs.

The sea approach to Shellhaven is dredged to allow the passage of vessels to 13.7 m. at Mean Neap tides. For latest channel depths contact the Harbour Master or Thames Navigation Centre.

THAMES NAVIGATION SERVICE:

Thames Navigation Centre: (Call sign "Gravesend Radio") is the main operations centre for traffic information within the Port of London Authority area of jurisdiction. All information required by the Authority regarding ETAs and ETDs, etc., should be passed to this Centre. It also deals with matters concerning moorings in the River and enquiries concerning Byelaws, regulations and shipping information.

Communications: VHF radio: Channels 16, 12, 18, 20. Telephone: Gravesend 560311. Telex: 262880 Platns G. Facsimile: Group 3. Gravesend 352996.

Radar coverage and area of responsibility: From Crayfordness to the sea.

Tidal Information: Information on tidal heights from gauges at Walton, Margate, Shivering Sands, Southend and Tilbury is available on request.

Procedures: All vessels must report to this station on entering the Port Limits inward bound or when leaving a berth within the area of responsibility outward bound or when moving from one berth to another. It is also a requirement to report the vessel's progress at the "reporting points" indicated on the Admiralty Charts of the area. Regular half-hourly broadcasts of navigational information are made on VHF Channel 12 on the hour and 30 minutes past the hour.

Thames Barrier Navigation Centre: (Call sign "Woolwich Radio") is a sub-centre to the Thames Navigation Centre with particular responsibility for controlling navigation through the Thames Flood Barrier.

Communications: VHF Radio Channels 16, 14, 22. Tel.: 081-855 0315. Telex: 896157 Plabar G.

Radar coverage and area of responsibility: Radar from Crayfordness to Greenwich. Area of responsibility from Crayfordness to Teddington.

Tidal Information: Tidal information from a gauge at North Woolwich is available on request.

Regular half hourly broadcasts of Navigational information are made on VHF Channel 14 at 15 minutes and 45 minutes past each hour.

Procedures: All vessels navigating in the area of responsibility must inform this station of their intention to do so and maintain a listening watch on VHF radio. Progress reports should be made at the "reporting points" indicated on the Admiralty Charts. Special regulations are in existence for navigating through the Thames Flood Barrier and the Barrier Control Zone (Margaretness to Blackwall Point). See Port of London Notice to Mariners – No. 3 of 1986.

Tilbury Dock: All vessels wishing to enter or leave Tilbury Dock must book a time with the Lock Co-ordinator. Telephone Number Tilbury (0375) 852456. Telex 995176. The Lock Co-ordinator also deals with enquiries for dock tugs, dummy pontoons, floating crane and other services for vessels in the Dock.

Patrol Service: A 24-hour patrol service is maintained by the Authority whose launches can be contacted on VHF radio (Call sign "Thames Patrol") on VHF Channels 16, 12, 14 and 6. They can also be contacted through Gravesend Radio or Woolwich Radio.

General: The Thames Navigation Service maintains close liaison with Owners, Agents, Pilots, Watermen, Port Health, Customs and Excise and all the Emergency Services. It is available to give help and advice on any matters affecting ships and shipping.

ANCHORAGES: Great Nore and Little Nore Anchorages allocated by Medway Port Operations, all other anchorages allocated by the Thames Navigation Service dependent upon the size and draft of vessel, the length of stay required at the anchorage and the specific details of the vessel, i.e. explosives, petroleum, etc.

Explosives anchorage at Chapman Anchorage for discharging/loading to/ex barge to/from appointed river wharves.

MAX. SIZE: Tankers:

Berth	*Depth at Chart Datum*	*Length*
Coryton	14.0 m. maximum	1,100 ft.
Shellhaven	14.6 m. maximum	1,200 ft.
Holehaven	11.2 m. maximum	720 ft.
Purfleet	8.6 m. – 11.2 m. maximum	700 ft.
Grays	11.2 m. maximum	620 ft.-750 ft.

Other river and tanker berths restrictions apply according to tides and berth.

Passage for deep-draft tankers for berthing at Shellhaven and Coryton is sometimes over a period of 2 tides. Passage on the first tide to deep water anchorage, vessel to leave anchorage on make of second tide and arrive off the installation half an hour before HW of this tide.

HEALTH: Port of London Health Authority:
Public Health (Ships) Regulations, 1979.

Notes for the guidance of Masters/ships Agents:

(1) It is the responsibility of the Master of a vessel due to arrive in the Port of London to report to the Port Health Authority the presence of sickness, animals or captive birds on board, or of the occurrence, during the voyage, of the death, other than by accident, of a crew member or passenger.

(2) This information should be transmitted to North Foreland Radio Station for forwarding to "Portelth London", not more than 12 hours or less than 4 hours before vessel's arrival in the Port.

(3) Vessels already in the Port can contact the Port Health Authority directly by telephoning Tilbury (03752) 2663.
At Public Holidays (and all times other than 0900 – 1700 hrs. Monday to Friday) an answering machine is connected to this number giving the telephone number of the Duty Officer who will give any advice or assistance required.

(4) The Port of London Health Authority District includes that part of the River Medway comprising Sheerness, Isle of Grain, Ridham Dock and Queenborough.

Also see "Health – All Ports" before first U.K. port.

RADIO: Outside U.K. waters from the South, call long range station "Portishead Radio"; approaching London, "Niton Radio" or "Northforeland Radio", giving Agent vessel's draft and ETA. "Gravesend Radio" when in the Thames and its estuary.

TUGS: Tugs usually pick up vessels for Shellhaven and Holehaven in reaches approaching berth, or Gravesend for berths/docks up river. Tugs and lines can be hired from Alexandra Towing Co. (London) Ltd., Alexandra House, Royal Pier Road, Gravesend, Kent. Tel: (0474) 359361.

P.L.A. provide a towage service within the enclosed docks.

BERTHING:

Cargo Berths: The Port of Tilbury operates the enclosed dock system at Tilbury Docks.

Depths of water shown for berths in the enclosed docks and on the river are the authorised depths to which the berths may be dredged. Actual depths may be less than the authorised depth and the advice of the PLA or tenants Operating Manager should be sought if necessary.

Berth	*No. of Berths*	*Length (ft.)*	*Depth (ft.)*	*Equipment*	*Remarks*
TILBURY DOCKS:					
Entrance lock dimensions: Length 1,000 ft. (305 m.). Width 110 ft. (33.5 m.). Depth 45.5 ft. (13.9 m.).					
Access to berths (except the Grain Terminal, Northfleet Hope Container Terminal, cargo and repair jetties, riverside Ro/Ro terminal and passenger landing stage) is gained through an entrance lock.					
Northfleet Hope Terminal	1 (in dock) 1 (in river)	850 1,000	35.0 41.0 (MLWS)	2 container cranes 45 tonnes (in dock), 2 container cranes 35 tonnes (riverside), straddle carriers, tractors and trailers.	P & O Containers/ACT and partners. Container services. Accommodation for 5,000 containers at any one time (inc. 1,464 reefers). Operation: 24 hours per day, 7 days a week.
Container Terminal	3	2,540	38.0	4 container cranes 30 tonnes, van carriers, tractors and trailers, forklift trucks.	(Container Division). Containers to and from cellular and purpose built lift-on/lift-off all container or semi-container vessels. Electrical reefer points. Floating cranes for uncontainerisable cargo. Operation: 24 hours per day, 7 days a week.
General Purpose Berths 1, 2, 4, 34, 38, 40, 13/16 (2 berths)	9	6,900	up to 38.0	20×5 tonne quay cranes, light and h/duty forklifts, mobile cranes, tractor/trailer units, 80 tonne mobile, 36 tonne land based and up to 120 tonne floating heavy lift cranes, 1×30 tonne container crane, 1×30 ton gantry crane.	(Conventional Division). Conventional, Ro/Ro and unitised general import and export cargoes. Containers to and from semi-container/Ro/Ro vessels. Forest products. Heavy lifts. Scrap metal.

Berth	*No. of Berths*	*Length (ft.)*	*Depth (ft.)*	*Equipment*	*Remarks*
PLA Riverside Ro/Ro Terminal	1	Ship length up to 500 ft.	20.0 (MLWS)	Tractors	(Conventional Division). Ro/Ro. Suitable for bow or stern ramp vessels.
Tilbury Passenger Landing Stage	1/2	Ship length up to 740 ft.	Dredged to 10 m. below datum	2 covered gangways.	(Conventional Division). Embarkation and disembarkation of passengers for ships, hovercraft, hydrofoils and launches and Tilbury/Gravesend local ferry.
42 Berth (Tilbury) Ltd.	1/2	700	38.0	Heavy duty forklift trucks, tractors and 35 tonne trailers.	Forest products.
44 Berth	1	750	38.0	Forklift trucks 4 ton-22 ton capacity – roll trailers/tractors.	Forest products.
46 Berth (Seaboard Pioneer)	1	750	38.0	Forklifts 4 ton-12 ton capacity, roll trailers/tractors	Forest products.
PLA Tilbury Grain Terminal	Deep Sea 1 Short Sea 6 barge berths 1 Coaster discharge berth	900 230	42.0 (MLWS)	2×1,000 tonnes per hour marine leg elevator towers, coaster and barge loading points, 2×200 tonnes per hour pneumatic elevators (coastal jetty). Silo capacity 100,000 tons. Export vessels now handled. 30,000 tonnes on outer jetty and 10,000 tonnes on inner jetty.	(Grain Division). Terminal has direct feed by conveyor to 5 adjacent privately-owned mills: Allied Mills Ltd., Rank Hovis Ltd. Spillers French Milling Ltd., Cargill Albion Ltd. Laing National Ltd.
Private Wharfingers:					
Bridge Wharf (Bow Creek)	7 (barges)	270-290	15.0 (MHWS)	Up to 20 tonnes, mobile.	Metals of all descriptions and bulk ore by grabs.
Bridges Wharf (Battersea)	1	225	13.0 (MHWS) Dries at LW	2 cranes up to 10 tons.	Handling and storage of inflammable and hazardous chemical products etc.
Convoys Wharf	1	900	18.0 (MLWS)	Ro/Ro pontoon and jetty, 6×2 tonne cranes 1× 50 tonne mobile crane.	Equipped with 2 floating Ro/Ro berths handling newsprint, forest products and general cargo.
	1	442	18.0 (MLWS)	Ro/Ro pontoon.	Operators of nationwide warehousing, transport and freight forwarding.
Dartford International Ferry Terminal	2	200 m. (downstream) 150 m. (upstream)	36 (LLW)	1 Sku container mover, 12 tractor units, 4 forklift trucks.	2 Ro/Ro berths (bow, stern or quarter ramp) 22 acres hardstanding. 4,260 sq.ft. transit shed. Extended driver facilities and restaurant.
Denton Wharf (P.L.A.)	3	260-600	34.0 (MHWS)	11×3 – 30 tonnes. 2×30 tonne container park gantries.	Discharge and loading of all types of conventional cargo and containers to and from ships and barges. Groupage service. Licensed for handling explosives
Erith Deep Wharf	1 (ship) 2 (barges)	600 600	21.0 (MLWS)	4×6.5 – 7.5 tonnes. 2×4.5 tonnes.	Direct handling ship/road transport or ship/warehouse. Handling of forestry products. Lash/Seebee barges.
Imperial Wharf	1	300	26.0	3×5 tonnes.	Forest products.
The London Steel Terminal	2	295	16.4 (MHWS)	2 cranes up to 30 tonnes.	Handling of steel using electro-mechanical grabs for steel coils. All operations including shipwor carried out under cantilevered roof providing all weather working.
Lovells Wharf	1	280	18.0 (MHWS)	2 cranes up to 20 tonnes.	Steel and other metals (London Metal Exchange approved warehouse).
Mast Pond Wharf	1	220	16.5 (MHWS)	1×5 tonne, mobile.	Bulk handling, overside or direct delivery.
Mulberry Wharf	1	225	17.0 (MHWS)	1×5 tonne mobile, 1×2.5 tonne fixed.	Bulk handling, overseas and direct delivery.
Phoenix Wharf	2	625-800 (floating jetty)	21.0 (MLWS)	5 cranes up to 30 tonnes. (8 – 10 tonnes ex-ship's hold). 9 quay cranes up to 10 tonnes.	Forest products in all forms, steel, fertilisers and bulk cargoes, empty containers. Bulk wine and spirits. General cargo.
	1 (Ro-Ro Berth)	450	16.0 (MLWS)	3 tugmasters.	For continental ferry service and Import/Export of motor vehicles.
Purfleet Deep Wharf	2	1,000	27.5 (MLWS)	7 (jetty)×5 – 6 tonnes. 2 (shoreside)×40 tonnes.	Equipped with modern floating Ro/Ro berth. Handling of forestry products and general cargo.
Tate & Lyle Sugars (Silverton)	1	550	28.0	I grab crane 1 continuous ship-unloader	Max. LOA 560 ft. – 570 ft. Max. draft 29 ft. Max. size 23,000 d.w.t. Discharge rate 750 tons per day. Fresh water and fuel available.
Tower Wharf (Northfleet)	1	650	36.0	4×5 tons	Wharf operated by Cargo Trans Services Ltd. Max. size 40,000 d.w.t. Max. draft 10.5 m. Steel, forest products and general cargo handled.
	1 (coasters)			1×5 tons	Fuel available by barge or truck. Fresh water not available.
Victoria Deep Water Terminal	2	850	22.0 (MLWS)	1 crane 32 tonnes. 2×30-40 tonne gantries.	
	1	350	15.0 (MHWS)	1×30 tonne park gantry.	

The depths quoted are to be taken as approximate only. For detailed information contact the wharf operator or Thames Navigation Service

TANKERS: (Also see "Notices"). There are about 40 berths for tankers in the Thames District, main terminals of which are listed below. Recommended that Masters cable terminal with discharge manifold size, enabling wharf have correct pipes ready. Slop tanks are available at most wharves.

Company	*Berths*	*Length* **(ft.)	*Depth* **(ft.)	*Remarks*
BP (Northfleet)	1	170.0	—	Able to handle vessels 3,000 d.w.t. High and low flash point products. Storage capacity 20,000 tons.
BP (Fulham)	1	—	—	Lube oil, gas oil and spirits.
Esso (Purfleet) No. 1	1	Max. LOA 628	26.5 (LWS)	Max. size 28,000 d.w.t. Products handled: F.O., G.O., D.O., kero, gasoline. 4×10 in. (clean products); 2×10 in. (fuel oil). Max. pressure 150 psi.
Esso (Purfleet) No. 2	1	Max. LOA 628	26.5 (LWS)	Max. size 18,000 d.w.t. Products handled: F.O., lube oil, G.O., kero. 3×6 in. (lube oil); 2×6/8/10 in. (fuel oil); Max. pressure 150 psi. Total capacity (Berths No. 1-2): White oils 187,000 tons. Fuel oil 126,000 tons. Lube oil 39,000 tons.
Mobil* (Coryton) No. 1	1	Max. LOA 650	Max. draft 33 (MLW)	Max. displacement 40,000 tons. Products handled: L.P.G., gas oil, lube oil, fuel oil, gasoline.
Mobil* (Coryton) No. 2	1	—	Max. draft 18 (MLW)	Coaster berth, max. displacement 2,000 tons. Products handled: Same as Berth No. 1 (excluding L.P.G.).
Mobil* (Coryton) No. 3	1	Max. LOA 900	Max. draft 44 (MLW)	Max. displacement 100,000 tons. Products handled: Crude and fuel oil (3,000 t.p.h.), gas oil (2,000 t.p.h.), gasoline (1,000 t.p.h.), products (350 – 500 t.p.h.). Other products handled: Diesel oil, naphtha and Av. Tur.
Mobil* (Coryton) No. 4	1	Max. LOA 1,200	Max. draft 45 (MLW)	Max. displacement 230,000 tons (320,000 d.w.t. with part load). Crude oil only handled. 4×16 in. steel arms. Rate 3,500 t.p.h. each arm.
Mobil* (Coryton) No. 5	1	Max. LOA 200 m. Max. draft 37 ft.	Depth 43 (MLW)	Max. displacement 40,000 tons. 4×10 in. arms for loading/discharging fuel oil, gasoline and gas oil (rate 2,000 t.p.h.). 1×10 in. arm for receiving refrigerated butane.
Conoco Ltd.	1	256 Max. LOA 625 ft.	44.0 (MHWS)	White oils, capacity 70,000 tonnes.
London & Coastal Oil Wharves Ltd., Canvey Island	1	720	36.0 Av. LW	Low flash bonded storage for hydrocarbon oils, chemicals and edible oils. 127 tanks totalling 350,000 cu.m. with tanks ranging from 45 cu.m. – 20,350 cu.m.
London & Coastal Oil Wharves Ltd., Dagenham	1 (ship) 2 (barge)	750	34.0 (MLWS)	Mild and stainless steel storage – 161 tanks totalling 93,000 cu.m. with tanks ranging from 27 cu.m. – 4,532 cu.m. Low/high flash, bonded storage for chemical, minerals, fuel and edible oils.
Murco Petroleum Ltd.	2	730	37.0 (MLWS)	Motor spirit, distillates. Storage capacity: 52,000 tonnes motor spirit. 10,870 tonnes distillates. Shares Blue Circle Industries Ltd.'s Wouldham Jetties with Unitank Storage Company Ltd.
Powell Duffryn Terminals Ltd.	6	840	34.0 (MLWS)	Hydrocarbon oils and all chemicals. Total storage capacity: 423,000 cu.m. Oil storage capacity: 365,000 cu.m. Chemical storage capacity: 58,000 cu.m. (50 cu.m. to 15,000 cu.m. capacity tanks).
Thames Matex (West Thurrock)	3	750	34.0 (MLWS)	Hydrocarbon oils, chemicals, vegetable oils. Storage capacity: 352,000 cu.m. (125 tanks – 200 cu.m. to 10,000 cu.m. capacity). Max. LOA 228 m., max. draft 11.2 m. (LW).
Unitank Storage Co. Ltd.	2	750	37.0 (MLWS)	High and low flash petroleum, some chemicals. Storage capacity: 310,000 cu.m. in 52 mild steel tanks (1,700 cu.m. – 20,800 cu.m. capacity). Shares Blue Circle Industries Ltd.'s Wouldham Jetties with Murco Petroleum Ltd.
Shell (Shell Haven) "A"	1	—	† 8.7 m.	LPG vessels only. Max. size 5,000 cu.m. due to loading arm envelope. Berth kept clear if VLCC on Jetty B. 1×6 in. LPG line.
Shell (Shell Haven) "B"	1	Max. LOA 350.0 m.	†14.6 m.	VLCC's and large crude carriers berth head down river at slack HW. Berth handles crude, fuel and white oils. 4×10 in. and 4×8 in. (white oils and fuel oil). 4×10 in. and 4×16 in. (crude).
Shell (Shell Haven) "C"	1	Max. LOA 238.0 m.	†10.4 m.	Max. deadweight 40,000 tons. Berth handles black and white oils. Max. deadweight allowed if VLCC on Jetty B is 12,000 tons. 4×10 in. lines.
Shell (Shell Haven) "E"	1	Max. LOA 183.0 m.	†8.6 m.	Max. displacement 20,000 tons. Chemicals and luboil only handled. 5×6 in. lines.
Shell (Shell Haven) "G"	5	No LOA restriction	(outer) †8.3 m. (inner) †5.6 m.	Berths No. 3, 4 and 5 are for estuarial craft only, max. deadweight 1,000 tons. Berth No. 1 (outer) max. deadweight 3,500 tons. Berth No. 2 (outer) max. deadweight 10,000 tons. if vessel over 3,000 deadweight tons on Berth G2 then restricted size only on Berth G1. 6×8 in. lines at outer berths and 5×6 in. lines at inner berths.
London and Coastal Oil Ltd.	1	Max. LOA 580 ft.	Depth (subject to dredging) 40 ft. Max. draft 32 ft.	Products handled: Gasoline, gas oil, diesel, kerosine, jet fuel. Pumping rates into barges, 200 – 250 t.p.h. with max. pressure 100 p.s.i. Discharge rate 400 – 1,500 t.p.h.

Other Wharves: In addition to the above some manufacturing and service industries have their own riverside premises with ship berths. Thames Navigation Service will assist with information. Otherwise contact Waterside Manufacturers and Associated Industries. Tel: 071-481 3681.

*Bunkers available at all berths. Fresh water not available.

**Unless otherwise stated.

†All berths subject to siltation, and Marine Superintendents should be consulted for current depths.

‡Tank cleaning is permitted when back loading operations are to take place. Tank cleaning for other purposes may take place only after agreement from the Terminal.

Dirty ballast separator system allows a cumulative rate of 1,500 cu.m./hr. from all jetties. No waxy material, chemicals or chemical additive is accepted.

Vessels should arrive with minimum possible ballast commensurate with safe handling of vessel.

Shell – Shellhaven: *Cautionary Advice:* Shellhaven Terminal is situated on the concave side of a bend in the river and, as a consequence, the tide does not run parallel to the berths. There is a strong outflow of tide from behind Berth "A" and "B" (the VLCC berth) during the ebb.

When swinging off the terminal before berthing or (for smaller ships) on sailing, due allowance must be made for the run of the tide and a close watch kept on passing traffic. Before a VLCC is berthed on Berth B the adjacent Berths A and C should be vacant or occupied by small craft.

Berthing Masters: All vessels of 11,500 g.r.t. and over, bound for oil jetties in the Shellhaven area are required to employ the services of a Berthing Pilot. (Drawn from senior P.L.A. Pilots). The Berthing Pilot will normally board the vessel from one of the berthing tugs.

Berthing Procedures: Deep draft ships (over 12 m.) are swung before berthing and should, therefore, arrive off the berths on a flood tide. Other ships berth heading up or down river according to the tidal direction at the time of arrival (always head to tide).

Tugs are made fast off No. 7 Sea Reach Buoy. Ships are swung off the berth with due allowance for the set of the tide being made. Extreme care should be exercised in selecting the precise swinging position as the flood tide sets strongly onto "Mucking Flats".

During the swing all tugs are on the hook. For VLCCs there are 3 tugs from the forecastle head and 1 from the poop. When swinging, 2 forward tugs will let go and come alongside to push the ship onto the berth. The vessel should always land on the fenders parallel to the berth. 2 "boatmen" will board the ship in the vicinity of the berth to assist and liaise between ship's crew, the mooring boats and the jetty during mooring operations. Moorings are taken ashore by motor boats (one at each end of the vessel). Spring lines are normally taken first, followed by breast lines, then head and stern lines. Liaison between the Pilot/Berthing Master and the terminal in positioning the ship is not always good, and it is recommended that a ship's officer with portable VHF be stationed near the manifold to assist in positioning.

Moorings – Cautionary Advice. During Spring tides a surface current of up to 2 knots setting out from behind the berth can be experienced on the ebb tide. Large deep ships should be securely moored prior to the start of operations. Upstream moorings in particular, must be of good material and well positioned. Mixed moorings of wire and fibre are not recommended and the terminal recommends that fibre tails be removed from wire moorings. There are no shore moorings.

Mobil – Coryton: *Berthing Masters:* All vessels of 11,500 g.r.t. and over, bound for jetties in the Coryton area are required to employ the services of a Berthing Pilot. (Drawn from senior P.L.A. Pilots). The Berthing Pilot will normally board the vessel from one of the berthing tugs.

Berthing Procedures: Regardless of draft, VLCCs must not enter the berth dredged box until 1 hour prior to HW.

Deep draft ships (over 12 m.) are swung before berthing and should, therefore, arrive off the berth on a flood tide. Other ships berth heading up or down river according to the tidal direction at time of arrival (always head to tide).

Tugs are made fast at No. 6 Sea Reach Buoy. Ships are swung off the berth with due allowance for set and tide being made.

During the swing all tugs are on the hook. For VLCCs there are 3 tugs from the forecastle head and 1 from the poop. When swung 2 forward tugs will let go and come alongside to push the ship onto the berth. Berth 4 (VLCC) is fitted with a Marconi Semi Mark II approach speed measuring device. Information from this equipment is supplied to the ship by means of VHF radio telephone. (The service will be offered to the vessel when radio contact is first made, and radios will be placed aboard the vessel prior to its arrival off the berth).

Maximum impact velocity is 25 ft. per minute for a maximum displacement of 230,000 tons at a maximum angle of 12°.

Mooring arrangements for Berth 4 are as follows:

4 mooring dolphins are provided to take the breast ropes and head ropes from vessels. The 4 mooring dolphins are of equal strength and are capable of taking a load of 150 tons. Each mooring dolphin is fitted with triple hook assemblies capable of taking a load of 50 tons on a single hook.

Mooring hook assemblies are also fitted to each of the 2 berthing dolphins and at either end of the jetty head. Each assembly comprises two hooks which are capable of taking a load of 50 tons on a single hook. These mooring arrangements are intended to take the spring lines of vessels and have been designed to be capable of taking a load of 100 tons acting either parallel to berth face or up to an angle of 20° from this line. Any significant load applied at an angle greater than 20° from the berthing line may cause severe damage to the jetty head.

Mooring diagrams will be available to each vessel from tugs or boatmen.

2 shore breasting wires are provided, and it is recommended that vessels should make use of these.

2 "boatmen" will board the ship in the vicinity of the berth to assist and liaise between the ship's crew, the mooring boats and the jetty during mooring operations. Moorings are taken ashore by motor boats (one at each end of the vessel).

Moorings: Cautionary Advice. Strong tidal flows, especially during Spring ebb tides which can generate tidal flows up to 4 knots, demand a diligent tendering of vessel's moorings at all times.

Esso – Purfleet: *Berthing:* A vessel should come up river on the flood tide so as to arrive off the berth about 2 hours before HW. Then turn to starboard and berth port side to the jetty head.

Moorings: At Berth No. 1 the first lines run are a head rope to the buoy and a spring to the jetty. When the vessel is secured, she should have 2 head/stern ropes to the buoys, 2 breast lines to shore, and 2 backsprings to the jetty head. For large vessels the eye of a 5 in. shore wire is taken aboard and put over a set of bitts located aft. This wire is tensioned from ashore.

For large vessels or in bad weather, additional heavy wire/combination backsprings may be available from shore.

The vessel must provide "emergency towing wires" on her offshore bow and quarter, with eyes maintained at water level.

Thames Matex – West Thurrock: *Cautionary Advice:* Both main berths are of similar construction. Berth No. 2 (down-river) is subject to heavy silting.

Berthing: Depending on the size of the ship and the weather, 2 or 3 tugs usually accompany the vessel from Gravesend. They secure with the tug's towline on the hook when about 1 mile from the terminal. When sailing, 1 or 2 tugs are used depending on the flash point of the product.

Vessels berth head to tide and may secure either side to jetty. Those with drafts not exceeding 25 ft. can berth at any stage of the tide. Deep draft vessels (34 ft.) usually berth about 1 hour before HW, during the last of the flood tide, and turn off the terminal and secure port side to the jetty.

Moorings: No particular pattern of mooring is specified. Vessels usual secure with 2 or 3 head and stern ropes, 1 or 2 breast ropes, and spring at each end. 2 mooring launches are in attendance while berthing The vessel must provide emergency towing on her offshore bow an quarter, with eyes placed at water level.

No shore moorings are available.

CRANES: See "Berthing".

BULK CARGO FACILITIES: See "Berthing".

SPECIALISED CARGO HANDLING FACILITIES: See "Berthing".

BRIDGES: No bridges below Tower Bridge which opens for shippin on request.

Note: Dartford – Thurrock Bridge to be completed mid-1991. Projected height of bridge above M.H.W.S. – 54 m. Air-draft to be confirmed.

STEVEDORES: Ordered by the Agents; no ETA to stevedores from vessel necessary; labour to be ordered by 1200 hrs. day before required.

At PLA General Purpose Berths order by 1100 hrs. day before excep for weekends/public holidays when 1600 hrs. 2 days before. PLA/TC Container Terminals work 24 hours a day, including weekends.

MEDICAL: Not necessary to contact Agents once port healt requirements satisfied unless urgent medical treatment required o board on arrival. All medical treatment, vaccinations available.

DENSITY: Varies according to position and tides.

FRESH WATER: Available at all berths either from shore or barge.

FUEL: All types, grades available by barge, or from terminals.

FIRE PRECAUTIONS: Tankers – no smoking on open decks, onl cabins. Deck fire hoses to be connected. Fire monitors to be trained o manifold area. Explosive workings at Chapman Anchorage, same precautions. Red flag to be flown by these vessels. Fire tug to be i attendance when explosives being worked. Smoking not permitted i the docks or berths.

CONSULS: All British Commonwealth countries are represented i London by a High Commissioner's Office.

Most foreign countries maintain embassies or a consula representative in London.

REPAIRS: All repairs, gas freeing possible; pre-advice recommended.

DRY DOCKS: Largest dry docks at Tilbury, 752 ft. length, 133 f breadth. There are smaller dry docks available on the river.

SURVEYORS: *Classification Societies:*

American Bureau of Shipping, 1 Frying Pan Alley, London E1 7HR Tel: 071-247 3255.

Det Norske Veritas, European Head Office, Veritas House 112 Station Road, Sidcup DA15 7BU, Tel: 081-309 7477.

SGS Inspection Services Ltd., Testing Division, Gaw House, Alperton Lane, Alperton, Wembley HA0 1WU, Tel: 081-998 2171. (Laboratory testing quality of raw wool, textiles, toys, electrical and consumer goods

GANGWAY/DECK WATCHMEN: Available but not compulsory Master's discretion.

OPENING/CLOSING HATCHES: Liner vessels by crew, with stevedor assistance. Tramp vessels according to charter party.

CERTIFICATES: These certificates to be on board.

Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Safety Construction.
Oil Record Book.
Derat Exemption.
Previous U.K. Light Due Bills.
Cargo Gear and Chain Register complying to U.K. Factory Acts.
British Tonnage Certificate if available.

CUSTOMS ALLOWANCES: Customs usually permit 200 cigarettes o 0.25 lb. tobacco per person on board for 4 days. They can refuse t issue duty free or amount allowed at their discretion. Usually perm 1.3 pints or 1 bottle spirits per person for 4 days. They can issue less or refuse to allow as duty free at their discretion.

CARGO GEAR: To comply with U.K. Factory Acts, valid chain and Cargo Gear Register to be on board. Stevedores usually supply carg slings, etc.

BANKS: All British and most foreign banks represented in London British banks have branches in Thameside towns.

REPATRIATION: All facilities exist for changing crews, repatriations.

AIRPORTS: London Heathrow, Stanstead and Gatwick Airpor Southend Airport serves domestic and Continental services.

TIME: British Summer Time which is 1 hour in advance of GMT. GM during Winter months.

HOLIDAYS: *Public Holidays:* Work is available on official holidays practical. New Year's Day, Good Friday; Easter Monday; May D Monday; Spring Bank Holiday Monday; August Bank Holiday Monda Christmas Day; Boxing Day.

POLICE/AMBULANCE/FIRE: Contact by public telephone; dial 999 a ask for service needed. PLA telephones dial 259 (fire) and 222 for othe

EMERGENCY CO-ORDINATION CENTRE: See "Thames Navigat Service" and "Notices".

TELEPHONES: Ship to shore connections available at most berths

SERVICES: All types of service for navigational aids, radar, compass adjusting, nautical instruments repaired, slop discharge barges available. Tank-cleaning, gas-freeing services available.

SHORE LEAVE: Crew members allowed ashore.

IDENTIFICATION CARDS: Seamen's Identity Book required to be retained on board in port.

REGULATIONS: No livestock allowed ashore without permission Customs and Port Health Authorities. Rabies regulations enforced.

NOTICES: *Emergency Procedures for Vessels on The River Thames:* Report immediately by the quickest means available to either Thames Navigation Service on VHF radio, Gravesend Radio, VHF Channel 12; Woolwich Radio, VHF Channel 14, or public telephone Tel: 999.

Message: Vessel's name and present position together with details of emergency and assistance required.

Collision, Fire or Other Accident: If involved in or sighting a collision or accident report as above.

Human Injury or Man Overboard: In event of serious personal injury or recovery of a person from the river when vessel's crew require additional assistance report as above.

Machinery or Steering Failure: In event of machinery or steering failure report as above.

If necessary to anchor then endeavour to anchor clear of the fairway if size and draft permit.

Details of Port of London Authority Combined Accident Procedure Applicable to Vessels (POLACAP): In event of a major accident, the Thames Navigation Service will broadcast on appropriate VHF Channels an outline of the accident, including in the message:

Word	*Meaning*
"POLACAP"	Serious accident as specified has occurred – Combined Accident Procedure is in force.

Action by Vessels on Receipt of POLACAP Message: Maintain current communications watch, keeping requests for information to MINIMUM. If in vicinity of accident be prepared for traffic regulation, which, if required, will be operated by PLA Harbour Master's Launches.

If directly involved in or assisting with the accident, switch to VHF Channel 16 for inter-ship/craft communications, and report to Thames Navigation Service.

On scene control will be exercised from the forward control craft using call sign POLACHIEF. This craft will identify itself by a blue rotating light and in addition by day will hoist a red ball at the masthead.

When Combined Accident Procedure is no longer in force, Thames Navigation Service will pass:

Words	*Meaning*
"CANCEL POLACAP"	Combative measures to deal with the major accident are completed and no further action required.

June 1984.

Director of Port Services, Port of London Authority.

This Notice supersedes similar Notice dated February 1968.

Notice to Mariners – 27 of 1983.

Merchant Shipping (Tanker) Regulations 1981 and (Amendment) Regulations 1982 (EEC Requirements):

In compliance with the above regulations: (Statutory Instruments 1981, No. 1077 and 1982 No. 1637). The Master of any tanker of 1,600 g.r.t. or over which is:

(a) Carrying a cargo of chemicals, gas or oil in bulk; or
(b) Non gas free from any of these cargoes shall:

Section I: Make a report to the Harbour Master by telex (Telex No. 262880) or via G.P.O. Coast Station before entering or navigating within the limits of the Port of London which shall provide the following information in the order listed:

(a) Tanker's name and call sign.
(b) Country where registered.
(c) Length, beam and arrival draft.
(d) Destination and ETA.
(e) Tankers bound for the Medway, ETA at Medway Buoy.
(f) Nature and type of cargo (together with Flash Point if known).
(g) Is an inert gas system fitted?
(h) If an inert gas system is fitted, is it fully operational?
(i) Do any of the cargo tanks have an atmosphere which has been rendered non-flammable?
(j) If the tanker has a cargo of chemicals or gas has it been issued with a certificate stating that it complies with:
  (i) IMO Code for Ships carrying dangerous chemicals.
  (ii) IMO Code for Existing Ships carrying Liquefied Gas.
  (iii) IMO Code for Ships carrying Liquefied Gas.
(k) Does the tanker have any hull, machinery or equipment defects which may materially affect:
  (i) Its safe manoeuvrability.
  (ii) The safety of other vessels.
 or constitute a hazard to:
  (iii) The marine environment.
  (iv) Persons or property.

If the answer is 'Yes' to any of the 4 questions contained in (k), then details of the problem must also be provided.

If the Master fails to make a report or knowingly provides false information to the Port Authority or to a Pilot when boarding his ship he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £1,000 or on conviction on indictment a fine.

If any Pilot boarding a ship to pilot it in or out of the port believes there are defects as described in sub-section (k) which have not been reported to the Port Authority he shall inform the Master of those defects and if the Master then fails to inform the Port Authority the Pilot shall forthwith give such information to the Authority himself.

If the Pilot knowing the Master has failed to make a report, then himself, fails to make a report of any known defect as defined in sub-section (k) he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £400.

Section II: Make a Check List available to the Pilot when he boards the vessel and make a copy of the same Check List available to the Harbour Master (if necessary through the vessel's agents).

If the Master fails to make a Check List available the Pilot shall forthwith notify the Harbour Master.

If the Master knowingly makes a Check List available which is materially false he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £1,000 or on conviction on indictment a fine.

Notice to Mariners – 50 of 1981.

Inert Gas Systems and Crude Oil Washing (COW): (Reference Statutory Instruments No. 541, 544 and 687 of 1980).

The attention of tanker Masters are drawn to the following conditions, which must be observed whenever crude oil washing of tanks is to be undertaken in the Port of London.

1. *Notification*
(a) At least 24 hours prior notification of the intention to COW is to be received by the Director of Marine Operations (through the Thames Navigation Service) together with written assurance that all systems have been checked and found satisfactory in accordance with the ship's COW Manual and IMO requirements.
(b) One hour before the actual commencement of COW, a further advice must be received by the Director of Marine Operations (through the Thames Navigation Service) that COW is about to commence and that all systems are fully operational.

2. *Terminal Approval*
No vessel is to undertake COW without the approval of the Terminal Management and having complied with IMO COW requirements applicable to that ship.

3. *Failure of Systems*
Following the failure of the inert gas system to supply either the correct quality or quantity of inert gas, or a failure of any other part of a COW system, all cargo discharge, de-ballasting and tank cleaning must cease forthwith, and the Authority is to be immediately advised. Operations are NOT to be resumed until after consultation has taken place and agreement reached between the Authority, the Terminal Management and the ship's Master.

4. *Tanker Drafts*
No tanker crude oil washing is to be accepted at any berth where the vessel cannot safely be afloat at any state of the tide.

Notice:

Dangerous Substances in Harbour Areas Regulations 1987

1. INTRODUCTION

The Dangerous Substances in Harbour Areas Regulations 1987 ("DSHA Regulations") came into force on 1st June 1987. They apply in every harbour and harbour area in Great Britain, including therefore the Port of London.

On the same date certain provisions for the control of dangerous substances in the port of London were repealed –
 (a) Sections 150, 151, 152 and 160 of the Port of London Act 1968;
 (b) the Port of London Explosives Byelaws;
and, subject to temporary exceptions, –
 (c) the Port of London Petroleum Spirit Byelaws;
 (d) the Port of London Liquid Methane Byelaws.

The exceptions are Petroleum-Spirit Byelaws 7, 8, 9, 10 and 17 and Liquid Methane Byelaws 8 and 9. These remain in force until the end of 1989, and in the meantime replacement byelaws may be made if thought appropriate.

2. MEANING OF "DANGEROUS SUBSTANCE"

The term "dangerous substance" is defined in Regulation 3 of DHSA Regulations. For a full understanding of the term, reference should be made to that definition. Essentially, however, it means any substance which by reason of its characteristic properties creates a risk to the health or safety of any person when the substance is in a harbour or harbour area. It includes any substance or article which is within the definition of "dangerous goods" in Regulation 1 (2) of the Merchant Shipping (Dangerous Goods) Regulations 1981.

3. NOTICE OF ENTRY

Regulation 6 requires that a dangerous substance shall not be brought into a harbour or harbour area, unless *notice* containing the required particulars has first been given. The notice must be of *not less than 24 hours* unless –
 (a) the Harbour Master requires a *longer* time (up to 14 days) for operational reasons; or
 (b) a *shorter* time is agreed, if it is not reasonably practicable to give 24 hours' notice.

A. Entry by Vessel – Notice by Master or Agent

A.1 Persons to be notified

If a dangerous substance is intended to be brought in by a vessel, the notice must be given by the Master or Agent to –
 (a) the PLA's Harbour Master at the address mentioned below (*Note* – the requirement applies even if the vessel is in transit to or from the Medway); *and*
 (b) the berth operator (*Note* – if the berth is at the PLA's Tilbury Docks, notice must be given to the Berth Superintendent as well as to the Harbour Master).

A.2 Form

The PLA's Harbour Master and the berth operator must be *in receipt* of the notice *before* the specified time. Notices should therefore preferably be sent by *telex* or *facsimile*.

The notice to the Harbour Master should be sent to –

The Harbour Master, Thames Navigation Centre, Royal Pier Road, Gravesend, Kent DA12 2BG
Telex: 262880. Fax: Group 3 – 0474 352996.

A.3 *Contents*

The notice must contain such information as is *adequate to evaluate the risk* created by the substance and –

(a) Name of vessel, and PLA voyage reference number (if allocated).

(b) Berth to be used.

(c) Whether substance is to be discharged or remain on board in transit.

(d) Product name
IMO class
UN number
IMDG Code page number
Weight in tonnes or kilos.

(e) Mode of carriage: i.e. bulk, containers, Ro/Ro trailer or general.

(f) If in bulk –
  (i) whether petroleum or chemical, and
  (ii) Flash Point (FP) closed cup (if only an open cup FP can be given, this fact should be stated).

(g) Whether vessel has current certificate of fitness (if recommended by IMO).

(h) If an oil tanker, whether vessel has valid cargo-ship Safety Construction and Safety Equipment Certificates (if required under a SOLAS convention).

B. *Entry by Road or Rail – Notice by Transport Operator and Ship's Agent.*

B.1 *Transport Operator*

If a dangerous substance is intended to be brought in by road or rail, the notice must be given by the transport operator.

The notice must be given to the Manager of the berth concerned, who for the purposes of notification under Regulation 6 (1) (b) of the Dangerous Substances in Harbour Areas Regulations 1987 shall be deemed to be both the harbour master and the berth operator.

The notice must contain such information as is *adequate to evaluate the risk* created by the substance and –

(a) Name of the transport operator.

(b) Berth to which substance is to be sent.

(c) Name of vessel for which intended (if known), with date and estimated time of departure.

(d) Product name
IMO class
UN number
IMDG Code page number
Weight in tonnes or kilos.

(e) Method of packaging.

B.2 *Ship's Agent*

Information about the loading and estimated time of departure of the vessel (as required at (c) above) is important but may not be readily available to the transport operator. Also, the PLA's Harbour Master needs to have the information in a *form* which related mainly to the vessels on which the substances are to be carried. The information given by transport operators under the DSHA Regulations will not normally be in this form, but information in this form has hitherto been given by ship's agents in accordance with PLA Notice to Mariners No. 4 of 1985.

Ship's agents should therefore *continue* to give notice to the PLA's Harbour Master at least *24 hours before* a dangerous substance is *loaded* on to a vessel *anywhere* in the Port of London. The notice should be given in the manner stated at A.2 above and should contain the information stated at A.3 above (except for item (c)).

4. TILBURY DOCKS

Dangerous goods intended for loading or discharge in the PLA's docks continue to be subject to the PLA's published Schedule of Dangerous Goods. Attention is particularly drawn to the terms and conditions for explosives (class 1) and radio-active substances (class 7).

In addition to notification under the DSHA Regulations, some descriptions of dangerous substances (designated in the Schedule as Group 3, require the *prior approval* of the PLA before entering the PLA's docks. Application for approval should be made to the Dangerous Substances Section, Accident Prevention, Port of Tilbury, Tilbury Docks, Essex RM18 7EH. Telephone: Tilbury 0375 – 852374. Telex: 995441. Fax: 0375 – 857667.

5. FURTHER REQUIREMENTS OF DSHA REGULATIONS

It is impracticable to set out all the provisions of the DSHA Regulations in this notice, but particular attention is drawn to the following:

5.1 *Movement of Vessels*

(a) Regulation 7 confers on the Harbour Master powers of prohibition, removal and regulation relating to dangerous substances.

(b) Regulation 10 requires that a vessel shall not be placed alongside another vessel carrying Schedule 3 dangerous substance without the permission of the Master of the other vessel and of –
  (i) the berth operator, or
  (ii) the Harbour Master (if the vessel is not at berth).

(c) Regulation 14 requires the Master of a vessel carrying a dangerous substance to anchor or moor his vessel only where directed by the Harbour Master.

(d) Regulation 15 requires that the Master of a vessel (other than a dumb barge) carrying a Schedule 3 dangerous substance shall ensure that the vessel is in a state of readiness to be moved at any time (tidal conditions permitting).

5.2 *Permission for Certain Operations*

(a) Regulation 20 requires the Master of a vessel to obtain the Harbour Master's written permission before transferring a dangerous substance by pipeline to another vessel.

(b) Regulation 22 requires the Master of a vessel carrying or which has carried dangerous substance in bulk to obtain the Harbour Master's permission before discharging slops or ballast, pumping bilges, gas-freeing or purging tanks and before crude oil washing a cargo tank.

5.3 *Marking of Vessels*

(a) A vessel carrying a Schedule 3 dangerous substance must carry the lights or flags required by regulation 8. Masters should note that the *all round red light* hitherto required by Byelaw 5 of the Port of London Petroleum-Spirit Byelaws must *not* since 1st June 1987 be displayed when *under way*.

(b) A barge carrying one or more dangerous substances in the quantities stated in Regulation 11 (1) must display the hazard warning panels required thereby (or those panels and the labels required by regulations 11 (2)).

6. OTHER PROVISIONS

Attention is drawn to the following:

(a) Port of London River Byelaws 1978

No. 6 –Escape of dangerous substance – vessel not to proceed above No. 1 Sea Reach Buoy except with permission of Harbour Master.

No. 7(f)–Spillage of liquid in bulk to be forthwith notified to Harbour Master.

(b) Merchant Shipping Notice 1152

Reporting of incidents involving loss of dangerous substances.

AUTHORITY: Port of London Authority, Thames House, St. Andrews Road, Tilbury, Essex RM18 7JH. *Tel:* 0375 852200. *Telex:* 995553. *FAX:* 0375 852312. *Contact:* D. J. Jeffery, Chief Executive, River Captain Gordon Varney, Chief Harbour Master.

Port of Tilbury, Leslie Ford House, Tilbury Docks, Tilbury, Essex RM18 7EH. *Tel:* 0375 852427. *Telex:* 995170. *FAX:* 0375 855106. *Contact:* John S. McNab, Chief Executive, Tilbury.

LONDONDERRY (incl. Moville): 54.59 N. 07.19 W.

(See Plan)

The main port of Londonderry is situated about 21 miles from the sea on the River Foyle.

PORT LIMITS: Extend from Lifford Bridge to a line drawn from Greencastle Fort in the County of Donegal to the Tower on Magilligan Point in the County of Londonderry.

DOCUMENTS: For Londonderry see "Belfast". For "Moville" see "Dublin".

Since the Port of Londonderry falls within the Republic of Ireland and the United Kingdom, both Governments are concerned in regard to Customs documents. Moville, which is situated down river from Londonderry, is located in the Republic of Ireland and is the anchorage where deep-sea vessels lie prior to proceeding to Londonderry. Should vessels discharge cargo or load cargo at this anchorage, Irish documents are required. The port is under the control of the Londonderry Port and Harbour Commissioners who are recognised by both Governments.

PILOTAGE: The Londonderry Port and Harbour Commissioners are the Pilotage Authority for the Londonderry Pilotage District. For information regarding pilotage application should be made to The Secretary, Harbour Office, Londonderry, Northern Ireland. Tel: (0504) 262553.

Pilotage is compulsory, vessels normally taking the Pilot at Carrickarory Pier, Moville. A Pilot may be taken at the Fairway buoy by special arrangement.

The Pilot station is located at Carrickarory Pier, Moville, 55° 10′ 57″ N. 07° 03′ 27″ W.

Deep-draft vessels usually take Pilot 2 hours before HW time Londonderry, so as to arrive at Londonderry on the top of HW.

Pilotage service may be obtained in response to following signals:

Inward-bound vessels: By day. 1. The International Code Signal G. 2. The International Code Signal P.T.; 3. The Pilot Jack hoisted at the fore. If required after hours telephone Harbour Radio (Londonderry 363218).

By night. Pilot Station unattended at night. Vessels should contact harbour radio on VHF Channel 14 or Londonderry (0504) 363218.

By day or night. 1. By VHF (FM) Channel 14 to the pilot station at Carrickarory Pier. 2. By VHF (FM) Channel 14 to the pilot launch "James McDonald." 3. After hours and weekends VHF (FM) Channel 14 to Harbour Radio.

In poor visibility. By sounding the letter G in Morse Code on the steam whistle or siren.

As visibility to seaward from Carrickarory Pier is restricted it is important that Owners, Masters or Agents notify the Berthing Master (tel: Londonderry 263680) or outside Office hours Harbour Radio (tel: Londonderry 363218) of the name of vessel; estimated time of arrival at the Pilot Station; draft of water of the vessel. It is also important that VHF (FM) communication be established with pilot station, pilot launch "James McDonald", or Harbour Radio as early as possible before arrival in Lough Foyle. Call signs, frequencies and procedure are as follows:

VHF (FM) Communications:

1. Pilot Station at Carrickarory Pier, Moville: Call sign "Foyle Pilots". Equipment VHF (FM) R/T single frequency working. A continuous listening watch is kept during office hours on Channel 14 (156.70 MHz.) except when pilot launch is operating, when watch is transferred to the launch.

2. Harbour Radio: A continuous listening watch is kept on Channel 14 (156.70 MHz) outside of office hours.

3. **Pilot launch:** Name of vessel "James McDonald". Equipment VHF (FM) R/T single frequency working. When launch is operating a listening watch is kept on Channel 14 (156.70 MHz).

4. **Harbour Office, Londonderry:** Call sign "Harbour Office". Equipment VHF (FM) R/T single frequency working. All vessels fitted with VHF (FM) R/T while navigating in the river or at anchor in Moville Bay should keep a listening watch on Channel 14 (156.70 MHz).

Messages must be restricted to those related to the movement of vessels and safety of vessels and persons. Messages of any other nature and messages of a personal character cannot be accepted.

A continuous listening watch is kept on Channel 16 (156.80 MHz) which is only to be used in circumstances involving distress and safety.

Outward-bound vessels and vessels shifting:

When the services of a Pilot are required for an outward-bound vessel or for shifting a vessel, 3 hours' notification should be given to the Berthing Master (Tel: Londonderry 263680) during office hours, of name of vessel; time of departure; draft of water of vessel; where bound. Early notification should be given to enable Pilot to board vessel in good time.

ANCHORAGES: The only anchorage at Londonderry is located at Moville.

RESTRICTIONS: See "Max. Size".

MAX. SIZE: For vessels using main port of Londonderry, overall length 152.5 m. draft 7.2 m.

Due to new road bridge at Madam's Bank, height clearance 32 m. H.W.O.S.T.

For vessels using N.I.E.S. Oil Jetty, Coolkeeragh, Londonderry, overall length 183 m. draft (salt water) 7.2 m.

Maximum draft of vessels is increased on Spring tides at Coolkeeragh and Londonderry.

HEALTH: Pratique is automatic except in the case where the Master suspects one of the dangerous diseases on board when he should notify the Agent.

Also see "Health – All Ports" before first U.K. port.

RADIO: Malin Head Radio Station, Republic of Ireland, covers W/T and R/T transmissions and Portpatrick Radio Station, Scotland, covers R/T transmissions.

TUGS: One tug is available which is owned by the Londonderry Port and Harbour Commissioners. Tugs lines normally used.

BERTHING: Vessels of deep draft or large dimensions can only berth at Londonderry to arrive on top of high water. Decisions in this matter are taken by the Pilots in conjunction with the Harbour Master.

A total of 800 m. of ferro-concrete wharf is available. All berths dredged to 7.6 m. LWOST

CRANES: 2×5 ton electric grabbing cranes, 2×10 ton mobile grab cranes, 1×4 ton mobile grab crane, 1×4 ton mobile hook crane, 1×20 ton crawler hook crane and 1×35 ton container derrick.

STEVEDORES: ETA advices should be given before 1600 hrs. on weekdays to arrange work for the next morning and before 1100 hrs. on Saturday to arrange work for Monday morning.

MEDICAL: Doctors and hospital facilities available. Agents should be advised in advance of any medical attention required.

TANKERS: No slop facilities available. Deep-sea tankers discharge heavy fuel oil for electricity power station at N.I.E.S. Jetty, depth 8.8 m., Coolkeeragh, diameter of pipes 8 in. Crew are required to connect and disconnect hoses under port conditions.

Shell Oil: Max. LOA 120 m. Depth 6.0 m.

Du Pont: Depth 8.5 m.

DENSITY: Water at Londonderry is brackish and average density 1005 to 1018.

FRESH WATER: Available at all berths direct from shore lines.

FUEL: Gas-oil and light marine diesel available by road tankers and from Shell Jetty at Pennyburn. Shell Mex and B.P. can supply light, medium and heavy fuel oil by road tanker.

CONSULS: Nearest at Belfast.

REPAIRS: Deck and engine repairs are carried out by a local engineering works. No major repairs available.

GANGWAY/DECK WATCHMEN: Can be covered by crew; shore watchmen available if required.

OPENING/CLOSING HATCHES: This is required to be carried out by ship's crew under local port labour conditions.

CARGO GEAR: Ship's winches and derricks should be in good working order and have DTI Certificates or equivalent. Cluster lighting is required for night work.

REPATRIATION: Can be arranged by ship's Agent on request.

AIRPORT: Eglington Airport 9 miles from city centre. Aldergrove International Airport (Belfast) 60 miles from Londonderry.

HOLIDAYS: Port Holidays at Londonderry are: New Year's Day; St. Patricks Day (17th March); Easter Monday; Easter Tuesday; First Monday in May; Last Monday in May; 12th July; 1st Monday and Tuesday in August; Christmas Day and Boxing Day.

POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required, or Police 265161; Ambulance 45171; Fire 264321.

TELEPHONES: No telephones available for connecting on board.

IDENTIFICATION CARDS: Not obligatory but should be carried.

SERVICES: No tank cleaning available or facilities for discharging of tank-washings. Compass adjusters available from Glasgow.

REGULATIONS: Copies of Port Bye-Laws may be obtained through Agent.

AUTHORITY: Londonderry Port and Harbour Commissioners, Harbour Office, Harbour Square, Londonderry BT48 6AF, Northern Ireland. *Tel:* (0504) 264884, 264885, 262553. *Telex:* 748039. *FAX:* (0504) 371809. *Contact:* Captain T. F. Wright, Chief Executive. G. S. Wilson, Secretary.

LOWESTOFT: 52.29 N. 01.45 E. (See Plan)

DOCUMENTS:

Crew List (at least 2 copies).
Passenger List (at least 2 copies).
Manifest (at least 3 copies).
Customs & Health Documents (normal U.K. regulations).
Ship's Papers (to be presented to Customs and Port Authorities).

PILOTAGE: Pilots on standby at all times. Pilot launch fitted with VHF and maintains listening watch on Channel 14. Pilots can also be ordered by R/T via Humber and Northforeland Radio, hence by phone.

Pilot's telephone No. Lowestoft 560277, or at the Lowestoft Harbour Masters Office, tel. Lowestoft 572286 (this number manned 24 hours). Pilot boat, black hull, white upper work with "Pilot" painted on each side. Light and sound signals as laid down in the International Code of Signals.

Pilot boards vessel at West Holm Buoy or East Barnard Buoy. Vessel should not approach harbour closer than these limits when awaiting Pilot.

ANCHORAGES: Pilotage anchorage North of a line joining West Holm Buoy and Lowestoft Lighthouse.

RESTRICTIONS: No specific restrictions provided the height of tide is sufficient for draft of vessel. Large vessels normally enter on slack tide due to cross currents at entrance.

There are regulations governing the passage of vessels through the harbour entrance. Masters of vessels shall observe the Harbour Control Light which is a white flashing light situated below the occulting red light on the South Pier Lighthouse. This light is visible except between 232° to 286° true from the light. When this light is flashing vessels may proceed to sea, but no vessel shall enter the harbour. At all other times vessels may enter the harbour, but no vessel shall proceed to sea.

A green occulting light is shown on the North Pier Head and a red occulting light on the South Pier Head, from sunset to sunrise.

Several Inner Pier lights will be clearly visible from a vessel upon entering the harbour and some will also be visible from certain directions before entry.

A "horn" signal is fixed on the South Pier Head for use in foggy weather. 4 blasts of 2 seconds each will be given every minute.

MAX. SIZE: Max. length approx. 410 ft. Draft up to 21 ft. MHWS. (Check with Port Authority for current situation.)

HEALTH: See "Health – All Ports" before first U.K. port.

TUGS: A number of tugs are available; tug's lines normally used.

BERTHING: *Outer Harbour* (comprising Hamilton and Waveney Docks and Trawl and Yacht Basins). Used largely for fish traffic, sea aggregates and offshore module construction:

Width at entrance	148 ft.
Depth at entrance	23 ft. MHWS
Water area	40 acres
Length of quays	4,500 ft.
Depth of water at quays	18 ft. MHWS 12 ft. MLWS

Inner Harbour. Used for general cargo and grain traffic.

Width of bridge	74 ft.
Water area	70 acres
Length of quay	6,800 ft.
Depth of water at quays up to	23 ft. MHWS 17 ft. MLWS

CRANES: 1×200 tonne crane, 1×35 tonne crane and 1×32 ton container crane. Mobile cranes also available.

CARGO HANDLING FACILITIES: Silo complex with a capacity of 14,000 tonnes and discharging and loading rates of 120 tonnes and 350 tonnes/p.h. respectively.

Containers: Purpose built container terminal is equipped with a 32 tonne container crane and 2 park-gantry cranes.

STEVEDORES: Shipping Agent should be advised of ETA, etc., to enable gangs to be available. Working hours: 0800 – 1700 hrs. (1600 hrs. Friday). Overtime as required.

MEDICAL: Advance notice desirable of medical attention required on arrival. Hospital facilities available in the district.

FRESH WATER: Can be supplied at various points on quays from hydrants. Normal hours 0800 – 1700 hrs. Monday to Thursday and 0800 – 1600 hrs.

FUEL: Marine diesel available from road tankers or fuel barge within the harbour. 24 hours notice is normally required for supplying gas oil or boiler fuel; this comes from road tankers.

FIRE PRECAUTIONS: Local fire services available in an emergency. Special arrangements can be made for taking fire-fighting equipment to sea. Normal harbour fire-prevention regulations apply to all berths.

CONSULS:

Belgium	Tel: Lowestoft	572301
Denmark	"	"
France	"	"
Netherlands	"	"
Norway	"	"

REPAIRS: All types of deck and engine repairs are possible in the port.

DRY DOCKS: One dry dock. Length 248 ft. Width at entrance 48 ft. Depth of water on sill 14.5 ft. MHWS.

OPENING/CLOSING HATCHES: Carried out by crew.

AIRPORTS: Nearest international airport served by regular airlines is London (Heathrow). Smaller airport at Norwich (27 miles) served by regular airlines.

POLICE/AMBULANCE/FIRE: In an emergency dial 999 and ask for service required. For normal enquiries: Police Lowestoft 572121; Ambulance Lowestoft 572572; Fire Lowestoft 572227.

SERVICES: Compass adjusting. VHF, Radar, radio repairs. All ships' provisions are available by arrangements with the shipping Agencies.

SHORE LEAVE: Leave is permitted.

GENERAL:

Air/Sea Rescue Services at R.A.F. Cottishall (35 miles).
Royal National Lifeboat Institution, lifeboat berthed at Lowestoft.
Modern transit sheds.

AUTHORITY: Associated British Ports, Port House, Lowestoft, Suffolk, NR32 1BG. *Tel:* (0502) 572286/7. *Telex:* 97448 Abplow G. *FAX:* (0502) 500032. *Contact:* L. R. Gravestock, Port Manager. Captain M. J. C. Graham, Dock and Harbour Master. R.D. Arundale, Commerical Manager.

LYDNEY: 51.43 N. 02.33 W. (See Plan)

PILOTAGE: Available from Sharpness.
RESTRICTIONS: Entry and exit only possible at HW and for a very short period afterwards.
VHF: Not permanently manned. Used solely for directing vessels. Standard multi-channel. Channel 16 for call up.
BERTHING: *Tidal Basin:* 82.3 m.× 22.8 m. Width of entrance 10.5 m. Depth at HWST 7.3 m.
Inner Dock: 237.7 m.×32 m. Width of entrance 7.0 m. Depth 3.6 m.
FRESH WATER: Limited supply from small bore tap.
FUEL: Not available.
AIRPORT: Gloucester (Staverton) 24 miles, Bristol 24 miles, Cardiff 30 miles.
GENERAL: The port does not offer any cargo handling facilities.
AUTHORITY: National Rivers Authority, Severn Trent Region, Southwick Park, Gloucester Road, Tewkesbury, Gloucestershire GL20 7DG. *Tel:* (0684) 850951. *FAX:* (0684) 293599. *Contact:* Mr. R. J. Bishop, General Manager. Mr. W. Hardy, Harbour Master, Tel: (0594) 516391 (part-time only – 48 hours notice required).

MANCHESTER: 53.29 N. 02.14 W. (See Plan)

GENERAL: The Port of Manchester includes the whole of the Manchester Ship Canal and Queen Elizabeth II Dock. The Canal is approximately 36 miles long from its entrance at Eastham on River Mersey to the Manchester Docks.
PILOTAGE: Compulsory. Orders for Pilots may be lodged with the Harbour Master's Office at Eastham (Tel. 051-327 1242/4). As much notice as possible should be given, particularly in the case of inward-bound vessels due to arrive at Eastham. Helmsmen can be obtained in same manner.
DOCUMENTS:
1 Maritime Declaration of Health.
1 Crew Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each Passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British ships only.
Load-Line Certificate.
Safety Equipment Certificate.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.
In addition, Manifests and Bills of Lading are usually sent to Agent direct from loading port.
RESTRICTIONS: Eastham Locks. The main entrance to the Canal is at Eastham where there are two locks side by side, one 600 ft. by 80 ft., and the other 350 ft. by 50 ft. The outer or lower sill of each lock is 11.36 ft. below Chart Datum (1975). The levels of upper sills of the 80 ft. and 50 ft. locks are 32 ft. and 29 ft. respectively below statutory water level in Canal.

Both locks are operated for incoming and outgoing vessels of suitable draft during a period of 8 hours on each tide, i.e. from 4 hours before high water to 4 hours after high water.

The size of vessel which can navigate the Canal is governed by the dimensions of locks, the height of fixed bridges and limitations for the draft of vessel.

Maximum length: The greatest length measured between perpendiculars drawn at the foreside of the foremost extremity and at the afterside of the aftermost extremity of the hull or any attachments to the hull shall not exceed 560 ft. The acceptance of ships proceeding above Ince with overall length greater than 530 ft. is subject to approval of the Harbour Master.

The length measured between perpendiculars drawn at the foreside of the stern and at the afterside of the rudder post, or through centre of the rudder stock if there is no rudder post, on the Summer load water-line shall not exceed 535 ft.

The length measured between perpendiculars drawn at the afterside of the rudder plate and at the foreside of the foremost extremity of any part of the hull which is below a horizontal line drawn through the top of the rudder plate shall not exceed 544 ft.

Maximum beam: Vessels not proceeding beyond Ince Oil Berth: 72 ft. overall. Vessels proceeding beyond Ince Oil Berth: 63 ft. 6 in. overall.

Provided the height of masts and/or funnels or other structures is no more than 70 ft. 9 in. from water-line, vessels can pass under all fixe bridges under normal conditions. As, however, the headroom is les during periods of high-water levels, a vessel, in order to avoid possib detention, should reduce masts and funnels or other structures to 70 f above the water-line. The restriction as regards height does not app to vessels proceeding only as far as Runcorn Bridge.

Facilities are available at Eastham for removing and replacing tops o masts and funnels.
MAX. SIZE: When vessels are loading inwards for the Canal, Master should take these facts into their calculations and have regard to th following limitations, all of which are expressed as maximum draft i fresh water:

Vessels inward bound to a berth	*Arrival draft (in fresh water) at Eastham not to be such as would exceed:*
Between Eastham Locks and Ince Oil Berth	8.78 m.
Between Ince Oil Berth and Runcorn Lay-by (Other than Runcorn Docks)	8.07 m.
Between Runcorn Lay-by and Mode Wheel Locks	7.31 m.
In the Manchester Docks upstream of the Inner Gates of Mode Wheel Locks and downstream of the Railway Swingbridge.	5.48 m.
In the Manchester Docks upstream of the Railway Swingbridge to No. 3 Dock Pomona	2.90 m.

HEALTH: Foreign arrivals to complete Maritime Declaration of Health. They are cleared immediately on arrival by either a port doctor or a officer of H.M. Customs depending on where ship comes from and whether there is sickness on board.

Vessels arriving from ports within accepted area (N. European ports and coastal arrivals need not present Declaration in all cases; whe there is sickness on board the Port Health Authority must be informe preferably not more than 12 hours and not less than 3 hours before arrival.

Also see "Health – All Ports" before first U.K. port.
RADIO: FM VHF R/T equipment is installed at Eastham, Stanlow Latchford, Irlam, Barton and Mode Wheel Locks as an aid to navigation on the Canal.

Ships which are equipped with the appropriate R/T channels are requested to establish contact with the nearest shore station before leaving a berth or lock within the harbour and thereafter to maintain a continuous listening watch on Channel 14.

Station	*Call sign*	*Channel*	
Eastham Locks	Eastham Locks	7	Docking instructions: When approaching Eastham Locks from seaward.
Eastham Locks	Eastham	14	Port operations: Vessels moving within the harbour should maintain a listening watch on Channel 14. After contact has been established the shore station will request the ship to switch to the appro-priate speech Channel. Irlam, Barton and Mode Wheel Locks are for emergency use only.

Weston Point Docks: Near Runcorn, 11 miles from canal entrance at Eastham. 10-12 berths for vessels up to 2,500 tonnes. Fixed, portal and mobile cranes for handling bulk cargoes.

CARGO HANDLING FACILITIES: Heavy duty floating crane with capacity up to 120 tonnes. Roll-on/Roll-off berth with strengthening to take loads of 300 tonnes.

STEVEDORES: The stevedores require to sight a certificate covering inspection and S.W.L. of slings used in pre-slung cargoes.

MEDICAL: Doctors and hospital facilities available. Agent should be advised in advance of any medical attention required.

TANKERS: *Queen Elizabeth II Dock:* This dock is adjacent to the locks at Eastham which give access to the Canal, and is approached from River Mersey through its own entrance lock. This lock is 807 ft. long by 100 ft. wide. The level of outer sill is 18.36 ft. below Chart Datum (1975). The dock covers an area of 19 acres in the form of a square and has four berths designed to accommodate large tankers, the dimensions of berths being as follows:

Berth No. 1	800 ft.	Berth No. 3	900 ft.
Berth No. 2	725 ft.	Berth No. 4	730 ft.

The dock is directly connected to oil installations by pipe-lines.

Stanlow Oil Docks: No. 1 & 2 (5 berths) 4.5 miles above Eastham Lock. Length 560 ft., draft 28 ft., beam 72 ft.

Ince Oil Berth: 5.5 miles above Eastham Lock. Length 560 ft., draft 28 ft., beam 72 ft.

Ince Coaster Berth: Max. length 350 ft., beam 53 ft. draft approx 21 ft. dependent on current survey.

Barton: 32 miles above Eastham Lock. Length 508 ft., draft 24 ft., beam 63 ft. 6 in. Max. height above water-line 70 ft.

DENSITY: The water in lower section of the Canal between Eastham Locks and Latchford Locks is brackish. In all sections above Latchford Locks the water is fresh.

FRESH WATER: Available.

FUEL: Oil bunkers may be taken by arrangement with oil companies either from craft alongside or at various oil berths along the Canal.

(A) MEDWAY (See Plan)

PILOTAGE: *Pilotage to and from the Medway:*

Ships navigating through the compulsory area of the Port of London to or from the Medway will be subject to the same requirements as those navigating to or from places in the Port of London. However, the Medway Ports Authority will be empowered to authorise Medway Pilots (viz. persons authorised by the Authority to act as Pilot in or in part of that Authority's area) to act as Pilot in the Port of London of ships navigating to or from that area.

Also see "London".

VHF/RADAR: Medway Navigation Service (Medway Ports Authority) is situated at Garrison Point, Sheerness. Tel: Sheerness 663025. Telex: 96435 (call sign "Medway Radio"). Fax: (0795) 666596. Fitted with VHF, Channels 16, 74, 9 and 22. The station has radar service surveillance of Inner Estuary, Sea Reach, Medway Approach Channel and Lower Reaches of River Medway.

Tugs operate on Channel 73.

REGULATIONS: All vessels required to proceed in accordance with instructions of Port Authority. Vessels are requested to advise Medway Ports Authority – Medway Navigation Service (call sign "Medway Radio") VHF Channels 16, 74, 9 and 22 of ETA, shifting of sailing movements.

Prior notification to the Medway Ports Authority is required, detailing the carriage of all explosives and "dangerous goods".

GENERAL:

Tidal Information:

Tidal streams in the River Medway vary between about 2.5 knots at Springs and 1.5 knots at Neap Tides, although velocities vary considerably from Reach to Reach, the areas of maximum encountered velocities are: off Garrison Point Sheerness and through Rochester Bridge.

Average Tidal Heights are as follows: (metres)

Sheerness	5.7 MHWS	4.8 MHWN
Chatham	6.0 MHWS	4.9 MHWN
Rochester	6.2 MHWS	5.0 MHWN

High Waters occur approximately:

Margate	45 minutes	before Sheerness
Herne Bay	20 minutes	before Sheerness
Whitstable	10 minutes	before Sheerness
Rochester	9 minutes	after Chatham
Wouldham	28 minutes	after Chatham
New Hythe	33 minutes	after Chatham
Allington Lock	41 minutes	after Chatham

Tide Tables may be obtained at the offices of the Medway Ports Authority.

(B) SHEERNESS: 51.27 N. 00.44 E. (See Plan)

Situated on Isle of Sheppey at junctions of Thames and Medway Rivers.

DOCUMENTS: See "London".

PILOTAGE: See "Medway".

ANCHORAGES: For vessels entering River Medway up to 107 m. length, Little Nore Anchorage, Sheerness. Over 107 m. length – as directed by Medway Navigation Service (Medway Radio) or Thames Navigation to Great Nore, Sea Reach or Warps.

RESTRICTIONS: Subject to tidal conditions and under keel clearance appropriate size of vessel. Minimum depth of Medway Approach Channel 8.5 m. at Chart Datum.

Entry as directed by Medway Navigation Service (Medway Radio). Station keeps watch on VHF Channels 16, 74, 73, 9 and 22.

Occasional restriction for vessels over 130 m. overall length entering approach channel between sunset and sunrise when the Traffic Warning Lights are exhibited from Garrison Point.

MAX. SIZE: Five deep water terminals for vessels up to 230 m. in length and 11.0 m. in draft. Also see "Developments".

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Portishead. Local Stations: From South – Lands End, Niton, Northforeland. From North, Cullercoats, Humber, Northforeland.

VHF/RADAR: See "Medway".

TUGS: River Medway – For Sheerness, Ridham Dock, Isle of Grain, Oakham Ness – Tugs usually meet vessels at Garrison Point, Sheerness. Tug's lines used, no extra charge.

BERTHING: Sheerness, deep water berths and Ferry Terminal – as directed by Medway Navigation Service (Medway Radio).

Berths equipped for handling containers, forest products, motor vehicles and wine in bulk and for general cargo of all kinds, including fresh fruit and vegetables.

Storage facilities available for bulk wine, vehicles, forest products and the warehousing of general cargo.

Sheerness Deep Water Berths – No. 1 – Suitable for vessels up to 230 m. length and 11.0 m. draft.

No. 2. Suitable for vessels up to 210 m. length and 11.0 m. draft.

No. 1/2. Retractable Ro/Ro pontoon serves both berths simultaneously, capable of 60 tonne payload.

No. 3. Suitable for vessels up to 230 m. length and 11.0 m. draft.

No. 4. Suitable for vessels up to 250 m. length and 9.0 m. draft.

No. 5. New car and Ro-Ro Terminal for vessels of 100 m. length and 5.5 m. draft.

Ferry Terminal – Berth 10. Suitable for either bow or stern door vessels of up to 165 m. in length and 7.0 m. in draft. Present service twice daily Sheerness/Flushing and vice versa.

CRANES:

Berth No.	*Remarks*
1	3×5 tonne Electric

Oil Pollution Insurance Certificate (tankers).
British Tonnage Certificate (if applicable).
U.K. Light Dues for current year (if applicable).

PILOTAGE: Pilots normally board incoming ships from a green-hulled pilot vessel, in a position S.W. of Mid-Channel Rock Light-tower, as close thereto, as weather, size of ship and circumstances permit. When the Western Channel is being used by very large ships other ships may be requested by the Port Signal Station, or by the pilot vessel, to use the Eastern channel, if draft, and length of ship permit, in which case the Pilot will board close to Sheep Buoy. Deep-draft ships should not approach too close whilst awaiting the pilot vessel. They should remain at least 4 miles S.W. of Mid-Channel Rock Light-tower. It is important, when manoeuvring at slow speeds to embark a Pilot to make proper allowance for the set of the tidal stream, which sets across the entrance. *Accurate times of arrival* are requested so that the pilot vessel may be on station at the correct time. ETAs should be given at least 12 hours before arrival and amendments should be made 2 hours before the latest ETA.

ETAs and subsequent amendments should be passed by telex or radio telephone through any United Kingdom Coast Station to Milford Haven Signal Station (Milford Haven 692343. Telex: 48575) or to the local Agent of the ship. Alternatively when within 30 miles of St. Ann's Head ETA's may be passed direct to Milford Haven Port Authority Signal Station calling on VHF Channel 16 then transferring to Channel 12 (the Port working frequency). In addition ships may call the pilot vessel on MF radio calling on 2,182 kHz and transfer to the working frequencies 2,241, 2,246 or 2,301 kHz. However, VHF contact is preferred.

ANCHORAGES: Anchorage normally available for vessels up to 40 ft. draft in Dale Roads. Anchorage for smaller vessels normally available in Dale Shelf or Stack anchorages. Signal Station will advise mariners on the availability of these anchorages.

RESTRICTIONS: The West Channel with minimum depth of 55 ft. at the entrance and 54 ft. inside is the channel used by the largest tankers. The East Channel with minimum depth of 32 ft. is available to all vessels of suitable size and vessels able to do so are requested to use it when the largest tankers are entering or leaving in the West Channel. The inner channel Westward of Texaco Jetty has a minimum depth of 53 ft.

MAX. SIZE: Vessels of 65 ft. draft can be handled on virtually all high waters, but draft restriction always dependent on tide, 63 ft. at worst HW Neaps, or up to 68 ft. in favourable conditions.

HEALTH: The Port Health Authority must be notified in advance if any animals on board or of any suspected disease or fever.

Also See "Health – All Ports" before first U.K. port.

RADIO: Lands End Radio, Ilfracombe Radio, Celtic Radio and Cardigan Bay Radio.

VHF: It is important to maintain continuous radio telephone contact with Signal Station when within one hour's steaming of St. Ann's Head, and at all times when in Haven and not safely moored to an alongside berth, including all times spent at anchor or at buoys.

All vessels equipped with VHF radio should adopt following procedures:

Entering the Harbour: Contact Signal Station on Channel 16 when within one hour's steaming of St. Ann's Head. After making contact ship will be requested to maintain watch on Channel 12 until vessel safely moored alongside or at anchor.

Going to anchor or to a buoy mooring: Report to Signal Station when secured and then maintain a continuous watch on Channel 16.

Berthing alongside: Report to Signal Station when safely moored and may then shut down.

Leaving the Haven: Maintain continuous listening watch on Channel 12 until Pilot has disembarked, when Signal Station should be informed and vessel should maintain a continuous watch on Channel 16 until one hour after passing St. Ann's Head.

Navigating within the Haven: Maintain a continuous watch on Channel 12. When radio telephone is used between vessel and tugs during berthing operation, Channel 6 or 8 will be used and Signal Station should be informed before vessel comes off Channel 12.

Signal Station will answer calls on Channel 16 for any ship in the port which has been instructed to move off international calling frequency.

RADAR: Harbour surveillance radar in operation, range 24 miles.

TUGS: Tugs normally join vessels to Westward of Esso Jetty, but Master will be advised by Pilot. Tug's lines used, cost of lines inclusive of towage charge.

BERTHING: VLCCs enter at HW and normally berth heading East. Vessel will be required to swing after unloading and prior to departure. *Milford Docks:* Enclosed dock, minimum depth on sill 26 ft., lock length 550 ft., width 69 ft., 5,033 ft. of quayage includes 420 ft. fish market and two modern cargo handling berths, one of 732 ft. and the other 455 ft. in length. Vessels of up to 34 ft. draft may be handled on Spring tides.

Pembroke Dock:

Govan Davies Dock:

Quay	*Length* (ft.)	*Depth at C.D.* (m.)	*Remarks*
1	600	10.8	Can accept bulk carriers and container vessels up to 700 ft.
2	354	8.0	Can accept bulk carriers and container vessels up to 450 ft.
3	235	6.1	Can accept general cargo vessels up to 340 ft.
4	1,000	—	To be built.

Vessels with Ro/Ro ramps (bow or stern) can berth in the basin between Berths No. 2 and 3.

Mainport Jetty: One cargo berth, depth 20 ft., for vessels up to 350 ft. length. Max. size approximately 6,500 d.w.t.

CRANES: In Milford Docks – 1×25 ton mobile, 2×6 ton electric. Further mobile cranage available if required.

SPECIALISED CARGO HANDLING FACILITIES:

Containers: Container traffic is handled at Milford Docks although there is no specialised container handling equipment.

Ro/Ro: Pembroke Dock Ferry Terminal has one Ro/Ro berth, depth alongside 21 ft., and can accommodate ferries up to 425 ft. in length, max. size 6,000 g.r.t. (approx.).

LPG: LPG is handled at the Elf, Gulf and Texaco oil terminals.

STEVEDORES: Ordered prior to arrival.

MEDICAL: All oil terminals have well equipped medical centres. Local hospital facilities available.

TANKER TERMINALS:

Elf:

Berth No. 1: Depth 64 ft., 1×18 in., crude line, 2×12 in. and 3×8 in. product lines, max. size 275,000 d.w.t.

Berth No. 2: Depth 38 ft., 1×18 in., 1×12 in., 2×10 in. and 2×8 in. product lines, 1×8 in. and 1×6 in. LPG lines, max. size 30,000 d.w.t.

Berth No. 3: Depth 22 ft., 1×18 in., 1×8 in. and 2×6 in. product lines, 1×8 in. and 1×6 in. LPG lines, max. size 5,000 d.w.t.

Herbrandston:

Ex-Esso Terminal. New general purpose terminal with 5 berths, able to handle VLCC size ships to coasters (1 large berth only in use).

Gulf Oil:

Berth No. 1: Depth 44 ft., 3×10 in. and 2×12 in. cargo lines, max. size 65,000 d.w.t.

Berth No. 2: Depth 55 ft., 6×12 in. cargo lines, max. size 140,000 d.w.t.

Berth No. 3: Depth 32 ft., 6×8 in. product and 1×4 in. LPG cargo lines, max. size 6,000 d.w.t.

Texaco:

Berth No. 1: Depth 56.7 ft., 4×16 in. crude, 4×6 in. black oil and 4×10 in. clean oil cargo lines, max. size 275,000 d.w.t.

Berth No. 2: Depth 41.3 ft., 2×12 in. LPG ship discharge lines with 1×8 in. vapour return line, 4×10 in. black oil, 6×10 in. clean oil and 2×10 in. ballast/bunker lines, max. size 100,000 d.w.t. (75,000 cu.m. LPG).

Berth No. 3: Depth 35.4 ft., 1×12 in. LPG ships discharge with 1×4 in. vapour return line, 2×12 in. black oil and 4×10 in. clean oil lines, max. size 35,000 d.w.t. (30,000 cu.m. LPG).

Berth No. 4: Depth 16.4 ft., 1×8 in. black oil, 3×6 in. clean oil, 1×6 in. LPG and 1×6 in. ballast lines, max. size 2,000 d.w.t.

Berth No. 5: Depth 16.4 ft., 1×8 in. black oil, 3×6 in. clean oil, 1×6 in. LPG and 1×6 in. ballast lines, max. size 4,500 d.w.t.

Berth No. 6: Depth 59.7 ft., 4×16 in. cargo lines, max. size 275,000 d.w.t.

Berth No. 7: Depth 48.5 ft., 4×10 in. cargo lines, max. size 113,000 d.w.t.

Berth No. 8: Out of commission.

No ballast facilities at Berths No. 6, 7 and 8.

Report: *Cautionary Advice:* In-Port: There are 3 major oil terminals within the Haven and the previous Esso Terminal, now the Herbrandston General Purpose Terminal, which is located less than 2 miles E.N.E. of the Angle Buoy. Ships bound for this terminal make tugs fast between the Angle Buoy and South Hook Buoy.

VLCCs which require 5 or 6 tugs have little but adequate time to make them fast. It is, therefore, extremely important for a deep tanker bound for a terminal in the Haven to have everything ready and the crew on stations prepared to make tugs fast by the time the Angle Buoy is reached and that after the turn is made the speed over the ground is reduced quickly so that by the time the South Hook Buoy is reached, all tugs are fast and speed reduced to about 2.5 knots.

Ships bound upstream of Herbrandston Terminal must proceed at the slowest speed consistent with safe navigation, as they pass quite close to ships lying alongside other terminals and can cause considerable "passing ship" problems. They usually make tugs fast after passing South Hook Buoy.

Berth Approaches: Ships are strongly advised against steaming into the berths at any terminal.

The only safe manoeuvre being to bring the ship to rest, stopped over the ground, parallel to and about 40 m. – 60 m. off the berth before breasting in.

This particular manoeuvre is of importance to vessels of 70,000 d.w.t. and over.

Most of the incidents during berthing operations have arisen because of a combination of an angled approach to the berth, excessive headway and berth approach speed with a sheer resulting from strong astern engine movements.

Anchorages: Ships of up to 12.80 m. draft for which there is no berth available on arrival can find anchorage within the Haven. (See below). Deeper draft ships which have to wait for tide or berth should only attempt to anchor outside when weather conditions are good and for limited periods only. A number of large tankers have successfully anchored S.W. of St. Ann's Head outside the 36.5 m. contour, but tides are strong. The Milford Haven Signal Station should be consulted before anchoring in this location mainly due to the high incidence of port and passing traffic.

When Easterly winds prevail, there is good anchorage in St. Bride's Bay. Carmarthen Bay is not recommended, as there is a gunnery range covering the area but not marked on the charts.

Vessels at anchor outside must keep listening watch on VHF Channel 16, and it is stressed that enough time must be allowed to weigh anchor and reach the entrance at the proper time for shipping the Pilot to enter port.

Anchorages within the Haven: The recognised anchorages within the Haven are shown on the large scale charts.

Dale Roads is the only anchorage for ships over 7.00 m. and under 12.00 m. draft. It is exposed to wind and swell and has an uneven rocky bottom which does not always afford a good holding ground. *Many ships have dragged anchor here and several have lost an anchor, and it is emphasised that a full anchor watch must be maintained on all ships with a listening watch on VHF Channel 12.*

If at anchor in Dale Roads at the onset of a gale, it is usually sound advice to pick up the anchor and proceed to sea. After rounding the Angle Buoy, if Mid-Channel Rock Lighthouse is kept fine on the port bow, this will take a ship clear of dangers. Before departing, the status of the buoys should be checked out with the Signal Station and then proceed with caution.

The 2 entrance buoys should not be relied upon as they sometimes drag out of position during gales.

Stack Anchorage can be used by medium sized ships of up to 7.00 m. draft. It is a little more sheltered and has a better holding ground.

Small ship anchorages are at Dale Shelf, Sandy Haven, and with the exception of LPG ships between Milford Shelf Buoy and Newton Noyes Pier. Some small ships find shelter South of the channel opposite the Herbrandston Terminal.

Herbrandston Terminal – Cautionary Advice: Each berth has a designed maximum speed of approach for the maximum size ship acceptable.

The berths are in an exposed position with prevailing winds blowing on to the berths. Strong winds from the Northerly semi-circle do occur and usually with a sudden shift in wind. Ships with high freeboard can be badly affected by these strong winds and it is, therefore, very important that moorings are kept tight and are properly tended at all times.

Description of Berthing Procedures: All vessels berth head to tide. Ships of less than 265 m. and 14.6 m. draft can be berthed on the flood tide and, therefore, swung before berthing. These ships are usually swung off the berth. Ships of greater draft will always berth at HW or on the ebb tide and will, therefore, always be port side to.

All moorings are taken ashore by boat and lifted on to the dolphins by power winch.

Breast and spring lines are usually put out first.

Good messengers are required at each position for this operation. This system is for VLCCs only.

DENSITY: 1025.

FRESH WATER: Available at all berths.

FUEL: All oil terminals can supply all grades of bunkers. Fuel also available within Milford Docks and from bunkering barge elsewhere in the Haven.

FIRE PRECAUTIONS: Fire wires to be rigged fore and aft on all tankers.

CONSULS: The following countries are represented by Consuls at the port or elsewhere in South Wales:

Belgium
Brazil
Denmark
Finland
France
Germany F.R.
Italy
Netherlands
Norway
Spain
Sweden
Turkey

REPAIRS: All types of deck and engine voyage repairs carried out.

DRY DOCKS: One dry dock at Milford Docks, 600 ft. × 63 ft. × 18 ft.

SURVEYORS: Lloyd's at Swansea, ABS and NV in South Wales. Cargo inspectors available – Saybolt, Moore, Barrat and Redwood have local offices.

GANGWAY/DECK WATCHMEN: Available if necessary – very rarely required.

CUSTOMS ALLOWANCES: Tobacco, 0.5 oz. per man per day. Spirits, 0.25 pint per man per day.

REPATRIATION: Crew changes frequently carried out and repatriation arranged. Crew arriving by rail to join vessels at Elf, Herbrandston, Gulf and Milford Docks should be directed to Milford Haven station. If joining vessels at Texaco to Pembroke station, and for vessels at Port Operators and Storage or Pembroke Dock Ferry Terminal, to Pembroke Dock station.

AIRPORT: Nearest main airport is Cardiff (Wales) Airport, distance approximately 100 miles. Flights to London for onward connections.

TIME: GMT in Winter months, BST (GMT plus 1 hour) March to October.

HOLIDAYS: Oil Terminals operate 24 hours/365 days. Other berths observe standard U.K. holidays but cargo work can be arranged if required.

POLICE/AMBULANCE/FIRE: Police – Milford Haven 692351, Pembroke 682121; Ambulance – Haverfordwest 3347; Fire – Carmarthen 231181.

EMERGENCY CO-ORDINATION CENTRE: Emergencies within the port are co-ordinated by the Milford Haven Port Authority Signal Station. Emergencies outside the port and S.A.R. co-ordinated by H.M. Coastguard St. Ann's Head (Tel: Dale 218).

TELEPHONES: No telephones on board. Public call boxes exist on all oil jetties.

SERVICES: Ministry of Defence compass adjuster available subject to operational commitments.

STORING: Vessels can be stored by barge or truck and local riggers are available to assist. Storing can normally take place during cargo operations but, in the case of oil tankers, trucks cannot proceed alongside the ship and storing from a barge must be carried out near the stern of the ship. Fork lift trucks cannot be used to store oil tankers.

SHIP SUPPLY SERVICE: D.V. Howells and Sons Ltd., P.O. Box 14 Milford Haven, Dyfed SA73 3ER. Tel: Milford Haven (0646) 69309 692418. Telex: 48575.

Marine & Port Services Ltd., The Dockyard, Pembroke Dock, Dyfed SA72 6TF. Tel: Pembroke (0646) 682271/5. Telex: 48303.

Additionally, there is a tug company operating in Milford Haven wi a fleet of locally based tugs whose prime duty is the berthing an unberthing of tankers at oil terminals in the Haven and firefightin responsibilities, although occasionally a tug may be called offshore fo salvage purposes. The tug company is Cory Towage Ltd., Slip Hi Milford Haven, Dyfed SA73 3BB. Tel: Milford Haven (0646) 692296/7.

There is a helicopter squadron based at RAF Brawdy, Haverfordwes which provides a rescue service and, on occasions, airlifts seriousl injured or sick personnel from ships in the area, usually on reques through the local Coastguard Station.

SHORE LEAVE: Shore leave allowed.

IDENTIFICATION CARDS: Not necessary.

AUTHORITY: Milford Haven Port Authority, P.O.Box 14, Milford Haven, Dyfed, SA73 3ER, U.K. *Tel:* Milford Haven (0646) 693091 office, Milfor Haven Signal Station (0646) 692342 or 692343. Signal Station – 24 hours. *Telex:* 48575 – 24 hours. *FAX:* (0646) 690179. *Contact:* Captai J. E. Frost, Harbour Master.

AGENT: G. S. Kelway Ltd., Murray Crescent House, The Rath, Milfor Haven SA73 3JR, Dyfed. Tel: Milford Haven 692313/4. After hours Milford Haven (0646) 695587, 695905, 693341, 698248. Telex: 48213 Fax: (0646) 692406. Cables: "Kelway Milford Haven".

MISTLEY: 51.57 N. 01.05 E. (See Plan)

LOCATION: Private port situated on the River Stour within Harwich Harbour. Seven tidal berths, vessels lay safe aground (also see "Harwich").

DOCUMENTS: Normal requirements – local Agents will advise.

PILOTAGE: Order via Agents or direct with Harwich Pilots.

Call sign: "Harwich Pilots".
VHF: Channel 16 and 9.
Telephone: Harwich (0255) 3129.
Telex: 98472.

Compulsory ETA 8 hours before arrival and 2 hours confirmation. Details required: Name of vessel, ETA, destination, max. draft., g.r.t.

ANCHORAGES: Safe anchorage in Harwich Harbour or Cork Pilot Station.

RESTRICTIONS: Vessels can enter/depart on HW, according to state of tide and draft. Day and night navigation.

MAX. SIZE: No length or beam restrictions. Draft varies between 3.3 m. Neap tides to 4.3 m. Spring tides except Berth No. 1 with a draft variation of 4.6 m. neap tides to 5.6 m. spring tides (subject to max. LOA 90 m.). Further dredging of the channel is taking place and will result in a further increase in max. draft for Berth No. 1.

HEALTH: As per Port Health Regulations. See "Harwich".

RADIO: Northern Approach: Humber Radio, Tel: (0521) 73447.

Southern Approach: North Foreland Radio, Tel: (0843) 20592.

VHF: Harwich Harbour Radio, Channel 14.

TUGS: Available from Felixstowe and Mistley via ship's Agents.

BERTHING: Instructions given via Pilot or Agents. Loading/discharging via shore cranes/elevators.

CRANES: Mobile cranes up to 12 tons, and Scotch Derrick up to 30 tons.

BULK HANDLING FACILITIES: Bulk cargo facilities available fo discharge of grain, ores, fertilisers, etc., by grab. Loading elevators fo grain, etc.

STEVEDORES: All cargo handling instructions and enquiries to: Mistley Quay and Forwarding, High Street, Mistley, Manningtree, Essex Tel: 0206 394431. Telex: 98692. Fax: 0206-393882.

MEDICAL: All requirements via Agents with advance notice.

DENSITY: 1026.

FRESH WATER: Available with notice. Up to 12 tons-charge £24.2 plus overtime charges if incurred.

FUEL: Bunkers available from major suppliers via Agents.

SURVEYORS: Cargo inspectors, superintendents and surveyors ar available locally via Agents.

GANGWAY/DECK WATCHMEN: Ship's gangway, watchmen no necessary.

HATCHES: Opening and closing by crew.

CUSTOMS ALLOWANCES: Normal U.K. Regulations.

CARGO GEAR: All work by shore cranes, heavy lift up to 30 tons.

REPATRIATION: Facilities via Agents.

TIME: GMT. Summertime, GMT plus 1 hour.

HOLIDAYS: No work on public holidays unless overtime working i arranged in advance.

POLICE/AMBULANCE/FIRE: See "Harwich".

TELEPHONES: No onboard facilities available.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: Not necessary.

DELAYS: None.

DEVELOPMENTS: Dredging of the approach channel to Mistley an within the port to increase acceptability of larger vessels is presently i hand but at present it is not possible to indicate when such improvemen will be completed. Please enquire to the Port Owners, Mistley Quay Forwarding.

AUTHORITY: *Port Owners:* Mistley Quay & Forwarding, High Stree Mistley, Manningtree, Essex CO11 1HB. *Tel:* Colchester (0206) 39443 *Telex:* 98692. *FAX:* (0206) 393882. *Contact:* I.J. Forbes, Directo T.P. Crossley, Commercial Manager.

Local Port Authority: The Harwich Conservancy Board.

MONTROSE: 56.42 N. 02.17 W. (See Plan)

PORT LIMITS: The port is bounded by a line drawn in a Northwesterly direction from Scurdie Ness Lighthouse to the Annat Bank and thence by both banks of the river to the road bridge which completes the inner boundary.

DOCUMENTS:
1 Crew List,
1 Passenger List,
1 Stores List,
1 Personal Effects List for baggage coming ashore,
1 Manifest or Bill of Lading.
Ship's Register, Load Line Certificate, Radio Certificate and LSA and Safety Certificates to be sighted.

PILOTAGE: Pilotage is compulsory. Pilots are available throughout the 24 hours. International Code Flag "G" to be exhibited.

Vessels should approach the port to a position with Scurdie Ness Lighthouse bearing 250° distance 0.5 mile where Pilot will normally board.

Pilot cutter *"Celurca"* has a dark blue hull with white upper works and "Pilots" painted in black on each side of the wheelhouse. The normal red and white pilot flag is flown during daylight and regulation lights exhibited at night. VHF Channel 16 for calling with a working frequency on Channel 12.

In bad weather it may be necessary for a ship to proceed inwards at the radioed directions of a Pilot to a position on the outer leading marks and inside the lighthouse where the Pilot may board safely. This will only apply during periods of strong Easterly gales and very heavy seas and may be applicable for only a few times in a year. Similarly the port may be closed under severe weather conditions, on average 2.5 days per year.

ETA Messages: Masters should cable Agent with 24 hours' notice of arrival giving overall length and deepest draft and also call "Montrose Port Control" within 2 hours of arrival at the pilot station.

ANCHORAGE: In position mentioned above with Scurdie Ness bearing 250° distance 0.5 mile, in about 13 m.

MAX. SIZE: Since the harbour was reconstructed and deepened ships of 500 ft. (150 m.) LOA and 15,500 d.w.t. have been handled on a max. draft of 24 ft.

HEALTH: "Q" flag to be flown when coming from a foreign country until cleared inwards. In event of disease or fever onboard, advise Agents by radio. Strict attention paid to quarantine regulations regarding dogs which are not allowed ashore.

Also see "Health – all ports" before first UK port.

RADIO: Messages to Agents may be sent through Stonehaven Radio. Harbour service is on Channel 12. Call Montrose Port Control on Channel 16.

RADAR/VHF: No port radar service. Harbour service and pilot vessel work on VHF Channels 16 and 12.

TUGS: Pilot vessel is equipped with towing hook and pusher bow to assist in berthing and unberthing if necessary. Vessel's lines used. Small charge made for such work.

In addition to the pilot vessel, the tug "Glenesk", 425 b.h.p. (4 ton bollard pull) is available.

BERTHING: North Riverside Quays: No. 6 – 112 m., No. 7 – 141 m., No. 8 – 87.5 m., No. 9 – 69 m. No., 10/11 – 152 m.

Depths vary from 18 ft. at No. 8 (see "Developments") to 16 ft. at No. 10/11 at Chart Datum.

South Riverside Quays: Berths No. 12, 13, 14, 15, 16, (Berth No. 16 dredged to a depth of 25 ft. (7.6 m.) at MLWS), 17 and 18. These are extensively used by oil related vessels.

Total wharf length available is 1,600 ft. with depth alongside 20 ft. at MLWS.

Fixed Ro/Ro Ramp available between Berths No. 6 and 7. Vessels able to land bow or stern ramp of width 8 m. Depth alongside 18 ft.

CARGO HANDLING FACILITIES: The stevedores are well equipped with mobile cranes, fork lifts, etc., and only rarely is ship's gear used unless it is of rapid, modern type. Grab discharge is used for bulk cargoes and conveyor belt systems for loading same.

Rates of loading or discharge:— Bagged cargoes 250 tons per gang per day; Bulk 400 tons; Bulk grain loading 3,000 tons; Unitised pulp 500 tons; Paper 500 ton; Timber 500 tons all per gang per day.

A large motor transport fleet is always available at the port and the Agents also have their own road haulage company.

STEVEDORES: Provided by: J. M. Piggins & Co. Ltd., Tel: Montrose 72827. Telex 76251. J. Milne & Sons, Stracathro. Tel: 067484-491. Fax: 067484-608.

MEDICAL: Small hospital in Montrose. Several major units within easy reach by road.

TANKERS: There is no oil berth in the harbour except the facilities offered by Rix Petroleum for the receipt into their 3,000 ton storage depot of gas oil.

DENSITY: At high water average 1024 but can be as low as 1005 at LW during heavy river outflow.

FRESH WATER: Supplied from quayside hydrants at all berths.

FUEL: Obtainable from road tanker, gas oil and H.S.D. from more prominent oil companies. Rix Oils can supply gas oil from local stocks. Contact J. Piggins.

FIRE PRECAUTIONS: Normal rules to be observed.

CONSULS: None in Montrose.

REPAIRS: Minor deck and engine repairs can be carried out.

DRY DOCKS: None.

SURVEYORS: Cargo ship and engine surveyors Johnston & Smart; Swan & Co., or Pirie & Smith available from Aberdeen at short notice.

Cargo Superintendents regularly working at the port on loading out and discharging various bulk cargoes, include Cargo Superintendents (London) Ltd., 50 Wellington Street, Glasgow; James Patterson, The Old Granary Buildings, Meadowside Quay, Partick, Glasgow, and Malcolm Main at same address.

GANGWAY/DECK WATCHMEN: Can be arranged. Owing to range of tide on riverside berths mooring watch strongly recommended.

OPENING/CLOSING HATCHES: Normally done by ship's crew.

CERTIFICATES: On arrival Ship's Register may be asked for.

CUSTOMS ALLOWANCES: As arranged between Customs Officer and Master.

CARGO GEAR: The port is equipped with mobile cranes which can be used at any berth. These are of various capacities and the maximum lift is 100 tons for which prior notice is required.

REPATRIATION: Facilities available with excellent railway connections. Air connections from Aberdeen.

AIRPORT: Aberdeen 36 miles. Montrose has facilities for light aircraft and helicopter landing.

TIME: GMT with 1 hour advance for British Summer Time, approximately March to October.

HOLIDAYS: *Port Holidays:* Christmas Day; Boxing Day; 1st and 2nd January; One day Spring, mid-Summer and Autumn Trades Holidays.

POLICE/AMBULANCE/FIRE: Report to Dock Office immediately. Dial 999 and ask for whichever emergency service required.

EMERGENCY CO-ORDINATION CENTRE: Maritime Rescue Sub Centre – Forth District Tel: Crail 666.

TELEPHONES: Not possible to place telephones aboard. Kiosk on Wharf near Agents office. Comprehensive connections to Continent and Telex services from Agent's office.

SERVICES: Laundry, Ship Chandlers and Lloyd's Agent immediate.

Compass Adjuster, Radio/Radar Mechanics can be called in from Aberdeen at short notice.

BANKS: Usual branches of Scottish banks all in High Street. No American or European banks.

STORING: Vessels can be stored by truck. Trucks can proceed alongside vessel. Fork lifts can be used if required. Customs notification required for all bonded stores.

Stevedores can be employed to assist with storing and also lashing and fastening deck cargo.

SHORE LEAVE: No restrictions on crew members after inward clearance.

IDENTIFICATION CARDS: Not required.

DEVELOPMENTS: Berth No. 8 has been reconstructed to provide 293 m. of continuous quayside with a minimum depth of 18 ft. below C.D.

AUTHORITY: Montrose Harbour Trust, Port Office, South Quay, Ferryden, Montrose, Tayside. *Tel:* (0674) 72302, 73153, 72729. *Telex:* 76407. *FAX:* 0674-75530. *Contact:* Captain H. J. Johansen, Harbour Master.

NEW HOLLAND: 53.12 N. 00.21 W. (See Plan)

PILOTAGE, DOCUMENTS, ANCHORAGES, ETC.: See "Hull".

RESTRICTIONS: Vessels arrive and depart on high water. Vessel always aground (N.A.A.B.S.A.).

MAX. SIZE: Max. size 5,000 d.w.t. Max. LOA 110 m. No restriction on beam or air draft. Max. draft at Spring tide 7.0 m. – 7.5 m.

TUGS: Not necessary.

BERTHING:

Imports: The Terminal specialises in the import of feeding stuffs, fertilisers, coals, cokes, etc. The import route has been designed to off-load cargo, from ship to storage or direct to carrier, efficiently and fast and offers via drop-scale and weighbridge, full documentary control and management.

Terminal: With two berths, an inner berth for vessels of 2,500 d.w.t. and an outer berth with a maximum capacity of 5,000 d.w.t., the Terminal reaches into deep water channels of the River Humber and enjoys the advantage of only requiring one Pilot from Spurn Point. Unloading by grab discharge direct to covered conveyor belts, the import route is rated at a capacity of between 200 – 250 tonnes per hour and incorporates full bypass facilities.

Weighing: Grains and derivatives can be passed through a drop-scale with a capacity of 250 tonnes per hour; coals, cokes and other bulk commodities moving from the site are weighed by means of 2×60 tonne road and/or 100 tonne rail weighbridges.

Storage: Grains and derivatives can be passed by the conveyor systems direct to 2 flatstores with an approximate capacity of 25,000 tonnes, both with movable inner partitions. Coals, etc., are directed to open storage for ease of distribution.

Distribution: Direct ship to road haulage is made possible by 2 overhead lorry hoppers. Recovery from the flatstore is by means of Front End Loaders, and if required, import commodities can be loaded via the export system, weighed or unweighed.

Exports: The Terminal has a dual capability for simultaneous import and export and has been designed for the export of grains and other bulk commodities.

The export route has many features unique to Humberside, and with full weight control and documentation offers the ideal export venue for any product.

Terminal: With two export berths, an outer berth of 5,000 d.w.t. capacity and an inner berth with a maximum capacity of about 1,500 d.w.t., loading is rated at 400 tonnes per hour via the covered conveyor belt which feeds 4 loading spouts, direct to the ship's cargo holds. Vessels approaching New Holland from the North Sea need only one pilot in and outward, thereby reducing costs.

Reception: The Terminal is the only specially designed export terminal in Humberside that can receive grain direct from railcars. With extensive private sidings and shunting locomotive, full train loads can be handled in intake pits. Road haulage delivery is either by intake pit or direct to open compound. Reception of grains also includes a grain testing station for quality control.

Direct or Indirect Loading: Grain intake can either be pre-assembled into 5 silos with an approximate overall capacity of 3,500 tonnes and then loaded directly to ship. Coals, coke, etc., are fed directly to the main export belt from their pre-collected storage areas.
Weighing: All commodities entering the site are weighed by fully computerised weighbridges, 2×60 tonne road and 1×100 tonne rail weighbridges. Export of grain related products is also monitored by 2 dropscales weighbridges prior to being loaded onto export vessels.
CRANES: 2×8 ton electric rail mounted cranes.
STEVEDORES: Work around the clock, from Monday 0600 hrs.– Saturday 0600 hrs.

Sunday work by arrangement.
FRESH WATER: Available at 5 t.p.h. No charge, included in jetty dues.
FUEL: Available by barge from Hull.
REPAIRS: Local shipyard can undertake minor repairs.
HATCHES: Opening and closing by ship's crew.
AIRPORT: Humberside Airport is 15 minutes away by road. Air U.K. have flights to Aberdeen, Amsterdam, Bergen, Norwich, Stavanger and Teesside.
TELEPHONES: No shore connections. Public telephone available on pier.
GENERAL: The New Holland Bulk Terminal is situated on the South bank of the River Humber, about 4 miles East of the Humber Bridge, and about 20 miles inland from Spurn Point. Close proximity to the U.K.'s motorway and dual carriageway network gives the terminal a competitive and strategic position for the import and export of bulk commodities. Close connections to the M1, A1, M18 and A15 Humber Bridge link road ensure optimal North/South connections with the M180, M62 and A6 offering good East/West connections. The terminal has its own railway sidings, connected directly to the British Rail network.
AUTHORITY: New Holland Bulk Services Ltd., Old Ferry Terminal, New Holland, P.O. Box 1, Barrow upon Humber, South Humberside, DN19 7SD. *Tel:* Barrow upon Humber (0469) 31102. *Telex:* 527466 NH Bulk G. *FAX:* (0469) 31966. *Contact:* H. van Velzen, General Manager. J. Lyne, Operations Manager.

NEWHAVEN: 50.47 N. 00.04 E. (See Plan)

PORT LIMITS: A line drawn from a position 300 ft. South of breakwater in a 075° direction to Seaford Bay.
DOCUMENTS: See "London".
PILOTAGE: Pilotage compulsory for all vessels over 50 m. length. Contact Newhaven Radio, VHF Channels 12 and 16, advising ETA 12 hours in advance.
RESTRICTIONS: 5.0 m. through entrance to port LWOST. Inner harbour then dredged depth of 4.0 m. in accordance with chart datum 3.5 m. below OD Newlyn (tide gauge readings are directly applicable to soundings).
MAX. SIZE: Max. LOA 520 ft. 25 ft. draft taking bottom on soft mud at low water. Vessels greater than 350 ft. LOA length must either be towed into or out of port. Vessels for North Quay must not exceed 250 ft. length, draft 17 ft.
HEALTH: See "Health-All Ports" before first UK port.
RADIO: Radio Station Newhaven Radio, call sign Newhaven Radio.
RADAR/VHF: No radar service. Ship's may contact West Pier control point on Channel 16, working on Channel 12.
TUGS: One tug available upon request, owned by Newhaven Port and Properties Ltd.
BERTHING: Vessels may be berthed at any time, with prior notice given.
CRANES: 4×3 ton and 1×30 ton (container gantry).
BRIDGES: Vessels requiring to berth at North Quay must arrive within 2 hours either side of HW in order to pass through swing bridge which governs access to this quay.
STEVEDORES: ETA should be given as far in advance as possible and not less than 24 hours before ETA.
DENSITY: Salt water.
FRESH WATER: Available on request. Supplied by shore hosepipe.
FUEL: Available by previous arrangement.
FIRE PRECAUTIONS: Usual no-smoking precautions on quayside in port area.
CONSULS: Norwegian Vice-Consul and French Consular Agency.
REPAIRS: Repairs of a temporary nature only may be carried out by Newhaven Port and Properties Ltd. workshops, Ship & Industrial Repairs Ltd., Unit A3, Beach Road, Newhaven and C. R. Irving Ltd., Chapel Street, Newhaven.
GANGWAY/DECK WATCHMEN: Not provided by Port Authorities but recommended at discretion of Ship's Master.
AIRPORT: Nearest airport Gatwick, distance 30 miles. Served by regular airlines and Shoreham, distance 17 miles.
POLICE/AMBULANCE/FIRE: Police: Civil, Newhaven 515219; Port, Newhaven 514131 (extension: 229). Ambulance: 0830 – 1700 hrs., Lewes 515400; 1700 – 0830 hrs., Lewes 512819; Fire: 999.
SHORE LEAVE: Allowed.
DEVELOPMENTS: Southern Port Services Container Terminal now completed. 1×30 ton capacity Tango crane in operation.

A second Ro–Ro ramp has now been completed at Railway Quay.
AUTHORITY: Newhaven Port and Properties Ltd., Beach Road, Newhaven Harbour, Sussex BN9 0BG. *Tel:* Newhaven (0273) 514131. *Telex:* 87151. *FAX:* 512902. *Contact:* G. G. Burke, General Manager. Captain A. Flint, Harbour Master.

NEWPORT: 51.35 N. 02.59 W. (See Pla

DOCUMENTS: Required for arrival.

C142	2 copies	Crew Declaration
C14	3 copies	Stores Declaration
C13	2 copies	General Declaration (completed by Agent)
C16	2 copies	Cargo Inward Declaration
C74	1 copy	Master's Authority (completed by Agents)
C1320	2 copies	Cargo in unregistered spaces

These documents are to be completed and presented with copie of manifests and ship's documents at the time of report.
PILOTAGE: Telegraphic address – "Sewpil G 498180". Advance notic required – 24 hours. VHF Channel – Channel 16 for contact, thenc Channel 6 for conversation. Description of pilot boat – diesel launc black hull, white superstructure. Particular light or sound signals to b made by vessels requiring a Pilot – Code Signal 8, i.e. 3 longs 2 shorts Pilot boat is located in vicinity of Breaksea Lightvessel, or in vicinity o Merkur Buoy, for small vessels. Maintain VHF contact (if possible) wi pilot cutter and obey instructions with reference to positioning of vesse to facilitate boarding of Pilots.
ANCHORAGES: Large vessel should anchor in deep water to North o one Fathom banks. Deeper water anchorage (10 – 14 fathoms) in are between Breaksea Lightvessel and East 1 Fathom Bank Buoys to th South, and shallow water off Barry Roads to the North. Small vesse will find safe anchorage in Barry Roads in varying depth, depending o weather conditions and draft.
RESTRICTIONS: Entrance to Newport Docks is by means of a sea loc 1,000 ft. long, 100 ft. wide. Entry possible from 4 hours before to 4 hour after HW, depending on size of vessel.
MAX. SIZE: Max. size of vessels accepted at Newport is 800 ft. lon 96 ft. beam, 34.5 ft. draft.
HEALTH: Port Health Authority board vessel at entrance lock an Pratique is automatic.

See "Health – All Ports" before first U.K. port.
RADIO: At sea – Land's End radio station, call sign GIL. Within Bristo Channel use Portishead Radio.
VHF: Vessels requiring entry can contact port on VHF radio Channe 16, 9 and 11.
TUGS: Normally join at Newport Deeps. Ship's line used.
BERTHING: South Dock, normal depth of water 35 ft. North Doc normal depth of water 27 ft. Junction passage connecting South an North Dock restricts vessels to a max. size of 56 ft. 6 in. beam an 25 ft. draft.
CRANES: Heavy lift/container cranes: 2×25 tonne electro-hydraulic an 1×32 tonne Scotch Derrick cranes.

Bulk handling: 6×11.5 tonne electric grabbing cranes.

General cargo: 2×11.5 tonne, 2×10 tonne and 20×6 tonne electr cranes.

Handling equipment up to 27 tonnes capacity with a comprehensi range of attachments is available.
SPECIALISED CARGO HANDLING FACILITIES:
Combi Ship Operations: Heavy lift/containers for combi vessels a handled by the 25 tonne cranes at the same berth where breakbul general cargo is handled.
Forest Products: The North side, South dock area extends to ove 11 hectares with 1 hectare under cover.
Hardwood Terminal: South Dock (East side) covering 3 hectares.
Banana Imports: There is a terminal of 3 hectares for a weekly Jamaica service importing bananas and exporting general cargo. Included with the terminal is a temperature controlled transit shed of 3,716 sq.m.
STEVEDORES: Labour is allocated to vessels on arrival.
Working Hours: Monday to Friday: 0730 – 1700 hrs., 0600 – 1400 hrs 1400 – 2200 hrs.

Saturday: 0730 – 1200 hrs., 0600 – 1400 hrs., 1000 – 1400 hrs.
Sunday: 0600 – 1400 hrs., 1400 – 2200 hrs.
MEDICAL: No advance notice of medical attention for crew member is required and hospital facilities are available.
DENSITY: Average density of water in docks is 1016.
FRESH WATER: Available at all berths.
FUEL: All classes of fuel available.
REPAIRS: All wet dock and engine repairs possible.
DRY DOCK: Bristol Channel Ship Repairers Ltd., 454 ft. × 64 ft.
GANGWAY/DECK WATCHMEN: Available but not compulsory.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CUSTOMS ALLOWANCES: Tobacco, 0.5 lb. per crew membe reduced by 50% on coastal trade. 1 pint of spirit and 1 pint wine pe crew member, reduced by 50% on coastal trade.
REPATRIATION: All facilities for the changing of crew and repatriatio are available.
AIRPORT: Glamorgan Rhoose Airport terminal 28 miles from Newpor Regular connection planes to London Airport.
TIME: BST, GMT plus 1 hour. GMT in Winter months.
HOLIDAYS: Work not undertaken on Christmas, Easter, Spring an Summer Bank holidays. With the exception of Christmas holiday (25t and 26th December) dates on other holidays vary.
POLICE/AMBULANCE/FIRE: Telephone number 999 stating whic service is required.
TELEPHONES: Telephone facilities are available aboard vessels.
SERVICES: Tank cleaning equipment. Facilities for tank washin compass adjusting are available.
SHIP SUPPLY SERVICE: A ship supply service could be provided b Cory Ship Towage with their tugs at Cardiff if required. Address: Co Ship Towage Ltd., S.E. Wales Office, Alexandra Dock, Newport, Gwen NP9 2NP. Tel: Newport 56835/6.
SHORE LEAVE: No restrictions to crew members.
IDENTIFICATION CARDS: Not required.
AUTHORITY: Associated British Ports, Dock Office, Alexandra Doc Newport, Gwent NP9 2UW. *Tel:* (0633) 244411. *Telex:* 49858 *FAX:* (0633) 246070. *Contact:* R. C. F. Williams, Port Manager.

PADSTOW: 50.35 N. 04.55 W.

PORT LIMITS: A line from Stepper Point to Gulland Rock, thence N.E. to Newland Rock, thence S.E. to Pentire Point.
DOCUMENTS: All usual documentation required by H.M. Goverment.
PILOTAGE: Pilot compulsory. Contact via Harbour Office, Tel: Padstow (0841) 532239, or direct to Pilot on Padstow (0841) 532541, daytime or Padstow (0841) 532844 at night time. VHF via Padstow Harbour Office on Channel 16 during all office hours and 2 hours either side of HW at Padstow. ETA's should be given at least 12 hours before arrival, amendments up to 2 hours before ETA. Pilot boards from fishing vessel off Stepper Point in normal conditions. In adverse conditions ships should endeavour to close the pilot boat as near to the starboard hand buoy as possible in safety. Padstow Bay experiences heavy ground swell. Anchorage not recommended in onshore wind or sea.
MAX. SIZE: Max. length approximately 350 ft. (depending on draft). Max. draft 11 ft. any tide. Up to 18 ft. draft on Spring tides. No airdraft restriction.
VHF: Harbour office, call sign 'Padstow Harbour' listens VHF channel 16 during office hours and 2 hours either side of HW at Padstow. Call on Channel 16, working Channel 14.
TUGS: Not available. Local fishing vessels may assist.
BERTHING: All berths dry to firm mud or sand bottom. Depth alongside, South Jetty 11 ft. every tide and 18 ft. Springs. Depth alongside South Dock and West Quay 9 ft. every tide and 16 ft. Springs. Lesser depths in Inner Harbour and Outer Basin.

Inner Harbour to be kept "wet" with entry either side of high water by the use of a tidal gate (trial period).
CARGO HANDLING: Undertaken by Padstow Harbour Commissioners. Dry bulk and unitised cargoes handled. Limited storage facilities. Cranes hired by Harbour Commissioners to suit requirements.
FRESH WATER: Available, delivery from standpipes. Cost £1 per 100 gallons.
FUEL: Marine gas oil available direct from bunker tank on South Pier.
REPAIRS: Welding and general engineering services readily available.
DRY DOCKS: A & J Marine (Cornwall) Ltd. Tel: 0841-533114. One dry dock – 70 ft. × 32 ft. × 12 ft. draft at Springs.
STORES: All usual stores available.
AUTHORITY: Padstow Harbour Commissioners, Harbour Office, West Quay, Padstow, Cornwall PL28 8AQ. *Tel:* Padstow (0841) 532239. 24 hour page – 0345-333111. I.D. 0082258. *FAX:* 0841-533191. *Contact:* Captain J. Hinchcliffe, Port Administrator/Harbour Master.

PEEL, Isle of Man: 54.14 N. 04.40 W. (See Plan)

PILOTAGE: Not compulsory.
MAX. SIZE: See "Berthing".
VHF: Channels 16 and 12 available only when vessels expected.
BERTHING: Outer Harbour: Max. LOA 250 ft., although twin screw cross-channel vessels up to 350 ft. LOA can be accommodated under certain conditions. Max. draft 14 ft. to lie afloat over LWOST. Not tenable with strong Northerly winds.

Inner Harbour: Max. LOA 160 ft., draft 10 ft. on Neaps, 13 ft. on Springs. Dries out at LW. No quay space for storage.
AUTHORITY: Isle of Man Department of Highways, Ports and Properties, Harbours Division, Sea Terminal Building, P.O.Box 11, Douglas, Isle of Man. *Tel:* 0624-23813, extension 153. *Telex:* 629335 IOMHARG. *FAX:* 0624-27238. *Contact:* Captain W.B. Kinley, Chief Harbour Master (I.O.M.).

Harbour Master at Peel: Captain C.A. Clague. Tel: (0624) 842338.

PENZANCE: 50.07 N. 05.32 W. (See Plan)

PORT LIMITS: The seaward boundaries of the Port for the purposes of charter parties are considered to be the harbour walls.
DOCUMENTS: H.M. Customs require the Master or Agent of any vessel arriving from a Port outside the United Kingdom to present the following documents at the Customs House within 3 hours of the vessel's arrival, during office hours (0900–1230) Monday to Friday or within 6 hours during night hours.

1 copy	Crew Declaration (Form C.142)
1 copy	General Declaration (Form C.13)
1 copy	Stores and Livestock Declaration (Form C.14)
2 copies	Deck Cargo Declaration (if any) (Form SUR.238)
2 copies	Crew List (IMO Fal.Form 5)

The above is intended to be a guide only, not a definitive list.
PILOTAGE: Trinity House Pilots are available at all times. Call "Mounts Bay Pilots" during normal working hours or when vessel is expected on VHF Channel 16. Working Channels 12 and 9 are also available. Ships are asked to give advance notice by R/T or telegram through Land's End Radio (GLD) to either the Pilot or Local Agent. Alternatively, through the Port Radio which maintains watch on Channel 16, 12 and 9. The Pilot boards at a point immediately adjacent to the Low Lee Buoy (50° 05.6′ N., 05° 21.2′ W.) from one of the pilot boats operated in Mounts Bay. The boat operated from Newlyn is an ex–Trinity House pilot boat, black hulled, white deck house with "Dayglow" roof. The second boat stationed at Penzance is a black hulled open boat with a white shelter forward.

The pilot boat only cruises when a vessel is expected.
ANCHORAGE: Vessels awaiting orders or entry into Penzance may anchor in a minimum depth of 15 m., in position 50° 06.1′ N., 05° 31.5′ W.
RESTRICTIONS: The dock gates at Penzance are normally open, enabling vessels to enter from 2 hours before high water until one hour after high water, although this period may be increased so that the gate is open earlier or later by prior arrangement. The depth on the dock gate at MHWS is 5.49 m. and at MHWN 4.4 m. The entrance is 15.3 m. wide.
MAX. SIZE: Vessels up to a maximum of 95 m. in length and 2,000 net registered tonnes may normally enter within the draft and beam limitations listed.
HEALTH: No health or Pratique documents are required under normal circumstances.
RADIO: Vessels may pass messages, telegrams or link calls through Land's End Radio (GLD).
VHF: Penzance Harbour maintains VHF Radio watch on Channels 16 and working Channels 12 and 9, whenever the dock gates are manned from 2 hours before high water until one hour after high water on both tides, 7 days a week throughout the year. In addition, the radio is manned Monday to Friday between 0830 hrs.–1200 hrs. and 1300 hrs.–1630 hrs. and on Saturday from 0830 hrs.–1230 hrs. local time.
RADAR: There is no port radar.
TUGS: Tugs are available with prior notice, however, normal berthing is undertaken with the aid of pilotage workboats.
BERTHING: The wet dock has an entrance 15.3 m. wide and has 5 berths. Vessels discharging cargo should have a maximum length of 90 m.

The outer harbour has 4 berths. Berth No. 1 is for the use of the Isles of Scilly Ferry and Berth No. 7 is normally designated as a drying out berth for ship repair.
CRANES: Cranes are available with maximum lifts of up to 15 tonnes. Dual gear is normally used for discharge and mobile cranes of greater capacity are available locally.
BULK CARGO FACILITIES: Bulk cargo is discharged and loaded by Grab.
SPECIALISED CARGO HANDLING FACILITIES: There is one drying berth with an operational depth of 4.7 m. at MHWN which has been adapted for heavy lift Ro/Ro vessels. This berth is available by prior arrangement.
BRIDGES: A swing bridge provides access into the dry dock basin.
MEDICAL: Full hospital and dental services are available in Penzance through the Agents or Port Medical Officer. Evacuations are arranged through the Port Medical Officer and the Mounts Bay Boarding Service.
STEVEDORES: Generally 24 hours notice is needed to provide stevedores.
DENSITY: The density of the dock water is 1025. Fresh water can be provided on all berths, delivery rates nominally 15 tonnes per hour.
FRESH WATER: Available on all berths.
FUEL: Marine gas oil by pipeline at 3 bunkering points along the South Pier with up to 55,000 litres available immediately from harbourside tanks. Greater quantities may be supplemented by road tanker. Lubricating oil and other fuel plus liquid petroleum gas available through ship's Agent.
CONSULS: Vice–Consuls for France and the Netherlands are resident in Penzance and Consulates for Denmark, France, Greece, Norway, Spain, Sweden and Germany F.R. are located nearby.
REPAIRS: All types of engine and deck repairs carried out to both cargo and tanker vessels.
DRY DOCKS: There is one dry dock 74.73 m. long with a breadth of 11.9 m. and a maximum draft of 3.35 m.
SURVEYORS: Department of Transport, Lloyd's, Norsk Veritas, Bureau Veritas, American Bureau and the Salvage Association have surveyors readily available at Penzance, as are several independent surveyors and consultants.
GANGWAY/DECK WATCHMAN: The employment of a watchman would only be needed in Penzance wet dock if the vessel is un–manned.
OPENING/CLOSING HATCHES: The opening and closing of hatch covers is usually carried out by the ship's crew.
CUSTOMS ALLOWANCES: The following are permitted from Ports within Home Trade limits:

Items	*Descriptions*	*Quantities*
Tobacco	Cigarettes	100
	Cigarillos	50
	Cigars	25
	Smoking Tobacco	125 grams
Alcohol	Over 20% volume	0.25 litre
	Under 20% volume and fortified or sparkling wine	0.50 litre
	Still table wine	1 litre

Arrival from Ports outside home trade limits:

Items	*Descriptions*	*Quantities*
Tobacco	Cigarettes	200
	Cigarillos	100
	Cigars	50
	Smoking Tobacco	250 grams
Alcohol	Over 20% volume	0.50 litre
	Under 20% volume and fortified or sparkling wine	1 litre
	Still table wine	2 litres

REPATRIATION: Facilities are readily available for effecting crew changes and repatriation where this is necessary and may be done with medical escort or not as required (see "Ship Supply Service").
AIRPORT: Newquay Airport has connecting flights to London (Heathrow) via Plymouth and/or Exeter and also regular flights to Aberdeen. Total travel time Penzance to London (Heathrow) is 2.5 hours. There is also a Heliport in Penzance with regular flights between the Isles of Scilly.
TIME: Local time is GMT with Summertime being kept at GMT plus one hour.

HOLIDAYS: Public Holidays in the United Kingdom: New Year's Day, Good Friday, Easter Monday, early and late May Bank Holidays (Mondays), August Bank Holidays (first and last Monday), Christmas Day and Boxing Day.

The Harbour does not close for any of these holidays.

FIRE/POLICE/AMBULANCE: The Emergency Services are obtainable by dialling 999 or on more routine matters on the following telephone numbers: Police (0736) 62395; Fire Service (0736) 62918; Ambulance (0872) 78181; Coastguard (0326) 317575.

EMERGENCY CO–ORDINATION CENTRE: Falmouth Marine Rescue Co–ordination Centre is available on Falmouth (0326) 317575 or on Telex 45560. The station maintains a 24 hours, 365 day watch.

SERVICES: Compass adjusting at 2 hours notice, vessels can be swung in daylight hours in Mounts Bay. Divers, engineers, welding, hydraulic repair, radar, radio and other electronic repairs or servicing are available 7 days a week.

BANKS: The four principal clearing banks have branches in Penzance: Midland, Lloyd's, Barclays and National Westminster.

STORING: Vessels can be stored alongside from lorries which park immediately alongside the vessel. The operation can usually be carried out by the ship's crew, however, fork–lift trucks can be made available.

SHIP SUPPLY SERVICE: *Mount's Bay-Boarding Service:*

By helicopter: British International Helicopters operate a regular service between Penzance and the Isles of Scilly (30 miles S.W. of Land's End). Mount's Bay Boarding Service (MBBS) can charter helicopters for rendezvous with ships at sea for transfer of equipment and personnel.

Parcels: MBBS collect and despatch stores, parts, charts, etc, via British Rail "Red Star" parcels service, T.N.T. "Overnite" and "Courier", part of the G.P.O. Datapost and Securicor.

Charts: All British Admiralty charts and publications are available within 12 hours.

Stores: Fresh, frozen and dry stores are obtainable within 6 hours notice, while Bonded stores are available at 24 hours notice.

Spare parts: MBBS arrange clearance, forwarding and transport of spare parts to meet vessels on arrival. Undivided lifts of 1.5 tonnes can be handled (up to 10 tonnes by arrangement).

Crew transfer: MBBS can land and clear crew through Customs and Immigration as well as arranging for their travel onward to worldwide destinations. MBBS can also meet crew and either embark or accommodate them until the vessel's arrival.

Landing sick crew: Although in urgent cases, vessels are in direct contact with Falmouth's Coastguard MRCC, MBBS arrange the landing of non-urgent cases. In both instances MBBS liaise with local Coastguards, Customs, Immigration, Doctors and Hospitals, and can usually provide interpreters for non–English speaking crew. MBBS visit and look after the interests of hospitalised crew, and can report to their company/family. MBBS arrange travel and repatriation of crew members either with or without medical escort, according to Doctors' or hospital instructions.

Contact: J.H. Bennetts Ltd. (See "Agent").

SHORE LEAVE: There are no restrictions on crew shore leave.

IDENTIFICATION CARDS: An International Seaman's Card is sufficient identification for crew members.

REGULATIONS: There are no unusual Regulations affecting the Port.

DELAYS: Vessels will berth on the tide and will either commence discharge upon arrival or the following morning if they have arrived overnight.

DEVELOPMENTS: Port development is under review.

AUTHORITY: Penwith District Council, St. Clare, Penzance, Cornwall TR18 3QW. *Tel:* (0736) 62341. *FAX:* (0736) 64292.

Harbour Master, Harbour Office, Wharf Road, Penzance, Cornwall TR18 4AB. Tel: (0736) 66113 office hours; 62341 Ext: 294 office hours; 61119 outside office hours. *FAX:* 0736-64292. *Contact:* Captain M. Tregoning, Harbour Master.

AGENT: J. H. Bennetts Ltd., 72 Market Jew Street, Penzance, Cornwall TR18 2LF. Tel: 0736-60660. Telex: 45530 (Jhb G).

PERTH: 56.24 N. 03.29 W. (See Plan)

LOCATION: On River Tay, 35.4 km. above Dundee and 48.3 km. from sea.

DOCUMENTS: Normal documentation for arrival and departure U.K.

PILOTAGE: Navigation on the River Tay between Dundee and Perth is difficult and can be hazardous. The Perth Harbour Master will arrange for the services of local Pilots to assist vessels in making passage between Dundee and Perth. The contract for the services of a Pilot is between the Pilot and the vessel's Owner. The account will be rendered direct from the Pilot to the Shipping Agent for the charge to the Owner. Masters are strongly advised to make use of this facility, although it is not compulsory and is not provided under the terms of the Pilotage Act 1987.

ANCHORAGES: No anchorage above Dundee.

RESTRICTIONS: Clearance under bridges 78 ft. at MHWOS. Vessels draft for acceptance at the discretion of the Harbour Master (Perth).

MAX. SIZE: Length 85 m. Max. draft 4.2 m.

RADIO: VHF for upper river transit. "Perth Harbour" Channel 9.

TUGS: By arrangement with Agents. Small tug/push boat is available at harbour.

BERTHING: Tidal harbour about 3 acres with total quayage of 2,400 Depth at LW 9 ft. HWST 15 ft. At LW vessels sit evenly on soft mud bottom.

CRANES: 14 mobile cranes available. SWL ranging from 5 to 40 ton Ample fork lifts and elevators for loading bulk.

BRIDGES: See "Restrictions".

STEVEDORES: N. E. Shipping and Warehousing Ltd., Tel: 0738-3322 Telex: 76611.

Calport of Perth. Tel: 0738-26675/24372. Telex: 76458.

DENSITY: River Tay above bridges pure fresh water.

FRESH WATER: Available at all berths.

FUEL: Available by road tanker, arranged by Agent.

REPAIRS: Small repairs undertaken locally by good engineering firm Major repairs undertaken at Dundee.

AIRPORT: Edinburgh (Turnhouse) 44 miles, Glasgow (Abbotsinch) 7 miles, Prestwick 90 miles. Motorway M90, connects Perth with airports Dundee operates variety of daily air services.

HOLIDAYS: Stevedores may work on Public Holidays if required.

POLICE/AMBULANCE/FIRE: Police: 21141. Ambulance: 2212 Fire: 22226.

DEVELOPMENTS: Berth No. 1 extension completed May 1990.

AUTHORITY: (a) Tayside Regional Council, Roads & Transpo Transport Unit, Parker Street, Dundee, DD1 5RW. *Tel:* (0382) 2328 *Contact:* Mr. L. Watson, Harbours Manager.

(b) Tayside Regional Authority – Perth Harbour, Harbour Office Friarton Road, Lower Harbour, Perth PH2 8BH. *Tel:* Perth (0738) 2405 *Contact:* Captain N. H. Lawrance, Harbour Master. Mr. F. G. Bisset Assistant Harbour Master.

PETERHEAD BAY HARBOUR: 57.30 N. 01.47 W. (See Plan

DOCUMENTS: On arrival at Peterhead, Masters should have the following Customs documents ready for presentation:

2 copies C13 – General Declaration.
2 copies C142 – Declaration of Goods.

PILOTAGE: Pilotage is compulsory for all vessels over 3,500 g.r.t unless the Master or Mate has a valid Pilotage Certificate. Pilotage i also compulsory for vessels carrying dangerous goods in bulk and a tankers, unless the Master or Mate has a valid Pilotage Certificate Masters must call "Peterhead Pilots" on VHF Channel 16, giving minimum one hour's tice of ETA.

In the message of ETA, the following information must be included

1. Name/call-sign of vessel.
2. Nationality.
3. Length, draft and g.r.t.

Pilot boards within 0.5 miles of breakwaters in fair weather. In adverse weather Pilot boards inside bay.

ANCHORAGE: Depth within bay up to 12 m. Poor holding in Easterly gales.

TUGS: A twin-screw tug of 36 tonnes bollard pull is normally stationed in the harbour and is available through Peterhead Towage Services Tel. (0779) 78065. Additional tugs may be procured if sufficient advanc notice is given.

BERTHING: Two supply bases for oil-related support work. Aberdee Service Co. (North Sea) Ltd. have a quay 470 m. long with a minimu depth of 6.8 m., situated at the South side of the Bay, with suppor berthage on the South Breakwater and about 10 hectares of back u land. Total of 12 berths. Cranage available up to 200 tons.

Aberdeen Service Company (ASCO) also have a jetty situated on th North side of the Bay. Two outside berths 105 m., inside 85 m. with a minimum depth of 3.0 m., with support berthage on the North Breakwate of 420 m., depth up to 21.2 m. Total of 7 berths. Cranage available u to 280 tons. Facilities for Ro/Ro, semi-submersible drill rigs, etc. Ampl storage space.

Note: Breakwaters are subject to closure during adverse weather an vessels must be ready to leave at short notice.

CRANES: See "Berthing".

TANKERS: One berth for vessels up to 40,000 d.w.t. Max. LOA 200 m Max. draft 11.5 m. Four loading arms with 12 in. flanges feed th Boddam Power Station via a 24 in. pipe-line. This berth ca accommodate semi-submersible drill rigs, vessels loading grain an other commodities.

FRESH WATER: Available.

FUEL: Available.

REPAIRS: Most deck and engine repairs can be carried out.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Aberdeen, Dyce 34 miles. Feeder routes to ma international airports, some continental air transportation.

TIME: GMT. Clocks advanced 1 hour last Sunday in March.

Last Sunday in October, clocks retarded 1 hour.

POLICE/AMBULANCE/FIRE: Emergency 999. Police 7257 Ambulance 72494. Fire (emergency only) 999.

RESCUE CO-ORDINATION CENTRE: Aberdeen Coastguards. Call o VHF Channel 16 or telephone No. 0224-592334.

DEVELOPMENTS: Fishery harbour breakwaters under construction

AUTHORITY: Peterhead Bay Authority, Harbour Office, West Pi Peterhead AB4 6DZ. *Tel:* Peterhead (0779) 74020, after hours (077 74281. *Telex:* 73749. *FAX:* (0779) 75712. *Contact:* Captain A. M. Fie Chief Executive/Harbour Master.

PLYMOUTH: 50.22 N. 04.09 W. (See Plan)

DOCUMENTS: Importer to supply Agent with Customs documentation, e.g. original B/L with cheque to cover various details; plus copies of Invoice and Forms C.105 with packing lists. Derat or Exemption Certificate required.
PILOTAGE: Compulsory for merchant vessels. Call sign FSG, or 4 short blasts on whistle. Vessels not subject to compulsory pilotage may obtain Docking Pilot in Plymouth Sound otherwise pilot station off Penlee Point.
Pilot boat is motor boat with white upperworks, black hull. "Pilot" in black on wheelhouse.
ANCHORAGES: In Plymouth Sound.
MAX. SIZE: Maximum depth of water 9.0 m. Vessel drawing 8.0 m. would leave anchorage 2 hours before HW. Also see "Berthing".
Ro/Ro Berth No. 1: Max. LOA 145 m. Max. beam 20 m. Max. draft 5.5 m.
Ro/Ro Berth No. 2: Max. LOA 200 m. Max. beam 30 m. Max. draft 8.5 m.
HEALTH: Pratique – Apply to Customs Waterguard. Pratique issued when requirements satisfied.
See "Health – All Ports" before first U.K. port.
RADIO: *Pilots:* The calling and listening frequency is 2182 kHz and the working frequencies are 2246 or 2301 kHz. A listening watch is kept on 2182 kHz at every even hour to 15 minutes past, local time and for longer periods when a ship is expected.
VHF: The pilot vessel is equipped with VHF and should be called on Channel 16; the working Channels 6, 8 or 12 should be used for passing messages. Alternatively the shore-based Trinity House Pilot Station, Plymouth, call sign "Cattewater Harbour Radio", maintains a continuous watch on Channel 16 (calling Channel) and is fitted with Channel 12 (first choice Port Operations Channel) and 18.
TUGS: Available in Sound by arrangement.
BERTHING: *Millbay Docks:* (Associated British Ports).
Outer Harbour:

Water Area	11.00 Hectares
Length of West Wharf	200 m.
Depth alongside MLWST	8.6 m. – 9.0 m.
Length of Trinity Pier	146 m.
Depth alongside Northside and West end MLWST	5.8 m.
Ro/Ro Berth No. 1 (3 Round dolphins)	
Max. length of vessel	145 m.
Depth alongside MLWST	6.7 m.
Ro/Ro Berth No. 2	
Max. length of vessel	200 m.
Depth alongside MLWST	9.0 m.

Fresh Water available at all berths.
Large transit shed on Trinity Pier.

Victoria Bulk Wharves: Pier No. 1. Length 475 ft. Depth 20 ft. LWOST. Pier No. 2. Length 350 ft. Depth 20 ft. LWOST. Max. beam 38 ft. (Larger with prior notice.) Max. d.w.t. 3,000 tons. Bulk products loaded by conveyor ex-railway trucks and lorry.
Cattedown Wharves: Length 712 ft. Depth 24 ft.–26 ft. LWOST. Max. LOA 560 ft. Max. draft 26 ft. Max. size 12,000 g.r.t. 1×5 ton and 2×3 ton cranes.
CRANES: 4 quayside cranes of 6 tonnes capacity. 3 mobile cranes up to 28 tonnes capacity.
STEVEDORES: Commodities regularly handled include fresh fruit and vegetables, timber and general cargoes.
Imports: Fertiliser, clinker, pumice and bulk cargoes.
Working Hours: Monday – Thursday 0800 – 1700. Friday 0800 – 1600. Overtime by arrangement.
Shift working is also regularly undertaken 7 days per week to meet specific requirements, (i.e. Ro/Ro vessels in ABP – Millbay Docks).
MEDICAL: No advance notice required; hospital facilities in Plymouth.
TANKERS: Vessels of the Shell "H" class can be handled at Cattedown Wharves. Max. draft 26 ft. 5 hose connections, diameter 10 in. 2 for black oil and 3 for white oil.
FRESH WATER: Available from shore at all berths.
FUEL: All normal grades available at short notice.
CONSULS:

Belgium	65154	Italy	63445

Cattedown Wharves Ltd. for Cattedown Wharves and Bethyl Gwynn Ltd. for Victoria Wharves.

POOLE: 50.43 N. 01.59 W. (See Plan)

DOCUMENTS: As for other British ports.
PILOTAGE: Pilots board 0.5 mile South of Poole Bar Buoy from cutter. Prefer ladder 0.50 m. from water and a good lee. VHF watch kept on Channel 16 working Channels 9 and 14. As much notice as possible. Address: Pilots, Poole.
ANCHORAGE: Vessels can anchor anywhere in Poole Bay and Studland Bay. Good holding ground and protected in all but Easterly gale.
RESTRICTIONS: Vessels drawing up to 5.2 m. can enter at any state of tide. Drafts in excess of 5.2 m. must wait for the tide.
MAX. SIZE: Max. length 140 m., beam – no limit, draft 5.2 m.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Vessels using the Port may call direct on VHF Channel 16 – working frequency Channel 14 call-sign "Poole Harbour Radio".
TUGS: 2 tugs, 8 ton and 7 ton bollard pull. Join at Stakes Buoy, by special application arrangements can be made to join at North Haven Point. Ship's lines. No difference in charges.
Pilots will advise whether a tug is necessary or not. Any vessel in excess of 1,000 d.w.t. or 300 ft. LOA due to pass through the Poole Bridge is required to take a tug. The gap in the bridge is 60 ft.
BERTHING: Berthing time depends on draft at some private quays. No restriction at New Quay or Ro/Ro berths.
Ro/Ro Terminal (CFFT):
Size of vessel:
Max. draft 5.5 m.
Max. length 140 m.
Max. depth 6.0 m. at Chart Datum.
Berths/Equipment: Three linkspan berths for Ro/Ro vessels, Berth No. 1 utilises mooring dolphins, Berth No. 2 has 90 m. long working quay. Berth No. 3 has 130 m. long working quay. Vehicles up to 180 tonnes gross weight can be handled subject to prior approval of Port Authority. A total of some 16 hectares (40 acres) of terminal is surfaced to a high standard, providing parking places for 400 heavy goods vehicles. A further 2 hectares (5 acres) of reclaimed land is available for future port expansion. Warehousing facilities; self weighing weighbridge; fleet of Tugmasters and fork lift trucks; 35 tonne gantry crane in Terminal for handling 20/30/40 ft. containers to/from road.
New Quay:
Length: 158 m.
Depth alongside: 16 ft. (4.9 m.) at Chart Datum.
Equipment: 3 ton capacity level luffing rail-mounted crane, 25 ton Scotch derrick and 35 tonne capacity crawler crane equipped for hook/bulk/grab/spider grab duties giving an operational capacity of 6 tonnes at 18 m.; warehousing 3,000 sq.m. plus open storage; mobile crane capacity up to 200 tonnes.
Yard Quay:
Length: 200 ft. (61 m.).
Depth alongside: 2.6 m. at Chart Datum.
Equipment: Warehousing facilities; limited open storage.
Ballast Quay:
Length: 270 ft. (82 m.).
Depth alongside: 4.0 m. at Chart Datum.
Equipment: 6.5 ton capacity level luffing crane fitted with grab/hook for bulk handling/general cargo duties.
Poole Town Quay:
Length: 1,300 ft. (396 m.).
Depth alongside: 3.6 m.–4.5 m. at Chart Datum.
Equipment: Mobile crane capacity 40 tonnes.
Bulwark Quay:
Length: 91 m.
Depth alongside: 4.5 m. at Chart Datum.
Equipment: 25 ton Scotch Derrick; warehousing facilities; open storage.
Private Quays:
J. T. Sydenham (Timber Wharf)
Length: 250 ft. (76 m.).
Depth alongside: 4.2 m.
Equipment: Mobile crane capacity 45 tonnes.
Other Private Quays:
Corrals (Fuel)
J. Bolson & Son Ltd. (Marine Repair & Engineering).
South Coast Sand & Ballast (Sea Dredged Aggregates).
Southern Ocean Shipyard Ltd. (Yacht Builders).
Enoxy Chemicals Ltd.
Central Electricity Generating Board.
Oil Jetty:
Length: 270 ft. (82 m.).
Depth alongside: 4.5 m. at Chart Datum.
BRIDGES: Poole Bridge (Max. width 60 ft.) at West end of Poole Quay. Will open at any time on request by commercial vessel.
STEVEDORES: Normal notice for gangs.
MEDICAL: Advance notice required for ambulance services. Normal medical and hospital services available. Distance to hospital is 2 miles.
TANKERS: 3 oil berths. Diameter of load/discharge lines 6 in.
DENSITY: 1021.
FRESH WATER: Delivery 25 t.p.h. by 2 in. hose.
FUEL: Gas oil only.
CONSULS: At Southampton.

DEVELOPMENTS: Between April 1991 and October 1991 the channe harbour and berth are to be deepened in order that vessels of 55 f draft and 150,000 d.w.t. may be accepted.

A new grab unloader will be available in 1991.
AUTHORITY: Associated British Ports, Port Office, King's Dock Loc Swansea, West Glamorgan. *Tel:* Swansea (0792) 650855. *Telex:* 4815 *FAX:* (0792) 650729. *Contact:* Mr. A.R. Klinck, Port Manager. Captai T. Boyd, Dock and Harbour Master.

PORTLAND: 50.34 N. 02.26 W.

PILOTAGE: Available from Weymouth. Pilot boards in positio Lat. 50° 36′ N., Long. 02° 24′ W.
ANCHORAGE: Vessels seeking shelter from Westerly gales are like to find more room and better shelter outside the breakwaters Weymouth Bay.
VHF: All Harbour movements are controlled on VHF Channel 13.
Traffic Regulations: Due to the frequent movements by naval vesse in the vicinity of Portland Harbour, all vessels approaching Portlan Harbour, which are fitted with VHF, should make reports on th appropriate channel to Queen's Harbour Master, Portland, when passi through various Radio Reporting Points, whose positions can best b seen on the charts. In addition it is mandatory that such vessels shou keep watch on the appropriate channel when within 3 nautical miles "A" Head (50° 35′ N., 20° 25′ W.). For details of frequencies se "Admiralty List of Radio Signals'.

Radio Reporting Points:
Positions 'EE' and 'CB' are for inward bound vessels.
Position 'CH' is for inward bound vessels proceeding to the Noise Range buoys, moored 0.75 miles S.E. of "D" Head, and for outward bound vessels proceeding between Bill of Portland and The Shambles.
Position 'CG' is for inward bound vessels, and for outward bound vessels proceeding East of The Shambles.
Position 'CF' is for inward bound vessels approaching Portland Harbour from East, and for outward bound vessels proceeding in an Easterly direction.

Reports should include the following information:
Inward bound vessels:
- Name of ship.
- Position (i.e. Reporting Point letters).
- Destination and ETA.

Outward bound vessels:
- Name of ship.
- Position (i.e. Reporting Point letters).
- Intended route East or West of The Shambles (if appropriate).

TUGS: Admiralty tugs available.
BERTHING:
Castletown Pier: Castletown Pier is a commercial wharf and leased to A.R.C. for the discharge of fertilisers. Max. LOA of vessel 82.3 m, beam 12 m. with max. draft 5.3 m.
CRANES: 1 mobile crane.
FUEL: Available by road tanker.
GENERAL: The Harbour and the immediate vicinity are classified as a Dockyard Port under the supervision of the Queen's Harbour Master, Portland. Attention is drawn to Chart 2268 which gives details of the Restricted Area around the Naval Base, of designated Anchor Berths for H.M. Ships, of Prohibited Anchorage areas and of the numerous Admiralty moorings and telephone cables. The Harbour, which is protected by breakwaters, is easily accessible by the North Ship Channel (12 m. LWS) or East Ship Channel (12.5 m. LWS). The South Ship Channel is blocked both above and below the surface and is only suitable for small boats.
AUTHORITY: Naval Base Commander, H.M. Naval Base, Portland.
Contact: Queen's Harbour Master, H.M. Naval Base, Portland, Dorset. DT5 1BQ. *Tel:* Portland (0305) 820311 Ext. 2106/3641.

PORTREE: 57.24 N. 06.07 W. (See Plan)

PILOTAGE: No Pilots available.
ANCHORAGE: No defined areas, left to the discretion of the ship's Master.

PORTSMOUTH: 50.48 N. 01.07 W. (See Plan)

DOCUMENTS: (Those marked* to be produced to H.M. Customs Boarding Officer.)
*1 Maritime Declaration of Health.
*1 Crew's Effects List C142.
2 Ship's Reports by Master.
*1 Home Office Form 1B6.
*1 Stores List.
*1 Certificate of Deck Cargo Tonnage.
*1 Grain Certificate.
*1 Light Dues Certificate.
1 Port Dues Certificate.
*1 Passenger List.
*1 Landing Card for each non-British passenger.
*Ship's Certificate of Registry.
Mercantile Marine Office Certificate (British ships only).
*Load Line Certificate.
*Safety Equipment Certificate.
Lloyd's Certificate.
*Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.
*List C143 for packages not cargo or crew/passenger effects.
*Danish Tollpass for ships arriving from Denmark.
Form of Authority for Agent to make Report and clear vessel outwards for Master.

Note: Where cargo is to remain on board for unloading at another port after Portsmouth, 3 copies of Ship's Report are required by the Customs House.

PILOTAGE: Pilotage is compulsory for all vessels over 48 m. LOA. The Pilot boards at the Warner Buoy or the North Sturbridge Buoy. The pilot boat has a white hull with "Portsmouth Pilots" in black letters on the side of the hull. Pilot boat on VHF Channel 9 and Queen's Harbour Master and Portsmouth Harbour Radio on Channel 11. Pilots require 24 hours' notice of arrival. This notice to include draft, length, beam, particulars of cargo, last port of call and intended berth. Vessels should also contact Pilot 8 hours and 1.5 hours prior arrival at the Warner Buoy.

When leaving the port, the Pilots require 6 hours' notice (Tel. No. (0705) 297395).

Strict compliance with the requirements of the Merchant Shipping (Pilot Ladders) Safety Rules is requested by the Pilots, who may refuse to board vessels with unsatisfactory and dangerous ladders. Manropes are not required. Ladders should reach to about 3 ft. from the water, each rung resting firmly against the ship's side; a good lee should be provided whilst making approximately 3 to 7 knots headway.

ANCHORAGES: Small vessels may anchor close Westward of the 'Outer Spit' Buoy, unless prohibition signal flying – see "Restrictions". Larger vessels will be allocated a numbered anchor berth in the Spithead Man-of-War anchorage.

If anchorage is prohibited in Spithead, St. Helen's Roads, Ryde Roads or Cowes Roads are the nearest safe anchorages. Mooring Buoys 1, 2 and 3 off North Corner in the Harbour are sometimes used. Pilots will be fully informed before the vessel's arrival.

APPROACHES: *The Main Channel:* The outer part of the main approach channel into Portsmouth Harbour lies between Horse and Dean Sand and Spit Sand. The inner part of the channel lies between Spit Sand and East Sand with a narrow coastal bank fronting the coast North-West of Southsea Castle. The channel is dredged to a depth of 9.4 m. and is well marked by leading marks and light buoys. Within the harbour entrance the main channel is bounded on both sides by the 10 m. line.

Portsmouth Harbour has a mean tidal range of 4.1 m. at Springs and 2.0 m. at Neaps. Particular reference should be made to Admiralty Charts and other publications for information on tidal streams in the Harbour entrance and approaches.

RESTRICTIONS: The following traffic signals are exhibited and must be complied with by all vessels. Shown by *Central Signal Station (C), Blockhouse (B), Gilkicker (G), Dolphin Pier (D) and H.M. ships concerned (S).

Day	*Night*	*Meaning*	**Shown by*
Red flag with white diagonal.	Red Green Green	No vessel to enter or leave harbour or enter approach channel North of Outer Spit Buoy.	C B G
Red flag with white diagonal over black ball.		No vessel to enter harbour or approach channel. Outward shipping may proceed.	C B G
Black ball over red flag with white diagonal.		No vessel to leave harbour. Inward-bound shipping may proceed.	C B G
Black pendant.	White Red Red	No merchant or private vessel to anchor in man-of-war anchorage in Spithead.	G
Answg. Pendant over Pt 0.		All vessels North of Outer Spit keep clear of warship flying this signal.	S
Answg. Pendant over Pt. 9.	Green Green Green	All vessels and boats keep clear of H.M. ships under way.	C B G
Answg. Pendant over flags N E.	Green Red	Proceed with great caution, ships leaving Camber (Not ferries).	B
Answg. Pendant over flag A.	Red Red	Divers down, keep clear.	Diving boat.
Flag E	Orange	Submarine entering or leaving Haslar Lake. At night, light flashes when sub. under way. All vessels keep clear of submarines.	B D

Speed limit of 10 knots in harbour and when within 1,000 yards of shore in any part of the dockyard port; 12 knots within 1,000 yards of any H.M. ships in any part of the Dockyard Port not covered by the 10 knots limit. Dockyard Port boundaries are shown on Admiralty charts.
MAX. SIZE: See "Berthing".
HEALTH: Foreign arrivals to complete Maritime Declaration of Health. They are cleared immediately on arrival by either a Port Doctor or an officer of H.M. Customs, depending on where ship comes from and whether there is sickness on board.

Vessels arriving from ports within accepted area (North European ports) and coastal arrivals need not present Declaration in all cases; when there is sickness on board, Port Health Authority must be informed, preferably not more than 12 hours nor less than 3 hours before arrival.

See "Health – All Ports" before first U.K. port.
RADIO: See "Southampton" for pilotage communications.

Harbour Control is exercised through "Queen's Harbour Master" for commercial traffic on VHF Channels 16 and 11. Gilkicker Radio on Channels 16 and 14 is also available for commercial vessels, and all vessels entering the area bounded by the "Warner" Buoy in the East and the "Sturbridge" Buoy in the West must contact Gilkicker, even if only passing through the District. Channel 13 is the working channel for H.M. ships and the Q.H.M.'s office; call sign "Q.H.M.". H.M. ships are required to keep a listening watch on Channel 16 when in the Portsmouth and Southampton control areas, and will 'shift' to working frequencies selected by mutual agreement. Gilkicker is also equipped for visual signalling. Medium frequency calls to Pilots and Port Authorities only available by link call through Niton Radio.
TUGS: Tow-boat services are available for commercial vessels at commercial berths. In addition Admiralty tugs available at commercial berths by arrangement with Queen's Harbour Master.
BERTHING: Commercial berths: Camber – length 80 m., depth 16 ft. Flathouse – length 300 m., depth 3.0 m. below C.D. Vessels up to 146 m. LOA can be accommodated. Albert Johnson Quay – length 195 m. Depth 3.6 m. below C.D. Continental Ferry Port Ro/Ro Linkspans – Max. length 150 m., depth No. 1 – 5.0 m. below C.D. depth No. 2, 3 and 4 – 7.0 m. below C.D.

Vessels at the Camber, Flathouse and Rudmore Wharves must expect to take the bottom in soft mud.
CRANES: 32 ton Scotch Derrick at Flathouse Quay. Mobile cranes provided by stevedoring companies.
STEVEDORES: Available by arrangement with stevedoring companies.
MEDICAL: All medical facilities available. Agent should be advised in advance. (See "Southampton" entry if arrival is solely to land sick personnel).
DENSITY: 1025 salt water.
FRESH WATER: Available.
FUEL: Fuel and Diesel Oil available by road tanker or bunker barge from Fawley.
FIRE PRECAUTIONS: Notices will be delivered to Master if berthing at any jetty where special precautions apply.
CONSULS:

Belgium
Denmark
Finland
France
Netherlands
Norway
Sweden

REPAIRS: Minor deck and engine repairs can be carried out locally. Larger repairs and dry dock facilities at Southampton.
OPENING/CLOSING HATCHES: By ship's crew.
CUSTOMS ALLOWANCES: As for "Southampton".
REPATRIATION: All facilities exist.
AIRPORT: Fast train service from Portsmouth to London Airport. Eastleigh Airport local, but mainly short flights to Channel Islands and feeder services.
TELEPHONES: None on board.
SERVICES: All marine, radio and radar services can be obtained from Southampton.
SHIP SUPPLY SERVICE: J. Butcher & Sons (Port Services) Ltd., 19 Pembroke Road, Old Portsmouth PO1 2NS. Tel: (0705) 822584. After hours 821347 and 821033.

The Company provides the majority of the towing services in the commercial port, operating in the Eastern Solent from Cowes to Nab Shoal including Spithead, The Mother Bank and St. Helen's Roads. A fleet of 11 vessels is operated, headed by the 525 b.h.p. Kort Nozzle Tugs "Janet James" and "Carol James" providing towing services (including tow boats for smaller ships) and boats for mooring, rope running and berthing purposes. The passenger launch and workboat service transports ships' crews, Agents, technicians, stores and equipment within the harbour area and Eastern Solent.

The tugs and tow boats have been purpose built for berthing and unberthing ships up to 140 m. at the commercial port.

Services of an Admiralty tug available on application to the Queen's Harbour Master.
DEVELOPMENTS: With the opening of the Portsmouth section of the M27 and M275, there is immediate access to Albert Johnson Quays at the Rudmore Roundabout. At present, P & O operate services to Cherbourg and Le Havre; Brittany Ferries to Caen and St. Malo and Sealink to Cherbourg and Channel Islands in Summer.

C. & M. Shipping operate freight ferries to the Channel Islands and Cherbourg. Hoverspeed operate a catamaran service to Cherbourg.

The ferry port is currently being expanded on an extra 7.5 acres of reclaimed land.

Use of Rudmore Wharf is restricted and this will be replaced by a new quay.
AUTHORITY: City of Portsmouth, Port Manager's Department, Harbour Officers, George Byng Way, Continental Ferry Port, Portsmouth PO2 8SP. *Tel:* Portsmouth (0705) 297391. *Telex:* 9312110368 PM G. *FAX:* (0705) 861165. *Contact:* Rear-Admiral A. S. George, Port Manager. Captain S. M. O'Mahony, Harbour Master.

RAMSEY, Isle of Man: 54.19 N. 04.21 W. (See Plan

PORT LIMITS: Line joining Shellag Point (3.25 miles North of harbou entrance) and Cor Stack (2.75 miles S.E. of harbour entrance) define the port limits.
DOCUMENTS: Same as other U.K. ports.
PILOTAGE: Service provided by Harbour Master and is not compulsor There is no regular pilot boat. Pilot will board 0.5 miles East of harbou entrance.

Contact Harbour Master direct by telephone (0624) 812245 or by VH Channels 16 and 12 at tide times only. In all cases as much notice a possible should be given.
ANCHORAGES: No specific anchorages, but anchoring not permitte within 4 cables of harbour entrance or within 4 cables of Queen's Pie (3.5 cables S.E. of harbour entrance). Moderately good holding groun in sand, often used by sheltering vessels in S.S.W. or N.W. gales.
RESTRICTIONS: Harbour dries out each LW.

MHWN: Max. available depth 3.80 m.
MHWS: Max. available depth 5.50 m.

MAX. SIZE: For East Quay and West Quay: Max. length 61 m., bread 9.0 m. Draft 3.0 m. on Neap tide, 4.0 m. at Spring tides.

For Channel Berth: Max. length 70 m., breadth 13 m.

For all berths max. available depth will vary according to tide.
HEALTH: Standard U.K. procedure.
RADIO: R/T, W/T and VHF through Portpatrick Radio (GPK) or Anglese Radio (GLV).
VHF: Coverage from Harbour Master's Office includes port an approaches, Channels 16 and 12 at tide times only.

Coverage of North Irish Sea from Snaefell Summit by Dougla Harbour Radio, continuous 24 hour watch on Channel 16. Message may be passed through Douglas Harbour Radio to amend ETA Ramse etc.
RADAR: No port radar.
TUGS: One tug of 420 i.h.p. based at Douglas. It can be made availab with sufficient notice, if required.

BERTHING: All berths dry out each LW. Bottom is sand and shingle

Name	*No.*	*Length* (m.)	
Channel Berth	1	76	
East Quay	2 & 3	116	
West Quay	4	80	
North Quay	10	73	For lay-by only. Use restricted by sea conditions.

With exception of North Quay all berths readily accessible to roa traffic. Load/discharge by ship's gear or shore equipment at ship discretion.

CRANES: No cargo handling gear at any berth. Mobile cranes can b arranged through Agents with reasonable notice.
BULK CARGO FACILITIES: Bulk cement handling facility at East Qua No. 2 Berth with 2×500 ton silos. Privately owned.
SPECIALISED CARGO HANDLING FACILITIES: No Ro/Ro or bu liquid handling facilities. Privately owned container handling facilitie available.
BRIDGES: Access to upper harbour through swing bridge, b arrangement with Harbour Master. Sufficient depth of water usual available 2 hours either side of HW. At least 24 hours' notice require to swing the bridge outside normal working hours, weekends an holidays. Within normal working hours less notice is acceptable.
STEVEDORES: Arranged through Agent. A minimum of 24 hours' notic required and all working hours are negotiable in advance. Ma commodities discharged are all types of general cargo and coal b mobile crane with grab – average discharge rate is approx. 60 t.p. Occasional grain cargo loaded by mobile elevator at approx. 40 t.p.
MEDICAL: Hospital and dental facilities available without prior notice
TANKERS: No tanker facilities or berths available.
DENSITY: 1025.
FRESH WATER: Available by hose at approx. 30 t.p.h. on East, We and North Quays. Labour charge £8.20 per hour (minimum 2 hou plus £1.55 per 1,000 gallons.
FUEL: Delivery by road tanker from Douglas and Peel to all bert except North Quay. Gas oil and medium fuel oil available at 24 hou notice. Manx Petroleum (Shell), Tel. 0624-74652. 100 gallons minimu Total, Tel. 0624-844000. 100 gallons minimum.
CONSULS: None.
REPAIRS: All types of deck and engine repairs possible by sma shipyard in upper harbour.
DRY DOCKS: No dry docks but 2 slipways; one for vessels abo 200 g.r.t. and one for about 50 g.r.t. Both slipways in upper harbour

Also a grid in upper harbour which dries out at approx. half tide, leng 40 m., breadth 7.5 m. This grid used occasionally by vessels of up t 300 g.r.t. for bottom plate inspection/repairs. At least 72 hours' notic required, more if possible. Grid hire arrangement through Harbo Master.
SURVEYORS: D.H.P.P., Marine Division. Tel: 0624-23813, extension 18
GANGWAY/DECK WATCHMEN: Not required.
HATCHES: Normally handled by ship's crew.
CUSTOMS ALLOWANCES: Standard U.K. allowance.
CARGO GEAR: Loading/discharging of general by ship's gear or mob crane. Discharge of bulk by grab equipped mobile cranes. A wide rang of mobile cranes up to 25 tons available for hire at reasonable noti
REPATRIATION: Facilities available for repatriation of crew membe

Daily scheduled aircraft connections to London and other U.K. In airports. Daily ferry services to Heysham. These services operate a year with supplementary air and sea services to other destinations du the Summer.
AIRPORT: 25 miles distant.
TIME: GMT and BST.

HOLIDAYS: New Year's Day, Good Friday, Easter Monday, May Day, Whit Monday, Senior TT Race Day (usually 1st or 2nd Friday in June), Tynwald Day (5th July), August Bank Holiday, Christmas Day, Boxing Day.

Cargo not normally worked on these days but all working hours are negotiable in advance.

POLICE/AMBULANCE/FIRE: All emergency services available by telephoning 999 on any telephone, no charge is made for this call. Assistance possible from H.M. Coastguard on VHF Channel 16.

EMERGENCY CO-ORDINATION CENTRE: Liverpool Coastguard. Tel: 051-9313341. Telex: 629448. Fax: 051-931-3347. VHF: Channel 16.

TELEPHONES: There are no facilities for telephones to be placed on board.

SERVICES: Lloyd's Agent available. Decca, Kelvin Hughes, Furano, etc., repairs and servicing available locally. Divers available via Harbour Master.

BANKS: Barclays Bank, 52 Parliament Street. Tel: (0624) 813124.
I.O.M. Bank, 20 Parliament Street. Tel: (0624) 812829.
Lloyd's Bank, 71 Parliament Street. Tel: (0624) 812225/814233.
Midland Bank, St. Paul's Square. Tel: (0624) 814000.
Nat. West Bank, Douglas. Tel: (0624) 29292.

Major banking facilities are available in Douglas.

STORING: See "Prelims".

1. Vessel may be stored by barge or truck.
2. No restrictions unless dangerous cargo being handled. If dangerous cargo being handled as cargo or as part of the stores then all other cargo work/storing to cease.
3. Berths accessible to all road traffic.
4. Fork lift trucks may be used on quayside.
5. Bonded stores available through local agent, who will arrange necessary clearance, etc. H.M. Customs may attend at their discretion.
6. Riggers may be arranged through local agent at reasonable notice.

SHIP SUPPLY SERVICE: See "Douglas".

SHORE LEAVE: When Immigration and Customs requirements satisfied (for vessels arriving from a port outside the U.K.), no restriction on crew shore leave provided that they rejoin prior to the vessel's departure.

IDENTIFICATION CARDS: Not required.

DELAYS: Berthing delays are not usual (disregarding awaiting tide) except when strong N.E. to S.E. winds make navigation in the harbour entrance hazardous. These conditions may cause 1-2 days delay if severe.

AUTHORITY: Isle of Man Department of Highways, Ports and Properties, Harbours Division, Sea Terminal Building, Douglas, Isle of Man. *Tel:* 0624-23813, extension 153. *Telex:* 629335 IOMHARG. *FAX:* 0624-27238. *Contact:* Captain W.B. Kinley, Chief Harbour Master (I.O.M.).

Harbour Office, East Quay, Ramsey, Isle of Man. *Tel:* 0624-812245. *Contact:* Captain M. Brew, Harbour Master.

RAMSGATE: 51.20 N. 01.24 E.

(A) RAMSGATE WESTERN TERMINAL (PORT RAMSGATE)

DOCUMENTS:

2 copies C142, Crew Declaration.
3 copies C13, General Declaration, including stores (normally completed by Agent).
2 copies C16, Cargo Declaration (if no manifests).
1 copy C74, Master's Authority (completed by Agent).
2 copies C1320, Cargo in Unregistered Spaces.

These documents should be completed and presented with copies of all manifests and ship's documents when making report.

PILOTAGE: Compulsory for most merchant vessels. Tel: (0843) 592277 (24 hours). VHF Working Channels 16 and 9.

Minimum notice: Inward 12 hours. Outward: 2 hours.

ANCHORAGE: Anchorages available at Margate Roads, Broadstairs Knoll and The Downs off Deal (Chart No. 1828; Dover to North Foreland applies).

APPROACHES: *Approach Channel:* The approach channel extends East from Long. 01° 25.30′ E. for a distance of 2,133 m. from the Ramsgate breakwater heads. The channel has a depth of −6.5 m (CD) with a base width of 110 m.

The tidal range is +0.3 m. (CD) to +6.2 m. (CD) (predicted).

CHANNEL MARKINGS:

East Brake Buoy: East Cardinal QK FL. 3 every 10 seconds W; Lat. 51° 19.46′ N., Long. 01° 29.1′ E.

Starboard Channel Buoy No. 1: Green conical with green conical topmark. FL. every 5 seconds G; Lat. 51° 19.51′ N., Long. 01° 27.2′ E.

Port Channel Buoy No. 2: Red can with can topmark. FL. 4 every 10 seconds R; Lat. 51° 19.45′ N., Long. 01° 27.2′ E.

Channel Buoy No. 3: Green conical with green conical topmark; FL. every 2.5 seconds G; Lat. 51° 19.51′ N., Long. 01° 26.65′ E.

Channel Buoy No. 4: Red can with red can topmark. QK FL. R; Lat. 51° 19.45′ N., Long. 01° 26.65′ E.

Dike Buoy No. 5: South Cardinal. QK FL. 6 plus 1 every 15 seconds W; Lat. 51° 19.51′ N., Long. 01° 26′ E.

Quern Buoy No. 6: North Cardinal. QK FL. W; Lat. 51° 19.45′ N., Long. 01° 26′ E.

East Breakwater Light Tower: Lat. 51° 19.31′ N., Long. 01° 25.34′ E. Day mark red and white. Qk. Fl. Green.

West Breakwater Light Tower: Lat. 51° 19.25′ N., Long. 01° 25.30′ E. Day mark green and white. Qk. Fl. Green.

Front Lead Beacon: Lat. 51° 19.29′ N., Long. 01° 24.59′ E. Occulting 8 secs. on, 2 secs. off. Racon beacon fitted. Coloured sectors light: green 10°, white 2°, red 10°.

Rear Lead Beacon: Lat: 51° 19.29′ N., Long. 01° 24.44′ E. Fl. every 8 secs. White.

Harbour Signals: The harbour has established, at the West Pier Signal Station, signals which conform with the International Harbour Signals Regulations.

Port Ramsgate Turning Basin: Maximum dimensions 500 m. North – South; 550 m. East – West, giving a free swing diameter of 300 m. (ref. to Chart No. 1827 Ramsgate Harbour and Approaches).

VHF: *Vessel Traffic Services:* All arriving vessels are to notify the Ramsgate VTS Office at the West Pier Control Tower on VHF Channels 14 or 16, or by telephone (0843) 592277 (24 hours), of intended arrival and requirements.

Vessels should report when approximately 1 hour from Point "R" (Romeo) which is defined as a radius of 2.5 miles from the centre of a line joining the Channel Entrance buoys.

TUGS: 1×13 tonne bollard pull and 1×45 tonnes bollard pull.

BERTHING: Berths/Linkspans No. 1, 2 and 3: All have a depth of −6.5 m. (CD). Beam 25 m. (vessels). 9 point mooring system along the centre line of the berthing structure, 4 fenders on each side.

Fender positions from the front face of the pontoon: No. 1 – 38 m.; No. 2 – 63 m.; No. 3 – 80 m.; No. 4 – 100 m. (the outer bollard position 110 m.).

All 3 linkspans are of the same pontoon type, depth moulded 4.4 m., depth working 1.0 m., ship ends freeboard variable.

Ramp Details: Length 40 m., width 9.1 m. – 10.7 m.; free width 7.0 m. – 9.7 m.; axle loads 50 tonnes.

CARGO HANDLING FACILITIES: *Port Plant:*

2 (4×4) terminal tractors, 70 tonnes drawbar pull.
8 (2×4) terminal tractors, 50 tonnes drawbar pull.
Forklifts of 12 tonnes, 7.5 tonnes, 1.5 tonnes and 1 tonne capacity.
Container transhipment gantry of 32 tonnes capacity, handling 20 ft., 30 ft. and 40 ft. units.
4×80 passenger motor buses.
Baggage trolleys.
Freight shed of 25,000 sq.m. internal area, equipped with full handling equipment.
Cold store facilities for cargo inspection.
Open storage areas, total parking areas of 126,000 sq.m.
Craneage available up to 100 tonnes capacity at 24 hours notice.
Hazardous bund facilities.
Tipping pen and conveyor for handling bulk Ro/Ro cargoes.

MEDICAL: Hospital, doctor and dentists available.

FRESH WATER: Available at all 3 berths.

FUEL: Available at berths by road tanker.

FIRE PRECAUTIONS: Fire hydrants available at all berths.

REPAIRS: Possible.

A. & P. Appledore, Military Road, Ramsgate.
Ramsgate Marine, Royal Harbour, Ramsgate.
Walkers Marine, Military Road, Ramsgate.

REPATRIATION: Possible.

EMERGENCY CO-ORDINATION CENTRE: Coastguards: Based at Dover. Tel: (0304) 210008 – VHF Channels 16 and 11.

Air Sea Rescue helicopters from R.A.F. Manston.

AIRPORT: 3 miles West of Ramsgate is Kent International Airport (Manston).

Having bought a 125 year lease from the Ministry of Defence in 1987, the airport's owner has built a £2 million passenger terminal which was opened in October 1989.

With the largest runway of all regional airports, 24 hours Customs, and its easy access to London, the airport is ideally situated for air-freight shipments, or as an inland clearance depot for trucks coming over from Europe.

Currently there is a regular cargo flight from Colombia and holiday flights to Majorca, Pula and Jersey.

The airport is in discussions with various airlines, and hopes to develop commuter services to major European destinations in 1991.

DEVELOPMENTS: During 1990, the following major projects were completed: The reclamation of a further 36,000 sq.m. of parking area; the completion of the new freight shed for the speedy handling of Customs checks and transhipments; a cold store facility; a new preventive shed in conjunction with the introduction of Fastlane – the system which provided for the speedy clearance of freight vehicles (Ramsgate was the pioneer port for this system); Phase IV of the DTI computer system.

In order to handle the increasing demand for swap-bodies/container traffic, the port installed a 32 tonne container handling gantry.

Future developments include the re-organisation and streamlining of the traffic circulation systems, to enable the freight and passenger traffic to pass through the terminal area with minimum delay and inconvenience.

New facilities to enable Customs to check motor cars.

A passenger access system to the passenger ferries together with a new fleet of motor buses, to transport passengers to and from the vessels.

Increased parking facilities for day-trip passengers.

Long-term plans include the provision of a new terminal complex to include new office accommodation for the port staff, operators and port official bodies.

A new access road, by-passing the town of Ramsgate, linking the port directly with the A299 trunk road, is projected.

AUTHORITY: Thanet District Council, P.O.Box 9, Margate, Kent. *Tel:* (0843) 225511.

West Pier Control Tower, Ramsgate Harbour, Ramsgate. *Tel:* (0843) 592277.

(B) ROYAL HARBOUR

ANCHORAGE: Vessels waiting to enter Ramsgate may anchor in Margate Roads or in the vicinity of the Broadstairs Knoll Buoy, paying due regard to the presence of submarine cables.

APPROACHES: *Approach Channel:* The main channel, 110 m. wide at the base, extends 2,133 m. to seaward from the harbour entrance. Additionally a turning area has been dredged West of the harbour entrance and in the vicinity of the ferry terminal. The centre of the channel is indicated by leading lights and marks 090°–270° True.

Harbour Signals: Permission to enter the channel and the Royal Harbour may be requested by radio from the Harbour Control. Harbour signals, to conform with the International Harbour Signals, are displayed by the Harbour Control and also at the Lock Head to the marina.

RESTRICTIONS: *Times of Entry:* The main channel has been dredged to a depth of 6.5 m. below datum, allowing unrestricted entry to the Western Terminal. The entrance to the Royal Harbour is maintained at 2.5 m. below datum and vessels are advised that this normally allows entry for at least 2 hours on either side of HW.

MAX. SIZE: Max. LOA 105 m. Max. draft 4.8 m. (2 hours either side of HW).

VHF: *Vessel Traffic Service:* Vessels wishing to enter Ramsgate Harbour must report to the Harbour Control on Channel 14 when arriving at a point 2.5 miles from the channel entrance buoys. This point is referred to as "Point Romeo" and permission must be obtained to enter the channel before proceeding further.

BERTHING: Commercial Quay: Length 109 m. Width 18.0 m. Berthing possible on the East side.

Ro/Ro Berth: Vessels berth against dolphins which are 36 m. apart. Linkspan available.

CRANES: 1×18 ton crane available. Private cranes up to 130 tons capacity may be hired. Fork lift trucks available.

STEVEDORES: Available locally.

MEDICAL: Hospital, doctors and dentists available locally.

FRESH WATER: Available.

FUEL: Small quantities available by barge. Larger quantities available by road tanker.

CONSULS: See "Dover".

REPAIRS: Minor repairs possible. Slipway for up to 500 tons capacity.

SURVEYORS: Available locally.

HATCHES: Opened and closed by crew.

AIRPORT: See "Port Ramsgate".

POLICE/AMBULANCE/FIRE: Dial 999.

EMERGENCY CO-ORDINATION CENTRE: The RNLI maintains a motor lifeboat stationed in the harbour, and Air Sea Rescue facilities are provided by R.A.F. helicopters from nearby Manston Airport.

SERVICES: The following are available: radio repairs, ship chandler, diving services, charts, compass adjusting, Derat and fumigation.

AUTHORITY: Thanet District Council, P.O.Box 9, Margate, Kent CT9 1XZ. *Tel:* (0843) 25511. *Telex:* 966182.

Ramsgate Harbour Office, Military Road, Ramsgate, Kent CT11 9LG. *Tel:* (0843) 592277. *Telex:* 965861. *FAX:* (0843) 590941.

Contact: Captain J.Ewing, Harbour Master. Commander C.H.Marsh, General Manager.

RYE: 50.56 N., 00.47 E. (See Plan)

PORT LIMITS: An imaginary line between No. 2 red light and No. 1 white light.

DOCUMENTS: Usual documents required for Customs.

PILOTAGE: Call "Rye Pilots" 1 hour before to 1 hour after HW. Pilots attend station when vessels expected – ETA 24 hours in advance.

Vessels fitted with VHF Radio should keep watch on Channel 14 when arriving and sailing from Rye and call for instructions on traffic movements.

Pilotage compulsory for vessels over 30 m. LOA.

ANCHORAGES: Vessels may anchor at the Fairway Buoy or shelter from Southwesterly winds in the East Roads (St.Mary's Bay).

NAVIGATION: *Leading Marks:* Inner Leading Light – Occulting Green 4 secs. with white sector 326°T to 331°T.

Tide Signals: Shown from harbour office, 0.75 miles inside harbour entrance on East Bank.

Night – 7 ft. to 10 ft. on bar. Fixed Green.
Over 10 ft. on bar. Fixed Purple.

Day – None, but horizontal timbers on tripod beacon at harbour entrance indicate plus 5 ft. plus 10 ft. plus 15 ft. above Ordnance Datum.

Traffic Signals: Day and Night: Qk. Fl. Yellow above Harbour Office and at West end of Alsford's Wharf denote immediate shipping movement into or out of harbour.

Day – on Flagstaff yard arms behind Harbour Office denotes expected shipping movements on tide.

One Black Ball – ship arriving from sea.
Two Black Balls side by side – ship sailing.
Three Black Balls in a triangle – ships arriving and sailing.

Fog Signals: East Pierhead Horn every 7 secs.

RESTRICTIONS: Night navigation possible for vessels of less than 210 ft. LOA.

Also see "Berthing".

MAX. SIZE: LOA 235 ft. Max. draft 13 ft. 06 in.

VHF: Call sign "Rye Harbour Radio" Channels 16 and 14. 0900 – 1700 hrs. daily. "Dover Coastguard" VHF Channels 16 and 67.

TUGS: None available. Harbour launch will assist if requested.

BERTHING: Cargo vessels entering Rye Bay should follow the coast from Dungeness coming from the East or Fairlight coming from the West keeping at least 2 miles offshore until Rye Fairway Buoy is reached (Spher. R.W. Fl. 10 secs.), position 149° T, 1.8 miles from the harbour entrance. Anchorage 5 fathoms. at MLWS.

The entrance is 42 m. (140 ft.) wide and is recognised by a conspicuous tripod beacon (Fl. 5 secs. Red), 30 m. seaward of the West Groyne which is 240 m. seaward of the East Pier with the light tower (Qk. Fl.(9) 15 secs.). The channel virtually dries and is liable to change. The East Pier submerges at HWS and is marked by starboard hand beacons. There is a strong eddy inside the East Pier during the flood stream.

Inside the entrance the channel narrows to 30 m. and runs straight for half a mile (329°T) to Rye Harbour Village where there is an inner leading light (Occ. W.G. 4 secs.). Strict attention should be paid to Port Hand Beacons (4 with Qk. Fl. Red) which mark a training wall on the West side of the channel (submerged at plus 8.3 O.D.N.)

The Rother has a strong flood stream and as the harbour dries out it should NOT be approached 3 hours either side of LW. In gales from the S.E. through to S.W. waves break across the entrance.

The best time for any vessel to enter or leave the port is 1 hour either side of HW but care is needed because movement of cargo vessels takes place during this period (see "Navigation" – "Traffic Signal"). Visiting yachts may berth at the Admiralty Jetty by the Harbour Office and in mud berths at Strand Quay in Rye by arrangement with the Harbour Master. Subject to weather conditions it is possible for vessels drawing less than 1.5 m. to enter the harbour at HW minus 2.5 hours (before the flood tide flows at maximum rate) to plus 3 hours.

H.M. Customs clear craft entering from abroad at the Harbour Office.

Alsford's Wharf is located 1 mile from the entrance on the West bank of the river.

Length of quay 600 ft. Berth handles grain, aggregate, fertilisers, general cargo, etc.

CRANES: 2 mobile cranes of 3 tons (SWL) available for cargo handling. Stores are loaded by these cranes.

BRIDGES: No air draft restrictions.

STEVEDORES: Stevedores ordered through vessel's agent. Usual working hours 0730 – 1700 hrs., Monday to Friday. Overtime is possible by arrangement.

MEDICAL: The Royal East Sussex Hospital at Hastings (15 miles) maintains a 24 hour casualty service. Doctors and Port Health Officers available locally.

TANKERS: No facilities.

DENSITY: 1025.

FRESH WATER: Available from the quay by hose.

FUEL: Agent arranges supply through a local supplier.

FIRE PRECAUTIONS: Usual precautions necessary.

CONSULS: None locally.

REPAIRS: Minor engineering repairs possible. Radio and radar repairs by arrangements.

DRY DOCKS: None locally.

SURVEYORS: Cargo inspectors arranged by agent. No Classification Society surveyors locally.

GANGWAY/DECK WATCHMEN: Not available.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CUSTOMS ALLOWANCES: Standard British allowances.

REPATRIATION: Possible. Crew may be repatriated through Heathrow or Gatwick Airports, or Dover and Newhaven for continental ferry services.

AIRPORT: Heathrow or Gatwick.

EMERGENCY CO-ORDINATION CENTRE: Contact Dover Coast Guard on VHF Channels 16 and 67.

TELEPHONES: Not available.

SERVICES: Any services required should be arranged with the agent prior to arrival.

BANKS: Major banks located in Rye.

STORING: See "Prelims".

1. By truck.
2. N.A.
3. Yes.
4. Yes.
6. Yes.

SHORE LEAVE: Permitted.

DELAYS: None.

GENERAL: *Tidal Information:* These tide tables are referred to Ordnance Datum Newlyn and GMT.

Chart Datum equals O.D. Newlyn minus 4 m. (13 ft.)
O.D. Newlyn equals Chart Datum plus 4 m. (13 ft.)
Duration of Mean Rise at Rye Harbour:
Spring – 3 hours 15 minutes.
Neaps – 5 hours 00 minutes.

Latest Surveys (September 1987) indicates that the main channel leads E.S.E.'ly from red light marking end West Groyne. Average depth in the channel at the entrance:

At MHWS – 5.5 m. (19.2 ft.)
At MHWN – 4.5 m. (15 ft.)
Depth over bar:
At MHWS – 4.2 m. (13.8 ft.)
At MHWN – 2.5 m. (8.2 ft.)

For depth at HW at Alsford's Quay add 1.52 m. (5 ft.) to predicted height given in tables.

For depth at HW at Strand Quay mud berths deduct 0.6 m. (2 ft.) from predicted height.

The following approximate corrections for level and time of HW should be added/subtracted to convert these tables for use at the undermentioned coastal areas:

Hastings	minus 0.8 ft.	minus 2 minutes
Dungeness	plus 0.9 ft.	minus 6 minutes
Folkestone	minus 1.6 ft.	minus 15 minutes

UTHORITY: National Rivers Authority, Guildbourne House, hatsworth Road, Worthing, West Sussex. BN11 1LD. *Tel:* (0903) 05252. *Telex:* 877340. *FAX:* (0903) 30511. *Contact:* Mr. George oberts, Rivers Controller. Tel: Rye 223256.

Harbour Office, New Lydd Road, Camber, Rye, East Sussex N31 7QS. *Tel:* (0797) 225225. *FAX:* (0797) 226711. *Contact:* Captain Bagwell, Harbour Master.

CALLOWAY: 60.08 N. 01.16 W. (See Plan)

Scalloway is a small port on the Atlantic side of the Mainland of etland and is located only 7 miles by road from Lerwick.

The main trade is centred around the catching, processing and export fish, but there has been a marked increase in general trade since the cent improvement of port facilities.

Most services are available and can be arranged through the local ipping Agents.

mmunications: Listening watch is maintained on Channel 16 only ring office hours. At other times contact to be made through Shetland dio. Local shipping agent Tel: Scalloway 636 (office), after hours: alloway 304. Pier Master's Office, Scalloway 574, home Scalloway 4. Assistant Pier Master, Lerwick 3485.

NCHORAGES: Good holding bottom in Scalloway Bay.

Anchorage may also be obtained at several locations within the port proaches and vessels intending to do so should advise the Scalloway er Master via VHF who will provide advice on areas encumbered by atic fishing gear.

LOTAGE: Licensed Pilots are available and requests for pilotage ould be made at least 12 hours in advance of ETA and confirmed hour before arrival by calling Scalloway Harbour Radio on VHF annels 12 or 16. Requests for pilotage should be made through alloway Harbour Office (Scalloway 574), through Sullom Voe Port ntrol Tel: 0806 – 242551 or Telex: 75142 (manned 24 hours), or ough agents. No particular light or sound signals are required and ot boat freeboard is 1.5 m. Pilot boarding stations are charted on the rrent edition of BA. Chart No. 3294. Masters should advise the ended pilot boarding station when confirming ETA and should note at the Northerly station is preferred in bad weather or high swell. otage is not compulsory except for vessels carrying hazardous rgoes for which it is compulsory.

ESTRICTIONS: No night time or tidal restrictions. Largest scale and to date charts essential.

AX. SIZE: Maximum length 90 m., max. draft 6.0 m. Vessels ceeding these dimensions may be accepted by prior arrangement. A e gauge has been installed, and precise tidal heights will be available request by radio.

EALTH: See "Health – All Ports" before first U.K. port.

ADIO: Shetland Radio.

HF: Vessels should listen to Channel 16 VHF when in VHF range.

ERTHING:

Berth No.	*Length* (m.)	*Least Depth* (m.)
1	66	7.5
2	53	4.0
3	77	4.2
4	75	6

Berth No. 1 can accommodate vessels up to 95 m. in length.

RANES: Mobile cranes available. Ships normally employ their own anes.

TEVEDORES: Should be arranged through Agents.

EDICAL: Doctor based at Scalloway. Hospital at Lerwick.

RESH WATER: Available from standpipe at all berths, rate 10 t.p.h.

UEL: Marine gas oil by pipe or from road tanker. 1 hour advance notice rough Agent.

EPAIRS: Most types deck and engine repairs.

LIPWAYS: Slip accommodation for vessels up to 180 tons.

URVEYORS: Lloyd's Agency at Lerwick: Hay and Company (Lerwick) td., 106a Commercial Street. Tel: (0595) 3057. Telex: 75295.

USTOMS ALLOWANCES: See "Lerwick".

EPATRIATION: Facilities for effecting crew changes.

IRPORT: Sumburgh Airport 25 miles. British Airways several times aily. Tingwall Airstrip 3 miles.

OLIDAYS: Cargo or shipping operations not affected by holidays.

OLICE/AMBULANCE/FIRE: Dial 999.

ELEPHONES: No arrangement for placing telephones on board. The Port Authority provide a telephone box in the harbour area.

SERVICES: Compass adjusting. Provisions of all kinds can be obtained ocally.

SHORE LEAVE: Crew members allowed ashore.

AUTHORITY: Shetland Islands Council, Ports and Harbours Department, Port Administration Building, Sella Ness, Graven, Mossbank, Shetland ZE2 9QR. *Tel:* Sullom Voe (0806) 242551. *Telex:* 75142. *FAX:* (0806) 242237. *Contact:* Captain G.H.Sutherland, Director of Ports & Harbours. Captain K.J.Radley, Deputy Harbour Master/ Deputy Port Director.

SCAPA FLOW (Flotta Terminal), Orkney Isles: 58.53 N. 03.05 W. (See Plan)

DOCUMENTS:

- Maritime Declaration of Health (Form supplied by Pilot or Agent).
- Vaccination List.
- Immigration Form H.O. Form IS6.
- Crew Lists — 2 required.
- Ship's Stores List.
- Crew Personal Effects Declaration, Customs Form C.142.
- Last Port Clearance.
- Ship's Register.
- Load Line Certificate.
- Safety Construction Certificate.
- Safety Radio and Safety Equipment Certificates.
- Derat Certificate.
- Previous British Light Dues Receipts.

Customs and Health: Weather permitting, Customs, Immigration, Health and Agent will embark inside Scapa Flow.

Customs House: Customs clearance inward and outward will be the responsibility of ship's Agents.

Light dues will be paid by the vessel.

Cargo Documents: Bills of Lading; Cargo Manifest, Quantity and Quality Report; Tanker Time and Loading Report; Certificate of Origin; Ship's Cargo and Ullage Reports; Master's Receipt for Shipping Documents and Documentation Transmittal Reports will be prepared by Company Representative.

Ship's Agent: All ship's business other than Cargo and Customs documentation and the shipping documents under section above will be conducted by the ship's Agent.

EDP: Early Departure Procedures apply to most vessels. Blank Bills of Lading are signed by the Master on arrival, and the tonnages inserted on completion of loading.

PILOTAGE: Pilot vessels *Scapa Pathfinder, Scapa Pilot* and *Scapa Patrol* watch VHF Channel 16.

Inside pilot station (Lat. 58° 46′ N., Long. 03° 07′ W.) located 2 miles 180° from Cantick Head Lighthouse.

Unfamiliar vessels, VLCCs, also any vessel without full information about the unusually strong currents in Pentland Firth is recommended to embark the Pilot at the appropriate outside position (Refer to Tidal Stream Atlas, Admiralty Publication H.O. Number NP 209).

Port Restrictions which may cause delays: Weather preventing embarkation of Pilot at either inside or outside positions.

Local wind conditions in Scapa Flow preventing a safe approach to the berth.

Remarks: In Scapa Flow the weather conditions, in particular the wind, can change suddenly and quickly deteriorate, not only in Winter but at any time of the year.

Mooring Masters: A Company Mooring Master will board vessels to the Northward of the Calf of Flotta or at her designated anchorage within Scapa Flow prior to berthing at any Terminal Facility. A Company Mooring Master will be on board during the time that a vessel is moored and he will liaise between the Terminal and ship personnel throughout any deballasting, loading or discharging operation.

The Company Mooring Master may ensure that Masters of vessels are familiar with, and strictly observe, all local regulations concerning the safety of operations and pollution of the sea by oil whilst laid at the Company's facilities.

Vessels using the Company's facilities are required to provide the Mooring Master with accommodation and messing of a standard equivalent to that enjoyed by the vessel's officers.

ANCHORAGE: Inside Scapa Flow several anchorages are available depending upon prevailing winds. Sea anchorage outside, in the approaches to the Pentland Firth, is not possible.

APPROACHES: The approach to the Terminal is through the Pentland Firth from East or West, and then Northward through Hoxa Sound, the main entrance to Scapa Flow. Consult Admiralty Sailing Directions Vol. 1, and Admiralty Tidal Stream Atlas for Orkney and Shetland, Publication No. 209. Principal charts are as follows and Decca coverage is available: Admiralty Chart Nos. 2162, 2581, 35.

MAX. SIZE/RESTRICTIONS: The current maximum sizes of crude tankers permissible at Flotta is 200,000 d.w.t. at the SPMs and 150,000 d.w.t. at the jetty.

Since the advent of segregated ballast tankers, an anomaly has arisen between the physical size of tankers, upon which these maximums are based and the deadweight capacity. In order to prevent confusion as to the size of tanker that is acceptable, the following guidelines will be enforced.

	Conventional Ballast Tankers	*Segregated Ballast Tankers*
SPMs	200,000 d.w.t.	170,000 d.w.t.
Jetty	150,000 d.w.t.	130,000 d.w.t.

Prior to accepting crude vessels it must be clarified whether the vessel is a segregated ballast tanker or a conventional ballast tanker. If a segregated ballast tanker then the deadweight must be indicated. If the tanker has been converted from a conventional ballast tanker to a segregated ballast tanker, then the original deadweight should also be indicated.

RADIO: Arrival Notices.

Pilots: By coastal radio station 24 hours and 12 hours prior to arrival. VHF contact at least 3 hours prior to arrival at the pilot station.

Terminal: By coastal radio station 7 days, 72, 48 and 12 hours prior to arrival at the pilot station.

VHF contact should be established at least 3 hours prior to arrival at the pilot station.

The Terminal must be advised by VHF via the "Harbour Control", when the Pilot has boarded or when 6 miles from Stanger Head at the entrance to Hoxa Sound.

INFORMATION REQUIRED PRIOR TO ARRIVAL:

Radio Advice Prior to Arrival: Terminal operated by Occidental of Britain, Flotta Terminal, Telex: 75212 (Oxyops G), via Portishead Radio, of ETA with following details. Also advise Agent of ETA, drafts fore and aft for arrival, and any immediate requirements on arrival.

Standard Message to Crude Vessels (Initial Visit): Masters are advised that reception facilities are available for clean ballast only. All ballast must be discharged to reception facilities ashore. No ballast from either cargo or permanent ballast tanks is permitted to be discharged into Scapa Flow.

Please advise the following details:

AAA	Arriving and sailing drafts and ETA.
BBB	Cargo requirements in metric tonnes.
CCC	Grade of previous cargo.
DDD	Quantity of Cargo tank ballast and position uplifted.
EEE	Quantity of permanent ballast and position uplifted.
FFF	Quantity of ballast for discharge ashore.
GGG	Last port and destination.
HHH	Is inert gas system fully operational and cargo tanks inerted?
JJJ	Oxygen level in cargo tanks.
KKK	Gross nett and summer d.w.t. tonnages.
LLL	Maximum loading rate.
MMM	Total time for deballast.
NNN	Number and size of cargo manifolds.
OOO	Availability of reducers to adapt manifolds to suit 16 in. 150 ASA flanges three required.
PPP	Can vessel load and deballast simultaneously while maintaining a minimum of a two valve separation?
QQQ	Is vessel equipped with a patent A.K.D. stopper or similar capable of accepting an 80 mm. end link?

Vessels are required to load part cargo prior to discharging ballast.

Minimum 10 ton SWL derrick required on port side for SPMs. Derrick required at jetty if it is necessary to fit spool pieces to accept loading arms. Ballast manifold is aft of two crude connections on SPM.

Your attention is drawn to the serious view taken by Port and Terminal Authorities of pollution. Heavy fines are imposed to which is added the cost of clean-up operations. Please ensure all crew members are conversant with and comply with pollution requirements.

Principal pollution causes are leaking sea valves overboard discharge valves and cargo or bunker overflows. We recommend sea valves, overboard and bilge discharges are checked tight. Prior arrival cargo and bunkering procedures should be reviewed with chief officer and chief engineer. All scuppers to be plugged.

NOTE: On subsequent visits vessels should only answer AAA to JJJ inclusive.

Standard Message to Liquid Gas Carriers (Initial Visit):

LIQUID GAS CARRIERS ARRIVING AT SCAPA.

LPG vessels arriving at Flotta Terminal with ballast for discharge to Scapa Flow will comply with the following instructions in respect of this ballast.

1. Ballast for discharge must have been taken on board within 24 hours of arrival and at a distance of at least 12 miles off shore.

2. The Master will provide the Terminal with signed advice stating date, time and positions between which ballasting operations were carried out, quantity of ballast for discharge and tanks in which it is contained.

Harbour Authority Officials may board vessels to ascertain that these procedures have been adhered to and the quality of the ballast is suitable for discharge. The Authority's decision as to whether or not the ballast is acceptable for discharge will be final. Non compliance will result in delays being occasioned by the vessel.

Masters are advised that this concession for discharge of permanent ballast relates only to LPG carriers and your attention is drawn to the serious attitude adopted by Port and Terminal Authorities to pollution incidents of any kind.

To prevent problems arising due to surge pressures caused by too rapid closure of emergency shutdown valves (ship side) it is required that the minimum closure rate from fully open to completely closed be 9 seconds when loading LPG or 13 seconds for Ethane loading.

Please advise the following details:

AAA	Arriving and sailing draft and ETA.
BBB	Cargo requirements in metric tonnes.
CCC	Previous cargo and quality of tank atmospheres.
DDD	Tank temperature on arrival.
EEE	Time required for cooldown.
FFF	Height of manifold above water line at arrival draft.
GGG	Closure timed of emergency shutdown valves.
HHH	Quantity of ballast and amount to discharge.
JJJ	Last port and destination.
KKK	Gross, nett and summer deadweight tonnages.
LLL	Maximum and cooldown loading rates.
MMM	Availability of deck tanks to accept coolant and quantity required.
NNN	Size of cargo/vapour return manifold and position of vapour return manifold relative to cargo manifold.

Purging and/or coolant is not carried out alongside.

Vessel will require to load sufficient coolant for purging and/or coolant to be carried out at anchor.

NOTE: On subsequent visits vessels should only answer AAA to JJJ inclusive.

VHF: *Harbour Pilots and Harbour Control:*

VHF Listening: 16 Telex: 75475
Working: 9, 11 and 20

Mooring Masters/Terminal:

Mooring Masters	161.15	Private Frequencies Only
Terminal	161.30	
Loading Operations	161.15	Private Frequencies Only
" "	161.30	

N.B. Launches are fitted with VHF Listening Channel 16.
Working Channels 14, 12, 8, 6

HEALTH: See "Health – All Ports" before first U.K. port.

READINESS: *Notice of Readiness to Load/Discharge:*

Notice of Readiness will be accepted subject to the following conditions;—

a. The Terminal is open (this decision shall be communicated to the Master of the vessel by the Company).

b. (i) The vessel has been boarded by the Company Mooring Master prior to her proceeding towards the berth *or*

(ii) The vessel has anchored within the anchorage area awaiting a berth.

N.B. Although vessels will be loaded in order of acceptance of Notice of Readiness, it should be borne in mind that acceptance of Notice of Readiness is contingent upon complete compliance with all the requirements of Port Conditions.

c. Acceptance of Notice of Readiness may be withdrawn by the Company upon the occurrence of any of the following events:

The decision by the Mooring Master that the vessel's drafts, equipment and/or appurtenances are not suitable for berthing at the Terminal. If this decision has not been taken, for reasons within the Mooring Master's control, within 24 hours from Acceptance of Notice of Readiness, the Company shall be deemed to have waived its right to withdraw acceptance under this sub-paragraph.

Any supervening decision of the Harbour Authority which prevents the vessel from berthing.

N.B. A derrick or crane with a safe working load of not less than 10 tons is required for handling hoses at the SPM berths.

TUGS: 3 tugs (2×50 ton bollard pull and 1×45 ton bollard pull) are available, and compulsory, for berthing. They are fire fighting tugs and equipped with Warren Springs pollution dispersent equipment.

Whenever a tanker is on a berth, 1 stand-by tug is anchored in the close vicinity for safety and pollution purposes. Fire wires must be rigged off-side forward and aft.

1 tug (standby tug) is towing aft whilst tanker is moored to SPM.

BERTHING:

Position:

SPM 1: Lat. 58° 52′ 11.86″ N., Long. 3° 07′ 20.68″ W.
SPM 2: Lat. 58° 52′ 17.72″ N., Long. 3° 05′ 47.79″ W.

Main Control Building (Radio Mast): Lat. 58° 50′ 31.05″ N., Long. 3° 07′ 08.01″ W.

SPM Particulars:

Pillar Type Single Buoy Mooring – 2.
Tanker Size – 35,000 d.w.t. – 200,000 d.w.t.
Minimum Water Depth – 75 ft.
Max. Draft – 72 ft.
Mooring System – 10 m.×3 in. chain, 40 m.×21 in. rope grommet, 10 m.×3 in. chain and 6 m.×2.625 in. chain.
Crude Manifolds – 2×16 in.
Ballast Manifolds – 1×16 in.
Maximum Loading Rate – 80,000 bbls.p.h.
Hose Weight – Minimum 7.5 tons
Ballast connection is positioned aft of the 2 crude connections.

A load monitoring system is fitted to each SPM giving constant strain readings to the Terminal Control Room and the Mooring Master on board the tanker. In adverse weather conditions strain gauge readings will indicate when vessel should prepare to vacate the berth.

LPG/Crude Oil Jetty:

Finger type jetty with breasting dolphins.
Tanker Size – 4,000 d.w.t. – 150,000 d.w.t.
Minimum Water Depth – 63 ft.
Maximum Draft – 62 ft.
LPG Manifolds – 1×10 in. loading plus 1×10 in. vapour return.
LPG Loading Rate – 10,000 bbls.p.h.
Crude Manifolds – 4×16 in.
Crude Loading Rate – 80,000 bbls.p.h. maximum.
Ballast Manifold – 1×16 in. (crude gantry only).
Maximum Deballasting Rate – 40,000 bbls.p.h.

LPG: Gas tankers also load at the jetty and in their case the only relevent restriction is a requirement for the cargo manifold flange to be able to work within the operating envelope of the LPG loading arms which have the following parameters:- Max. Airdraft 13.18 m.; Min. Airdraft 1.75 m.; Max. distance ship's side to flange 7.0 m.; Min. distance ship's side to flange 3.1 m.

Terminal Capacity:

1. Crude Oil:

There are 5 tanks, each of 500,000 bbls. nominal capacity for storage of stabilised crude oil, plus a further 2 of 1,000,000 bbls. each.

2. Liquid Petroleum Gas:

There are 2 tanks, each of 100,000 bbls. nominal capacity for storage of propane.

3. Ethane:

There are 5 ethane tanks, each of 500 cu.m. nominal capacity.

Remarks: Vessels moored to the SPMs are required under conditions to maintain a tug towing astern to keep the mooring system under a tension of 15 tons – 20 tons.

When ship's piping does not permit the pumping of permanent ballast through the manifold, the possibility to load some cargo prior to deballasting the cargo tanks' clean ballast may be granted by prior arrangement with the terminal. In all cases where ships intend to deballast and load simultaneously there must be at least a 2 valve separation.

Lightering Operations: Ship-to-ship lightering operations can be carried out in Scapa Flow on vessels up to 72 ft. draft.

Tug facilities and oil pollution equipment readily available.

DENSITY: 1025.

OORING AND HOSE HANDLING:

n SPMs: Ship's derrick (SWL 10 tons) and manifold connections will equire to be prepared on the port side. An accommodation ladder will e rigged to starboard with a pilot ladder ready to port.

Securing equipment for single chain mooring forward and hose onnecting gear will be hoisted on board from Company work launch y ship's derrick. A good mooring line will be required from forecastle ead as a messenger for the buoy mooring.

anker Loading Pier: The loading pier is equipped with rigid articulated pe arms mounted on gantries for loading liquid petroleum gas and also r loading crude oil. The crude oil gantry is also fitted with a ballast ischarge arm.

There is an access roadway between the Pier head and the shore. ooring lines are run to dolphins by terminal mooring boats. Vessels ith tension winches when moored at the pier must have winches on anual brake'.

rrival Draft: Vessels must arrive at the Company's facility in an dequate ballast condition compatible with safe manoeuvring during andling. Excessive trim or insufficient ballast could incur delay until uch time as an acceptable condition is reached.

ALLAST: All berths are equipped with water ballast discharge lines. here is a water ballast tank of 500,000 bbls. capacity and a ballast eating facility capable of handling 40,000 bbls.p.h. It is prohibited to ischarge water ballast into Scapa Flow.

ilge Ballast Discharge: Vessels should arrive in Scapa Flow with clean allast only.

The discharge of bilges and/or ballast by vessels into Scapa Flow is trictly prohibited.

N.B. All ballast water including permanent ballast must be ischarged through the Terminal ballast reception and cleaning facility.

Discharge of ballast and simultaneously lifting of cargo is not permitted nless approval has been given by the Mooring Master.

The salvage in ballast shall become the property of the Company, in onsideration of the Company's operation of the Terminal ballast eception and cleaning facility.

EDICAL: Medical and dental services are available by arrangement. ospital facilities are available at Balfour Hospital, Kirkwall.

RESH WATER: Not available.

UEL: Bunkers not available at present, but lubricants in small quantity vailable. Ships should cable requirements to Agent as soon as possible.
ONSULS: Denmark, Netherlands, Norway and Germany F.R.
EPAIRS: There are no dry-docking facilities available, but local ngineering firms undertake minor repairs to machinery and equipment.
mmobilisation of Engines: Not allowed on any of the berths, and not ecommended when at anchor. When at the anchorage, however, in pecial circumstances, and provided the Harbour Master's permission s first obtained, it may be possible.
RAVEL: There are daily air services, during the week, to Aberdeen, nverness, Glasgow and Edinburgh from Kirkwall Airport. There is no ervice on Sunday, There is a daily ferry service from Stromness to crabster to connect with British Rail. During the Winter months there s no service on Sunday.
AUNCH SERVICES: Launch services from Flotta and SPM berths are vailable by arrangement with local Agents to Scapa Pier.
AFETY: Should communications fail, the Mooring Master will authorise ontinuous soundings of the ship's whistle or siren as a signal to stop oading (ships in the vicinity capable of so doing should inform the erminal Control by VHF that this signal is being sounded in case it is naudible ashore). Ships hearing the signal and unable to contact the erminal should inform "Harbour Control".
SERVICES: Stores are of good quality, and the laundry facilities are ood, but limited. Tank cleaning and dirty ballast facilities are not available.
SHORE LEAVE: There are no restrictions on shore leave for ships' personnel. For vessels moored at SPMs arrangements can be made with the Agent for a launch service to be operated to the shore. For safety reasons, the boat selected for this service must have good stability, to prevent accidents in cases of hazardous boarding due to weather conditions.
GENERAL:
Accidental Spills and Leakage: All oil spills and leakages must be immediately reported to the Mooring Master, who will inform the Harbour Authority forthwith. All deballasting/loading/discharging operations will be immediately suspended until the cause of the spill/leakage has been determined, and rectified to the satisfaction of the Mooring Master, and the Harbour Authority.
Galley and Other Refuse: Dumping of all refuse into Scapa Flow and approaches is prohibited. Refuse must be retained on board in sealed containers. (Vessels in port over a long period may make arrangements with their local Agent for collection).
Lighting: Sufficient lighting must be provided in the way of all overboard discharge points to facilitate detection of leaks or spillage. Adequate lighting must also be provided at the loading manifold.
Lifting of Stores; When tankships are at SPMs, loading or off-loading of stores, provisions, drums or any other goods or articles on, to or from the main tank deck is prohibited while cargo is being lifted.

Under certain circumstances and with the approval of the Company's Mooring Master, stores may be worked on the poop during the cargo lifting.

When tankships are moored at the pier, vessels and boats are prohibited from coming alongside during cargo lifting, unless all cargo operations are shut down, all tank openings are closed and secured, and permission from the Mooring Master has been obtained.

Working of stores over the pier will not normally be allowed.
During Loading/Deballasting Operations at SPMs: Mooring Masters will carry Company communication equipment. Ship's VHF must also be available to the Mooring Master at all times. Ship's whistle must be available throughout the time a Mooring Master is on board.

Emergency signals in the event of complete communication failure will be as follows:

By day: Continuous blasting of ship's whistle accompanied by the hoisting of 2 black balls in a position conspicuous to the Terminal Control Room.

By night: Continuous blasting of ship's whistle accompanied by continuous flashing on an Aldis type signal lamp aimed towards the Terminal Control Room.

In the event of such a communication failure all loading operations shall cease until an effective means of communications has been established.

AUTHORITY: Orkney Islands Council, Department of Harbours, Harbour Authority Building, Scapa, Orkney KW15 1SD. *Tel:* 0856-3636. *Telex:* 75475. *FAX:* (0856) 3012. *Contact:* Captain R. C. Sclater, Director of Harbours.
Operator: Occidental of Britain Inc., Flotta Terminal, P.O.Box 14, Kirkwall, Orkney. Tel: Longhope 341.

AGENT: John Jolly, 21 Bridge Street, Kirkwall, Orkney Isles KW15 1HR. Telegraphic Address: "Jolly Kirkwall Telex", Telex: 75253. Tel: Kirkwall (0856) 2268 (24 hours answering service) and 3462. VHF call sign (Private frequency 161.25 mHz): Jolly.

SCRABSTER: 58.37 N. 03.33 W. (See Plan)

PILOTAGE: Not compulsory. Pilotage available for Pentland Firth and locally. Pilots can be contacted on Channel 16, working Channel 12.
ANCHORAGE: Excellent anchorage in bay, close to high land on North side. Good shelter.
MAX. SIZE: 5.2 m. draft, 2,500 d.w.t. can be accommodated at Ro/Ro berth.
VHF: See "Pilotage".
TUGS: None.
BERTHING: Ro/Ro Berth: Length 100 m., depth 6.5 m.
Inner Harbour: 2 wharves, length 30.5 m., depth 3 m.
Fishing Berths: Quay 300 m. long, depth 1 m.
CRANES: Mobile cranes up to 100 tons available.
SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro Berth available. See "Berthing".
STEVEDORES: Cargo worked 24 hours.
TANKERS: Vessels up to 2,000 d.w.t. can use Tanker Terminal.
FRESH WATER: Available.
FUEL: By road from Tanker Terminal, 24 hours notice required. Also from tanks (80,000 litres) on Ro/Ro lay-by.
REPAIRS: Engine and minor hull repairs can be undertaken.
AIRPORT: Nearest at Wick, 32 km. away.
HOLIDAYS: Usual U.K. holidays.
GENERAL: *Charts:* B.A. Charts No. 2162 and 1462.
Stores: Available.
Bonded Stores: Available at 48 hours' notice.
Developments: Proposed development will provide an extra 85 m. of quay space and 100 m. of berthing space.
AUTHORITY: Scrabster Harbour Trust, Harbour Office, Scrabster, Thurso, Caithness KW14 7UJ. *Tel:* 0847-62779/64618. *Telex:* 75449 Thurso G. *FAX:* (0847) 62353. *Contact:* Captain R.G.McKay, Harbour Master.

AGENT: Scrabster Harbour Trust, Shipping Agents, see above.

SEAHAM: 54.50 N. 01.19 W. (See Plan)

PILOTAGE: Not compulsory. Pilotage Service available with VHF watch on Channel 16 over tidal period. Call sign: Seaham Harbour Pilots. Tel: (091) 5813246.
ANCHORAGE: Good anchorage approximately 1 mile N.E. of North Pier Lighthouse. Shallow water and rocks to South of South Pier (Liddle Scars). Depth on bar at HWST 6.85 m.
RESTRICTIONS: The entrance to harbour is formed by North and South Piers and is 84.34 m. wide. South Dock gates are manned from 2.5 hours before HW to 1.5 hours after HW. Gateway to South Dock 19.81 m. wide.

No vessel can enter at LW and entrance should not be attempted during strong on-shore winds.
MAX. SIZE: *Largest Vessel:* 106 m. LOA, 16 m. beam and draft subject to tidal rise.
VHF: VHF watch on Channel 16 over tidal period and during office hours (0800 – 1800 hrs.) Monday – Friday. Working Channels 6 and 12.
TUGS: 1 tug with 8 tons bollard pull available.
BERTHING: *South Dock:* 8 berths. 625 m. quayage with cranage up to 100 tons capacity. Gravity spouts and conveyors for loading vessels up to 6,000 tons. 60 ton weighbridges with 18.4 m. platforms available. Railway connections.
North Dock: Used by fishing boats only.
CRANES: Five crawler cranes with capacity up to 35 tons.
BULK CARGO FACILITIES: Chute, conveyor and cranage handling facilities available for loading/discharging bulk cargoes from/to road transport.
SPECIALISED CARGO-HANDLING FACILITIES: *Container and Ro/Ro Facilities:* Area available for handling containers. 42 ton container handling forklift truck available.

STEVEDORES: *Working Hours:* Monday to Friday 0800 – 1200 hrs., 1300 – 1700 hrs. Overtime to be ordered by 1300 hrs.

Saturday and Sunday: Work at overtime rates can be arranged with 8 hour minimum period. Weekend overtime to be ordered by 1600 hrs. Friday.

Public Holidays: Overtime possible except New Year's Day, Christmas Day and Boxing Day.

MEDICAL: Hospital at Sunderland, distance 6 miles.
TANKERS: No facilities.
FRESH WATER: Available on quay.
FUEL: Available by barge or road tanker.
REPAIRS: Facilities available at Sunderland and the Tyne.
OPENING/CLOSING HATCHES: By crew.
AIRPORT: Newcastle Airport, 32 km. Teesside Airport, 40 km.
HOLIDAYS: *Local Holidays:* Port closes for two weeks in July/August and one week at Christmas.
POLICE/AMBULANCE/FIRE: Dial 999.
EMERGENCY CO-ORDINATION CENTRE:
Maritime Rescue and Search Centre. Tel: North Shields 091–2572691.
BANKS: Barclays, National Westminster, Lloyd's and Midland.
GENERAL: *Chart:* B.A. Chart No. 1627.
Weather: The prevailing winds are from the West.
Tides: Normal range in enclosed dock: 1.97 m. Spring range 4.42 m. Neap range 3.5 m.
Provisions: Available from local chandlers.
Storage: Transit shed of 1,394 sq.m. and warehouse space of 16,000 sq.m. Open storage of 10 acres also available.
AUTHORITY: The Seaham Harbour Dock Co., Seaham House, North Terrace, Seaham, Co. Durham SR7 7EU. *Tel:* Administration 091–5813877; Harbour Office 091–5813246; Security 091–5813320; *FAX:* 091–5130700. *Telex:* 537368 SEADOC G. *Contact:* D. Clifford, Managing Director; G. Hicks, Operations Director/Harbour Master; T. Elliott, Pier Master.

SHARPNESS and GLOUCESTER: 51.43 N. 02.29 W.

(See Plan)

The Port of Gloucester comprises the wet docks at Sharpness and Gloucester which are connected by a ship canal named "The Gloucester and Sharpness Canal".
PORT LIMITS: Sharpness Dock entrance.
DOCUMENTS:
1 Maritime Declaration of Health.
1 Crew's Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B.6.
3 Stores Lists.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate (British ships only).

In addition Manifests and Bills of Lading are usually sent to Agent direct from loading port.
PILOTAGE: Pilotage is compulsory. Masters of vessels bound for the Ports of Gloucester, Sharpness, Chepstow and Lydney requiring the services of a Pilot at the Barry Roads Station must give at least 24 hours notice of their intended arrival at the Pilot Station. Failure to give this notice could lead to a vessel being delayed. Draft and Summer d.w.t. are also required. Masters who expect their passage time to be less than 24 hours should send advice from their sailing port with d.w.t. tonnage, draft, speed and ETA. Masters of vessels bound for Chepstow should also state mast height above the appropriate water line and whether masts can be lowered. (Vertical clearance limited by Bridge to 52 ft. (15.8 m) above MHWS)

Vessels are boarded at Barry Roads by the Bristol and Gloucester Pilot Cutter which is equipped with VHF Channels 16, 6, 8, 9, 11 and 14. Radio contact with the Cardiff Pilot Cutter should be made not later than 1 hour before arrival at Breaksea Buoy. In fog ships sound "9" (4 longs, 1 short). Pilot replies the same. Masters can send ETAs direct to the Pilotage Agent, Sharpness. Tel: (0860) 232736.
Dock Pilots: Dock Pilots are available, not compulsory but advisable for berthing in Sharpness Dock, transit of the Sharpness Canal and in Gloucester Dock.
ANCHORAGES: Barry Roads afford good anchorage in moderate weather for vessels awaiting a Pilot.
RESTRICTIONS: 3 ft. (0.9 m.) water clearance over outer sill for vessels of maximum draft 21 ft. 6 in. (6.55 m.) Neap tides impose certain restrictions.

Beam	*Clearance Required*
Less than 10.36 m.	0.61 m.
10.36 m. – 13.71 m.	0.76 m.
13.72 m. – 16.76 m.	0.91 m.

Note: The River Severn at Sharpness dries out at LW.
MAX. SIZE: Maximum Length – no restriction. Maximum beam – 55 ft. (16.76 m.) Maximum draft – 21 ft. 6 in. (6.55 m.) fresh water.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Niton Radio, Lands End Radio, Ilfracombe Radio.
VHF: Sharpness Radio Channels 16, 14 and 9. Range normally within pilotage waters only.
TUGS: *(River):* Larger vessels normally pick up tugs off Avonmouth i required by Pilot. *(Dock Tugs):* Not suitable for river work. 3 tugs available in Sharpness Dock and for use between Sharpness and Gloucester if required. All tugs take ships lines.
BERTHING: Max. draft 21 ft. 6 in. (6.55 m.) Fresh Water. Range of dock level 4 in. (0.1 m.)
Available Berths: 10 to 14 berths depending on ship length. This includes a scrap berth. Available length of Quay – 12,000 ft. (3,660 m.).
Cargo Equipment and Methods: Cranes 5×3 tons, 5×6 tons, all Portal and 1 Scotch Derrick of 32 tons. 3 Mobile Cranes, Grabs, Slings and Pallets, etc. Load/discharge by shore gear.
BULK CARGO FACILITIES: 1 grain silo, 1 cement silo.
Belt driven elevators provided as required.
1×300 t.p.h. mobile hopper for handling fertiliser into 4×2,500 ton storage bays.
BRIDGES: 16 swing bridges between Sharpness and Gloucester. Mast height restriction 32 m. (105 ft.)
STEVEDORES: British Waterways Board.
MEDICAL: Absolutely necessary for Agent to have as much notice as possible if any medical attention is required. All facilities available.
DENSITY: 1000/1003.
FRESH WATER: Available by stand pipe, 20 t.p.h.
FUEL: Through Agents, 12 hours notice, most grades available.
FIRE PRECAUTIONS: According to local laws available on request.
CONSULS: See "Bristol".
REPAIRS: All types of deck and engine repairs are possible.
DRY DOCK: 360 ft. by 47 ft. by 14 ft. over blocks.
SURVEYORS: Most Societies are available.
GANGWAY/DECK WATCHMEN: Ship's personnel, but watchmen can be arranged if necessary.
HATCHES: Opened by ship's crew.
CUSTOMS ALLOWANCES: As for other U.K. ports.
REPATRIATION: All arrangements through Agents.
AIRPORT: London or Birmingham within 2 hours. Local taxi service available.
TIME: BST is GMT plus 1 hour. GMT in Winter months.
HOLIDAYS: Easter (varies). May Day. Spring Bank Holiday (last Monday in May). August Bank Holiday (varies, usually last Monday in August). Christmas Day (25th December), Boxing Day (26th December). Work can usually be arranged on these holidays although unusual to work 25th/26th December.
POLICE/AMBULANCE/FIRE: Telephone 999 ask for service required.
TELEPHONE: No ship to shore connection. Public telephone kiosks available.
SERVICES: Taxi. Laundry. Ship chandlery.
SHORE LEAVE: Possible.
IDENTIFICATION CARDS: Not necessary unless being repatriated.
REGULATIONS: British Waterways Board Byelaws 1962.
GENERAL: *Gloucester and Sharpness Canal and Gloucester Dock* Maximum size of vessel: Length 205 ft. (62.5 m.), beam 31 ft. (9.45 m.) draft 11 ft. 6 in. (3.5 m.) fresh water. Vessels exceeding these dimensions may be considered subject to Harbour Master's approval.
AUTHORITY: British Waterways Board, Dock Office, Sharpness Docks Gloucestershire GL13 9UD. *Tel:* (0453) 811644. *Telex:* 43376 BWB SDS G. *FAX:* (0453) 811990. *Contact:* Mr.M.Vale, Port Manager Captain G.A.Boyack, Harbour Master. M.D.Stilliard, Asst. Harbour Master.

SHOREHAM: 50.50 N. 00.15 W.

(See Plan)

DOCUMENTS and all general information, refer to "London". Distance from London, 80 km.
PILOTAGE: Pilotage is compulsory for all vessels over 50 m. LOA. Send ETA 12 hours and 2 hours in advance, including max. draft. Pilot boards within 2 nautical miles of harbour entrance. Tel: Brighton (0273) 592455 VHF: Channels 16 and 14. Hours: Tidal hours.
ANCHORAGE: Off Harbour. Depths as per English Channel Charts.
RESTRICTIONS: No night restrictions. Locks manned 4 hours either side of HW. According to size and draft these times can be extended by prior arrangement.

Main entrance channel, 122 m. wide, leads into a 91.4 m. channel to the Eastern arm.

Dimensions of Prince Philip Lock: 113.9 m. length, 17.3 m. width.
MAX. SIZE: *Canal:* Length 105.9 m., beam 16.4 m., draft 6.7 m. (subject to tide). Vessels over 103 m. are subject to the Harbour Master's approval.
Western Arm: Length 82.3 m., beam 14.3 m., draft subject to tide.
East Arm: Max. LOA 120 m. Max. Draft 6.4 m., subject to tide and Harbour Master's approval.
HEALTH: See "Health – All Ports" before first UK port.
RADIO: Niton Radio/Northforeland Radio. ETA to Shoreham Harbour Master 24 hours prior to arrival.
VHF: When within VHF range advise Harbour Master (via "Shoreham Harbour Radio"), ETA, draft, beam, LOA and of any circumstances which may affect seaworthiness or handling capacity of the vessel.

Port Operation and Information Service manned continuously, contact by VHF calling Channel 16, working Channel 14. Station is situated on the middle pier. Tel: Brighton (0273) 592366.
TUGS: One tug (Bollard Pull 10 tonnes). Tug lines used for which no extra charge. Communications between vessel and tug take place on VHF Channel 11.

BERTHING: See "Restrictions".

Bulk wine terminals capable of handling 1,653,462 litres of wine are vailable.

A grain silo terminal with a storage capacity of 13,000 tonnes has een constructed within the canal.

A Ro/Ro berth has been constructed at the East end of Aldrington asin.

TEVEDORES: Reasonable ETA is sufficient for gangs to be called.

EDICAL: All facilities available.

ANKERS: Texaco in the Canal.

ENSITY: Approx. 1025.

RESH WATER: Available at most berths.

UEL: Available by road tanker.

ONSULS: Denmark.

EPAIRS: Minor repairs possible.

URVEYORS: Available locally.

ANGWAY/DECK WATCHMEN: Recommended.

ATCHES: Opening and closing by crew.

EPATRIATION: Possible.

IRPORT: Gatwick Airport.

OLICE/AMBULANCE/FIRE: Dial 999.

ELEPHONES: There are no arrangements for placing telephones oard ship.

ANKS: Barclay's, National Westminster, Lloyd's and Midland Bank all ave branches locally.

TORING: No restrictions. Stevedores not required to load stores.

HORE LEAVE: Possible.

UTHORITY: Shoreham Port Authority, Harbour Office, Albion Street, outhwick, Brighton BN4 4ED. *Tel:* Brighton (0273) 592613. elex: 878178. *FAX:* (0273) 592492. *Contact:* Captain J. Robertson, arbour Master. P. Lacey, General Manager.

ILLOTH: 54.52 N. 03.24 W **(See Plan)**

ORT LIMITS: A vessel is considered to be an "arrived vessel" for the urposes of stemming when she arrives at the pilot station off orkington (see Admiralty Chart No. 1346). Laytime normally ommences when the vessel berths in the New Dock, Silloth.

OCUMENTS: Normal U.K. requirements.

ILOTAGE: Compulsory for all vessels except for those qualifying for pecial exemption. Vessels should send their ETA to local Agents or to e Dock Master, Silloth, at least 12 hours before arrival. Pilot boat Medway Patrol" is stationed off Workington when vessels are expected nd listens out on Channels 16, 14 or 12 VHF. Pilot boards vessels etween 2.5 hours and 1.5 hours before HW, Silloth.

NCHORAGES: Vessels may anchor at the pilot station in good eather, but are advised to seek shelter in Ramsey Bay, Isle of Man or igtown Bay in adverse weather conditions.

ESTRICTIONS: The port lies in a relatively sheltered position in the olway Firth, and in consequence, access during adverse weather is ainly governed by the practicability of boarding and landing Pilots off orkington. Vessels over 75 m. in length do not normally enter the port t night.

AX. SIZE: *Neap Tides:* Length 90 m., beam 15 m., draft 4 m.
pring Tides: Length 90 m., beam 15 m., draft 6 m.

Typically, the port is used by vessels of between 500 tonnes and ,500 tonnes deadweight.

HF: A "Port Operation" and Information Services operates on Channels 16 and 12 from 2.5 hours before HW, Silloth, call sign "Silloth Harbour Radio".

UGS: There are no tugs available at the port.

ERTHING: The port comprises two docks:

The outer, Marshall Dock is tidal and contains no berths.

The inner, New Dock is enclosed by dock gates which are opened rom 1 hour before to 1 hour after HW. Minimum depths in the New Dock are maintained at 4 m. on Neaps and 6 m. on Springs. The specific ravity of the water in the dock is normally about 1.022.

Cargo Berths: The New Dock contains 7 berths:

Berth No. 1: A "single user" bulk grain import berth operated by Carr's Flour Mills Ltd. Suction elevators, 60 tonnes p.h.

Berth No. 2: A general cargo berth with limited quay space.

Berth No. 3: A specialised bulk molasses import terminal operated by Carr's Flour Mills Ltd. and general cargo berth.

Berth No. 4 'A': A "common user" import terminal for bulk agricultural materials (mainly animal feeds) operated by D. A. Harrison & Co. Suction elevators and grabs; 100 tonnes p.h., automated handling and storage.

Berth No. 4 'B': A specialised import/export bulk cement terminal operated by D. A. Harrison & Co. 100 tonnes p.h., automated handling and storage of cement powders.

Berth No. 5: Main general cargo berth. Mobile cranes and elevator, heated-covered storage.

Berth No. 6: Specialised livestock import terminal operated by Frans Buitelaar Ltd., under the control and supervision of M.A.F.F. officials. Lairaging facilities for 800 cattle. The berth can also be used for general cargo.

Berth No. 7: General cargo berth for small vessels of up to 50 m. in length.

BULK CARGO FACILITIES: See "Berthing".

CRANES: 4 × 30 tonne mobile cranes are permanently available in the port. Larger or additional cranes can be conveniently hired in. Ship's gear is never used.

STEVEDORES: D. A. Harrison & Co., Anvil House, West Newton, Aspatria, Cumbria. Tel: (06973) 20529. Telex: 64493. Working hours in the port are unlimited 24 hours per day, 365 days per year.

Storage: Stevedores D.A. Harrison & Co. also operate a large covered storage facility adjacent to the Port with a capacity of more than 40,000 tonnes, and can provide inland road transport to and from this facility to all parts of the United Kingdom using own vehicles.

FRESH WATER: Available at all berths.

FUEL: Fuel oil can be loaded from road tanker.

REPAIRS: Any type of repair which does not require dry dock facilities can be carried out by local contractors.

DRY DOCKS: None.

HATCHES: Always handled by ship's crews.

AIRPORT: Nearest airports are Carlisle, 39 km., Newcastle 140 km., Prestwick 225 km. and Manchester 260 km.

POLICE/FIRE/AMBULANCE: Police: Tel. 31313 or 09002422; Fire: Tel. 999; Ambulance: Tel. 31309 or 999. The nearest public telephone is at the entrance to the docks.

BANKS: The Midland Bank, Station Road, Silloth. The National Westminster Bank, Eden Street, Silloth.

AUTHORITY: Associated British Ports, Dock Office, Silloth Docks, Cumbria CA5 4JQ. *Tel:* (06973) 31358 or 31165. *FAX:* (06973) 31358. *Cables:* Dock Office, Silloth. *Contact:* Captain C.Puxley, Dock and Marine Superintendent.

SOUTHAMPTON (Including Fawley): 50.54 N. 01.24 W. **(See Plan)**

DOCUMENTS:
1 Maritime Declaration of Health.
1 Crew's Effects List.
2 Ship's Reports by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each Passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British ships only.
Load Line Certificate.
Safety Equipment and Safety Construction Certificates.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.

In addition, Manifests and Bills of Lading are usually sent to Agent direct from loading port.

PILOTAGE: Pilotage in the Port of Southampton Competent Harbour Authority area (see "Plan") is compulsory, except for Pilotage Exemption Certificate holders, naval vessels and other small exemptions.

In addition to 48 hours notice to local Agent, advise Southampton VTS Centre as appropriate, ETA 48 hours, and again 2 hours to 3 hours immediately prior to arrival. The pilot boarding areas are serviced by fast launches (black hulls, orange wheelhouses) under the control of the VTS Officer at the VTS Centre, Associated British Ports, Berth 37, Eastern Docks, Southampton. The VTS Officer keeps a continuous watch on VHF Channel 16, call sign "Nab", "Sturbridge" or "Lepe Pilot" as appropriate. Working frequency Channel 9 only. No medium frequency facility, M/F and R/T messages via Niton Radio. VTS Centre Telephone No. (0703) 632345/6. Telex No. (0703) 477161.

The launches only put to sea when required. Failure to send an accurate ETA 2 hours to 3 hours before arrival could cause delay to the offending vessel.

Strict compliance with the requirements of the Merchant Shipping (pilot ladders) Safety Rules is requested by the Pilots who may refuse to board vessels with unsatisfactory and dangerous ladders. Manropes are required. Ladders should reach to approximately 1.0 m. from the water, each rung resting firmly against the ship's side; and a good lee provided whilst making approximately 5 knots to 7 knots headway.

Eastern Outer Limit: All vessels over 150 m. (492 ft.) LOA, and all vessels carrying LPG/LNG in bulk (i.e. in tanks which form part of the permanent structure of the vessel), pilot boarding point is 2 miles N.N.W. of Nab Tower (i.e. New Grounds Buoy). Vessels exceeding 70,000 d.w.t. may board Pilots 3 miles South of Nab Tower by arrangement. (Note: Vessels having carried cargo referred to above, and which have not been rendered gas free or the cargo spaces completely inerted, will be subject to the same conditions as specified above).

Eastern Inner Limit: All other vessels for which compulsory pilotage applies not specified above, the pilot boarding point is in the vicinity of the North Sturbridge Buoy area.

Western Limit: All vessels for which compulsory pilotage applies, the pilot boarding area is in the vicinity of the West Lepe Buoy in the West Solent.

Voluntary/Optional Pilotage: West Solent including the Needles Channel. A facility is available by prior arrangement to engage a Pilot on a voluntary/optional basis from the Needles Fairway Buoy to the Western Compulsory Pilotage Limit of the Port of Southampton CHA pilotage area.

Voluntary/Optional Pilotage: East Solent from Nab Tower to the Eastern Inner Limit and vice-versa. A facility is available, by prior arrangement, to engage a Pilot on a voluntary/optional basis for those vessels under 150 m. (492 ft.) LOA to/from the Inner Compulsory Pilotage Limit in East Solent.

GENERAL NAVIGATION: A VTS Officer, responsible to the Harbour Master Southampton, maintains a continuous watch in the VTS Centre (Berth 37), call sign "Southampton VTS". He is to be informed prior to any movement to, from or within the port area, and will give information on the movement of other vessels.

Harbour radar information and guidance will be given on request. The radar reference line shown on the Admiralty Charts is superimposed on the Harbour Radar displays. Particular attention should be paid by Masters to the designated "Reporting Points" marked on the Admiralty Charts. Reports should be made on VHF to "Southampton VTS", to enable the proper identification and co-ordination of the ship movement, to be made to the benefit of all mariners navigating within the Solent area. This applies equally to naval and non-compulsory vessels.

The following VHF Channels are operated within the port:
Southampton VTS: Channels 16, 14, 12, 9, 18 and 20.
Harbour Patrol Launch (call sign S.P.): Channels 16, 14, 12, 9 and 6.
Southampton Pilot Launches (call sign Nab/Sturbridge/Lepe Pilot as appropriate): Channels 16, 14, 12, 9 and 6.
Tugs when berthing vessels: Channels 71 or 74.
Esso Petroleum Terminal, Fawley: Channels 16, 14 and 19.
BP Oil UK Ltd, Hamble: Channels 16, 19, 46 and 71.

A patrol launch (Harbour Master flag by day, all-round blue light by night) is controlled by the VTS Officer Southampton for pollution detection and keeping channels clear of pleasure craft for the passage of large vessels.

Vessels (a) drawing more than 10.5 m., (b) more than 288 m. in length, and (c) or more than 100,000 d.w.t., exhibit a large black cylinder by day and 3 vertical red lights by night. Vessels showing these signals, and LPG vessels, are not to be passed or overtaken within channel limits between the "West/East Bramble" and "Hook" Light Buoys; these vessels are considered to be constrained by their draft or restricted in their ability to manoeuvre, and may not be able to comply with the Collision Regulations. Will indicate inability by 5 short blasts on the whistle. "Clear Channel" control is exercised by the VTS Officer at the VTS Centre, Associated British Ports, Berth 37, Eastern Docks, Southampton.

ANCHORAGES: The Thorn Channel has a limited depth of 12.6 m. at low water datum. Up to 7 vessels, other than LPG vessels (only 3 LPG) of under 91.4 m. in length, are permitted with prior permission to anchor out of the channel to the East of the "Hook" Buoy in the designated Small Ships Anchorage, the limits of which must be strictly observed. Three numbered anchorages are available in an emergency for vessels not exceeding 168 m. in length in Fawley Reach, where vessels must moor to two anchors. Permission to anchor, including within the Small Ships Anchorage and numbered anchorages, must be obtained from the VTS Officer, Southampton VTS Centre.

Also see "Notices".

APPROACHES:
(a) Prolonged high barometric pressure or strong N.E./N.W. winds may reduce predicted tide levels by 0.45 m. – 0.6 m.
(b) Deep drafted vessels enter via the Nab dredged channel. The tidal currents set at almost 90° to this channel, at certain stages of the tide, and, as it is marked by buoys on one side only, care must be taken to keep within the confines of the channel. At its Northern end the channel swings about 45° to the West, but it is not marked on either side.
(c) When passing Portsmouth, ships should be prepared to encounter crossing traffic to and from that port.
(d) The most difficult part of the navigation between Nab and Fawley is that between Prince Consort Buoy, Cowes Roads, Black Jack Buoy and Calshot, particularly for VLCCs on maximum draft which have to take a wide sweep down to East Gurnard Buoy, before making a 145° starboard turn into Western approach channel which narrows to 305 m. Tidal currents in this area are somewhat uncertain but can reach up to 3.5 knots on a Spring ebb tide and 2.5 knots on a Spring flood tide. In Summer many yachts and other small pleasure craft are encountered. The closest contact should be maintained with Southampton VTS.
(e) VLCCs are not to enter the Thorn Channel on a flood tide when the wind is between West and S.W. and in excess of 30 knots. The Pilot will board VLCCs with the latest weather report and will advise Masters accordingly.
(f) It is also important, before the VLCC enters Thorn Channel, that Southampton VTS is contacted to confirm that no ship which, by virtue of its size or draft, could interfere with the safe navigation and manoeuvring of the VLCC, will be allowed to enter the main channel between Cadland and Prince Consort Buoys after the VLCC has entered this channel.

MAX. SIZE: The largest passenger and container vessels call regularly at Southampton. Tankers: Fawley can accept partly loaded VLCCs up to 14.9 m. draft.

HEALTH: See "Health – All Ports" before first UK Port.

TUGS: 2 firefighting/anti-pollutant tugs are permanently stationed at Fawley. During loading operations at Hamble, an anti-pollutant and a firefighting tug are standing by. If more than 2 tugs are required, it should be noted that weekend requirements have to be advised to the tug operators not later than 1530 hrs. on Friday of each week. If a vessel requires more than 2 tugs and is due to arrive at Fawley between 0001 hrs. Saturday and 0900 hrs. Monday, ETAs must be submitted well in advance of 1530 hrs. on the Friday prior to arrival. It is usual to use the wires provided by the tugs for towing.

BERTHING: The Pilot boarding the ship at the Sea Station or anchorage will also berth the ship. Non-compulsory vessels can obtain or disembark a Pilot in the vicinity of the "N.W. Netley" or "Hook" Buoys by contacting "Southampton Pilot" on VHF.

	31-33	9.1	29.8	263	879
	34-36	9.1	29.8	484	1590

Other berths are available. Lesser draft berths not shown. The depths of water are maintained as far as practicable, but are subject to variation and are not guaranteed.

* To find the depth of water in the berths add the tidal rise to the depths shown in the above table.

† Chart datum is approximately the lowest low water level.

BULK HANDLING FACILITIES: Grain handling at Berths No. 36, 47, 101, 102 and 109.

Berth 36: Southampton Grain Silo: 8×1,600 tonnes capacity cells and 4 cells with total capacity 15,000 tonnes.

Receiving rate by truck 500 t.p.h. 1×1,000 t.p.h. shiploader available with travel of 135 m. (443 ft.).

Berth 47: Continental Grain: 16×1,000 tonnes silos. 1×1,000 t.p.h. shiploader with travel of 220 m. (720 ft.).

Western Docks: 1×32,500 tonne grain silo.

Ro/Ro facilities at Berths No. 105 and 201 – 202.

Scrap metals handled at Berths No. 43 and 44 by 2×10 ton cranes with grabs.

CRANES:

Type	*No.*	*Capacity in tonnes*
Container cranes	6	Up to 50
Quayside cranes	26	Up to 10
Floating crane	1	200
Mobile cranes	2	10

MEDICAL: Doctors and hospital facilities available. Agent should be advised in advance of any medical attention required.

An organisation exists for hospitalisation of sick seamen from vessels off Cowes, Isle of Wight. Arrange through Niton Radio, Nab, Needles or Southampton Pilot or through vessel's Agent. Minimum delay to vessel.

TANKERS: Esso Marine Terminal, Fawley.

Cautionary Advice: All ships berth at Fawley stemming the tide, i.e. starboard side to berth on flood tides, port side to berth on ebb tides. Because of the "double high water" feature of the port the ebb tide is of short duration 3.75 hours, compared with 9.0 hours of flood over each tidal period. Therefore, most ships swing before berthing and berth starboard side to.

For VLCCs there is a turning width of about 1.5 ship's lengths off Berth No. 5 which is the Pilots' preferred swinging position. Because of these tight turning conditions it is VERY IMPORTANT that:
(a) The ship is in the correct position in relation to the channel before commencing to swing. For this the Pilot uses the 326°–327° leading lights shown on the chart.
(b) THE SHIP MUST BE STOPPED OVER THE GROUND BEFORE COMMENCING TO SWING. For several reasons the Pilots prefer to swing to port, i.e. to the West and towards the jetty and a serious accident has occurred because a VLCC was not stopped over the ground whilst swinging and collided with the jetty.

In order to protect both ship and jetty, equipment to positively indicate to the ship that it is stopped over the ground is being provided on the jetty. Until this is installed VLCCs MAY BERTH PORT SIDE TO ONLY, i.e. without swinging before berthing. The doppler speed of approach equipment provided on the jetty is not effective in measuring the ship's speed parallel to the berth after it has passed a point about 500 m. South of Berth No. 5 and is therefore of no value in determining if the ship is stopped over the ground when off the berth. Ship's doppler logs are sometimes unreliable when a ship is manoeuvring with low bottom clearance and with the assistance of tugs.

Procedures: On closing the berth, either after swinging or when berthing port side to, advice as to the bodily speed of approach will be provided for all VLCCs using Berth No. 5 over UHV pocketfone, one of which is also issued to the Pilot acting as communications officer. This information is also displayed on a visual digital read out with 100 m. range in normal visibility for the direct use of the pilot. The MAXIMUM IMPACT VELOCITY SHOULD NOT EXCEED 8 cm./sec. (15 ft./min.) normal to the jetty faceline.

The doppler speed of approach equipment can also be used to provide ccurate speed along the channel axis information up to a point when hip is about 500 m. South of Berth No. 5.

Prior to arrival off the berth, mooring lines should be lowered to 1 m. bove the water and the winches of the first ropes on the mooring plan rovided by the Pilot to be in gear ready to pay out the moorings to the ope running launches. Prevailing winds are off berth and the emphasis s on the use of springs and breast lines. The number used will depend n the size of the ship, condition of mooring lines and positions of irleads, but generally minimum requirements are 2 spring lines and breast lines of wire at each end. Additional head and stern lines may e required. Mooring plans are taken on board VLCC's by the Pilot. hese must be closely followed.

Backsprings are always first lines ashore.

Tugs on hooks usually let go and push up on offside during the ooring operation.

pproach: Terminal is approached by either the Nab or the Needles. he Nab with a dredged channel of 43 ft. below chart datum admits the rger vessel. Double HW with an average tidal range of 13.25 ft. Springs) and 7.75 ft. (Neaps). Rate of Spring tide 2 knots, Neap tide knot.

Anchoring in the fairway adjacent to the terminal requires permission om Southampton Harbour Authorities. Approval will only be given to essels of 300 ft. or under. Usual practice is not to moor with both nchors. This applies to Controlled Anchorage only. Depth of 41 ft. LW available. Anchorages in the Solent and Cowes Roads are more enerally used. Good holding ground with depth of 50 ft. LW.

ccommodation: Terminal has 2 approach trestles, 1,900 ft. long leading eaward to the main pierhead trestle with its 9 berths. This trestle is 575 ft. long and lies parallel with the channel. 5 main ocean berths e on the seaward side and the 4 coastal berths on the landward side. imensions of the berths are as follows:

Berth	*Length of 'T' Head*	*Distance between centres*
No. 1	222 ft.	800 ft.
No. 2	222 ft.	800 ft.
No. 3	222 ft.	800 ft.
No. 4	222 ft.	800 ft.
No. 5	300 ft.	1,000 ft.
No. 6	80 ft.	395 ft.
No. 7	80 ft.	400 ft.
No. 8	80 ft.	400 ft.
No. 9	100 ft.	440 ft.

quipment: Suitable cargo hose handling equipment is positioned at ach of the 9 berths. To facilitate the handling of mooring lines, air owered hoists are available at each of the berths. Mooring boats are attendance for running lines. VLCCs are required to meet minimum tandards with regard to their mooring equipment. All water ballast ontaining oil or likely to contain oil must be pumped ashore. ×67,000 barrel ballast tanks are provided on shore. With the approval f the Terminal Manager minor repairs can be undertaken whilst ischarging/loading at the Terminal. Major repairs can be undertaken at nchor or at Southampton Docks. Working is continuous throughout. acilities installed at the berths and available for use by tankers include esh water, bunkers, steam, compressed air, nitrogen. Ship's stores of l kinds are available in any quantity at Southampton. All deliveries of tores must be made by water transport. For quarantine purposes essels are either boarded prior to berthing or immediately after berthing. wo firefighting tugs of 2,530 h.p. are permanently stationed at the arine Terminal. Additional tugs can be provided on notice from outhampton.* All tugs are equipped with Radio Telephone and operate n Channels 8 or 10 of the Port Operations Service. Provision of shore team is made in exceptional circumstances.

*A standby charge is levied on vessels over 16,000 d.w.t.

Pilotage: Compulsory. Inward-bound vessels embark Pilots at the Nab r Needles entrances. Tankers up to 250,000 d.w.t. berthed at any time during the day or night subject to tidal conditions.

Berthing:

1. Cautionary Advice:

Prevailing strongest winds are off berth and a considerable number of large container ships, passenger ships and ferries pass the terminal at close quarters. Drift-offs and excessive surging have been experienced at Fawley berths and have caused damage. It is therefore very important that ships, particularly deep draft or high freeboard ships, pay particular attention to moorings.

2. Mooring Requirements and Procedures:

In the case of VLCCs, minimum mooring rerquirements are laid down. These preclude mixed moorings except under special circumstances agreed prior to acceptance of the ship.

Moorings reeled on winches must be held by brakes hardened up to full torque. Self-tensioning devices are not allowed. The moorings must be reeled in such a direction as to assist the brake, not oppose it. Where split drum winches are used, a maximum of two layers should be on the working drum when the mooring reaches the shore bollards or mooring hooks. Brakes must be in good condition and certificate of brake holding power should be available.

VLCCs should strictly adhere to requested order of running. This is done by motor launches.

There are limits applicable to freeboard both from a windage point of view and also because of the upper reach limit of the hard arms. These together with maximum operable wind speed will be discussed with Masters of VLCCs by a terminal supervisor shortly after the ship berths.

Special attention must be paid to ballasting of permanent ballast spaces and use of over-deck systems into emptied cargo tanks during cargo discharge and, if necessary, and with the agreement of terminal supervision, into emptied cargo tanks using the cargo system, in order to keep the freeboard within reasonable limits.

The ship must be held firmly against the fenders at all times. It is unnecessary and dangerous to slack away lines, even if they appear taut, if the ship is not against fenders.

Rules for Berth Planning: The following limitations are now in force when planning berth movements.

1. Berth size restrictions:
Berth No. 1: Max. size of vessel 50,000 tonnes displacement.
Berth No. 2: Max. size of vessel 82,000 tonnes displacement.
Berth No. 3: Max. size of vessel 65,000 tonnes displacement.
Berth No. 4: Max. size of vessel 176,000 tonnes displacement.
Berth No. 5: Max. size of vessel 240,000 tonnes displacement.
Berth No. 6: Max. size of vessel 3,500 tonnes displacement.
Berth No. 7: Max. size of vessel 3,500 tonnes displacement.
Berth No. 8: Max. size of vessel 3,500 tonnes displacement.
Berth No. 9: Max. size of vessel 8,000 tonnes displacement.

2. Vessels on Berth 6 must not exceed 330 ft. (100.5 m.) in length.

3. Distance between vessels secured on any berths must be 100 ft. (30.48 m.) or more. (This is required under local by-laws for fire regulations.)

4. Distance allowed for berthing vessels must not be less than vessel's length + 40% length. (Agreement with Pilots).

5. Maximum draft of vessels:
Berth No. 1 33 ft. 03 in. (10.2 m.)
Berth No. 2 41 ft. 00 in. (12.6 m.)
Berth No. 3 41 ft. 00 in. (12.6 m.)
Berth No. 4 49 ft. 00 in. (14.9 m.)
Berth No. 5 49 ft. 00 in. (14.9 m.)
Berth No. 6 18 ft. 06 in. (5.6 m.)
Berth No. 7 18 ft. 06 in. (5.6 m.)
Berth No. 8 18 ft. 06 in. (5.6 m.)
Berth No. 9 21 ft. 08 in. (6.6 m.)

These drafts are subject to change and are therefore updated quarterly.

6. Tide charts are to be prepared for Nab and Thorn Channels for vessels over 40 ft. (12.19 m.) draft.

7. Check product can be loaded on nominated berth.

8. Check product or ullage availability before berthing vessel.

9. Check that maintenance will not interfere with operation of berth.

10. No vessels to berth on Ocean Berths with mean wind speed above 30 knots from N.W. through to S.W. to S.E.

11. No vessels to berth on Coaster Berths with mean wind speed above 30 knots from N.W. through to S.W. to S.E.

12. Ensure liaison maintained with S.P.R. regarding sailings coinciding with movement of vessels over 70 knots (hovercraft).

Fawley Coastal Berth Manoeuvring Requirements: Fawley Coastal Berths comprise Berths 6, 7, 8 and 9 and are situated on the inside (Western Side) of the Marine Terminal complex.

Before any manoeuvring is undertaken on these Berths the following requirements are to be followed:

1. Marine Controllers are to be informed of vessel manoeuvring plan.

2. Vessels without bow thruster capability should berth stemming the tide.

3. All vessels over 61 m. (200 ft.) LOA must have the assistance of the Esso mooring boat when:
(a) berthing.
(b) sailing if berthed starboard side to.

4. Vessels over 85 m. (279 ft.) in length will not normally swing West of a line between Fawley Buoy and the S.E. of Fawley Jetty. Exceptions may be made only *after* consultation between Terminal and the Pilot or Master of the vessel. Due account must be made of wind, tide, weather and time. Only then will vessels be permitted to swing West of that line referred to above.

5. Vessels over 85 m. (279 ft.) LOA without bow thruster capabilities must have in attendance when berthing port side to or sailing after being starboard side to:
(a) Esso mooring boat, *and one tug.*

Such vessels when berthing starboard side to or sailing after being port side to must have in attendance:
(a) Esso mooring boat.

They may also be required to have a tug if prevailing conditions require it.

6. Vessels of 91.5 m. (300 ft.) LOA or more when berthing at Nos. 6, 7 or 8 to have at least one adjacent berth vacant during the berthing movement.

7. No vessel to berth when wind is from South to West with mean wind speed above 30 knots, i.e. within S.W. quadrant.

8. The Esso mooring boat will be made available on request to assist with any vessel not covered in these instructions. Its communication Channel is 71 (74 in an emergency). These boats must not be used for towing.

Grade/Rates:

MAIN BERTHS:

Grade	*Line*	*Berths*	*Rate* (t.p.h.)
Plus Gasoline	321	1, 2, 3, 4	1,000

B.P. Terminal, Hamble. Situated immediately opposite Fawley; has one main berth on the outside face, having a depth of 31 ft. 6 in. below PLWD alongside and in the approaches. The berth face is 250 ft. long, so head or stern moorings are taken to 2 mooring buoys at the N.W. end of the berth. They are hook buoys; no lashings or mooring shackles are needed.

Facilities and services as for Fawley with the exception of transport, no transport being available within the depot. Ship's personnel are allowed to walk through the installation to Hamble Village where public transport to Southampton is frequent.

All grades of fuel and diesel bunkers and fresh water are available. Also see "Notices" and "Late Reports".

BUNKERS AND WATER: All grades of fuel oil and diesel oil are available and water is piped on all berths. Bunkers and stores can also be obtained by barge in Cowes Roads anchorage, but water is not readily obtainable there.

CONSULS:

Country	*Status*	*Address/Telephone No.*
Belgium	Consul	c/o A.C.T. Services, Richmond House, Terminus Terrace, Southampton, SO9 1GG Tel: 634433 Telex: 477622
Denmark	Vice-Consul	c/o Ackerleys, Canute Chambers, Canute Road, SO9 1FJ Tel: 227171
Dominican Republic	Consul	Mascot Ships Agents, c/o MacIntyre Scott & Co. Ltd., West Bay Road, SO9 4NW Tel: 634033
Finland	Vice-Consul	c/o Sandell Bros. Ltd., Ryde Terrace, SO9 2UL Tel: 30966
France	Consular Agent	R. H. Hammond Ltd., 236 Winchester Rd., SO1 2SB Tel: 772442
Germany (Federal Republic)	Consul	c/o Wainwright Bros. Bowling Green House, 1 Orchard Place, SO1 1BR Tel: 223671
Greece	Vice-Consul	c/o Keller Bryant & Co. Ltd., 21-22 Queens Terrace, SO9 3FD Tel: 28566
Italy	Consular Agent	c/o Herbert Ferryman Ltd., Galen House, 1-9 Oakley Road, SO9 7AT Tel: 788011
Netherlands	Consul	c/o Macship Agencies Ltd., 4th Floor Havelock Chambers, Queens Terrace, SO1 1BP Tel: 229051
Norway	Consul	c/o G. Haswell & Co. Ltd., 28 Queen's Terrace, SO9 2UJ Tel: 23555
Philippines	Consul	Mann & Son (London) Ltd., Test Road, Eastern Docks, Southampton, Tel: 637233
Spain	Consul-General	Richmond House, (First Floor) Terminus Terrace, College Street, SO1 1EJ Tel: 35835
Sweden	Consul	c/o Meadows Freight, 12-14 Queens Terrace Tel: 225033

REPAIRS/DRY DOCKS: All ship repairs can be effected. Largest dr dock is 1,141 ft. long overall, 132.5 ft. wide and has 34 ft. over the blocks. One other dry dock maintained within the Port by Vosper Sh Repairers Ltd.

SURVEYORS: Lloyd's Register. Tel: 220353.
Salvage Association, Tel: 227983.
Topmarine, Tel: 220585.
Murray Fenton & Associates, Tel: 229787.
International Shipping Trustees (UK) Ltd. Tel: 37596.

OIL POLLUTION: Southampton Water is an international yachting centre and has many holiday beaches on its shores. Consequently oil pollution is treated very severely and heavy fines are imposed o offenders.

The Esso Refinery, Williams Shipping and BP Oil Response Base operate a clean-up service, the full economic cost of which is billed t the offending ship.

CUSTOMS ALLOWANCES: By statute, crews of vessels in port ar allowed 25 cigarettes per day per man. 0.3 litres (0.5 pint) of spirits an 1 bottle of table wine per day per man.

AIRPORT: Eastleigh Airport. Air U.K. have flights to Guernsey an Jersey.

TIME: British Standard Time is GMT plus 1 hour, reverting to GMT i Winter months.

HOLIDAYS: Good Friday (variable date); Easter Monday (variable date May Day; Spring Bank Holiday (variable date); Autumn Bank Holida (variable date); Christmas Day (25th December); Boxing Day (26t December); New Year's Day (1st January).

POLICE/AMBULANCE/FIRE: Dial 999 from any telephone and ask t service required.

SHIP SUPPLY SERVICE: Williams Shipping Company (Fawle Limited, Clyde Buildings, Town Quay, Southampton SO1 1L Tel: (0703) 225271. Telex: 47436.

Services Supplied: Fast launches for personnel ship to shore, essenti small packages and/or sick crew members.

D.O.T. approved to operate; not more than 6 passengers, are Swansea to Selsey, not more than 5 miles offshore.

Motorised barges for all types of supplies, deck and engine, an stores. Also, vessel with U.K. load line that can meet vessels passin in the English Channel with essential stores.

Mainly used for storing vessels in Oil Terminals, Cowes Roads an Motherbank.

Also see "Cowes".

NOTICES: *Notice to Mariners No. 14 of 1986.*

The Dockyard Port of Portsmouth,
The Port of Southampton
and the Isle of Wight Pilotage District
Movement of Gas Tankers in the Solent

1. Notice is hereby given that these directions have been join promulgated by the Queen's Harbour Master, Portsmouth and Harbou Master, Southampton, in agreement with the Isle of Wight Pilotag Service, to ensure the safe navigation of gas tankers within the Isle o Wight Pilotage District.

2. This Notice applies to all gas tankers loaded or partly loaded an gas tankers which have not been rendered gas free.

3. Gas tankers in transit within the Isle of Wight Pilotage District ma not enter an area in which the visibility is less than 0.5 miles.

4. Before navigating within the area between the North Sturbridg Buoy and the Warner Buoy, all gas tankers must establis communications with the Queen's Harbour Master Portsmouth on VH R/T Channel 11 to advise of their transit and to ascertain movemen into and out of Portsmouth Harbour.

5. Gas tankers when navigating between Hook Buoy and We Bramble Buoy in the Western Approach Channel shall be given the so occupancy of that channel.

6. Gas tankers when navigating between East Bramble Buoy an Calshot Buoy in the North Channel shall be given the sole occupan of that channel.

7. No vessel may anchor closer to a gas tanker than twice th combined lengths.

8. At no time will more than 3 gas tankers be permitted to anch within the designated Small Ships Anchorage in Southampton Wat

9. No gas tanker exceeding either 8,000 cu.m. total capacity or 6,000 g.r.t. will be permitted to enter or leave the Port of Southampton via the West Solent.

Signed: Dock and Harbour Master.

Notice to Mariners No. 15 of 1986.

The Merchant Shipping (Tankers)
(EEC Requirements) Regulations 1981
Isle of Wight Pilotage District

1. Notice is hereby given that the Merchant Shipping (Tankers) EEC Requirements) Regulations 1981 (SI 1981 No. 1077) came into peration on Thursday, 15th October, 1981.

2. Application.

These Regulations apply to all tankers of 1,600 g.r.t. or over which:

(a) are carrying a cargo of chemicals, gas or oil in bulk; or

(b) having previously carried such a cargo, have discharged that argo, but whose tanks are not free of vapours given off by residues of uch cargo, and have an atmosphere which has not been rendered nonammable.

The Regulations do not apply to any ship belonging to Her Majesty r owned or operated by any State and used, for the time being, only n the non-commercial service of that State.

3. Reporting.

The Master of a tanker to which these Regulations apply shall at least 4 hours in advance of entering the Isle of Wight Pilotage District notify he Harbour Master Southampton the following information by telegram r telex using one of the following modes:

Telegraphic Address: Harbour Master Southampton
Telex Number: 477161 – Dhmspr G
VHF Radio: Southampton Port Radio
Call Sign SPR, Channel 12, 14.
Telephone Number: 0703 – 223844 extn: 2440

(a) the name and call sign of tanker;
(b) the country in which the tanker is registered;
(c) the overall length, draft and beam of the tanker;
(d) the harbour where the Master intends first to berth the tanker;
(e) unless the Master does not propose to berth the tanker at the arbour which is being entered, the ETA at the pilot station or harbour mits of the harbour where the Master intends first to berth the tanker;
(f) the nature and quantity of any chemicals, gas or oil carried by the anker;
(g) whether the tanker is fitted with an inert gas system;
(h) whether the inert gas system, if fitted, is fully operational;
(i) whether the cargo tanks have an atmosphere which has been endered non-flammable.
(j) whether or not a certificate has been issued in respect of the tanker;
  (i) if its cargo includes chemicals, that it complies with the IMO Code for Ships carrying Dangerous Chemicals; and
  (ii) if its cargo includes gas, that it complies with the IMO Code for Existing Ships carrying Liquefied Gases or with the IMO Code for Ships carrying Liquefied Gases;
(k) any defect in hull, machinery or equipment of the tanker, which nay:
  (i) affect materially the safe manoeuvrability of the tanker; or
  (ii) affect materially the safety of other vessels in or in the vicinity of or in the approaches to the harbour; or
  (iii) constitute a hazard to the marine environment; or
  (iv) constitute a hazard to the persons or property on land or in the vicinity of the harbour.

4. The Master of a tanker to which the Regulations apply shall in dvance of entering the Isle of Wight Pilotage District forthwith notify he Harbour Master Southampton of any change in the information otifiable under item 3 (k) above which occurs after such information was notified to the Harbour Master Southampton.

5. While a tanker to which these Regulations apply is within the Port of Southampton or the Dockyard Port of Portsmouth, the Master of that anker shall notify the Harbour Master Southampton or through him the Queen's Harbour Master Portsmouth of any change which occurs in the nformation where appropriate notifiable under items 3 (k) and 4 above.

6. Check List.

The Master of a tanker to which these Regulations apply shall make available a Check List in the form set out in the Schedule contained in the Regulations and completed in respect of the tanker to the Harbour Master Southampton or the Queen's Harbour Master Portsmouth if they so request.

7. Isle of Wight Pilotage District.

The Isle of Wight Pilotage District comprises that part of the sea with all harbours, docks and tidal waters within an imaginary line drawn from a point 1 mile true South from LW mark of ordinary Spring tides at Selsey Bill to a position in Lat. 50° 40′ N., Long. 00° 57′ W., thence to a point 1 nautical mile true South from LW mark of ordinary Spring tides at Whitehorse Culver Cliff in the Isle of Wight thence to a point 1 nautical mile true South from St. Catherine's Point and thence direct to Peverell Point but excluding any docks belonging to the Admiralty and any part of this area which lies within the Poole Pilotage District.

8. Authentication.

This Notice where applicable within the Port of Southampton is the direction of the Harbour Master as authorised pursuant to Section 52 of the Harbours, Docks and Piers Clauses Act 1847 and the Southampton Harbour Act 1939. The Port of Southampton is as defined in the Southampton Harbour Act 1887 as amended by the River Hamble Revision Order 1969 and extended by the British Transport Docks Act 1972. (The limits of the Port of Southampton are as shown on Admiralty Charts).

9. This Notice where applicable within the Dockyard Port of Portsmouth is the direction of the Queen's Harbour Master as authorised pursuant to the Dockyard Ports Regulation Act 1865, and the Dockyard Port of Portsmouth Order 1978. (The limits of the Dockyard Port of Portsmouth are as shown on Admiralty Charts).

10. These Directions have been jointly promulgated by the Queen's Harbour Master Portsmouth and the Harbour Master Southampton.

Signed: Harbour Master.

Notice to Mariners No. 17 of 1986.

Port Operations, VHF Communications
and Radar Information

1. Notice is hereby given that the following Port Operations, VHF R/T communications and radar information procedures are effective in the Port of Southampton and its approaches.

2. There is no alternation to the availability of the existing services including the provision of Harbour Radar Information. Messages on Port Operations Channels must be restricted to the movement and safety of ships and the safety of life.

3. Marine Incidents and Accidents.

A vessel involved in a marine incident or accident must immediately report this to Southampton Port Radio (SPR) and state whether or not assistance is required.

4. The Solent and Southampton Water Marine Emergency Plan.

This plan has been prepared to deal with any serious marine accident occuring in the Solent or in the Ports of Portsmouth or Southampton and is intended to ensure that adequate Service and Civilian resources are made available to deal with any emergency.

5. VHF R/T Communications.

(a) The Port Signal and Radar Station Southampton, call sign SPR, maintains a continuous watch on Channels 16, 14, 12, 18, 20 and 22 and monitors Channels 71 and 74.

(b) The Queen's Harbour Master Portsmouth, call sign QHM, maintains a continuous watch on Channels 11, 13 and 73.

(c) Vessels should maintain a continuous watch on VHF R/T Channel 12 or 14 and report to SPR as appropriate when passing the designated reporting points, and, in addition, if embarking a Pilot, when the Pilot has boarded.

(See "Appendix".)

6. Co-Ordination of Shipping Movements.

(a) The Duty Operations Officer responsible to the Harbour Master, Southampton maintains a continuous watch in the Port Signal and Radar Station. Tel: 0703 – 223844, extn: 2440.

(b) The movement of vessels and the general situation in the Port and its approaches is monitored continuously at Southampton Port Signal and Radar Station whence information will be passed to Masters and Pilots. The full exchange of information is essential to efficient operations and the need to maintain R/T communications with SPR cannot be over-emphasised.

(c) In co-ordinating the movement of vessels it may be necessary for the Duty Operations Officer to require certain vessels to remain alongside or at anchor, or to regulate their time of entry into the Port, their departure or progress.

7. Movement Reporting Procedure.

(a) All vessels in excess of 20 m. length, bound to or from or passing through the Port of Southampton, vessels bound to or from Portsmouth or passing through the Dockyard Port of Portsmouth and vessels bound to or from anchorages or other locations in the Solent are required to communicate by VHF R/T with SPR.

(b) Inward bound vessels should establish contact when approaching Nab or Needles.

(c) Vessels outward bound from the Port of Southampton should establish contact at least 15 minutes prior to leaving the berth.

(d) Vessels clearing Portsmouth Harbour should establish contact when passing Southsea War Memorial.

(e) Vessels leaving an anchorage either inward or outward bound should first establish contact at least 15 minutes before getting underway.

(f) Vessels bound to or from Portsmouth Harbour are also required to report to QHM. See Port of Portsmouth Dockyard, Local Notices to Mariners.

8. Movement Reporting Points.

(a) Vessels bound to or from the Ports of Southampton and Portsmouth, or other destination in the Solent or passing through the Solent are required to report by VHF R/T when passing Movement Reporting Points indicated on Admiralty Charts.

(b) The initial report by all inward bound vessels should include:

1. Ship's Name or IRCS.
2. Deepest draft.
3. Destination and Last Port of Call.
4. ETAs at various locations as requested.
5. Deficiencies of ship, navigation equipment, machinery and cargo.
6. Tankers in addition should report any change in the information notifiable under the Merchant Shipping (Tankers) (EEC Requirements) Regulations 1981 and confirm that a check list has been completed.

(c) The initial report by outward bound vessels from the Port of Southampton should include:

1. Ship's name or IRCS.
2. ETD.
3. Deepest draft.
4. Other information requested.
5. Where applicable, tug working Channel to be used.
6. ETAs at various locations as requested.
7. Next Port of Call.

(d) The initial report by vessels from anchorages and other locations in the Solent should follow the procedure for inward or outward bound vessels as appropriate.

9. Harbour Patrol.

The Operations Officer is assisted by a Patrol Officer who maintains a continuous harbour patrol. To assist Mariners in identifying the Harbour Patrol Launch at night, a blue all round light is exhibited at the mast head. The Harbour Patrol is fitted with VHF R/T call sign SP.

10. Height of Tide.

Automatic tide gauges are located at Calshot, Dock Head and Prince Charles Container Port. Tidal information is available on request and is recorded.

11. Wind Speed and Direction.

Wind speed and direction information is available on request and is recorded.

12. Harbour Radar.

(a) Remote controlled radar Stations are situated at Calshot Spit and Hythe and depicted on Admiralty Charts. Each station is fitted with a 25 ft. horizonal aperture scanner 110 ft. above MHWS searching over a 0.3° horizontal and 4° vertical beam width rotating at 20 r.p.m. in winds up to 80 knots.

(b) Vessels can be supplied with continuous information relating to their progress, approach to navigation marks and other vessels, transits and turning marks, channel margins and the manner in which the vessel is progressing round the West Bramble and Calshot turns. Manoeuvring instructions, however, will not be given unless specifically requested by the Master or Pilot.

(c) Computer Assisted Measurement System.

This system employs a small digital computer and a variable marker which can be placed over any target on the display to provide the following information:

1. The bearing and distance between the scanner and a selected target.
2. The bearing and distance between any two targets.
3. The course made good by a selected target.

Facilities are available to store up to 24 targets such as Navigation Buoys, vessels at anchor, etc. The bearing and distance from any selected target to any one of the stored targets can be quickly obtained and the closest point of approach determined.

(d) Accuracy of Bearing and Distance Measurement.

Bearing accuracy from Point A to Point B is to 0.5° and distances are to 25 m. or to 0.3% of the most distant echo from the scanner, whichever is the greater.

(e) Radar Reference Line.

An alternative position fixing system indicates the position of a vessel relative to a Reference Line electronically produced as points 1 cable apart on the radar display linked to the Calshot Radar only. The Radar Reference Line is shown on the Admiralty Charts of the area as a broken line with points at 1 cable and circles where the line changes direction.

A vessel underway will, upon request, be given her position using the distance between the points of the Reference Line as a scale to estimate the position:

1. As a distance RIGHT or LEFT of the Reference Line relative to her direction of progress.
2. As a distance along the Reference Line to a navigational mark or marks in transit.

The position of another vessel will be given:

3. As a distance from the Reference Line ON THE SAME SIDE or ON THE OTHER SIDE.
4. As a distance along the Reference Line.

Note: In areas where a Reference Line is not shown progress will be indicated relative to navigational marks and other vessels.

(f) Bearings and Distances.

Bearings and distances will be related to the bow (stem) of the vessel concerned unless otherwise stated.

13. This Notice is issued in agreement with QHM Portsmouth.

Signed: Harbour Master.

DEVELOPMENTS: A sixth quayside gantry crane has been installed at the container berths (No. 204-5-6).

A second Linkspan has been installed at Berth No. 25.

	19	156.95 161.55	Working Channel	Non-continuous Watch

STORNOWAY: 58.12 N. 06.22 W. (See Plan)

PORT LIMITS: Extend to a line from Southern end of Holm Island on the East to Rudh A'Bhaigh Uaine on the West – approximately 7.5 cables to seaward of Arnish Point Light.

PILOTAGE: Pilotage not compulsory. Vessels requesting Pilot request same with ETA. Boarding off Arnish Point Lighthouse.

ANCHORAGES: Anchorage in harbour between Goat Island and mouth of Creed River, 8 fathoms.

RESTRICTIONS: Entry night or day and at any state of tide. No bar on entrance.

MAX. SIZE: 400 ft. by 60 ft. by 22 ft. draft to berth alongside, 600 ft. length by 35 ft. draft for anchorage in bay.

HEALTH: The customary flying of "Q" flag.

Also see "Health – All Ports" before first U.K. port.

RADIO: Wick Radio or alternatively Stonehaven Radio.

RADAR/VHF: R/T-VHF established in harbour, call "Stornoway Harbour" on Channels 16 and 12. Emergency messages may be passed through Stornoway Coastguard on 81.8 m.

TUGS: No tugs available at port. Fishing vessels have been used, when necessary, for this purpose.

BERTHING: Vessels can be berthed at any time, provided berth is free.

Ro/Ro ferry terminal for Stornoway/Ullapool service in operation.

Depth of Water at Low Water Spring Tides: West side No. 1 Pier: 24.5 ft. shallowing to 12 ft. at junction of North Beach Quay. East side No. 1 Pier: 24.5 ft. shallowing to zero at inward end. West side No. 2 Pier: 17.5 ft. shallowing to zero at inward end. East side No. 2 Pier: 16.5 ft. shallowing to zero at inward end. Inner Harbour decreases from 12 ft. at junction of Esplanade Quay to 8 ft. at upper end of Cromwell Street Quay.

STEVEDORES: Arranged by Agents on receipt of ETA.

MEDICAL: Advance notice desirable, Hospital facilities available in the town.

TANKERS: Normal safety requirements. One tanker berth only 15 ft. mean draft, max. length 220 ft.

DENSITY: Practically always dead salt; 1025 density.

FRESH WATER: Fresh water available by hose at 15 t.p.h.

FUEL: 24 hours notice required.

CONSULS: French, Swedish, Norwegian; Tel: Stornoway 2920, 2054, 3173 respectively.

REPAIRS: Minor deck and engine repairs can be carried out locally.

DRY DOCKS: No dry dock but one slipway of 750 tons displacement.

SURVEYORS: Marine & Engineer Surveys (Hebrides) Ltd., Stornoway.

GANGWAY/DECK WATCHMEN: Service of watchmen not necessary. Watchmen from shore may be employed if required.

OPENING/CLOSING HATCHES: Normally crew.

REPATRIATION: Facilities exist for this service.

AIRPORT: 3 miles from port, served regularly by British Airways from Glasgow and Inverness.

HOLIDAYS: New Year's Day, Christmas Day and all other local Bank Holidays. Cargo work can be arranged except New Year's Day. (No Sunday work.)

POLICE/AMBULANCE/FIRE: Police, Stornoway 2222 (can deal with all three services).

EMERGENCY CO-ORDINATION CENTRE: Stornoway Coastguard Tel: 2013 or 2014.

TELEPHONES: Can be arranged by prior application through Aberdeen office.

STORING: See "Prelims".

1. By truck.
2. –
3. Yes.
4. Yes.
5. Notice No. 69.
6. Yes.

IDENTIFICATION CARDS: Not required.

GENERAL: ETA to be sent 24 hours beforehand so that necessary arrangements can be made.

AUTHORITY: Stornoway Pier and Harbour Commission, Amity House, Esplanade Quay, Stornoway, Isle of Lewis PA87 2XS. *Tel:* (0851) 2688. *Telex:* 75408. *Cables:* Harbour Commission. *FAX:* 0851-5714. *Contact:* M. Macleod, General Manager. Captain A.M. Mackenzie, Harbour Master.

STRANRAER: 54.55 N. 05.02 W. (See Plan)

DOCUMENTS: As for other British ports.

PILOTAGE: Not compulsory.

ANCHORAGE: Deep water anchorage at Lady Bay.

MAX. SIZE: Largest vessel handled 420 ft. long. Working draft 5.0 m.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: VHF watch kept on Channel 16 at Sealink Scotland Ferry Terminal. Working Channel is 14.

TUGS: Not available.

BERTHING: *East Pier:* 3 berths, depth 5.0 m. at L.A.T. One with vehicular ramp (single tier).

Ross Pier: Length 500 ft. Dredged to 16 ft. at L.A.T. Double tier vehicular ramp at this berth.

CARGO GEAR: Mobile crane of 15 tons maximum capacity.

MEDICAL: Medical Centre and hospital in town.

FRESH WATER: Available at all berths.

FUEL: Limited quantities of fuel oil can be supplied from road tankers.

REPAIRS: Small repairs can be carried out by local engineering firm.

GENERAL: Inshore lifeboat based at Stranraer.

AUTHORITY: *East Pier:* Sealink (Scotland) Ltd., Sea Terminal, Stranraer Harbour, Stranraer DG9 8EL. *Tel:* (0776) 2262. *Telex:* 778125. FAX: (0776) 6586. *Cables:* Sealink Port Stranraer. *Contact:* A. Boland, Port Manager. Captain H.A.C. Ross, General Manager.

West Pier: Harbour Master, Dumfries and Galloway Regional Council, Ailsa House, Sun Street, Stranraer. DG9 7JL. *Tel:* Harbour Office (0776) 2460. *Contact:* John C. Calvin, Harbour Master.

SULLOM VOE: 60.27 N., 01.17 W. (See Plan)

GENERAL: The Port of Sullom Voe is a major deep water harbour. It is owned and operated by the Shetland Islands Council as Harbour and Pilotage Authority.

The Sullom Voe Oil and Gas Complex is located within the port limits on Calback Ness in position 60° 27.5′ N., 01° 17.0′ W. and is operated by BP Petroleum Development Limited on behalf of several oil company participants. The oil delivered to Sullom Voe through the Brent and Ninian pipelines is collected from a group of oilfields located in the East Shetland basin.

The Port Administration Building, from which all marine operations are monitored and controlled, is located on Sella Ness in position: Lat. 60° 26.8′ N., Long. 01° 16.5′ W.

Services offered by the Harbour Authority and financed through conservancy charges include port radar, navigational advice to Shipmasters, intensity controlled navigational lighting to assist in poor visibility, meteorological advice and shore access gangways at all oil and gas jetties. Services offered and financed through separate charging structures include pilotage and mooring boat services. Boat hire can be arranged for vessels anchored or standing off. Helicopter hire is also available at times. The towage service is operated by a separate towage company and financed directly through towage charges.

The harbour is presently designed to routinely accept tankers up to around 365 m. LOA, with a draft of up to 22.6 m. and LPG carriers up to around 260 m. in length with a draft up to 15.9 m. In addition to liquid bulk and LPG cargo, the port is designed to handle general, dry bulk, Ro/Ro, containerised cargo and quarried rock.

There are 2 entrances to Yell Sound. The primary Northern route, suitable for oil and gas tankers, lies on the Western side of Yell Sound and is marked by leading lights situated on Gluss Isle. The South Eastern approach is considered suitable for vessels of up to 200 m. LOA and having a draft of not more than 11.6 m.

Both routes merge at the entrance to Sullom Voe; the lead into the Voe is indicated by leading markers located on Fugla Ness. In the case of vessels other than coasters, all manoeuvres South of Lamba Island will be assisted by tugs.

Ships will generally be berthed starboard side alongside at the oil loading berths. This will involve swinging each vessel within the Voe in areas adjacent to the tanker jetties. Vessels may be berthed port side alongside during adverse wind conditions.

For the purpose of manoeuvring within the pilotage district a minimum under keel clearance of 2.0 m. is required at all times.

Although current rates of up to 7 knots may be experienced in areas of Yell Sound, records indicate that the maximum current likely to be experienced within Sullom Voe on the deep draft route, is unlikely to exceed 1 knot.

The maximum tidal range within the Harbour Area is 2.3 m. at Springs and minimum 0.6 m. at Neaps. The main tidal current flows to the South on the flood and to the North on the ebb.

Moorings: Strong winds are frequently experienced at Sullom Voe and may be accompanied by sudden gusts from any direction. The prevailing wind direction is S.W.

It is essential that whilst alongside the jetty, moorings are tended carefully and regularly and conform with the mooring requirements. (See "Plan").

CONDUCT OF VESSELS ENTERING YELL SOUND:

(a) Masters of tankers and gas carriers entering the Port of Sullom Voe are advised to refer to Charts BA 3298, 3297 and 3292.

(b) Navigation within the Pilotage District is prohibited unless the vessel is mechanically and navigationally sound, anchors have been cleared away and there is a responsible person who can speak and understand English on the bridge.

(c) The berthing of tankers and gas carriers is suspended when wind speeds are regularly and frequently gusting in excess of 30 knots. Masters will be advised by Port Control in the event of such suspension.

(d) Vessels should afford a safe lee for the pilot boat during boarding and landing operations at the Northern Station – Reporting Point A ('Alpha').

(e) At Reporting Point B ('Bravo') the Master should alert the crew in preparation for securing tugs, while speed is reduced accordingly.

(f) The bow and stern tugs will be made fast when it is considered safe to do so, soon after passing the Outer Skerry.

(g) The alongside tugs shall be secured as soon as possible thereafter.

(h) The vessel's speed must not exceed 5 knots South of a line joining Skaw Taing and Trumba Point.

(i) Standard practice requires vessels to be swung on arrival (except when weather conditions dictate otherwise) and berthed starboard side alongside the jetty designated (see "Plans" for mooring guidelines).

Note: Tugs will use their own lines for securing.

MINIMUM REQUIREMENTS: In order to avoid delays, all vessels programmed for Sullom Voe should comply with the recommendations of the Council of the European Committee for Vessels Transitting Community Seaports, and be fitted with:

(i) Fully operational radar.
(ii) Fully operational VHF radio with Channels 16, 14, 20 12, 10 and 9.
(iii) Sufficient crew to handle tugs' lines and moorings efficiently.
(iv) Efficient propulsion and deck machinery.
(v) Efficient and adequate moorings to secure vessels safely.
(vi) Efficient signalling equipment.
(vii) Fully operational tachometer, rudder and helm indicators.
(viii) Efficient mooring stations communications systems.
(ix) An efficient anchor windlass and anchors.
(x) A complete and valid set of Safety Certificates.

(xi) All officers to be properly qualified and carry recognised certificates of competency.

Note: If any vessel cannot comply with any of the above, Sullom Voe Port Control should be advised prior to arrival or departure.

DOCUMENTS:

General Declaration (C13). In duplicate.
Cargo Manifest (if appropriate).
Crew Declaration (C142). In duplicate.

Procedure:

(i) The Master of a ship is responsible for making Report.
(ii) The Report is to be completed in duplicate on arrival.
(iii) If the ship is visited on arrival, the Report is to be handed to the visiting Officer.
(iv) If the ship is not visited on arrival, the original copy of the Report is to be lodged at the Designated Place (H.M. Customs & Excise, Charlotte House, Lerwick), not later than 3 hours after the ship has arrived at its place of loading or unloading.
(v) Form IMO FAL 5 or equivalent is to be submitted with the Ship's Report.

PILOTAGE: Pilotage is compulsory within the Sullom Voe harbour area. The Sullom Voe Harbour Area is defined in 'The Sullom Voe Harbour Revision Order 1980' as: "The entire area of Yell Sound and Sullom Voe and adjacent inlets within a line commencing at Ell Wick thence in a Northerly direction along the line of the low water mark on the West side to a point in Latitude 60° 38.27′ N., Longitude 01° 18.27′ W. on the line of low water mark at the Northern extremity of the Point of Fethaland, thence in an Easterly direction following a straight line to a point in Latitude 60° 38.23′ N., Longitude 01° 11.13′ W. on the line of low water mark at the Northern extremity of Fogla Lee on the Island of Yell, thence generally in a Southerly and Easterly direction along the line of low water mark on the East side to a point in Latitude 60° 29.15′ N., Longitude 01° 05.80′ W. on the line of low water mark at the South–eastern extremity of the Ness of Copister, thence in a Southerly direction to a point in Latitude 60° 28.68′ N., Longitude 01° 05.97′ W. on the line of low water mark at the South–Eastern extremity of the Island of Orfasay, thence in a South–westerly direction following a straight line to a point in Latitude 60° 27.73′ N., Longitude 01° 08.37′ W. on the line of low water mark at the Southern extremity of Samphrey Island, thence in a Westerly direction following a straight line to a point in Latitude 60° 27.75′ N., Longitude 01° 10.82′ W. at the root of Mossbank Pier and thence generally in a Northerly and Southerly direction following the line of low water mark to the point of commencement.

Pilots: Licensed Pilots are available on a 24-hour basis. A continuous watch is maintained. Call sign "Sullom Voe Harbour Radio" on Channel 16 or Channel 14.

Pilot Boarding Areas: Ships arriving from sea which are compelled to take a pilot in compliance with this Direction, or otherwise require a pilot, shall take the pilot on board in the following areas:

(a) Ships approaching the North Entrance of Sullom Voe Harbour Area should rendezvous with the pilot in position Lat. 60° 38.3′ N., Long. 01° 14.8′ W., with Point of Fethaland lighthouse bearing 260° (T)×1.8 miles.
(b) Ships approaching the East Entrance of Sullom Voe Harbour Area should rendezvous with the pilot in position Lat. 60° 28.5′ N., Long. 00° 56.5′ W., with Firths Voe lighthouse bearing 260°(T)×7 miles.
(c) Ships may take a pilot on board in other areas only if expressly directed to do so by an authorised pilot or the Harbour Master.

Note: Vessels boarding pilots by helicopter will usually carry out such operations near North of the normal boarding position for the North Entrance given above. This may be varied due to weather or other cause and vessels should proceed in accordance with advice from Sullom Voe Port Control when helicopters are used.

Exemption from Compulsory Pilotage: Without prejudice to the generality of the foregoing, the following ships shall be exempt from compulsory pilotage within the Sullom Voe Harbour Area unless as may otherwise be directed by the Harbour Master:

(a) All ships of not more than 300 tons gross registered tonnage which do not have on board dangerous substances to which the provisions of the Dangerous Substances in Harbour Areas Regulations 1987 apply.
(b) All fishing vessels.
(c) All tugboats operating as such exclusively within Sullom Voe Harbour Area.
(d) All ships in transit through the Sullom Voe Harbour Area which do not pass South of a line joining the most Northerly point of Gluss Isle and the most Northerly point of Calback Ness.
(e) All ships belonging to Her Majesty.

Pilotage Exemption Certificates: The Secretary of State has directed that the Shetland Islands Council may refuse to grant such Certificates in respect of vessels using Sullom Voe Harbour Area.

Pilot Boats: The Authority has 3 boats for use at the Port of Sullom Voe.

(i) "Sullom Mareel" LOA 16.2 m., service speed 16 knots.
(ii) "Sullom Spindrift" LOA 19.8 m., service speed 20 knots.
(iii) "Sullom Shoormal" LOA 19.8 m., service speed 20 knots.

All boats are of GRP construction and are fully equipped with modern navigational aids.

The freeboard of each boat is approximately 1.5 m.

Pilot Ladder Requirements: All vessels calling at the Port of Sullom Voe must comply with "The Merchant Shipping (Pilot Ladders and Hoists) Regulations 1987 (S.I. 1961)".

The following points are stressed:

(i) The rigging of pilot ladders and the embarkation and disembarkation of Pilots thereby shall be supervised by a responsible deck officer of the ship.
(ii) Every pilot ladder shall be secured in a position clear of any possible discharges from the ship, and so that each step rests firmly against the ship's side.
(iii) Every pilot ladder shall be secured in a position where the Pilot can gain safe and convenient access to the ship after climbing not less than 1.5 m. and not more than 9.0 m.
(iv) Whenever the distance from the water to the point of access to the ship exceeds 9.0 m., access to the ship must be by means of a combination of a pilot ladder and an accommodation ladder, or an equally safe and convenient means.
(v) Owners, Charterers and Masters of vessels should be aware that Sections 6 and 7 of the M.S. (Pilot Ladders and Hoists) Regulations 1987 specifies very clearly the conditions under which accommodation ladders are permitted to be used in combination with a pilot ladder when the freeboard exceeds 9 m. The attention of those involved is drawn particularly to Section 7(2)(A) of these regulations which reads as follows ". . . the lower end of the accommodation ladder rests firmly against the side of the ship within the parallel body length of the ship and, as far as is practicable, within the mid-ship half section *and leading aft*". Masters are advised that these regulations will be strictly enforced by the Harbour Authority. Any vessels unable to comply with the above section in every particular way should contact their Agent in good time before arrival in order to arrange alternative means for embarking the Pilot.
Any delays and/or additional costs incurred by vessels unable to comply with the above regulations will be strictly to the ship's own account.
(vi) Adequate lighting shall be provided at night so that the pilot ladder overside and also the position where the Pilot boards the ship shall be properly illuminated.
(vii) Actual sea conditions for small craft are not always appreciated when viewed from the bridge of a large vessel. Boarding and landing of pilots is a potentially hazardous operation which requires whole-hearted co-operation between those in control of both the tanker and pilot boat. Hard and fast rules cannot be laid down to fit every set of circumstances but the following points of guidance should be noted.
  (a) All vessels being serviced should be at the pilot station at the agreed time and not significantly early or late.
  (b) All vessels being serviced should be ready to respond to all reasonable requests from the pilot boat to ensure a safe transfer. Agreement as to how and where the transfer is to take place should be reached in ample time and the manoeuvre executed where sufficient sea room exists.
  (c) All vessels being serviced should inform the pilot boat of their intention to change their heading and when that change of heading has been completed.

Pilot Hoists: Pilots are not obliged to use pilot hoists. Any use of these devices must only be at the option of the Pilot, and in general, pilot hoists are not acceptable for the boarding and landing of Pilots at Sullom Voe.

Any pilot hoist offered must, in any case, comply fully with IMO recommendations on performance standards for mechanical pilot hoists and also with the recommendations of the European Maritime Pilots Association.

Note: Because of the low ambient air temperature combined with strong wind conditions, experience has shown that it is not uncommon for pilot hoists driven by compressed air to freeze. Careful attention should be paid to this equipment during the Winter months.

Pilot Boarding Arrangements: In all normal circumstances the boarding and landing of Pilots at Sullom Voe will be carried out by the Authority's pilot vessels, which are approved for this purpose. Helicopters may be used at certain times and under certain conditions as set out below.

Pilot Transfer by Helicopter: Sea conditions at the North Entrance to Yell Sound can at times prevent the boarding and landing of Pilots by boat even though wind speeds may be within operational limits. Helicopters may be used at the discretion of the Authority to carry out Pilot transfer when such conditions exist. Helicopters may also be used in cases where a vessel is unable to provide a satisfactory pilot ladder accommodation ladder. Factors affecting the use of helicopters for these purposes are set out below.

1. An MBB Bolkow 105 helicopter is contracted to the Authority on a sole user basis for purposes of Pilot transfer. This helicopter may also be available for ad hoc use outside of the aforementioned dates.
2. The first choice helicopter is capable only of landing on vessels to be serviced. Winching operations cannot be carried out by this aircraft. It is a small twin-engined helicopter of approximately 2 tonnes weight and with a rotor height of 3 m. Experience has shown that this helicopter can safely land on 90% of vessels calling at Sullom Voe.
   Winch-capable helicopters may be available but will take much longer to obtain and delays could result to the requesting vessel.
3. The permission of the Master and/or Agents as appropriate will be obtained prior to any transfer taking place using the Bolkow 105 helicopter.
4. All transfers by helicopter will be carried out strictly in accordance with the U.K. CAA Regulations and the Procedures set out in the "Guide to Helicopter/Ship Operations" published by the International Chamber of Shipping (see extracts reprinted below).
5. The Bolkow helicopter service is available only to crude carriers and combination carriers provided with suitable helicopter operating areas. It is not available to LPG carriers.
6. Any helicopter service is available during daylight hours only. The MBB Bolkow 105 helicopter is generally available during all daylight hours during the contract period. Service by winch – capable aircraft may be available only during ordinary airport opening hours which may be 0730 – 2030 weekdays and 1045 – 1430 Sundays.
7. During the contract period, no extra charge accrues to the vessel when boarding and landing by the MBB Bolkow 105 helicopter for reasons of weather and/or adverse sea conditions. The regular and published boarding and landing fee is applied.

8. During the contract period, when the MBB Bolkow 105 Helicopter is used to service a vessel with defective boarding and landing equipment, a charge of £1,400 plus the regular published boarding and landing fee per operation plus re-charges at cost will be applied.
9. Helicopter operations are co-ordinated by Sullom Voe Port Control. Vessels serviced in this manner should follow instructions issued by Sullom Voe Port Control to facilitate such transfers.
10. Helicopters used are operated only by the well-established companies, currently Bond Helicopters Ltd. and British International Helicopters Ltd., which operate to the highest standards and are approved to carry out transfers of Sullom Voe personnel by the Harbour Authority.
11. Only experienced aircrew are used and Marine Pilots of this Authority are all experienced in this mode of transfer and trained in accordance with Section 8(h) of the ICS Guide to Helicopter/Ship Operations.
12. Outside the contract period, when continuous service by MBB Bolkow 105 Helicopter is not available, vessels which require helicopter services for reasons of defective pilot boarding equipment must give early and specific advice of this requirement if delays are to be avoided. Helicopters may be obtained on an ad hoc basis for this purpose subject to availability and will generally transfer by winching only. Only helicopter operators approved by the Harbour Authority will be used.
13. Outside contract period, all helicopter services will be charged at cost.
14. At all times, any helicopter secured to carry out winching operations for whatever reason will be charged at cost.

Note: The Sullom Voe Harbour Authority will endeavour to advise a essel's Agent or Operator when an additional cost is likely to be incurred ue to use of a helicopter for pilot transfer(s). However, all Agents and perators should be aware that notwithstanding the above, the Harbour uthority will, at their sole discretion, secure helicopters for the purpose f pilot transfers when they deem such service is required.

For convenience of ships Masters the following extracts from the urrent "Guide to Helicopter/Ship Operations" are reproduced by kind ermission of the International Chamber of Shipping:

.1 Operational Checks

The Officer in charge should check all operational requirements on deck shortly before the arrival of the helicopter. Different types of ships may require specialist checks.

The general requirements for all types of ships are listed below.

.1.1 Ship Checks

- (a) All loose objects within and adjacent to the operating area must be secured or removed;
- (b) All aerials and standing or running rigging above or in the vicinity of the operational area should be lowered or secured;
- (c) Fire pumps should be running with sufficient water pressure on deck;
- (d) Fire hoses should be ready. (Hoses should be near to but clear of and, if possible, upwind of the operating area pointing away from the helicopter);
- (e) Foam equipment operators (at least 2 wearing the prescribed firemen's outfits) should be standing by, and have foam nozzles pointing away from the helicopter;
- (f) A rescue party should be detailed with at least 2 members wearing firemen's outfits;
- (g) The man overboard rescue boat should be ready for immediate lowering;
- (h) The following items of equipment should be to hand:
  - (i) Portable fire extinguishers.
  - (ii) Large axe.
  - (iii) Crowbar.
  - (iv) Wirecutters.
  - (v) Red emergency signal/torch.
  - (vi) Marshalling batons (at night).
  - (vii) First aid equipment.
- (i) The correct lighting and signals (including special navigation lights) should be switched on prior to night operations;
- (j) The deck party should be ready, and all passengers clear of the operating area;
- (k) Hook handlers should be equipped with electricians' strong rubber gloves and rubber soled shoes to avoid electric shocks from static discharge;
- (l) All the deck crew should be wearing bright coloured life vests and protective helmets securely fastened with a chin strap;
- (m) The Officer of the watch on the bridge should be consulted about the ship's readiness.

5.1.2 Landing On (These checks are additional to those in 5.1.1):

- (a) The deck party should be made aware that a landing is to be made;
- (b) The operating area should be free of heavy spray or seas on deck;
- (c) Awnings, stanchions and derricks and, if necessary, side rails should be lowered or removed.

As outlined under "Pilot Transfer by Helicopter" the Port Authority uses a MBB Bolkow 105D Helicopter for boarding and landing of pilots in certain circumstances.

The primary purpose is to provide a service when sea and swell conditions at the boarding stations are such that boatwork must be suspended, but it is also used when vessels are unable to provide the correct pilot boarding equipment.

This helicopter cannot carry out pilot transfer by winching and must land on the vessel to be serviced. The arrangements approved by the United Kingdom Civil Aviation Authority for the MBB Bolkow 105D to land on vessels are shown in the "Plan Section". However, for a trial period, approval has been given by the CAA which allows the helicopter to land on vessels to be serviced at Sullom Voe without the necessity for the vessel to lower the shipside rails. This temporary approval may not continue in the longer term and owners and managers of vessels trading to Sullom Voe who wish to continue to avail themselves of the service must now consider carrying out the minor structural modifications shown in the "Plan Section".

The modifications required are adaptation of the ship-side rails in way of the landing area to allow these to fold down inboard and remain secured in the folded down position and the application of non-skid paint to the landing circle. Both items are inexpensive and may be carried out without waiting for the next drydock or repair schedule.

Operators of ships trading regularly to Sullom Voe are hereby strongly urged to ensure that their vessels are adapted and equipped to comply with this requirement at the earliest opportunity.

Should further clarification be required this may be obtained by contacting the Port Authority.

APPROACHES: *Routeing and Aerial Surveillance in Shetland Waters.*
Vessel routes in Shetland Waters:

Applicable to all tankers, combination carriers and LPG vessels calling at Sullom Voe.

Shetland Islands Council, conscious of the dangers to navigation around the Shetland coast, due largely to offshore obstructions, strong tides, rapid weather changes and the presence of fishing vessels, vigorously discourages navigation within 10 miles of the coastline.

An agreed procedure has been reached between the Oil Industry and Shetland Islands Council of which the following is an extract:

1. Masters are strongly recommended to keep at least 10 miles off the Shetland Islands, including Foula and Ve Skerries, when approaching or leaving Yell Sound. Since Fair Isle is part of Shetland Islands it is recommended that vessels navigate the Fair Isle Channels approximately midway between Fair Isle and either Mainland Shetland or North Ronaldsay, Orkney.
2. It is further recommended that passage between off-lying islands/skerries etc., including Foula and Mainland Shetland should not be attempted.
3. For the final approach to/departure from Yell Sound, vessels are strongly recommended to navigate on the offshore side of the boundaries joining the following co-ordinates:

When approaching from/proceeding to the West:

A.	Lat. 60° 42.5′ N.,	Long. 01° 42.0′ W.
B.	Lat. 60° 42.5′ N.,	Long. 01° 22.0′ W.
C.	Lat. 60° 40.0′ N.,	Long. 01° 17.0′ W.

When approaching from/proceeding to the East:

D.	Lat. 60° 40.0′ N.,	Long. 01° 14.0′ W.
E.	Lat. 60° 56.5′ N.,	Long. 01° 14.5′ W.
F.	Lat. 61° 01.5′ N.,	Long. 00° 59.5′ W.
G.	Lat. 61° 01.5′ N.,	Long. 00° 48.0′ W.
H.	Lat. 60° 56.5′ N.,	Long. 00° 27.0′ W.

4. Vessels which have permission to use the pilot station at the S.E. entrance to Yell Sound are requested to navigate as follows:

   A. Vessels approaching the Shetland Islands from the South and making for the pilot station at the S.E. entrance to Yell Sound or wishing to anchor in Colgrave Sound are advised to navigate to a position 10 miles East of Out Skerries before altering course to the pilot station or to Colgrave Sound.

   B. Vessels approaching from the North and making for the pilot station at the S.E. entrance to Yell Sound or wishing to anchor in Colgrave Sound are advised to navigate to a position 10 miles East of Fetlar before altering course to the pilot station or Colgrave Sound.
5. Where, for any reason of safety or emergency, it is not possible to comply with the foregoing, you are required to notify immediately your intentions with reasons, to Sullom Voe Port Control by VHF Channel 16 or via Agents.
6. Charts should not be cleaned off until berthed at Sullom Voe to assist checking by Port Authority.
7. In the event of breakdown and your vessel drifts, or is likely to drift, within ten miles of the coastline, you must contact Sullom Voe Port Control or Shetland Coastguard by VHF Channel 16 at the earliest opportunity.

ANCHORAGES: There are no suitable anchorages available for large tankers in the Port of Sullom Voe.

However, LPG carriers of less than 180 m. LOA may be anchored in a designated area within the harbour at the discretion of the Harbour Master.

Vessels are permitted to anchor in Colgrave Sound (Lat. 60° 35′ N., Long. 00° 57′ W. approx.) when circumstances dictate that this is appropriate. In doing so, Masters should make reference to charts B.A. 3282 and 3292, the North of Scotland Pilot – NP. 52, page 99 and "Routeing and Aerial Surveillance in Shetland Waters", see "Approaches".

In addition, the following guidance to the usage of Colgrave Sound is relevant and all vessels intending to anchor there should comply with the advice given herein.

1. Colgrave Sound is used extensively by fishing craft throughout the year and Masters of other vessels are requested and required to give such fishing vessels a wide berth.
2. Three designated anchorages in Colgrave Sound have been identified as being suitable for large vessels and clear of established fishing grounds. These anchorages should be used in preference to any other area of Colgrave Sound. (See "Plan").

3. Colgrave Sound is outside the Sullom Voe Harbour Area and also outside the extended area of coverage of the Harbour surveillance radar. It is however observed several times each day by the surveillance aircraft. Therefore any information given by Sullom Voe Port Control to vessels proposing to anchor in Colgrave Sound is given in good faith and on the understanding that neither the Harbour Authority nor its servants will accept liability for the consequences of any vessel dragging anchor, colliding with any other vessel, stranding, causing pollution, or any other occurrence occasioned by or to the vessel concerned whilst navigating or at anchor within Colgrave Sound and its approaches.
4. Sullom Voe Harbour Authority will, however, give all assistance to any vessel seeking information about the Colgrave Sound area with the objective of establishing orderly navigational disciplines in the area for the benefit of all users.
5. To this end any vessel (including oil rigs, oil exploration vessels, barges and supply craft) wishing to anchor in Colgrave Sound is requested, in the first instance, to contact Sullom Voe Port Control. The vessel will then be advised which designated anchorage is believed to be unoccupied and which may therefore be used by the vessel.
6. The designated anchorages are identified by the numbers 1, 2 and 3 (see "Plan") and also by bearing and distance of the White Hill Light House (Lat. 60° 34.9′ N., Long. 01° 00.1′ W.) as follows:
   Anchorage 1: White Hill Lighthouse bearing 238°T×1.50 miles.
   Anchorage 2: White Hill Lighthouse bearing 253°T×0.95 miles.
   Anchorage 3: White Hill Lighthouse bearing 260°T×1.68 miles.
7. Masters of vessels making use of any of the designated anchorages are requested to provide Sullom Voe Port Control with details of their anchorage position when brought up.
8. Masters of vessels approaching or at anchor within Colgrave Sound are requested to strictly observe the regulations prohibiting the dumping of industrial debris, offensive and noxious substances and oil pollution.

Masters should beware of 2 submarine oil pipe-lines on the East Side of Shetland shown on the latest charts and referred to in "North Coast of Scotland Pilot", pages 94 and 95.

Except when advised otherwise, Masters should proceed to a point 6 miles off Gruney Island (Lat. 60° 39′ 00″ N., Long. 01° 18′ 00″ W.). Thereafter, Masters should follow directions in "North Coast of Scotland Pilot", page 54, noting, however, that there are areas of poor VHF communication with Sullom Voe Harbour Radio to the West and North of Yell Sound.

MAX. SIZE: See "Berthing", "Loading/Discharging Facilities" and "Liquefied Petroleum Gas Facilities".

HEALTH: The following Port Health procedure applies at the Sullom Voe Terminal.

The Master has no need to obtain health clearance unless:

(i) An authorised officer otherwise directs.
(ii) A death or illness has occurred as defined in the Public Health (Ships) (Scotland) Regulations.
(iii) An abnormal mortality among rats or mice on board has occurred.

Where it is necessary to obtain "Free Pratique" for health purposes, the Master should provide the following documents:

(i) Maritime Declaration of Health.
(ii) A list of passengers and crew leaving the ship, together with the addresses they are going to in the United Kingdom.

Derat Exemption Certificates: The Sullom Voe Terminal is an "approved" Port, and Derat Exemption Certificates will be issued by the local Health Authority.

Also see "Health – All Ports" before first U.K. port.

RADIO:

ETA Requirements: Vessels bound for Sullom Voe are required to provide the Pilotage Authority with the following information.

(i) An estimated time of arrival at least 24 hours prior to arrival or on leaving the last port (whichever is later). In addition to this ETA Masters are to include the estimated time of crossing Lat. 58° 20′ N. and estimated longitude on crossing that latitude, and the intended inward courses and turnpoints to the Gruney Island Pilot Station. Vessels arriving from the North Atlantic or Northern North Sea should use a position 200 miles from the pilot station.
(ii) Confirm the vessel's ETA at least 6 hours before arrival at the seaward limit of the Pilotage District and thereafter notify any significant change in excess of 1 hour.
(iii) On coming within range of "Sullom Voe Harbour Radio", the ETA to be given by VHF (Channel 16 or Channel 14).

Pre-Arrival Information: 24 hours prior to arrival, all vessels calling at Sullom Voe should cable "Portcontrol Sullomvoe" the following information:

(i) Ship's name and call sign.
(ii) Port of Registry.
(iii) Name of Master.
(iv) G.R.T.
(v) Summer deadweight (tonnes).
(vi) Length overall and beam (metres).
(vii) Draft fore and aft.
(viii) Whether to berth or in transit.
(ix) Whether loaded or in ballast. If loaded, nature and quantity of cargo.
(x) Whether vessel is carrying segregated ballast.
(xi) If so, quantity and at which port taken onboard.
(xii) Dirty ballast quantity (tonnes).
(xiii) Total ballast/bunkers/FW and stores as a percentage of the Summer d.w.t. (minimum acceptable 35%).
(xiv) Which pilot station on arrival.
(xv) Pilot boarding arrangements.
(xvi) Number of crew.
(xvii) Last Port of call.
(xviii) Does ship have a fully operational inert gas system?
(xix) Your vessel will be required to "closed-load" at all times even during topping off, can you comply? Y/N.
(xx) Are all cargo/slop tanks inerted to less than 8% oxygen content (2% for LPG carriers)?
(xxi) Is all navigation, safety, anchoring and mooring equipment fully operational and ready for use? If not, specify. All anchors to be cleared away on arrival at the pilot station.
(xxii) Confirmation to be given that vessels are complying in all respects with "The Merchant Shipping (Tankers) (EEC Requirements) Regulations 1981".

VHF Radio Communications:

1. Sullom Voe Harbour Radio maintains a continuous listening watch on the following VHF Channels: 16, 9, 10, 12, 14 and 20. Vessels should, when possible, only use Channel 16 for initial calling and refrain from using Channel 10, which is designated for emergency purposes and Channel 9 which is the primary pilotage/tug working channel.
2. All vessels entering or leaving the Sullom Voe Harbour Area are requested to contact "Sullom Voe Harbour Radio" initially on VHF Channel 16, or Channel 14. This includes all vessels transiting Yell Sound.
3. Any vessel intending to use the deep water channels marked by the leading lights of Gluss Isle, the white sector of Queyfirth Light, the white sector of Skaw Taing Light, the Fugla Ness leading lights or the Sella Ness leading light, for the purpose of fishing must report such intentions to "Sullom Voe Harbour Radio" and report at intervals not exceeding 2 hours while fishing.
4. Any vessel may receive traffic information on request by contacting "Sullom Voe Harbour Radio" on Channel 16 or Channel 14.
5. Brief local weather forecasts will be broadcast on request. Cal "Sullom Voe Harbour Radio" on Channel 16 or Channel 14.

VHF: *Port Operation and Control Services:* All shipping movements within the Pilotage District are monitored from a Port Control Room in the Port Administration Building at Sella Ness.

The Port Control Room is manned on a 24 hour basis by Marine Officers who are licensed Pilots.

These Marine Officers, in their capacity as Port Control Officers, maintain a continuous VHF and radar watch. They provide advice to Masters and Pilots on all navigational aspects (including weather forecasts) within the area, direct shipping movements within the port, and liaise with the Terminal Operator and emergency services.

The following VHF Channels are continuously monitored in the Port Control Room:

Channel 16	Calling, Safety and Distress.
Channel 9	Tanker pilotage and tug handling.
Channel 10	Port emergency, fire or oil pollution.
Channel 12	Secondary Port Control working frequency.
Channel 14	Main Port Control working frequency.
Channel 20	Secondary Port Control working frequency.

The call-sign for Sullom Voe Pilots is "Sullom Voe Harbour Radio".

In addition, Sullom Voe Terminal constantly monitors Channels 16 and 19. Pre-arrival information will be given on Channel 19. Initial contact should be made on Channel 16 using call sign "Sullom Voe Terminal".

It is emphasised that Masters should try to contact the terminal as soon as possible prior to arrival at the Pilot Boarding Area, so that loading information may be exchanged before commencing the inward passage through Yell Sound.

Channel 24 — Link calls for commercial radio traffic can be arranged on this channel. Call-sign "Collafirth Radio".

Control of Traffic: The Port Controller may direct the movement of any vessel within the Harbour Area. Overtaking and passing is prohibited in the Deep Water Channel within an area bounded by a line joining Queyfirth Light and the Northern extremity of Lamba Island and a line joining Skaw Tang Light and the front leading light on Gluss Isle.

No vessel having an overall length in excess of 50 m. shall navigate so as to pass or overtake an LPG carrier underway anywhere within Yell Sound or Sullom Voe between lines drawn between the Northern extremity of Muckle Holm (Lat. 60° 35.1′ N., Long. 01° 15.8′ W. approximately) and the Northern extremity of the North Holm of Burravoe (Lat. 60° 35.4′ N., Long. 01° 18.2′ W. approximately) and between the Northern extremity of Lunna Holm (Lat. 60° 27.5′ N., Long. 01° 02.4′ W. approximately) and the Southern extremity of Heoga Ness (Lat. 60° 29.4′ N., Long. 01° 02.4′ W. approximately).

Reporting Positions: During transits of Yell Sound and approaches to Sullom Voe, all vessels are required to report to Port Control when passing the following positions:

A. Lat. 60° 38.25′ N., Long. 01° 14.82′ W. with Point of Fethaland Lighthouse bearing 260° T×1.8 miles.
B. Lat. 60° 34.95′ N., Long. 01° 16.56′ W. with Muckle Holm Lighthouse bearing 105°T×0.35 miles.
C. Lat. 60° 31.35′ N., Long. 01° 18.49′ W. with Queyfirth Lighthouse bearing 285°T×0.49 miles.
D. Lat. 60° 29.32′ N., Long. 01° 17.47′ W. with Skaw Taing Lighthouse bearing 118°T×0.41 miles.
X. Lat. 60° 28.50′ N., Long. 01° 10.70′ W. with Mossbank Lighthouse bearing 175°T×1.25 miles.

The provision of additional reporting points in the S.E. entrance is under review.

RADAR: Full radar coverage exists for Yell Sound and Sullom Voe. Comprehensive coverage also includes the 'funnel' of approach to the Northern Pilot Boarding Station and also the S.E. entrance channel and the associated seaward approaches.

The main scanner is located on the Hill of Vats Houlland (Lat. 60° 27.57′ N., Long. 01° 17.28′ W. and the secondary scanner, which provides coverage of the S.E. entrance and Western approach channels is located near Brough (Lat. 60° 28.90′ N., Long. 01° 13.04′ W.). Both scanners are connected by microwave links to displays in the Port Control Room.

Port Control maintains a continuous radar watch, and the passage of each vessel is monitored and recorded. Advice is available to vessels on request.

TUGS: At present a fleet of harbour tugs provide a towing service for vessels at the Port of Sullom Voe. These are stationed at the Sella Ness Jetty adjacent to the Port Administration Building.

The fleet is operated by Shetland Towage Ltd., a private company owned and operated by a joint venture between Shetland Islands Council, Clyde Shipping Company and Cory Ship Towage.

The fleet consists of 3 twin screw 3,800 h.p. vessels, each having a bollard pull of 55 tons. These vessels are fully equipped as fire-fighting tugs and pollution control vessels and were built by Hall Russell and Company Ltd., in Aberdeen, in 1978. Named after Shetland birds, they are:

"Stanechakker", "Swaabie", "Lyrie"

Two additions to the fleet are Voith water tractors, built in 1983 by Ferguson Ailsa Ltd., at Port Glasgow. These vessels have twin 32G Voith units developing 4,000 b.h.p. and a bollard pull of 45 tons. Also given bird names, they are:

"Tirrick", "Shalder"

The use of tugs and their numbers will be as directed by the Harbour Master. Prior to arrival, vessels should ensure that heaving lines of adequate length and breaking strain are readily available to assist in securing the tugs.

Tugs will normally meet incoming vessels at a position North of Lamba Island. Officers and crew should be standing by to receive lines and all necessary tugs must be secured before the vessel's ability to manoeuvre becomes restricted.

When a vessel is berthing, tugs will be secured to the bow and stern of the vessel with towing lines and alongside in a push pull mode. Their mode of operation and disposition will be fully explained by the Pilot on arrival. Tug lines will normally be used throughout, either from towing hook or towing winch.

It is requested that wherever possible tug orders for movements before 0900 hrs. be placed not later than 1700 hrs. on the preceding day.

BERTHING: The following criteria apply to conventional vessels loading at crude and gas jetties at Sullom Voe.

The minimum under-keel clearance allowed is 1 m. required alongside jetties and 2 m. elsewhere in the Harbour Area.

Oil tankers/combination carriers in the range of 18,000 tons deadweight to 350,000 tons deadweight may be accepted at Sullom Voe, as a matter of routine.

Vessels outside the parameters listed below and vessels of unconventional design may be accepted at Sullom Voe subject to individual consideration by the Harbour Master and Terminal Operator.

Limiting Vessel Sizes:

Jetty No. 1:	**Crude Oil Carriers**
LOA	170 m. to 280 m.
Depth alongside	16.9 m.(minimum)
Max. allowed draft	15.9 m.
	LPG Carriers
LOA	140 m. to 260 m.
Capacity	10,000 cu.m. to 75,000 cu.m.
Jetty No. 2:	**Crude Oil Carriers**
LOA	210 m. to 365 m.
Depth alongside	23.1 m. (minimum)
Max. allowed draft	22.1 m.
Jetty No. 3:	**Crude Oil Carriers**
LOA	170 m. to 365 m.
Depth alongside	23.6 m. (minimum)
Max. allowed draft	22.6 m.
(Jetty No. 3 was taken out of service in September 1989)	
Jetty No. 4:	**Crude Oil Carriers**
LOA	170 m. to 365 m.
Depth alongside	23.6 m. (minimum)
Max. allowed draft	22.6 m.

Note: (i) Vessels entering in ballast or partially loaded conditions should ensure that their draft does not exceed 13 m. as this is the draft normally allowed in the South Turning Area.

(ii) Where it is not possible for vessels to arrive with a draft of 13 m. or less, berthing will be carried out in accordance with the Harbour Master's directions.

Loading Systems:

All crude loading arms are 150 ASA 16 in. hydraulic connections. This includes Jetty No. 1 where 16 in. connections are attached to 12 in. arms. All LPG loading arms have 150 ASA Camlock connections.

No. 1	Crude	4×12 in.	Loading arms	hydraulic connections.
	LPG	2×12 in.	Loading arms	hydraulic connections.
		1× 8 in.		
No. 2	Crude	4×16 in.	Loading arms	hydraulic connections.
No. 3	Crude	4×16 in.	Loading arms	hydraulic connections.
(Jetty No. 3 was taken out of service in September 1989)				
No. 4	Crude	4×16 in.	Loading arms	hydraulic connections.

Manifold Heights:

	Heights above chart datum	
	Max.	*Min.*
No. 1 Crude	22.70 m.	1.80 m.
LPG	21.50 m.	3.50 m.
No. 2 Crude	31.30 m.	2.60 m.
No. 3 Crude	31.30 m.	4.23 m.
(Jetty No. 3 was taken out of service in September 1989)		
No. 4 Crude	31.30 m.	4.23 m.

Maximum allowable pressure on lines and connections: 150 p.s.i.

Jetty Orientation:

No. 1	280°/100°
No. 2	135°/315°
No. 3	135°/315°
No. 4	145°/325°

Gangway: Shore tower type gangways are provided at all times. If for any reason, a shore gangway will not be available, ships will be advised in good time.

MOORING: The 4 loading berths are located in deep water on the Northern shores of Sullom Voe, adjacent to the Terminal complex at Calback Ness.

The berths are numbered 1 to 4 in sequence from East to West. Jetty No. 1 has facilities for both crude and LPG carriers and can accommodate vessels up to 120,000 d.w.t. Jetties No. 2, 3 and 4 have crude loading facilities only and are designed to accommodate tankers up to 350,000 d.w.t. range. (Larger tankers may be accepted at the discretion of the Harbour Master and Terminal Operator). Jetty No. 3 was taken out of service in September 1989.

Each jetty is of conventional "T" shaped construction with 4 breasting dolphins in line with the jetty head. The mooring dolphins are offset from the line of breasting dolphins to provide an optimum lead for mooring lines. Vessels may land at a maximum angle of 8° to the jetty face. Quick release mooring hooks are fitted on all dolphins. For use with large vessels, quick release mooring pulleys have been fitted on Berths No. 2, 3 and 4. These pulleys, 1 at each end of the berth are designed to accept a ship's mooring wire in the form of a bight.

Large flexible rubber fenders are fitted to the outer faces of each breasting dolphin. Each has a generous energy absorbing capacity.

Each mooring operation will be assisted by 2 purpose-built mooring boats.

ACTIONS TO BE TAKEN IN SEVERE WEATHER CONDITIONS

1. At least 1 tug shall be called out to assist in keeping *any* vessel alongside when all the following conditions exist:
   (a) Where the mean freeboard height of the vessel exceeds the mean draft,
   (b) Where the wind is gusting to 50 knots or more and
   (c) When the wind is from a direction in line with or inside the berthing line of the jetty.

2. At the time of suspending loading/deballasting operations because of deteriorating weather conditions, the Terminal Loading Supervisor will advise Port Control immediately of any vessels in the condition stated in 1(a) above.

3. When a tug is called out under the conditions stipulated in (1) above:
   (a) The Terminal Loading Supervisor will notify the Master of the situation and request that the vessel be brought to a state of immediate readiness.
   (b) With the exception of the Port Controller, such Pilots as are available will station themselves aboard those vessels which are considered to be most vulnerable, and any vessel with a tug alongside must be attended by a Harbour Pilot throughout the period a tug is required.
   (c) The Duty Harbour Master will be notified.

4. Tugs may be necessary to assist in keeping vessels alongside when some of the conditions in (1) above are absent, and may or may not be called for by the vessel. In such circumstances any vessel requiring tug assistance will also be attended by a Harbour Pilot who will board the vessel as soon as possible and remain on board throughout the whole period a tug is in attendance. In these circumstances the Duty Harbour Master will be informed.

5. Notwithstanding anything contained in 1 – 4, the Duty Port Controller may, *after consultation with the Harbour Master*, call out such tugs as are required, at any time, if he feels the situation warrants this action. In the case of large vessels in light condition for example, it may be prudent in certain circumstances to call out the tugs when the wind off the berth is less than 50 knots. In such cases the Duty Port Controller should exercise his discretion.

6. In all situations where tugs are required to assist a vessel moored alongside, a Harbour Pilot will also be stationed on board that vessel as soon as possible after tugs are called out, and will remain on board throughout the whole period the tugs are in use.

General Mooring Requirements:

1. Masters should ensure that mooring lines are in good condition, winch brakes or securing devices should be in efficient operating order and should have a holding power of at least 60% of the breaking load of the vessel's mooring lines. (On vessels constructed before 1978 these conditions may be met by placing the winch in gear and applying power in addition to applying the brake).
2. Any known defects in the vessel's mooring system or limitation of mooring winch brakes should be reported to the Pilot and the Terminal before arrival in order that, if necessary, additional precautions may be agreed.
3. In order to avoid damage to loading arms and the serious consequences of oil pollution, the vessel should be kept close alongside at all times.
4. It is recommended that wires (or wires fitted with synthetic fibre rope tails of at least 25% greater breaking load than the wire), should be used for all mooring lines.
5. The following mooring requirements shall apply to all crude and gas tankers in excess of 10,000 tons gross and in general all mooring operations shall be conducted in accordance with the OCIMF "Guidelines and Recommendations for the Safe Mooring of Large Ships at Piers and Sea Islands".
   5.1 Where a crude or gas tanker has undergone a mooring audit on a previous visit to Sullom Voe, the ship must be moored exactly in accordance with the mooring plan. If for any reason this is not possible the ship should be secured in compliance with Section 5.2, 5.3 or 5.4 as appropriate and the details reported to the Port Controller for the attention of the Director of Ports and Harbours. Audited mooring plans shall not be altered, amended or edited without the approval of the Director of Ports and Harbours.
   5.2 Where a crude or gas tanker is equipped with synthetic mooring lines or a random mixture of synthetic and wire mooring lines, the ship shall be secured by a minimum of 4 head lines/stern lines, 4 breast lines and 2 springs at each end of the ship.

5.3 Where a crude or gas tanker is equipped with wire mooring lines only, the ship shall be secured in accordance with the appropriate mooring guide plan (See Plan).

5.4 Where a crude or gas tanker has not undergone a mooring audit and is not designed or equipped to comply with the requirements outlined in Section 5.2 and 5.3 it shall be secured as near to these requirements as possible and in any case to the satisfaction of the Master, the Pilot and the Loading Supervisor. If such ships cannot be secured satisfactorily, the loading arms must not be connected and the duty Harbour Master shall be contacted immediately.

5.5 Mooring lines leading in the same directon of restraint shall be of similar material and construction throughout their lengths from jetty mooring point(s) to vessel's securing point(s).

6. Particular care should be taken to ensure sufficient transverse restraint from breast moorings. When synthetic fibre mooring lines are used, pre-tensioning of these lines on making fast will help prevent drift of the vessel away from the berth in "off the berth" wind conditions.

7. As soon as the vessel is secured, brakes on all mooring winches should be firmly applied. Winches must not be left on automatic tensioning. Full steam pressure or power to all mooring winches should be maintained at all times when alongside. On split drum mooring winches only one layer of rope shall be permitted on the working half of the drum.

8. An efficient watch must be maintained on the vessel's moorings at all times to ensure that all lines are properly tensioned and tended when required. The deck watch should make regular checks that mooring winch brakes are applied at the correct setting.

LOADING: *Maximum Loading Rate per Arm:*

Crude:	16 in. loading arm	5,000 metric t.p.h.
Crude:	12 in. loading arm	2,500 metric t.p.h.
LPG:	8 in. loading arm	900 cu.m/hr.
LPG:	12 in. loading arm	2,100 cu.m/hr.

Connection of Loading Arms: Confirmation to be given that vessels will arrive with the required spool pieces fitted to their manifold for either crude or LPG fitting.

Manifolds should comply with latest OCIMF Standards. As a minimum there must be 500 mm. between faces of spool/reducer presented for connection. Reducers must be equally tapered.

Failure to present correct reducer/spool will result in delays. The Terminal does not have reducers, but does have 16 in. to 16 in. spool pieces. Should it be necessary to use the Terminal's spools a charge will be levied.

CRUDE The connection of loading arms will be undertaken by shore personnel. Vessels should arrive with 16 in. 150 ASA manifolds, ready for connecting to the loading arms.

LPG The connection of loading arms will be undertaken by shore personnel. Vessels must have 150 ASA manifolds for connection to the loading arms. Sizes will either be 12 in. or 8 in. as directed by the Terminal.

Failure to present reducer spool will result in terminal levying a charge for their own equipment, if available.

Masters should ensure that the deck firemain is pressurised at all times and fire extinguishers and fire hoses are ready for use at the ship's manifold in accordance with Jetty Regulations.

Crude Oil Storage: 16 conventional floating roof storage tanks are constructed, each with a capacity of 600,000 bbls. These provide storage facilities in the event of port closures and ensure sufficient stocks to enable tankers to load without delay.

The storage tanks have been constructed with bases as much as 30 m. above sea level, to allow gravity loading. However 6 oil loading pumps are installed to increase the loading rate as may be required by the vessel.

Loading Rates: A maximum loading rate of 30,000 t.p.h. can be provided by the Terminal with a maximum of 20,000 t.p.h. to any one berth.

The LPG loading system delivers up to 3,000 cu.m./hr.

Cargo Measurement: Meters are installed for cargo measurement.

Early Departure Procedure: An Early Departure Procedure is operated at the Sullom Voe Terminal for Ninian shipments. This policy is to be reviewed in 1990.

LIQUEFIED PETROLEUM GAS FACILITIES: There is a single LPG insulated pipe-line from the LPG storage area to Jetty No. 1 for tanker loading. The LPG tankers using Jetty No. 1 will range in size from 10,000 to 75,000 cu.m. capacity and they will transport butane and propane under refrigerated conditions as in the onshore tankage.

Navigation, Mooring, Berthing: Except by permission obtained from the Harbour Master, no LPG ship shall at any time be navigated in, lie on, or be moored in any part of the harbour.

No LPG ship shall be anchored or moored except

(a) at a quay duly approved by the Harbour Authority

or

(b) in such position as the Harbour Master shall from time to time direct

and no LPG ship shall be removed from such last mentioned position except in accordance with the order or permission of the Harbour Master or for the purpose of leaving the harbour forthwith.

An LPG ship shall at all times lie safely afloat.

While an LPG ship is at a quay

(a) it shall be securely made fast as close alongside as possible in a manner approved by the Harbour Master.

(b) its moorings shall be adjusted from time to time to allow for the rise and fall of the tide and for the loading and discharging of cargo.

Except in accordance with such conditions as may from time to time be prescribed by the Harbour Master, no ship or harbour craft shall, when moored, unmoored or anchored, lie or pass within 30 m. of any LPG ship which is moored or anchored, without permission of the Harbour Master.

Loading and Discharging: All jetty LPG drains and ships' scuppers whereby LPG can, in case of spillage, escape to the Harbour shall be open before loading or discharging commences and shall be kept open during the whole period of such operations.

All vessels calling at Sullom Voe Terminal must be in possession of a Certificate of Fitness under the terms of the IMO code for the construction and equipment of ships carrying liquefied gases in bulk and be in possession of an appropriate Classification Society's Certificate.

Also see "Report" dated October 1983.

DRY CARGO FACILITIES:

Construction Jetty: A concrete pier suitable for coastal traffic is located in Garths Voe, East of Jetty No. 1.

This pier, orientated on a 108°/288° axis is 100 m. long and can accept ships on both the North and South faces.

The North Berth is equipped with a fixed Ro/Ro ramp which has a width of 10.7 m., a total length of 23.7 m. and a fixed gradient of 1:22. The height of the sill is 1.67 m. above MHWS.

The pier is well fendered with patent fenders and tyres. The depths at the pier range from 9.9 m. at the Eastern extremity, rising to 3.9 m. at the Ro/Ro ramp.

Bunkers can be supplied by road tankers to vessels using this jetty.

There is no permanent dock labour force available on site at Sullom Voe. However, stevedoring services can be obtained as and when required from Lerwick, arrangements for which should be made through the local ships' Agents or receivers of cargo, as appropriate.

Garths Pier: This 2 finger jetty is situated adjacent to Sella Ness Industrial Estate.

The inside berths have a length of 41 m. and the outside berth a length of 65 m. Each finger is 7.3 m. wide. There is a depth of 4 m. alongside for the lengths stated; thereafter the depth decreases rapidly.

Graven Pier: A small concrete fishing pier is situated on the Southern shore of Garths Voe. The pier has been designated as an unsafe structure and must not be used. Vessels previously using Graven Pier should now use Garths Pier.

Tug Jetty: Harbour tugs and pilot boats are stationed at an "L" shaped jetty located on the Southern shore of Garths Voe adjacent to Sella Ness. This jetty, of cellular design is constructed of concrete and steel.

Fendering arrangements consist of used tyres suspended at intervals along the jetty face. This pier is suitable for coastal traffic but is not used as such on a regular basis.

The present minimum depth off the main face of the jetty is approximately 6.9 m.

Gas oil is available from bunkering points on this jetty.

Gaza Jetty: (Lat. 60° 26′ 10″ N., Long. 01° 21′ 02″ W.).

A small jetty has been constructed at Gaza near Sullom for the purpose of exporting aggregates from nearby quarries. The jetty face is located on the N.E. side of the seaward extremity of a rock armoured causeway. The jetty face is 30 m. in length and is well fendered. The orientation is on a 111°/291° axis. The depths alongside the pier range from 4.5 m. to 3.7 m. below chart datum at the landward extremity.

An anchor with cable and clump weight has been laid S.W. of the jetty head. A wire is attached to the cable for the purpose of attaching the vessel mooring lines.

At the Harbour Master's discretion vessels up to 75 m. in length may use the jetty.

Colla Firth Pier: (Lat. 60° 32′ 24″ N., Long. 01° 20′ 47″ W.).

A small jetty has been constructed in the North West corner of Colla Firth which is located on the West side of Yell Sound. The pier is utilised by both fishing and commercial vessels and is licensed to handle explosives.

The main berthing face is 55 m. in length and has an orientation of 100°/280° and a minimum depth of 6 m. Berthing for smaller vessels is also available on the Northern side of this pier.

OIL POLLUTION SURVEILLANCE: Only clean ballast contained in tanks completely segregated from main cargo tanks will be allowed to be discharged into the Harbour, but then only after testing by the Terminal Operator and approval by the Port Authority.

Recent pollution of beaches and serious damage to wildlife around the shores of Orkney and Shetland suggests that certain vessels have disregarded the IMO Conventions on Oil Pollution and discharging dirty ballast whilst approaching or immediately after sailing from Sullom Voe.

Such procedures cannot be condoned by the U.K. Department of Transport, Local Authorities or the Terminal Operator, and with the object of preventing this practice (which is contrary to internationally agreed rules) air surveillance of all shipping in waters around Orkney and Shetland has been introduced.

As detailed in the section entitled "ETA Requirements" (see "Radio"), Masters are requested to advise Sullom Voe Port Control (Telex: Sulvoe 75142. Telegraphic Address: Portcontrol Sullomvoe) of their ETA 24 hours in advance of arrival. In addition, this message is to include the estimated time of crossing Lat. 58° 20′ N., Longitude on crossing this Latitude, and the intended inward courses and turnpoints to the Gruney Island Pilot Station (Lat. 60° 38.6′ N., Long. 01° 15.3′ W.). Vessels arriving from the North Atlantic or Northern North Sea should use a position 200 miles from the pilot station.

Prior to sailing from Sullom Voe, all vessels are requested by the Port Authority to indicate intended outward bound courses and turnpoints until South of Lat. 58° 20′ N. or 200 miles from the pilot station as appropriate. This should be detailed on the Tanker Safety Checklist provided by your Agent.

Any vessel sighted discharging dirty ballast will be immediately reported to the U.K. Government Authorities for appropriate action to be taken. In such circumstances, vessels may be liable to extensive delay until investigations have been completed.

Prevention of Oil Pollution: Prior to arrival, vessels are requested to ensure that all crew members are conversant with the anti-pollution regulations, which must be complied with at all times.

Principal causes of pollution are leaking ship side valves, cargo/bunker overflows and pumping engine room bilges. Therefore it is recommended that sea valves, overboard discharges (which should be shut) and ballast/cargo/bunker/bilge operations are checked by the Chief Officer and the Chief Engineer before arrival. Scuppers must be plugged on main and poop decks in respect of vessels loading/discharging bulk oil.

On arrival the terminal will give all assistance necessary but are empowered to take action in the event of contravention of pollution prevention requirements.

Masters must advise if their vessel has sustained any damage which could cause oil pollution and confirm any known oil losses from hull or sea valves.

Vessels are required to arrive at the Sullom Voe Terminal with a total deadweight of not less than 35% of Summer d.w.t including bunkers, fresh water and stores.

Vessels should confirm in advance the amount of ballast, indicating the quantities of segregated ballast, and cargo tank ballast, separately. (See "Radio" – Pre-arrival information).

BALLAST:

Ballast Requirements: For the purpose of manoeuvring, all vessels are required to maintain a reasonable ballasted condition, subject to the requirements specified in the section dealing with Oil Pollution Surveillance.

Vessels should carry sufficient ballast so that the propeller remains immersed whilst maintaining a reasonable stern trim.

Masters are advised that the Port Authority requires, unless otherwise directed by the Harbour Master, that the propeller of any ship to be immersed at all times when vessels are alongside. When operations permit, the proportion of cargo loaded to ballast remaining onboard must be such as to ensure that the vessel can be safely manoeuvred at any time whilst in the harbour. It must be understood that shifts of wind and changes of wind force in Sullom Voe are at times violent and the adoption of an adverse trim in relation to the ship's optimum manoeuvring characteristics will not be accepted.

Ballast Reception Facilities: It is prohibited to discharge any ballast other than segregated clean ballast into the waters of Sullom Voe.

All dirty ballast or non-segregated ballast will be discharged ashore for treatment.

Non-segregated ballast includes ballast contained in any tank designed for or capable of being used for the carriage of crude oil. Tanks having a permanent connection to the cargo piping system are not considered to be segregated ballast tanks.

The Terminal can accept dirty ballast whilst providing the vessel with cargo. Ballast will initially be pumped into settling tanks where excess oil will be skimmed off into recovered-oil tanks. The remaining ballast will be monitored throughout the cleaning process.

Inert Gas: A random check of the quality of the inert gas in several of the vessels' tanks will be made on arrival alongside to ensure the vessel complies with the statutory requirements regarding inert gas. If any of the tanks are found to have an oxygen content in excess of 8% the vessel will be required to vacate the berth and return to sea to complete inerting.

Purging of tanks whilst alongside is not permitted.

Vessels must arrive at the berth with positive I.G. pressure.

Discharge of Dirty Ballast Water: The discharge of ballast water from oil cargo tanks or non-segregated ballast tanks or any ballast water containing quantities of oil or high levels of mineral or chemical pollutant, into the waters of the harbour is prohibited.

The discharge of ballast water from segregated or permanent ballast tanks into the waters of the harbour will be permitted provided that:

1. The Master of the vessel advises the Harbour Authority prior to arrival:
   (a) The place at which the ballast was taken.
   (b) The quantity and disposition of the ballast.
   (c) That to his knowledge the ballast is free from oil contamination.
2. Samples have been taken and analysed by the Terminal Operator. Hydrocarbon level to be 5 p.p.m. or less.

The Oil Pollution Control Officer of the Harbour Authority will on occasions board vessels carrying segregated ballast to obtain samples. Analysis will be made of these samples to ascertain the quantity of hydrocarbon, colliforms and heavy metal pollutants within the ballast. The Harbour Authority may, as a result of information so obtained, refuse permission for the discharge of segregated ballast water taken on board in certain locations.

The discharge of segregated ballast is not to commence before permission has been received from the Loading Supervisor. He will have confirmed with the laboratory that the hydrocarbon level is 5 p.p.m. or less.

MASTERS ARE STRONGLY ADVISED TO CLOSELY MONITOR THE DISCHARGE OF SEGREGATED BALLAST AT REGULAR INTERVALS TO ENSURE THAT OIL IS NOT ENTRAINED IN THE BALLAST WATER.

CONSULS: In Lerwick.

MEDICAL: Medical attention for ship's crews is available on request through Agents. Some specialist services including inoculation and vaccination are available.

FRESH WATER: Potable water can be supplied to tankers at Sullom Voe in an emergency. A small charge is levied for the use of the facility.

Vessels requiring fresh water should inform their Agents prior to arrival.

FUEL: There are no bunkering facilities available for tankers calling at the Port of Sullom Voe.

REPAIRS: Engineering facilities are available to carry out repairs afloat to hull and machinery. Drydock facilities do not exist for vessels over 120 ft.

Electronic Navigational Aids and Radio: All major companies have agencies in Shetland. Repair facilities exist for all types of electronic equipment.

Engine Readiness: Main engines must be maintained in a state of readiness for vacating the Terminal at short notice at all times except in the cases of approved repair work as detailed in Regulation 19 of "Jetty Safety Regulations".

CUSTOMS: A selective system of boarding commercial vessels arriving from a non-U.K. port, will apply at the Sullom Voe Terminal.

REPATRIATION: Crew changes can normally be arranged. Air and sea connections are available to mainland destinations.

It should be borne in mind, however, that during the Winter months delays to air traffic are not uncommon due to prevailing weather conditions whilst in Summer delays can be experienced due to low visibility.

Ships will not be permitted to retain their berth awaiting the arrival of crew members.

AIRPORT: Shetland's airport network is within easy reach of Sullom Voe and scheduled flights are available daily to all major U.K. cities, with connections to worldwide destinations.

BANKS:

Bank of Scotland.	Tel: Lerwick 2624.	Telex: 75309.
Clydesdale Bank.	Tel: Lerwick 5664.	
The Royal Bank of Scotland.	Tel: Lerwick 4520.	

GENERAL:

The following services can be provided for vessels by the Shipping Agencies. Masters are requested to provide notice of requirements prior to arrival.

Compass Adjusting: A service is available for large vessels. Requests should be made in good time to ship's Agents in order that the adjuster may board with the Pilot on arrival.

Storing: Due to the high berth occupancy at Sullom Voe it is not possible to carry out major storings. However, a limited amount of fresh provisions for immediate store requirements can be supplied providing it can be easily handled by the ship's crew.

Fresh and frozen meat can be supplied in any quantity with Shetland lamb a speciality. Shetland knitwear goods of high quality are available at reasonable prices. Other local products include sheepskin rugs, traditional jewellery, handicrafts and salmon (fresh and smoked).

Bonded Stores: Bonded stores are available in any quantity.

Lubricating Oils: Most major oil companies have authorised dealers in Shetland. Lubricating oils of all grades are available at competitive prices.

Charts and Nautical Publications: Available on application to ship's Agents. Advance notice is required for the supply of large sets.

Lloyd's and Salvage Association: If service or survey is required, this may be obtained through their Shetland Agents, Hay & Co. (Lerwick) Ltd.

Sea Travel: P&O Ferries maintain a regular Ro/Ro and Passenger ferry service between Lerwick and Aberdeen.

Provisioning: This service is provided by ship's Agents on request.

Shore Leave/Taxis: All personnel proceeding ashore must be in possession of a shore pass, a supply of which is handed to Masters on the vessel's arrival.

Transport is provided free from the root of each jetty to Seafarers' Centre, and taxis can be arranged for those wishing to travel further afield in Shetland.

There is no public transport system serving the Sullom Voe area.

Telephones: This facility is provided at the Seafarers' Centre operated by the British Sailors' Society and situated outside the main gate.

There are public telephone boxes on the roadside adjacent to the end of each jetty. There are portable telephones available for use aboard a vessel, however, these are NOT intrinsically safe and must only be used within the accommodation spaces. The ship's Agent will supply a list of all call details after use.

Weather Routeing: This service is available to Shipmasters on application to Shetland Weather Centre.

British Sailors' Society: The British Sailors' Society has a Seafarers' Centre just beyond the Terminal Entrance. A free mini-bus service is provided between the jetties and the centre which is open from 1100 hrs. to 2300 hrs. Monday to Saturday and from 1230 hrs. to 1430 hrs. and 1900 hrs. to 2300 hrs. on Sundays.

Amongst the facilities provided are the following: A Chapel, Library, three International Telephones, Television Room, Snooker and Pool Tables, Darts, Shop, Fully Licensed Bar and Light Meals.

The resident manager, Mr. David Hughdie, is there to assist all seamen whatever their Nationality, Colour or Creed and there are three Honorary Chaplains whose services are also available.

Any Seafarer in need of practical, spiritual or welfare help is invited to contact the manager or his staff on Sullom Voe 242715.

Sjomannsstua Havly: 9 Mounthooly Street, Lerwick. (50 Km. from Sullom Voe). Tel. Lerwick 4369. Billiards, T.V., Films, Mini-Bus Service.

NOTICES:

Landing in Great Britain of Live Animals, Live Birds and Meat:

The attention of Masters is drawn to "Notice to Masters of Vessels and Commanders of Aircraft (IM24 (Rev 79))" of which the following are extracts:

Diseases of Animals Acts 1950 and 1975, Rabies Act 1974, Destructive Imported Animals Act 1932 and Ponies Act 1969.

WARNING: Her Majesty's Government exercise strict controls at ports and airports to prevent the introduction of animal disease and destructive animals into Great Britain. Severe penalties may be applied to those who do not comply with the import regulations.

Dogs, cats and other mammals (including ship's pets) brought to Great Britain on board a vessel which are not intended to be landed do not need a licence, but must at all times be securely confined in an enclosed part of the ship so as to prevent their escape and must not come in contact with any other animals except those similarly confined. The authorities must be informed immediately if any animal should escape.

Notice to Mariners 4/82:

Spur Booms

Anti-Pollution Spur Booms have been established at several permanent sites around the shores of Sullom Voe, and mooring buoys have been laid to facilitate quick deployment at each location as follows:

Location	*Boom Layout*	*Buoy Position*	
		Latitude	*Longitude*
Tivaka Taing	Spur Boom	60° 28′ 41″ N.	01° 18′ 37″ W.
Fugla Ness	Spur Boom	60° 27′ 04″ N.	01° 18′ 50″ W.
Lang Ayre	Twin Boom	60° 26′ 53″ N.	01° 20′ 12″ W.
Voxter Voe	Twin Boom	60° 24′ 36″ N.	01° 20′ 40″ W.
Calna Taing	Spur Boom	60° 26′ 26″ N.	01° 19′ 21″ W.
Scatsta Voe	Twin Boom	60° 26′ 38″ N.	01° 16′ 50″ W.
R.A.F. Jetty	Spur Boom	No buoy used.	
Roe Clett	Spur Boom	60° 28′ 56″ N.	01° 17′ 19″ W.

Buoy Description: Body: Yellow Pillar; Character: Gp. Fl. (4) ev. 12 sec.; Daymark: Yellow St. George's Cross; Range: 3 miles; Light: Yellow.

Notice to Mariners 5/82:

Bight of Haggrister: Mooring Buoy. A permanent barge mooring has been established in position: Lat. 60° 24′ 37″ N., Long. 1° 22′ 02″ W. Description: Yellow cylindrical; unlit.

Mariners are requested to exercise caution when navigating in the vicinity of these locations.

HYDROGRAPHIC NOTES:

Prohibited Anchorages

1. Owing to the existence of the tanker turning area within the vicinity of Sella Ness and Scatsta Ness, Mariners are advised that anchoring East of a line joining the following positions is prohibited, viz.:

From Position: Lat. 60° 26′ 57″ N., Long. 01° 19′ 17″ W.
To Position: Lat. 60° 26′ 32″ N., Long. 01° 18′ 10″ W.

2. Owing to the existence of an outfall pipe between Skaw Taing and Swarta Taing, all vessels are advised that fishing and anchoring is prohibited within the area bounded by Little Roe and lines produced seawards from 2 sets of day transit marks diamond in shape and yellow in colour which are established in the following positions:

A: Lat. 60° 29′ 15″ N., Long. 01° 16′ 42″ W.
Lat. 60° 29′ 10″ N., Long. 01° 16′ 44″ W.
B: Lat. 60° 29′ 10″ N., Long. 01° 16′ 21″ W.
Lat. 60° 29′ 06″ N., Long. 01° 16′ 21″ W.

Outfall Marker Buoy – Calback Ness: A yellow spherical navigational buoy with a yellow St. Andrews cross topmark and a radar reflector showing a light Gp. Fl. 4(Y). ev. 12s. has been established in position:
Lat. 60° 29′ 29″ N., Long. 01° 16′ 08″ W.

This buoy marks the seaward end of the ballast water outfall pipe.

Permanent Navigation Marks Tanker Jetties – Sullom Voe

Permanent navigation marks have been established on the mooring dolphins at either extremity of the tanker jetty complex as follows:

Jetty No. 1 East end dolphin in position Lat. 60° 27′ 21″ N., Long. 01° 17′ 02″ W. two fixed red lights vertically disposed 2 m. apart, the lower of which is 5 m. above MHWS. Visible 3 miles.

Jetty No. 4 West end dolphin in position Lat. 60° 27′ 56″ N., Long. 01° 18′ 20″ W. two fixed red lights vertically disposed 2 m. apart, the lower of which is 5 m. above MHWS. Visible 3 miles.

Misuse of VHF Radio:

Owners, Masters and Skippers are reminded to read Merchant Shipping Notice No. M814, which refers to the misuse of VHF Radio.

The improper use of VHF is illegal and can cause serious disruption to communications concerned with the movement of shipping in the port area.

The co-operation of all port users is requested to ensure that such misuse does not occur.

SAFETY: *Smoking:* Smoking is prohibited in vessels during loading operations, except in 2 or at most 3 smoking rooms allocated by the Master and approved by the Terminal Representative.

Matches and lighters must not be carried by personnel outside the approved smoking areas, or on the jetties or anywhere within the terminal.

The Seaman's Pass issued to personnel going ashore by Sullom Voe Terminal carries the information that matches are available at the Main Gate for use outside the Terminal premises. The matches are issued free of charge.

Special arrangements have been made for ship's personnel leaving or joining vessels at the terminal, details of which are in the Terminal Regulations, or can be advised by the ship's Agent.

Fire Precautions: Every vessel's fire-fighting appliances, (including main and emergency fire pumps) must be kept ready for immediate use with at least 1 fire pump maintaining pressure on the main.

Before deballasting and loading/discharging operations commence, and during periods when permitted repair work is being carried out, at least 2 fire hoses must be uncoiled and connected to the fire main. One of the fire hoses must be sited forward and the other abaft the manifold.

An International Shore connection shall be available on the vessel's fire main in the vicinity of the gangway.

Jetty Fire-Fighting Facilities: The oil loading jetties are each equipped with 2 independent fire-fighting systems, one for water alone and the second for either water or foam mixture.

These jetties supply hydrants which are spaced along the jetty access road and jetty head.

Monitors are installed to provide a water curtain in the area of the jetty head and between the access tower and manifold area. Elevated monitors are also positioned at the top of the access and monitor towers. A sprinkler system protects the access tower.

Hose couplings are 2.5 in. standard instantaneous female type and the fire main to the access tower can accept international connections.

The working pressure of the fire system is 250 – 260 p.s.i. A fire hose connection is situated on the construction jetty to allow fire-fighting tugs to link into the system.

POLLUTION: It will be appreciated that oil spillages are viewed seriously by Government, Local Authorities, Port Authorities and Terminal Operators. Spillages will be investigated by the appropriate authorities and the Master and/or Owner may be liable to prosecution. Delay to the vessel could well arise.

Masters are therefore requested to ensure that every precaution is taken to prevent oil spillages at the Sullom Voe Terminal.

COASTGUARD SERVICES: H.M. Coastguard is the authority responsible for initiating and co-ordinating all sea and coastal search and rescue operations in the Shetland sea area. They also keep in close touch with the S.A.R. organisations of all countries in adjoining sea areas.

Regular stations are maintained at Lerwick M.R.S.C. (Marine Rescue Sub-Centre), with sector offices in the Port Administration Buildings at Sella Ness and Lerwick.

Rescue equipment is maintained and manned by auxiliary coastguards at Baltasound, Mid Yell, Fetlar, Out Skerries, Whalsay, Bressay, Noness, Sumburgh, Fair Isle, West Burra Isle, Walls, Huxter, Hillswick, North Roe and Papa Stour.

Safety and Weather Information is available through the remote controlled VHF radio sites at Saxa Vord (Unst), Collafirth, Lerwick and Sumburgh. A 24 hour radio watch is maintained by Lerwick M.R.S.C. (call sign "Shetland Coastguard") on Channel 16 and 2182 kHz, and by Sullom Voe Coastguard (Channel 16) during normal office hours or as required.

This enables safety and distress calls from vessels, up to 40 miles out from Shetland, to be picked up on the Coastguard VHF network. On receiving a call for assistance or advice, the Coastguard can instantly alert the appropriate facility, which might be a military or civilian helicopter, RNLI lifeboat, shore rescue teams or vessels at sea.

Other VHF Channels are 0, 6, 10, 67 (working) and 73.

A VHF D/F facility through (Compass Head) Sumburgh Aerial on Channels 0, 6, 10, 16, 67 and 73.

Civilian Search and Rescue Helicopters, based at Sumburgh, are contracted by the Department of Transport (H.M. Coastguard) for long range search and rescue purposes. These helicopters are fitted for winching, and carry comprehensive rescue equipment including a salvage pump and inflatable dinghy capable of being dropped to vessels in distress.

They have a speed of about 100 knots and a range of approximately 150 nautical miles from Sumburgh. Navigation equipment includes V.O.R., I.L.F., Decca A and D/F Console. Communications facilities are:

MF	2182, 3095 and 5693.5 kHz
VHF AM	118/135.95 MHz
VHF FM	Marine Frequencies

R.N.L.I. STATIONS: The following lifeboats are on station:

Lerwick: 52 ft. Arun Lifeboat 'Soldian'.
Details: Speed 18 knots, range – 220 nautical miles.
Navigation – Radar, Decca, VHF/DF, MF/DF, etc.
Communications MF 2182 kHz, 1647.5 kHz, 1662.5 kHz
1827 kHz, 2226 kHz, 2241 kHz
2306 kHz, 2381 kHz, 2548 kHz
VHF/FM (Marine Band) 60 channel set.

Aith: 52 ft. Arun Lifeboat 'Snolda'.
Details: Speed 17.2 knots, range 237 nautical miles.
Navigation – Radar, Decca, echo sounders, MF D/F, VHF D/F.
Communications MF (RX): 1647.5, 1662.5, 1792, 182
2182, 2241, 3023.
MF (TX): 1647.5, 1662.5, 2009, 201
2104, 2182, 2241, 2381, 302
kHz.
VHF/FM (Marine Band): 60 Channel set.

All requests for lifeboat or helicopter assistance should be routed through Shetland Coastguard M.R.S.C.

MEDICOS: Vessels requiring medical advice or medical assistance should adhere to the radio regulations and contact either Collafirth or Shetland Radio on Channel 16 VHF. If unable to contact the radio station, vessels can contact Shetland Coastguard direct on Channel 16 VHF.

EMERGENCY SERVICES AND PROCEDURES:

Fire	Tel: Sullom Voe 242798	VHF Channel 10
Oil Pollution	Tel: Sullom Voe 242798	VHF Channel 10
Ambulance	Tel: Sullom Voe 242798	VHF Channel 10
Security	Tel: Sullom Voe 242798	VHF Channel 10

All emergency services at the oil terminal are co-ordinated by the "Emergency Response Control Room" situated at the Terminal fire station.

On vessel's arrival at the Terminal, the responsible ship's officer and the Loading Supervisor will discuss action to be taken in an emergency situation. The Master of the vessel should study and comply with the 'Jetty Safety Regulations', a copy of which will be supplied.

Safety inspections will be undertaken by the Loading Supervisor throughout the vessel's stay alongside. Spot checks will also be made by the Terminal Emergency Response Branch.

In the event of an emergency, vessels should immediately contact Sullom Voe Port Control 242494/242495/242551 or VHF Channel 10.

SHIPMASTER'S REPORT: 1983.

It is necessary to provide access to the vessel on the offshore side, in the form of accommodation ladder with vessels having high freeboard, at all times when alongside.

All crew members require passes for shore leave and must use transport from the jetty. This transport is arranged by the security guard in the hut at shore end of jetty.

Usually with moorings it is springs first then breast lines. The Terminal is not concerned with head or stern ropes. Some of the dolphins are fitted with shore based pulley systems and these count as 2 ropes for mooring purposes.

Telephone calls may be made from the Mission (U.K. and International) and paid for in pounds sterling.

REPORT: October 1983.

Gas Carriers: Gas carriers shall conform to the following requirements and the pipe-line operators concerned shall, at the time of nomination, confirm to the terminal operator that the carrier nominated so conforms throughout the time she will be within the port limits.

a. The tanker conforms to the standards required in the EEC memorandum of understanding or to state control.

b. The tanker complies with the Statutory Instrument 1981 No. 1077 Merchant Shipping, Merchant Shipping (Tankers) (EEC requirements) Regulations 1981.

c. The tanker can comply with the conditions of carriage as specified on her IMO Certificate of Fitness.

d. The tanker will during the loading and simultaneous handling of ballast follow the procedures as outlined in her approval trim and stability document.

e. The tanker can be adequately moored to equivalent OCIMF standards, i.e. resisting loads due to any of the following current conditions acting simultaneously with a 60 knot wind from any direction:
3 knots at 0° and 180°
2 knots at 10° and 170°
3/4 knots from direction of maximum beam current loading.

f. The tanker can accept a minimum bulk loading rate per hour of 3% of her total cargo carrying capacity up to a maximum of 3,000 cu.m./hr.

g. The tanker reliquefaction units are capable of handling a minimum bulk loading rate per hour of 3 per cent of her total cargo carrying capacity up to a maximum of 3,000 cu.m./hr.:
(a) without venting to atmosphere and:
(b) without the use of a vapour return line to shore.

h. All cargo tanks will be cooled down on arrival and the vessel ready to commence loading. Any vessel that cannot comply and requires to purge and/or cooldown prior to loading will only be accepted on the basis of prior agreement having been reached between the terminal operator and the pipe-line group nominating the vessel.

i. That the following tests will be carried out within 24 hours before arrival and any defect, and any change in the status of the systems thereafter, be reported to the Port Authorities:
(a) ventilation of compressor/pump/control room.
(b) gas detection system
(c) emergency shut down system
(d) pressure and temperature control units
(e) cargo tanks' safety relief valves setting.

SHIPMASTER'S REPORT: August 1984 (Updated 1988).
Vessel: 140,000 d.w.t.
Tugs: Normally 4 tugs for berthing and 2 tugs for sailing, tugs' lines. All tugs make fast and 2 push. On arrival the forward tug requires a heaving line from the main deck, he then steams forward to pass his line up through the centre fairlead.
Moorings: Under normal conditions first 2 back springs, then 2 to 3 breasts, then 2 to 3 head/stern lines.
Gangway: Shore gangway.
Departure: On departure Pilot normally boards 1 hour after completion of loading. EDP is standard procedure.
Surveyor: Lloyd's Surveyor comes from Aberdeen and requires 2 to 3 days' notice.

AUTHORITY: Shetland Islands Council, Ports and Harbours Department, Port Administration Building, Stella Ness, Mossbank, Graven, Shetland ZE2 9QR. *Tel:* Sullom Voe (0806) 242551. *Telex:* 75142 Sulvoe G. *FAX:* Sullom Voe (0806) 242237. *Cables:* Portcontrol Sullomvoe. *Contact:* Captain G. H. Sutherland, Director of Ports and Harbours, Harbour Master – Sullom Voe.

SUNDERLAND: 54.55 N. 01.21 W. (See Plan)

DOCUMENTS:

Crew List. 1 Form I.B.6A to be delivered to an Immigration Officer within 24 hours of arrival.

Passenger Lists. Form P.R.4. in duplicate and Form P.R.10 in duplicate.

Customs Documents. Crew Declaration Form C.142 in duplicate.

Cargo Manifests, triplicate.

Ship's Papers:
Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Derat Certificate.
Customs Light Bills.

PILOTAGE: Call Sunderland Harbour Radio, Channel 16, working Channel for port is 14. Pilotage compulsory in South Docks and upriver of Corporation Quay. Pilotage also compulsory on all vessels carrying dangerous goods or with mechanical defects, under tow. Pilots maintaining continuous watch on VHF Sound signals for vessel requiring Pilot is Morse Code No. 6. Pilot boards 0.5 to 0.75 miles off piers. In bad weather pilot cutter leads vessel into inner harbour, and Pilot boards there.

ANCHORAGES: 0.5 to 0.75 miles N.E. of Roker Pier Lighthouse.

RESTRICTIONS: Vessels may enter South Dock from 2 hours before until half an hour after high-water. Vessels may lock in outside of these times depending on draft and state of tide. For North Dock and Corporation Quay restrictions depend on draft and state of tide.

MAX. SIZE: South Dock – length 142 m. beam 18.9 m., draft 8.08 m. with Spring tides, 7.16 m. with Neap tides.

River – length 183 m., beam – no restriction, draft 8.38 m. subject to siltage.

HEALTH: Pratique procedure: Pratique granted by Port Health Authority on arrival.

Suspected disease or fever: All ships from suspected areas must radio Port Health Authority 24 hours in advance of arrival, stating general condition of crew members. Pratique is automatic when ships arrive from other U.K. ports.

Also see "Health – All Ports" before first U.K. port.

RADIO: Cullercoats.
TUGS: Join vessel at or outside harbour entrance. Tug's ropes normally used.
BERTHING: In South Dock vessel must arrive from 2 hours before up to 30 minutes after high water. Vessels may lock in as under "Restrictions". At Corporation Quay small vessels berth at any time. Large vessels usually berth at same time as mentioned for South Dock.

Bridge swung to allow vessels to pass through.
BRIDGES: In South Dock bridge swung to allow vessel to pass through. Railway Bridge clearance, 25.1 m. MHWS.
STEVEDORES: A close knit dedicated labour force is engaged on cargo handling operations.

Arrangements and Hours of Working:
Normal hours of operation are:
0800 – 1700 hrs. (Monday to Thursday).
0800 – 1600 hrs. (Friday).

Work outside these core hours (overtime working) may be ordered as required.

On bulk cargo a continuous working day is available from:
0700 – 1900 hrs. (Monday to Thursday).
0700 – 1600 hrs. (Friday).

Weekend working on Saturday and Sunday and Bank Holiday working can be arranged as necessary, with the exception of Christmas Day, Boxing Day and New Year's Day.
MEDICAL: Well served with General practitioners and hospital facilities, and attention can be arranged at very short notice. However, unless urgent, 24 hours notice desirable.
TANKERS: 4 installations (lines either 0.16 m. or 0.2 m.) 3 installations in South Dock and 2 berths, the S.E Oil Berth 98 m., the S.W. Oil Berth 89 m. 1 vessel of maximum length 142 m. can use this berth, draft 8.08 m. Spring tides; 7.16 m. Neap tides. At Corporation Quay vessel 183 m. long, draft 8.58 m.
DENSITY: Usually 1025. May be less after heavy rain.
FRESH WATER: Available. Arrangements can be made to supply water at any time.
FUEL: Bunkers supplied at Corporation Quay pipe-line from Petrofina. All grades available – Corporation Quay and Hendon Dock. Viscosities range from 32 secs. to 3,500 secs., and can be blended to any requirement in this range. 12 hours' notice necessary. Rate 250 t.p.h.

REPAIRS: All repairs possible.
DRY DOCKS: One dry dock in use, length 112 m., breadth 16.5 m.

Floating dock, length 65.5 m., breadth 13.72 m.
GANGWAY/DECK WATCHMEN: Watchmen's services recommended.
OPENING/CLOSING HATCHES: This work is normally carried out by ship's crew, otherwise shore riggers.
CERTIFICATES:
Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Derat Certificate.

CUSTOMS ALLOWANCES: As per H.M. Customs and Excise Regulations.
REPATRIATION: Facilities available for effecting repatriations, with good rail, road and air communications.
AIRPORT: Approximately 20 miles. Newcastle Airport served by regular airlines, all the year round, to all parts of the world. Air UK operate flights to Amsterdam.
HOLIDAYS: Official Holidays for General Cargo ships: New Year's Day (no work except by special agreement); Good Friday; Easter Monday; May Day; Spring Bank Holiday; Summer Bank Holiday; Christmas Day (no work except by special agreement); Boxing Day (no work except by special agreement).
POLICE/AMBULANCE/FIRE: Police Station Tel: Wearside (091) 567-6155; Ambulance Control Tel: (091) 567-9337; Fire Tel: (091) 261-6523, or call 999 from any telephone and ask for service required.
TELEPHONES: Permanent arrangements do not exist, but a temporary arrangement can be made at any time.
IDENTIFICATION CARDS: Not required. Must possess valid Seaman's Book and/or Passport.
DEVELOPMENTS: A Ro-Ro terminal is to be constructed on 30 acres of reclaimed land. Initially a single berth of 150 m. length will be available.
AUTHORITY: Port of Sunderland Authority, Barrack Street, Sunderland SR1 2BU. *Tel:* (091) 5140411. *Telex:* 53483. *Fax:* 5108351. *Contact:* Harbour Master.

SWANSEA: 51.37 N. 03.56 W. (See Plan)

DOCUMENTS:

C142	2 copies	Crew Declaration
C14	3 copies	Stores Declaration
C13	2 copies	General Declaration (completed by Agent)
C16	2 copies	Cargo Inward Declaration
C74	1 copy	Master's Authority (Agents complete)
C1320	2 copies	Cargo In unregistered spaces

These documents are to be completed and presented with copies of manifests and ship's documents at the time of report.
PILOTAGE: Compulsory for vessels of 1,500 g.r.t. and above. Request for Swansea Bay Pilots by International Signal Code for Sea Pilots, by telephone call for Dock Pilots. Telegraphic address for Swansea Pilots is "Pilority, Swansea".

Advance notice of ETA required at least 12 hours. VHF Channels 16 and 6. Pilot boat has bright yellow hull with red boot-topping; superstructure painted white. Pilot cutter's sound signal is "SM", 3 short and 2 long blasts. The area of boarding is usually 1 mile S.E. of Mumbles Lighthouse in all weathers. Usual requirements for ladders are in force, and Pilots require ladder to be about 4 ft. to 5 ft. above water.
ANCHORAGE: About 1 mile S.E. of the Mumbles Lighthouse.
RESTRICTIONS: Berthing is in accordance with tide. King's Dock Lock operates for a minimum of 8 hours each tide. River-side berths and Swansea Ferryport Terminal operate over a greater period.

No night-time restriction of entry.
MAX. SIZE: Max. size for entry is 655 ft. long, 86 ft. beam, 32 ft. 6 in. draft.

These vessels are docked over HW period. Any vessel whose dimensions are approaching maximum, or slightly in excess, for port should advise Port Manager well in advance. A vessel with a beam of 87 ft. 4 in. has been accepted.
HEALTH: Usual international health regulations are to be observed. Any vessel which is suspect should inform Port Medical Officer of Health.
RADIO: All communications for ship movements through "Swansea Dock Radio" Channels 16 and 14 VHF. Agents, receivers, etc., can be called through usual coastal radio stations – this includes Ilfracombe Radio.
TUGS: Towage undertaken by private operators. The Alexandra Towing Co. Ltd., at present use a modern fleet of tugs at Swansea and Port Talbot. It is optional whose lines are used, but if tugs line is taken, an extra charge will be made.
BERTHING:

Dock	*Quay Length (Total)*	*Depth of Water (Absolute Min.)*	*Maximum Size of Vessel*			
			Length	*Beam*	*Draft*	*Approx. d.w.t.*
	(m.)	(m.)	(m.)	(m.)	(m.)	
Kings Dock	2,268	10.1	199	26.5	9.9	30,000
Prince of Wales Dock	1,219	8.1	122	20.7	7.3	—
Queen's Dock	Oil Jetties (Operated by BP Co.)	10.7	199	26.5	9.9	30,000

Ro/Ro Berth: Situated on the East bank of the River Tawe, this facility provides a 137 m. berth, hinged shore bridge 76 m. long, with a 6 m. roadway. Adequate vehicle marshalling areas and Customs/ passenger facilities are available. The nose of the bridge can be lowered through 12.95 m. to allow for variation in tides and ship's flotation.
Containers: Swansea Container Terminal plc operates a full container terminal with a 35 tonne crane.
BULK HANDLING FACILITIES: *Petro Chemicals:* One jetty in Queen's Dock and 4 jetties for bulk liquid fuels, feedstock, etc. operated by BP Chemicals International Ltd.
Bulk Cargoes (Sulphur, coal, ores, etc.): Two berths in King's Dock equipped with 5×7.5 ton and 5×10 ton grabbing cranes. Operated by Associated British Ports.
Ferryport: On East bank of River Tawe.
CRANES: 2×25 ton and 9×11.5 ton, 4×7.5 ton and 9×6 ton electric cranes. 2×4 ton mobile cranes also available.

40 fork-lifts up to 11.5 tons, 1×25 tonnes capacity, and 1×40 tonnes capacity.
BRIDGES: One in dock bridge is under direction of duty Assistant Dock Master. A vessel which has to pass will be informed by the Assistant Dock Master as to the availablity.
STEVEDORES: Stevedoring services are provided by Associated British Ports and Swansea Container Terminal plc. Advice of labour requirements must be received by the following times:
General Cargo: By 0700 hrs. to start work at 0700 hrs.

Weekend work to be ordered by 1030 hrs. on Friday.
MEDICAL: Port Medical Officer of Health has an office on King's Dock Lock. Medical attention can be obtained at short notice. In emergencies the duty Assistant Dock Master can be communicated with, to obtain medical help. Hospital facilities available, and there is a first-class medical centre on the Prince of Wales Dock. Vaccination and fever certificates will be examined when receiving Pratique.
TANKERS: All tankers arriving, working cargo, and departing are required to observe port's Petroleum By-laws and Oil in Navigable Waters Act. British Petroleum Company has further private directives for oil tankers. 5 main tanker berths, 1 petrochemical berth, 2 coastal tanker berths and 2 lay-by berths in Queen's Dock. 1 tanker/general cargo berth in King's Dock. Deepest draft permitted is 32 ft. 6 in.

Tankers of 1,600 g.r.t. and over to observe Merchant Shipping (Tankers – E.E.C. Requirements) Regulations 1981.
DENSITY: King's Dock Lock density is 1025.
FRESH WATER: Fresh water supplied from hydrants on quays by watermen. Rate of delivery is 2,000 g.p.h., approx., depending on the demand.
FUEL: Various grades of gas oil and diesel can be supplied by barge or road vehicles, or it can be delivered ex-pipeline at Queen's Dock

FIRE PRECAUTIONS: All matches and lighters must be declared at entrance to oil installation. There are arrangements at the Queen's Dock depot for shore cooking and eating. There is an oil boom between the King's Dock and Queen's Dock to serve as an oil fire break between two docks.

CONSULS:

France	Tel: Swansea 650021
Norway	Tel: Milford Haven 2313
Vice-Consuls:	
Belgium	Tel: Milford Haven 2313
Sweden	Tel: Gorseinow 895881

REPAIRS: All types of deck and engine-room repairs are possible.

DRY DOCKS: 2 dry docks in port are entered from King's Dock. Dry docks: "Duke of Edinburgh" 670 ft.×92 ft.; "Palmers" 560 ft.×75 ft.

SURVEYORS: Cargo Inspectors available locally.

Ship Surveyors located in Swansea and Cardiff.

GANGWAY/DECK WATCHMEN: Under Port Regulations, there shall always be on board sufficient men to move or take care of the vessel. Some vessels employ watchmen.

OPENING/CLOSING HATCHES: Normally done by the ship's crew, but if riggers are employed by vessel for general duties they open up hatches.

CUSTOMS ALLOWANCES: At discretion of local H.M. Customs Inspectors.

CERTIFICATES:

Certificate of Freeboard.
Certificate of Registry.
Certificate of Pratique.
Light Bill.
Manifest.
Bill of Health.
Bills of Lading.

REPATRIATION: Arrangements can be made for repatriation through the Consular Channels.

AIRPORT: Nearest airport at Swansea, 8 miles from Docks. Next are Rhoose (Cardiff) and Bristol Airports where regular scheduled flights are handled.

TIME: Local time is British Standard Time which is plus 1 hour to Greenwich Time. Reverting to GMT during Winter months.

HOLIDAYS: Christmas (25th December); Boxing Day (26th December); New Year's Day; Easter, Good Friday and Monday (movable dates); Spring Holiday, May Day, Summer Bank Holiday (both movable dates). No cargo is worked on these days.

POLICE/AMBULANCE/FIRE: Call 999 from any telephone, and ask for service required.

EMERGENCY CO-ORDINATION CENTRE: S.A.R. Centre based at Mumbles. Tel: Swansea 66534.

TELEPHONES: Arrangements at most berths for placing telephones on board ships in port.

5.
6. Yes.

SHIP SUPPLY SERVICE: It is the practice for the Swansea and Port Talbot pilot cutter to ferry personnel, stores, etc., to vessels offshore and due to dock at the respective ports.

Swansea and Port Talbot Pilotage, Port Office, King's Dock Lock, Swansea, West Glamorgan, South Wales. Tel: (0792) 650855.

IDENTIFICATION CARDS: Not compulsory, but they are helpful if a crew member has to identify himself to Authorities.

GENERAL: Entrance lock is 875 ft. in length, 90 ft. across at cope level. The inner sill is 7 ft. higher than the outer sill. The outer sill is 2.8 m. below Admiralty Chart datum (Chart No. 1161).

Tugs are available at the port for in-dock as well as sea towage.

A diver can usually be obtained by enquiry to the A.B.P. Port Engineer, Swansea.

Port Manager: Tel: 650855/200. Port Engineer: Tel: 650855/275. Dock Master and Fire Officer: Tel. 650855/260.

AUTHORITY: Associated British Ports, Harbour Office, Adelaide Street, Swansea, Glamorgan SA1 1QR. *Tel:* (0792) 650855. *Telex:* 48150. FAX: (0792) 650729. *Contact:* Mr. A.R. Klinck, Port Manager. Captain T.E.W. Boyd, Harbour Master.

TEES RIVER: 54.39 N. 01.08 W. (See Plan)

PORT LIMITS: The Port facilities extend from the river entrance to the I.C.I. Billingham Oil Jetty 16 km. up river.

Arrival in the port is accepted as time of passing South Gare Lighthouse inward, or time of anchoring in the Tees Bay.

DOCUMENTS: Ship's official papers including:

Register.
Load Line Certificate.
Derat Certificate.
Safety Equipment Certificate.
Radio Safety Certificate.
Construction Safety Certificate.
U.K. Light Dues.
Oil Pollution Certificate. (Tankers).
Crew List.
C14 Ship's Stores List.
C13 Arrival General Declaration.
C142 Crew Declaration.
Tanker Check List (Tankers over 1,600 g.r.t.)

PILOTAGE: The Tees Pilotage Area is that part of the harbour for the time being, as specified in the Tees & Hartlepool Port Authority Act 1966 and all statutory modifications thereto falling within an area from the waters of the River Tees below the Newport Bridge at Middlesbrough, including all docks and tidal creeks connected therewith and the waters of the sea bounded by a line bearing 047°(True) from the Port Boundary Stone at Seaton Carew and extending seaward from that stone for a distance of 3.95 miles, thence clockwise along a circle of a radius of 3.5 miles from the South Gare Lighthouse at the mouth of the River Tees to the shore at Redcar, always excluding any port of the area enclosed by a circle of radius of 1.5 miles from the seaward end of the Hartlepool Breakwater.

Official address: The Tees & Hartlepool Pilotage Co. Ltd., 13 – 14 Bridge Street East, Middlesbrough, Cleveland, TS2 1NS. Tel: Middlesbrough 242924 (during office hours). Pilots should be ordered through Redcar 485648 (all hours).

Pilot station is situated at South Gare and pilot cutter on duty is moored there. Cutters are painted blue with white or orange upper structure and fly the pilot flag by day when on duty and International Regulation lights by night. The duty cutter is equipped with VHF Radio, call sign "Tees Pilots" on Channel 16. Radar is also fitted.

As much advance notice of a vessel's arrival as possible should be given to Pilots. Minimum requirement for vessel arriving is 1 hour and for vessel sailing 1 hour 15 minutes.

Pilot boards in vicinity of Tees Fairway Buoy although smaller vessels are occasionally boarded off the South Gare lighthouse. During severe weather the duty cutter may move to Tees Dock and the Pilot will board as far seaward as the conditions permit.

Pilotage is compulsory for certain classes of vessel.

Class of ship requiring a Pilot:

1. (a) Ships of 95 m. LOA and over, navigating in the "Tees Approach Channel" and the "Tees River Channel" seawards of Light Buoy No. 27 (Position: Latitude 54° 35′ 02.2″ N., Longitude 01° 11′ 46.8″ W.).
   (b) Ships of 80 m. LOA and over, navigating in the "Tees River Channel" between Light Buoy No. 27 and Tees "Newport" Bridge.
2. Ships navigating in the "Tees Approach Channel" or "Tees River Channel" up to Tees "Newport" Bridge.
   (a) Of 20 m. LOA and over, having on board a dangerous substance.
   (b) Requiring the services of a tug.

Pilotage Exemption Certificates: Certain Masters and Mates may be entitled to a "Pilotage Exemption Certificate" upon application to the Tees & Hartlepool Port Authority. Details are obtainable from the Harbour Master, Harbour Master's Office, Tees Dock, Grangetown, Middlesbrough, Cleveland, TS6 6UD.

APPROACHES: Vessels are prohibited from anchoring:—

(i) inside the dredged channel.
(ii) within a radius of 1,113 m. of the Tees Fairway Buoy.
(iii) within the limits of 2 divergent lines starting and extending from the dredged channel limits 244 m. apart at the South Gare Light Station, to 550 m. apart between their respective points of intersection with the circumference of the circle defined in (ii).

Small vessels can anchor close N.E. of Light Buoy No. 4: larger vessels at Fairway Buoy and in all cases outside the 20 m. contour. Vessels waiting Pilots anchor in these areas.

Anchoring in the vicinity of the Ekofisk Pipe-line is to be avoided. See Notice to Mariners No. 2724 of 1977.

RESTRICTIONS: *Traffic Control:* This is operated by the Harbour Master when vessels over 200 m. in length are moving within the river limits. The primary purpose is to allow the subject vessel to negotiate the channel without embarrassment from other traffic. Overtaking/passing is decided by the Harbour Master when circumstances favour such actions.

Restricted Transit Control: This is imposed by the Harbour Master upon vessels carrying certain hazardous cargoes. The subject vessel is intended to proceed from sea to berth or from berth to sea without meeting other traffic. As a consequence such vessel must be restrained from entering the main channel until an 'all clear' route is available. Some regulated passing.

Port Safety Control: Masters of ALL vessels before committing their vessels to the River Tees Channel are required to satisfy the Harbour Master in respect of shipboard equipment by affirming to the following questionnaire:—

Question No. 1: Your vessel is in all respects seaworthy.
Question No. 2: All secondary power or mechanical systems are in operation and *immediately* available in the event of failure of any primary system.
Question No. 3: Steering is under direct manual control.
Question No. 4: Anchors are ready for use.

In view of the controls it is essential for contact to be made with the Harbour Master before considering entering the river, leaving the berth.

VHF Radio use Channels 22, 16 or 14 to contact. Tel: (0642) 452541. Telex: 58145.

MAX. SIZE: This matter is constantly under review. At present the largest dimensions acceptable are quoted as: Length 305 m. (1,000 ft.); Beam 45.7 m. (150 ft.); Draft 16.76 m. (55 ft.). This depends on the berth nominated, tidal influence and prevailing weather.

Vessels requiring in excess of 16.15 m. (53 ft.) draft should be the subject of prior consultation with the Harbour Master.

A vessel with unusual dimensions e.g. oil rig, or any vessel with dimensions approaching the port maxima, must be the subject of consultation with the Harbour Master.

HEALTH: New Regulations. The Public Health (Ships') Regulations in force from 1.4.78.

See "Health – All Ports" before first U.K. port.

RADIO: Ships approaching from the North or at anchor in Tees Bay use Cullercoats Radio. Ships approaching from Southward use Humber Radio or Whitby Radio which is a slave-station to Cullercoats.

VHF Station	*Call Sign*	*Channel Fitted (min.)*
Harbour Master's Office	TEES HARBOUR RADIO	22,16,14,12,11,8
Harbour Master's Launch	TEES HARBOUR LAUNCH	16,14,12,11,9,8,6
Tees & Hartlepool Port Authority Maintenance Craft	"NAME"	16,11,6, etc.
Tees Pilot Cutter	TEES PILOTS	16,14,12,9,8,6
Tees Pilot Station (South Gare)		16,14,9
Tees Tugs	NAME	16,14,12,8,6, etc.

Tees Harbour Radio is manned 24 hours per day and is also available to Hartlepool shipping for relaying port operational messages.

Channel	*Use*	*Channel*	*Use*
22	Port Operations	11	Domestic Port Operations
16	Calling and Safety	9	Pilot Port Operations
14	Port Operations	8	Intership
12	Port Operations		

Vessels should listen on Channel 14 at all times when underway in the port.

RADAR: 3 scanner sites give full radar coverage from Tees Offshore Base/Tees Dockyard Ltd. to Fairway Buoy and up to 20 miles to seaward. Advice/information available to Masters/Pilots at any time. Advice in poor visibility in prescribed form. Call "Tees Harbour Radio". (See "VHF").

The Ekofisk oil pipe-line runs 220 miles from the Ekofisk oilfield to Teesside, coming ashore just North of the Tees Entrance; the inshore section is vulnerable to anchor damage from large ships and to give the pipe-line optimum protection, a computerised radar has been installed in the Harbour Office.

TUGS: Official Address: Tees Towing & Co. Ltd., Tees Wharf, Dockside Road, Middlesbrough, Cleveland TS3 6AB. Tel: Middlesbrough 247277 day and night.

Fleet of 7 tugs between 2,200 h.p. and 3,650 h.p. Tugs join vessel in Redcar Reach between Buoys No. 9 and No. 17 depending on size, draft and destination. Tug's lines are used.

Tugs are on duty daily and available on 6 hours' notice for sailing and arriving after normal office hours.

BERTHING: Small vessels can usually berth at any stage of the tide. Deep drafted vessels enter in accordance with the tide.

T.H.P.A. General Cargo Facilities:

Tees Dock: Quay No. 1: 4 conventional general cargo berths each of 183 m. length, 1 of 208 m. in length with flush faced quay. Road and rail access to all vessels. Ample cranage and spacious sheds/open ground. Nominal dredged depth 10.9 m. below LAT.

Quay No. 2: Two berths, one at 183 m. in length and one at 208 m. in length, equipped with electric luffing cranes up to 25 tonnes capacity. Nominal dredged depth 10.9 m. below LAT.

BULK HANDLING FACILITIES: *Redcar Ore Terminal:* Handles iron ore imports for British Steel. Berth dredged to nominal 17.30 m. and able to accommodate vessels up to 305 m. in length, approx. 150,000 d.w.t. 3 ore dischargers capable of handling 2,000 t.p.h.

Teesbulk Handling Ltd.: Built on the East side of Tees Dock, this loading/discharging facility is for the export of Potash mined in North Yorkshire. Dredged to a nominal depth of 10.90 m., the quay is intended to accommodate vessels simultaneously. The main loader is capable of 1,500 t.p.h. or 1,000 t.p.h. each to 2 vessels. A silo on the site has a storage capacity for 56,900 tons. Grain is exported from the terminal utilising a 7,500 ton silo as well as direct transport. Coal, soda ash and bentonite also handled.

ROLL-ON/ROLL-OFF FACILITIES: A link span Ro/Ro berth in Tees Dock can accommodate ships of up to 160 m. in length and 23.7 m. beam. Nominal dredged depth of 8.7 m.

Designed for loads up to 182 tonnes (when carried on 4 axles).

A second Ro/Ro pontoon is located at Tees Dock, Berth No. 5 and can accommodate vessels of up 200 m. LOA, and has a nominal dredged depth of 10.4 m. below LAT.

CONTAINER FACILITIES: A privately owned (Bell) purpose-built Container Berth utilising a 32 tonne gantry crane is established downstream of Tees Dock.

CONSTRUCTION FACILITIES: There are a number of yards specialising in oil-rig module construction work, all capable of handling flat-top barges up to 92 m. and unit loads to 4,000 tons.

Whessoe Offshore, Redpath Offshore South, Davy Offshore and Davy Normanby are on the South side of the river, while Redpath Offshore North are on the North side.

STEVEDORES: In order to prepare for loading/discharging, i.e. ordering of gangs, transport, etc., it is necessary to give ETA through their Agents not less than 24 hours before arrival.

In Tees berths, the port works 2 shifts daily, i.e. 0600 – 1400 hrs. and 1400 – 2200 hrs. Mondays to Fridays, with voluntary overtime at weekends.

MEDICAL: All medical facilities available. Vessels requiring doctor to board are advised to give maximum notice. Emergency medical attention can be arranged through VHF radio contact to Tees Harbour Radio on Channels 22, 16 or 14.

TANKER BERTHS:

Name	*Vessel Length* (m.)	*LAT Nominal depth* (m.)	*Remarks*

South Wharf	82	4.8	7,000 d.w.t.
Billingham Oil Wharf	80	4.5	2,500 d.w.t.

Clarence/Deep Water Wharves also handle tankers.

Report: *Cautionary Advice:* Vessels approaching River Tees should have B.A. Charts 2566 and 2567. Both are large scale charts, having complete coverage of River Tees and associated terminals, and Tees Bay. B.A. Charts 134, 152 and 1191 are recommended for use from seaward to the Tees Bay area.

It should be noted that there are two 15 m. wrecks outside the 30 m. line in positions within 3 miles of the Fairway Buoy (54° 41′ N., 1° 02′ W. and 54° 42.5′ N., 1° 24′ W. (PA)). Tides in the vicinity of the Fairway Buoy and the pilot boarding areas set at approximate right angles to the channel, with rates up to 1.5 knots. Great care should be exercised when slowing down to embark the Pilot.

During or after Northeasterly gales, a heavy ground swell can build up in this area.

North Sea Petroleum Teesside: Docking and Berthing: It is the normal practice to berth port side to. The vessel is swung in Seaton Channel turning circle and backed into the berth. There are no approach speed indicators on the jetties. Mooring boats are used to run the lines ashore (usually spring lines first, followed by a head line and a stern line). All moorings should be of the same construction and material.

ICI North Tees: Docking and Berthing: Vessels may berth either side to any of these jetties, according to tide and weather conditions, but port side to is favoured by Harbour Authorities so that the vessel is heading seaward. If the vessel is berthing port side to, normal practice is to swing off Tees Dock. There are no approach speed indicators. Also see "Shipmaster's Report" – April 1988.

Tees Storage Terminal: Docking and Berthing: Vessels may berth either side to at No. 2 Jetty according to tide and weather conditions prevailing, but port side to is favoured by Harbour Authorities so that the vessel is facing seaward. Vessels berthing port side to are swung in the Tees Dock turning circle and then pushed into berth with the aid of tugs.

Teesport Oil Jetties: Docking and Berthing: Vessels may berth either side to these berths according to tide and weather conditions prevailing, but starboard side to is favoured by Harbour Authorities so that the vessel is facing seaward. If the vessel is berthing starboard side to, it is swung in the Tees Dock turning circle. There are no approach speed indicators.

Billingham Oil Jetty: Docking and Berthing: Vessels may berth port or starboard side to depending on weather and tidal conditions prevailing at the time.

If vessel berths port side to, an anchor is sometimes used when swinging the vessel off the berth. 2 springs are run from each end of the vessel, then 2 messengers are passed from jetty deck to vessel, one to bow and one to stern. 2 shore head lines and 2 shore stern lines are brought on board and made fast.

B.A.S.F. Terminal: Docking and Berthing: Vessels may berth either side to according to tide and weather conditions prevailing at the time, but port side is favoured by Harbour Authorities so that vessel is facing seaward. If vessel is berthing port side to it is swung in the turning circle off Tees Dock and then pushed into the berth with the aid of tugs.

DENSITY: The density of the river water fluctuates with the seasons and rain amount, being between 1015 and 1025 mainly. Below Tees Offshore Base/Tees Dockyard Ltd. the fresh water influence is minimal.

FRESH WATER: Plentiful from wharf and small quantities available from tug in emergency, approx. 20 t.p.h.

FUEL: All grades available by road or river delivery. 48 hours notice of requirements is requested for barge delivery.

CONSULS: Sweden, Norway, Denmark, Netherlands, Germany F.R. Finland. Also French Consular Agency.

REPAIRS: Facilities available for all deck or engine repairs.

DRY DOCKS: Tees Dockyard Ltd. has 2 dry docks:

No. 1 Dry Dock 175 m.×22.25 m., capacity 26,000 tons.

No. 2 Dry Dock 83.21 m.×17.31 m.

Cranage: 5 tons, 10 tons, 15 tons and 30 tons.

SURVEYORS: 1. Moore Barrett & Redwood Ltd., and Caleb Brett cargo inspectors available.

2. Lloyd's Register, American Bureau, German Lloyd, Bureau Veritas, Salvage Association, U.S. Salvage, N.K.K., RIMA and Corporation of China available.

GANGWAY/DECK WATCHMEN: Recommended. Majority of berths are tidal with 5 m. range at Springs.

OPENING/CLOSING HATCHES: Always by crew. Riggers available.

CUSTOMS ALLOWANCES: 0.5 lb. tobacco or 200 cigarettes. (0.25 lb. tobacco for coasters). 1 spirit and 1 wine bottle (0.5 bottle spirit and 0.5 bottle wine for coasters).

REPATRIATION: All facilities exist.

AIRPORT: Teesside Airport with regular flights to London, etc. is 12 miles from Middlesbrough Centre.

Air U.K. have flights to Aberdeen, Amsterdam, Bergen, Humberside, Norwich and Stavanger.

TIME: GMT in Winter months. BST (GMT plus 1 hour) operates between late March and mid-October as decided by government.

HOLIDAYS: Normal English Bank Holidays. On certain holidays work can be arranged if suitable notice is given.

POLICE/AMBULANCE/FIRE: Telephone 999 in emergency. If no phone available contact the Harbour Master on VHF Radio Channel 16 or 14.

EMERGENCY CO-ORDINATION CENTRE: H.M. Coast Guard Maritime Rescue Sub-Centre, Tyne/Tees. Tel: Tyneside (091) 257-2691. Telex: 58839.

TELEPHONES: Many berths can be connected to telephone system using coin boxes; a connection charge is made.

BANKS: All major U.K. banks have branches in Middlesborough, Redcar and Hartlepool.

STORING: See "Prelims".

1. Both.
2. Tankers – No.

Storing may take place before or after cargo operations, while all tanks are battened down.

3. No. Distance varies from 100 yards to half mile depending on berth.
4. No.
5. Applicable to spirits, cigarettes, tobacco and bonded meat only.
6. Yes, but normally by suppliers/ship's crew.

IDENTIFICATION CARDS: Not used in Tees.

DEVELOPMENTS: The Port Authority is undertaking a feasibility study into provision of a coal terminal on the redundant oil terminal site. The terminal is to be a common user terminal for 80,000 d.w.t. and 140,000 d.w.t. (part loaded) vessels.

SHIPMASTER'S REPORT: April 1988.

Chart: BA. Chart No. 2566.

Pilot: Pilot boards at Tees Fairway Buoy (Racon) from a fast sea cutter. If the weather is poor the Pilot boards inside South Gare.

When leaving, extra charges are incurred if the Pilot has to standby for more than 1 hour.

Entry: It is about 30 minutes from the Pilot to ICI North Tees.

Tugs: There are several powerful tugs available. Tugs are not normally used by small vessels. When ordering tugs, 2 hours' notice required.

Berthing: For ethylene, Jetty A only can be used, depth of water approximately 7.5 m. at low water.

When berthing, side alongside is dependent on the tide, but in general vessels berth starboard side to. Vessels swing off the berth and sometimes the anchor is used. Good fendering is provided by 3 large 'Yokahama' type fenders which ride up and down with the tide on the wooden quay face. Mooring boat assists with running the lines.

Great care should be taken when lining vessel up with the manifolds as shore personnel alignment may not be accurate. The ICI Jetties can handle Gas Ships up to a maximum of 60,000 cu.m.

Cargo: There is an 8 in. liquid line and a 6 in. vapour line. The shore personnel connect and disconnect the Chicksan arms. There are often long delays between connection of arms and commencement of operations.

The shore compressor extracts ship's vapour, so can use all ship's plant for internal cooling.

Negative cool down on completion. We had a temperature of -101.7° C on completion of loading. This can vary from −101° C to -102° C, depending on the time of year.

Average loading rate 124 t.p.h. (shore maximum). We stopped loading 12 tonnes before being full (there is a stop button at the ship's manifold) and the remaining product was blown to the ship in about 45 minutes.

Oxygen samples taken before loading.

All documentation, including Bills of Lading, handled by Surveyor, who accepts Notice of Readiness and Protests. The Supervisor is located in a cabin near the vessel and was very helpful.

General: Fresh water is obtainable from a hydrant on the Jetty and is free.

Transport delivering stores is permitted to within 25 m. of the ship's side.

Ship's gangway used but was troublesome due to the rise and fall of the tide.

There is a public telephone near the vessel. Collect calls may be made via the operator (no coin box). The Master is able to use the telephone in the Supervisor's office for any local official business.

Customs are very strict, all forms are to be completely correct.

AUTHORITY: Tees and Hartlepool Port Authority, Harbour Master's Office, Tees Dock, Grangetown, Middlesbrough, Cleveland TS6 6UD. *Tel:* (0642) 468127. *Telex:* 58145 HMTees G. *FAX:* (0642) 467855 (office hours only). *Contact:* Captain P. J. Lewis, Harbour Master.

TETNEY MARINE TERMINAL: 53.32 N. 00.07 E.

LOCATION: Tetney Marine Terminal is the deep water crude oil terminal of Crude Oil Terminals (Humber) Limited, operated by Conoco Limited.

The position of the mono-buoy is 53° 32′ 18″ N., 00° 06′ 48″ E., lying in approx. 60 ft. of water at low water and about 2.5 miles offshore.

Tetney is an open roadstead in the entrance of the River Humber on the East coast of England. The tidal rates in the vicinity of the mono-buoy reach 3.5 knots during Spring tides and the direction of the ebb and flood tides is generally East and West respectively. The tidal range varies between 7 ft. and 22.5 ft.

DOCUMENTS: The following documents should be completed for arrival:

General Declaration – Form C13 (duplicate).
Crew Declaration – Form C142 (duplicate).
Crew List – IMO (duplicate).
Tanker Check List Log 22.

Normally the Agent will board the tanker from one of the 2 berthing tugs prior to berthing, and the previously mentioned documentation, with the exception of the Tanker Check List (which will be handed to the Berthing Controller, together with cargo documents) will be handled by him.

Stores can be taken at the berth provided the Agents are given the order at least 72 hours before arrival.

The Master of the tanker shall notify to the Harbour Master prior to arrival the information required under S.I. 1981 No. 1077, The Merchant Shipping (Tankers) (EEC Requirements) Regulations 1981.

PILOTAGE: Vessels are requested to send ETA and draft to Spurn Pilot 12 hours before arrival and any adjustment to that time at least 2 hours before arrival. Spurn Pilots listen continuously on VHF Channel 16 and use Channel 14 as a working frequency.

Additionally, Agents should be advised of ETA 72 hours before arrival and the following information should be included in the cable: Arrival draft, bow to manifold distance and cargo manifold size.

Pilotage is by Humber Pilots who board in the vicinity of the Humber Light Vessel from a fast launch. Additional berthing information can be obtained from Tetney Base.

The Berthing Controller and his Assistant will board as the vessel approaches the mono-buoy and will assist the Pilot in the mooring operation. He will advise the ship's Officers during the mooring operation, hose connection and disconnection, and will act as Company representative throughout the vessel's stay in the berth.

Vessels must provide a pilot ladder with spreaders and grab lines for the Pilot and Berthing Controllers to board and whilst in the berth a suitable gangway with a pilot ladder near the end in order to board from a small boat.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: *Pre-Arrival Procedure:*

In addition to the ETA requirements the following information is required by the terminal within 6 hours of clearing the previous port, or as soon as receiving orders for Tetney.

(a) Name of ship.
(b) Name of the last port from which the vessel cleared and the name of the loading port if different from above.
(c) Estimated date and time of arrival at Humber.
(d) Cargo loaded (barrels and metric tons – gross and nett).
(e) API and gravity.
(f) Arrival draft fore and aft.
(g) Lifting capacity of derricks.
(h) Size of manifolds.
(i) Slops in cargo.
(j) Personal requirements.
(k) Ship's stores.

About 48 hours from the pilot station a second cable should be sent to the Agent with the following information:

(a) Name of Ship and Master.
(b) Amended time of arrival.
(c) Names of crew leaving the vessel.
(d) Requirements in way of doctor and dentist.
(e) Stores and water.
(f) Additional requirements.

About 24 hours from the pilot station a final cable should be sent to the Agent confirming:

a) Time of arrival.
(b) Ship's bond remaining on board.
(c) Amendments.

VHF: There is a VHF station at Tetney which is manned 24 hours a day and has the call sign, 'Tetney Base'. A continuous watch is kept on VHF Channels 16, 19 (156.8/156.95), and 48 (163.00/158.40). Channel allocation is as follows, 16 calling, 19 ship to shore, and 48 port operations. UHF (467.725 MHz) is allocated for use by the Conoco Berthing Controller, Tetney Terminal and the Conoco owned work boats.

The Pilot and Berthing Controllers carry portable VHF hand sets for use during berthing for inter-ship and ship to tug communications, Channel 9 (156.45 MHz).

Portable radios can be provided for vessels not having a VHF set and the Agents should be so informed in order to allow time to dispatch a set to the ship on arrival. A vessel arriving without suitable means of communication and not having informed the Agent of the fact could incur delays.

BERTHING: Hose hang-off chains and securing equipment are placed aboard the vessel when the Berthing Controller boards from the Conoco service craft, "Spurn Haven".

Vessels will moor using an OCIMF Approved Mooring Stopper.

The vessel approaches the mono-buoy on a Westerly heading. A messenger (min. 40 mm. diameter) should be lowered to the water and this will be picked up by the Conoco mooring launch "Monogirl" when approx. 150 m. from the mono-buoy. This messenger will be made fast to a 80 mm. × 92 m. polypropylene pick up rope which should be heaved up as the vessel makes the final approach to the buoy. When the chafing chain is in the fairlead the open links are secured to the bow stopper.

HOSES: Hoses are taken on the port side and the port derrick (minimum S.W.L. 10 tons) should be rigged and ready for use on arrival.

2×16 in. hoses are taken aboard, manifolds should be 16 in. 150 ASA and 10 in. and 12 in. 150 ASA can be accommodated by the provision of reducers. Should a vessel have any other size of manifold or be unable to provide adaptors to suit one of the sizes, Tetney Terminal will need to be notified at least 72 hours before arrival.

Hose connection and disconnection is carried out by the ships crew under the supervision of the Berthing Controller. Upon completion of discharge the hoses will be filled with sea water by the ship after which disconnection can commence. When the hoses are blanked off they will be hung off until just before sailing when they will be lowered to the Spurn Haven for towing clear.

POLLUTION: It is the Master's responsiblity to see that no oil of any kind is pumped or spilled overboard from his vessel. This includes oil water from the bilges, crude residues from previous voyages or any other matter that may result in the pollution of the sea. Owners and Masters should comply with any international regulations and recommendations concerning the prevention of pollution of the sea, especially in regard to the river Humber.

SHORE LEAVE: None of the officers or crew shall be allowed shore leave and no boats of any kind, except in an emergency, shall be lowered during the vessel's stay in the berth.

OPERATOR: Tetney Marine Terminal, Crude Oil Terminals (Humber) Ltd., Tetney Lock Road, Tetney, Nr. Grimsby, South Humberside DN36 5NX. *Tel:* (0472) 814101. *Telex:* 527055 Coth G. *FAX:* (0472) 210275. *FAX:* (0472) 210275. *Contact:* Captain B.R.Stephenson, Harbour Master & Terminal Superintendent.

TYNE DISTRICT: 55.01 N. 01.24 W. (See Plan)

(Including Newcastle, North and South Shields, Jarrow, Tynemouth, Wallsend and Gateshead).

PORT OPERATIONS AND INFORMATION SERVICE: VHF: Call sign "Tyne Harbour Radio" on Channel 16, frequency 156.80 MHz and on Channel 12, frequency 156.60 MHz. The control station is situated at the Harbour Master's Office, North Shields (Tel: 091 – 2572080, 2570407), and is manned on a 24 hour basis. Vessels must obtain permission by VHF from the control station before entering the port, similar permisson must be obtained before movement within, or before sailing from the port. A service is provided for the passing of information to shipowners and Agents.

DOCUMENTS:

1 Crew List for H.M. Immigration Office.

1 Form C.142 (Tobacco List) supplied by H.M. Customs.

1 List of Private Addressed Packages not manifested (C.143), supplied by H.M. Customs.

Details of Oil in double bottom tanks, also measurement in cubic feet of cargo in non-registered spaces.

PILOTAGE: Pilotage is compulsory for all vessels over 50 m. LOA. The Port of Tyne Authority pilotage district includes the port and its seaward approached within a radius of 3 miles from the North and South Piers. Pilot will board by arrangement either inside piers or at sea.

24 hours advance notice via agent required.

Call 'Tyne Harbour Radio' on VHF Channels 16 and 12 to order Pilot. Efficient pilot ladder required as per D.O.T. Regulations.

ANCHORAGE: Off entrance River Tyne, recommended 1.5 mile N.E. of North Pier. Minimum 12 fathoms.

RESTRICTIONS: Depths below Chart Datum (L.A.T.) from piers to Jarrow Quay Corner 8.6 m. thence to West end of Jarrow Staith 6.0 m., thence to Swing Bridge 5.2 m. (except in main channels of Swing Bridge and High Level Bridge) thence to Redheugh Bridge 5.61 m. West of Redheugh Bridge there is no authorised dredged depth.

MAX. SIZE: Harbour entrance, length and breadth: no limit. Draft 8.0 m. any state of tide: up to 11.0 m. at high water.

Riverside Quay, draft up to 10.00 m.

Esso Oil Terminal, draft up to 9.00 m.

Newcastle Quay, 27 – 28 berths – 6.0 m.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Cullercoats Radio W/T "GCC." Cullercoats Radio on R/T.

TUGS: Normally join inside piers, tow ropes optional except manufactured of man-made fibres. Orders for week-end arrivals must be given before 1030 hrs. Saturday. Rates on application to Tyne and Wear Tugs Ltd. Tel: (091)-2553361.

BERTHING:

Albert Edward Dock:

Warehouse Quay: 356 m. long, depth of water 7.9 m.

East Dock Wall: 162 m. long, depth of water 7.9 m.

Ro/Ro Berth No. 1, East Dock Wall: depth of water 7.5 m.

Heavy Load Berth (Ro/Ro No. 2) for heavy unit loads on transporters up to 510 tonnes; depth of water 7.9 m.

Tyne Commission Quay: 335 m. long, depth of water 7.11 m.

Tyne Commission Quay Extension: 118 m. long, depth of water 6.21 m.

Car Ferry Terminal:

Ro/Ro No. 3: 125 m. long, depth of water 7.11 m.

Ro/Ro No. 4: 140 m. long, depth of water 7.5 m.

Whitehill Point Jetty: 90 m. long, depth of water 5.5 m.

Tyne Dock:

North West Quay: 243 m. long, depth of water 8.2 m.

Factory Quay: 196 m. long, depth of water 7.0 m.

Riverside Quay: 384 m. long, depth of water 10.5 m.

Tynegrain Ltd. (Extension of Riverside Quay): Terminal, 37,000 tonnes silo capacity. Loading rate 1,000 tonnes per hour. Max. size 40,000 d.w.t. Depth of water 10.51 m.

Tyne Coal Terminal: 1 berth, depth of water 10.5 m. Loading rate 2,800 tonnes per hour.

Newcastle Quay:

Spillers Tyne Mill: 237 m. long, depth of water 6.0 m., discharge rate 150 tonnes per hour. Silo capacity 34,000 tons.

Jarrow Staith: 1 berth, depth of water 6.0 m. Loading rate 400 tonnes per hour.

BRIDGES: At Newcastle 10 miles from entrance, Swing Bridge negotiated against tide; other bridges, maximum mast height 24.7 m. above MHWS.

STEVEDORES: Principal Stevedores Port of Tyne Authority. A arrangements through Agent. Stowage plan required prior to arrival.

Plant pool as follows:–

Albert Edward Dock:

Warehouse Quay – 7 cranes, 6 tonnes – 30 tonnes.

East Dock Wall – 3 cranes, 5 tonnes.

Tyne Commission Quay – 5 cranes, 3 tonnes – 40 tonnes.

Tyne Commission Quay Extension – 2 cranes, 6 tonnes.

Ro/Ro Berths – 4 terminal tractors.

Tyne Dock:

Riverside Quay – 7 cranes, 6 tonnes – 12 tonnes.

North West Quay – 5 cranes, 5 tonnes – 10 tonnes.

Factory Quay – 2 cranes, 3 tonnes.

There is a pool of 32 fork lift trucks of 5,000 lbs. – 25 tonnes capacity available for any location. These trucks can be fitted with attachments for handling paper, pulp, etc.

Also see "Dry Docks".

MEDICAL: Hospitals available, Advise Agent in advance if medica attention required on arrival.

TANKERS:

Esso Petroleum Company Limited, Howdon:–

Ocean Jetty: 274 m. long, depth of water 9.51 m.

Coaster Jetty: 167 m. long, depth of water 6.0 m.

Jarrow Oil Jetty: Length 189 m.

Rohm & Haas Ltd. Jarrow: Chemical Berth, length 180 m. Depth 5.6 m.

Velva Liquids Limited, North Shields: 248 m. long, depth of water 7.11 m.

Report: *Cautionary Advice* – Port Approaches: The approach to the Tyne Piers is clear of danger and adequate navigation aids are provided and well maintained. The entrance, however, is exposed to Easterly winds and early contact should be made with "Tyne Harbour Radio" on VHF when bad weather prevails to facilitate boarding and avoid unnecessary delays.

In addition to close attention to other coastal traffic, a sharp lookout should be maintained for local fishermen whose craft are often badly lighted and poorly painted, with colours which may blend rather than contrast with the background.

Entry: Provided that the out-going stream is not making strongly, which causes maximum turbulence, there should be no difficulty entering the port with winds between N.E. and S.E. It is preferable to enter while the in-going stream is still running although at that time it also sets across the entrance. This precaution is especially necessary during N.E. gales, which cause the heaviest seas at the entrance. In Northerly gales vessels should keep close under the lee of North Pier and in Southerly gales, especially with the out-going stream running, close under the lee of South Pier.

Entry: After embarking Pilot prior to entry, vessel proceeds at half to full speed keeping leading lights in line 258°(T).

Normal entry times for maximum draft vessel (although sufficient water at any state of tide) from 3 hours before HW to HW River Tyne North Shields.

During this period tide sets across entrance from North to South in a 160° direction with Spring rates up to 1 knot.

Vessels must approach entrance with sufficient speed and set allowed to maintain a true course of 258°(T) keeping leading marks and lights in line.

Leading line must be disregarded as soon as the Tyne Piers are passed, when a vessel should reduce speed and be guided by the light buoys and beacons.

Inside the piers, tidal streams tend to run with the channel at rates up to 3 knots during Spring tides.

Vessels should pass in mid channel between Nos. 1 and 2 light buoys on the North side and Herd Light Buoy and Herd Groyne Light Structure on the South side.

Regulations also state that vessels are to keep Southward of mid channel when proceeding to sea and Northward of mid channel when entering, so as to pass each other port side to port side.

Distance from Tyne Piers to Herd Groyne 0.8 miles, course approx. 255°(T).

Tugs meet vessel in the area between Tyne Pier and Herd Groyne.

Passage up river from Herd Groyne to Esso Tynemouth is approximately another 2 miles. Vessels speed when transitting this region should be between Dead Slow and Slow. This tends to be a very busy area with numerous riverside berths. Two bends, one to port and one to starboard, are negotiated before vessel reaches the swinging area off Esso Tynemouth Terminal.

Vessels coming up river on the flood tide swing in the turning area and berth port side to Esso Tynemouth Terminal.

Vessels late for the tide are accepted on a spot basis and have been berthed up to 2 hours after HW. In these cases, vessels go straight alongside, starboard side to, and swing in the turning area outward bound.

Prescribed turning area is 360 m. in diameter.

Tugs are made fast between Herd Groyne and the swinging area and normal practice is to swing to starboard heading vessel to the jetty when all way is off the vessel.

Mooring boats are employed for running the ship's lines to shore. Normal practice is to hold vessel alongside with tugs. First lines ashore are usually breast lines forward and aft, followed by springs, and finally the head lines and stern lines. Riggers will board vessel on arrival to secure 2 shore springs. (Esso Ocean Jetty only).

DENSITY: Entrance/Tyne Dock – 1025; Tyne Dock/Jarrow 1020; Newcastle Quay 1005/1010.

FRESH WATER: Available ex-water boat, rate of delivery up to 150 t.p.h.

FUEL: All grades ex-installation, or by barge, 24 hours notice required.

GANGWAY/DECK WATCHMEN: Available if required.

OPENING/CLOSING HATCHES: Crew allowed open and close.

CERTIFICATES:
Register.
Load-line.
Safety Construction.
Safety Equipment.
Safety Radio.
Trinity House Light Bills.

CUSTOMS ALLOWANCES: At the discretion of Local Customs inspector. Normal allowances are equivalent of 0.5 lb. tobacco per man and equivalent to 1 bottle wine per man. Allowances may be halved for home trade vessels. Vessels in port more than 3 or 4 days may receive extra allowances.

WARRENPOINT: 54.06 N. 06.16 W. (See Plan)

PORT LIMITS: Seaward to a line from Ryland River (South Coast) to Ross Memorial (North Coast) approximately 3,000 m. from Warrenpoint.

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
1 Stores List.
Vessel's Papers and Certificates.
1 Manifest or Bill of Lading.

PILOTAGE: Not compulsory, if required Tel. (06937) 62549. Pilot station at Greencastle Pier at entrance (North side) to Carlingford Lough. VHF (Warrenpoint Pilot) radio, Channels 16 and 12. Notice to Agents of ETA at 48 hours and 24 hours.

ANCHORAGES: Safe anchorage at Fairmont Roads S.E. Greenore and also inside Carlingford Lough N.W. of Buoy No. 13.

RESTRICTIONS: None except draft of vessel. Advise Agents.

HEALTH: No certificate necessary. In event of disease or fever contact Agent in advance. Hospitals available.

Also see "Health-All ports" before first U.K. port.

RADIO: All messages to Agents through Portpatrick Radio or Anglesea Radio.

VHF: Pilot station (Warrenpoint Pilot) and Port Radio (Warrenpoint Harbour) on Channels 16 and 12.

TUGS: 1 tug available, contact Pilot Station.

BERTHING: All berths except Town Dock have 17 ft. at LWOST.

STEVEDORES: Warrenpoint Harbour Authority. Telephone: Warrenpoint 73381. Telex: 74660. Fax: (06937) 73962.

CARGO HANDLING FACILITIES:
2×35 tonne Liebherr Transporter container cranes;
1 Poclain HC300 hydraulic crane;
1 Jones 971 HLB dockside crane;
2 Babcock Wilcox Luffing grabbing cranes;
1 Gottwald 25 tonne harbour mobile crane;
1 NCK Rapier 605 – 5 tonne grabbing crane.

BULK CARGO FACILITIES: Coal – 2 Luffing Grabbing Cranes at 150 t.p.h.

Grain discharged at up to 250 t.p.h. to Grain Silo of 8 bins, total capacity about 4,800 tonnes. Flat grain store capacity 4,000 tonnes also available.

SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro berth with 17 ft. at LWOST. Ramp 6 m. wide Marshalling area about 6 acres.

FRESH WATER: Available from pipes on quay.

FUEL: Available by road tankers. 48 hours' notice usually required.

CONSULS: Finland.

REPAIRS: Small repairs can be undertaken.

DRY DOCKS: None.

SURVEYORS: Lloyd's – Jos. Fisher & Sons, Ltd. Warrenpoint 73500.

GANGWAY/DECK WATCHMEN: Gangway and safety net obligatory. Watchmen advisable.

HATCHES: Opening and closing by crew.

CUSTOMS ALLOWANCES: As permitted by U.K. Customs and Excise.

REPATRIATION: Air and sea passenger services available from Belfast and Dublin. Both are about 1.5 hours by road from Warrenpoint.

AIRPORTS: Belfast (Aldergrove) 60 miles. Dublin 75 miles. Schedule flights daily to London.

TIME: GMT. GMT plus 1 hour in Summer.

HOLIDAYS: New Year's Day; St. Patrick's Day (17th March); Easter Monday and Easter Tuesday; 1st Monday in May; 12th July; 13th July; 15th August; Christmas Day and Boxing Day.

POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required.

TELEPHONES: Not possible to place telephones on board.

SERVICES: Check with Agents. Most services can be supplied given 24 hours' notice.

SHORE LEAVE: After clearance inwards, Crew members allowed ashore without restriction. No passes issued.

DELAYS: Delays in loading or discharging are minimal and infrequent.

WATCHET: 51.11 N. 03.20 W. (See Plan)

DOCUMENTS: Crew List, Stores List, Ship's Register, Manifest or Bills of Lading.

PILOTAGE: West Somerset District Pilotage Authority. Compulsory, ETA 24 hrs. before arrival to Harbour Master's Office, Watchet (0984) 31264, after hours Minehead (0643) 3430.

ANCHORAGE: Safe anchorage Blue Anchor Road.

RESTRICTIONS: Accordance with state of tide and draft. Vessels enter 2 hours before HW.

MAX. SIZE: Max. permissible length 95 m., breadth 16 m., draft restrictions according the height of tides, max. draft Neap tides 12 ft. and Spring tides 14 ft. – 18 ft.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: It is best for vessels to give ETA by R/T to Lands End or Ilfracombe Radio.

VHF: Watchet Radio Channels 16, 12, 14 and 9.

TUGS: None.

BERTHING: 2 quays, 1×150 m., 1×120 m.

CRANES: 3 cranes, 2×5 tons, 1×10 tons.

BULK CARGO: Cranes with grabs.

STEVEDORES: Watchet Marine Ltd.

MEDICAL: Port Doctor in Watchet.

DENSITY: Salt 90%.

FRESH WATER: Available on the quay.

FUEL: All grades, advance notice required.

FIRE PRECAUTIONS: Normal port precautions.

CONSULS: At Bristol.

REPAIRS: Normal repairs to ships possible notice required.

SURVEYORS: West Marine Surveyors & Consultants Limited, Consulting Marine Surveyors, Engineers & Naval Architects, The Old Custom House, Brixham, South Devon. Tel: Brixham (STD 08045) 2604. After normal office hours Tel: 0803 842925. Cables: Surveyor, Brixham. Telex: 42962 – Survey G.

OPENING/CLOSING HATCHES: Carried out by crew.
CUSTOMS ALLOWANCES: Decided by the Customs Officer in charge.
CARGO GEAR: Shore gear, cranes and forklifts.
REPATRIATION: Facilities exist for crew changes.
AIRPORT: Nearest airport at Bristol.
TIME: GMT and British Summertime.
HOLIDAYS: Cargo work can be arranged.
POLICE/AMBULANCE/FIRE: Phone 999 for all three services.
TELEPHONES: None on quay.
SERVICES: Chandler available.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: None required.
AUTHORITY: West Somerset District Council, East Wharf, Watchet, Somerset. *Tel:* (0984) 31264. *Cables:* Port of Watchet. *FAX:* (0984) 33022. *Contact:* Captain C. Muller.

WEYMOUTH: 50.36 N. 02.27 W.

LOCATION: Situated to the North of Portland Bill, midway between Southampton and Plymouth. Weymouth is the nearest U.K. port to Cherbourg and the Channel Islands.
PORT LIMITS: The area within a line drawn 090° (T) from the Nothe Fort distance 1.7 miles and the Sluice Gate Beacon at Greenhill.
PILOTAGE: Compulsory for all vessels exceeding 150 ft. LOA. The Pilot boards 1.0 miles East of the Harbour entrance. Notice of ETA and request for a Pilot must be advised at least 24 hours in advance and any amendment of this ETA must be made not less than 2 hours prior to vessel's arrival at the Pilot Station. Weymouth Pilot listens on VHF Channel 16 and working frequency is Channel 9. Messages for the Pilot may be relayed via Weymouth Harbour Radio (VHF 16/12) or Portland Coastguards (VHF 16/67) or Queen's Harbour Master, Portland (VHF 16/13).
ANCHORAGE: Good holding ground can be found 1.5 miles to 1.0 miles East of the Harbour entrance.
RESTRICTIONS/MAX. SIZE: Vessels up to 125 m. LOA with a maximum draft of 5.2 m. can enter or leave at all states of the tide, entrance being made to a sheltered harbour between two piers. The Pier Heads are 137 m. apart and the channel is 76 m. wide.
HEALTH: Weymouth Port Health Authority offer facilities for food/meat examination and health clearance requirements.
RADIO: Weymouth Harbour Radio, hours of duty when vessel expected or during working hours 0630 – 2200. Calling Channel VHF 16, Working Channel VHF 12.
VHF: See "Pilotage" and "Radio".
TUGS: Several tugs are available from the Naval Dockyard at Portland.
BERTHING: There is a deep-water berth inside the pier heads with a dredged depth of 5.2 m. (Berth No. 1). This berth can take vessels of up to 115 m. LOA and is used for Lo/Lo operations of bulk cargoes and Ro/Ro side loading/discharging.

Linkspan and Ro/Ro facilities are available at Berth No. 3 with further general cargo/lay-by berths at Berths No. 5 and 6.
CRANES: Berth No. 1 has a 20 tonne SWL Mobile Crane. Other cranes can be hired locally up to 80 tonnes SWL.
STEVEDORES: As required.
MEDICAL: Full hospital facilities are available without notice.
TANKERS: No facilities.
FRESH WATER: Available at all berths.
FUEL: Available at all berths by road tanker.
CONSULS: All consulates and agencies are at Southampton.
REPAIRS: Hull and engine repair facilities are available.
DRY DOCKS: None.
SURVEYORS: At Southampton.
HATCHES: Opened and closed by crew.
REPATRIATION: Possible.
AIRPORT: Hurn and Exeter Airports.
POLICE/AMBULANCE/FIRE: Dial 999.
EMERGENCY CO-ORDINATION CENTRE: Contact U.K. Coastguard, Tel: (0305) 760439.
TELEPHONES: Not available.
SERVICES: Radio and radar repairs. Charts and publications available.
SHORE LEAVE: Permitted.
AUTHORITY: Weymouth and Portland Borough Council, Harbour Master's Office, 20 Custom House Quay, Weymouth, Dorset DT4 8BQ. *Tel:* (0305) 206421. *FAX:* (0305) 760971. *Contact:* Captain P. C. Tambling, Port Manager and Harbour Master.

WHITEHAVEN: 54.33 N. 03.36 W. (See Plan)

DOCUMENTS: Usual required for clearing a vessel from foreign port, i.e. Crew List, Passenger List, Customs Documents, Ship's Register, Manifest and Bills of Lading.
PILOTAGE: Request for Pilot is made by International Code signal G, sound and visual. ETA should be sent 12 hours in advance either to ship's Agent or Harbour Master or both. Area for taking Pilot on board 4 to 5 cables West of Harbour. Pilot boats are Trinity House Pilot Boats – "Viking" and "Cumbria". VHF is installed.
ANCHORAGE: Same area as for boarding Pilot according to draft.
RESTRICTIONS: Vessels may dock from 1.5 hours before HW till 1 hour after HW according to draft.
MAX. SIZE: 270 ft. length, 40 ft. beam and 17 ft. draft (deepest) on Spring tides, 14 ft. draft (deepest) on Neap tides.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Port Patrick and Anglesey Radio Stations.
TUGS: No tugs.
CRANES:

2×10 tonnes lifting capacity.
1×15 tonnes lifting capacity.
2×5 tonnes lifting capacity.

MEDICAL: Agent should receive notice in advance of any medical treatment required. Hospital services are readily available.
DENSITY: Any state of tide density is 1025.
FRESH WATER: Fresh water is available on all berths, any quantity on request to ship's Agent.
FUEL: Most grades and types available.
FIRE PRECAUTIONS: Usual precautions are taken when inflammable cargo is being loaded or discharged.
CONSULS: Norway, Sweden, Denmark and the Netherlands.
REPAIRS: All types of deck and engine repairs carried out.
GANGWAY/DECK WATCHMEN: Advisable to have a watchman but not absolutely necessary.
OPENING/CLOSING HATCHES: Always opened and closed by crew.
CERTIFICATES: Derat Certificate, Load Line Certificate, Radio R/T Certificate, etc.
CUSTOMS ALLOWANCES: 200 cigarettes, 1 bottle spirits.
REPATRIATION: Facilities exist for effecting crew changes and arranging any necessary repatriations.
AIRPORTS: Nearest airports are at Manchester, Newcastle and Prestwick, all approx. 130 miles away.
HOLIDAYS: Cargo may be worked on following days: New Year's Day, Good Friday, Easter Monday, Whit Monday, August Monday, Christmas Day and Boxing Day.
POLICE/AMBULANCE/FIRE: Telephone numbers of these services in order are: Whitehaven 692616, 693181 and 692151.
TELEPHONES: No special arrangements exist for placing telephones on board vessels.
SHORE LEAVE: Crew members may come and go at all times.
IDENTIFICATION CARDS: None required.
DELAYS: There are very seldom any delays in berthing and none in loading, discharging or bunkering.
AUTHORITY: Whitehaven Harbour Commissioners, Harbour Office, Pears House, 1 Duke Street, Whitehaven, Cumbria CA28 7HW. *Tel:* Whitehaven (0946) 692435. *Contact:* Captain B. Ashbridge, Harbour Master (*Tel:* 692436). R. W. Crosbie, General Manager.

WHITSTABLE: 51.21 N. 01.02 E. (See Plan)

PILOTAGE: Pilotage is available but Pilots must be ordered through the Lloyd's Agent. A minimum of 4 hours notice is required as Pilots are from Medway Ports Authority.
APPROACHES: Vessels are advised to arrive at the Whitstable Street Buoy not later than 1.5 hours before HW.

To ensure that vessel's approach on the correct heading, (122.5°), and to assist in identifying the entrance, the Whitstable Oyster Buoy has been established in a position bearing 310°×1,950 ft. from the light on the Dolphin on the Western side of the Harbour. This is a red can, flashing 2 red every 10 seconds.

The entrance to the Harbour is marked by a Sector Light fixed to the West Quay Dolphin and shows White, Green and Red. The outer end of the East Quay is marked by 2 fixed Vertical Red Lights. The outer end of the West Quay is marked by 2 fixed vertical green lights. There are fixed Red Leading Lights on the South Quay bearing 122.5° from seaward.
Harbour Signals: A fixed Red Light shown below the fixed Harbour White Light at night means entry of vessels is prohibited. A fixed White Light *only* means Port open for entry.
MAX. SIZE: The Harbour is tidal and dries out at LW with berths of soft mud capable of accepting vessels of up to 2,000 tonnes capacity. There are 4 quays having a total overall length of 2,205 ft. (679 m.), with accommodation for up to 8 vessels at drafts of 15 ft. 6 in. (4.72 m.) at Spring tides and 12 ft. 0 in. (3.66 m.) at Neap tides.
VHF: Ship to shore communication is maintained by VHF Radio, the call sign being "Whitstable Harbour Radio", listening on Channel 16 and working Channels 12 and 9. The station is manned for 3 hours before HW to 1 hour after HW and daily from 0800 hrs. – 1700 hrs.
In event of VHF Breakdown: On day tides between the hours of sunrise to sunset (from 3 hours before until 1 hour after HW), a Docking Light Signal may be in operation, exhibited from the Light Tower in position Lat: 51° 21′ 48″ N., Long: 01° 01′ 39″ E. Character to indicate Port Closed: Fixed White. Character to indicate Port Open and Clear for Entry: One flash every 3 seconds.
TUGS: The services of a tug can be made available via Lloyd's Agent. 24 hours notice is required.
BERTHING:

East Quay: Length 900 ft. (274 m.). 3 berths.
  Storage – Transit Shed 12,000 sq.ft. (1,115 sq.m.)
    Warehouse 4,000 sq.ft. (371 sq.m.)
  Bins – Stone, Slag and Ballast at Inner Berth.
South Quay: Length 500 ft. (152.4 m.). 2 berths.
  Storage – 1. Warehouse 9,000 sq.ft. (836 sq.m.)
    2. Warehouse 7,000 sq.ft. (650 sq.m.)
  Open Storage – Bulk Stone, etc. – 2,000 tonnes.
  Open Storage and Trailer Park – 5,000 sq.ft. (464 sq.m.)
North Quay: Length 205 ft. (62.5 m.). 1 berth.
West Quay: Length 600 ft. (183 m.), width 130 ft. (40 m.).
  Storage – Warehouse 19,000 sq.ft. (1,765 sq.m.)

Depth of Water:

Quay:	*HWS*	*HWN*
North	13 ft. 6 in. (4.11 m.)	10 ft. (3.05 m.)
South	15 ft. 6 in. (4.72 m.)	12 ft. (3.66 m.)
East –	15 ft. 6 in. (4.72 m.)	12 ft. (3.66 m.)
West	15 ft. 6 in. (4.72 m.)	12 ft. (3.66 m.)

CRANES: Cranes are privately owned and consist of 4 mobile cranes on tracks. SWL up to 10 tonnes.
FRESH WATER: Available.
FUEL: Available.
AUTHORITY: Canterbury City Council, Whitstable Harbour Office, Harbour Street, Whitstable, Kent CT5 1AB. *Tel:* Whitstable (0227) 274086. *Contact:* Commander F. J. Bloom, Harbour Master.

WORKINGTON: 54.39 N. 03.34 W. (See Plan)

DOCUMENTS: Standard U.K. documents.
PILOTAGE: Compulsory. Minimum notice 12 hours via vessel's Agents. Pilot boards 1 mile West of entrance.
ANCHORAGES: 1.5 miles to 2 miles N.W. of the entrance.
MAX. SIZE: 10,000 d.w.t., length 137.2 m. beam 62 ft. and draft 25 ft.
HEALTH: Standard U.K. procedure.
VHF: Workington Harbour Radio operates on Channels 16, 14 and 11. A listening watch is maintained daily from 2.5 hours before HW until 2 hours after HW.
TUGS: Vessels over 92 m. LOA shall, if the Harbour Master so requires, be assisted by a tug or tugs.

A tug is no longer berthed at the port. Shipowners/agents are responsible for making their own arrangements. In the event of a tug being required, the Harbour Master shall be provided in writing, with the tugs specification, at least 48 hours in advance.

The Port Authority also reserves the right to appoint a tug or tugs to attend any vessel if, with due regard to the prevailing circumstances, the Harbour Master deems it necessary.

BERTHING: *Tidal Harbour:* 853 m. of quayage for fishing vessels and other small craft. Depths are from 4.1 m. Neap tides to 7.2 m. Spring tides.

Prince of Wales Dock: Enclosed dock, width of entrance 21.2 m. There is 772.7 m. of quay frontage with depths from 7.2 m. Neaps to 10.2 m. Springs. The dock is 97.8 m. wide at the West end, 76.2 m. at the East end. There is a transit shed situated at the general cargo berth.
CRANES: 2 × 7 tonnes and 2 × 10 tonnes cranes are available. As from May 1990 there will be 2 new dockside cranes with a capacity of 12 tonnes at 28 m. radius and 28 tonnes at 13 m. radius.
BULK CARGO FACILITIES: The new automated coal terminal is capable of handling 1,750 tonnes of coal per hour.
SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro facility available.
STEVEDORES: Normal working 0800 hrs. – 1700 hrs. with 3 hours evening overtime if requested. Shift working is available on request from 0600 hrs. – 1400 hrs. and 1400 hrs. – 2200 hrs.
FRESH WATER: Available.
FUEL: Available.
TIME: GMT plus 1 hour (late March – late October), otherwise GMT.
AUTHORITY: Cumbria County Council, Port of Workington, Dock Office, Prince of Wales Dock, Workington, Cumbria CA14 2JH. *Tel:* (0900) 602301. *Telex:* 64253. *FAX:* 0900-604696. *Contact:* Captain W.S. Worthington, Harbour Master and General Manager.

United States of America

GENERAL

SHIPMASTER'S REPORT: January 1987.

Preparation for arrival in U.S.A. Ports

Refer to:

1. Annual Summary of Notices to Mariners (British) No. 22 – Charts and Publications.

2. C.F.R. Title 33, Part 164 (especially 164.25/164.30/164.33, 35, 37, 38, 41, 53, etc. Also 159.59 and 155.440, 700, 740, 750).

Action Required:

Purchase (if necessary) large scale U.S. charts, current Coast Pilot and Light Lists, Tide Tables, Loran Charts, Tidal Stream Tables; but British publications are usually acceptable if up to date and charts are of largest scale.

Arrival Preparations:

U.S. Department of Agriculture prepare for inspection of:

1. Galley, storerooms, and possible sealing of prohibited fruits and meats.
2. Covered and leakproof garbage cans.
3. Rat guards.
4. Declare all animals and birds.
5. Hold inspections for grain, etc. Carried out by teams of 2 men, and extremely severe. Failure of holds will result if loose paint scale, loose rust scale, insects or deposits of past cargoes are found. High powered flash-lights used to probe the most remote corners. They are very experienced and know where to look!

U.S. Public Health Service: Ship not boarded unless sickness is reported or vessel is from an infected area.

U.S. Coast Guard: Do a preliminary check, using a "Vessel Compliance Check-List" or an old "Vessel Inspection Form". Before arrival ensure navigation equipment is tested as per C.F.R.33, Part 164.25 and a good Log entry has been made. Check Oil Record Book (151.35); Placard re-discharge of Oil (155.440); Oil transfer procedures are posted (155.750); Marine Sanitation device is working and instructions for use are visible.

Read British Annual Notice to Mariner 4B (The Amver System), especially paragraph 5, (Constructive compliance with C.F.R.33, Part 161.7).

U.S. Customs: Will examine all Certificates.

U.S. Bureau of Labour: Will examine Cargo Gear Register and Certificates.

Documents:

4 Crew Lists (Form I-418).
4 Passenger Lists (Form I-418).
4 Ship's Stores Declarations (Form 1303), to include Shop and Bond Lists, Steward Stores Lists, Medicine Lists, Fire-arms Lists.
4 Crews' Effects Declarations (Form 1304).
1 Master's Oath (Form 1300).
3 Cargo Manifests (Form 1302), if cargo on board original showing all cargo on board and 2 copies showing only cargo for this port.
1 General Declaration (Form 1301), usually completed by Agent.

All ship's certificates should be to hand. Also Last Port Clearance and previous Tonnage Tax Vouchers.

All entry papers must be prepared on proper U.S. Customs Forms, with no attachments permitted.

The Crew List must be made out correctly in alphabetical manner as prescribed. Also a Crew List must be prepared at the previous port and visaed by the U.S. Consulate. For this purpose 2 copies are made.

The original has Columns 1 to 3 completed as usual, but the duplicate must list in Column 4 the date, city and country of birth, and in column 5 the Place and Authority issuing the crew member's passport or document. If this visaed Crew List cannot be produced on arrival a waiver can be granted, for which the Agent must pay U.S.$15 in cash. If the vessel has crew from the People's Republic of China or other communist countries, then shore leave will not be granted at all, without that visaed Crew List. No waiver will be issued for them.

Crewman's Landing Permits (Form I-95A) must be prepared before arrival for each man. Previously used shore passes can be used again, but only if the seaman is still on the same ship.

Some ports require less than the number of documents stated above. The Mississippi consists of 3 Custom areas (New Orleans, Gramercy, and Baton Rouge). If the the ship moves to another area, then new forms may be needed, so extra copies are useful, in the case of Forms 1303 and 1304.

AGRICULTURE: All ports.

Arrival Notification: The vessel's Master or Port Agent must provide advance notification of intent to arrive. Notice is to be received by the U.S. Department of Agriculture (USDA) no less than 12 hours before the estimated time of arrival and must include:

1. The name or other identifying feature of the vessel.
2. The date and estimated time of arrival.
3. The specific location of arrival (dock, pier, mole, anchorage, etc.).
4. The names of all foreign and noncontinental United States ports where any cargo, crew or passenger destined for the continental United States has been boarded since the vessel's most recent arrival in the United States.

Changes in the above information must be communicated as soon as known. If the place of arrival is an anchorage; subsequent movement to a pier, wharf, etc., must be reported as soon as known.

Documents: The cargo, stores, and crews' effects lists or manifests must be available for review by the boarding USDA Inspector.

Inspection: The USDA Inspector will examine the galleys, storerooms, lockers, mess areas, and crew quarters in some instances for prohibited plant materials (fruits, vegetables, and plants) and meat products. Also, inspections may be made of on-board cargo and cargo holds.

Stores Sealing: The USDA Inspector will place under seal certain fresh fruits and vegetables in stores aboard vessels calling at ports in Florida, Mississippi, Alabama, Louisiana, Texas and California. Routine sealing will be limited to fruits likely to carry exotic tropical fruit flies. In addition, USDA Inspectors at any port may require sealing of any vessel stores when pest infestations are detected. It is recommended that each vessel construct a special compartment for sealing fruits and vegetables so that it will not be necessary to seal the entire vegetable locker.

Garbage: All food wastes aboard vessels arriving from foreign or offshore areas (except Canada) must be handled in accordance with USDA Regulations. Garbage must be held aboard vessels in leakproof, covered containers inside the rails for later disposal or, it may be removed with permission and under supervision of a USDA Inspector for incineration or sterlisation in approved facilities.

Penalties: Monetary civil penalties may be imposed for violation of USDA Regulations including, but not limited to:

1. Failure to provide adequate arrival notification.
2. Breaking U.S. Department of Agriculture seals.
3. Unauthorised or unsupervised removal/disposal of garbage.
4. Unauthorised removal of fruits, vegetables, meats or animal products or live plants.
5. Failure to keep garbage in other than closed, leakproof containers.

Treatments: If quarantine-significant pests are found aboard a vessel, an Emergency Action Notification may be issued to the Master. It will prescribe what treatments are required to the affected articles or area of the vessel and when this treatment must be accomplished.

Honeybees: Honeybees may not be brought into the United States. This is a precaution to keep out Africanised bees, which could gravely upset beekeeping in North America. Do not disturb any signs of bees on board, such as live swarms, dead bees, or hives. Contact the ship's Agent before entering U.S. ports for appropriate instructions regarding disposal and treatment from the USDA inspector.

Animals/birds: All live animals or birds aboard vessels must be retained on-board and reported to the USDA Inspector.

For additional information: Write to "Quarantines", U.S. Department of Agriculture, Federal Building, Hyattsville, MD 20782. Tel: (301) 436–8295, 436–8455.

Notice

To: Ship's Masters:
From: United States Department of Agriculture, Animal and Plant Health Inspection Service.

On April 1st, 1985, the Animal and Plant Health Inspection Service (APHIS) will implement routine sealing of certain fresh fruits and vegetables in stores aboard vessels calling at ports in Florida, Mississippi, Alabama, Louisiana, Texas and California. Routine sealing will be limited to fruits likely to carry exotic tropical fruit flies. In addition, APHIS Officers at any port may require sealing of any vessel stores when pest infestations are detected.

This is an interim measure in preparation for full implementation of a new Maritime Clearance and Monitoring Guideline on or about June 1st, 1985. You will receive additional information in the near future.

It is recommended that each vessel construct a special compartment for sealing their fruits and vegetables so that it will not be necessary to seal the entire vegetable locker.

You are reminded that the following may result in a civil/monetary penalty:

1. Breaking U.S. Department of Agriculture seals.
2. Unauthorised or unsupervised removal/disposal of garbage.
3. Unauthorised removal of fruits, vegetables, meats or animal products, or live plants.
4. Failure to keep garbage in other than closed, leakproof containers.

Further information can be obtained by calling (713) 229-3541.

Purser's Note: It is advisable to have a locker ready prior to arrival in order that fruit and vegetables may be transferred for sealing.

ALCOHOL:

OPERATING A VESSEL WHILE INTOXICATED
COMMERCIAL VESSELS (33 CFR PART 95)

1.	*Applicability:*	Any crew member, pilot, or watchstander not a regular crew member, on any U.S. vessel anywhere or any foreign vessel in the national waters of the U.S. (out to three miles offshore).
2.	*Standard of intoxication:*	Blood alcohol concentration of 0.04% or more by weight; *OR* Effect of intoxicant (drug or alcoholic) on person's manner, disposition, speech, muscular movement, general appearance or behaviour is apparent by observation.
3.	*Evidence of intoxication:*	Chemical test or personal observation.
4.	*Who may require testing:*	Law enforcement officer or marine employer when reasonable cause exists.
5.	*Reasonable cause for testing:*	When individual is directly involved in marine casualty; *OR* Individual is suspected of being intoxicated.
6.	*Refusal to submit to test:*	Is admissible as evidence in any administrative procedure if ordered by marine employer *and further* will be cause for presumption of intoxication if ordered by law enforcement officer.
7.	*Prohibited acts of individual while aboard vessel:*	A. Be intoxicated at any time. *B. Perform or attempt to perform any scheduled duties within four hours of consuming any alcohol. *C. Consume any intoxicant while on watch or duty.

8. *Penalties (46 USC 2302(C):*
A. Civil penalty of up to $1,000.
B. Criminal penalty of up to $5,000 and/or imprisonment for up to one year.

9. *Responsibilities:*
Marine employers shall exercise due diligence to ensure compliance.
If any marine employer has reason to believe a person may be intoxicated he shall not allow that individual to stand watch or perform any other duties.

*Apply only to vessels which are inspected or subject to inspection (U.S. and foreign).

HEALTH: All ports.

The U.S. Public Health Service does not maintain Quarantine Stations at each port of entry. The smaller ports are under the jurisdiction of Quarantine Stations located at strategic ports of entry. Matters of public health significance occurring on vessels destined to ports not staffed by Public Health Service personel should be reported to the Quarantine Station having jurisdiction over that port.

Masters of Vessels arriving at United States ports

Effective July 1, 1973, Radio Pratique as a method of Quarantine Clearance was discontinued at all ports under control of the United States.

Vessels Subject to Public Health Inspection

The only vessels that will be subject to on-board public health inspection upon arrival or during stay at ports under control of the United States are those carrying crew or passengers having:

1. Temperature of 100°F.(38°C.) or greater, accompanied by a rash, glandular swelling, or jaundice, or which has persisted for more than 48 hours; or
2. Diarrhoea, defined as the occurrence in a 24-hour period of three of more loose stools or of greater than normal (for the person) amount of loose stools; or
3. On-board occurrence of death, regardless of the signs and symptoms above.

Procedures. In accordance with regulations you must inform the quarantine station, through your vessel's Agent, at or nearest the intended port of your vessel's first arrival in the United States of the occurrence of illness as specified above. Arriving vessels no longer need to complete a Maritime Public Health Declarataion.

These changes reflect our confidence that you will continue to report, in advance of arrival in the United States, the on-board occurrence of: death or illness compatible with the signs and symptoms specified above, or death or illness while in port if such occurs after arrival.

AUTHORITY: Department of Health and Human Services, Centers for Disease Control, Program Operations Branch, Division of Quarantine CPS (EO3), Atlanta, Georgia, GA. 30333. *Tel:* (404) 639 – 1437.

CONTROLLED FLAG VESSELS:

SHIPPING AGENT GUIDELINES
UNITED STATES
PORT ENTRY REQUIREMENTS
FOR
CONTROLLED FLAG, CHARTERED AND
CREWED VESSELS
REVISED DECEMBER 1989
PREVIOUS EDITIONS OBSOLETE
Issued by Department of Transportation
Commandant U.S. Coast Guard (G-MPS-2)
2100 2nd Street, S.W.
Washington, DC 20593-0001

PLEASE NOTE: The following is under constant review due to political changes taking place.

1. General Requirements.

A. *INTRODUCTION.*

1. *Applicability:* This document provides guidance on requirements for entry into the United States territorial sea, internal waters, and ports for maritime vessels registered to, owned or operated by, chartered to, or which employ citizens of the nations listed below. Owners, Masters, Agents or persons in charge of these vessels should adhere to these requirements to facilitate legitimate entry of their vessels into the U.S. territorial sea, internal waters and ports.
   (a) Warsaw Pact nations:
   Union of Soviet Socialist Republics (U.S.S.R.)
   Bulgaria
   Czechoslovakia
   Hungary
   Poland
   Romania
   (b) Other nations:
   People's Republic of China.
   (c) Vessels registered to, owned or operated by, or chartered by *Non-Entrant Nations* are not permitted to enter the U.S. territorial sea or U.S. ports. Nations appear on this list because of U.S. diplomatic sanctions against them.
   Non-Entrant Nations are:
   Albania
   Cambodia
   Cuba
   People's Republic of Korea (North Korea)
   Vietnam
   Iran
   Iraq
   Libya
   Yemen
   Syria
   (d) Requirements contained in these guidelines also apply to officers and crew members from either Warsaw Pact or Non-Entrant Nations aboard *free-flag vessels* (Crew Make-Up Vessels). See Section 1.E. for Crew Make-Up Vessel requirements.
   (e) Although shipping agents may be hired to provide services for *public vessels*, all public vessel Entry Applications and changes are handled on a government-to-government basis at the embassy level via the Department of State, and must be made at least 14 days prior to desired entry date. See Section 1.B.13. for a definition of a public vessel.
2. *Intent:* These guidelines are intended to assist shipping agents in obtaining port calls for vessels associated with the nations listed in Section 1.A.1. Access to U.S. ports by *any* foreign vessel is subject to compliance with applicable laws and regulations of the federal government and state and local authorities in the areas of their jurisdiction. Vessels associated with the nations listed in Section 1.A.1. must comply with all applicable foreign vessel regulations *and* any additional requirements found in these guidelines.
3. *Authority:* National security interests require that the movement of any vessel within the territorial sea or internal waters of the United States be subject to U.S. Government review. Authority for this is found in the Magnuson Act (Title 50, United States Code, Section 191, 1950). The President implemented this statute by Executive Order (E.O.) 10173, as amended since by E.O.s 10277, 10352 and 11249. These orders promulgated regulations in Part 6, Chapter 1, Title 33 of the Code of Federal Regulations (CFR). These regulations assign port security responsibilities to the U.S. Coast Guard. E.O. 10173 further directed all agencies and authorities of the United States Government and all state and local authorities to support, conform to, and assist in the enforcement of these regulations and any supplemental regulations issued.
4. *Maritime Agreements:* These guidelines implement and support provisions of treaties, conventions, agreements and similar instruments in force between the Government of the United States and the Governments of certain nations concerning maritime matters. Title I, United States Code, Section 112a, directs the Secretary of State to compile a publication *United States Treaties and Other International Agreements* (UST) which contains all treaties to which the United States is a party. It also states that the UST "shall be legal evidence of the treaties, ... in all courts of the United States, ...". In some instances, these instruments and supporting documents state specific procedures for entry to United States ports, should be consulted for a complete understanding of requirements applicable to affected vessels. These guidelines address only those port entry requirements administered by the U.S. Coast Guard.

B. *DEFINITIONS.*

1. *2-Day Request (for Itinerary Changes).* This period is exactly 48 hours. It commences at the hour and minute that an Agent's Change Application message is received at Coast Guard Headquarters. Weekends and federal holidays have no effect on 2-Day Requests.
2. *4-Day Request:* This period is exactly 96 hours. It commences at the precise hour and minute that the Agent's Entry Application message is received at Coast Guard Headquarters. Weekend and federal holidays have no effect on 4-Day Requests. 4-Day Requests may not be submitted more than *2 weeks* in advance of the first desired U.S. port call.
3. *4-Working Day Request:* This period excludes the day o
day of entry, weekends, and federal holidays. For exa
obtain clearance for a ship to call on a Tuesday, the re
required at Coast Guard Headquarters no later than the p
Tuesday provided no federal holidays are involved. 4-
Day Requests may not be submitted more than *2 w*
advance of the first desired U.S. port call.
4. *7-Working Day Request:* This period excludes the day o
day of entry, weekends, and federal holidays. For exa
obtain clearance for a ship to call on a Monday, the re
required at Coast Guard Headquarters no later t
Wednesday 12 days preceding, provided no federal holi
involved. 7-Working Day Requests may not be submitt
than *three weeks* in advance of the vessel's first desi
port call.
5. *14-Day Request:* This period excludes the day of rece
not the day of entry, weekends, or federal holidays. For e
to obtain clearance for a ship to call on the 15th, the requ
be filed by the 1st of the month. 14-Day Requests ma
submitted more than *four weeks* in advance of the first
U.S. port call.
6. *Government-to-Government:* These requests are co-ord
the embassy level. They are handled through diplomatic
between the two governments only. When the Initial
Request is government-to-government, all desired future
changes or late arrivals must also be handled on a gove
to-government basis.
7. *Agent-to-Coast Guard:* Co-ordination of applicable p
requests, itinerary changes, and special waivers are sp
conducted between the U.S. Coast Guard Headquarters
Interest Vessel Desk and the U.S. Shipping Agent repr
vessels covered by these guidelines.
8. *U.S. Coast Guard Special Interest Vessel (SIV) De*
individual entry of all vessel's covered by these guidel
the U.S. territorial sea, internal waters, and ports is co-c
by the USCG's SIV Desk. Under direction of the Ch
Security Branch, Commandant (G-MPS-2), the SI
annually co-ordinates approximately 4,500 port calls.
Desk or Duty Officer is available 24 hours a day. During
hours, call (202) 267-0476; after hours and weekends
routine matters, call Coast Guard Headquarters C
Center at (202) 267-2100, and ask for the Port Securit
Officer.
9. *Port Call:* A port call includes anchoring or mooring w
territorial sea or, for ports not adjacent to the territorial
waters of the geographical limit of the port area desc
"Enclosure No.1". A vessel may be within these limits as
it is either en route to an approved port call or depart
such a port call. A vessel's presence within these limit
permitted within the time frame of the previously appro
call. Vessels must have a Commandant (G-MPS) a
itinerary and an entry date-time "window" for any U.S.
10. *Port Area Descriptions:* Geographical port limits are de
certain U.S. ports for purposes of administering this prog
See "Enclosure No.1" for a list of port area descriptions.
area descriptions apply to port calls involving the nations
by these guidelines. Port areas, for which there is no geog
description, include that area which encompasses the
facilities of the port, the internal water approaches,
seaward approaches to the limits of the territorial sea.
11. *Free-Flag Vessel:* Any vessel which is registered to or o
any nation other than those listed in Section 1.A.1.(a), (
of these requirements.
12. *Crew Make-Up Vessel:* A free-flag vessel which is su
these requirements because crew members or officers
Warsaw Pact or non-entrant nation listed in Section 1.A
(c) are aboard the vessel.
13. *Public Vessel:* A vessel which is owned or charter
operated by a foreign government and not engaged in con
service. An example of a public vessel is a foreign
research vessel.

C. *UNAVAILABLE PORTS.*

The following ports are unavailable to vessels which are regis
owned or operated, or bareboat chartered to Warsaw Pact nati
Warsaw Pact nationals who are officers or crew members on
vessels, refer to Section 1.E.

1. *Portsmouth, New Hampshire* – (Including Kittery, Ma
Dover, New Hampshire on the Piscataqua River) – Por
Harbour from the COLREGS Demarcation Line to the
navigation on the Piscataqua River, to include Kittery ar
Maine, and Portsmouth, Newington and Dover, New Ha
2. *New London and Groton, Connecticut* – All waters encom
by a line from Black Point, CT to Race Point (Western
Island), Fishers Island, and a line from East Point (
Fishers Island) to Watch Hill, RI.
3. *Hampton Roads, Virginia* – (Including Norfolk, Newpor
Jamestown, Yorktown and Portsmouth, Virginia, and ac
the James River). All the waters of a line from Cape He
to New Point Comfort, which includes the S.W. po
Chesapeake Bay, Hampton Roads, and the Elizabeth, Jar
York Rivers.
4. *Charleston, South Carolina* – Charleston Harbou
approaches from the sea buoy to the navigable limits
Cooper River, Wando River and Ashley River.
5. *Kings Bay, Georgia* – All waters of Cumberland Sound f
entrance to St. Mary's River at Intracoastal Waterway Stat
712.5, North to the entrance of Crooked River at Statute M

6. *Port Canaveral, Florida* – All waters of the Atlantic Ocean within 4.5 nautical miles of the seaward extremity of the Port Canaveral Entrance Channel jetties, including all waters of the Entrance Channel Westward to the Canaveral Barge Canal Lock.
7. *Panama City, Florida* – From the Panama City Harbour Channel Entrance Buoy "SA" to Panama City proper, including St. Andrew's Bay.
8. *Pensacola, Florida* – The Pensacola Ship Channel from the sea buoy to Pensacola Bay, inclusive.
9. *Port St. Joe, Florida* – From Port St. Joe Harbour proper to Buoy No. 6 of the Port St. Joe Entrance Channel, the entrance to the Gulf County Canal and St. Joseph Bay.
10. *San Diego, California* – San Diego Bay, Mission Bay, and all waters of the Pacific Ocean adjacent to the cities of La Jolla, Pacific Beach, Ocean Beach, San Diego, Coranado, National City and Chula Vista out to 3 nautical miles.
11. *Port Hueneme, California* – The waters of Port Hueneme Harbour shoreward of a line drawn from Port Hueneme East Jetty Light 4 to Port Hueneme West Jetty Light 3.
12. *Honolulu, Hawaii* – All internal waters and waters of the Pacific Ocean out to 3 nautical miles from Diamond Head Westward to and including Barber's Point Harbour.

D. CHARTERED VESSELS.

The U.S. Port Security Programme also applies to free-flag vessels chartered or crewed with nationals from nations listed in Section 1.A.1.(a). of these Guidelines.

The following apply:

1. Free-flag vessels chartered by *Non-Entrant Nations*, listed in Section 1.A.1.(b)., are not permitted access to the U.S. territorial sea, internal waters or ports.
2. Agents of free-flag vessels chartered by *Warsaw Pact Nations* should provide charter information in advance of a port call to the local Coast Guard along with the required 24-hour Advance Notice of Arrival (33 CFR 160.207). When advance information is provided to the Coast Guard, a vessel chartered to one of these nations, in all likelihood, will receive delay-free entry. In those cases where charter information is brought to Coast Guard attention by other means, there may be delays while processing the entry.

E. CREW MAKE-UP VESSELS.

1. *Crew Make-up Vessels (Warsaw Pact Officers and Crew Members).*

Free-flag vessels with Warsaw Pact Officers or Crew Members on board occasionally seek entry to Unavailable U.S. Ports. Any proposals for removal/restriction must be submitted to the Coast Guard Headquarters, Special Interest Vessel Desk (G-MPS-2), *48 hours* in advance of the port call. Even if no restriction or removal is required, shipping agents should send a Crew List 24 hours in advance of arrival to the local Captain of the Port, to avoid any possible delays due to crew member nationality. Shipping agents are responsible for ensuring that any armed guards they hire are properly instructed as to their mission.

(a) Unavailable Ports – *Warsaw Pact Crew Members* must be detained below deck under armed guard supplied by the agent, during the inbound transit, the port call and the outbound transit. Guards must be provided in the ratio of one guard to every four crew members. *Warsaw Pact Officers* must be removed from the vessel under armed guard supplied by the agent during the inbound transit, the port call, and the outbound transit, in the ratio of one guard to every four officers. The officers must be kept under armed guard ashore (usually in a hotel) until the vessel is ready to depart. The officers are then escorted, still under armed guard, back to the vessel.

Proposals for removal should:

(1) Specify location where removal and return will occur (usually at the pilot station).
(2) State the method of removal and return.
(3) State the dates of removal and return.
(4) State the names and positions of the officers and/or crew members to be restricted or removed.

Each proposal is evaluated on a case-by-case basis. Should a vessel be discovered in an Unavailable Port with Warsaw Pact crew members on board, the vessel will be ordered to cease cargo operations until an acceptable proposal is received from the agent and approved by the Coast Guard. Please see "Enclosure No.2, Figures D and E" for examples of agent proposals for removal and restriction of Warsaw Pact nationals.

(b) Available Ports – There are no Coast Guard requirements for restriction. Immigration and Naturalisation Service (INS) requirements apply.

2. *Crew Make-up Vessels (Non-Entrant Officers and Crew Members).*

Free-flag vessels with officers or crew members from Non-Entrant Nations on board occasionally seek entry to U.S. Ports. The Department of State determined that six nations on the list of Non-Entrant Nations found on Section 1.A.1. support international terrorism: Libya, Syria, Yemen, Iran, Cuba, and the People's Republic of Korea (North Korea). Restrictions imposed by the Coast Guard apply to officers and crew members of Non-Entrant Nations *in all ports* as outlined below.

(a) Non-Entrants subject to restriction – Crew members and officers from Non-Entrant Nations that have repeatedly provided support for acts of international terrorism (Libya, Syria, Yemen, Iran, Cuba and North Korea) must be restricted to their vessel under armed guard. It is not necessary to restrict them below decks, nor is it necessary to prevent them from performing their normal shipboard duties. They must merely be kept from departing the ship. THIS REQUIREMENT APPLIES IN BOTH AVAILABLE AND UNAVAILABLE PORTS. Proposals for crew restriction should be submitted at least *48-hours* in advance and should:

(1) Specify the port where the restriction will occur.
(2) State the date(s) of the port call.
(3) State the crew members' names, positions, dates of birth and Passport numbers.

Each proposal is evaluated on a case-by-case basis. Should a vessel be discovered in port with crew members or officers on board from a Non-Entrant Country subject to restriction, the vessel will be ordered to cease operations until an acceptable proposal is received from the agent and approved by the Coast Guard SIV Desk. Please see "Enclosure No. 2, Figure F" for an example of a proposal for restriction of Non-Entrant Nationals.

(b) Non-Entrants not subject to restriction – Crew members and officers of Albania, Cambodia, Vietnam and Nicaragua are not subject to Coast Guard restriction, but are subject to Immigration and Naturalisation Service (INS) requirements.

3. *Effective Control.* Should it be determined that the vessel is under the effective control of a Non-Entrant or Warsaw Pact (in the case of Unavailable Ports) country, the vessel will not be permitted to enter port. Effective control is determined on a case-by-case basis. It may be due to the number of persons on board from certain nations, the charter of the vessel, the positions held by persons of various nationalities or the influence these persons or various nationalities appear to exert over the rest of the vessel. Agents should provide crew information, such as a Crew List with positions of any Non-Entrant or Warsaw Pact Nationals, to the local Captain of the Port (COTP), at least 24 hours in advance of the desired port call, in order to avoid unexpected problems resulting from effective control determinations.

F. *OTHER ENTRIES.*

1. *National Marine Fisheries Service (NMFS) Observer Programme.* Under authority of the Fisheries Conservation Management Act, NMFS can place U.S. observers aboard foreign fishing vessels while they fish within the U.S. 200-mile Fisheries Conservation Zone (also referred to as the Exclusive Economic Zone by Presidential Proclamation of March 10, 1982). In some instances, it is advantageous for a foreign fishing vessel to enter the U.S. territorial sea briefly to embark/disembark a NMFS observer. When specifically authorised by Commandant (G-MPS), a Coast Guard District Commander may permit brief entry of commercial fishing vessels of nations subject to these guidelines into the territorial sea of the U.S. for the sole purpose of embarking/disembarking NMFS observers. (Note: To-date, this authority has been delegated to the Commander, Coast Guard Pacific Area and Commander, Seventeenth Coast Guard District for Pacific and Alaskan U.S. territorial sea.) These fishing vessels must have a valid Governing International Fishing Agreement (GIFA) Permit.

(a) Entry of these vessels for any purpose other than, or in addition to, NMFS observer transfer must be approved by Commandant (G-MPS).

(b) Vessels ordered or permitted to enter U.S. waters to effect NMFS observer transfers need not provide a 24-hour Advance Notice of Arrival in accordance with 33 CFR 160.207; however, vessels must notify the local Coast Guard of their arrival and departure times into and out of the U.S. territorial sea.

(c) Vessels permitted entry under this authority must return to international waters immediately upon transfer of observers. The vessel's agent should submit a proposal for NMFS observer transfer in Alaskan waters to: "Commander, Seventeenth Coast Guard District, Juneau, Alaska; Telex No. 09945305, Answer back US COGARD JNU." NMFS transfer request for other West coast ports should be submitted to: "Commander, U.S. Coast Guard Pacific Area, Alameda, California; Telex No. 330459, Answer back CG ALDA." For all other NMFS observer transfers to occur in the U.S. territorial sea, agents should submit proposals to: "Commandant (G-MPS), U.S. Coast Guard, Washington, D.C.; Telex No. 89-2427 Answer back COASTGUARDWSH."

2. *U.S. – Warsaw Pact Cooperative Marine Scientific Research.* When specifically authorised by Commandant (G-MPS), a Coast Guard District Commander may permit brief entry of research vessels (oceanographic and fisheries) of nations subject to these requirements into the territorial sea of the U.S. for the sole purpose of embarking/disembarking U.S. scientists and their equipment. (Note: To-date, this authority has been delegated to the Commander, Coast Guard Pacific Area and Commander, Seventeenth Coast Guard District for Pacific and Alaskan U.S. territorial sea.)

(a) Entry of these vessels for any purpose other than, or in addition to, U.S. scientist and equipment transfers must be approved by Commandant (G-MPS). This includes transfer of non-U.S. scientists from U.S. vessels to or from foreign vessels.

(b) Vessels permitted to enter U.S. waters to effect U.S. scientist and equipment transfers need not provide a 24 hour Advance Notice of Arrival in accordance with 33 CFR 160.2071; however, vessels must notify the Coast Guard of their arrival and departure times into and out of the U.S. territorial seas.

(c) Vessels permitted entry under this authority must return to international waters immediately upon transfer of the scientists and their equipment.

A vessel's agent should submit a proposal for U.S. scientist and equipment transfer in Alaskan waters directly to: "Commander, Seventeenth Coast Guard District, Juneau, Alaska; Telex No. 09945305, Answer back US COGARD JNU." Scientist transfer requests for other West coast waters should be submitted to: "Commander, U.S. Coast Guard Pacific Area, Alameda, California; Telex No. 330459, Answer back CG ALDA." For all other U.S. scientist and equipment transfers to occur in the U.S. territorial sea, agents should submit their proposals to: "Commandant (G-MPS), U.S. Coast Guard, Washington, D.C.; Telex No. 89-2427, Answer back COASTGUARDWSH."

Note: Vessels discharging oil into the U.S. territorial sea or U.S. ports are liable for clean-up costs and subject to a civil penalty under the Federal Water Pollution Act. A Certificate of Financial Responsibility (COFR) is required for vessels over 300 gross tons prior to entry into the U.S. territorial sea.

3. *Force Majeure.* In accordance with this international doctrine, a foreign vessel may enter the U.S. territorial sea under a condition of Force Majeure. The vessel should notify the Coast Guard COTP before entering the U.S. territorial sea. Original declarations of Force Majeure are subject to validation by the Coast Guard. The Coast Guard COTP may direct a vessel claiming Force Majeure to a specific location within U.S. waters.
4. *Innocent Passage.* Innocent passage is navigation through the territorial sea for the purpose of traversing that sea without entering internal waters for lawful entry, or from internal waters following lawful clearance to the high seas. It may include stopping or anchoring only when this is incident to ordinary navigation (such as when awaiting a favourable tide to traverse a particular narrows), or when rendered necessary by Force Majeure or by distress. Innocent passage specifically does not include hovering, stopping or anchoring for other reasons, and it does not include fishing. Anchoring or slow steaming within the U.S. territorial sea to avoid early arrival in port for which the vessel holds an approved itinerary will not be considered innocent passage, and will result in cancellation of the vessel's itinerary, except when the vessel's movements are directed by a Coast Guard Vessel Traffic Service (VTS) for purposes of safety of navigation.
5. *Medical Emergency.* Foreign flag vessels not previously approved for a U.S. port call may enter U.S. waters for the sole purpose of removing a crew member in need of *immediate* medical attention. The local Coast Guard COTP may grant permission for a vessel to enter territorial waters for a MEDEVAC. The COTP may also arrange a MEDEVAC outside the territorial sea. If the vessel is given permission to enter the territorial sea for a MEDEVAC, the vessel must depart upon completion of the transfer of the affected crew member. Notify the COTP as soon as possible prior to desired entry. Repatriation of foreign nationals, who have been evacuated for emergency medical treatment, is to be arranged and paid for by their native nations. Commandant (G-MPS) is to be advised by *Telex* when a vessel requests entry into the territorial sea, for the purpose of removing crew members in need of medical attention at this telex address: "Commandant (G-MPS), U.S. Coast Guard, Washington, D.C.; Telex No. 89-2427, Answer back COASTGUARDWSH."

G. *NON-ENTRANTS.*

Vessels registered to, owned or operated by or chartered by the following nations are not permitted entry to U.S. territorial sea, except under conditions of Force Majeure, medical emergency, innocent passage or a Canadian approved passage of the St. Lawrence Seaway en route to Canadian ports: Albania, Cambodia, Cuba, the People's Republic of Korea (North Korea), Vietnam, Iran, Nicaragua, Libya, Yemen and Syria. This differs from a free-flag vessel with Non-Entrant officers or crew members on board. Please see Section 1.E. (Crew Make-up Vessels) for treatment of crew members and officers from these nations on board free-flag vessels.

H. *REMOTE PORTS UNDER U.S. JURISDICTION.*

The requirements of this programme apply to remote Alaskan ports as well as to Guam, American Samoa and the Commonwealth of the Northern Marianas Islands (CNMI – Saipan, Rota, Tinian).

I. *DEEPWATER PORTS.*

Port calls at U.S. deepwater ports require the same conditions of advance notification for entry as applicable in U.S. coastal ports (refer to Title 33, U.S.C., Section 1518 (c)).

2. Port Entry Application Procedures.

A. *PORT ENTRY APPLICATION REQUIREMENTS.*

1. *General:* All Port Entry Applications must be in writing. Telephone inquiries are welcome during normal business hours (0700 to 1530 Eastern Time). The Special Interest Vessel Desk, in the Port Security Branch at U.S. Coast Guard Headquarters, can be reached by calling (202) 267-0475/0480. For non-business hour emergencies, call U.S. Coast Guard Headquarters Command Center at (202) 267-2100. Port Entry Applications (except government-to-government) should be submitted by the vessel's Agent directly to Coast Guard Headquarters. *Telex messages are preferred.* Port Entry Applications will *not* be accepted by local or regional Coast Guard commands.

Apply to only one of the following USCG Headquarters addresses:

(a) Telex address: "Commandant (G-MPS), U.S. Coast Guard, Washington, D.C. 20593-0001. Telex No. 89-2427, Answer back COASTGUARDWSH."

(b) TWX address: "Commandant (G-MPS), U.S. Coast Guard, Washington, D.C. 20593-0001. TWX No. 710 822 1959, Answer back CGDOTWSH."

(c) Western Union address: "Commandant (G-MPS), U.S. Coast Guard, 2100 2nd Street, S.W., Washington, D.C. 20593-0001." (Prepaid).

(d) Port entry applications may also be sent by mail or delivered by hand. The mailing address is:

Commandant (G-MPS-2)
U.S. Coast Guard Headquarters
2100 Second Street, S.W.
Washington, D.C. 20593-0001.

Shipping agents are generally responsible for ensuring that requests, whether sent electronically, by mail, or delivered by hand, arrive at Coast Guard Headquarters in time and with enough information to meet all requirements. Coast Guard Headquarters will send a receipt confirmation telex within 24 hours of receiving a telex from a shipping agent. If you do not receive this confirmation telex within 48 hours, call the SIV Desk to inquire about your request.

2. *Required Information:* All port applications must provid
information in an orderly manner. See "Enclosure No.2, F
for an example of an Initial Itinerary Request. Agents shoul
check all information, including spelling of foreign translatio
requests with incomplete information will be denied. All P
Applications *must* include the following:

(a) Shipping agent's complete address, commercial t
number, point of contact, and Telex/TWX number with
back code or Western Union address.

(b) Appropriate message title identification: For exampl
request, 4-working day request, 7-working day
or 14-day request.

(c) Itinerary number: For example, Initial Itinerary, or Cha
3, ...

(d) Vessel type: This information must precede the vesse
Use applicable abbreviation as follows:

Merchant Vessel,	M/V
Passenger Vessel,	P/V
Fishing Vessel,	F/V
Fishing Support Vessel,	F/V
Sailing Vessel,	S/V
Research Vessel,	R/V

(e) Vessel's name, flag, call sign, and Lloyd's number.

(f) Itinerary Information:

  (1) U.S. ports of call in the order desired. See Secti
  for the definition of a port call.

  (2) Desired arrival and departure dates.

(g) Cargo information: Type of cargo loaded/unloaded; loa
of cargo being discharged; destination for cargo being

(h) Masters' name.

(i) Last foreign port of call.

(j) Next foreign port of call.

(*Note:* Information above is *required*; failure to provide
information will result in denials or cancellations.)

3. *Arrival and Departure Dates:*

(a) Only one day overlap is allowed for multiple port calls
York 6/17-6/19, Philadelphia 6/19-6/21, Baltimore 6/2

(b) Should any single port call exceed 14 days, the Port C
Application must include a *detailed* explanation of th
for time needed. For example "to make repairs to
machinery" *is not* sufficient detail. Include exact repa
made and time estimated for completion.

(c) All Approved Itineraries automatically terminate u
vessel's departure en route a foreign port of call, exc
the vessel departs en route Canadian ports, which ha
noted on the Initial or Change Itinerary Message.

(d) An Approved Port Call terminates upon departure of th
from the port area. For instance, if a vessel is approv
6/10, but departs the port area on 6/08, it cannot re-e
unless a new Initial Itinerary is filed.

(e) The vessel's official notification period begins upon r
the agent's telex request or notice at Coast Guard Head
communication center. By return telex, Commandant
will inform the agent of the exact *Greenwich Mean Tim*
his message was received. All entry and departure t
calculated and specified in GMT. The agent and ve
responsible for conversion to local time.

(f) Port approvals are in effect through 2359 (one minut
midnight) GMT on the final day stated on Port Call A
The vessel must be outside of the port area by this time
may not wait until this time to begin their outbound c
without being in violation of U.S. territorial waters.

4. *Approved Itinerary Entry Times: (Port Entry Window).* If the
itinerary is approved, Commandant (G-MPS) notifies the
message which specifies the official entry date and time or "
Port entry dates begin one minute after midnight Greenwi
Time (GMT). The vessel must depart one minute before
GMT on the final day stated on the port call approval. For
a ship with a port call period approved for 12/28-01/03 ma
in port from 0001 GMT on 28th December until 2359 GM
January. The vessel has 24 hours after the starting date/time
a specific port. The vessel in the previous example may e
from 0001 GMT 28th December until 0001 GMT 29th De
Should the vessel fail to arrive in port during this window, t
itinerary will be cancelled. Upon releasing the Agent's m
Commandant (G-MPS) sends an Entry Approval No
Message to the appropriate local Coast Guard commands, s
the approved entry "window" for the vessel.

5. *24-Hour Advance Notice of Arrival:* None of the procedures
in this document relieves the Master or agent of his legal req
to provide 24-hour Advance Notice of Arrival to each loc
Guard Captain of the Port (COTP) (33 CFR 160.207) and t
with other applicable laws and regulations.

6. *Denials:* Vessels will be denied U.S. entry when there is in
information or if the agent's application message does not
time limits required by these guidelines. All denials are se
vessel's agent by the end of the working day, following th
receipt of the Initial Itinerary Request telex. An agent may,
submit a new corrected Entry Application for the vessel.
cases, the official notification period commences upon rece
corrected Entry Application, not the original Entry Applicati
was denied.

7. *Early Arrival:* A vessel which holds an Approved Itinerary for
States port entry shall not enter the U.S. territorial sea ea
the approved window. A vessel is considered to have arrive
when it enters U.S. territorial waters, or, for ports not adj
U.S. territorial waters, the port area descriptions listed in "E
No.1". The vessel is required to be within territorial waters
area during the first 24 hours of an approved port call.

B. *ITINERARY CHANGE REQUESTS.*

1. *General:* Agents seek Itinerary Change Requests generally for three reasons: To add ports, to change the previously approved Coast Guard approved port call sequence and/or dates, and to cancel planned port calls after receiving Commandant (G-MPS) approval to enter. In each case, the agent's message request must list the vessel's full remaining itinerary, in addition to the desired change. Failure to list the vessel's entire desired U.S. port calls will lead to automatic cancellation of the vessel's itinerary other than the requested change. For example, if the Initial Itinerary requested New York, Baltimore and Wilmington, and the agent sent a change listing only Baltimore, the vessel would be considered only for entry into Baltimore. Two days is the minimum time necessary to process itinerary change requests. Use the format in "Enclosure No. 2, Figure B" for Itinerary Change Requests. Actions applicable to three types of itinerary change requests follow.

2. *To add Port Calls:* Request for additional port calls are reviewed using the same criteria as for initial port calls. The following apply:
   (a) When an initial government-to-government request is required, all requests for additional ports must be made at the Embassy level.
   (b) Agent messages should be titled *change* 1, 2, 3, etc.
   (c) Additional ports must be requested far enough in advance to comply with the required entry procedure in effect (i.e. 4-working day request, 7-working day request, 14-day request, 4-day request, etc.).

3. *To Change Port Call Sequence/Dates:* Change requests to a vessel's approved port call sequence/dates are accepted by Commandant (G-MPS), and normally approved, provided the following criteria are met:
   (a) The initial port request was not government-to-government. (All others which are government-to-government must continue to be handled at the Embassy level).
   (b) Prior Coast Guard approval was given initially for the vessel to enter.
   (c) The Itinerary Change Request was submitted far enough in advance. Two days is the minimum processing time required by the Coast Guard to process itinerary change request for changes in port sequence or dates. Whenever possible, the Coast Guard will try to expedite the itinerary changes, however, requests made within the minimum processing time may be delayed. Agents should submit change requests *as early as possible*. (Note: The vessel's entire U.S. itinerary must be contained in the message requesting port call sequence or date changes. When a port is not mentioned, the Coast Guard concludes that the port is no longer desired and will delete it from the approved itinerary).
   (d) The change was submitted prior to the close of the entry "window" (See Section 2.A.4.).
   (e) The new date requested for entry is not prior to the previously approved date.

4. *Cancelled Port Calls:* Occasionally, cargo loading plans change and certain previously requested U.S. port calls may not be desired. Agents should notify the Coast Guard of cancelled port calls as far in advance as possible. See "Enclosure No.2, Figure G." for an example of a port call cancellation. Failure to arrive at a port within the approved arrival "window" will lead to cancellation of a vessel's remaining itinerary, and will subsequently delay entry to a previously approved port.

5. *Waivers:* The Coast Guard recognizes that unusual circumstances arise, which require agents to request waivers of the advance itinerary request period. *Approval of waiver requests will be the exception rather than the rule, and all waiver requests should be well documented.* Agents must fully elaborate on their justification for the Coast Guard to consider a waiver of these entry requirements. Agents should allow at least 48 hours for waiver requests to be processed. Waivers are not ordinarily approved for purely economic reasons. See "Enclosure No.2, Figure H." for an example of a waiver request.

6. *Late Arrival Notices:*
   (a) Coast Guard Port Entry Approval Messages provide the official Greenwich Mean Time (GMT) entry that the vessel is cleared to enter a particular port. Actual vessel entry is expected to occur during the initial 24-hour period commencing from the official entry time (commencing at 0001 GMT; see paragraph 2.A.4.). An additional 24-hour period may be requested (but is not guaranteed), by providing Coast Guard Headquarters with a Late Arrival Notice Message. In most cases, these will be accepted by the Coast Guard in lieu of Itinerary Change Requests. Late Arrival Notices provide Agents with a simplified means to extend by 24 hours the approved entry date (see "Enclosure No. 2, Figure C" for an example of a Late Arrival Notice.).
   (b) In most cases, automatic late entry privileges will be extended to the vessel. The Coast Guard will not send return message traffic to the agent unless late entry is denied. The following apply:
      (1) Late Arrival Notices may be submitted for any vessel which has prior Coast Guard approval to enter the U.S. except those processed as government-to-government. Late Arrival Notices for government-to-government requests must also be sent government-to-government.
      (2) Only *one* Late Arrival Notice may be submitted per vessel per port call.
      (3) The Late Arrival Notice does not change the vessel's approved official entry or departure time. It does, however, delay by 24 hours cancellation of a vessel's itinerary which lacks an approved Itinerary Change Request. If the vessel will be delayed by more than 24 hours, Itinerary Change Requests or government-to-government requests are the only means of changing the vessel's official entry or departure time.
      (4) The Late Arrival Notice does not replace or eliminate the requirement of 33 CFR 160.207 for 24-hour advance notice of arrival to the local COTP.
      (5) Late Arrival Notices will be denied if an approved port call length is only one day.

3. Specific Entry Requirements for Warsaw Pact Nations and the People's Republic of China (PRC).

A. *UNAVAILABLE PORTS.*

No vessels registered to, owned or operated by or chartered by the Union of Soviet Socialist Republics (U.S.S.R.), Bulgaria, Czechoslovakia, Hungary, Poland or Romania may enter Unavailable U.S. Ports. Unavailable Ports are listed in Section 1.C. of these guidelines.

B. *CREW MAKE-UP VESSELS.*

Officers and crew members from the nations covered by these guidelines aboard free-flag vessels (See Section 1.E.) may be subject to removal or restriction on board prior to the vessel's entry into port. Agents should provide advance crew information to the local COTP and the local INS office to avoid any possible delays due to crew nationality.

C. *GENERAL.*

Sections 3.C.1. through 3.C.8. contain specific entry requirements by country for vessels registered to, owned or operated by, or under bareboat charter to the Union of Soviet Socialist Republics, Bulgaria, Czechoslovakia, Hungary, Poland, Romania and the People's Republic of China. All vessels which are not public vessels are subject to a U.S. Coast Guard boarding and inspection at any time. Questions concerning these and other port entry matters should be directed to the Special Interest Vessel Entry Desk at Coast Guard Headquarters at (202) 267-0476/0480.

1. *Bulgaria (BU):*
   (a) *Merchant and Passenger Vessels:* Requirements: 7-working day request for all Available U.S. Ports. Vessel's agent must submit port call applications to Commandant (G-MPS).
   (b) *Fishing Vessels:* Fishing vessel entry requests must be submitted on a government-to-government basis via the Department of State at least 14 days in advance of the desired entry date. There is currently no Governing International Fishing Agreement (GIFA) with Bulgaria in effect.
   (c) *Research Vessels:* All research vessels must submit requests for entry on a government-to-government basis via the Department of State at least 14 days in advance of the desired entry date.
   (d) *Public Vessels:* All public vessel entry applications are handled on a government-to-government basis via the Department of State. These requests must be made at least 14 days prior to desired date of entry.
   (e) *Private Yachts:* Private yachts, not carrying passengers for hire, must submit requests for port calls on a government-to-government basis via the Department of State with a 14-day notice.
   Amendment (1990): Private yachts may enter all Available U.S. Ports. No notification required for vessels of less than 1,600 g.r.t.

2. *Czechoslovakia (CZ):*
   (a) *Merchant and Passenger Vessels:* Requirements: 7-working day request for all Available U.S. Ports. Vessel's agent must submit port call applications to Commandant (G-MPS).
   (b) *Fishing Vessels:* Entry requests for all Available U.S. Ports must be submitted on a government-to-government basis via the Department of State at least 14 days in advance of the desired entry date. There is no Governing International Fishing Agreement (GIFA) with Czechoslovakia in effect.
   (c) *Research Vessels:* All research vessels must submit requests for entry on a government-to-government basis via the Department of State at least 14 days in advance of the desired entry date.
   (d) *Public Vessels:* All public vessel entry applications are handled on a government-to-government basis via the Department of State. These requests must be made at least 14 days prior to desired date of entry.
   (e) *Private Yachts:* Private yachts, not carrying passengers for hire, must submit requests for port calls on a government-to-government basis via the Department of State with a 14 day advance notice.
   Amendment (1990): Private yachts may enter all Available U.S. Ports. No notification required for vessels of less than 1,600 g.r.t.

3. *Deleted.*

4. *Hungary (HU):*
   (a) *Merchant and Passenger Vessels:* Requirements: 4-working day request for all Available U.S. Ports. Vessel's agent must submit port call applications to Commandant (G-MPS).
   (b) *Fishing Vessels:* Entry requests for all Available U.S. Ports must be submitted on a government-to-government basis via the Department of State at least 14 days in advance of the desired entry date. There is no Governing International Fishing Agreement (GIFA) in effect.

(c) *Research Vessels:* All research vessels must submit requests for entry on a government-to-government basis at least 14 days in advance of the desired entry date.

(d) *Public Vessels:* All public vessel entry applications are handled on a government-to-government basis via the Department of State. All requests must be filed at least 14 days prior to desired entry date.

(e) *Private Yachts:* Private yachts, not carrying passengers for hire, must submit requests for port calls on a government-to-government basis via the Department of State with a 14-day advance notice.

Amendment (1990): Private yachts may enter all Available U.S. Ports. No notification required for vessels of less than 1,600 g.r.t.

5. *Poland (PL):*

(a) *Merchant and Passenger Vessels:* Requirements: 4-working day request for all Available U.S. Ports. Vessel's agent must submit port call applications to Commandant (G-MPS).

Amendment (1990): Section 5.(a) has been amended – check with U.S.C.G. Washington.

(b) *Fishing Vessels and Fisheries Research Vessels:* Under the provisions of the U.S./Poland Governing International Fishing Agreement (GIFA), fishing vessels (including fishing support vessels and fisheries research vessels) authorised by the Fisheries Conservation and Management Act of 1976 (PL 94-265) are permitted to enter Selected Ports upon providing notice to Commandant (G-MPS) at least 4 days in advance of the desired entry.

Those port are:

Astoria, Oregon
Baltimore, Maryland
Boston, Massachusetts
Coos Bay, Oregon
Camden, New Jersey
Dutch Harbour, Alaska
New York, New York
Philadelphia, Pennsylvania
San Francisco, California
Seward, Alaska

Fishing vessel Entry Requests for all other Available U.S. Ports must be submitted on a government-to-government basis via the Department of State at least 14 days in advance of the desired entry date. The U.S./Poland GIFA currently in effect, expires 1st July 1991.

(c) *Research Vessels:* All research vessels (except fisheries research vessels as noted above) must submit requests for entry on a government-to-government basis via the Department of State at least 14 days in advance of the desired entry date.

(d) *Public Vessels:* All public vessel entry applications are handled on a government-to-government basis via the Department of State and must be submitted at least 14 days prior to desired date of entry.

(e) *Private Yachts:* Private yachts, not carrying passengers for hire, must submit requests for port calls on a government-to-government basis via the Department of State with a 14-day advance notice.

Amendment (1990): Private yachts may enter all Available U.S. Ports. No notification required for vessels of less than 1,600 g.r.t.

6. *Romania (RO):*

(a) *Merchant and Passenger Vessels:* Requirements: 4-working day request for all Available U.S. Ports. Vessel's agent must submit port call applications to Commandant (G-MPS).

(b) *Fishing Vessels:* Entry requests for all Available U.S. Ports must be submitted on a government-to-government basis via the Department of State at least 14 days in advance of the desired entry date. There is no Governing International Fishing Agreement (GIFA) with Romania currently in effect.

(c) *Research Vessels:* All research vessels must submit requests for entry on a government-to-government basis at least 14 days in advance of the desired entry date.

(d) *Public Vessels:* All public vessel entry applications are handled on a government-to-government basis via the Department of State. These requests must be filed at least 14 days prior to desired date of entry.

(e) *Private Yachts:* Private yachts, not carrying passengers for hire, must submit requests for port calls on a government-to-government basis via the Department of State with a 14-day advance notice.

Amendment (1990): Private yachts may enter all Available U.S. Ports. No notification required for vessels of less than 1,600 g.r.t.

7. *Union of Soviet Socialist Republics (UR):* Also see "Telex" after "Enclosure No. 2"

(a) *Merchant and Passenger Vessels:* Requirements: 14-day request for all Available U.S. Ports. Vessel's Agent must submit port call applications to Commandant (G-MPS).

(b) *Fishing Vessels:* Under the provisions of the five year U.S./U.S.S.R. Governing International Fishing Agreement (GIFA), fishing vessels (including fisheries support vessels) authorised by the Fisheries Conservation and Management Act of 1976 (PL 94-265) are permitted to enter selected ports upon providing notice to Commandant (G-MPS) at least 4 days in advance of the desired entry.

Those ports are:

Astoria, Oregon
Boston, Massachusetts
Dutch Harbor, Alaska
Portland, Oregon

Entry Requests for all other Available U.S. Ports must be submitted on a government-to-government basis via the Department of State at least 14 days in advance of the desired entry date. The U.S./U.S.S.R. GIFA currently in effect expires 31st December 1992.

(c) *Research Vessels:* All research vessels (including fisheries research vessels) must submit request for entry on a government-to-government basis via the Department of State at least 14 days in advance of the desired entry date.

(d) *Public Vessels:* All public vessel entry applications are handl on a government-to-government basis via the Department State. All requests must be made at least 14 days prior desired date of entry.

(e) *Private Yachts:* Private yachts, not carrying passengers for hi must submit requests for port calls on a government-t government basis via the Department of State with a 14-d advance notice.

Amendment (1990): Private yachts may enter all Available U. Ports. No notification required for vessels of less than 1,600 g.

8. *People's Republic of China (CH):*

(a) The available/unavailable requirements apply to *mercha vessels, passenger vessels, fishing vessels, fisheries resear vessels, fisheries support vessels* (all with GIFA permits), a *research vessels* engaged in *hydrographic, oceanograph meteorological* and *terrestrial magnetic field research.*

(1) *Available U.S. ports:* Requirements: 24-hour Advan Notice of Arrival to be provided to the local Coast Gua COTP.

(2) *Unavailable U.S. ports:* (Listed in Section 1.C.)

Requirements: 4-day request prior to desired date of entry. T vessel's agent must submit a port call request to Commanda (G-MPS).

(b) *Fishing Vessels:* Fishing vessels, fisheries support vessels, a fisheries research vessels without GIFA permits must follow t procedure for "All Other Vessels" below.

(c) *All Other Vessels:* Entry requests for all other vessels must submitted on a government-to-government basis via t Department of State at least 14 days in advance of the desir entry date. The U.S./PRC GIFA currently in effect expir 1st July 1990.

Enclosure No. 1. Also see "Telex" after "Enclosure No. 2".

U.S. Port	*Geographical Description*
Alameda, California	See San Francisco, California.
Albany, New York	Hudson River, bounded by Rensselae County to the East and Albany County to the West.
Anchorage, Alaska	The waters of Cook Inlet, Northward from line drawn between Cape Dougla and Cape Elizabeth.
Apra Harbour, Guam	The waters of Apra Outer Harbour an Apra Inner Harbour.
Astoria, Oregon	Coincident with Clatsop County, Oregon.
Baltimore, Maryland	North and West of a line from North Point to Bodkin Point, but including Annapolis anchorage area between th Chesapeake Bay Bridge and Kent Point.
Baton Rouge, Louisiana	Mississippi River, Mile 170 to Mile 255.2.
Bay City, Michigan	See Detroit, Michigan.
Beaumont, Texas	The Neches River, from the Intracoast Waterway (ICW) to Interstate 10 Bridg
Bellingham, Washington	Bellingham Bay.
Benicia, California	See San Francisco, California.
Berkeley, California	See San Francisco, California.
Boca Grande, Florida	Boca Grande Channel, from sea buoy to Port Boca Grande on Gasparilla Island.
Boston, Massachusetts	Boston Harbour proper, including Myst River and Chelsea River to limit of navigation.
Brownsville, Texas	The Brownsville Ship Channel, from th sea buoy to the Brownsville Turning Basin.
Buffalo, New York	Outer Harbour, including Buffalo River to limits of navigation. Black Rock Canal, from the entrance channel downstream to its termination abeam o Placid Harbour. The Niagara River, downstream from Placid Harbour to limits of navigation.
Burnside, Louisiana	Mississippi River, Mile 155 to Mile 170.
Camden, New Jersey	See Philadelphia, Pennsylvania.
Charleston, South Carolina	See Section 1.C.
Charlotte Amalie, St. Thomas, U.S.V.I.	St. Thomas Harbour, including Anchorage Area "D", Crown Bay, East and West Gregarie Channels.
Christiansted Harbour, St. Croix, U.S.V.I.	Christiansted Harbour proper.
Chicago, Illinois	Between Burns Harbour (including Burns Waterway Harbour) and Northern limits of Chicago Harbour, including Lake Calumet and other waterways, inland to intersection of the Chicago Sanitary and Ship Canal with Calumet Sag Channel.
Cleveland, Ohio	Cleveland Harbour, including Cuyahoga River to limits of navigation.
Coos Bay, Oregon (including North Bend)	All of Coos Bay to North of Coos River
Corpus Christi, Texas	The Corpus Christi Channel, from the sea buoy to the Viola Turning Basin, and the La Quinta Channel from its junction to the Corpus Christi Channel

Detroit, Michigan (including Harrisville, MI; Bay City, MI; Saginaw, MI; Port Huron, MI; River Rogue, MI; and Trenton, MI.)	All navigable waters of the United States within Lake Huron from Sturgeon Point Light North to Detroit River Light South.
Duluth, Minnesota/Superior, Wisconsin	Duluth/Superior Harbour only.
Dutch Harbour, Alaska	The bays and harbours of Dutch Harbour, Illiliuk Bay, Illiliuk Harbour, Captain's Bay, Nateekin Bay, Broad Bay, Wide Bay, and Unalaska Bay to a distance 3 miles seaward of the Northern end of Unalaska Island.
Erie, Pennsylvania	Presque Isle Bay.
Eureka, California	Humboldt Bay.
Everett, Washington	N.E. end of Possession Sound.
Fall River, Massachusetts	Mount Hope Bay and Taunton River coincident with corporate limits of the City of Fall River.
Fernandina, Florida	All waters of the St. Mary's Entrance Channel West of the COLREGS demarcation Line as described in Title 33 CFR Part 80.720 (C) and all waters of the Amelia River South to Intracoastal Waterway Statute Mile 718.
Frederiksted, St. Croix, U.S.V.I.	Frederiksted Harbour proper.
Galveston/Texas City, Texas	The Galveston and Texas City Channels from their intersection with the Houston Ship Channel to their respective Turning Basins.
Georgetown, South Carolina	Entrance channel between Sand and North Island and North Island at South Island Bend through Wingah Bay, including all Georgetown and Sampit River, North to where Waccamaw River and Pee Dee River merge at U.S. Route 17 into Winyah Bay.
Guanica, Puerto Rico	Bahia de Guanica proper
Guayanilla, Puerto Rico	Bahia de Guayanilla and Bahia de Tallaboa.
Gulfport, Mississippi	Ship Island Pass and Gulfport Ship Channel from the sea buoy to the harbour basin.
Green Bay, Wisconsin	Port area of Green Bay, including the Fox River upstream to the limit of commercial navigation.
Harrisville, Michigan	See Detroit, Michigan.
Hampton Roads, Virginia (including Norfolk, Newport News, Jamestown, Yorktown, Portsmouth)	See Section 1.C.
Honolulu, Hawaii	See Section 1.C.
Hilo, Hawaii	Eastern end of Kohio Bay on N.E. coast of the Island of Hawaii.
Houston, Texas	The Houston Ship Channel, from Five Mile Cut to the Houston Turning Basin and the Bayport Turning Basin.
Jacksonville, Florida	All waters of the St. John's River upriver of the COLREGS Demarcation Line as described in Title 33 CFR part 80.723 (C) terminating at the Highway 295 bridge.
Juneau, Alaska	Auke Bay and Gastineau Channel, N.W. of a line between Pt. Salisbury to Marmion Island and S.E. of a line between Pt. Louisa to outer point on Douglas Island.
Kenosha, Wisconsin	Kenosha Harbour proper.
Ketchikan, Alaska	All of Tongas Narrows, N.W. of a line between Mountain Point and Gravina Point, and Behm Canal North of a line between Vallenar Point and Caamano Point and South of a line between Point Francis and Escape Point, including Vallenar Bay.
Kings Bay, Georgia	See Section 1.C.
Laguna de Las Mareas, Puerto Rico	Laguna de Las Mareas proper.
Lake Charles, Louisiana	The Calcasieu River, from the Industrial Canal and intersection with the Intracoastal Waterway North to Mile 36.0, including Prien Lake, Lake Charles and the turning basins.
Limetree Bay, St. Croix, U.S.V.I.	Limetree Bay, Limetree Bay Channel, and Krause Lagoon (also known as Alucroix or Martin Marietta Channel).
Long Beach, California (including Eastern part of Terminal Island).	That portion of San Pedro Bay and Cerritos Channel within the City of Long Beach, California.
Longview, Washington	Columbia River, between Mile 62 and Mile 70.
Los Angeles, California (including San Pedro, Wilmington, and Western Terminal Island)	That portion of San Pedro Bay and Cerrritos Channel within the City of Los Angeles, California.
Martinez, California	See San Francisco, California.
Mayaguez, Puerto Rico	Bahia de Mayaguez, Mayaguez Approach Channel and Mayaguez Terminal Channel.
Miami, Florida	Upper Biscayne Bay, South of MacArthur Causeway and North of Rickenbacker Causeway, including Government Cut. The Miami River East of the Brickell Ave. Bridge.
Milwaukee, Wisconsin	Milwaukee Harbour and Rivers to limits of navigation within Milwaukee breakwater.
Mobile, Alabama	The Mobile Ship Channel, from the sea buoy to the Cochran Bridge, and the Hollinger's Island Channel from its junction with the Mobile Ship Channel.
Morehead City, North Carolina	Morehead City Harbour, including Radio Island from the sea buoy at Beaufort Inlet, North Carolina.
Muskegon, MI	Muskegon Lake to limits of navigation within Muskegon breakwater.
New London and Groton, Connecticut	See Section 1.C.
New Orleans, Louisiana	Sea Buoy to Mississippi River Mile 155.
New York, New York (including both the New York and New Jersey parts of the New York Port Authority, Port Elizabeth, and Newark)	From highway route No. 740 South, West from Sandy Hook to Coney Island, North to George Washington Bridge, East to Throg's Neck.
North Bend, Oregon	See Coos Bay, Oregon.
Oakland, California	See San Francisco, California.
Ogdensburg, New York	Ogdensburg Harbour, including the Oswegatchie River to the limits of navigation.
Olympia, Washington	Coincident with Thurston County, Washington.
Orange, Texas	The ICW from Mile 276.5 to Mile 265; the Sabine River from the intersection with the ICW; North to the Navy Yard.
Oswego, New York	Oswego Harbour, including Oswego River to Lock 8.
Pago Pago, American Samoa	Pago Pago Harbour and access channel, located on the South side of Tutuila Island at 14° 16.5′ S., 170° 42′ W.
Palau Harbour, Palau	The waters of the "Western" and "Eastern" passages through the barrier reef, up to and including the waters of Malakal Harbour.
Pascagoula, MS	From the sea buoy of Horn Island Channel Pass to Mile 1 of the Pascagoula River, including the Pascagoula Channel; and from the Bayou Cassote Harbour proper to the junction buoy of Bayou Cassotte Channel and the Pascagoula Channel.
Panama City, Florida	See Section 1.C.
Pensacola, Florida	See Section 1.C.
Philadelphia, Pennsylvania	The waters of the Schuylkill River, Delaware River, and Delaware Bay from Trenton, New Jersey to the Line of Demarcation at the entrance to Delaware Bay, excluding the port area of Wilmington, Delaware.
Ponce, Puerto Rico	Bahia de Ponce proper.
Port Arthur, Texas	The ICW from Mile 276.5 to Mile 288.5 including the East Basin, West Basin, and Turning Basin of Taylor Bayou.
Port Everglades, Florida	Port Everglades coincident with Broward County, Florida.
Port Huron, Michigan	See Detroit, Michigan.
Portland, Maine	Hussey Sound and Fare River to combined fixed railroad and highway bridge (Route 1 Bridge).
Portland, Oregon	Three Oregon Counties: Multnomah, Clackamas, and Washington, and the Port of Vancouver, Washington.
Portsmouth, New Hampshire (including Kittery, Maine, and Dover, New Hampshire, on the Piscataqua River).	See Section 1.C.
Port Canaveral, Florida	See Section 1.C.
Port Hueneme, California	See Section 1.C.
Port St. Joe, Florida	See Section 1.C.
Redwood City, California	See San Francisco, California.
Richmond, California	See San Francisco, California.
Richmond, Virginia	James River from Benjamin Harrison Memorial Bridge, Hopewell, Virginia, to limits of navigation.
River Rogue, Michigan	See Detroit, Michigan.
Rota Harbour, Rota, CNMI	The waters of Sasanhaya Harbour, all waters North of a line drawn between Puntan Pona and Puntan Taipingot. The waters of Sasanlago Harbour, all waters West of the Island of Rota within an arc of 1.5 miles drawn from the centre of the town of Rota.
San Diego, California	See Section 1.C.

Sacramento, California	All waters of the Sacramento River Deep Water Ship Channel from Sacramento River Deep Water Ship Channel Light 1 to the William G. Stone Lock.
San Francisco, California (including Alameda, Oakland, Berkeley, Richmond, Martinez, Benicia, and Redwood City)	All waters of Suisan Bay, the Carquinez Straits, and San Pablo Bay and all waters of San Francisco Bay shoreward of a line drawn from Point Bonita Light through Mile Rocks Light to the shore.
San Juan, Puerto Rico	Bahia de San Juan proper.
San Pedro, California	See Los Angeles, California.
Savannah, Georgia	Savannah River from the Route 17 Bridge to the territorial sea limit.
Seattle, Washington	Coincident with King County, Washington.
Seward, Alaska	All headwaters of Resurrection Bay to a line from Cape Resurrection to Callisto Head.
Sitka, Alaska	Sitka Sound and Silver Bay, North of a line between Cape Edgecomb on Kruzof Island to Pavorotni Point on Baronof Island and South of a line between Point Brown on Kruzof Island to Lisianski Point on Baronof Island.
Stockton, California	All waters of the New York Slough, the San Joaquin River, and the Stockton Deep Water Channel from Suisan Bay Light 30 to the Interstate 5 Bridge.
Skagway, Alaska	Taiya Point (in Tiaya Inlet on Lynn Canal) to the town of Skagway, Alaska.
Superior, Wisconsin	See Duluth, Minnesota.
Tacoma, Washington	Coincident with Pierce County, Washington.
Tampa, Florida	That portion of Tampa Bay contained within Hillsborough County.
Tanapag Harbour, Saipan, CNMI	The waters of Garapan Lagoon and Puetten Tanapag (Tanapag Harbour) North of 15° 30.0′ N. and South of 15° 15.5′ N.
Terminal Island, California	See Los Angeles, California.
Texas City, Texas	See Galveston, Texas.
Tinian Harbour, Tinian, CNMI	The waters of Tinian Harbour and Sunharon Roads enclosed within a line drawn between Carolinas Point and Gurguan Point.
Toledo, Ohio	Maumee River to limits of navigation.
Trenton, Michigan	See Detroit, Michigan.
Vancouver, Washington	See Portland, Oregon.
Wilmington, California	See Los Angeles, California.
Wilmington, Delaware	The waters of the Delaware River and Bay, including the Christina River and the Salem River, from the Delaware/Pennsylvania state border to the Line of Demarcation at the entrance to Delaware Bay.
Wilmington, North Carolina	The Cape Fear River, from the Sea Buoy to Point Peter, and then the N.E. River to the Turning Basin at Mile 2.
Yabucoa, Puerto Rico	Puerto de Yabucoa proper.

Enclosure No. 2. Also see "Telex" at end of this Enclosure.

ex:
m: Commandant, U.S.C.G., Washington, D.C.
Shipping Guides Ltd.
d: 9th November 1990.
ect: U.S./Soviet Maritime Agreement.
Shipping Agent Guidelines.

On 1st October 1990, the U.S./U.S.S.R. signed a Maritime Agreement that will be placed into effect. The terms of the Agreement will significantly affect the treatment of Soviet vessels in U.S. Ports.

This Agreement applies only to commercial cargo, passenger and maritime training vessels. It does not, repeat not, apply to warships vessels engaged in hydrographic, oceanographic, meteorological r terrestrial magnetic field research), fishing vessels, fishery research vessels or fishery support vessels.

3. Fishing vessels will continue to be regulated under separately negotiated Governing International Fishing Agreement (GIFA). Port entry for fishing vessels will require approval from Commandant (G-MPS-2). In addition, Soviet commercial vessels are no longer prohibited from engaging in "Cross Trading" between the U.S. and third countries.
4. Entry of vessels into selected ports specified in Paragraph 6 below will be permitted, subject to a notice provided to the Cognisant Coast Guard Captain of the Port (COTP), a minimum of 2 working days in advance of the planned entry date. (Working days do not include weekends or federal holidays.) This notice provision applies only to those vessels required to provide 24 hour Advance Notice of Arrival under 33 CFR 160.207. (i.e. it does not apply to Soviet vessels of less than 1,600 g.r.t.). Vessels will not need approved itineraries from Commandant (G-MPS-2), nor will they be held to "24 hour entry windows", or to any fixed port call length or departure date.
5. Entry into all other U.S. Ports may be permitted upon request submitted to Commandant (G-MPS-2), a minimum of 7 calendar days in advance of the desired entry date. Vessels desiring to enter these ports will be held to Approved Port Call Itineraries and entry windows. This represents no change (apart from the required lead time) from the current practice. Soviet vessels will continue to be denied entry into the 12 designated Unavailable Ports.
6. Designated 2 Working Day Notice Ports:
    - Albany, NY.
    - Baltimore, MD.
    - Baton Rouge, LA.
    - Bay City, MI.
    - Beaumont, TX.
    - Bellingham, WA.
    - Boca Grande, FL.
    - Boston, MA.
    - Brownsville, TX.
    - Burnside, LA.
    - Chicago, IL.
    - Cleveland, OH.
    - Duluth, MN (including Superior, WS).
    - Dutch Harbor, AK.
    - Erie, PA.
    - Everett, WA.

7. Free-flag vessels with Soviet nationals serving as crew members, regardless of tonnage, are still subject to Chapter One Paragraph E.1, (Crew Make-Up Vessels), of Ref. A (Shipping Agent Guidelines). Chapter One Paragraph E.3, (Effective Control) specifically applies.
8. Questions concerning this change should be directed to the SIV Desk (202) 267-0476.
9. The Shipping Agent Guidelines are in the rewrite phase, and will be sent to you when available.

PILOTAGE: North West Coast of U.S.A.
Columbia River Bar Pilots are "Sea Pilots" for all ports in Columbia and Willamette Rivers. Namely, Astoria and Portland (Oregon), Longview, Kalama and Vancouver (Washington) – when entering from sea and if providing above Astoria, Columbia River Pilots relieve Bar Pilots for balance of transit.

COLUMBIA RIVER BAR PILOTS
Foot of 14th Street,
P.O.Box 87, Astoria, Oregon 97103
TWX 9104668014
FAX (503) 325-5630
Marisat 00259104668014+
Telephones (503) 325-2641 or 325-2642

RADIO FACILITIES

Pilot Boat Peacock	WS 7217
Pilot Boat Columbia	WYE 7344
Bar Pilots Office, Astoria (Ch. 16) (156.80 MHz)	KOK 360
Astoria Marinephone "KFX"	
Ship's Call on	2206 kHz
KFX Answers on	2598 kHz

Or call on and receive KFX on Channel 26.

In order there be no delays, vessels due to arrive at the Columbia River and desiring a Bar Pilot, must cable or telephone the Columbia River Bar Pilots. (Pilot normally not on station unless cable or telephone message received.) USE RADIO STATION KLB, EVERETT, WASHINGTON at least 12 hours before arrival at the lightship. Code address, "BAR PILOT ASTO, STATING THE TIME OF ARRIVAL". If transmitted by any other radio station, delay may occur. If vessel is equipped with VHF, use Channel 16 (156.80 MHz) to call the pilot boat or Bar Pilots' Office, Astoria (KOK 360) and shift to Channel 13 (156.65 MHz).

PILOT LADDER INSTRUCTIONS

1. Please contact the pilot boat via voice radio (Channel 16 or Channel 13 approximately 30 minutes prior to arrival for desired lee and boarding instructions.

2. The Columbia River Bar Pilots have 2 pilot vessels; the "Peacock" and the "Columbia". When the "Peacock" is on station, Masters will be instructed to rig their pilot ladder 4 ft. above the water's edge. When the "Columbia" is on station, the Master will be instructed to rig the ladder 10 ft. – 12 ft. above the water's edge. The above-mentioned distances above the water are of the utmost importance, particularly in the case of the "Columbia", as the pilot boat can and has pulled the ladder down when it becomes pinched between the pilot boat and the side of the vessel. Pilot ladders and boat ropes shall not be permitted to drag in the water. No tag lines, pull ropes or trailing lines shall be attached to the bottom of the ladder. All pilot ladders must comply with SOLAS Regulations.

3. Pilot ladders shall be rigged amidships, over "draft marks" clear of all obstructions, such as accommodation ladders, and clear of overside discharges from the engine room and deck scuppers.

4. The pilot ladder should be kept clean and used for embarking and disembarking Pilots only. The ladder shall be made in one continuous length, not 2 sections shackled or lashed together. The ladder shall be equipped with spreaders approximately 10 ft. apart in accordance with SOLAS regulations. The ladder must be in good condition, the treads horizontal and the upper surface of rough non-skid quality.

5. The ladder must be adequately lit at night by means of a light shining well over the ship's side in the vicinity of the ladder. The area of the deck where the Pilot boards and leaves should be free of debris and well lighted. Where portable stanchions and bulwark steps are used, they shall be rigidly attached to the ship's structure. A life ring with water light and lifeline attached should be ready at hand. Rigging of the ladder and embarking and disembarking of the Pilot must be under the supervision of a licensed officer.

6. Boat ropes are not to be used, all pilot boats are power propelled.

7. Manropes shall be of manila 3 in. circumference. The manropes shall be free of any knots including the lower end. The manropes should be rigged 1 ft. – 2 ft. longer than the pilot ladder. Manropes are not to be rigged for boarding unless otherwise advised.

8. If vessel is to take a deck load of logs, please discuss with your Agent the building of a catwalk to provide safe passage to and from the pilot ladder.

Long Island Sound and Connecticut Ports: The Connecticut State Pilots Association is offering pilot service for all foreign and registered vessels en route to and from Connecticut Ports via the Long Island Sound. U.S. enrolled vessels will continue to be services by Interport Pilots using the same boats and pilots. Pilots are licensed by the Federal Government and the State of Connecticut.

The Pilot Station established off Montauk Point provides a more direct route to Long Island Sound ports. Vessels using Connecticut State pilots through the mile wide, 58 ft. deep, Montauk Passage, will save between 1 hour and 3 hours steaming time as opposed to being diverted to pilot stations at Point Judith or Brenton Reef, Rhode Island.

The U.S. Navy uses the Montauk Passage for its nuclear submarines bound to and from Connecticut ports and, as Interport Pilots, we have used this route for vessels in the coastwise trade for over 30 years.

Notice of Arrival is required. A 24 hour to 36 hour advance notice of ETA is suggested. A 12 hour update and a 6 hour update is necessary in order to co-ordinate dispatching of pilots.

The Pilot boarding point is 3 miles East of Montauk Sea Buoy.

Connecticut State Pilots Association, State Pier, New London, Ct. 06320. Tel: 1 (800) 346-4877 or in New Jersey 1 (201) 291-1310. Cables: Port Pilots, Atlantic Highlands, N.J. Pilot Boat: Call Sign – "Connecticut Pilot".

Constitution State Pilots Association also offer pilot service in Long Island Sound and all Connecticut ports.

Constitution State Pilots Association, formed in 1986, offer a pilotage service in Block Island Sound, Long Island Sound, the Harbours of Bridgeport, New Haven and New London, Connecticut. They also provide docking pilot services in the afore-mentioned harbours, and have 2 Pilot Stations, one located at Montauk Point in Block Island Sound (Lat. 41° 01.7′ N., Long. 71° 41.8′ W.), and the other station at Block Island (Lat. 41° 18′ N., Long. 71° 35′ W.). These stations are serviced by the Pilot Boat "Constitution", a 65 ft. blue and white vessel which monitors VHF Channels 16 and 9.

Constitution State Pilots Association, 500 Waterfront Street, New Haven, Connecticut 06512. Tel: 203-783-5991 (24 hours). Fax: (516) 582-6327. Telex: 940103 WU Pubtlx BSN.

AUTOMATIC RADAR PLOTTING AIDS: With effect as from July 1st, 1982, vessels carrying oil or hazardous materials in bulk must have automatic radar plotting aids.

A fine for failure to carry an ARPA could be multiplied by the number of days of the violation.

The United States Coast Guard has stressed, however, that its official policy is enforcement by denial of entry and restriction of operation and not primarily by the enforcement of fines.

While the Coast Guard recognises that the Public Law enables financial penalties to be incurred, it is believed that the terms of the Port and Tanker Safety Act under which the U.S. Coast Guard operates directs it to monitoring and identification of previous offenders and enforcement by prevention of entry into U.S. ports or subsequent restriction of trade and departure.

COAST GUARD REGULATIONS: The U.S. Coast Guard has announced its intention to develop the following regulations implementing sections of the 1978 U.S. Port and Tanker Safety Act requiring:

1. Existing crude oil carriers of 20,000 d.w.t. or above but less than 40,000 d.w.t. to have segregated ballast tanks (SBT) or a crude oil washing system (COW) by January 1st, 1986, or when they reach 15 years of age, which ever occurs later; and

2. Existing product carriers of 20,000 d.w.t. or above but less than 40,000 d.w.t. to have SBT or dedicated clean ballast tanks (CBT) by January 1st, 1986, or when they reach 15 years of age, whichever occurs later.

POLLUTION: Any vessel which does not have a valid I.O.P.P. Certificate on board will not be allowed to transit U.S. waters.

NOTICE: *B.A. Notice to Mariners No. 3013(T) of 1983:*
UNITED STATES OF AMERICA – Chart and Publication requirements.

A statement concerning the U.S. Navigation Safety Regulations relating to Navigation, charts and Publications has been issued in the U.S. Notices to Mariners Weekly 44/83. This is reproduced below. Admiralty Annual Notice to Mariners No. 22 will be amended as appropriate in the 1984 edition.

CHART AND PUBLICATION REQUIREMENTS

Sections 164.30 and 164.33 of Title 33 of the Code of Federal Regulations Part 164 (33 CFR 164), which detail requirements for the carriage of nautical charts and publications, are amended effective October 28, 1983. The regulations contained in these sections are applicable to each self-propelled vessel of 1,600 g.r.t. or more, operating on the navigable waters of the United States, except the St. Lawrence Seaway, and are reprinted as follows:

§164.30 Charts, publications, and equipment: General.

No person may operate or cause the operation of a vessel unless the vessel has the marine charts, publications, and equipment as required by §§164.33 through 164.41 of this part.

§164.33 Charts and publications.

(a) Each vessel must have the following:

(1) Marine charts of the area to be transited, published by the National Ocean Service, U.S. Army Corps of Engineers, or a river authority that:

(i) Are of a large enough scale and have enough detail to make safe navigation of the area possible; and
(ii) Are currently corrected.

(2) For the area to be transited, a currently corrected copy of, or applicable currently corrected extract from, each of the following publications:

(i) U.S. Coast Pilot.
(ii) Coast Guard Light List.

(3) For the area to be transited, the current edition of, or applicable current extract from:

(i) Tide tables published by the National Ocean Service.
(ii) Tidal current tables published by the National Ocean Service, or river current publication issued by the U.S. Army Corps of Engineers, or a river authority.

(b) As an alternative to the requirements for paragraph (a) of this section, a marine chart or publication, or applicable extract, published by a foreign government may be substituted for a U.S. chart and publication required by this section. The chart must be of large enough scale and have enough detail to make safe navigation of the area possible, and must be currently corrected. The publication, or applicable extract, must singly or in combination contain similar information to the U.S. Government publication to make safe navigation of the area possible. The publication, or applicable extract must be currently corrected, with the exceptions of the tide and tidal current tables, which must be the current editions.

(c) As used in this section, "currently corrected" means corrected with changes contained in all Notices to Mariners published by Defense Mapping Agency Hydrographic/Topographic Centre, or an equivalent foreign government publication, reasonably available to the vessel, and that is applicable to the vessel's transit.

SHIP'S OFFICER'S REPORT: The information given for the port of New Orleans (U.S.A.) applies to all the ports in the U.S.A. in the event of the vessel arriving from abroad or from a previous U.S. port. All the documents such as Crew List, Passenger List (Form I-418), Deck, Engine, Steward's and Bonded Stores Lists (Form 1303), Crew's Effects Declaration (Form 1304), are required in duplicate at each port for entry inward.

ALBANY, New York: 42.40 N. 73.45 W. (See Plan)

DOCUMENTS: If first port of call in U.S., 2 complete Customs Manifests describing all cargo on board and ports of discharge. Also 1 Cargo List for Albany cargo, 3 Crew Lists, 3 Stores Lists, 3 Curio Lists, Ship's Register, Load Line Certificate and Tonnage Tax Certificate.

PILOTAGE: Hudson River Pilot boards vessel off Yonkers, N.Y. Cable address: "Hudpilots, Yonkers, N.Y."

ANCHORAGES: Several anchorage areas in Hudson River en route to Albany if required due to weather. Vessels cannot anchor at Port of Albany.

RESTRICTIONS: Hudson River Channel to Albany has controlling depth of 32 ft. MLW. Vessels with draft in excess of 28 ft. will be required to transit river on favourable tide as directed by Pilot.

MAX. SIZE: Max. permissible length 750 ft., breadth 110 ft., draft 30 ft. Turning basin at Albany 1,100 ft. in width.

HEALTH: See "Health: All Ports" before first U.S.A. port. Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port.

TUGS: One 2,500 h.p. tug stationed at port at all times; additional tugs available upon advance request. Normally 1 tug is sufficient for turning and docking. Tug's lines are used.

BERTHING: 5,000 linear ft. of marginal wharf available at APDC terminal for general cargo, grain, lumber, etc., 32 ft. alongside wharf. Various privately operated deep-water petroleum terminals in port area.

Facilities: 13.5 million bushel grain elevator. 17 million gallon molasses storage – 2 terminals. Scrap Iron Terminal, 300,000 sq. ft. covered warehouse space.

Equipment: Available at the Port of Albany:

4 Gas powered 5,000 lb. lift trucks.
4 Diesel powered 9,000 lb. lift trucks, of which 3 are available with bale clamps.
1 Diesel powered 30,000 lb. lift truck.
1 Diesel powered 50 ton top loader.

BRIDGES: Minimum vertical clearance of bridges on Hudson River en route to Albany is 135 ft.

STEVEDORES: Rates and information can be obtained from Meehan Overseas Terminals, Ltd.

TANKERS: Bray/Getty Terminal:

Location: The Bray/Getty Terminal is located approximately 126 miles from the Battery (NYC), about 0.8 miles Northward of Island Creek. It is an offshore wharf 250 ft. long with a dock height above the waterline of 11 ft.

Berthing: Normal berthing is starboard side to with the use of only one 1,800 h.p. tug. An additional tug may be required if adverse weather conditions exist. The vessel approaches the berth from midstream on approximately a 30° angle to the pier. The tug is used on the port bow to control the direction of the vessel during the approach. Once alongside the pier, spring lines are run out and the vessel is held in position with her own engines until the tug is secured. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Not available at this terminal.

Bunkers: Fuel is not available at this terminal.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: The terminal is fenced and guarded.

Pollution: Although an oil boom is permanently in place inside the dock area, outside contractors must be contacted for clean-up in the event of the oil spill.

Firefighting: The terminal is equipped with one 150 lb. dry chemical extinguisher with additional firefighting support by shorebased fire trucks.

Cirillo Terminal:

Location: The Cirillo Terminal is located approximately 125 miles from the Battery (NYC), about 0.5 miles Northward from Island Creek. It is a bulkhead wharf 280 ft. long with a dock height above the waterline to 10 ft. It is owned by Albany Port District Commission and operated by Cirillo Brothers.

Berthing: Normal berthing is port side to with the use of one 1,800 h.p. tug. An additional tug, may be required if adverse weather conditions exist. The vessel approaches the berth on the ebb tide and slowly approaches the marginal berth in the usual manner. The current in this area sets fair with the dock face creating an ideal docking environment. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: The terminal can supply fresh water upon request.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: The terminal is fenced and guarded at all times.

Pollution: Although an oil boom is readily available for oil spill containment, all clean-up must be performed by outside contractors.

Metropolitan/Arco Terminal:

Location: The Metropolitan/Arco Terminal is located approximately 126 miles from the Battery (NYC). The dock is of an offshore wharf construction with dolphins.

Berthing: Normal berthing is starboard side to with the use of 2×1,800 h.p. tugs. All ships are usually docked at Slack High Water. The vessel approaches the dock from the centre of the channel and is carefully breasted alongside the pier, using her tug and the current to slide over against the breasting dolphins. Spring lines are run first, followed by breasts, then head and stern lines. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Piped fresh water is available.

Bunkers: Fuel is not available at the dock.

Slop/Deballast: The terminal is not equipped for slops or dirty ballast receipt.

Security: The terminal is fenced and guarded. The main gate is locked when no vessels are at the dock. When a vessel arrives the dock is continually manned by terminal employees.

Pollution: The terminal is equipped with a workboat and 1,000 ft. of boom for spill containment. Local contractors must be contacted for clean-up operations.

Firefighting: The dock is equipped with one 150 lb. dry chemical extinguisher. Additional back-up is supplied by local firefighting departments.

Niagara/Mohawk Terminal:

Location: The Niagara/Mohawk Terminal is located approximately 125 miles from the Battery (NYC).

Berthing: Normal docking is port side to with the assistance of one 1,200 h.p. tug. The vessel approaches the marginal berth at minimum velocity with the ship's engines used to maintain relative position of vessel while lines are passed. The tug assists in the breasting of the vessel towards the dock. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Piped fresh water is available at the dock.

Bunkers: Fuel is not available at this terminal.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: The terminal is fenced and guarded.

Pollution: The dock is equipped with 2,500 ft. of boom for oil spill containment.

Firefighting: Portable CO_2 extinguishers provide adequate firefighting capabilities.

Sears Terminal:

Location: The Sears Terminal is located approximately 124 miles from the Battery (NYC), about 1.2 miles Southward of Island Creek. It is an offshore wharf 191 ft. long with a dock height above the waterline of 10 ft.

Berthing: Normal berthing is port side to with the use of one 1,800 h.p. tug. An additional tug may be required if adverse weather conditions exist. The vessel approaches the dock on the first of the ebb tide, slowly stemming the tide during the approach. The tug is positioned on the starboard bow to control the vessel's movements. After a normal approach, the vessel is spotted and spring lines are led out. The vessel is then held in position with the tug and own engines while the breast, head and stern lines are led out. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Not available at this dock.

Bunkers: Fuel is not available.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: The terminal is fenced and guarded at all times.

Pollution: Although the terminal is equipped with a workboat and boom for oil spill containment, all clean-up equipment and personnel must be secured through local contractors.

Roseton, N.Y.: Central Hudson Gas & Electric Terminal:

Location: The Central Hudson Gas and Electric Terminal is located on the Hudson River approximately 74 miles from the seabuoy.

Berthing: Normal berthing is starboard side to with use of one 3,500 h.p. tug. An additional tug may be required during adverse weather conditions. The vessel proceeds to a point opposite to or a little above the dock, turns midstream with the aid of the tug and comes down parallel to the dock. She is then breasted in and held alongside by the tug while the spring and breast lines are led out. The tug then handles the head and stern lines (synthetic required). See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Not available at the dock.

Bunkers: Fuel is not available at this terminal.

Security: The terminal is fenced and guarded.

Pollution: Booms and absorbent materials are available on the dock in the event of an oil spill.

Firefighting: The dock is equipped with one 250 lb. purple K extinguisher, 2×2.5 in. fire hoses with fog nozzles on a 6 in. main.

Ravena, N.Y. (Port of Albany): Atlantic Cement Terminal:

Location: The Atlantic Cement Terminal is located on the Hudson River approximately 127 miles from the seabuoy and is under the jurisdiction of the Port of Albany.

Berthing: All vessels must dock and undock during daylight hours only. Normal berthing is port side to with the use of one 2,100 h.p. tug. An additional tug may be required during adverse weather conditions or when docking on a rising tide. The dock is of a marginal design, parallel to the channel axis. Normal approach is with a tug breasting the vessel onto the dock.

Gangway: The terminal does not provide a gangway.

Fresh Water: Not available at the dock.

Bunkers: Fuel is not available at this terminal.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: Although the terminal is not fenced or guarded, dock personnel are in attendance at all times.

Pollution: In the event of an oil spill, the containment and clean-up equipment available at the dock consists of:

1. 7,400 ft. of 12 in. collar boom.
2. Oil retention gate mounted on dock.
3. 23 ft. 150 h.p. tow boat.
4. 30 ft. deck barge for oil boom.
5. 500 ft. of 2.5 in. fire hose.
6. 100 bags of oil absorbent material.
7. 15 bags plastic "Oil Snares".
8. Air bubbling system-along dock face.

Firefighting: The dock is equipped with one 500 lb. dry chemical extinguisher, 350×2.5 in. hose and fog nozzles located adjacent to the dock manifold.

FRESH WATER: Supplied during regular working hours daily, except Saturdays, Sundays, and holidays, at $2.75 per 100 cu. ft. plus $22.00 service charge per daily delivery on straight time. Additional charge if supplied during other periods.

CONSULS: Italian Vice-Consulate located at Albany, other consulates available at New York City.

REPAIRS: Minor deck and engine repairs can be handled.
GANGWAY/DECK WATCHMEN: Available via ship chandler, not required but recommended.
AIRPORT: 7 miles distant from port: served by Allegheny, America, Altair and Executive Airlines.
TIME: Eastern Daylight Saving, (GMT minus 4 hours) from first Sunday in April till last Sunday in October.
HOLIDAYS: Standard U.S. holidays; cargo work can be arranged on all holidays at overtime rates, except July 4th, Labour Day and Christmas Day.
SHORE LEAVE: Crew members allowed ashore unless restricted by Customs or Immigration requirements.

SHIPMASTER'S REPORT: February 1980.
Pilotage: Compulsory. Pilot boards at Ambrose Light Tower and Hudson River Pilot boards at Yonkers.
Restrictions: Vessels able to enter and leave during darkness at any stage of the tide.
Max. Size: LOA 750 ft. (Approx). Max. Draft: 31 ft. to 32 ft. depending on height of river.
Tugs: One tug stationed at Albany (approx. 2,500 h.p.). Additional tugs come from New York.
VHF: Tug only listens out on VHF before vessel arrives.
Services: Following services available: Fresh water, fresh provisions, small repairs, machine shop, airport, Lloyd's surveyor (from New York), Salvage surveyor (from New York), lubricating oil, groceries and meats.
Berthing: Pier No. 2 Albany: Berth located 3 miles from Albany and 145 miles from the entrance. Vessel's size limited by draft and space available in swinging room in basin. Max. size approx. LOA 600 ft., draft 31 ft. Least depth of water in channel from sea to berth 33 ft. (approx). Vessels able to dock and undock at any stage of the tide, day or night.
Grain Loading Facilities: Available.
Ro/Ro Facilities: Available, port now being used to discharge cars from car carriers. No floating cranes available.

AUTHORITY: Albany Port District Commission, Administration Building, Port of Albany, Albany, N.Y. 12202. *Tel:* (518) 463-8763. *FAX:* (518) 463-8767. *Contact:* F. Keane, General Manager.

ALEXANDRIA, Virginia: 38.48 N. 77.03 W. (See Plan)

LOCATION: On the Potomac River 7 miles from Washington D.C.
DOCUMENTS/PILOTAGE: Refer to "Hampton Roads".
RESTRICTIONS: Anchoring necessary between 2200 hrs. – 0600 hrs. Berthing daylight only.
Channel: Width 200 ft. Depth 24 ft. Turning basin: length 6,700 ft. Width 300 ft.
MAX. SIZE: Governed by draft only – max. 22 ft. 6 in. all times.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: WMH Baltimore, Md.
TUGS: None required.
BERTHING: 2 open piers. Berthing 0600 hrs. to 2200 hrs.
BRIDGES: 1 bridge, closed Monday through Friday 1600–1830 hrs. and 0630–0900 hrs.
STEVEDORES: Informally arranged through Receivers or Shipper's Agents.
MEDICAL: Hospital available.
FRESH WATER: Available at berth – 10 t.p.h.
FUEL: Not available.
REPAIRS: Minor facilities.
GANGWAY/DECK WATCHMEN: Shore watchman provided.
OPENING/CLOSING HATCHES: Stevedores. Vessel – depending on understanding.
REPATRIATION: Facilities exist.
AIRPORT: 3 miles. Washington National – multiple flights.
TIME: GMT minus 5 hours.
POLICE/AMBULANCE/FIRE: Agents arrange. Watchmen on duty.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required by Immigration.
DELAYS: No unusual delays.
SERVICES: Searle Consortium, Ltd. in Alexandria (Tel: (703) 768-6026) and their sister company, Seaward Marine Services can provide the following: Diving and general underwater inspection services; underwater hull cleaning; Salvage survey and underwater repairs of a salvage nature; assistance in the refloating of stranded vessels and assistance in the arranging/engineering of towage.
AUTHORITY: Virginia Port Authority, 600, World Trade Center, Norfolk, Va. 23510. *Tel:* (804) 623-8000. *Telex:* TWX 710-881-1231. *Cables:* Vastports-Norfolk. *FAX:* (804)-683-8211. *Contact:* George H. Stroud, Deputy Executive Director.

ANACORTES, Washington: 48.31 N. 122.36 W. (See Plan)

DOCUMENTS: Refer to "Tacoma".
PILOTAGE: Port Angeles Pilots. Tel: Seattle 728-6400, Dispatcher 448-4455. Pilots on VHF Channels 13 and 14.
ANCHORAGES: East End Guemes Channel, 54 ft. minimum depth.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Join vessel in Guemes Channel at Anacortes – lines optional.
BERTHING: *Pier No. 1:* Length 580 ft., depth 34.5 ft.
Pier No. 2: Length 452 ft., depth 44 ft.
CRANES: 1×15 tonne mobile crane.
TANKERS: *Texaco:* Berth No. 1: Length 1,000 ft., depth 45 ft.
Berth No. 2: Max. LOA 650 ft., depth 40 ft.
Shell: Outer Berth: Max. LOA 810 ft., max. draft 45 ft.
Inner Berth: Max. draft 40 ft.
STEVEDORES: Request 24 hours' notice. Working hours: 0800 – 1200 and 1300 – 1700.
Weekend work on overtime rates.
FRESH WATER: Available from city water system.
FUEL: Available from Shell and Texaco (Bunker "C" and light diesel).
REPAIRS: Minor repairs only.
DRY DOCKS: Synchrolift (300 ft. × 75 ft.) with capacity 5,250 tons.
GANGWAY/DECK WATCHMEN: Not required by port.
OPENING/CLOSING HATCHES: Stevedores or crew before vessel's arrival.
CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.
CARGO GEAR: ILWU requirements.
AIRPORT: 75 miles Seattle International.
TIME: GMT minus 8 hours. From end April to end October, Pacific Daylight Saving Time, GMT minus 7 hours.
HOLIDAYS: See "Tacoma".
POLICE/AMBULANCE/FIRE: Police, Ambulance and Fire dial 911.
TELEPHONES: Available at Pier 2 and at Pier 1 by Phone Co.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required.
AUTHORITY: Port of Anacortes, P.O.Box 297, Anacortes, Washington 98221. *Tel:* (206) 293 – 3134 (Scan System 576 – 6371). *FAX:* (206) 293-9608. *Contact:* M. Hardy, Marine Terminal Supervisor.

ANCHORAGE, Alaska: 61.12 N. 150.00 W. (See Plan)

DOCUMENTS:
3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (curio list).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).
Customs Boarding Officer will also examine Ship's Register and Load-line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:
Master's Oath (Customs Form 1300).
All foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List.
PILOTAGE: The pilot station for Anchorage is at Homer, Alaska. Vessels may contact Pilot by radio telephone. Telegraphic address "Almarrpilot", ETA notice requested 24 hours. Listens VHF Channel 10. Pilot boat green and white. Pilot flag by day, pilot light at night. Pilot boat 1 mile South of Homer Spit (Coal Point), Homer, Alaska. In bad weather, wait inside Homer Spit and advise via radio-telephone.
Also see "Homer".
ANCHORAGES: The best anchorage for deep-draft vessels is West of Anchorage in depth of 10 fathoms to 12 fathoms, silt bottom. Holding ground is good.
TIDE AND CURRENTS: The diurnal range of tide is 29.6 ft., currents from 1.7 knots to 6 knots or more in mid-channel.
RESTRICTIONS: Flow and pan ice is encountered in the Cook Inlet from approximately the end of November until the end of February. This ice does not freeze solid due to the tidal action. The port is in year-round use and expert information on Winter conditions may be obtained from any of the highly qualified licensed ship pilots available in the area.
MAX. SIZE: All berths 35 ft. MLLW.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Port of Anchorage "KBT-42" on HF-AM and SSB. "WHJ-82" on VHF-FM.
Radio Advice: Masters must notify Agents at Anchorage of ETA at Homer Spit, Alaska, as early as possible. Homer Spit position 59° 35′ N., 151° 40′ W. To avoid confusion ETA message to Anchorage should indicate Time Zone used. Alaska Communication System Stations are located at Juneau – call sign AKM – Keeping watch on 500 kHz and working on 452 kHz. This station is reported to be very difficult to contact and is closed during weekends.

The fastest way to forward radio messages in the North Pacific is via San Francisco Radio KPH.

The U.S. Coast Guard Station Kodiak – call sign NOJ – keeps W/T watch on 500 kHz, working on 470 kHz.

Due to difficulties reported in contacting local Alaskan stations Masters of vessels engaged on trans-Pacific crossings are advised to route radio messages to Alaska and Europe via Singapore Radio or Choshi Radio until the dateline, thereafter via San Francisco radio.
TUGS: Join vessel 1.5 miles S.W. of docks.

BERTHING: 600 ft. General Cargo Terminal No. 1, apron width 95 ft., load limit 600 lb. per sq. ft. General Cargo Terminals No. 2 and 3, ft. and 893 ft. respectively, apron width 69 ft. Depth alongside face MLLW 35 ft.
SPECIALISED CARGO HANDLING FACILITIES: 2×30 ton Paceco and 1×40 ton Mitsubishi container cranes servicing general cargo Terminals 1, 2 and 3; private bulk cement pipe-lines to shore silos. Ro-Ro service available.
CRANES: Shore Cranes: Level luffing gantry, Paceco and Mitsubishi container cranes. Capacity: Level luffing gantry 7.5 tons and 40 tons 5 ton high-speed whip lines). Container cranes 30 tons and 40 tons. Outreach from fender face is 70 ft. for the gantries and 81 ft. on the Paceco. Clear height above MLLW is 132 ft.
STEVEDORES: *Working Hours:* Stevedores do not work on January 1st, September 6th, November 25th and December 25th. The first 8 hours of any shift between 0800 hrs. and 1500 hrs. is at the straight time rate. Work performed on Saturdays, Sundays, holidays and between 1700 hrs. and midnight is at overtime rate. Meal breaks are 1145 hrs. to 1300 hrs. and 1745 hrs. to 1900 hrs. Stevedores do not normally work between midnight and 0700 hrs.
MEDICAL: All facilities available. 3 local hospitals.
TANKERS: The Petroleum Terminal at the Port of Anchorage is contiguous to the general cargo docks. The POL Dock is 612 ft. long and contains multiple petroleum manifolds. Depth 35 ft. alongside.
DENSITY: From 1009 to 1010.
FRESH WATER: Public Health Service certified water station.
FUEL: All grades available.
SURVEYORS: B. J. Logan and Associates, (Lloyd's Agency; correspondence to AIMU; National Cargo Bureau), 237 E. Third Avenue, Anchorage, Alaska 99501. Tel: (907) 272-7724.
GANGWAY/DECK WATCHMEN: Required shipside.
OPENING/CLOSING HATCHES: By stevedores.
CUSTOMS ALLOWANCES: At the discretion of Customs Officer. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 quart wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.
AIRPORT: 5 miles; served by regular foreign and domestic airlines.
HOLIDAYS: New Year's Day (January 1st); Lincoln's Birthday; Washington's Birthday; Seward's Day (March 30th); Memorial Day; Independence Day (July 4th); Labour Day; Columbus Day; Alaska Day (October 19th); Veterans' Day; Thanksgiving Day; Christmas Day (December 25th).
POLICE/FIRE/AMBULANCE: Police 786–8900; Ambulance/Fire 267–4900.
EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard, Anchorage, Alaska 99513. Tel: (907) 271-5137.
TELEPHONES: Telephones available shipside.
BANKS:

Alliance Bank
First National Bank of Anchorage
Key Bank
National Bank of Alaska
Ranier Bank Alaska

STORING: See "Prelims".

1. Yes.
2. No restrictive regulations.
3. Yes: Immediately adjacent to ship.
4. Yes.
5. No.
6. Yes.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I – 95 to be made up for each crew member on arrival. Not necessary for crew men already holding Form I–95, issued for the same vessel.
AUTHORITY: Port of Anchorage, 2000 Anchorage Port Road, Anchorage, Alaska 99501. *Tel:* (907) 272-1531. *Telex:* 090-26-431. FAX: (907) 277–5636. *Contact:* H. Glenzer, Jr., Port Director.

ASHTABULA, Ohio: 41.53 N. 80.48 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.
PILOTAGE: Nearest pilot station is the Welland Canal, Canada.
ANCHORAGES: No anchorage inside boundaries. Good anchorage outside to East of the entrance, depth approx. 20 fathoms.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Contact Lorain, Ohio ship-to-shore station for local connections.
TUGS: Tugs normally join vessels just inside harbour entrance. Use ship's or tug's lines optional; if tug lines used an additional charge of 10% of the tonnage will be added. For tug service call ship-to-shore tug Idaho, FM Channel 51.
BERTHING: Pinney Dock and Transport Co.: Dock No. 4 – length 2,000 ft., depth 27 ft. 2×45 ton cranes

Pinney Dock and Transport Co. (Ex-Con Rail Minnesota slip): Re-aligned berth with length 1,500 ft. and depth 28 ft.

Con Rail: Dock No. 10 – length 1,200 ft., depth 27 ft. 1 shiploader, rate 7,000 t.p.h. Max. size: LOA 1,000 ft., beam 105 ft. and max. draft 26 ft.
STEVEDORES: Work gangs for loading and unloading provided by the Pinney Dock and Transport Company.
MEDICAL: Vessels requiring medical attention call U.S. Coastguard station located in the main river by calling AM Channel 20. Ambulance and hospital service available. No inoculation, vaccinations, or fever certificates required.
DENSITY: Fresh water.
FRESH WATER: Available at stevedoring dock.
FUEL: Available on 24-hour notice.
FIRE PRECAUTIONS: City fire department. Also water line on face of the dock available.
CONSULS: Nearest at Cleveland.
REPAIRS: All types of deck and engine repairs available; also topside shell repairs.
GANGWAY/DECK WATCHMEN: Overseas stevedoring dock enclosed wire fence, watchmen on dock at all times, guard at main gate.
OPENING/CLOSING HATCHES: Optional by crew or stevedores.
CUSTOMS ALLOWANCES: Only allotments per person consumed aboard allowed.
REPATRIATION: Can be arranged.
AIRPORT: Nearest airport approx. 10 miles South with commuter services to Cleveland Hopkins Airport. Cleveland Hopkins Airport approximately 70 miles West.
TIME: Local Eastern Standard Time except from first Sunday in April till last Sunday in October – Daylight Saving Time.
HOLIDAYS: Stevedoring docks double time on holidays and time plus one-half on Saturdays and Sundays.
POLICE/AMBULANCE/FIRE: Police, 998-2221; Ambulance, 998-2345; Fire, 998-2121.
TELEPHONES: No provisions for placing telephones aboard vessels.
SHORE LEAVE: Crew allowed ashore.
IDENTIFICATION CARDS: Required.
AUTHORITY: Ashtabula Port Authority, P.O.Box 889, Ashtabula, Ohio 44044. *Tel:* (216) 992 8428. *Contact:* Robert Weiner, Chairman. Nicholas Paulchel, Harbour Master.

ASTORIA, Oregon: 46.11 N. 123.50 W. (See Plan)

PILOTAGE: Columbia River Bar Pilots, Astoria, Oregon, 97103. See "General – Pilotage" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Tugs are available for assisting ships at the option of the vessel.
BERTHING: The 3 piers, including Ro-Ro facilities and barge ramp, comprising the Port of Astoria Terminals are located in the Western part of the City of Astoria at the confluence of Youngs Bay and the Columbia River. Astoria is served by 1 railroad, 3 major highways and 6 barge lines. The piers extend to the main ship channel, allowing vessels to berth or sail at any time. The terminals are operated by the Port of Astoria Commission as a public property open to all carriers and shippers.

Pier No. 1:
Location: Foot of Portway Street, adjacent to Pier No. 2, and separated therefrom by a water slip 400 ft. in width.
Principal Commodities: General commodities, break bulk, plywood, frozen tuna, grain, sacked goods.
Berths: 2 vessels. 875 ft. face or Northerly end; 1,000 ft. slip or Westerly side, depth 40 ft.
Pier Apron: Width 24 ft., slip side; 70 ft., face or end. Dock is 16.1 ft. above MLW.
Equipment: Dock tractors, 2 container straddle carriers, fork lift trucks, trailer trucks, hand trucks and other necessary miscellaneous cargo handling equipment.
Water Services: Portable meters and hose connections for vessel service. Rates of delivery, 10,000 g.p.h. Water pressure about 110 p.s.i.
Fire Protection: Complete automatic dry pipe sprinkler system and hose stand pipes.
Electric Current: Face Pier No. 1 – 440 volt, 3 phase. Lighting 110 volt, 2 phase, 60 cycle, 35 amperes, alternating current. Portable meter and plug-in service available at all berths.

Pier No. 2:
Location: Between Piers No. 1 and 3. Separated from Pier No. 1 by a water slip, 400 ft. wide, and from Pier No. 3 by a water slip, 350 ft. wide.
Warehouse Shed: 65,000 sq.ft. steel building with foundation and sprinkler system.
Principal Commodities: Lumber, logs, general cargo, break bulk, bulky cargo in open storage.
Berths: 5 vessels; 425 ft. face or Northerly end; 1,307 ft., slip Easterly side, 40 ft. depth; 1,445 ft., slip Westerly side, 35 ft. depth.
Open Dock: 535,000 sq.ft. Dock level 16.1 ft. above MLW.
Equipment: Modern lighting. Tractors, fork trucks, etc. as listed under Pier No. 1, when required. Portable meters and hose connections. Pipe lines on pier for bunkering.
Barge Ramp: A barge ramp capable of handling loads up to 50 tons is now in operation at the outer berth of Pier No. 2. The ramp is utilised for transfer of cargo from barge or vice versa.
Water Service: City service. Portable meters and hose connections for service to vessels. Rate of delivery, 10,000 g.p.h. Water pressure about 110 p.s.i.
Electric Current: Lighting 110 volt, single phase, 60 cycle, 35 amperes, alternating current. Power 220 volts, 3 phase, 60 cycle, 35 amperes, alternating current. Portable meters and plug-in service at all berths.

Pier No. 3:
Location: Foot of Hamburg Avenue, (adjacent to and separated from Pier No. 2 by water slip 350 ft. wide).
Principal Commodities: Canned goods, wood pulp, paper products, general cargo, break bulk, dry bulk.
Berths: 2 vessels. 1,750 ft. slip on Easterly side; 35 ft. in depth.
Warehouse Transit Shed: Floor area 248,000 sq.ft. Floor load 600 lbs. East side; 1,000 lbs. West side, per sq.ft.

Shed width 160 ft. Shed length 1,550 ft. Mill type reinforced concrete walls and floor construction. Concrete and blacktop floor. Complete automatic sprinkler system.
Pier Apron: Width, slip side 24 ft. Dock level, 16.1 ft. above MLW.
Equipment: Tractors, trailers, fork trucks, etc., as listed under Pier No. 1, when required.
Water Supply: Portable meters and hose connections for service to vessels. Rate of delivery, 10,000 g.p.h. Water pressure about 110 p.s.i.
Fire Protection: Automatic dry sprinkler system. Hose stand pipes.
Electric Current: Lighting 110 volts, single phase, 60 cycle, 35 amperes, alternating current. Power 220 volts, 3 phase, 60 cycle, 35 amperes, alternating current. Portable meters and plug-in service available at all berths.

CONTAINER HANDLING: Container Yard (West of Pier No. 3) 11.5 acres paved, fenced and lighted.

CRANES: 30 ton crane on Pier No. 2.

STEVEDORES: Stevedore Services of America and Jones-Oregon-Rogers.

FRESH WATER: Available, delivery to vessel through portable hose.

FUEL: Bunkering oil facilities for ocean vessels are maintained at Pier No. 2. The rate of delivery for heavy fuel oil is 1,500 b.p.h., and for diesel oil, 800 b.p.h.

GENERAL: The Port of Astoria Terminals are located 10 miles upstream from the mouth of the river and 86 miles downstream from the City of Portland, Oregon.

The channel in the Columbia River, from the ocean to Astoria, has a width of 600 ft. and project depth at low water of 40 ft.

At Astoria, the mean range of tide is 7.5 ft. with extreme tidal range of about 12 ft. On a flood tide a velocity of 2 knots is seldom exceeded, but the velocity sometimes attains 5 knots during the ebb tide. This variation is due largely to the strength of the river discharge, with maximum velocity during the freshets which occur during the months of May, June and July. These freshets, however, do not effect the height of water at Astoria. The Columbia River is navigable throughout the year.

A total of 9 berths at the Port of Astoria Terminals are periodically dredged to 35 ft. and 40 ft. at zero tide, but depths vary from time to time.

AUTHORITY: Port of Astoria, 1 Portway, Astoria, Oregon 97103. *Tel:* (503) 325-4521. *FAX:* (503) 325-4525. *Contact:* Steve Felkins, Director.

BALTIMORE, Maryland: 39.17 N. 76.35 W. (See Plan)

PORT LIMITS: North Point is the outer limit of Baltimore Harbour for arrival purposes. The anchorage off Annapolis at Thomas Point, for vessels assigned thereto, is considered arrived for charter purposes.

DOCUMENTS:

3 copies Cargo Manifest (Form 1302).
Direct Arrival – 2 All Cargo on Board.
1 Cargo this Port.
Coastwise Arrival – 1 All Cargo on Board.
2 Cargo this Port.
3 copies Crew Manifest (curio list) (Form 1304).
3 copies Stores Lists (Form 1303).
3 copies Passenger List (Form I-418).
3 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port.

Master's Oath (Customs Form 1300) 3 copies.
General Declaration (Customs Form 1301) 3 copies.
All foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List (Visa Crew List – U.S. Immigration).

PILOTAGE: Each vessel entering the Chesapeake Capes under foreign flag or carrying foreign cargo is required to employ a Pilot of the Association of Maryland Pilots. Pilots are furnished with a small transistorised portable radio unit, which provide ships' bridge to bridge communication system to ensure navigational safety while traversing the waters of Chesapeake Bay. It is a positive means of communication to ensure ship's position reporting, the safety and movement of vessels, as well as messages related to the operational needs of vessels proceeding to the port, and provide the Pilots' communications instructions expediting operations of vessels when they are aboard.

Send ETA via Telex to pilots or vessel's agent, 48 hours before arrival and confirm 24 hours before arrival.

The ETA message should state whether arriving via Chesapeake and Delaware Ship Canal or Cape Henry, and deepest draft and speed of vessel.

Cable address of Pilot: "Marpilot Baltimore". Cape Henry Pilot Tower on VHF Channels 11, 13 and 16. Telex: 87-574. Telephone: (301) 276-1377. Fax: (301) 276-1364.

The large ocean station pilot vessel has been removed from station. Inbound and outbound traffic is monitored by the new Cape Henry Pilot Tower on shore just seaward of Cape Henry Light. The Pilot Tower maintains both a radar and radio watch for the area. Vessels should contact the Pilot Tower on VHF Channel 16 whence they will be directed to a working frequency. Vessels are requested to contact the tower 2 hours prior to arrival at the pilot boarding area.

Pilots are despatched from Lynnhaven Inlet by high-speed all-weather boarding launches and will rendezvous with vessels at CBJ Buoy, approximately 2 miles ENE of Cape Henry Light.

Pilots may request a relief pilot during transit who will board the vessel at the Pilot Transfer Station located 90 miles Northward near the Patuxent River. Under certain conditions of speed and draft, 2 pilots may be provided at the outset of the transit. Relief pilots are provided at no extra charge.

ANCHORAGES: Numerous anchorages located within harbour limits for ocean-going vessels. 6 such areas are available for vessels of light and deep draft. 4 of these anchorages are located on the East side of the main ship channel between the entrance channel to the Central Soya Company Grain Elevator and Fort Carroll. 2 are on the West side of the main ship channel. At Thomas Point, approximately 22 miles South of Baltimore, there is an emergency anchorage in natural deep water with depth of 50 ft. or more. The U.S. Coast Guard is responsible for the anchorages, but in practice, the Pilots make the assignments.

RESTRICTIONS: There are two different approaches and exits to the sea lanes. The principal route is by way of the Southerly course through the Chesapeake Bay and Cape Henry to the ocean. The distance by this route is approximately 150 nautical miles. There is a main ship channel 20 miles long from Baltimore to the Chesapeake Bay; this channel is 800 ft. wide and 42 ft. deep. (It will be 50 ft. deep by the end of 1990).

The other route to the sea lanes is via the Chesapeake and Delaware Ship Canal. This offers a short protected route between Baltimore and other leading North Atlantic ports by way of Delaware Bay and allows ships serving North Atlantic European ports to save about 115 miles sailing distance.

Entrance to the Chesapeake and Delaware Ship Canal is located about 50 miles North of Baltimore. Depth of channel 35 ft. The width of the channel is 450 ft. Max. LOA 960 ft. Larger LOA must have bow thruster, Max. draft 33 ft. The canal itself is 15 miles in length, and from the Delaware Bay side the distance to sea lanes is about 60 miles. Navigation lights are maintained so the canal is open to navigation day and night. Mean range of tide is 1.1 ft. at Baltimore. Currents are 0.8 knot on flood and ebb tides.

MAX. SIZE: Length 1,250 ft., draft 50 ft. by Winter 1990 at Consolidated Coal Pier. No restriction on beam.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: See "Pilotage".

TUGS: The port has an efficient fleet of tugs in operation. The tugs usually take vessel in tow at Francis Scott Key Bridge. Tug's lines are used at no extra charge.

BERTHING: Major piers and terminals:

Abbreviations:
WC = Whirley Crane (Tower Gantry)   LT = Long Ton
CC = Container Crane   T = Net Ton
M.T. = Marine Terminal

Breakbulk – Container, General Cargo:

CRANES: *Floating:* 1×150 tons.

Also see "Berthing".

BRIDGES: The Chesapeake Bay Bridge-Tunnel is located across the entrance to the Bay, between Cape Henry and Cape Charles. This vehicular crossing consists of fixed causeways and bridges 15 miles in length, and 2 tunnels – one under the Chesapeake Channel and one under the Thimble Shoal Channel. A horizontal clearance of 1,400 ft. at 60 ft. water depth exists.

The Francis Scott Key Memorial Bridge crosses the main ship channel in Baltimore Harbour and is 8,640 ft. long, with main channel horizontal clearance of 800 ft. and vertical clearance of 185 ft. Vessels en route to the harbour from the ocean via the Chesapeake Bay pass under the Chesapeake Bay Bridge (2 parallel bridges), about 138 statute miles above the ocean entrance to the bay. This bridge is 3.7 miles long from shore to shore; its Western end is 0.5 miles S.W. of Sandy Point and its Eastern end is on Kent Island, 4 miles S.W. of Love Point. Least clearance width of 1,500 ft. and vertical clearance 186 ft.

By way of the Chesapeake and Delaware Canal the least horizontal clearance is 500 ft. and vertical clearance to + 136 ft.

The Curtis Creek and Middle Branch sections of harbour are each crossed by highway and railroad bridges.

DENSITY: Fresh water.

MEDICAL: All facilities available.

TANKERS:

Exxon: The Exxon Terminal in Baltimore Harbour is located 153 miles from the Sea Buoy and consists of 2 berths (North and South Piers). The controlling depth at this terminal is:

Navigation Channel – 41 ft. 0 in. North Berth 35 ft. 0 in.
South Berth 36 ft. 6 in.

The max. size vessels received at these berths are:

North Berth – 28,000 d.w.t.
South Berth – 76,000 d.w.t.

The controlling height of the vessel's mast – 180 ft. Vessels dock and undock at all stages of the tide. Constant Northwesterly winds may cause substantial variation in tide and delay docking.

At this terminal there are 3 terminal personnel on the scene at all times who will advise vessels of any critical conditions.

When docking, vessels normally use 2 tugs and when undocking, 1. On approach to the berths, vessels transit the Fort McHenry Channel with a controlling depth of 41 ft. MLW and minimum width of 300 ft. Vessels are then turned 90° Eastward for berthing on the North side of the finger pier starboard side to or on the South side of the finger pier port side to.

Shell: The Shell Oil Dock is located in Fairfield, Maryland Harbour, 162.5 miles from the Sea Buoy. Although the controlling depth for vessels in the navigation channel is 39 ft., the max. allowable draft is limited to 33 ft. 6 in. due to the water available alongside the berth. The average size vessel normally received at this terminal is 28,000 d.w.t. Vessels can dock and undock at any stage of the tide. Passing traffic at this terminal could cause vessel to surge. When docking vessels utilise 2 tugs, and when undocking normally 2 tugs unless weather conditions permit 1.

The terminal is located on the port hand at Fort McHenry Channel on approach to berth. Vessels make a 90° turn to port and enter approach channel to berth. The distance from the main channel to the berth is approximately 270 ft. When undocking, vessels are backed down Approach Channel to the Main Channel where they are then turned.

Also see "Berthing".

FRESH WATER: Can be supplied at all berths. Water barges available.

FUEL: All grades supplied by numerous oil companies by barge or ex-wharf at the oil berths.

BANGOR (including Brewer and Orrington), Maine: 44.49 N. 68.47 W. (See Plan)

LOCATION: Bangor is located on the West bank of the Penobscot River at the head of navigation. Brewer is on the East bank of the river opposite Bangor and Orrington is on the East bank of the river 2 miles below Brewer.

DOCUMENTS:

1 copy of Crew List.
1 copy of Passenger List.
2 copies of Stores Lists.
2 copies of Foreign Purchase Lists.
2 copies of Inward Foreign Manifest.
1 Form 1300 (Master's Oath on entry of vessel).
2 Forms 1374 Outward Foreign Manifest.

PILOTAGE: Pilotage is compulsory for all foreign vessels and U.S. vessels under register in the foreign trade, with a draft of 9 ft. or more, entering or departing from any port or harbour within the waters of Penobscot Bay and Penobscot River North of a line drawn from Marshall Point Livat Port Clyde, thence to Matinicus Rock Light, and thence to Western Head, Isle Au Haut. Pilotage is optional for vessels powered by sail.

Cable PENBAY via Chatham Radio. Ship's Agent usually notifies Pilot 48 hours and 24 hours before arrival at the pilot station. Pilot boat usually stands by on their radio 1 hour before ETA on RT 2182 kHz and VHF Channel 16. Pilot boards at Monhegan Is., Lat. 43° 45′ N., Long. 69° 22′ 5″ W. Pilot uses a white boat 36 ft. long and displays "H" by day and the Pilot signals at night. Vessels awaiting Pilot in bad weather must heave-to outside.

ANCHORAGES: The usual anchorage for vessels waiting at the riv entrance for a towboat or favourable wind and tide is Northward of Fo Point on the West side of the channel.

Vessels bound up the river anchor anywhere in the channel whe soft bottom is found. Vessels towing to Bangor, if the tide does not serv often anchor off Winterport. On account of the strong ebb current, it better for vessels going to Bangor, particularly large vessels, to anch off Fort Point and start up the river about 3 hours after LW.

RESTRICTIONS: CHANNEL:– The controlling depth in the marke channel in Penobscot River from Bucksport to Bangor is 19 ft. Winterport, thence 13 ft. to Bangor. The channel is marked by buoys a point about 1.5 miles below South Brewer.

Caution: Deep-draft vessels should exercise caution above Fort Po as depths of 31 ft. to 32 ft. are in mid-channel, about 0.5 miles Eastwa of Sandy Point, and rocky ledge, covered 34 ft., also in mid-channel, reported about 0.2 miles S.W. of Odom Ledge Daybeacon.

The most difficult sections for vessels are off Lawrence and Lu Coves just North of Bucksport where it is difficult to mark the best wa and off Frankfurt Flats where large vessels experience difficulty with th sharp turns.

The channel in Penobscot River is crooked and narrow in places, a frequent changes occur. Vessels should not attempt to carry dra greater than 10 ft. to Bangor at LW. With a deeper draft a Pilot or towbo should be used; 14 ft. or 15 ft. is carried to Bangor and Brewer at H and deeper drafts occasionally to the oil berth at South Brewer. T safest time is on a rising tide. Navigation of the river at night is extreme dangerous due to lack of lighted navigation aids. After unusually hi tides many logs, dangerous to small craft, are in the river. At times maximum ebb currents, buoys are occasionally pulled under.

Tides: The mean range of tide varies from 10.3 ft. at Fort Point to 13.1 at Bangor. Currents of 3 knots are not unusual from Odom Ledge Orrington, and during Spring runoff currents approaching 5 knots ma be encountered. Because of these currents, larger vessels should u caution navigating the river. Passage up the river is more advisab during flood current.

Ice impedes but usually does not prevent navigation above Winterpo for nearly 5 months each year, beginning about December. Dur extreme Winters the river is closed to the mouth. The most difficult pla below Winterport is abreast Fort Knox, where ice jams occur. If vesse can pass this point, they usually can go to Winterport. The river is ke open by an icebreaker, which prevents much of the damage that mig otherwise be caused by ice and freshets. However, in recent year according to local information, there has been very little ice and the riv has seldom frozen over below Bangor. The brackish water formed b tidal action and the river current no doubt have contributed to this.

Freshets occur in the river during March and April; at times they a dangerous to vessels.

MAX. SIZE: At present ships of 560 ft. are taken up the river 2 hou before HW during daylight. Size and draft of ship depend on the ber

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illnes Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Vessels arriving Bangor use radio station at Chatham, Mass or call on the R/T through station WOU at Boston, Mass.

TUGS: 4 tugs available up to 1,200 h.p. Tugs join at Belfast to assist turning and berthing.

BERTHING:

Texaco Oil Co. Terminal: A timber pile, timber-decked pie approximately 5,250 sq.ft., used for berthing oil tankers. There a 8 storage tanks and 1 warehouse/office building with 1,920 sq.ft. of flo space.

Mobil Oil Co.: A timber crib pier approximately 8,500 sq.ft., used fo berthing tankers. There are 10 storage tanks and a garage at this facili

Webber Terminal Inc.: A timber crib pier, approximately 2,340 sq.ft. use for berthing tankers. Adjacent to this pier, there is another timber cri pier, approximately 5,280 sq.ft., also used for berthing tankers. Ther are 2 storage tanks and a storage building with 480 sq.ft. of floor spac

Astroline Petroleum Corp. of Maine: There is a log filled bulkhead use for berthing tankers. This facility includes 5 storage tanks and 1 to shed.

Bangor Municipal Dock: A new wooden and steel float with gangwa 1,500 sq.ft. located just below the Joshua Chamberlain Bridge also 4×4 ton guest moorings are available for recreational use.

Webber Tanks Inc. – Brewer: A rock and timber crib, timber decke pier, approximately 7,200 sq.ft., used for berthing tankers. There a 5 storage tanks and a warehouse with approximately 3,850 sq.ft. of floo area.

C. H. Sprague – Brewer-Orrington: A timber pile wharf, approximate 1,600 sq.ft., used for berthing tankers. The wharf is in Orrington an fuel is pumped to 3 storage tanks located in Brewer. There is on building, a pump house, approximately 600 sq.ft.

Hampden Recreational Boating Facility: 2 launch ramps with groun float; landing dock; 2 guest moorings, 8 ft. MLW to ramps, 80 ft. wid channel.

Town Launch Ramp – Orrington. This is a paved launch ram no docking facilities. There is a 40-space (30 car – 10 trailer) grav parking area.

BRIDGES: 1 suspension bridge below Bucksport with a height of 135 f at HW. Horizontal clearance is 750 ft.

The overhead power cable that crosses the river just above Bucksport has a clearance of 145 ft.

MEDICAL: No advance notice required. There are 3 large hospitals

TANKERS: 1 berth for ocean-going vessels. 1×8 in. hose with a 10 in line. 22 ft. at low water. Also see "Berthing".

DENSITY: Nearly fresh water.

FRESH WATER: Supplied at ocean-going berth at the rate of 50 t.p.

FUEL: Only available at oil berth.

CONSULS: None.

REPAIRS: Only machinery repairs.

CERTIFICATES:
Load Line.
Foreign Clearance.
Safety Certificate.
Radio Operator's Licence.

CUSTOMS ALLOWANCES: 200 cigarettes per man, 1 bottle wine/spirits per man.

REPATRIATION: Arrangements must be made ahead of time by telegram.

TIME: GMT minus 5 hours in the Winter and minus 4 hours from first Sunday in April till last Sunday in October in the Summer.

AIRPORT: Bangor International is 2 miles from the city.

POLICE/AMBULANCE/FIRE: Police 9427377; Ambulance 9893311; Fire 9422293.

TELEPHONES: None put aboard. 1 pay phone on ocean-going berth.

SHORE LEAVE: Allowed subject to Immigration approval.

IDENTIFICATION CARDS: Form I – 95 must be filled out upon arriving unless seaman has made one out before on a previous trip.

AUTHORITY: City of Bangor, Dept. of Harbour and Wharves, Harbour Master.

Original and 3 copies of Inward Manifest.
Derat Certificate.
Load Line Certificate.
Safety Certificate.
Ship's Register.
3 copies Curio List.

PILOTAGE: Advise Agents ETA sea-buoy 48 hours in advance. Agent then makes arrangements for Pilots. Seven 46 ft. pilot boats – red hulls white cabins, flying white and blue pilot flags. Suggest pilot ladder 6 ft. above water level, no life-line. Call on 2738 kHz or VHF Channel 9, 30 miles to 40 miles out. Safe anchorage within 2 miles South Pass or S.W. Pass entrance.

ANCHORAGES: Anchorages within the river are limited; therefore, whenever possible, vessels should utilise the large anchorage area located East of the entrance of Southwest Pass.

MISSISSIPPI RIVER DESIGNATED PERMANENT ANCHORAGES:

Pilottown Anchorage: An area extending from Mile 1.5 to Mile 6.7 AHP along the right descending bank and having a width of 1,600 ft. at its upper and lower limits.

Boothville Anchorage: An area extending from Mile 12.2 to Mile 18.5 AHP along the right descending bank and having a width of 1,000 ft. at its upper and lower limits.

Ostrica Anchorage: An area extending from Mile 23.5 to Mile 24.4 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Port Sulphur Anchorage: An area extending from Mile 37.5 to Mile 39.7 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Magnolia Anchorage: An area extending from Mile 45.5 to Mile 46.9 AHP on the right descending bank, having a width of 1,100 ft. measured from the Low Water Reference Plane from Mile 45.5 to 46.3, and 600 ft. measured from 500 ft. riverward of the Low Water Reference Plane from Mile 46.3 to 46.9.

Davant Anchorage: An area extending from Mile 53.5 to Mile 54.5 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Alliance Anchorage: An area extending from Mile 63.6 to Mile 65.8 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Wills Point Anchorage: An area extending from Mile 66.5 to Mile 67.6 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Cedar Grove Anchorage: An area extending from Mile 69.9 to Mile 70.6 AHP on the right descending bank, 700 ft. wide with a Western limit 400 ft. from the Low Water Reference Plane on the right descending bank.

Belle Chase Anchorage: An area extending from Mile 73.1 to Mile 75.2 AHP along the right descending bank and having a width of 1,000 ft. at its upper and lower limits.

Lower 12 Mile Point Anchorage: An area extending from Mile 78.5 to Mile 80.8 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Lower 9 Mile Point Anchorage: An area extending from Mile 82.7 to Mile 85.0 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

New Orleans General Anchorage: An area extending from Mile 89.3 to Mile 90.5 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits. (See Appendix, paragraph 8).

Quarantine Anchorage: An area extending from Mile 90.9 to Mile 91.6 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits (See Appendix, paragraphs 6, 8 and 9).

Kenner Band Anchorage: An area extending from Mile 115.1 to Mile 115.6 AHP along the right descending bank and having a width of 700 ft. at its upper and lower limits.

Ama Anchorage: An area extending from Mile 115.7 to Mile 117.2 AHP along the left descending bank and [illegible] ft. at its upper and lower limits.

Bonnet Carre Anchorage: An area [illegible] Mile 127.3 to Mile 128.8 AHP along the left descending [illegible] having a [illegible]dth of 600 ft. at its upper and lower limits. (See Appendix, paragraph [illegible]).

La Place Anchorage: An area extending from Mile 134 to Mile 135 AHP along the left descending bank and having a width of 600 ft. at its upper and lower limits.

Reserve Anchorage: An area extending from Mile 137.0 to Mile 137.5 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Lower Grandview Reach Anchorage: An area extending from Mile 146.5 to Mile 147.1 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits.

Upper Grandview Reach Anchorage: An area extending from Mile 147.7 to Mile 148.8 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits.

Lower Sunshine Anchorage: An area extending from Mile 165.0 to Mile 165.9 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Upper Sunshine Anchorage: An area extending from Mile 166.3 to Mile 167.0 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Baton Rouge General Anchorage: An area extending from Mile 225.8 to Mile 227.3 AHP along the right descending bank and having a width of 1,400 ft. at its upper and lower limits. Less than 27 ft. draft.

Lower Baton Rouge Anchorage: An area extending from Mile 228.5 to Mile 229.0 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits. Light draft.

Middle Baton Rouge Anchorage: An area extending from Mile 229.6 to Mile 229.8 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits. Light draft.

Upper Baton Rouge Anchorage: An area extending from Mile 230.6 to Mile 231.0 AHP along the left descending bank and having a width of 1,075 ft. at its upper limit and 1,200 ft. at its lower limit. Light draft.

Note 1: Loaded vessels are not allowed to use Middle and Upper Baton Rouge Anchorages.

Note 2: An explosives anchorage, approximately 1,000 ft. wide, is located on the West side of the river 1.4 miles upstream of Oak Point Light (63.0 miles AHP) and cannot be used by any vessel without previous approval from the Commander, Eighth Coast Guard District.

All anchorages have mud bottoms and are protected by the Mississippi River banks on each side. Vessel's position should be monitored continuously for dragging while anchored. No specific distances are required between anchored vessels. Caution is advised if required to anchor off Baton Rouge Docks, due to proximity of submerged pipeline crossing just South of docks.

The Coast Guard advises that during high water conditions, Mariners should give anchored vessels a particularly wide berth. Fast river currents may cause anchored vessels to swing in wide arcs. Under these conditions, it is important that the Mariner beware of anchor chains.

APPENDIX:

Regulations Concerning Designated Anchorages have been extracted from 33 CFR 110.195.

(1) Anchoring is prohibited outside of established anchorages except in cases of emergency. In an emergency, if it becomes necessary to anchor a vessel outside an established anchorage, the vessel shall be anchored so that it does not interfere with or endanger any facility or other vessel. The Master or person-in-charge of the vessel shall notify the Captain of the Port of the location of the emergency anchoring by the most expeditious means and shall move the vessel as soon as the emergency is over.

(2) In an emergency, if it becomes necessary to anchor a vessel in Southwest Pass, the vessel shall be positioned as close to the left descending bank as possible.

(3) No vessel may be anchored unless it maintains a bridge watch, guard and answer VHF Channel 16, maintains an accurate position plot and can take appropriate action to ensure the safety of the vessel, structure, and other vessels.

(4) When anchoring individually or in fleets, vessels shall be anchored with sufficient anchors or secured with sufficient lines, to ensure their remaining in place and withstanding the action of winds, currents and the suction of passing vessels.

(5) No vessels may be anchored over revetted banks of the river or within any cable or pipeline area. The locations of revetted areas and cable and pipeline areas may be obtained from the District Engineer, Corps of Engineers, New Orleans.

(6) The intentions to transfer any cargo while in an anchorage shall be reported to the Captain of the Port, giving particulars as to name of ships involved, quantity and type of cargo, and expected duration of the operation. The Captain of the Port shall be notified upon completion of operations. Cargo transfer operations are not permitted in the New Orleans General or Quarantine Anchorages. Bunkering and similar operations related to ship's stores are exempt from reporting requirements.

Note: Activities conducted within a designated anchorage (e.g. cargo transfer, tank cleaning, stack blowing, etc.), may be restricted by other Federal, State or local Regulations. Owners, or persons in charge of any vessel should consider all safety and/or environmental regulations prior to engaging in any activity within designated anchorges.

(7) Nothing in this section relieves the owner or person-in-charge of any vessel from the penalties for obstructing or interfering with navigation or navigational aids or for failing to comply with the navigation laws for lights, day shapes, or fog signals and any other applicable laws and regulations.

(8) Vessels carrying carg of particular hazard as defined in 33 CFR 126.10 or carg products in bulk may not be anchored in the New orage or Quarantine Anchorage without permi of the Port.
(9) Except w United States Public Health Service for quarantine Quarantine Anchorage may be used as a general ancho

aunch and Marine
ervice, Inc., Tel: 675

ays 363-3122.
others Inc., Tel

(10) When the Bonnet Carre Spillway is open, no vessel may be anchored in the Bonnet Carre Anchorage.

RESTRICTIONS: No night-time restriction for entry or clearance, docking or undocking.

Caution should be exercised when anchoring in the vicinity of pipelines.

MAX. SIZE: Federal Project Depth of 45 ft., from the entrance to the jetties to Head of the Passes and up to Mile 180, is obtained through continuous maintenance dredging.

Exxon Terminal: LOA 810 ft. (246.8 m.); Beam, no restriction; Displacement, 90,000 ton; Draft, normally 45 ft. alongside.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: ETA cables can be routed through Tropical Radio WNU New Orleans.

If destined for Exxon Terminal, send ETA messages to "Stanship Baton Rouge"; 72 hours, 48 hours and 24 hours in advance of arrival at Southwest Pass. Telex: 510-993-3575, Answerback: HOBRM. Also, contact Exxon Docks (KZA 891) on VHF Channel 16, 3 hours prior to berthing. Berthing instructions will be provided on Channels 9 or 18.

TUGS: Available at Baton Rouge for docking and undocking. Ship's lines used.

At Exxon, 2 tugs are required for all vessels in excess of 12,000 d.w.t., for docking and undocking.

BERTHING: No time restrictions on berthing. 2 general cargo docks with total 400,000 sq. ft. transit shed and 2,265 ft. long, 40 ft. wide apron with double marginal tracks; grain elevator and bulk terminal at Burnside, for handling ores, concentrates, etc.; container marshalling yard adjacent cargo docks; also 20-acre paved staging area for project cargo.

BULK HANDLING FACILITIES:

Grain: Cargill Grain Elevator: Max. draft 40 ft. Loading rate 1,000 t.p.h. Silo storage 160,000 tons.

Dry Bulk: Burnside Terminal: 2 unloading gantries for bauxite. Rate 2,000 t.p.h. Max. draft 40 ft.

Molasses: Molasses terminal, leased to Manard Molasses Company, has an 11 million gallon capacity.

Coal: Coal Monitor One: The ultimate in the midstream transfer of coal, Coal Monitor One is a joint venture of Ryan-Walsh Stevedores and P & C Bituminous Coal, Inc. The device has the ability to sample and blend as well as aerate and cool the coal as it is transferred from barge to vessel.

Coal has become a major commodity at the Port with the safe, convenient anchorage buoy facility for ocean going vessels and the connection through major rivers and waterways to the primary coal-producing states.

Coal Monitor One can handle vessels with air draft of 65 ft. and beam 135 ft. Loading rate 1,800 tonnes per hour.

Midstream Transfer: The Port's midstream anchorage buoy facility is located in the Mississippi River just opposite its docks for the transfer of cargo between barges and ships. Primarily for the transfer of export coal, the operation is capable of handling import or export steel, salt, coke, unitised cargoes in slings and other bargeborne commodities by the use of floating cranes.

BRIDGES: Sufficient clearance for all stages of river at all times; 3 bridges cross at New Orleans, 1 at Baton Rouge, 1 at Donaldsonville, and 1 at Luling-Destrehan.

CRANES: 3×150 ton crawler; 2×70 ton crawler; 1×50 ton motor crane; 2×45 ton motor crane; 2×35 ton motor crane; 1×30 gantry and 5×100 ton rail car pushers.

STEVEDORES: May be obtained by Agent with 4 hours' notice.

MEDICAL: Agents should receive 24 hours' notice when medical attention is required. 2 excellent hospitals at Baton Rouge, U.S. Public Health Hospital at New Orleans.

TANKERS: *Exxon Refinery Terminal:* 4 tanker berths available with 2,260 ft. of berthing space. Normally handles 3 tanker simultaneously. See "Max. size".

Oil slop facilities available, but 48 hours advance notice required to be given to terminal.

Baton Rouge Port Authority: 2 berths; 238 m. and 410 m.; Apex Oil – heavy fuel oil; and Westway – Molasses.

Placid Oil Company: Crude and products, 330 m. berthing space.

Formosa Plastics: Caustic soda, ethylene dichloride, 240 m. berthing space.

Report:

Approaches – Cautionary Advice: Vessels make arrival at the S.W. Pass Sea Buoy located in position Lat. 28° 52.7′ N., Long. 89° 26′ W. Approach to the Sea Buoy should be made from the South to S.E. Vessels should remain in the fairways because of numerous structures in the approach area. Pilots board just South of the Sea Buoy. Precautions should be taken to remain to the East of the Sea Buoy, Buoy No. 1, and Buoy No. 3, when approaching the bar. At times strong cross-currents are encountered in the area of S.W. Pass Channel Entrance and precautions should be taken to prevent the vessel from being set onto shoal grounds on the West side of the channel. There is a large anchorage area to the East of the S.W. Pass Entrance Channel.

Exxon Refinery Terminal:

Docking: 1 tug is used for docking and 1 is used for undocking. On a very high river with a swift current 2 tugs should be used to turn the vessel when sailing, due to the close proximity of the Baton Rouge Highway Bridge as well as the limited turning basin. 2 tugs should also be used when the ship must be berthed between 2 other vessels. Vessels berth starboard side to. Vessels should not drop anchor due to numerous submerged pipe-lines.

A normal mooring configuration should be used with additional head lines in view of the river current.

Cautionary Advice: Channel traffic which is passing close by could cause ships to move away from the berths which could result in damage to the hard arms. It is essential that more than usual attention be given to maintaining the ship in position alongside. It is recommended that several crew members be specifically assigned to tend the mooring lines and winches.

Under no circumstances should mooring lines be slack.

Exxon U.S.A. Refinery Terminal: 232 miles AHP: The refinery dock, consisting of 5 berths, is a concrete and steel structure 50 ft. wide and running in a North – South direction along the river bank for about 2,750 ft. The berths are numbered 1 through to 5 from South to North. All products are transferred through hoses or 10 in. hydraulically operated steel loading arms. The loading arms for crude oil at No. 1 Berth, however, are 12 in. connections. Cargo hoses are handled by electric hoisting equipment. Vessels are moored to 50 ton quick release hooks located on the dock. Electric capstans are used for hauling the mooring lines to the mooring hooks.

The loading arms and hose connections are manifolded to permit washing into a slop line for change of grade.

All hose diameters are 4 in., 6 in. and 8 in. The 10 in. loading arms have 8 in. reducers.

Each berth has an office equipped with a telephone which is tied into a public address system. In addition, each berthman is equipped with a portable radio for communicating with the dock as well as all control centres. The emergency shut down system for the dock can be operated from each office.

The main control centre for the entire dock is equipped with telephones, a process radio, an FM and AM marine radio and the control station for the public address system. All loading line pressures are displayed on a panel. The public address system provides communication with each transfer location or berth office. The dock emergency shutdown system may also be operated from the control centre.

Cargo Handled and Shore Installations: Berth No. 1 handles nearly all products except lubes and some chemicals. It is also the primary berth for receiving crude oil.

Berth No. 2 handles specialties, chemicals, carbon black, asphalt and wax. Caustic soda is not handled at this berth.

Berth No. 3 handles clean products, lubes, chemicals, carbon black and dirty products.

Berth No. 4 handles clean and dirty products, chemicals and carbon black.

All berths can handle crude.

Pipe-lines range from 4 in. to 24 in.

Berthing: The River Pilot berths the vessel starboard side to.

Approach to Berth No. 1 should never be attempted from directly below the dock, due to a shoal area. This shoal area is known to the Pilots and must be given a wide berth. The Pilot should be consulted as to the exact location of the shoal area.

Vessels should approach dock at dead slow ahead and as parallel to it as possible.

All vessels over 30,000 d.w.t. must use 2 tugs for docking and undocking. Light vessels under 30,000 d.w.t. must dock and undock with at least 1 tug. A bow thruster does not substitute for a tug. A normal mooring configuration should be used with additional head lines due to the river current. Minimum mooring requirements are 4 bow lines, 2 breast lines, 2 forward springs, 2 after springs and 2 stern lines. Mixed moorings in the same direction are discouraged.

When the Baton Rouge River gauge is 30 ft. and above, vessels greater than 30,000 d.w.t. must use a minimum of 6 bow lines plus 2 breast lines. In addition, all vessels over 60,000 d.w.t. must be attended by a tug actively pushing on the bow until the vessel has discharged 75% of its cargo.

When the Baton Rouge gauge is above 40 ft. a tug is required during entire time vessel is alongside Berth No. 1, regardless of ship size.

In the event of an emergency, tugs are readily available within 15 minutes. Tugs can be contacted via VHF Channel 13.

Mooring: Mooring is provided through the use of fairleads and quick release hooks at all of the ship berths. These hooks are rated at 38 tons and 50 tons throughout the berths.

The refinery provides a line handling crew for each ship berthing/unberthing. The line handling crew is assisted by electric driven capstans. This service is provided at no extra charge to the vessel.

Normal mooring line sequence: Forward springs, head and forward breast lines, after springs and stern lines. It is the ship's responsibility to provide all mooring equipment.

Terminal monitors mooring throughout operations and provides each vessel with a standard mooring plan.

Terminal has no requirements to limit wind area of vessel; however in the event of unexpected high winds, vessel may be required to ballast down.

Manifold Criteria: The vessel's manifold must not be allowed to get more than 42 ft. above or below the dock deck. When connected to a vessel the end of the arm should be positioned between 13 ft. and 19 ft. from the edge of the vessel if the 12 in. loading arms are used; between 4 ft. and 10 ft. for the 8 in. arms. The vessel's flanges to which the arms are to be connected must be spaced at least 3 ft. 6 in. apart and be vertical and parallel to the vessel's side. The vessel's flange should be no more than 3 ft. from the last permanent support and it should be attached to that support.

Before a vessel arrives at the dock, vessel personnel are advised of the size of flanges needed for connection to the loading arms or hoses.

Dock Communications: The Baton Rouge dock is equipped with a positive ship-to-terminal radio communications system. On arrival vessel will be provided with a radio for which a signed receipt is required. The radio must be monitored by the English-speaking person in charge at all times. The ship's personnel will be instructed in the proper use of these radios at the time of receipt. If these radios are not returned in good condition, a charge of $2,000 will be levied against the vessel.

Each berthman is equipped with a portable radio on the same frequency as the radio provided to the ship. This will be the primary means of communication.

The main control centre for the entire dock is equipped with telephones, a radio on the same frequency as the berthman and an AM/FM marine radio with Channels 9, 16, 18 and 22.

Bunkers and Fresh Water: Bunker C, diesel and fresh water are available.

Ballast Facilities: Ballast facilities are limited to 20,000 barrels.

DENSITY: No tide – fresh water at all times.

FRESH WATER: At public docks. At Exxon, water available for flat fee, presently $300. Ship's crew to make water connections.

FUEL: All grades subject inquiry. Barging essential.

No fuel available at Exxon.

FIRE PRECAUTIONS: Usual fire lines and sprinkler systems. Fireboat "Exxon Bayou State" on station.

Ship's fire plan should be available at gangway.

GANGWAY/DECK WATCHMEN: Only if Master requires.

OPENING/CLOSING HATCHES: Depending on terms of charter, usually by ship's crew.

CUSTOMS ALLOWANCES: Tobacco, each crew member allowed 1 carton cigarettes. Master allowed reasonable quantity. Wine and/or Spirit, each crew member allowed 1 bottle each of wine and spirits. Master allowed reasonable quantity.

CARGO GEAR: Safety Certificate required for ship's gear.

IDENTIFICATION CARDS: Usual Passports.

CONSULS: Norwegian only, all other consuls at New Orleans – 85 miles distant.

REPAIRS: All types of deck and engine repairs may be carried out.

At Exxon, no repairs allowed without permission from terminal. Vessels shall be able to get underway as soon as possible.

SURVEYORS: *Testing, Sampling, Weighing and Cargo Certification:*

Caleb Brett USA Inc., P.O.Box 46039, Baton Rouge 70895. Tel: 927-0020.

Chas. Martin, Inspectors of Petroleum, 2835 Plank Rd., Baton Rouge. Tel: 355-8833.

Pittsburgh Testing Lab., 2166 Monroe Ave., Baton Rouge. Tel: 355-2641.

Saybolt, E. W. Co., 10023 Mammoth Avenue, Baton Rouge. Tel: 925-1231.

Transport Management & Consulting, Inc., 4137 Sherwood Forest Blvd., Suite 110, Baton Rouge 70816. Tel: 293-3025.

USDA, FGIS, Port Allen. Tel: 389-0373.

USDA, FGIS Field Office, Lutcher. Tel: 536-2811.

Marine Surveyors:

Jorgensen, Capt., N.E. 865 E. Riveroaks, Baton Rouge. Tel: 926-6828.

McAnally Engineering Co., Box 66012, Baton Rouge 70809. Tel: 766-8992.

National Cargo Bureau, 7414 Perkins Rd., Suite 180, Baton Rouge. Tel: 769-6353.

REPATRIATION: Crew repatriation and crew changes may be made.

AIRPORT: 6 miles to Ryan Airport, served by regular airlines.

TIME: Local time is Central Standard Time – GMT minus 6 hours; from April through October local time is CS daylight saving time, GMT minus 5 hours.

POLICE/AMBULANCE/FIRE: Tel. Nos. Public Dock: Police 343 – 9234; Ambulance 343 – 6691; Fire 343 – 6691.

TELEPHONES: No arrangements for placing telephones aboard.

SERVICES: Because of restricted river width inadvisable adjust compasses. This is usually accomplished below New Orleans where river of sufficient width to permit large vessels to swing. 3 firms engaged in tank cleaning, namely, Watson Marine, Robin Hood Fleeting and Port Allen Marine Cleaning Plant. Slop facilities available at the Exxon Oil & Refining Co. dock.

SHIP SUPPLY SERVICE: *Launch Service:*

Capital Marine Supply, Inc., Box 3018, Baton Rouge. Tel: 343-8379.

Tri-G Marine Supply, Inc., Box 3808, Baton Rouge. Tel: 344-7664.

SHORE LEAVE: Shore leave permitted except when detained aboard by U.S. Immigration.

DELAYS: Normally no delays at Exxon Oil docks in berthing except when vessel's tanks unsuitable for loading. Normally no delay at city wharf.

Vessels loading Isopropanol Alchohol must have tanks approved before berthing.

NOTICE: To all Masters from a Ship's Agent:

Please be advised that the Agent will need a copy of the Notice of Readiness and Dry Tank Certificate. The Agent will pick these two certificates up from the Master on sailing of vessel. These are needed by the Agents to send out to the Owners and/or Charterers along with the other documents. We have been having problems receiving these documents from the terminal and/or Cargo Surveyor. The terminal will require, on the vessel's arrival at the berth, one copy of the Bill of Lading and/or Customs Manifest. It would be appreciated if you could make an additional copy of these documents when they are prepared by your vessel.

GENERAL: Tankers in ballast advised of drift wood conditions in river and ballast their vessels accordingly so as to avoid propeller damage.

AUTHORITY: Greater Baton Rouge Port Commission, P.O.Box 380, Port Allen, Louisiana 70767-0380. *Tel:* (504) 387-4207. *FAX:* (504) 387-1534. *Contact:* Gary C. Pruitt, Executive Director. Doris J. Bautch, Director of Trade Development. Richard Savoy, Director of Terminal operations.

BAYTOWN, Texas: 29.44 N. 95.01 W. (See Plan)

DOCUMENTS, PILOTAGE, etc.: Refer to "Houston".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO/VHF: Exxon Dock "KNQ-Baytown" on VHF Channel 19.

TUGS: Available if required. Tel: 713-928-5406.

BERTHING: All berths at Baytown 39 ft. (Fresh water). Agent should verify safe arrival/departure draft with Exxon Docks prior vessel arrival.

STEVEDORES: Available. Call L. S. Mitchell Co. Tel: 713-426-4575.

MEDICAL: All medical assistance available.

TANKERS: *Caution:* Channel traffic which is passing close by could cause ships to move away from the berths which could result in damage to the hard arms. It is essential that more than usual attention be given to maintaining the ship in position alongside. It is recommended that several crew members be specifically assigned to tend the mooring lines and winches.

Under no circumstances should mooring lines be slack.

The terminal prefers the use of self-stowing winches with mooring wires.

Berthing: Tugs of up to 3,200 h.p. and bollard pull of up to 46 tons are available. Tugs use the "alongside" method. Tugs normally use a head line and quarter line; however, larger tugs will usually use 2 head lines.

By pre-planning discussions with the Pilot, Masters are to assure themselves that a sufficient number of tugs, each with sufficient horsepower, are ordered well in advance by the Pilot.

Depending on the size and draft of the vessel, 2 – 4 tugs will meet the vessel in the vicinity of the tunnel about 1 mile below Baytown and escort the vessel into the turning area. Vessels scheduled to Berth No. 1 will moor starboard side to, bow up stream. Vessels at Berth No. 2 will be turned about and moor port side to. Vessels scheduled to Berths No. 3, 4, 5 or 6 will be turned and backed into the berth, bow out. There are virtually no exceptions to these mooring rules.

Tidal height, current speed and direction are monitored by the Baytown Dock Co-ordinator. This information may be obtained prior to berthing by calling KNQ.

This information is particularly important when turning ship and backing into Berth No. 5.

Exxon Berth No. 1: Vessels assigned to this berth must dock starboard side to, bow upstream. Winch mounted wires are preferred, however, mooring ropes are acceptable. Additional lines will be required for vessels not equipped with all wire moorings. Vessels in this berth are passed close to by ships transitting the Ship Channel, therefore, all moorings must be well-tended and tight.

Products handled at this berth include gasolines, distillates, lube oils, and various petro-chemicals. All products are handled through 4 in., 6 in. or 8 in. hoses. All hose connections are bolted-type connections. Maximum pressure that all products are pumped at is 100 p.s.i. Ballast and slops are handled at this terminal. Maximum pumping pressure for ballast and slops is 100 p.s.i.

Exxon Berth No. 2: Bow to manifold should not exceed 320 ft. and stern to manifold is limited to 400 ft. due to berth overhang and interface with Berth No. 3.

Vessels assigned to this berth must dock port side to, bow downstream. Winch mounted wires are preferred, however, ropes are acceptable, though vessels with ropes will be required to use more lines than wire-equipped ships. Vessels in this berth are passed close to by ships transitting the Houston Ship Channel, therefore, all moorings must be tended and kept tight to prevent breakout or damage to hoses.

Products handled at this berth include gasolines, distillates, lube oils, and various petro-chemicals. All products are handled through 4 in., 6 in. or 8 in. hoses. All hose connections are bolted-type connections. Maximum pressure that all products are pumped at is 100 p.s.i. Ballast and slops are handled at this terminal. Maximum pumping pressure for ballast and slops is 100 p.s.i.

Exxon Berths No. 3 and 4: Vessels assigned to these berths are backed alongside the berth and then pushed by tugs against the dock. Extreme care should be taken not to approach the berth at too great an angle, and every effort should be made to manoeuvre into position prior to making contact with the breasting works. 2 or more tugs are required depending on vessel size and weather conditions.

Vessels always manoeuvre stern first into the slip utilising the turning area adjacent to the docks. Vessels are moored starboard side to Berth No. 3 and port side to Berth No. 4.

Winch mounted wires are preferred, but ropes are acceptable. Usually the spring lines are taken first followed by the stern then bow moorings.

Berthing of vessels at Berth No. 4 is predicated by the presence of a ship or tows at adjacent Berth No. 5. Terminal regulations are based upon the sum of the beam of vessels in adjacent berths to allow sufficient room for manoeuvring.

Products handled at Berth Nos. 3 and 4 include motor fuels, aviation fuel, distillates, solvents, petro-chemicals and bunkers. All products are transferred through 6 in. and 8 in. hoses, and 12 in. arms. Maximum pumping pressure for all products is 125 p.s.i. Ballast and slops are handled at both berths.

Exxon Berths No. 5 and 6: Vessels always manoeuvre stern first into the berth, utilising the turning area adjacement to the berth. 3 or 4 tugs are usually used to assist the vessel, depending on vessel size and weather conditions. Vessels are moored starboard side to Berth No. 5 and port side to Berth No. 6.

Docking: There is a large round mooring dolphin at the head of the finger-pier forming Berth Nos. 5 and 6 where loaded 80,000 – 90,000 d.w.t. vessels normally berth.

Although this dolphin has a fender system its sole purpose is to provide mooring points. It is not suitable to land on nor can it be used as a turning dolphin. On several occasions ships have come into contact with this structure resulting in both hull damage and damage to structure itself.

To prevent recurrence of such incidents it is necessary that the Master:

1. Before the berth approach is made reviews with the Pilot the intended docking manoeuvres which provide the widest possible berth to the mooring dolphin.

2. Monitors the docking manoeuvre carefully and plans corrective action in a timely fashion so that ship's contact with the dolphin will be prevented.

Tug Assistance: 4 tugs of minimum 3,000 h.p. each are to be used for 80,000 – 90,000 d.w.t. vessels. The tugs making fast on the outward side – not facing the berth – should use 2 headlines and a quarterline.

The Master should include these tug requirements in his first ETA message to the port Agent and ask for confirmation that such arrangements have been made.

Tidal Information: Having knowledge of tidal conditions in the Baytown area is of particular importance with regard to the docking manoeuvre.

Information on the velocity and direction of the current should be obtained from the Pilot.

Water level information should be obtained from the Baytown Dock Co-ordinator by VHF radio.

DENSITY: Mainly fresh.

FRESH WATER: Available ex-wharf.

FUEL: Bunker C and MDO only, no intermediate fuels. No bunkering by barge.

REPAIRS: Should be cleared with terminal before vessel arrives at dock.

GANGWAY/DECK WATCHMEN: Required only if crew detained by Immigration.

CUSTOMS ALLOWANCES: Each man 300 cigarettes or 100 cigars or 1 lb. tobacco; 1 quart wine/spirits.

STORING: Permissible with advance notice/approval.

SHORE LEAVE: No restrictions. Terminal bus transports crew from dock to refinery entrance.

AUTHORITY: Port of Houston Authority.

Operator: Exxon Company, U.S.A., P.O.Box 3950, Baytown, Texas 77520. *Tel:* 425-4452, 425-4453. *Telex:* 510-891-7885 Exxon Dock-Bton. *Contact:* Dock Co-ordinator.

Secondary Contact: Exxon Shipping Company, P.O.Box 3251, Baytown, Texas 77520. *Tel:* 713-427-7370. *Contact:* Transportation Co-ordinator.

BEAUMONT, Texas: 30.05 N. 94.05 W. (See Plan)

LOCATION: On Neches River, above Sabine Lake.

DOCUMENTS, PILOTAGE, RADIO, etc., Refer to "Port Arthur".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Meet vessel in Neches River before arriving at berth. Normally 2 tugs used for docking, 1 for undocking.

BERTHING:

Wharf	*Length* (ft.)	*Depth* (ft.)	*Remarks*
1	580	30	
2, 3 and 4	1,373	38	Ro-Ro Ramp
5, 6 and 7	1,483	36	
Harbour Island			
Marine Terminal	1,200	40	Ro-Ro Ramp
Carroll St. Wharf	765	40	
Grain Wharf	543	40	3.5 million bushel grain elevator Loading Rate: 1,875 t.p.h. (grain); 1,100 t.p.h. (soya).

CARGO HANDLING FACILITIES: For container ships, conventional break-bulk ships, heavy lift ships or side-loading Ro-Ro ships, the Harbour Island Marine Terminal – 1,200 linear ft. berthing space; 120,000 sq.ft. transit shed; 93 ft. wide apron facing transit shed; 240,000 sq.ft. open wharf space; 8 acres heavy duty hard stand adjacent to open wharf, backed up by 25 more acres for vehicle marshalling; twin marginal rail tracks for full length of wharf; 220 ton capacity truck-mounted mobile crane for containers and heavy lifts; 40 ton forklift machine with, expandable spreaders for container handling and 3-high container stacking or, blades for heavy cargo; 600 ft. undercover working track for all-weather rail car unloading inside transit shed; 200 linear ft. of truck height unloading platform along rear of open wharf; 20 ft. high × 18 ft. wide shed doors for high wide loads and entry for all-weather truck unloading or container stuffing; 40 ft. of water alongside; 1,200 lbs. per sq. ft. deck load capacity.

For stern loading Ro-Ro vessels, wharves 2 and 3 – 758 ft. in length with 75 ft. wide Ro-Ro platform at one end of the wharf. Ro-Ro platform deck elevation +15.89 ft. above mean low Gulf. (12 ft. 7 in. above average tide) 36 ft. of water alongside wharf; convenient roadway access to Ro-Ro platform from 15 acre storage area adjacent to the wharf; double marginal rail tracks for full length of wharf; 60 ton capacity gantry crane travels 700 ft. along face of wharf; 120,000 sq. ft. open wharf space; wharves 2 and 3 may also be used as an alternate to Harbour Island Wharf for containers, conventional break bulk, heavy lift or side loading Ro-Ro vessels. Covered wharf 4 is adjacent, extending total wharf length to 1,300 ft. and offering 57,000 sq. ft. covered area.

For security of cargo, all Port of Beaumont wharves are entirely within a chain link, barbed wire topped security fence, and all vehicular access is through the port's main gate, guarded 24 hours a day. The port is an approved outport of the Military Traffic Management Command, Eastern Areas, U.S. Army, is heavily used for shipments of military material, equipment and supplies, and is subjected to regular security inspections by Army personnel who have given the port high ratings.

For security of small, high value items that are considered especially subject to possible pilferage, the port will permit fencing and shelving o a limited designated security area within a transit shed.

For heavy lift requirements beyond the capacity of the 60 ton gantry (at Wharf No. 2 & 3) or the 220 ton mobile crane (at Harbour Island Marine Terminal), a 500 ton capacity derrick barge is available.

STEVEDORES: *Public Wharves:* Normal working hours 0800/1200 and 1300/1700 Monday to Friday.

MEDICAL: All facilities available.

TANKERS: *Amoco:* Terminal is located on the Neches River Channel 44 miles from the sea buoy. The controlling depth for the channel and turning basin is 40 ft. while the controlling depth for the North and South berth is 35 ft. The water is fresh (density 1000). The maximum size vessel normally received at the terminal is approximately 28,000 d.w.t. The limited strength of the docks combined with passing traffic should be noted. Vessels dock and undock day and night. A minimum of 2 tugs are used to dock and undock vessels. Pilings are not to be used as turning points. Vessels in ballast are turned prior to berthing starboard side to. Loaded vessels are berthed port side to and turned after discharge. Judicious use of tugs during turning manoeuvres is essential as vessels have a tendency to "overshoot" the pier when turning. Several mooring dolphins have been knocked out of position. Short wire springs are accepted. All other lines must be rope due to the weak pile clusters. Docks do not have winches nor do they supply a gangway.

Fuel and water are not available.

The terminal is fenced and guarded.

Pollution Control: Consists of 2,000 ft. of spill booms and a launch. Amoco is a member of Neches River Oil Control Committee.

Fire Protection includes a foam system with a tank on the dock. Water monitors and hoses are kept in readiness.

Mobil: Terminal is located on the Neches River Channel 56 miles from the sea buoy. The controlling depth for the channel and turning basin is 40 ft. The water at the terminal is brackish. The maximum size vessel normally received at the terminal is 50,000 d.w.t. Depth alongside 36 ft. The berths are subject to passing traffic and Master's are advised to keep mooring lines tight. No repair work may be done while transferring cargo at this port.

While berthing, a minimum of 2 tugs are used. 1 tug is needed when unberthing. 3 hours advance notice is required when ordering tugs.

Vessels normally proceed to the berth directly from the channel, prior communications establish whether ship will berth head-up or head-down the channel depending upon the LOA and hose connections. Ships can berth starboard side to; however, port is preferred. A normal complement of mooring lines is used. Wire lines are accepted with nylon pendants recommended. A mooring contractor is employed. The vertical range of hoses is 40 ft., 50 ft., if vessel uses its own derrick.

Fuel and fresh water are available at the Mobil Terminal.

The terminal is fenced and guarded.

Pollution Control consists of 1,500 ft. of spill boom and a launch. Terminal has vacuum trucks.

Fire protection is provided by a terminal fire brigade. Monitors are situated on the shore, foam and water along with dry chemical are located on the dock. Fire hose is on reels, water is under pressure and spray nozzles are located under the wharf.

Also see "Smith's Bluff".

DENSITY: Fresh water.

FRESH WATER: Available at berths, or by barge.

FUEL: Available ex-wharf at Mobil Terminal. All grades available by barge to other locations.

CONSULS: Nearest at Houston.

REPAIRS, DRY DOCKS: Beaumont's Bethlehem Shipyard offers all types ship repair or reconditioning – plus vessel conversion and jumboizing. 2 side-launching ways over 800 ft. each. Floating dry dock with extreme length of 648 ft.; length on bottom 576 ft.; breadth at entrance, 87 ft.; and lifting capacity 17,500 tons. Active in design and construction of mobile drilling platforms and oil and gas production and storage facilities for service offshore.

GANGWAY/DECK WATCHMEN: Not required unless crewmen detained by Immigration.

CUSTOMS ALLOWANCES: 300 cigarettes and 1 quart wine/spirits to each man.

HOLIDAYS: Longshore holidays are: New Year's Day: Martin Luther King's Birthday (January 15th); Lincoln's Birthday (February 12th); Washington's Birthday; Texas Independence Day (March 3rd); St. Patrick's Day (March 17th); Good Friday; Memorial Day (last Monday in May); Emancipation Day (June 20th); Fourth of July; Labour Day; Columbus Day; Veteran's Day (November 11th); Thanksgiving Day; Christmas Day.

IDENTIFICATION CARDS: Foreign crew require only Immigration landing permit.

AUTHORITY: Port of Beaumont, P.O.Drawer 2297, Beaumont, Texas 77704. *Tel:* (409) 835-5367. *Telex:* 779486. *Cables:* Portbomont. *Contact:* Billy G. Masters, Port Director.

BELLINGHAM, (Including Cherry Point), Washington: 48.45 N. 122.31 W. (See Plan

DOCUMENTS: Refer to "Tacoma".

PILOTAGE: Compulsory.

ANCHORAGE: Deep water available, but poor holding ground.

RESTRICTIONS: Channel depth 32 ft.

HEALTH: See "Health: All Ports" before first U.S.A. Port (Alban

Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany

TUGS: Available, join vessel in Bellingham Bay.

BERTHING: North Terminal, Berths No. 1 & 2, length 1,400 ft., depth alongside 32 ft. 05 in. MLLW. Berth No. 3, length 400 ft., depth alongside 25 ft. MLLW. Georgia Pacific Dock, Berthing length 600 ft., depth alongside 28 ft. MLLW. Ro-Ro facilities available within the port.
CRANES: 1 × 50 ton floating crane.
STEVEDORES: 8 local gangs. Additional gangs imported if required.
MEDICAL: All medical facilities available. 2 local hospitals.
TANKERS: Cherry Point: 48° 52′ N., 122° 30′ W. 3 oil jetties.
Arco Jetty: Depth 70 ft. Intalco Jetty: Depth 37.5 ft. Mobil Jetty: Depth 43 ft.
Deadweight limit in Puget Sound is 125,000 tons.
DENSITY: Salt water.
FRESH WATER: Available at all wharves.
FUEL: Available. Barge delivery only.
REPAIRS/DRY DOCKS: *Fairhaven Terminal:* Home to Maritime Contractors, Inc., large vessels repair and the Port's 2,800 ton capacity floating dry dock, which can accommodate vessels up to 116 m. length and 18 m. beam.
GANGWAY/DECK WATCHMEN: Required only if detainees aboard.
CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.
AIRPORT: 3 miles from the city.
HOLIDAYS: See "Tacoma".
TELEPHONES: Available.
AUTHORITY: Port of Bellingham, P.O.Box 1737, 625 Cornwall Avenue, Bellingham, Washington 98227-1737. *Tel:* (206) 676-2500. *FAX:* (206) 671-6411. *Contact:* D. C. Fleming, Executive Director.

BENICIA, California: 38.03 N. 122.10 W. **(See Plan)**

DOCUMENTS: Health and all General Information: Refer to "San Francisco".
PILOTAGE: Port located about 25 miles above Golden Gate Bridge. River Pilot joins at San Francisco, using VHF for traffic information. Passage includes passing under 2 bridges, Carquinez Strait Bridge having the least clearance, with 146 ft. (HW) and 151 ft. (LW) (using North Channel). River passage is timed to arrive at Benicia at the first of ebb tide; this is approximately 2.5 hours after HW at Fort Point (Golden Gate).
ANCHORAGE: At San Francisco.
RESTRICTIONS: Tankers must lighten to 36 ft. fresh water draft. This is done at No. 7 Anchorage, 1.5 miles East of Alcatraz Island. This cargo will later be pumped back to the tanker as barges cannot overcome shore back pressure. Turning basin off the berths, radius 1,800 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to San Francisco Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 1 small tug assists berthing. Only 1 normally required for unberthing.
BERTHING: Continuous wharf 2,404 ft. long with berth for 3 vessels. The West berth is used for the loading of petroleum products, and the centre and East berths are equipped for handling general and bulk cargoes. East of this facility is another berth that will accommodate one tanker for discharge of crude oil (Exxon), depth alongside – 38 ft.
MOORINGS: 2 head wires, 4 breasts and 2 springs forward. This is necessary because of current off the bank during ebb tide. 2 stern lines, 2 breast lines and 2 springs aft.
BULK HANDLING FACILITIES: Waterside silos' capacity 26,000 tons with loading conveyor belt capacity 1,000 t.p.h.
TANKERS: Crude oil discharge through 2×12 in. Chicksan arms and 36 in. shoreline, 2.5 miles long. Shore tanks are situated 164 ft. above sea level, initial back pressure 65/70 p.s.i.
FRESH WATER: Available from shore lines.
FUEL: Can only be delivered by barge. Averate rate 300 t.p.h.
DEVELOPMENTS: Current plans call for development of a complete container terminal.
AUTHORITY: Benicia Port Terminal Company, P.O.Box 315, Benicia, California 94510. *Tel:* (707) 745 – 2394. *FAX:* (707) 746-1485. *Contact:* J. A. Gaidsick, Vice-President.

BOCA GRANDE, Florida: 26.43 N. 82.15 W. **(See Plan)**

LOCATION: On the Eastern side of the Southern end of Gasparilla Island, about 60 miles South of Tampa Bay.
DOCUMENTS: See "Tampa".
Government Officials must travel from Tampa to Boca Grande at vessel's expense.
PILOTAGE: Compulsory for all foreign-going merchant vessels. The Pilot boards vessel near the sea buoy. Pilotage available 24 hours a day.
Request should be made to ship's Agents via Tampa Marine Operator. VHF Channels 16, 12 and 13.
ANCHORAGES: Good holding ground near the sea buoy (Lat. 26° 39.8′ N., Long. 82° 19.6′ W.)
APPROACHES: The Belcher Oil tanks are clearly indicated on the radar at approximately 25 miles distance.
RESTRICTIONS: The channel is less than 300 ft. wide in some places. Project depth 32 ft. at MLW. The traffic is one way and vessels enter only when the stream is half strength or less. Strong Westerly winds may cause a swell which prevents vessels using the channel.
MAX. SIZE: Beam: 80 ft. with 24 ft. max. distance from outside ship's hull to inside hatch coaming.
Draft: 28 ft. recommended by Pilots. The channel is 30 ft. deep at MLW.
Length: 700 ft. should be a maximum.
HEALTH: Same procedure as for any other U.S. port.
A U.S. Public Health physician is located on the island.
RADIO: Tampa Radio – WPD.
VHF: Pilots on VHF Channels 16, 12 and 13. U.S. Coast Guard on Channel 16.
TUGS: A small tug for light towing operations is available.
BERTHING: An oil handling berth with 28 ft. depth is located close Southward of the phosphate pier.
TIDES: Approximately 2 ft. variation.
TANKERS: *Belcher Oil:* Depth 28 ft.
Vessels enter and berth only when currrent is at half strength or less. The strength of the current has been reported to reach 4 knots. The current generally flows in 030°–210° direction, although the flood tide varies in direction. The pier face lies in a 060°–240° direction. A vessel uses an anchor to swing around and then to hold its head up into the current while mooring lines are run out to mooring buoys and the breasting cells. 2 mooring buoys forward for headlines and 2 mooring buoys aft for stern lines are used. A total of 14 mooring lines are required to safely tie up. Wires are permitted as spring lines only. Lines must be carefully tended and maintained in a tight condition with vessel snug alongside at all times.
Also see "Berthing".
DENSITY: Salt water.
FRESH WATER: Available.
FUEL: No local facilities. Prior arrangements with ample notice must be made via the ship's Agent at Tampa.
CONSULS: See "Tampa".
REPAIRS: No local facilities. To be arranged via Agents with ample notice.
SURVEYORS: The nearest Lloyds' office is at Jacksonville. American Bureau available from Tampa.
STORES AND PROVISIONS: No facilities available for normal ship chandlering. Prior arrangements should be made via Tampa.
GENERAL: All agents are based at Tampa, about 100 miles by road.
AUTHORITY: Robert W. Johnson, Harbour Master. P.O.Box 274, Boca Grande, Fl. 33921. *Tel:* (813) 964-2348. *FAX:* (813) 964-2245.

BOSTON, Massachusetts: 42.21 N. 71.05 W. **(See Plan)**

DOCUMENTS:

- 3 copies Cargo Manifest (Form 1302), 2 copies showing all cargo on board, and 1 copy showing only cargo for this port.
- 3 copies Crew Manifest (Form 1304).
- 3 copies Stores List (Form 1303).
- 3 copies Passenger List (Form I-418).
- 3 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register, Safety Equipment Certificate and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States Port:

- General Declaration (Form 1301).
- Health Pratique.
- Master's Oath (Customs Form 1300).
- All foreign clearances.
- Certificate of Financial Responsibility (Oil Pollution).
- U.S. Certificates of payment of tonnage tax (Customs Form 1002).
- Certified Crew List.

PILOTAGE: Pilotage is compulsory for all foreign vessels, with few exceptions, and for United States vessels under register in foreign trade. It is optional for coastwise vessels which have on board a Pilot licensed by the Federal United States government for these waters.
Pilot boats meet vessels within sight of Boston Lighted Horn Buoy B. During Winter, with a Northwesterly wind, pilot boats may meet vessels to the Northwestward of Boston Approach Light Buoy BG. Pilot boats often land or pick up Pilots at the town wharf at Nahant Harbour.
Both the 70 ft. (21.3 m.) "Boston Pilot" and the 52 ft. (15.8 m.) "Thomas Knox" have black hulls with the word "Pilot" in black letters on either side of the white superstructure. Both are equipped with radar and maintain a 24 hour radio watch on VHF Channel 16 and a 0700 to 1800 hrs. watch on VHF Channel 11.
Vessels are asked to give a 4 hour advance notice of their time of arrival. Pilots for Weymouth, Quincy, Lynn and Saugus are obtained from the Boston pilot boat. Pilots can be notified by radio, telegraph or by radiotelephone through the Boston Marine Operator.
Boston Pilots: Pier 1, Bremen Street, East Boston, MA. 02128. Tel: (617) 569-4500. Cable: BOSPILOT.
ANCHORAGES:
ANCHORAGE No. 1. *Upper Harbour Anchorage:* Steam and motor vessels permitted to anchor in this basin anchor within the following area: S.E. of a line bearing 205° True from N.E. corner of Boston and Albany Pier No. 5, East Boston; N.E. of a line bearing 122° True from S.E. corner of Lewis Wharf, North Pier; S.W. of a line bearing 292° True from N.E. corner of Southernmost Airport Approach Pier; N.W. of a line bearing 025° True from Buoy No. 12, Fl.R.6 sec.

ANCHORAGE No. 2. *President Roads Anchorage* (40 ft. anchorage): All vessels anchoring in this basin anchor within an area beginning at a point bearing 237°, 522 yards from Deer Island Light; thence to a point bearing 254°, 2,280 yards from Deer Island Light; thence to a point bearing 261°, 2,290 yards from Deer Island Light; thence to a point bearing 279°, 2,438 yards from Deer Island Light; thence to a point bearing 319°, 933 yards from Deer Island Light; thence to a point bearing 319°, 666 yards from Deer Island Light; and thence to point of beginning. *President Roads Anchorage* (35 ft. anchorage): All vessels anchoring in this basin anchor within an area beginning at a point bearing 256°, 2,603 yards from Deer Island Light; thence to a point bearing 258°, 3,315 yards from Deer Island Light; thence to a point bearing 264°, 3,967 yards from Deer Island Light; thence to a point bearing 261°, 2,290 yards from Deer Island Light; and thence to point of beginning.

ANCHORAGE No. 3. *Nantasket Roads Anchorage:* Vessels anchoring in this anchorage basin anchor within following area: Westerly of a line bearing 143° from wharf at Gallups Island to Bell Buoy No. 2, S.W. of Georges Island; Northerly of a line bearing 260° from Bell Buoy No. 2, Georges Island, to the Northerly end of Rainsford Island; Northerly of a line bearing 273° from the Northerly end of Rainsford Island to Bass Point, Long Island; Southerly of a line bearing 270° from the wharf at Gallups Island to Long Island.

ANCHORAGE No. 5. *Peddocks Island and Explosive Anchorage:* Vessels anchoring in this anchorage basin anchor within following area; S.W. of a line bearing 122° True from the Easterly end of Rainsford Island to the N.E. end of Rainsford Island to the N.E. end of Peddocks Island, N.E. of a line bearing 165° True from the Westerly end of Rainsford Island to the S.E. end of Peddocks Island.

RESTRICTIONS: There are 3 main entrance channels from sea to President Roads.

Broad Sound North Channel from Broad Sound to President Roads from N.E. Dredged 35 ft. deep and 1,500 ft. wide and is deepened to 40 ft. in a width of 900 ft. to 1,100 ft. It is well marked by lighted buoys.

Broad Sound South Channel from Broad Sound S.W. and Westerly to President Roads. Dredged 30 ft. deep and 1,200 ft. wide. This channel is well marked by buoys and ranges but most aids to navigation are not lighted.

The Narrows is channel leading into Boston Harbour from S.E. between Boston Lighthouse and Lovells Island on the N.E. and Point Allerton, Georges Island and Gallups Island on S.W. Depth is 27 ft. Width is generally 1,000 ft. except in a section between Narrows Light and Georges Island where shoaling on N.E side limits it to 700 ft. Channel is well marked.

The Main Ship Channel of Boston Harbour extends from President Roads to the mouths of the Chelsea and Mystic Rivers and to Charlestown Bridge on the Charles River. Channel has been dredged 35 ft. deep and 1,200 ft. wide to the inner end where widths decrease near the river mouths. It has been deepened to 40 ft. for 600 ft. width from President Roads to the mouth of the Mystic River, with a widening to 1,200 ft. at the bend just Northerly of Commonwealth Pier No. 5, South Boston.

Charles River is approach by water to Cambridge and Watertown. About 0.5 mile above the lower bridge there is a dam with a lock 45 ft. by 350 ft. with depth of 17 ft. over the lower sill. Depths above dam decrease gradually to 9 ft., basin level, at head of navigation.

Mystic River is approach by water to Everett, Malden and Medford. Controlling depths are 35 ft., from Mystic River bridge to approximately 1 mile above, thence 20 ft. from the 35 ft. channel to 800 ft. above the Malden Bridge to a point abreast Monsanto Chemical Company plant.

Chelsea River is approach to City of Revere. Channel from entrance to a point opposite the Belcher Oil Co. Terminal has a controlling depth of 35 ft.

Weymouth Fore River is approach by water to Quincy and Weymouth. Controlling depth is 30 ft. to Fore River Bridge. Controlling depth for a distance of 2,800 ft. above Fore River Bridge is 30 ft.

Town River extends N.W. from Weymouth Fore River at Quincy Point. River has a controlling depth of 34 ft. from deep water in Weymouth Fore River to a point opposite the Quincy Oil Co. Terminal. Opposite Quincy Oil Co. Terminal there is a turning basin 34 ft. deep, 400 ft. wide and 1,000 ft. long.

MAX. SIZE: The primary entrance to Boston Harbour is via the North Channel and President Roads. Controlling depth is 35 ft. MLW. Average rise of the tide in Boston is 9.5 ft.

Generally speaking, vessels drawing 40 ft. are taken at the top of the tide to Belcher Oil Terminal and Exxon only. Vessels going to berths in the Mystic River above the Mystic River Bridge are limited by the bridge's vertical clearance of 135 ft. MHW.

Vessels consigned to berths in the Chelsea Creek are limited to a length of 661 ft., beam of 90.5 ft. and draft of 36 ft. high water docking. Furthermore, vessels which exceed 630.5 ft. length and 85.5 ft. beam going above the Chelsea Street Bridge are restricted to daylight docking. Daylight sailing is required from the berths above the McArdle Bridge if the vessel is over 585 ft. long.

As a rule, vessels are docked bow in at the Chelsea Creek berths. If docked between the bridges, departure is stern first through the McArdle Bridge. If docked above the Chelsea Street Bridge, then on sailing, the vessel is turned in the basin West of the B.P. and Belcher Terminals.

The controlling depth in the channel leading to Weymouth Fore River is 28 ft. MLW. Vessels with a max. draft of 33 ft. 6 in. will be taken at high water, but it should be noted that docking and undocking in Fore River are daylight operations – between sunrise and sunset – and no vessel longer than 628 ft. will be handled.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: *Advance Notice of Arrival:* 24 hours advance notice of arrival be given. This notice is made to the office of the Captain of the Port – 223-3025.

The information to be provided consists of: Vessel's Agent's name; Vessel's name, type, flag, and call sign; the ETA; Berth; Last port and next port; Dangerous cargo on board. In return the Captain of the Port will assign a consecutive log number to the vessel.

In event the vessel's ETA is changed by more than 24 hours fro first notice, the Captain of the Port should be so notified, identifying th vessel by its assigned log number.

VHF: The following VHF Channels are able:

Coast Guard, Boston pilot boat and shore station: 6, 10, 11, 12, 13 14, 16, 21, 22, 23, 81 and 83.

Distrigas: 16 and 10.

In the event of an emergency, Channel 16 or 13 will be guarded.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Vessels can proceed from the sea to Boston Upper Harbou under own power. Barges usually left by the outside tugs at th anchorage grounds, to be docked later by harbour tugs.

Tugs up to 4,300 h.p. are available at Boston for towing, docking undocking and shifting. Tugs maintain radio communications on VHF Channel 18. Inbound vessels are usually met in the vicinity of Anchorage Areas 1 or 2. Arrangements are usually made in advance through ship's Agents.

BERTHING: There are 114 piers or wharves in the Port of Boston. Many of them have railroad connections. The depths of water available alongside these terminals range up to a maximum of 40 ft. at mean low water. Practically all terminals fronting on main ship channel are in close proximity to storage warehouses, both cold and dry which greatly facilitates transfer of cargo between vessel and warehouse.

Conley Terminal, Castle Island, South Boston:

Operator – Massachusetts Port Authority. Tel. 973-5354.

Type of Pier – Single face. 6 berths 3,705 ft. (Berths No. 11 – 16) Berths No. 12 – 15 handle break bulk general cargoes. Berth No. 11 – containers. Berth No. 16 – automobiles. 294,000 sq.ft. covered storage 4 million sq.ft. open storage (including 32 acres fenced in automobile storage), total 103 acres. 50 ton crane, rail service. Terminal equipped with 2×40 ton gantry cranes and 1 × 30 ton Paceco portal crane.

Depth alongside at MLW – 40 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side Minimum 40 ft. apron.

Products handled – General cargo, containers.

J. F. Moran Container Terminal, Charlestown:

Operator – Massachusetts Port Authority. Tel. 973-5354.

Type of pier – Single face, 1,100 ft. long. 1×45 ton container crane 1×70 ton container crane, 38,000 sq.ft. container stuffing shed, 50 acre container storage area, rail service.

Depth alongside at MLW – 40 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side.

Products handled – Containers.

Boston Army Base, South Boston:

Operator – Port Terminals, Inc. Tel. 542-4500.

Type of Pier – Single face, three sides: South 3,705 ft., East 351 ft North 964 ft., 950,000 sq.ft. covered storage, rail service, 2×27.5 to rail mounted cranes.

Depth alongside at MLW – 35 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side 50 ft. apron incorporates rail lines.

Products handled – General cargo, containers.

Massport Marine Terminal – South Boston:

Owned and operated by: Massport, Maritime Department.

Adjacent to the former South Boston Naval Annex, this termina features a 47 acre (19 ha.) site used for discharge and handling o automobiles, bulk road salt and other commodities; 2,700 ft. (822.96 m. face; 38 ft. (11.58 m.) alongside depth; 16 ft. (4.88 m.) deck height; 75 lb./sq.ft. (340 kg./sq.cm.) load capacity. Railway track connection stevedore equipment available as needed. An estimated 50,00 imported cars processed here yearly. Expansion space is available fo future container facilities and additional cargo storage space.

Black Falcon Cruise Terminal, South Boston:

Operator – Massachusetts Port Authority, Maritime Departme Tel. 330-1500.

Type of Pier – Single face, 600 ft.

Depth alongside at MLW – 32 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side. 20 apron incorporates rail lines.

Used for docking excursion vessels, and occasional passenge vessels.

Pier 1, East Boston: No cargo activity.

Operator – Massachusetts Port Authority. Tel. 567-0331.

Type of Pier – Single face, three sides: East and West 605 f South 390 ft., 196,000 sq.ft. covered storage.

Depth alongside at MLW – 35 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side

Coastal Oil New England, South Boston:

Operator – Coastal Oil New England. Tel. 284-4494.

Type of Pier – Single face.

Depth alongside at MLW – 40 ft.

Normal ship side to dock – Port (bow in).

Line handling boat – required.

Access to vessel (for stores and repairs) – limited, trucks can appro only to within 150 ft. of gangway or ship's side.

Products handled – Avjet, Heating Oil, No. 6 Oil, Molasses.
Size and number of pipe-lines – Numerous – 24 in., 20 in., 16 in., 12 in.
Bbls. per hour discharge capacity – 12,000 to 18,000.
Average distance to storage tanks – 1,000 ft.
Pollution control equipment – 1,600 ft. boom, 16 ft. boat, 300 absorbent pillows, 2,000 gallon pumpout truck.

Atlantic Petroleum, Chelsea:
Operator – Atlantic Petroleum. Tel. 729-3000.
Type of Pier – Timber pile, offshore.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Starboard (bow in).
Line handling boat not required.
Access to vessel (for stores and repairs) – by hand cart only.
Products handled – Heating Oil, No. 6 Oil.
Size and number of pipe-lines – 2 × 8 in.
Bbls. per hour discharge capacity – 6,000 to 8,000.
Storage tanks adjacent to berth.
Pollution control equipment – 1,000 ft. boom, 18 ft. boat, 50 absorbent pillows, 150 gallons Aqua-clene.
Note:– Bow to manifold 370 ft. No wire ropes used to moor vessel.
Vessels require 3 tugs while docking, depending on the deadweight of the vessel. A minimum of 2 tugs are required for undocking. Caution is advised while docking and undocking due to traffic congestion in this area of the channel.

Exxon Company U.S.A., Everett:
Operator – Exxon Company U.S.A. Tel. Marine Department 387-1733, Marketing Terminal 381-2828.
Type of Pier – Timber pile wharf with caissons.
Depth alongside at MLW – 42 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – by rail-mounted hand cart.
Products handled – Asphalt, Chemicals, Diesel Oil, Jet Fuel, LPG, Kerosene, Gasoline, No. 2 and No. 6 Oil.
Size and number of pipe-lines – numerous.
Bbls. per hour discharge capacity – Up to 35,000.
Average distance to storage tanks – 5,000 ft.
Pollution control equipment – 1,500 ft. boom, skiff.
Vessels meet tugs and Docking Master off Castle Island and then proceed up the main channel. Vessels pass under the Mystic Bridge on the approach to the berth and then dock starboard side to. If the vessel is equipped with a bow thruster 2 tugs are required when docking and undocking, otherwise 3 tugs are required. The vessel turns on departure from berth. A gangway is provided by the Terminal.

Distrigas of Massachusetts Corporation, Everett:
Operator – Distrigas of Mass. Corporation. Tel. 381-9444.
Type of Pier – Single face, 165 ft. long, with 900 ft. berthing space with dolphins and use of adjacent wharves. Concrete platform contains 5 Chicksan Marine LNG unloading arms.
Depth alongside at MLW – 36 ft.
Normal ship side to dock – Port (bow out).
Line handling boat is required.
Access to vessel (for stores and repairs) is limited.
Products handled – Liquefied Natural Gas.

Prolerized New England, Everett:
Operator – Prolerized New England Company. Tel. 389-8300.
Type of Pier – Straight face.
Depth alongside at MLW – 36 ft.
Normal ship side to dock – Port (bow out).
Access to vessel (for stores and repairs) – trucks to ship's side, but access may be limited due to vessel's position at conveyor.
Products handled – Ferrous scrap (including Prolerized shredded scrap).
General notes: Pier is equipped with 2×50-ton cranes. Shredded scrap is loaded from fixed conveyor requiring vessel to be shifted as each hatch is served.

U.S. Gypsum, Charlestown:
Operator – U.S. Gypsum Co. Tel. 241-9100.
Type of Pier – Single face. (410 ft.).
Depth alongside at MLW – 27 ft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – access to berth.
Products handled – Gypsum rock from Nova Scotia, carried in company's own vessels, specially fitted and adapted for discharge at this berth. Silo storage 25,000 tons. Open storage 38,000 tons.

Mobil Oil, East Boston:
Operator – Mobil Oil Corporation. Tel. 567-9080.
Type of Pier – Straight face, with centre relieving platform.
Depth alongside at MLW – 32 ft.
Normal ship side to dock – Starboard.
Line handling boat required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Gasoline, Heating Oil.
Size and number of pipe-lines – Various.
Bbls. per hour discharge capacity – 8,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – 950 ft. boom.

Amerada Hess Oil Terminal – East Boston: (No cargo activity).
Owned and operated by: Amerada Hess Corp.
For receiving and shipping petroleum products; 20 ft. (6 m.) face, 296 ft. (90.2 m.) total berthing space with dolphins, 35 ft. (10.67 m.) alongside depth, 13 ft. (3.96 m.) deck height. Pipe-lines extend from wharf to 10 steel storage tanks with total capacity of 595,250 bbls.

Gibbs (B.P.) Oil Company, Revere:
Operator – Gibbs (B.P.) Oil Company. Tel. 289-4201.
Type of Pier – Timber pile, wooden deck.
Depth alongside at MLW – 10 ft. – 35 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – only by hand cart.
Products handled – Heating Oil, Gasoline.
Size and number of pipe-lines – 3×10 in., 2×12 in.
Bbls. per hour discharge capacity – 8,000 per line.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 1,600 ft. boom, 16 ft. boat.
3 tugs are normally used for docking and undocking vessels at this berth. Vessels normally dock starboard side to.

Belcher New England Ship Pier – Revere:
Owned and operated by: Belcher New England, Inc.
Used for receiving and shipping petroleum products, the South side of pier has 600 ft. (182.88 m.) of berthing space; 37 ft. (11.27 m.) LW alongside depth; 15 ft. (4.57 m.) deck height. Pipe-lines extend to storage tanks with 1.25 million barrel capacity.

Coastal Oil New England Inc., Revere:
Operator – Coastal Oil New England Inc. Tel. 284-4494.
Type of Pier – Timber pile, wooden deck.
Depth alongside at MLW – 37 ft.
Normal ship side to dock – Port.
Line handling boat required.
Access to vessel (for stores and repairs) – only by hand cart.
Products handled – Heating Oil, Mogas, Alcohol, No. 6 Oil.
Size and number of pipe-lines – 5×12 in.
Bbls. per hour discharge capacity – 8,000 per line.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 1,600 ft. boom, 16 ft. boat. (Shared with B.P., Arco, Northeast.)
Vessels meet tugs and Docking Master in vicinity of Castle Island. The maximum size vessel which can be safely accommodated at this berth is about 38,000 d.w.t. Vessel normally require 2 tugs when docking and undocking at Union Oil Terminal. Vessels dock starboard side to, and when undocking are turned in the turning basin. Vessels must utilise their own gangway at this berth. Fully loaded vessels are docked or undocked at HW only, day or night.

Gulf Oil Company, Chelsea: (Cumberland Farms)
Operator – Gulf Oil Company. Tel. 884-5980.
Type of Pier – Single face.
Depth alongside at MLW – 36 ft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Heating Oil, Gasoline, Jet Fuel.
Size and number of pipe-lines – 5×12 in.
Bbls. per hour discharge capacity – 8,000 per line.
Average distance to storage tanks – 1,000 ft.
Pollution control equipment – 1,600 ft. boom, 16 ft. boat.
Vessels require 3 tugs when berthing and normally 2 when unberthing. Vessels dock daylight only, normally port side to, and when undocking proceed up river to the turning basin and are turned before proceeding outbound.

Atlantic Petroleum, Chelsea:
Owned and operated by: Atlantic Petroleum Inc.
Used for receiving and shipping petroleum products, bunkering vessels; can accommodate vessels up to 690 ft. (210.3 m.) in length; 33 ft. (10 m.) alongside depth; 14 ft. (4.26 m.) deck height. Pipe-lines extend from wharf to 14 steel storage tanks with total 660,000 barrel capacity.

Coastal Oil New England, Chelsea:
Operator – Coastal Oil New England. Tel. 289-4494.
Type of Pier – Single face.
Depth alongside at MLW – For 575 ft. vessels: 31 ft. fwd., 34 ft. aft. For 624 ft. vessels: 21 ft. fwd., 34 ft. aft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Avjet, Diesel Oil, Gasoline.
Size and number of pipe-lines – 7×12 in.
Bbls. per hour discharge capacity – 5,000 to 10,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – Automatic boom being installed.
3 tugs are normally required for berthing and 2 for unberthing. Vessels require a 300 ft. messenger fore and aft for handling lines. Vessels normally dock port side to. Due to the limited manoeuvring area adjacent to the berth, vessels when unberthing are towed out stern first and then turned in the main channel.

Quincy Oil, Quincy:
Operator – Quincy Oil Company. Tel. 773-2500.
Type of Pier – Timber pile, timber deck, offshore wharf.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – by hand cart only.
Products handled – Gasoline, Heating Oil.
Size and number of pipe-lines – 2×8 in.
Bbls. per hour discharge capacity – 6,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – 800 ft. boom, work boat.
Vessels meet tugs and Docking Master in the vicinity of Nantasket Roads and then proceed up the Weymouth Fore and Town Rivers to the Quincy Terminal.
Vessels should enter Town River at S.W. Extreme caution should be used when turning into Town River because of the narrow channel. Narrow channels demand extreme caution when navigating up to the terminal. Vessels normally berth port side to, and are swung around in the turning basin when unberthing. 3 tugs are required when docking or undocking. Vessels must utilise their own gangways.

Proctor and Gamble, Quincy:

Operator – Proctor and Gamble. Tel. 770-3155.
Type of Pier – T-head with dolphins.
Depth alongside at MLW – 32 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Palm Oil.
Size and number of pipe-lines – Various.
Bbls. per hour discharge capacity – 8,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – shared with Sprague.

C.H. Sprague & Son Co., North Weymouth:

Operator – C.H. Sprague & Son Co. Tel. Terminal 337-2040, Offices (603) 431-1000.
Type of Pier – Timber pile, concrete deck.
Depth alongside at MLW – 35 ft. 06 in.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – No. 6 Oil.
Size and number of pipe-lines – 2×12 in.
Bbls. per hour discharge capacity – 10,000 per line.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 500 ft. boom, 16 ft. boat. (Shared with Mobil.).

Vessels dock and sail during daylight only. 3 tugs are required when berthing and unberthing. Vessels met the tugs and Docking Pilot in the vicinity of Nantasket Roads and then proceed to the manoeuvring area near the berth where the vessels are turned and berthed starboard side to. Vessels must utilise their own gangway at this berth.

Citgo Petroleum Corp., Braintree:

Operator – Citgo Petroleum Corp. Tel. 848-2595.
Type of Pier – 4 cylindrical caissons.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Heating Oil, Gasoline.
Size and number of pipe-lines – 1×10 in., 4×12 in.
Bbls. per hour discharging capacity – 10,000.
Average distance to storage tanks – 2,500 ft.
Pollution Control Equipment – 1,500 ft. boom, work boat.

Vessels meet tugs and Docking Master in the vicinity of Nantasket Roads and then proceed up the Weymouth Fore River, through the Fore River Bridge, and berth starboard side to at the terminal. Vessels dock and undock during daylight hours only. 3 tugs are normally required when docking and undocking. Vessels must utilise their own gangways.

Bulk Cement Piers:

There are 2 berths in Boston used exclusively for the discharge of bulk cement from barges. Both are in the Mystic River.

No. 28: Independent Cement Corp.
No. 33: Blue Circle, Atlantic Cement Company, Inc. Tel: 241-9040.

CRANES: 1×60 ton floating crane and mobile cranes up to 150 tons capacity.

STEVEDORES: Available at various rates.
FRESH WATER: Plentiful supply of excellent water in Boston. It is supplied by terminal at prevailing rates.
FUEL: All grades available in various viscosities. Normally supplied by barge subject to advance notice.

SPECIALISED CARGO HANDLING FACILITIES: Also see "Berthing".

C.H. Sprague.	Weymouth	35

Berthing at all berths normally effected on a rising tide. It is the practice of the port for deep draft vessels to pump part cargo overtide in order to bring vessel to a safe draft by the next Low Water. Berthing at Sprague, North Weymouth is usually starboard side to, which involves swinging vessel.

LNG/LPG: Handled at Distrigas on the Mystic River, Everett.
U.S. Coast Guard Instructions: The following is only part of the instructions. Full copies may be obtained from U.S.C.G. Marine Safety Office, 447 Commercial Street, Boston, MA 02109-1096. Tel: (617) 565-9000.

Foreign flag vessel owners intending to transport liquefied gases in U.S. ports must obtain a Certificate of Compliance from the Coast Guard. The procedures for obtaining a Certificate of Compliance are detailed in 46 CFR 154. Both U.S. and foreign flag vessels must meet essentially the same requirements. Most requirements conform to the IMO Gas Carriers Code, but some construction requirements are more stringent.

PART A – LNG/LPG VESSEL OPERATIONS IN BOSTON HARBOUR

I. NOTIFICATION

The Master of an LNG/LPG vessel notifies COTP Boston 72 hours in advance of arrival at Broad Sound Anchorage. This advance notice of arrival is by message and includes the vessel's Agent in Boston, distance from keel to highest projection, maximum draft, and a statement by the Master to the effect that:

"To the best of my knowledge and belief, there are no known casualties to this vessel or its machinery which might affect her seaworthiness. I further state that all cryogenic handling and detection equipment is in proper operating condition and has been operating for the duration of this passage."

Signed
Master________________

Should any deficiency develop after the 72 hour advance notice is given, another message describing the discrepancy or condition in detail is sent to COTP Boston immediately.

Telex 910-2506309 (Answerback "US CG")

In addition to the certification of equipment, the Master includes the names and qualifications of crew that have changed since the last port visit.

The Vessel Movement Office (VMO) at the U.S. Coast Guard Marine Safety Office, Boston is the contact point for all notifications and requests of the COTP. Upon notification of arrival, the VMO:

a. Initiates an action file including vessel data, messages, letters etc.
b. Reviews the vessel history and communicates any special requirements with the Coast Guard inspectors.
c. Notifies appropriate Coast Guard units.
d. Maintains daily updates of the vessel's estimated time of arrival.
e. Arranges and co-ordinates Coast Guard inspection, escort and monitoring details.
f. Passes any unusual or additional information to interested parties.
g. Obtains a long range weather forecast for the period of transit and transfer and compiles updates as they occur.

One day prior to arrival of the vessel, the VMO:

a. Firms up probable transit time for planning purposes.
b. Prepares and transmits Oporder and marine information broadcast messages, and
c. Notifies other concerned parties of the estimated time of harbour transit and any special requirements affecting harbour transit.

II. ARRIVAL AND ENTRY

U.S. Coast Guard inspectors from MSO Boston board and inspect each vessel prior to its entry into port. The purpose of this inspection is to ensure that the vessel meets the requirements of its certificate and that all cargo control equipment and safety equipment is operative. Vessels will normally anchor in Broad Sound pending inspection.

The vessel's Master must provide safe access for the Coast Guard inspectors. Should sea conditions preclude a safe boarding while anchored, the LNG/LPG vessel may be required to resume manoeuvring and provide a lee. A combination of the vessel's accommodation ladder and pilot ladder is acceptable.

While the vessel is at anchor, a live bridge watch shall be maintained. LNG/LPG vessels arriving at the Port of Boston must maintain a radio guard on VHF-FM Channels 13 (156.65 MHz) and 16 (156.8 MHz). A round of bearings fixing the vessel's position shall be taken and recorded at least hourly, followed by a report if there is a significant change in position or other problem aboard the vessel. The report may be made to COTP Boston by radio via the U.S. Coast Guard Group Boston or via the vessel's agent if timely notification is possible.

An LNG/LPG vessel must have its cryogenic sensing and indicating instrumentation and gas detection system in operation while the vessel is in U.S. waters. The Master of the ship must be prepared to demonstrate that the cryogenic handling and gas detection equipment is in proper working order. The vessel shall have on board a cylinder of properly certified span gas for testing the gas detection system.

In addition to a valid Certificate of Compliance, vessels must have onboard all required ship's documents and an up-to-date set of plans, in English, specifying:

a. Cargo tank arrangement
b. Cargo tank venting arrangement
c. Cargo piping arrangement
d. Capacity plan
e. Firefighting plan
f. Up-to-date cargo system operating and safety procedures.

The vessel may enter the harbour only after the vessel equipment, publications and documents are inspected, confirmed to be in satisfactory condition, and COTP Boston has cleared the vessel for entry.

The U.S. Coast Guard, Captain of the Port must ascertain that crews are qualified to carry out transfer operations safely. On U.S. flag vessels carrying LNG, the Master, Chief Engineer, Chief Mate and First Assistant Engineer must be licensed and certified by the Coast Guard. On vessels other than U.S. flag, a valid Certificate of Compliance issued by the Coast Guard and a valid Certificate of Fitness (issued in compliance with the IMO Gas Carriers Code) is evidence of compliance with specific U.S. equipment requirements and home state requirements for certification.

Crew training standards of the Code (Chapter 18) require that personnel involved in cargo operations be adequately trained. All officers should be trained to deal with emergencies involving cargo leaks, spills or fires. The code also refers to the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers, 1978.

Each officer and rating with specific duties involving cargo and cargo equipment should complete a course of instruction, or undergo onboard training, applicable to his or her duties. As crew members change, the operator must keep the Coast Guard apprised of the new members' training. A company initiated letter or message indicating the completion of an administration approved formal training course will serve as evidence of this training. All crew members should have formal training, or onboard instruction, in the special hazards of LNG and LPG and an awareness of the general safety features of the vessel.

Serious discrepancies found during any boarding or examination which affect the safety of the port must be corrected prior to vessel entry or cargo transfer operations. Examples of serious discrepancies are leaking cargo tanks, inoperative leak detectors or inoperative fire-fighting equipment. Determination to permit or deny port entry or cargo transfer is made by the COTP. In unusual circumstances, however, Commandant (G-MTH) may be requested to advise or furnish a technical representative.

A fully or partially loaded LNG/LPG vessel will always transit the harbour within a moving safety zone. This concept enhances safety by avoiding crossing or passing situations. The LNG/LPG vessel may not enter the main ship channel until clearance is received from COTP Boston and a U.S. Coast Guard escort vessel is in position to begin the escort.

III. LNG/LPG VESSEL TRANSIT MANAGEMENT.

Fully or partially loaded LNG/LPG vessels may transit the harbour only during the hours between sunrise and sunset and then only during periods of adequate visibility.

One hour prior to scheduled LNG/LPG vessel transit, the Vessel Movement Officer assumes the watch in Group Boston Communications Centre, to perform the following duties:

a. Ensure that the tugs and the Coast Guard escort vessel are in position, two emergency towing lines are rigged fore and aft on the LNG vessel within 6 ft. of the water, and the inspectors have found no discrepancies in the condition of the vessel.
b. Contact the LNG/LPG vessel and initiate the transit.
c. Ensure that the Marine Information Broadcast is being properly sent by Group Boston and the escort craft. Keep Group Boston Duty Officer informed of LNG/LPG vessel position as reported by the escort vessel.
d. Notify Logan Airport Control Tower of the LNG/LPG vessel transit when the vessel approaches Deer Island.
e. Monitor Channel 13 VHF-FM and communicate with vessels to ensure no unauthorised vessels get underway in violation of the safety zone.
f. Address all vessel movement questions received via radio and telephone during the transit.
g. Keep the COTP informed of the progress of the evolution.
h. Notify Group Boston Duty Officer when safety broadcast can be terminated.
i. Maintain a logbook with appropriate entries (transit commenced, escort craft and adequate number of tugs on scene, emergency tow lines rigged, names of Boston Pilot and Docking Master onboard, vessel moored etc.).

The Vessel Movement Officer (VMO) can be contacted at the Marine Safety Office (565-9000) or by radio (Channel 13 VHF-FM)

If the visibility falls to less than 2 miles at any point in the transit, the Master shall notify the VMO of the situation and request authorisation to proceed.

When the LNG/LPG vessel enters Boston North Channel inbound, the Master notifies the Vessel Movement Officer via Channel 13 VHF-FM. The VMO will then notify the Chief or Assistant Chief Controller at Logan Airport. The Federal Aviation Administration imposes flight restrictions over the LNG/LPG vessel in keeping with the desire to maintain maximum standards of safety during an LNG/LPG vessel movement.

The vessel's Master shall ensure that calculations are made comparing the air draft of the LNG/LPG vessel to the height of any fixed objects under which it must pass. These calculations are to be made available to the Docking Master as an assurance that the LNG/LPG vessel can safely transit Boston Harbour.

Tugs meet the incoming LNG/LPG vessel at the Eastern end of President Roads and are used as needed during the vessel's transit of Boston Harbour. During the docking and undocking operation the tugs will be strategically positioned consistent with the Master's sound judgement and consultation with the Docking Master. Emergency towing lines must be rigged fore and aft within 6 ft. of the water during transit.

For vessels under 60,000 cu.m. cargo capacity, a minimum of 3 tugs with total of 5,400 shaft horsepower or greater shall attend the needs of the vessel.

Vessels of 60,000 cu.m. or over will be required to use a minimum of 5 tugs. Two of the tugs must be 3,000 h.p. or greater. The remaining 3 tugs must be 1,200 h.p. or greater. Note that the referenced 3 or 5 tugs are minimums. Nothing herein should be construed to overrule the Master's sound judgement in employing additional tugs.

While a fully or partially loaded LNG/LPG vessel is underway in the harbour, all other vessels in the harbour are required to remain moored unless otherwise authorised by the COTP. The COTP has given permission for towing vessels without tow and other vessels under 100 gross tons to transit outside the main ship channel:

IF they establish bridge to bridge radio contact with the LNG/LPG vessel upon their approach and advise the Master of their intent, AND they can safely navigate outside the main ship channel.

Other examples of vessel movements that may be allowed are:

a. A cargo ship requests permission to get underway in the main ship channel and transit Boston Harbour outbound while a LNG/LPG vessel is inbound. Permission may be granted by the COTP for the transit outbound if the cargo ship will not approach within 2 nautical miles ahead or one nautical mile astern of the LNG/LPG vessel.
b. A tankship requests permission to get underway for inbound transit of the harbour at the same time an LNG/LPG vessel is inbound. Permission by the COTP may be given for the tanker to proceed but to remain at least one nautical mile astern of the LNG/LPG vessel.

During an LNG/LPG vessel transit, the maximum allowable speed for any vessel permitted within the moving Safety Zone will be 8 knots. This speed applies to all vessels within the restricted area. At least one Coast Guard escort craft will be present to enforce the safety zone restrictions. Additional craft may be assigned to the escort if conditions warrant.

Marine information broadcasts will be made on Channel 16 VHF-FM, switching to Channel 22, beginning 24 hours prior to the ship's harbour transit. The escort craft will issue a broadcast bridge to bridge on Channel 13 at the beginning of the transit and every 30 minutes thereafter until the LNG/LPG vessel is moored. At the end of each broadcast, the escort craft will state the current location of the LNG/LPG vessel.

The escort craft should normally take station several hundred yards ahead and to one side of the bow of the LNG/LPG vessel and precede it through the harbour. The escort craft is responsible for enforcing the vessel movement requirements of the safety zone. The escort craft will monitor and use Channel 13 VHF-FM to provide vessel traffic control during the transit of the LNG/LPG vessel.

An officer from MSO Boston will be assigned to ride each LNG/LPG vessel during the inbound transit. The senior member of the pre-arrival inspection team will assume this role when the inspection and transit occur on the same day. When these events occur on separate days, arrangements will be made to place an officer aboard the vessel prior to commencing the harbour transit.

This officer will remain in the pilothouse, maintain radio communications with the VMO via Channel 13 VHF-FM, and shall be responsible for the following:

a. Serve as a direct communications link to the VMO to report any casualties or unusual incidents, obtain amplifying information, and relay instructions to the vessel's Master or Pilot as directed by the VMO.
b. Assist in making determination as to the nature and seriousness of a casualty and if the inbound vessel should be directed to exit the harbour and return to anchorage in Broad Sound or if it should be permitted to proceed to its berth.
c. Remain vigilant and report any situation that could affect the safety of the port or that could adversely impact the safety zone and vessel escort.

Should an emergency situation occur aboard the LNG/LPG vessel (loss of steering, grounding, fire, etc.) the Master/Pilot will immediately notify the MSO Officer on board who will inform the VMO of the emergency via Channel 13 VHF-FM. The escort craft will then provide traffic control to keep all vessels (other than tugs, fireboats, etc.), clear of the LNG/LPG vessel.

IV. CARGO TRANSFER OPERATIONS

The COTP will provide personnel to ensure safety during the process of cooling down and to monitor the progress of transfer operation. A Coast Guard patrol craft will also be present to provide continuous waterside safety zone enforcement to prevent any vessel approaching within 50 yards of the LNG tanker while it remains in a loaded condition or is conducting cargo operations.

LNG/LPG vessels must moor bow to seaward with at least 2 wire cable mooring lines (firewarps) at the water's edge, fore and aft on the outboard side, for emergency towing hook-up if the need should arise. The vessel must be maintained in a state of readiness with sufficient crew on board to enable the ship to get underway and clear the pier in an emergency within 30 minutes of notification. The LNG/LPG vessel must also be capable of navigating out of the Port of Boston, using the main ship channel, at all times and under all prevailing tidal conditions.

The following minimum personnel must be on board the vessel during transfer operations:

a. Two Licensed Officers, fully qualified to supervise cargo transfer operations.
b. Two deckhands.
c. One Licensed Deck Officer for duties other than cargo transfer.

The officers on the vessel supervising cargo transfer operations should be fully rested prior to commencing tranfer operations. A minimum of 8 hours sleep is recommended. All ship's personnel directly involved in the transfer operation must be able to communicate in the English language, or be provided with an interpreter.

Venting cargo gas to the atmosphere is not permitted in port. However, nothing in this instruction should be construed to require or authorise elimination of installed ship safety equipment. If emergency venting is necessary, the officer supervising cargo transfer on the vessel will immediately notify the COTP Boston. This notification should include location and amount of venting, the cause of the emergency venting, wind velocity and direction at the time of venting.

All LNG/LPG facilities in the Port of Boston shall meet the requirements of 33 CFR 127. The facility will be responsible for controlling access to the vessel while it is at the dock.

The facility and the vessel must discuss arrangements for emergency shutdown of cargo transfer and emergency breakway of the vessel from the facility.

During cargo transfer, the facility shall have at least one person onboard the vessel and one person in the facility control centre who will be in constant communication with each other at all times. In addition to sufficient personnel to safely conduct all physical transfer operations, a person specially trained and certified as knowledgeable in the properties and hazards of the cargo to be tranferred shall oversee all discharge operations.

The permission of the Captain of the Port is required before loading stores or bringing vessels alongside the LNG/LPG vessel during cargo transfer operations. Bunkering or other transfer of petroleum products or other compressed or liquefied gases is prohibited while the vessel has gas or liquid cargo in the transfer piping.

The transfer of liquid cargo shall not begin until the Coast Guard inspector is satisfied with cooldown. The inspector must certify that all items in the Cooldown Inspection List are examined. The primary function of this inspection is to ensure that all connections, piping, pumps, etc. are in satisfactory operating order and that no deficiencies develop during the cooldown phase. Full pumping may commence upon satisfactory completion of cooldown operations.

The monitoring detail supervises the LNG/LPG transfer operation from hookup to disconnect and maintains an official logbook. The primary function of the monitor is to ensure compliance with safety requirements during the transfer and to maintain an alert security posture.

The individual Coast Guardsmen that make up the monitoring detail represent the Captain of the Port. Their responsibility is to keep informed of the progress of transfer and to oversee the safety of the operation. The person representing the facility onboard the vessel and the vessel cargo officer *must* promptly report all problems or abnormal conditions encountered during transfer operations, on the vessel or facility, to the Coast Guard watchstander. Updates of the condition and corrective action planned are also required.

The monitoring detail logs the commencement of pumping, completion of pumping, disconnecting times and any unusual occurrences and informs the COTP at each stage in the operation.

All cargo operations must cease if electrical storms are observed nearby. However, cargo transfer connections should be maintained. If gale warnings are posted, additional mooring lines and/or tug assistance may be required.

Should an emergency occur, the monitoring detail should immediately get clear and inform the COTP of the situation. Detailed emergency instructions to the monitoring detail can be found in Part B (Emergency Operations) of this plan.

The safety zone enforcement craft will be located so that vessel movements within a mile of the LNG/LPG vessel can be readily observed in order to detect any unusual waterborne activities that may pose a threat to either the vessel or the facility. Any unusual circumstances such as suspicious craft in the vicinity of the LNG/LPG vessel, approaching thunderstorms, sudden changes in the direction or increase in wind speeds, or any leaking gas vapour cloud will be reported to the monitoring detail.

All firefighting equipment on the safety zone enforcement craft will be on standby, ready for immediate use in the event of an emergency. In the event of a threat of or actual fire or explosion, the enforcement craft will be positioned upwind and clear of the danger area to assist in response efforts.

Upon completion of the transfer operations when all cargo transfer piping is disconnected, the monitor on watch will notify COTP Boston. The MSO Duty officer will ensure that the safety zone broadcast is cancelled. A safety zone will normally be continued after cargo operations are complete and until the LNG/LPG vessel clears Deer Island Light *only* if the LNG/LPG vessel is partially loaded. When the vessel is empty, the VMO notifies Group Boston Communications Centre and releases the safety zone enforcement vessel.

V. LNG/LPG VESSEL DEPARTURE

A fully or partially loaded LNG/LPG vessel will always transit the harbour within a moving safety zone. This concept enhances safety by avoiding crossing or passing situations involving other vessels in the harbour. A U.S. Coast Guard escort craft will enforce the safety zone until the outbound LNG/LPG vessel clears Deer Island Light. The same requirements set forth in Section A-III will be used for transit of LNG/LPG vessels if a safety zone is set for departure.

LNG/LPG vessels departing the Port of Boston that are empty (in heel) will not require a safety zone. A Coast Guard escort or other additional requirements may be established in certain circumstances at the discretion of COTP Boston. Empty LNG/LPG vessels may transit the harbour during darkness.

When an empty LNG/LPG vessel gets underway outbound, the Master notifies the Vessel Movement Officer. The VMO will then notify the Chief or Assistance Chief Controller at Logan Airport. The Federal Aviation Administration imposes flight restrictions over the LNG/LPG vessel in keeping with the desire to maintain maximum standards of safety during an LNG/LPG vessel movement.

CERTIFICATES AND DOCUMENTS

(May be completed by Master prior to vessel entry and checked by attending inspector.)

REPAIRS/DRY DOCKS: Any type of repair undertaken.

East Boston, Massachusetts	Length	Capacity
Floating Dry Dock No. 1	622 ft.	18,000 tons
Floating Dry Dock No. 2	479 ft.	20,000 tons
Graving Dry Dock No. 4	256 ft.	

Modern facilities for repair, overhaul, and conversion of vessels of all sizes:

(a) a 10,000 ton capacity floating dry dock serviced by 2×150 ton overhead cranes with a yoked capacity of 350 tons. The 5-section dock is 415 ft. long, 120 ft. wide, and has an inside dimension of 85 ft. 7 in.

(b) 3 building basins (actually a 3-positioned graving dock). 2 are 132 ft. wide, 867 ft. long; 1 is 150 ft. wide, 938 ft. long. Each basin serviced by 2 Whirley type cranes of 75 and 50 ton capacity.

(c) 4 outfitting piers capable of handling up to 10 ships simultaneously provide adequate space for dockside work and

(d) for mooring personnel or service barges.

3 conventional "sliding" ways capable of handling ships up to 1,000 ft. in length.

Major Shops: 2-bay fabricating shop served by 17 bridge cranes. Machine shop equipped with large vertical and horizontal mills planers lathes and a complete small machine complement. Fully equipped sheet metal, joiner, boiler, blacksmith, pattern foundry, galvanizing, pipe and copper, and electrical shops. Complete facilities for inspection of all types including non-destructive testing such as radiography, magnetic particle, liquid penetrant and ultrasonic.

General Ship Corporation, East Boston: Dry docks for vessels up to 680 ft. × 90 ft. Damage and voyage repairs.

CUSTOMS ALLOWANCES: At the discretion of Customs officers. Normal allowance is 200 cigarettes or 2 lb. of tobacco and 1 quart wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

GANGWAY/DECK WATCHMEN: Available at prevailing prices.

OPENING/CLOSING HATCHES: Performed by stevedores.

REPATRIATION: Good facilities exist.

AIRPORT: Logan International Airport, East Boston.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight saving time from first Sunday in April till last Sunday in October.

HOLIDAYS: New Year's Day (1st January); Martin Luther King's Birthday (15th January) Washington's Birthday (3rd Monday in February); Evacuation Day (17th March); Patriots' Day (3rd Monday in April); Memorial Day (last Monday in May); Bunker Hill Day (17th June); Independence Day (4th July); Labour Day (first Monday in September); Columbus Day (8th October); Veteran's Day (11th November); Thanksgiving (fourth Thursday in November); Christmas Day (25th December).

Note: "Or any day celebrated in lieu thereof".

POLICE/AMBULANCE/FIRE: Boston Fire Dept. 725-2880; Boston Police Dept. (Harbour Master) 242-6096; Everett Fire Dept. 387-7443; Everett Poice Dept. 3878-1212; Chelsea Fire Dept. 884-1410; Chelsea Police Dept. 884-1212.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

AUTHORITY: Massachusetts Port Authority, Executive Offices, Transportation Building, Ten Park Plaza, Boston, Massachusetts, U.S.A. 02116-3971. *Tel.* (617) 973-5500. *Telex:* 940365.

Massachusetts Port Authority, Maritime Department, Fish Pier East 11 Northern Avenue, Boston, MA. 02210. *Tel:* (617) 973-5354 *FAX:* (617) 973-5357. *Contact:* Anne D. Aylward, Maritime Director.

AGENT: Rice, Unruh, Reynolds Co., 451 D Street, Suite 804, South Boston, MA 02210. Tel: (617) 330-6930. Telex: TRT 17438 Fax: (617) 330-6934.

BRIDGEPORT, Connecticut: 41.07 N. 73.11 W. (See Plan)

DOCUMENTS: Refer to "New York".

PILOTAGE: Vessel usually notifies Agent 48 hours before arrival, who will arrange Pilot boarding. Pilot boards either at Brenton Reef in position Lat. 41° 25′ N., Long. 71° 23′ W. or Point Judith in position Lat. 41° 17′ N., Long. 71° 29′ W.

Note: Non-U.S. flag vessels and U.S. flag vessels under registry approaching from Block Island embark Pilot about 2.5 miles South of Point Judith.

U.S. flag vessels under enrolment approaching from Block Island embark Pilot 1.4 miles East of Old Harbour - Block Island.

Notice *from State of Connecticut, Department of Transportation:*

Pilotage is compulsory for vessels transitting the waters of Long Island Sound via Block Island Sound bound to or from ports and harbours in Long Island Sound. Vessels bound for Bridgeport via Block Island/Long Island Sound usually board a pilot at either the Point Judith Pilot Station (41° 17.2′ N., 71° 28.5′ W., 2 miles South of the Point Judith R "2" whistle buoy) or the Montauk Pilot Station (41° 02′ N., 71° 42′ W., 3 miles due East of Montauk whistle buoy Mo (A) "MP"). Some Block Island/Long Island Sound pilots also serve as pilots for Bridgeport Harbour. If a local harbour pilot is to be boarded, he will usually board vessel in vicinity of Bridgeport Sea Buoy, marked "BH" – short and long flash; red and white vertical stripes.

ANCHORAGE: 2 miles South of the entrance with depths in excess of 50 ft.

APPROACHES: *Via New York:*

Charts: 12339, 12366, 12367, 12363, 12369.

Vessels leaving New York bound for Bridgeport will be transitting New York's East River and Western Long Island Sound. All shoals and rocks are well marked and the close proximity to the shore line provides an excellent radar target for position checking. During Summer months, thick fog will present a hazard on this route. Long Island Sound is also a major yachting centre, so extreme care must be exercised while transitting this area. There are several dangers to be wary of when making the passage from New York to Bridgeport.

In order of approach they are:

1. East River and Hell Gate are areas of strong tidal currents averaging 4.6 knots for the ebb current which sets in Southwesterly direction. Vessel drawing up to 35 ft. may transit Hell Gate at slack High Water only. Sluggish handling vessels should arrange for tug assistance up the East River and through Hell Gate.
2. 26-ft. Buoy "32A" usually passed well clear to the South.
3. Cable and Anchor Reef usually passed to the South.

Via *Block Island:*

Charts, 13205, 13215, 13209, 12354, 12369.

Block Island's Southern shore high rock cliffs provide a good radar target. Also, bearings can be taken from the RDF station at S.E. Light. Care should be exercised by vessels deeper than 30 ft. to always approach Block Island to East in views of the numerous shoals on the Western side of the Island.

It is also advisable to remain at least 1 mile to the East of Block Island due to the numerous shoals close in shore.

There are numerous dangers to be wary of when making the passage from the pilot station to Bridgeport. In order of approach they are:

1. Block Island North Reef Buoy "1B1" marks a dangerous shoal and should be passed well clear.
2. The Race is a narrow channel into Long Island Sound. Strong East to West currents exist during maximum ebb or flood and knowledge of position should be maintained in view of the possibility of unusual set. Valiant Rock may be passed on either side.
3. Great caution should be exercised during the Summer months when transitting through Block Island and Long Island Sound due to the heavy small boat traffic, especially the area in proximity to The Race.
4. Dense fog is prevalent during the Summer months. Good judgement should be used before transitting the area during fog.

Good water is found in Long Island Sound from The Race to Bridgeport as long as the mid-channel Buoys "P1" and "CF" are passed close aboard and care is taken so as not to pass North of Twenty-Eight Foot Shoal buoy.

Vessels usually pass one mile to the South of Stratford Shoals light before altering course for Bridgeport. Radar is the best navigational aid in this area. There are numerous RDF stations that can be used in conjunction with echo sounder readings to ascertain positions.

RESTRICTIONS: Entrance channel has a project depth of 35 ft. at MLW, is 400 ft. wide and 3 miles in length.

Normal time allowed for transit from outside to off the dock is 30 – 40 minutes. Docking time varies from 30 minutes to 1 hour, dependent on which terminal is the destination, and weather conditions.

The New Haven – Bridgeport Pilots Association believe 4 ft. of water in excess of the ship's draft is needed. As a rule of thumb, 31 ft. at low to 37 ft. at high. Any variations from this, a Pilot should be directly consulted. The range of tide is 6.7 ft. Wind strongly affects the tide in the main entrance channel. Flood and ebb cross the channel at a right angle, and velocities depend on the rise of tide for the day.

Vessels up to 70,000 d.w.t. and LOA 825 ft. call at the port.

MAX. SIZE: See "Berthing and Restrictions".

HEALTH: Vessel to cable Agent 24 hours prior to arrival of any illness on board, otherwise Radio Pratique not necessary.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Vessels arriving from North use Chatham Radio. Vessels from South use Amagansett Radio on Long Island.

BERTHING: *Cilco Terminal:* Cilco is a bulkhead dock, length approximately 1,100 ft. Vessels dock port or starboard side to. Two ships can moor at the same time. This is a dry cargo facility. Ships load or discharge all kinds of products. Several mobile cranes are available. Depth 33 ft. at MLW. Bunkers are only available by truck. Fresh water is available.

TUGS: Tugs available from Red Star. The Despatcher monitors VHF and is available 24 hours a day through Channel 24 at Bridgeport.

MEDICAL: All facilities available.

TANKERS: *Bridgeport Shell – Buckley Bros.:* The Shell berth is located on the East side at right angles to the main entrance, and ships must be turned 90° to approach the dock. The dock is approximately 200 ft. long with 2 main dolphins and catwalks to shore. Head lines and stern lines are run ashore by a messenger. The size of vessels is governed by manifold distance. Light oil products 300 ft. and heavy oil 350 ft. Vessels of length 700 ft. have been moored, 38 ft. at MLW in ship berth. Ships dock port side to.

Bunkers and fresh water are available.

United Illuminating: Berth is 0.6 miles inside the breakwater on the West side of the channel. A turn to port of 120° must be made into a dredged cut 140 ft. wide. The dock is concrete caissons on pilings with catwalks and centre platform. Depth 32 ft. to 37 ft. at MLW. Vessels of 70,000 d.w.t. call, but bow to manifold distance governs size of vessel. (350 ft. – 375 ft.). Vessels dock starboard side to.

Fresh water is available, but bunkers are not. Every tanker, when moored here, has an anti-pollution boom placed around it.

FRESH WATER: Available at all berths.

FUEL: No fuel barge service available. In emergency, tank truck delivery can be arranged.

CONSULS: All countries represented in New York.

AIRPORT: Bridgeport Airport about 3 miles away. New York airports about 50 miles distant.

TIME: Daylight Saving Time, GMT minus 4 hours from April to October.

HOLIDAYS: New Year's Day (1st January); Lincoln's Birthday (12th February); Washington's Birthday (18th February); Good Friday; Memorial Day; Independence Day (4th July); Labour Day; Columbus Day (14th October); Veterans' Day; Election Day (5th November); Thanksgiving Day (28th November); Christmas Day (25th December).

SERVICES: Ship's stores and launch service available from New Haven. Vessels must provide their own gangway at all docks.

AUTHORITY: City of Bridgeport, Office of the Harbour Master, City Hall, Room 223, 45 Lyon Terrace, Bridgeport, Connecticut 06604. *Tel:* (203) 576-7611 (office), 347-7795 (residence). *Contact:* Joseph C. Savino, Jr., Harbour Master.

BROWNSVILLE, Texas: 25.54 N. 97.28 W. (See Plan)

DOCUMENTS: See "Houston".

PILOTAGE: When a vessel is scheduled to arrive at Brownsville, the vessel's Agent notifies the Harbour Master's office of the approximate ETA. Later, when a firm ETA is received, the Harbour Master's office notifies the pilot office that the vessel is expected on the bar at a certain time and also gives the time which she would like to enter.

The telegraphic address of the pilot office is: Brazos-Santiago Pilots, c/o Harbour Master, Port of Brownsville, Brownsville, Texas.

If possible, it is desired that the Harbour Master's Office be notified 2 hours in advance of the ETA of any vessel.

The VHF Channel to be used when contacting the pilot boat and Harbour Master is 16. When contact is made, this will be switched to Channel 12.

The pilot boat is a steel hull length 43 ft., beam 16 ft. and draft 8 ft. 250 h.p. diesel. Gross tonnage 36 tons.

No light or sound signals are necessary from vessels requiring a Pilot, although light signals may sometimes be used at night – ordinarily a vessel is picked up by visual sighting.

The pilot boat is located on the South tip of Padre Island – the Pilot station is adjacent to the entrance to ship channel with a clear view of the approach to the jetties.

The Pilot is taken on board an incoming vessel at the sea buoy which is located 2 miles off shore.

The anchorage for a vessel awaiting Pilot is 1.5 miles North of sea buoy.

ANCHORAGES: Anchorages are marked on charts.

RESTRICTIONS: *Brazos Island Harbour:*

	Dredged Dimensions			*Minimum depths in channel entering from seaward*		
Name of Channel	*Width (ft.)*	*Length (miles)*	*Depth (ft.)*	*Left Outside Quarter (ft.)*	*Middle Half of Channel (ft.)*	*Right Outside Quarter (ft.)*
Brazos Santiago Pass:						
Entrance Channel	300	1.9	38	40.0	39.0	37.0
Channel across Laguna Madre	200	2.9	36	38.0	38.0	38.0
Brownsville Channel:						
Junction Basin to Boca Chica Passing Basin	200	4.0	36	38.0	38.0	38.0
Boca Chica Passing Basin to Goose Island Passing Basin	200	5.4	36	38.0	38.0	38.0
Goose Island Passing Basin to Brownsville Turning Basin	200	2.8	36	37.0	38.0	37.0
Brownsville Turning Basin (extension)	500	1.4	36	37.0	38.0	37.5
Brownsville Turning Basin	500-1000	0.5	36	36.0	37.0	35.0

MAX. SIZE: The max. permissible length 875 ft., beam 135 ft., draft 35 ft.

RADIO: ETA cables to Agent, etc., should be addressed to the Agent via WLC – Galveston, WLO – Mobile or Slidell Radio. When within 60 miles range of the port, calls may be made through the Harbour Master's office on VHF Channel 16 and the calls will then be transferred to land lines to any point. Also Brownsville Marine Operator, VHF Channel 26.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: A vessel approaching the Port of Brownsville may contact the Harbour Master's office on VHF Channel 16.

TUGS: Tugs normally join an incoming vessel 1.25 miles before she enters the turning basin. The tug's lines are used for which there is no charge.

BERTHING: Cargo facilities include over 7,500 ft. of modern, marginal dry cargo wharves, 14 deep sea docks and 10 barge berths, together with over 583,000 sq.ft. of transit shed space. In addition there is 242,000 sq.ft. of open storage space at the deep-draft docks and 271,000 sq.ft. of open storage at the shallow draft docks.

BULK HANDLING FACILITIES:

Public Grain Elevator: Located at the approach to the Turning Basin, the port-owned and operated elevator has a capacity of over 3,800,000 bushels. An adjacent bulk plant provides flat storage for all types of dry bulk commodities.

Two large gantry cranes handle the loading of vessels. The maximum spout clearance for loading vessels is 45 ft. above the water.

Equipped with two truck dumps and two hopper car dumps, the elevator has the rated loading capacity of 1,200 short tons per hour (1,000 L/T per hour on bulk carriers without wing tanks and 600 L/T per hour on tween deckers).

The 400 ft. wharf is 12 ft. above water and has an unlimited berth length. The draft at dockside is 34 ft. and the channel control depth is 36 ft.

The grain elevator also has the flexibility of unloading vessels (barge unloading capacity is 300 t.p.h.).

Liquid Bulk Handling: Total liquid bulk storage available for petrochemicals and combustible oils is 1.9 million barrels, tank capacities from 1,000 to 200,000 barrels, at Itapco, Statia, Petro Liquids, and Brownsville Refinery terminals. Additionally, Exxon, Star (Texaco), Champlin and Interlube maintain private terminals. Four liquid cargo docks on the North side of channel and one on the South side serve these entities.

CRANES: Two large floating cranes, rated at 150 metric tons each, are available for heavy lifts at any dockside location in the port area.

STEVEDORES: To arrange for gangs the vessel needs to notify the ship's Agent of ETA; the Agent will in turn notify the stevedores. It is necessary that the Agent be advised of an ETA before 1900 hrs. for an 0800 hrs. start.

Main commodities and average load discharge rates:

Grain	Bulk carrier 1,200 t.p.h.
Grain	tween deck 600 t.p.h.
Cotton	100 bales per hour per gang
Lead and zinc pigs	40 tons per hour per gang
Citrus in boxes	22 tons per hour per gang
Onions and carrots in bags	22 tons per hour per gang
General cargo	25 tons per hour per gang

MEDICAL: When medical attention is required, advance notice should be given to the Agent by ship's radio.

TANKERS: Ballast facilities are available up to 6,000 barrels per hour. The port loads refined petroleum products. The port has 4 tanker berths, with max. draft 34 ft. 7 in.

Vessels proceeding to Brownsville normally turn in the basin and berth Port side to. Berthing at Port Isabel Oil Wharf also generally Port side to.

Mooring boat employed.

DENSITY: The average density is 32 parts per 1,000.

FRESH WATER: Fresh water is available and can be delivered to a vessel through hose or pipe-line at 150 gallons per minute.

FUEL: No fuel is available locally. It must be barged in from Corpus Christi – advance arrangements are necessary.

FIRE PRECAUTIONS: Tankers are required to berth head out.

CONSULS: Mexico: Tel. 542-4431.

REPAIRS: Marathon, located at the port, is equipped to handle all normal temporary ship repairs.

DRY DOCKS: None available.

GANGWAY/DECK WATCHMEN: Such services are necessary only when detainees are held on board.

OPENING/CLOSING HATCHES: This work is done by the stevedores.

REPATRIATION: There are facilities for this service.

AIRPORT: The local airport is located 2 miles from the port. Ozark Airways operates 4 flights daily.

TIME: Local Time is 6 hours behind GMT.

HOLIDAYS: The following holidays are observed here: Veterans' Day (4th Monday of October); Thanksgiving; Christmas; New Year; Washington's Birthday (Feb. 22nd); Texas Independence Day (March 2nd); Emancipation Day (June 20th); July 4th; Labour Day (1st Monday in September); Decoration Day (last Monday in May).

No work shall be performed on Labour Day or Christmas Day except in case of fire or where property is in danger. When holidays fall on Sunday, the following day will be recognised as the holiday. Also, no work will be performed between 1600 and 1900 hrs. on election days.

POLICE/AMBULANCE/FIRE: Sheriff 546-2451; Brownsville Fire Dept. 542-4375; Ambulance Service 542-2121.

TELEPHONES: Telephones are not available for placing on ships.

SERVICES: Tank cleaning service is available at the port. Ballast facilities are available at Oil Docks 1, 2 and 3. P.I.B. can take care of compass adjusting, etc.

IDENTIFICATION CARDS: Immigration requires Form No. I - 95 Landing permit.

DELAYS: There are no delays unless an incoming ship has been assigned to a berth now occupied. Bunkers must be barged in; arrangements may be made ahead of time to avoid delay.

DEVELOPMENTS: The Federal Government has authorised deepening the channel to 42 ft. and widening to 300 ft. bottom width.

Direct truck/rail route across port property to the international border, U.S./Mexico is proposed.

AUTHORITY: Brownsville Navigation District, Port of Brownsville, P.O.Box 3070, Brownsville, Texas 78523-3070. *Tel:* (512) 831-4592. *FAX:* (512) 831-5006. *Contact:* C. James Kruse, Port Director. E. E. Cockrill, Deputy Port Director – Marine Services.

BRUNSWICK, Georgia: 31.09 N. 81.30 W. (See Pla

DOCUMENTS:

Crew Lists: 1 certified copy for Immigration; 2 copies uncertified fo Customs.
1 copy Pratique.
3 copies Inward Customs Manifests.
3 copies each Stores, Curio & Narcotics List.

PILOTAGE: Compulsory. 24-hour Pilot service arranged by Agent wi 48 – 24 hour prior notice from ship. Pilot boards vessel day or nigh approximately 1 mile outside "STS" Buoy (Lat. 31° 03′ 20″ N., Long 81° 15′ 20″ W.). Distance to East River Terminals is 13 miles. Pilo contacted on VHF Channels 12, 14 and 16. Pilot boat is 25 ft. white hull Marking is "Pilot" on hull.

Brunswick Bar Pilots' Association, 411 Arnold Road, St. Simons Island, Ga. 31522. Tel: (912) 638 2380.

ANCHORAGES: 3 miles S.E. of Buoy "STS", sand and mud bottom In event of deep draft (30 ft.) and high winds, anchorage obtained nea Ocean Buoy "2B" and inform Pilot as in "Pilotage". Vessels in need or for other good reason, may anchor in St. Simon's Sound depth 10 fathoms.

APPROACHES: The harbour is located about midway between Savannah and Jacksonville. The harbour is reached by a channel from the Atlantic Ocean, running between St. Simons and Jekyll Island. The channel has a minimum width of 500 ft. and a depth of 32 ft. t St. Simon's Sound, thence a width of 400 ft. and a depth of 30 ft. t Sidney Lanier Bridge, where the channel divides, 13 miles from sea The Northern branch leads to Lanier Dock, State Dock and the city 400 ft. wide and 30 ft. deep. The other branch leads N.W. to the pul plant dock, chemical docks and electrical generating plant, 300 ft. wide and 30 ft. deep.

RESTRICTIONS: Vessels with a draft of 28 ft. may enter at any time and over 28 ft. on flood tide. Max. size vessel is Panamax. Vessels wit draft of 34 ft. may proceed to or from Colonel's Island on high tide Vessels with 30 ft. draft berth in the East River on high tides. Tidal range 6 ft. – 8 ft.

MAX. SIZE: Max. permissible length 650 ft. Max. d.w.t. over 33,000 tons

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Prior arrival, use Commercial Lantana, Chatham Radio fo advices to Agent, 48-24 hours in advance.

TUGS: Tugs join vessel near Sidney Lanier Bridge if inbound for the East River and Mayor's Point Terminals and just West of Lanier Bridge if bound for Colonel's Island. Harbour pilot on board vessel carries ou the docking manoeuvre with tugs. 3 small tugs (500 h.p.)

BERTHING: 1,600 ft. continuous marginal wharf; steel and concrete construction, 57 ft. wide apron. Vessels normally turned to moor por side alongside unless deck cargo or other vessel obstruction means cargo may not be worked over port side. Gantry crane of 27 tons capacity available.

The Brunswick Port Authority operates a bulk commodity terminal a Lanier Dock. The facility is 500 ft. long and constructed of steel and concrete, with a project depth of 30 ft. MLW (mean low water), equipped with a grab bucket, conveyors and marginal tracks for handling bul cargoes at rates up to 600 t.p.h. It operates covered warehouses wi a capacity of approx. 60,000 tons. A limited amount of open storage space is available equipped with a conveyor system and reclam facilities. Lanier Dock lies directly adjacent to the Brunswick State Docks and warehouses. Both wharves have a turning basin of 1,000 ft. in length and 600 ft. wide with a project depth of 30 ft. MLW also Barge Doc facility 250 ft. long.

Colonel's Island: Multi-product dry bulk facility. 1×2,400 t.p.h. travelling ship-unloader, outreach 100 ft. Length of berth 600 ft. Storage area 135,000 sq.ft.

Mayor's Point: 3 berths. Total length 1,500 ft. 235,000 sq.ft. of trans sheds and 5 acres of open storage.

BRIDGES: Lanier Bridge lift bridge; 235 ft. horizontal clearance between fenders, 139 ft. vertical clearance in up position at HW. Vessels under control of Pilot and tugs when passing through.

STEVEDORES: Radio to Agent 48-24 hours prior arrival with number of gangs, working hatches and space in hatch, and special factors e.g. pilferable cargo, autos, heavy-lifts, etc.

MEDICAL: Advance notice to Agent, or notify on arrival.

TANKERS: Liquid bulk cargo is pine oil distillates loading. Petroleum storage 310,000 barrels, 3 tanks.

Outward Passage – Cautionary Advice: The berth is located just u river from the Sidney Lanier Bridge.

In view of the short distance to the bridge and the fact that a considerable course alteration must be made to port just before reaching the bridge, it is essential that the ship is properly lined up on the bridge before proceeding into the bridge passage.

It is advisable that the Master acquaints himself with the Pilot's pla for the approach and passage of the bridge.

An anchor party should be standing by and anchors should be ready to let go. Special attention should be given to make certain that the helmsman accurately follows the Pilot's orders.

DENSITY: Average 1016 (high) to 1014 (low). Water inside considera brackish.

FRESH WATER: From shore connections at 20 t.p.h.

FUEL: Bunker "C" available at piers. Distillate and blends by barge if required. 72 hour advance notice to Agent, giving type and quantity

CONSULS: None. Consulates at Savannah, Ga., and Jacksonville, Fla. may be used as required by vessel.

REPAIRS: Limited to minor replacement parts to engine, radio, rada of standard makes. Major repairs may be arranged with shipyards a Savannah or Jacksonville.

DRY DOCKS: None.

SURVEYORS: American Bureau of Shipping (912) 232-3793. Atlantic Marine Surveying, Inc. (912) 354-9938. Coleman, Kenney & Silas, Inc. (912) 352-7420. International Adjusters Southern Ltd. GANGWAY/DECK WATCHMEN: Not required but available.

OPENING/CLOSING HATCHES: "MacGregor" hatches must be opened by vessel prior working. All others may open at discretion to save turn-around time.

CERTIFICATES: Registry, U.S. tonnage tax, CFR Pollution, Load line, SOLAS, Derat.

CUSTOMS ALLOWANCES: Tobacco, 2 cartons. Customs will open bonded stores on request. Spirits, reasonable amount.

REPATRIATION: Through Agent.

AIRPORT: 20 minutes' drive from quays; 4 flights daily.

TIME: GMT minus 5 hours. Daylight Saving Time from first Sunday in April till last Sunday in October. April: advance; October: retard.

HOLIDAYS: 1st January, 22nd February, 30th May, 4th July, 1st Monday in September, 4th Thursday in November, 25th and 26th December.

POLICE/FIRE/AMBULANCE: Numbers given in Boarding Brochure.

TELEPHONES: None placed aboard. Public pay (coin) telephones on quay clearly marked.

IDENTIFICATION CARDS: U.S. Immigration Landing Permits.

GENERAL: Brunswick, Georgia, is a small port specialising in export of woodpulp in bales, pine-tree products in drums. Imports bulk salt, oil, fertiliser materials and gypsum, some break-bulk general cargo. Vessel requirements handled by Agent in residence, communication by wireless or R/T essential in advance.

AUTHORITY: Brunswick Port Authority, P.O.Box 1039, South Yards, Brunswick, Georgia 31521-1039. *Tel:* (912) 265-3700. *Telex:* TWX 810-7825071. *Contact:* Robert W. Turner, General Manager.

BUFFALO, New York: 42.55 N. 78.55 W. (See Plan)

DOCUMENTS: For vessels arriving from foreign ports:

3 Unfreighted copies of Complete Manifest covering all cargo to be discharged in the Great Lakes.
4 Personal Effects Lists.
4 Crew Lists.
4 Narcotics Lists.
Vessel's Registry and copies of Paid Tonnage Tax Certificates.
Health Pratique.
Clearance from previous port.

PILOTAGE: Not compulsory. Seaway Pilots will assist if required.

ANCHORAGE: Inside South Breakwater, depth 27 ft.

RESTRICTIONS: St. Lawrence Seaway navigation season. Approximately from 1st April to 15th December. Controlling depth 27 ft.

MAX. SIZE: Limited by Seaway Locks. 730 ft. length and Seaway draft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: WBL – Buffalo.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, but not normally required.

BERTHING: Outer Harbour: Total berth space 2,400 ft.; depth alongside 27 ft. LW. 2 transit sheds – total of 184,000 ft. dry dock space; sprinkler system equipped, seaway piers for bulk cargoes. South and North Piers 3,506 ft. of berth space, 200 acres open storage area. Depth alongside 27 ft.

Lake and Rail:

Operator: International Multifoods, Inc. Berthing Space - 535 ft. Max. OA Dimensions 647 ft.×70 ft. Storage Capacity: 4,600,000 Bushels.

Depth at Dock (ft.)	*Depth in Channel (ft.)*	*Unload Legs*	*Unload Speed (b.p.h.)*	*Load Spouts*	*Load Speed (b.p.h.)*	*Deepest Vessel Can Unload (ft.)*
22	22	2	23,000	None	–	36

Pillsbury:

Operator: The Pillsbury Co. Berthing Space - 875 ft. Max. OA Dimensions 647 ft.×70 ft. Storage Capacity: 5,000,000.

Depth at Dock (ft.)	*Depth in Channel (ft.)*	*Unload Legs*	*Unload Speed (b.p.h.)*	*Load Spouts*	*Load Speed (b.p.h.)*	*Deepest Vessel Can Unload (ft.)*
22	22	2	30,000	1	17,000	36

SPECIALISED CARGO HANDLING FACILITIES: A mobile gantry crane capable of handling lifts of 55 tons at 40 ft. and portable bulk conveyors. Crawler crane, capacity 230 tons. Conveyor, capacity 2,200 t.p.h. Additional heavy lift equipment available from the Port of Buffalo and commercial sources.

STEVEDORES: Gangs to be ordered by 1700 hrs. for 0800 hrs. start following day, ample gangs available.

MEDICAL: U.S. Public Health Outpatient Clinic as well as numerous hospital facilities.

DENSITY: Fresh water.

FRESH WATER: Available at most berths.

FUEL: All grades available by tank truck delivery or by harbour tank barge.

CONSULS: Canada, Costa Rica, Ecuador, France, Germany F.R., Italy, Mexico, Netherlands and Sweden.

REPAIRS: Machinery and above-water repairs available.

AIRPORT: 5 miles, served by 4 regular airlines.

SHORE LEAVE: No restrictions when cleared by U.S. Immigration Officials.

GENERAL: Refer to "Great Lakes Pilot".

AUTHORITY: Port of Buffalo, 901 Fuhrman Blvd., Buffalo, New York 14203. *Tel:* (716) 852 1921. *Telex:* 855-7443. *Contact:* Noel Painchaud, Port Director.

BURNS HARBOUR, Indiana: 41.38 N. 87.11 W. (See Plan)

The entrance to Burns International Harbour is at Lat. 41° 38′ N., Long. 87° 11′ W., and is located on the South shore of Lake Michigan at Portage, Indiana, some 30 miles East of Chicago in an area known as the Indiana Dunes.

PILOTAGE: Available.

RESTRICTIONS: Average Navigation Season: Domestic cargo by lake freighters – March 15th to February 1st. Ocean going vessels via Seaway – April 1st to December 15th. Lake river barges – 12 months. *Approach to Harbour:* Controlling depth of water at harbour entrance 30 ft., entry is from deeper water. Length and beam limitations – none. Approach open 24 hours per day.
Harbour: Controlling depth of water for outer harbour 28 ft.; East and West harbour arms 27 ft. Turning basin – 1,600 ft. radius with water depth of 28 ft. Accessible 24 hours a day. Length and beam limitations – none.

TUGS: Available if required.

BERTHING: The port provides 30 ft. depth at the entrance channel, 28 ft. at the inner harbour, and 27 ft. at berths. The harbour is protected by an all weather breakwater.

The port has 10 modern berths plus a mooring facility specifically designed for self-unloader ships. Ultimately the port will have 15 ship berths. Recently completed are 2 modern, heated, sprinkler-equipped transit sheds providing 146,000 sq.ft. of space for general cargo, which are being operated by competent stevedores.

A refrigerated storage building is in operation.

CRANES: 3×150 ton crawler cranes; 3×75 ton crawler cranes; 3×60 ton crawler cranes.

FRESH WATER: Available.

DEVELOPMENTS: 1 berth, length 700 ft. under construction.

AUTHORITY: Burns International Harbour – Port of Indiana, Indiana Port Commission, 150 West Market Street, Suite 603, Indianapolis, IN. 46204. *Tel:* (317) 232-9200. *Telex:* 510-601-4224. *Contact:* James H. Hartung, Port Director.

BURNSIDE, (including Convent and St. James), Louisiana: 30.08 N. 90.55 W. (See Plan)

DOCUMENTS/PILOTAGE: For all general information refer to "New Orleans".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made out to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Not normally required, see "Tankers".

BERTHING: Bulk Marine Terminal: Berth 877 ft. long, 40 ft. depth.

Ormet Corporation: Berth 825 ft. long, 50 ft. depth. Situated at Mile Point 169. Max. LOA 305 m. Max. beam 41 m. Max. draft 12.19 m. (60,000 d.w.t. or 130,000 d.w.t. part load) 2 travelling gantry cranes (1,000 t.p.h. each) and 1 shiploader (1,500 t.p.h.). Height above LWL 27.5 m., outreach 19.2 m. Travel 198 m. Loading rate 600 – 1,000 t.p.h.

Rogers Terminal and Shipping (Cargill Inc.): Floating feed transfer facility at Convent. 330 ft.×75 ft. Loading rate to vessels 1,300 t.p.h.

TANKERS: *Shell – St. James:* The facility is located on the West bank of the Mississippi River at Mile 160 above Head of Passes (AHP).

There are 2 berths, one of which is 800 ft. long and the other 1,100 ft. long. At the newer dock there are 2×16 in. arms and the berth is capable of unloading 28,000 bbls.p.h.

The depth alongside these berths is 55 ft. to 60 ft. However, the draft of the vessel is limited to that available at Southwest Pass.

It is important to note that due to the design of this terminal it is impracticable for vessels to receive stores at this location. Additionally there are no bunkers provided at this terminal nor is there any fresh water available from the terminal and there is no authorised anchorage in the immediate area of this facility. Vessels expecting less than 24 hours delay awaiting berth are generally anchored at New Orleans and then proceed to the terminal (which is a different port of entry for Customs) otherwise vessels would have to anchor at Burnside which is about 10 miles up river from St. James.

Because of an underwater pipe-line near the dock, the terminal management requires all vessels using their facility to have at least 1 tug of 1,800 h.p. to assist in docking and undocking.

As a point of reference it generally takes approximately 15 or 16 hours transit from Southwest Pass to St. James Terminal for most vessels.

Texaco – Convent: The Texaco Dock is located 167 miles AHP. The berths are located near the edge of the navigable channel and interaction caused by downbound laden vessels can result in excessive surge by deeply loaded vessels docked alongside.

Current in the river at this location varies between 3 and 8 knots, depending on the height of the river.

The docks are located near an area of revetment, therefore anchors should not be used while alongside.

Cargo Handled and Shore Installations: Berth No. 1 handles mainly clean products and petrochemicals, e.g., aviation gas, jet fuel, unleaded gasoline, hi-test gasoline, etc., and serves mainly as a loading dock.

Berth No. 2 handles clean as well as dirty products including crude oils, charge stocks, petrochemical feed stock, furnace and fuel oils, etc. This dock both ships and receives cargoes.

All cargo transfer is made through 12 in. Chicksan arms which are bolted at the ship's manifold. Maximum rail pressure for discharging vessels is 125 p.s.i.

An emergency loading stop control is located in each dock house and portable unit is provided for vessels docked at the berths.

Docking: Docking is always performed by the River Pilot or Docking Master, with the aid of at least 2 tugs. 2×1,800 h.p. tugs are required for vessels up to 60,000 d.w.t. docking and undocking, vessels larger than 60,000 d.w.t. are required to use 3×1,800 h.p. tugs for these operations. Approach is made parallel to the berths, stemming the current with 2 or 3 tugs on the port side. Mooring lines, either wire or synthetic, are run to mooring dolphins by boat.

At least 12 mooring lines are required for all vessels, i.e., 2 head lines, 2 stern lines, and a combination of 4 breast and or spring lines, depending on available leads, both forward and aft.

Nylon messengers or heaving lines are not permitted and will be refused by line handlers in the boats or on the docks.

Bunkers and Fresh Water: Bunker-C and fresh water are available upon request; however, no barges are allowed alongside vessels at any time.

Ballast/Slop Facilities: A maximum of 10,000 bbls. of oily slops may be discharged ashore for storage/treatment.

DENSITY: Fresh water, 1000.

FRESH WATER: Available ex-berth.

FUEL: Not available.

NOTICE:

Agent to Shipmaster:

Vessels over 100,000 Summer Deadweight:

This is to advise you that the Pilots will not allow your vessel to transit outbound between Pilottown and Southwest Pass during darkness hours if your vessel is at a draft in excess of 35 ft. fresh water upon arrival at Pilottown outbound. The times involved are from 1600 hrs. until 0700 hrs. the next day.

We feel certain with various ballasting procedures you will be able to comply with this draft upon reaching Pilottown even though you may leave the *St. James Berth* at a greater draft. If you cannot comply, please advise your Agent boarding with this letter in order that he may inform all parties interested.

By anchoring at Pilottown you will be costing yourself an additional $3,500 minimum in tug and Pilot expense. Therefore, we sincerely require your utmost co-operation.

SHIPMASTER'S REPORT: February 1979.

Location: St. James – West Bank.

Documents: Ship's stamp on cash receipts.

Anchorage: Usually at Grandview in the Customs District of Gramercy, where launch service available and about 1 hour's drive to New Orleans.

From Capline (St. James) about 45 minutes' drive to Baton Rouge.

VHF: All berthing and river pilotage on Channel 13.

Tugs: 3 tugs recommended.

Berthing: Always port side to. No shore gangway, moorings 4, 2, 2 each end for tankers of 100,000 d.w.t. and upwards.

Cranes: Not available.

Tankers: Require ship's gangway at Berth No. 2.

Consuls: Honorary British Consul at New Orleans. (321 St. Charles Avenue). Open 1000 hrs. – 1200 hrs. and 1400 hrs. – 1600 hrs.

AUTHORITY: Greater Baton Rouge Port Commission, P.O.Box 380, Port Allen, Louisiana 70767. *Tel:* (504) 387-4207. *FAX:* (504) 387–1534. *Contact:* Gary C. Pruitt, Executive Director.

Burnside Bulk Marine Terminal, P.O.Box 25, Highways 44 22, Burnside, Louisiana 70738. *Tel:* (504) 473-0793. *Contact:* Dan Hales, Vice-President and General Manager.

CAPE COD CANAL, (including Sandwich Oil Terminal), Massachusetts: **(See Plan)**

The Cape Cod Canal is a sea-level canal, extending from a point on Cape Cod Bay about 50 miles S.E. of Boston Harbour, Mass., to the head of Buzzards Bay, Mass. In general direction the Canal trends from Cape Cod Bay Westerly to Buzzards Bay.

PILOTAGE: The Corps of Engineers, Department of the Army , does not maintain pilot service but independent Pilots, licensed by the U.S. Coast Guard, are usually available at the canal. Messages will be transmitted to Pilots with the understanding that the Government will assume no responsibility in connection therewith.

Pilotage is compulsory and available 24 hours.

Pilot boards:

1. East Entrance: Position Lat. 41° 47.9′ N., Long. 70° 28.5′ W., midway between the Sea Buoy and the breakwaters.
2. West Entrance: Near West end of Cleveland Ledge.
3. By special request: Near Brenton Reef Light (Lat. 41° 25.6′ N., Long. 71° 23.4′ W.) or 2 nautical miles South of Point Judith Light Buoy No. 2 in position Lat. 41° 19.2′ N., Long. 71° 28.5′ W.

Pilots are available from the following associations:

Northeast Marine Pilots Incorporated, Newport, Rhode Island (Te 401-847 9050 (HJ), 401-331 4824 (HN)).

Interport Pilots Associates. Tel: 201-291 1310.

Boston Pilots, East Boston. Tel: 617-569 4500.

Associated Coast Pilots. Tel: 201-887 7114.

Association of East Coast Pilots. Tel: 609-435 1239.

RESTRICTIONS:

	Width bottom (ft.)	*Length* (miles)
Easterly Entrance to Station 430	480*	8.4
Station 430 to Wings Neck (Hog Island Channel)	500	4.3
Wings Neck to Cleveland Ledge (Cleveland Ledge Channel)	700	4.7

*Except narrows to 450 ft. opposite State Pier.

The canal and approach channels have been dredged to the project depth of 32 ft. below MLW.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: Direct communication with the Cape Cod Canal sub-office, New England Division, Corps of Engineers, is available at all hours by means of telegraph, telephone, or radio. The telephone number is 759-4431.

The nearest ship to shore telephone stations are at Scituate, call letters (WOU) and Chatham, call letters (WCC). Bridge to bridge radio telephone facilities are available on 156.65 MHz, 156.6 MHz, 156.7 MHz and 156.8 MHz. Vessels equipped for communications with the Cape Cod Canal are requested to keep their radio-telephone tuned to the above frequencies.

VHF: Pilot Office and pilot vessel on Channels 16 and 13. Tugs on Channels 13 and 18A. Pilot listens 1 hour before vessel is expected.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

BERTHING: Mooring basins are located at the East and West ends of the canal. The East Mooring Basin, located on the North side of the canal is 2,500 ft. in length, 350 ft. in width and is maintained at a depth of 25 ft. at MLW. The West Mooring Basin, located on the S.E. side of the Hog Island Channel is 3,300 ft. in length, 350 ft. in width and is maintained at a depth of 32 ft. at MLW. Mooring dolphins are provided in both mooring basins.

BRIDGES: 2 fixed span high-level highway bridges and 1 vertical lift railroad bridge cross the canal.

The minimum bridge clearance for the available width of channels are as follows:

	Horizontal Clearance	*Vertical Clearance (MHW)*
Highway Bridges	480 ft.	135 ft.
Railroad Bridge (vertical Lift)	466 ft.	135 ft. (open) 7 ft. (closed)

TANKERS: See "Shipmaster's Report".

COAST GUARD STATION AND WEATHER SIGNALS: A U.S. Coast Guard Station is located near the Eastern entrance.

TRAFFIC LIGHTS: Red, green and amber electric lights, visible for a distance of about 2 miles in clear weather, day or night, are located at the following points:

(a) Eastern or Cape Cod Bay entrance, on South side of entrance at an elevation of about 55 ft. above high water.

(b) Western or Buzzards Bay entrance, Wings Neck, near Wings Neck Light at an elevation of about 48 ft. above high water.

SHIPMASTER'S REPORT: September 1984.

Sandwich Oil Terminal: 41° 46.3′ N., 70° 30.9′ W. (See "Plan").

Location: 2,200 m. inside North Breakwater from Cape Cod Bay, South side of Cape Cod Canal.

Max. Draft: 40 ft. (salt water).

Salinity: 1025.

Anchorage: Good anchorage N.E. of Breakwater.

Berthing: Berthing and unberthing only when slack tide.

Berthing port side alongside when arrival from Cape Cod Bay.

Berth must be approached with care.

Ship's gangway to shore.

Derrick rigged to take onboard two cargo hoses 10 in. diameter.

After discharging, vessel to proceed through Cape Cod Canal as there is no turning basin. Max. draft 28 ft. Airdraft 135 ft. when passing 3 bridges.

Vessel can also enter from Buzzard Bay but draft according to Canal Control is 28 ft.

AUTHORITY: Department of The Army, New England Division, Corps of Engineers, Cape Cod Canal Field Office, P.O. Box J, Buzzards Ba Mass. 02532-1809. *Contact:* F.N. Ciccone, Engineer-in-Charge.

CASTLE ISLAND, Alaska: 56.39 N. 133.11 W.

Located in Duncan Canal off Kupreanof Island between Wrangell and Petersburg. Open all year.
DOCUMENTS: See "Anchorage, Alaska".
PILOTAGE: From sea via Dixon Entrance up Clarence Strait to Guard Island. Under pilotage from Guard Island.
ANCHORAGE: Fair weather anchorage only.
MAX. SIZE: Harbour depth 45 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TIDES: Diurnal range 16 ft. Also see "Berthing".
CUSTOMS: Quarantine and Immigration available from Guard Island. Customs available from Petersburg or Guard Island.
TUGS: From Wrangell, 3 available 500 h.p. each.
BERTHING: Alaska Barite facility: Dolphins and 2 floats. Present facilities limited to about 22,000 ton ships. Loading equipment consists of 1 loading spout for bulk cargo. Production average of 1,000 t.p.h.
STEVEDORES: Sufficient to work ore loading facility 24 hours a day when necessary.
MEDICAL: Facilities available in Petersburg or Wrangell.
REPAIRS/WATER/FUEL: None.
AIRPORT: Charter airplane only.
AUTHORITY: Chromalloy Mining and Minerals, P.O.Box 650, Petersburg, Alaska 99833. *Contact:* D.Brant, Harbour Master.

CHARLESTON, South Carolina: 32.47 N. 79.56 W.
(See Plan)

DOCUMENTS:
3 Crew Lists.
3 Curio Lists.
3 Stores Lists.
3 Manifests.
At least 1 copy of Bill of Lading, if provided by shipper, and 1 copy of Parting Crew List.

PILOTAGE: Shipmasters to notify Agent 48, 24 and 12 hours prior arrival at C-2 Buoy. Pilot may be contacted by VHF Channels 16 and 18. Pilot boards on lee side from black-painted launch with "Pilot" painted in white letters on the side. Normally vessel is berthed by Docking Master from tug company.

Charleston Branch Pilots Association: 2 North Adgers Wharf, Charleston. Tel: (803) 577-6695. Monitors VHF Channel 16 and 18A, Channel 14 also available.

Masters please advise ETA and deepest draft and changes in ETA as soon as possible. If no contact is made please announce ETA and draft over the air. Savannah and Cape Fear Pilot Stations will also pass on this information for you.

Pilot vessels: Call sign WZF 7266 "Carolina" 55 ft. length; "Palmetto State" 55 ft. length; "Sis" 37 ft. length.

Pilot vessel when on station guards following frequencies: VHF Channel 16; VHF Channel 13; VHF Channel 18A, 156.95 MHz.

Location of pilot station: Charleston C-2 Buoy Lat. 32° 40.7′ N., Long. 79° 42.9′ W., in 42 ft. of water.

Pilot ladder requirements: Have ladder in good repair, clean and approximately 6 ft. above water. Please provide escort to and from bridge. Personal portable VHF transceivers are carried by Pilots.

Distances from pilot station to all berths approximately:

	Nautical Miles
Union Pier	12
Columbus Street	12.5
Exxon Dock	14.5
Wando Terminal	14
Ship Yard River	15 – 16
Navy Yard	16 – 19
Other Oil Docks	19 – 20
State Port Terminals of North Charleston	21
Army Transportation Docks	22
Naval Weapons Station	25
Cainhoy	22.5

ANCHORAGES: Rarely required.
RESTRICTIONS: Only restriction affecting operation relates to channel depth of 35 ft. at low tide.
MAX. SIZE: Can handle vessels 930 ft. long. Present private tanker facilities measure 475 ft. from centre of discharge pipe-line to end of dock.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
RADIO: Normal procedure. No special or unusual procedures required.
RADAR/VHF: Services required are handled through Agent.

Tug Companies: Marine Contracting and Towing: 723-7442 Radio frequency Channel (7A).

White Stack Towing: 577-6556 Radio frequency Channel 19A.

Marine operator on Channel 26 VHF.

Weather Station on Channel 39 VHF.

TUGS: Tugs usually join tankers between Cooper River Bridge and Coal Pier, approximately 0.5 miles from dock. Tug lines used. No charge made for this service.

Tugs are required for any vessel docking at or sailing from any state port berth which has a crane.

BERTHING: *Union Pier:* State Pier No. 2: 4 berths. Break-bulk terminal, length 2,470 ft. (752.86 m.) Depth 35 ft. 1×30 ton gantry. LASH barge handling capabilities, and 12 acres (48,561 m.) of open storage area.
Columbus Street Terminal: State Pier No. 8. 6 berths. Length 3,875 ft. (1,181 m.) Depth 35 ft. Terminal handles break-bulk and containers. 1×75 ton gantry crane, 1×50 ton gantry crane and 1×150 ton gantry crane serve 1,940 ft. of berthing space along the South end of the pier. 1×475 ton capacity sheer-leg, 1×90 ton truck crane and 3×40 long ton container cranes.
North Charleston Terminal: State Pier No. 15: Total length 2,500 ft. 3 container berths, 6 container cranes, one grain elevator, capacity 1.5 million bushels. 185 acres (748,644 sq.m.) open container support space.
Wando Terminal: 3 container berths, each 809 ft. length. 4 container cranes each 40 tons capacity and 2 IHI container gantry cranes. Max. draft 35 ft. Paved container storage area of 167 acres.
BULK HANDLING FACILITIES: *Shipyard River Coal Terminal:* Operator: Massey Coal Terminal Corp. Max. size: 50,000 d.w.t. Max. draft 38 ft.

Accommodation includes a single ship berth at the confluence of the Shipyard and Cooper Rivers. The pier is served by a travelling and shuttling shiploader with telescopic chute, which has a maximum capacity of 2,500 t.p.h. and loads at an average of 1,650 t.p.h.
CRANES: 1×40 ton, 1×90 ton, and 2×140 ton mobile cranes are available to work any Port Authority Terminal. 1×67.5 ton floating crane at Wando Terminal.
BRIDGES: *Cooper River Bridges Specifications:* Main Channel Span: 150 ft. above MHW at Centre Line, 750 ft. horizontal.

Town Creek Span: 135 ft. above MHW at Centre Line, 750 ft. horizontal.
STEVEDORES: *Working Hours:* Labour may be ordered for work to start at the following times: 0800, 1000, 1200 and 1900 hrs. Labour will usually work as long as necessary; shift system not used in this port.
MEDICAL: Advance notice when possible.
TANKERS: *Private Facilities:* Discharge lines all 8 in. dia. and 1 solvent line 8 in. Adapter to conform to ship's discharge lines supplied. Draft not to exceed 35 ft. low tide. Tanker berths operated by Humble Oil, Shell Oil, Hess Oil, BPT, and Phillips Petroleum, all suitable for 35 ft. draft. Gulf Oil Berth, max. draft 30 ft. Texaco Berth, max. draft 32 ft.
Report: *Exxon Terminal:* The berth, located 14.5 miles from the Sea Buoy, is of marginal type construction, and traffic passes in close proximity to the facility. Passing traffic combined with tidal conditions experienced on ebb tide require that a vessel be moored as follows:

Vessels arriving at the Port of Charleston with a draft in excess of 33 ft. (salt) are scheduled to commence channel transit 2 hours after LW slack at the channel entrance. This schedule allows the vessel to berth and be fully secured prior to the start of the strong ebb current out of Shipyard Creek. (See Chart: US 11524).

On arrival, the vessel is breasted into the berth port side to, and 1 forward spring run to assist in spotting and maintaining vessel's position.

With vessel positioned, attending tug will work bow of vessel in. Once an angle of 5° is attained, vessel will then run 5 head lines and 3 forward breast lines. Efficient stoppers shall be available to "stop off" mooring lines during transfer from winch to bitts without loss of tension. With aforementioned lines all fast, attending tug will then work stern of vessel in; any required adjustment of head and/or breast lines to attain equal tension on all leads shall be undertaken during this period. With vessel in position, an additional forward spring line will be used. Recommended stern leads are as follows:
(a) 2 spring lines.
(b) 2 breast lines.
(c) 3 stern lines.

Mooring lines are to be kept taut during cargo transfer. Any required slacking of head lines shall only be attempted during flood tide. Vessel to consult tide tables for times of HW and LW. Also see "Plan" for mooring arrangements.

Vessels arriving with a draft of less than 33 ft. begin transit approximately 1 hour after LW slack at the channel entrance and follow the same procedures when mooring.

The U.S. Coast Guard has recommended that moored vessels maintain a listening watch on VHF Channel 13 and to pay close attention to moorings while deep draft vessels are transiting the North Charleston and Filbin Creek Reaches. Since maintaining a bridge watch to monitor VHF during the entire discharge is not practicable, nor is it permissible to operate radio equipment at any time during cargo transfer, it is suggested that vessels consult with the Agent to obtain advice on expected times of transit of passing vessels. Prior to vessels passing, crews should exercise particular care in maintaining a close watch on mooring lines to make certain vessel is alongside and mooring lines are in taut condition.

Failure of vessels to moor in a safe and proper manner will result in terminal's refusal to connect cargo hoses. Tidal conditions experienced at the berth require a full deck and engine room watch be kept; failure to comply will result in suspension of cargo transfer.
FRESH WATER: Available via 2.5 in. hose at a rate of 500 bbls.p.h.
FUEL: Bunker "C" at API of 14.4 to 16.6 (approx.) and blended Bonded Intermediate grades from 1 to 30.
FIRE PRECAUTIONS: Normal precautions.
CONSULS:

Chile: Dr. Carlos Salinas, 948 Equestrian Dr., Mount Pleasant, S.C. 29464, Tel: (803) 792-2489, (803) 884-6224.

GANGWAY/DECK WATCHMEN: Supplied by Agent upon request from Shipmaster only.

CERTIFICATES: Normal International Certificates.

CUSTOMS ALLOWANCES: Tobacco, Wine and/or Spirits, governed by length of time in port and existing Customs Regulations.

REPATRIATION: Facilities available.

AIRPORT: 10 miles from Terminal, served by regular airlines.

HOLIDAYS: Work continues on holidays (except New Year's Day, July 4th, Labour Day and December 25th).

EMERGENCY CO-ORDINATION CENTRE:

Marine & Air Emergency, Oil & Chemical Spills: 196 Tradd St., P.O.Box 724, 29402, Tel: 724-7600.

Captain of the Port, Marine Safety Office, 196 Tradd St., P.O.Box 724, 29401-1899, Tel: 724-7683.

Georgetown: Belle Isle, P.O.Box 1440, 29440, Tel: 546-2742.

POLICE/AMBULANCE/FIRE: Emergency Medical Service, 577-7080; Hospital (Roper), 724–2147; Charleston Fire Dept., 911; City Police, 911; County Police, 911.

TELEPHONES: No arrangements exist for placing phones aboard vessels. Phone facilities are situated within 100 ft. of vessel at dock.

SERVICES: No tank cleaning/washing facilities available at dock. Can be arranged and handled at local shipyard. Practically any other service available at dockside.

BANKS:

NCNB, 1 Broad St., P.O.Box 610, 29402, Tel: 723-6800.

Citizens & Southern National Bank of South Carolina, Main Office, 46 Broad Street., P.O.Box 10608, 29411, Tel: 554-0860.

First Union National Bank of South Carolina, 145 King Street, P.O.Box 995, 29402, Tel: 724-1000.

Southern National Bank, 151 Meeting Street, P.O.Box 935, 29402, Tel: 722-3333.

6. Yes

SHORE LEAVE: Subject to Shipmaster's permission and existing Immigration Regulations.

DELAYS: Normally, no delays beyond normal time required to connect/disconnect hoses.

DEVELOPMENTS: The main navigation channel is to be deepened to 40 ft.

Floating Ro/Ro ramp in operation.

SHIPMASTER'S REPORT: April 1989.

Chart: B.A. Chart No. 2806.

Approaches: Found to be as charted and described in the Pilot book.

Depths: Controlling depth in Charleston Harbour is given by the Pilots as 37 ft. MLWS. Dredging is underway to increase this to 40 ft.

Pilotage: Pilots require a minimum of 2 hours notice of arrival and departure. Radio signals show 2 days notice required.

Pilot Office monitors VHF Channels 16 and 18A and capable of using Channel 14.

Pilot vessels guard VHF Channels 16, 13 and 18A.

Pilot station is at the Sea Buoy with Racon 'K'.

Pilot ladder to be rigged 8 ft. above the water.

Pilots board from a large launch and request a speed of about 7 knots, instructions will be given for any special requirements due to weather conditions.

Pilots leave either in the buoyed channel or at the Sea Buoy depending on weather conditions and entering traffic.

The dock Pilot boards from a tug.

Sea Pilot will leave by launch and will request a pilot ladder to be rigged.

Tugs: When going to Shipyard River Coal Terminal, tugs will join the vessel just above the fixed bridges.

Berth: The Shipyard River Coal Terminal is on the South side of the entrance to Shipyard Creek, and is marked on the chart as dolphins. (Dns).

The face of the berth is well fendered and long enough for this vessel to be loaded without shifting.

Accommodation ladder can be used at high water when light, but due to the dockside saveall and discharging conveyor belt, it is difficult to land on the dockside, so a short brow is required for access at most times.

Ship's cranes will reach over the conveyor belt for storing, and access for trucks is good.

Mean tidal range is given as 5.2 ft. (1.6 m.), but it is as much as 2.0 m. at Springs.

The dockside fenders are above the maindeck level when loaded at low water and for this reason every effort should be made to complete on high water or considerable damage could be done to shipside rails, tank vents and timber stanchions. Possibly this could be considered not a safe berth according to the Charter party, at low water.

The foreman advised that vessels had been loaded to 38 ft. on the Coal Berth and that dredging was expected to increase this to 40 ft. at high water. There is therefore adequate water at all states of the tide for this vessel.

Berthing: Vessel berthed starboard side to, turning with tug's assistance inside the Shipyard Creek.

One line boat is in attendance, taking lines first to the forward dolphins and then coming aft for the stern lines.

Similar procedure for departure, letting go the head lines first then the stern lines.

Loading: Loading is by chute on a movable gantry and as mentioned before, all hatches can be loaded without shifting. Loading capability is about 600 tonnes per hour.

Cargo: All available cargo was loaded.

Stoker coal stowing at 52/53 cu.ft./ton (1.4498/1.4776 cu.m./tonne).

Total cargo loaded by shore weights 6755.556 tonnes.
by draft survey 6761.71 tonnes (Ship's figure).
6760.28 tonnes (Surveyor's figure).

The Surveyor's figure was used for the Mate's Receipt and Bill of Lading.

Hold distribution:

	Pre-stow Estimate	Actual	Slack	Possible Max.
No. 1	1531	1624.28	Nil	1624.28
No. 2	1800	1639.94	181	1820
No. 3	1800	1778.43	43	1820
No. 4	1697	1717.63	Nil	1717.63
Totals	6828	6760.28		6981.91

Pre-stow estimates were calculated using the untrimmed grain capacities of the holds, charter party calling for spout trimmed stowage.

Hold No. 4 was filled giving a stowage factor of 1.46 cu.m./tonne (52.37 cu.ft./ton). Foreman's estimate of space remaining in Hold No. 3 was 40 tonnes and in No. 2 170 tonnes, working on the stowage factor from Hold No. 4, these holds would take 1820 tonnes, being close to the Foreman's estimate.

Estimating Hold No. 1 with the same stowage factor, it would take 1550 tonnes, however this hold was filled and shore weights of 1624.28 tonnes were given, a stowage factor of 1.393 cu.m./tonne (49.86 cu.ft./ton). Either the shore weights are incorrect or there is an overestimation of the void space left in Hold No. 1. This is likely as the distance to the fore and after ends of the hold are shorter than in Holds No. 2 and 3 and the fore end has less width, but the same percentage loss is used as for the larger hatches although Hold No. 4 also with shorter ends but less taper has a smaller percentage loss. Therefore estimate that in future 6,982 tonnes of this coal could be loaded and the arrival draft of 21 ft. maintained with full bunkers at Charleston.

Fresh Water: Available from the berth, but delivery is reported to be slow.

Services: All services expected in a United States port are available.

AUTHORITY: South Carolina State Ports Authority, Port of Charleston, 176 Concord Street, P.O.Box 817, Charleston, South Carolina 29402. *Tel:* (803) 723-8651. *FAX:* (803) 577-8616. *Cables:* SC Portsauth. *Contact:* W. CHICAGO, Illinois: 41.50 N. 87.45 W. (See Plan)

DOCUMENTS:

For Agent in Montreal:

3 unfreighted copies of Complete Manifest for Seaway Toll purposes covering all cargo to be discharged in the Great Lakes.

In first U.S. port: a "Traveller" is made up by the Customs Inspector with the following documents:

2 complete sets of U.S. Cargo Manifests, plus 6 copies for Agents.

- 1 set Manifest of Cargo for first U.S. port.
- 4 Stores Lists.
- 4 Personal Effects Lists.
- 4 Firearms and Ammunition Lists.
- 4 Crew Lists, Form I-418.
- 4 Narcotics Lists.
- 4 Vessel's Itinerary Lists.
- Vessel's Registry and copies of Paid Tonnage Tax Certificate.
- Health Pratique.
- Clearance from previous port.
- 2 sets Bills of Lading.
- 3 copies Stowage Plan.

In subsequent U.S. ports the following are required:
5 sets Manifest of Cargo for that port.
The "Traveller" and Permit to Proceed issued in previous port.
2 Stores Lists.
2 Personal Effects Lists.
2 Firearms and Ammunition Lists.
2 Crew Lists.
2 Narcotics Lists.
2 sets Bills of Lading.
3 copies Stowage Plan.

PILOTAGE: Compulsory unless Master holds Exemption "B" Licence. 24 hours' notice of arrival required by Agents who arrange Pilot.

ANCHORAGES: In Chicago Harbour, Anchorages A and B designated for merchant ships and marked on charts. In Calumet Harbour vessels should not anchor within 1,000 ft. of the breakwaters.

RESTRICTIONS: St. Lawrence Seaway navigation season approx. from April 1st to December 15th. Controlling depth 27 ft.
Inland waterways to New Orleans open 12 months.

MAX. SIZE: Limited at Seaway Locks. 730 ft. length, 26 ft. draft. Depth alongside terminals 27 ft.
Inland waterway handles barges with draft 9.0 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

RADIO: Port can be contacted by Illinois telephone station WAY. Vessels are required to give notice on radio upon entering Calumet River.

Notice of Arrival: Master must give at least 24 hours' notice to Commander, 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also at least 24 hours' notice of ETA at first U.S.A. discharge port is required.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, not compulsory and not required at Iroquois Landing Terminals, but recommended for downriver transit to Lake Calumet berths.

BERTHING: 2×100,000 sq. ft. terminal warehouse facilities. 90 acres of the 194 acre site has been set aside for maritime operations adjacent to the 3,000 ft. of berthing space on the South side of the Calumet River entrance from Lake Michigan.

Calumet River Terminals: Iroquois Landing Lakefront Terminals. Operator: Ceres Marine Terminals. Facilities at the mouth of the Calumet River. Handles general cargoes, steel products and containers. The terminal has 3,000 ft. of berthing space. Heavy lift cranes run from 75 to 140 tons in capacity. Also numerous lift trucks, with capacities to 46,000 lb.

Federal Marine Terminals Inc. handles general cargo, steel products and containers. This facility has 730 ft. of berthing space, 34,000 sq. ft. of covered storage space and 11 acres of open storage space. Heavy lift cranes at Federal Marine range from 20 tons to 150 tons. Lift truck capacities range up to 52,000 lb.

The Rail to Water Transfer Corp. (RTW) on the Calumet River specialises in handling, storing and distributing raw materials or dry bulk commodities. RTW's twin bulk loading facilities offer 2 deep-water berths, each more than 700 ft. long. The facility has railroad yards that accommodate 2,200 rail cars adjacent to the dock. The twin loading towers provide fast handling at up to 2,500 t.p.h.

Lake Calumet Terminals: Stolt Terminals (Chicago) Inc. in Lake Calumet transfers liquid bulk cargoes – animal fats, vegetable oils and chemicals. Bulk Terminals has 600 ft. of berthing space, with storage capacity of more than 750,000 barrels and 16,000 sq. ft. of drumming warehouse space. This facility has a transfer capacity of approximately 200 t.p.h. Bulk also has 5 miles of internal railroad trackage and a switch engine.

Ceres Terminals (North), Inc. at Lake Calumet handles steel, ores, pig iron, scrap and containers. The terminal was designed for easy interchange of cargoes to and from deep sea vessels. Mississippi River barges, Great Lakes vessels, railroads and trucks – both local and interstate. Truck and railcar weighing services are available also. Ceres has 1,500 ft. of berthing space; 45,000 sq. ft. of covered storage and 27 acres of open storage. Heavy lift equipment includes 5 cranes ranging from 125 tons to 150 tons. Lift truck capacities range up to 50,000 lb. per unit.

Tri-River Docks on Lake Calumet have 100,000 sq.ft. of general covered storage with access to additional 68,000 sq.ft. Equipment includes lift trucks to 52,000 lbs. capacity, cranes 100 tons – 150 tons; 1,000 ft. of berthing for deep-draft vessels and inland barges. Speciality in steel, lumber, pulp and general cargoes.

Prairie Maritime on Lake Calumet specialises in bagged exports with 68,000 sq.ft. covered storage with rail to loading dock capability, serving deep-draft vessels and inland waterway barges.

Emesco (Dockside) Terminals warehousing and marine terminal facilities on Lake Calumet are designed for efficient handling of steel, machinery, containers, scrap, pig iron, ferro-alloys and other metallic bulk commodities. Emesco's 800 ft. of heavy duty bulkhead and 2×75 ton gantry mounted cranes operating over 3,700 ft. of tracks provide more than 1,000,000 sq. ft. of open storage under cranes. Emesco has 100,000 sq. ft. of heated warehouse. Other features are 25 acres of open storage, miscellaneous auxiliary cranes, an electronic truck and rail scale, 25,000 ft. of railroad track, ship to barge transfer.

Port District operates Free Trade Zone No. 22 for warehousing, storage and distribution. 200,000 sq.ft. covered warehouse and 25 acres of open storage area have FTZ designation.

BULK HANDLING FACILITIES: Continental Grain Company's Elevator "B" on the Calumet River has a storage capacity of 6,800,000 bushels. Elevator "B" has 5 loading spouts with a shipping capacity of 40,000 bushels per hour. Unloading capacity from barges is 15,000 bushels per hour. Receiving capacity from rail cars is 10,000 bushels per hour and from trucks 15,000 bushels per hour. The berthing space at Elevator "B" is 1,025 ft.

The Cargill Inc. grain elevator on the Calumet River has a capacity of 23 million bushels. In addition to grain, this facility handles salt, molasses, and grain by-products. Cargill has 3,600 ft. of berthing space – 1,200 ft. of this for elevator use, and 20 acres of open storage. Loading capacity is 60,000 bushels per hour, while unloading is 12,500 bushels per hour. Cargill has 3 marine legs, and 5 loading spouts.

The Gateway Elevator of the Indiana Grain Co-Operative at Lake Calumet offers storage capacity of 6,500,000 bushels for bulk grains. The 8 loading spouts have a capacity of 20,000 bushels each per hour. Unloading speed is 10,000 bushels per hour. Berthing space is 1,000 ft.

Continental Grain's Elevator "C" at Lake Calumet has a capacity of 6,500,000 bushels of bulk grain and grain products. The 8 loading spouts have a capacity of 20,000 bushels each per hour. Unloading capacity is 10,000 bushels per hour. This facility has 1,000 ft. of berthing space.

DENSITY: Fresh water.

MEDICAL: Doctors, hospital and all facilities available.

FRESH WATER: Available at most berths.

FUEL: All grades available, ex-wharf, or delivered by barge.

2 Narcotics Lists.
2 sets Bills of Lading.
3 copies Stowage Plan.

It is especially important that vessels try to have their visaed Crew List on board, which is required by U.S. Immigration at first U.S. port. Failure to have this visaed Crew List can result in all personnel being detained on board. Visa waivers are applied for and granted fairly regularly but Immigration has the discretion to refuse these at will.

PILOTAGE: Compulsory, unless Master has a "B" Certificate on board. Vessels are not permitted to transit the lakes from Port Colborne to Cleveland without either a "B" Certificate on board or a special Waiver from the U.S. Coast Guard.
ANCHORAGE: In the outer harbour, 28 ft. depth, mud and sand bottom.
RESTRICTIONS: St. Lawrence Seaway navigation season approx. from April 1st to December 15th. Controlling depth 25 ft. to 27 ft. Access to berths in the River is limited by height restriction of 97 ft. above waterline.
MAX. SIZE: Limited at Seaway Locks, 730 ft. length, 26 ft. draft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.
RADIO: U.S. Coast Guard can be contacted by R/T on 2182 kHz.
Notice of Arrival: Master must give at least 24 hours' notice to Commander, 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also at least 24 hours' notice of ETA at first U.S. discharge port is required.
AGRICULTURE: See "Agriculture" first U.S.A. port (Albany).
TUGS: Available and use is compulsory in Cuyahoga River and Old River Channel.
BERTHING: See "Tables".
DENSITY: Fresh water.
MEDICAL: Doctors, hospital and all facilities available.
FRESH WATER: Available at most berths.

COOS BAY, Oregon: 43.22 N. 124.13 W. **(See Plan)**

DOCUMENTS: Local Port Authority does not require any documents from merchant vessels entering this harbour. This does not preclude United States Customs requirements for documents.
PILOTAGE: No specified amount of advance notice of ETA required. Radio contact may be made on frequency 8182 kHz, also on frequency 2182 kHz. Most used frequency is VHF Channel 16. Pilot will be taken on board at entrance to Coos Bay Channel. No designated anchorages for vessels awaiting a Pilot.
ANCHORAGES: North of Entrance Buoy.
MAX. SIZE: Max. permissible length is 725 ft., breadth 110 ft. A 2 ft. clearance under keel is considered necessary for safe navigation. Vessels entering Coos Bay from sea draw down about 0.166 in. per foot of draft because of difference in density.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
RADIO: Pilots, Agents and stevedores monitor VHF Channel 16.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Pilot vessel acts as Tug. Emergency small harbour tugs available and ship's lines generally used.
BERTHING: *Note:* All berths with the exception of oil berths dredged to 35 ft. in 1979.
'T' Dock: Distance from entrance 6 miles.
Barge Facility: Distance from entrance 6.5 miles.
Roseburg Lumber Co. Dock: Length 635 ft. Depth alongside at MLW 35 ft. No fresh water available. Distance from entrance 8 miles.
Ocean Terminals Dock: Length 400 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 11 miles.
Weyerhaeuser Dock: Length: (Lumber Dock) 1,433 ft. (Wood Chip Dock) 694 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 12 miles.
Fibrex and Shipping Co. Dock: Length of floating walkway 700 ft. Depth alongside at MLW 35 ft. Wood chip loaded by pneumatic pipe. Fresh water available. Distance from entrance 12.5 miles.
Bayshore Dock: Length 504 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 13 miles.
Dolphin Terminals: Vessels moor to dolphins adjacent to apron 60 ft. long and 26 ft. wide which is joined to the shore by a causeway length 190 ft. and width 12 ft. Depth alongside at MLW 35 ft. Fresh water available. Distance from entrance 13 miles.
Central Dock: Length 1,348 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 13.5 miles.
Portland Dock: Length 576 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 15 miles.
Coos Bay Dock: Length 1,326 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 15 miles.
BRIDGES: 2 bridges cross the main ship channel. The Southern Pacific railway drawbridge 9 miles from the entrance and the Coast Highway Bridge 9.6 miles from the entrance. Clearance height of the Highway Bridge is 149 ft. in the centre of the span at MLW. Clearance width of swinging railway bridge 194 ft.
STEVEDORES: Should have minimum of 48 hours to arrange gangs. Also see "Radio".
MEDICAL: Advance notice of required medical attention is desirable, in order to expedite use of ambulance, if necessary.
TANKERS: 2 tanker berths, Standard Oil and Union Oil Co., draft 30 ft. Tankers discharge into tank farms. Union Oil Co. is the bunkering Agent.
FRESH WATER: Available. Cost per ton is negotiable.
FUEL: 24 hours advance notice desirable, both bunker and diesel fuel available.
CONSULS: None.
REPAIRS: Only minor deck and engine repairs possible.
DRY DOCKS: Largest dry dock handles vessels not exceeding 220 ft.
GANGWAY/DECK WATCHMEN: Service of watchman at discretion of ship's Master.
OPENING/CLOSING HATCHES: Normally by stevedores.
REPATRIATION: Repatriation through local Customs and Immigration Office.
AIRPORT: All docks within 5 miles of airport. Airport served by regular airlines.
TIME: GMT minus 8 hours, clocks advanced 1 hour on first Sunday in April, clocks retarded 1 hour last Sunday in October.
HOLIDAYS: All legal holidays observed, plus state-wide elections. Cargo work through negotiations with stevedore contractors.
POLICE/AMBULANCE/FIRE: Police: Coos Bay 269-1181, North Bend 756-3161; Ambulance 756-3234; Fire: Coos Bay 267-4123, North Bend 756-6111.
SHORE LEAVE: Crew members allowed ashore except when Federal Directives may be applied to a specific vessel.
IDENTIFICATION CARDS: Not required by local authorities.
SHIP SUPPLY SERVICE: For general ship stores: Day Ship Supply, 602 W. Hemlock St., Coos Bay, Oregon 97420. Tel: (503) 267-3813.

For transportation of personnel: The Coos Bay Pilots' Association, P.O.Box 254, Coos Bay, Oregon 97420. Tel: (503) 267-4186 would be the initial contact.

There are also numerous charter boat operators who provide charter services.

For emergency services the U.S. Coast Guard maintains a helicopter squadron in port. They bring sick crew members directly to the hospital. Their information phone number is (503) 756-4142, and their emergency number is 756-4141.
DELAYS: No delays in berthing, loading or discharging, or bunkering can normally be expected.
GENERAL: New enterprise zone and foreign trade zone within por district.
DEVELOPMENTS: Depth of channel at entrance 45 ft. MLLW. Inne channel, to head of channel 35 ft. MLLW. An additional anchorag (Turning Basin) will be installed, directly East of Beacon 17.
AUTHORITY: Oregon International Port of Coos Bay, Port Buildin Front and Market Streets, Coos Bay, Oregon 97420. *Tel:* 267 – Por *Telex:* 360315. *Contact:* Frank Martin, Jnr., General Manager.

CORDOVA, Alaska: 60.33 N. 145.46 W.

Located at S.E. side of Prince William Sound at the head of Orca Inle Open harbour year round.
APPROACHES: Via Prince William Sound.
DOCUMENTS: See "Anchorage, Alaska".
PILOTAGE: Pick-up point is Sheep's Point. Prior arrangemen required.
ANCHORAGES: Good holding ground. Mud bottom between Spik Island and Municipal dock.
MAX. SIZE: Recommend max. draft 25 ft. Tidal variation: 18 ft. – 19 f
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illnes Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Contact port on VHF Channels 16 and 68; Citizens Ban Channel 5 or SSB 2509 kHz.
TUGS: Limited availability. Prior arrangements need to be made.
BERTHING: Berthing Permit required. Advance notice of 48 hour requested.

Municipal Dock: 18 ft. deep, 400 ft. long, 72 ft. wide. Open storage o 10 acres. One 140 ton P & H mobile crane.
Container and Ro/Ro Facilities: Movable ramp, 4.57 m. wide, availab for Ro/Ro operations. 4 ha. container staging area.
STEVEDORES: ILWU No. 66, Box 335, Cordova, Alaska, 99574 Tel: (907) 424-5447.

Working hours – 24 hours.
MEDICAL: 22 bed hospital and a medical clinic, with 3 doctors, 1 dentis also public health nurse.
REPAIRS: Radio, radar, welding, machining and light engine repair can be effected.
FRESH WATER: Available at docks.
FUEL: No bunker "C" available. Fuel oil available.
CUSTOMS: Quarantine – local. Immigration and Customs fro Anchorage, Alaska.
AIRPORT: 13 miles from city centre. Small plane field near tow available for charter air service.
TIME: Alaska Standard time.
HOLIDAYS: None.
POLICE/FIRE/AMBULANCE: All available. Tel: (907) 424–6100.
AUTHORITY: City of Cordova, Box 1210, Cordova, Alaska 99574 *Tel:* (907) 424-6200. *FAX:* (907) 424–6000. *Contact:* Dale Mum Harbour Master/Port Director.

CORPUS CHRISTI, Texas: 27.48 N. 97.23 W. **(See Pla**

PORT LIMITS: Corpus Christi's port limits include all of Nueces Coun which has been officially designated as Port of Corpus Christi Authori of Nueces County, Texas. The Corpus Christi Turning Basin, Avery Poi Turning Basin, Chemical Turning Basin, Tule Lake Turning Basin an the Viola Turning Basin are interconnected by the Industrial Canal; th Tule Lake Channel and the Viola Channel constitute the Corpus Chri Inner Harbour. Other Bay points included in the Port of Corpus Chri area are: Harbor Island, the North end of Mustang Island, near the inne end of the Aransas Pass Entrance, and Port Ingleside and La Quin along the route of dredged deepwater channels on North side of Corpu Christi Bay; and the Rincon Barge Canal System. All of the ship chann has now been deepened from 40 ft. to 45 ft. to the Chemical Turnin Basin. The channels and basins to Viola Basin are 40 ft. deep.
DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all carg on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Form 1304).
2 copies Stores List (Form 1303).
2 copies Passenger List (Form I–418).
2 copies Crew List (Form I–418).

Customs Boarding Officer will also examine Ship's Register, Load-Lin Certificate, Safety Equipment Certificate and Certificate of Financ Responsibility. In addition, the following documents will be required fo formal entry to be made within 48 hours of arrival from abroa or 24 hours from arrival from a United States port:

Master's Oath (Customs, 2 copies Form 1300).
General Declaration (2 copies Form 1301).
All Foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002
Certified Crew List.

PILOTAGE: Pilot boards off Port Aransas.

RESTRICTIONS: No restrictions, 24 hour service. The Port of Corpus Christi is situated on the West side of Corpus Christi Bay, in South-western Texas. Port facilities at Inner Harbour lie along a 9.5 miles stretch of dredged channels and basins about 18 miles from Aransas Pass entrance at the Gulf of Mexico. Channel depth 40 ft., width 400 ft.

Turning Basins: 5 turning basins in the Inner Harbour are each minimum 1,000 ft. wide and more than 1,000 ft. in length.

MAX. SIZE: Cargo vessels: 39 ft. draft. Tankers: 40 ft. draft. Harbor Island has tanker docks with 45 ft. draft. Also see "Berthing".

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

RADIO: KLC ITT-Radio-Arcadia, Texas. KLC RCA-Radio-Galveston, Texas.

VHF: KKQ 769 – Harbour Master – Channels 12 and 16. WR 8879 – Pilot Boat. KQU – Pilot Office – Aransas-Corpus-Christi Pilots Channels 12 and 16. KBP 384 – Harbour Tugs – Channel 12. U.S. Coast Guard – Channels 16 and 22. Pilot Office KQU 371.

TUGS: Tug assistance available. Tugs join vessels berthing at Harbor Island in Jetty channel. Tugs accompany vessels entering Inner Harbour outside Corpus Christi Harbour Bridge.

BERTHING: The Corpus Christi Turning Basin is over a mile long and 1,000 ft. wide. There are 4 additional basins in the Inner Harbour, which extends Westward from Corpus Christi Harbour Bridge for 9.5 miles. The water in all basins, channels and canals is 40 ft. deep.

Draft for public docks will be furnished upon request to the Harbour Master or steamship Agent. Draft for private docks will be furnished upon request to the dock owners or steamship Agents.

Also see "Port Limits" and "Developments".

Inner Harbour – Public Docks: The length limit indicator is not of necessity the max. length for a vessel as larger vessels can berth if adjacent berth is not occupied.

Cargo Docks No.	*Length Limit* (ft.)
1 – 2	700
3 – 6	1,300
8	600
9	750
10 – 11	700
12	700
14 – 15	1,000
Bulk Materials Dock	835
Public Grain Elevator Dock	900

Inner Harbour – Private Docks: (Other than oil docks).

PPG Industries Inc., Cargo Dock: Length of pier 450 ft. Length of Head 100 ft.

Producers Grain Port Terminal Elevator Dock; Lone Star Cement Corp. Dock; Berry Contracting Company; Centex Cement Company.

CONTAINER FACILITY: New container facility in operation located on 6 acres behind Cargo Dock 14. Terminal provides full service for receiving, delivering and handling of marine containers. Containers are handled with new Kalmar lift machine with capacity of 90,000 lb. Kalmar has telescopic spreader for handling 20 ft. or 40 ft. units. U.S. Customs maintain on site inspection facilities.

BULK CARGO FACILITIES: *Ore, Minerals, Coal, Petroleum Coke:* Bulk Materials Dock with travelling unloading tower capable of direct discharge from vessels to railcars or trucks at rate of 1,000 t.p.h.

A new Bulk Loading Terminal to load vessels directly from trucks, railcars or stockpiles at rate of 1,500 t.p.h. is in operation. The new dock has a 45 ft. draft alongside, 63 ft. airdraft and 1,300 ft. slip length.

Grain: 2 export grain elevators are located in the Inner Harbour. The Corpus Christi Public Elevator has a 5,000,000 bushel capacity. Rated truck unloading capability is 1,000 t.p.h.; railcars can be unloaded simultaneously at 2,000 t.p.h. The Interstate Grain Port Terminal Elevator is privately owned and has a 6,400,000 bushel capacity.

TANKERS: Between Corpus Christi Turning Basin and Viola Basin are 11 public and 10 private Oil Docks, some capable of berthing tankers of 150,000 d.w.t. capacity. Also see "Berthing".

Inner Harbour – Public Docks:

Oil Dock	No. 1	Length Limit 965 ft. Max. Draft 45 ft. (SW)
	No. 2*	Length Limit 350 ft.
	No. 4†	Length Limit 965 ft. Max. Draft 40 ft. (SW)
	No. 6*	—
	No. 7†	Length Limit 965 ft. Max. Draft 40 ft. (SW)
	No. 8	Length Limit 900 ft. Max. Draft 40 ft. (SW) Also see "Shipmaster's Report" – dated September 1987

	No. 10*	—
	No. 11†	Length Limit 965 ft. Max. Draft 42 ft. (SW), subject to Pilot's approval
	No. 12*	—

*Limited to barge operations.

†Larger vessels may be berthed when adjacent berth not occupied.

Inner Harbour – Private Docks:

Mobil Oil Dock.
Southwestern Refining Co.
  Oil Dock No. 1 (barge only).
  Oil Dock No. 2. Max. draft 38 ft. (SW).
  Oil Dock No. 3. Max. draft 45 ft. (SW).
Champlin Petroleum Co.,
  Oil Dock No. 1. Max. draft 38 ft. 06 in. (SW).
  Oil Dock No. 2 (barge only).
  Oil Dock No. 3. Max. draft 39 ft. 05 in. (SW).
Valero Refining Co.,
  Oil Dock No. 1 (barge only).
  Oil Dock No. 2. Max. draft 42 ft. (SW).
  Oil Dock No. 3. Max. draft 42 ft. (SW).

Outside of Inner Harbour – Private Docks:

Harbor Island
  American Petrofina Oil Dock. Max. draft 45 ft. (SW). Also see "Shipmaster's Report" – dated September 1987.
  Exxon, Oil Dock No. 1. Max. draft 45 ft. (SW).
  Exxon, Oil Dock No. 2.
Ingelside
  Sun Pipe Line Co. Oil Dock. Max. draft 40 ft. (SW).
La Quinta Channel
  Du Pont Ship Liquid Chemicals Dock.
  Du Pont Ship Liquid Chemicals Barge Dock No. 1.
  Du Pont Ship Liquid Chemicals Barge Dock No. 2.
  Reynolds Metals Co. Bauxite Unloading Pier. (Also see "Shipmaster's Report" – dated April 1988.)
  Reynolds Metals Co. Alumina Loading Dock. (Also see "Shipmaster's Report" – dated April 1988.)

Report: *Cautionary Advice:* Special precautions and procedures are required for all vessels calling at Exxon's Harbor Island Dock No. 1 because of tidal current, wind conditions and passing traffic. Masters must ensure that their vessels are properly moored at all times to minimise the effect of these conditions and prevent the vessel from breaking out of the berth.

The special precautions and procedures, for deep-loaded vessels (34 ft. draft or deeper) are:

Deep-loaded vessels experience maximum effect from tidal current during the flood tide which forces the vessel away from the dock, particularly when clearance between the keel and bottom is 5 ft. or less.

Accordingly, deep draft vessels are docked at the end of the flood tide to allow ample pumping time so that maximum underkeel clearance be attained before the next flood tide reaches full strength.

(Vessels should anchor off the sea buoy to await the suitable stage of the tide.)

Vessels equipped with segregated ballast capability should not commence ballasting these systems until draft is 30 ft. or less.

If during the flood tide the vessel's draft is in excess of 34 ft. (mean), a tug should be in attendance to assist the vessel in staying alongside the dock. To ensure tug availability, the Master should advise the Agent 3 hours in advance if planned pumping does not proceed to permit a lesser draft than 34 ft. at the full strength of the next flood tide.

Vessels with drafts that exceed 34 ft. (mean) should be equipped with 12 mooring wires. If they are not so equipped, the Dockmaster will require the vessel to use additional mooring ropes.

Wind Conditions: Winds from the Northern quadrants, which occur particularly during the Winter months, place heavy loads on mooring lines when a vessel is in a fully light condition.

A contract weather service provides an alert to Masters (via the Agent and/or Dockmaster) and to the Dockmaster when abnormal weather conditions are predicted. The Dockmaster will require cargo transfer shutdown when wind velocity exceeds established limits.

In order to minimise wind effect, the vessel's segregated ballast tanks should be filled before completion of cargo discharge.

Combined Wind and Tide Conditions: Particular attention should be paid to unfavourable combinations of wind, tide and current which will place high loads on mooring lines.

Passing Traffic: The close proximity of the Exxon Berth to the Corpus Christi Channel results in interaction from passing traffic. This can be severe, depending on the speed and displacement of the passing vessel.

Propeller wash from vessels (mooring/unmooring) at the Petrofina Berth and the wash from assisting tugs also have an unfavourable effect. Special attention must be given to spring lines to ensure they are kept taut at all times.

The Exxon Terminal at Harbor Island has established wind and current limitations at which cargo operations should be stopped. Cargo operations are also stopped if a vessel moves off the berth. Hoses are disconnected by the terminal when required due to wind, current, etc.

Port Approaches: Vessels should approach Aransas Pass through the prescribed Safety Fairways, exercising due caution at all times as the lanes are unmarked. Numerous fishing vessels may be encountered. The low shore lines will start to show on radar at a range of between 15 and 20 miles. A large number of shore lights in the background make it difficult to distinguish the navigational aids. The entrance channel through Aransas Pass is protected by jetties. The outer bar channel, the Jetty channel and the inner harbour basin have project depth of 45 ft.

Tugs: Tugs will come alongside at Buoys No. 9 and 10. A minimum of 3 tugs are usually required for a loaded vessel and 2 for a vessel in ballast under good conditions. Tugs up to 3,200 h.p are available.

CARGO GEAR: 7 locomotive cranes including 4×30 tons, 1×25 ton, and 1×45 ton. Heavy lift facilities: Derrick at Cargo Dock 14 has 100 ton capacity, at 53 ft. radius, and can handle containers 40 ft. or larger; otherwise ship's gear used. Heavy lift facility also available at Bay, Inc.

Facilities are available for all types of liquid cargo, dry bulk and general cargo, but cannot handle restricted cargo such as ammunition and explosives.

BRIDGES: Corpus Christi Harbour Bridge: Vertical clearance at MHW is 138 ft.

Upper Harbour Lift Bridge: Vertical clearance at MHW when raised is 138 ft.

MEDICAL: Ample hospital and dental facilities available.

FRESH WATER: Water available at all public docks for $2.50 per 1,000 gallons; minimum charge of $25.00 for each connection.

FUEL: 24 hours notice required.

Bunker C, Marine diesel, Light diesel – Pipe-line or Barge, Truck.

FIRE PRECAUTIONS: No working barges alongside (except bunkering barges) and normal precautions such as shut down cargo operations during lightning, storm, etc.

CONSULS: Danish Consul, 4517 Baldwin. Tel: (512) 884-6344.
German (F.R.) Consul, 5440 Old Brownsville Rd. Tel: (512) 289-2416.
Mexican Consul, 1740 First City Tower I. Tel: (512) 882-3375.
Spanish Consul, 19833 Melissa Lane. Tel: (512) 887-7246.

REPAIRS: See "Services".

SURVEYORS: American Bureau of Shipping; J. E. Orrell, Lloyd's Sub-Agency and National Cargo Bureau.

GANGWAY/DECK WATCHMEN: Not necessary.

HATCHES: Hatches may be opened by crew before entering harbour, after the ship has entered harbour it is carried out by stevedores.

CUSTOMS ALLOWANCES: 300 cigarettes per man. 1 quart liquor per man.

AIRPORT: Approximately 7.75 miles from Port. Serviced by 3 regular airlines.

TIME: Daylight Saving Time from first Sunday in April till last Sunday in October (minus 5 hours GMT). Central time remainder of year (minus 6 hours GMT).

HOLIDAYS: New Year's Day (January 1st); Martin Luther King's Birthday (January 15th); Lincoln's Birthday (February 12th); Washington's Birthday (3rd Monday of February); Texas Independence Day (March 2nd); Good Friday (varies); Memorial Day (last Monday of May); June 20th; July 4th; Labour Day (First Monday of September); Columbus Day (2nd Monday of October); Veterans' Day (4th Monday of October); Thomas W. Gleason's Birthday (November 8th); Thanksgiving (4th Thursday of November); Christmas Day (December 25th).

Possible to work on any holiday, except Labour Day or Christmas, only in case of fire or danger to property. If holiday falls on Sunday, Monday is observed.

POLICE/AMBULANCE/FIRE: Police 882-1911, Ambulance 882-5571, City Fire 884-5563 or 911, Refinery Terminal Fire Co. 882-7801.

EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard Marine Emergency (512) 937-1898.

TELEPHONES: No arrangements exist.

SERVICES: Coastal Iron Works, Inc., 2,500 ton dry dock, 1,000 ton marine railway, machine shop Tel: (512) 882-8807 and (512) 884-5581.

Helicopter Charter, Rental and Leasing:

Evergreen Helicopters, P.O.Box 7781, Corpus Christi, TX. 78415. Tel: (512) 854-995.

Home Office (Evergreen Helicopters), Route 3, Box 198, Galveston, TX. 77553. Tel: (409) 740-0231.

Omniflght Offshore, Inc., P.O.Box 7519, Corpus Christi, TX. 78415. Tel: (512) 289-1181.

Pumpkin Air, Inc., P.O.Box 10264, Corpus Christi, TX. 78410. Tel: (512) 289-6363.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: Standard Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for same vessel.

DEVELOPMENTS: Port plans include deepening the Inner Harbour to 45 ft.

SHIPMASTER'S REPORT: September 1987.

Vessel: Tanker, 95,000 d.w.t.

Coastguard: For U.S.C.G. annual tank inspection, the authorities need to inspect the Cargo Gear Book, in addition to all other documents. Additionally U.S.C.G. require that for tankers, stores, gas cylinders, etc., must not be on cargo tanks.

Pilot: The Pilot requires the ladder 8 ft. above the water.

Berthing: Berthing carried out 24 hours a day.

At the Petrofina Berth at Harbour Island, fresh water and telephone are not available. Due to strong currents and passing vessels, the moorings consisted of 4 head/stern lines, 2 breast lines and 4 springs at each end. Three tugs assisted in berthing. Bunkers may be taken whilst alongside but this will usually depend on the Charterers or Receivers permission.

Just off the Petrofina Berth there is a shallow patch where deep draft vessels usually touch the bottom, but it appears to be soft mud.

The pilots, tugs and linesmen all require 2 hours notice.

At Oil Dock No. 8, 2 tugs are required and if vessel turns before berthing then only 1 tug will be required when unberthing. Moorings consisted of 3 head/stern lines, 2 breast lines and 2 springs at each end.

The ship's gangway was required at both berths.

If vessel is cleared for a foreign port and diverted to another U.S. port, the Agent at the sailing port should be informed, in order that he may advise the authorities accordingly. If the authorities are not advised the vessel is liable to a fine of U.S.$1000.00. Vessels have to pay a user fee to U.S. Customs of U.S.$397.00 regardless of size. Also if vessel is diverted to another U.S. port after being cleared for a foreign port, advise the Agent of any slops on board for Customs purposes.

SHIPMASTER'S REPORT: April 1988.

Port: Gregory.

Location: 27° 52′ 43″ N., 97° 15′ 38″ W.

The private docks of Reynolds Metals Co. are located on the North side of Corpus Christi Bay, Texas, on Chart No. 11309. The facility is known as Gregory Reynolds Sherwin Plant Dock.

Weather: Humid sub-tropical climate with prevailing winds onshore from East and Southeast at 10 – 15 knots. "Northers" may be expected from November to March with winds over 20 knots. These may be severe from December to February and up to 50 knots. Generally lasting from 1.5 – 3 days. Tropical storms/hurricanes may occur from June to October, reaching a peak in September, infrequently in May and November.

Communications: Reynolds Metal Co., Richmond, Va. Telex No. 827448 AAB REMETCOGO RCH, or via Agent.

Pilot: Aransas Corpus Christi Pilots are on VHF Channel 12, call sign "KQU 371".

Time: GMT minus 6 hours. Summer time of GMT minus 5 hours is applied from first Sunday of April to last Sunday of October each year.

Channel: Navigation to Sherwin Dock is via Main Corpus Christi Channel from Aransas Pass inlet, thence via La Quinta Channel to the Dock. Total distance 22 miles. Several commercial marine installations and private homes border the channel. These are susceptible to wash damage from vessels' wakes. Vessels are cautioned to reduce speed on approaching such installations and enter the reduction in the ship's log book.

Draft: Channel controlling depths are published in Notice to Mariners. Draft is presently restricted to 45 ft. Bauxite Pier Facility No. 5 – depth of water 45 ft. Alumina Pier Facility No. 90 – depth available 38 ft. at MLW (subject to shoaling).

Density: Generally 1022.

Tidal Range: 1.4 ft. Strong winds also affect water levels in Corpus Christi Bay as much as the tides.

Bauxite Pier Facility No. 5:

Max. LOA: 800 ft.

Max. beam: 106 ft. (larger vessels by arrangement).

Air draft: Max. of 50 ft. from top of hatch cover in open position to water line.

Hold depth: Max. of 66 ft. from top of hatch cover in open position to bottom of hold.

Min. hatch size 39 ft. × 39 ft.

Max. overhang into wings: 36 ft.

Min. distance after end last hatch to front of accommodation: 10 ft.

Washing of holds at the berth is permitted but the wash water cannot be pumped overboard or a fine will result. Free surface in the holds is also detrimental to the clean up process, as the vessel must be kept as level as possible because of the rotary motion on the tank top by unloader as it makes its final pass. Gantry travel of the Sumitomo Continuous Unloader is 606 ft. Max. unloading rate 2,000 tonnes per hour. Overall average rate 1,000 – 1,200 tonnes per hour. Plant personnel used exclusively. Plant labour make a good job of residue removal, but at the same time 2 or 3 crew may work in hold during final clean-up.

Vessel design: Deck should be clear of obstructions such as cranes, raised deck houses, light stands at side, log racks, etc.

Alumina Pier Facility No. 90:

Max. LOA: 680 ft. but this depends on distance from forward hatch to stern, which should not exceed 550 ft.

Loading chute outreach from fender line: 67 ft.

Air draft: Max. of 31 ft. 06 in. at ship's rail/bulwark.

The chute travels out on an incline so can usually accept 33 ft. 06 in. at hatch coaming, depending on distance in from side of vessel. If necessary list the vessel to meet this requirement. A list of 5° – 7° is considered the maximum allowable by plant personnel for working safely and ballasting cannot be started until boarding party is off the vessel and a draft survey complete. Most large vessels find it necessary to fill one cargo hold with water ballast to meet this restriction and caution must be taken when deballasting not to exceed loading rate. Loading rate about 500 tons per hour. Cargo stows at 55 lb./cu.ft. or 41 cu.ft. – 43 cu.ft./ton. Cargo is very dusty and abrasive. Wheelhouse should be sealed and accommodation ventilation "air washers" should be used if fitted. It is also helpful if a positive pressure of about 1 p.s.i. can be maintained in the accommodation by adjusting the supply/exhaust fans. There is no shore scale and although Plant may use a Surveyor to determine Bill of Lading quantity, vessel is responsible to advise terminal when loading is complete.

Hatches must be clean, fresh water washed and dry, with no residue in hold or underside of covers. A Surveyor will carry out a "Cleanliness" inspection before the vessel will be accepted. Crew must open/close hatches and haul ship alongside berth during loading operations. Gangway of the vessel used and safety net is recommended. Vessels normally turn and berth head out, port side to, using 2 tugs.

Fuel oil and Diesel oil are available by barge and small amounts of diesel oil available by tank truck, but some vendors do not like to deliver during cargo operations due to dust. U.S.C.G. also prohibits tank truck hose from loading over water so coordination with loading sequence is essential at Alumina Berth. Barging cost from Corpus Christi is about U.S.$3,600.

Fresh water may be taken in quantities up to 300 – 400 tons at no cost, but ship's crew must connect/disconnect and use own hose. Connection must be tight with no water leaking to dock.

AUTHORITY: Port of Corpus Christi Authority, P.O.Box 1541, Corpus Christi, Texas 78403. *Tel:* (512) 882-5633. *Telex:* 910-876-1446 Corp Coc. *Contact:* Harry G. Plomarity, Executive Director. Ed Altemus Director of Trade Development. Fred Bingham, Harbour Master.

DESTREHAN, Louisiana: 29.56 N. 90.21 W.

East bank of Mississippi River about 121 miles from sea.

DOCUMENTS/PILOTAGE: For all general information refer to "New Orleans."

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: At least 1 tug required for mooring/unmooring.

BERTHING: (a) St. Charles Elevator, berth 1,000 ft. length, Minimum 41 ft. depth. Loading rate, Max. 75,000 bushels per hour; 2 loading belts. Storage capacity 168,000 tonnes.

(b) Bunge Grain Elevator, berth 700 ft. length, Minimum 41 ft. depth. Loading rate, Max. 70,000 bushels per hour; 2 loading belts. Storage capacity is 115,000 tonnes.

(c) ADM Midstream loading buoys – 2 mooring facilities.

DENSITY: Fresh (1000).

FRESH WATER: Available ex-berth.

FUEL: Not available.

AUTHORITY: The Port of South Louisiana P.O.Box 909, La Place Louisiana 70069-0909.

Operators: (a) St. Charles Grain Elevator Company, P.O.Box 267, Destrehan, Louisiana 70047. *Tel:* (504) 764-7586. *Telex:* TWX 810-955-5503. *Contact:* John W. Imms, Vessel Co-ordinator.

DETROIT, Michigan: 42.19 N. 83.05 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: Compulsory unless Master holds Exemption "B" Licence. 24 hours' notice of arrival required by Agents who arrange Pilot.

ANCHORAGES: In depths from 29 ft. – 51 ft. in the Detroit River off the marine terminals and away from main channel.

RESTRICTIONS: St. Lawrence Seaway navigation season approx. from April 15th to December 15th. Controlling depth 27 ft. Minimum depth of 25 ft. in the Detroit River. The Amherstburg Channel has a depth of 27 ft. 6 in. for upbound traffic.

MAX. SIZE: Limited at Seaway Locks. 730 ft. length, 26 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, not compulsory but recommended for some terminals.

BERTHING: *Detroit Marine Terminals (Scotten Street):*

2,100 ft. dock with 27 ft. LW depth.
2 berths.
Container Freight Station – U.S. Customs approved. 45,000 sq.ft. covered storage.
Total 32 acres of which 20 acres dedicated to container operation.
1×200 ton heavy lift crane with automatic container spreader.
3×85,000 lb. top-loading container handlers.
1×25,000 lb. empty container handler.
1×250 ton diesel crawler crane.
1×200 ton diesel crawler crane.
1×50 ton diesel electric travelling gantry crane.
1×25 ton diesel electric travelling gantry crane.
1×15 ton diesel electric travelling gantry crane.
Lift trucks up to 80,000 lb. capacity.
1×80,000 lb. top loader for 20 ft. – 40 ft. containers.

Detroit Marine Terminals (River Rouge):

1,400 ft. dock with 27 ft. LW depth.
2 berths.
121,000 sq.ft. covered storage.
200,000 sq.ft. storage pads.
Total 45 acres.
3×250 ton crawler cranes.
4×140 ton crawler cranes.
1×50 ton gantry crane.
3×40 ton railroad cranes.
1×25 ton gantry crane.
2×600 h.p. switch engines.
1 rail scale 212,000 lb. capacity.
1 truck scale 212,000 lb. capacity.
7 magnets.
8 clam buckets.
Yard and warehouse lift trucks up to 70,000 lb. capacity.

Harridon Terminal, Inc:

790 ft. dock.
1 berth.
2×250 ton crawler cranes.
1×50 ton hydraulic crane.

Michigan Marine Terminal:

650 ft. dock.
Liquid bulk products (from No. 2 Oils to heavy residual fuels).
17 storage tanks.
Can ship and receive by water, truck and rail. Can receive by Buckeye pipeline.

Hickman, Williams and Co.:

1 berth.
Load bulk materials with conveyor. Unloading by self-unloaders.

Nicholson Terminal & Dock Company (Ecorse Dock):

3,400 ft. dock with 27 ft. LW depth.
4 berths.
275,000 sq.ft. covered storage.
Total 50 acres.
2 cranes, 70 ton capacity at 40 ft. radius and 50 ton capacity at 60 ft. radius.
4×12 ton gantry cranes.
6×30 ton diesel locomotive cranes.
1×85 ton mobile crane.
1×200 ton crawler crane.
3×1,000 h.p. diesel yard engines.
1×290 h.p. diesel yard engine.
1×150 ton railroad scale.
1×72 ft. combination rail and truck scale 400,000 lb. capacity.
2×87 in. magnets.
11×65 in. magnets.
5×55 in. magnets.
12 buckets: 1.5 yds. to 15 yds. capacity.
1 forklift truck, 50,000 lb. capacity.
1 forklift truck, 40,000 lb. capacity.
25 forklift trucks, various capacities.
3×12 yd. bucket front end loaders.

Nicholson Terminal & Dock Company (Summit Street Dock):

1,530 ft. dock with 28 ft. LW depth.
2 berths.
250,000 sq.ft. covered storage.
Total 16 acres.
2 crawler cranes, 200 ton capacity.
12 forklift trucks; 12,000 lb. to 45,000 lb. capacity.
1×60 ft. truck scale 300,000 lb. capacity.

DENSITY: Fresh water.

MEDICAL: Doctors, hospital and all facilities available.

FRESH WATER: Available at most berths.

FUEL: All grades available, ex-wharf, or delivered by barge.

DONALDSONVILLE, Louisiana: 30.05 N. 91.00 W.

(See Plan)

SHIPMASTER'S REPORT: September 1980 (updated 1988).

The report was compiled over 4 visits between August 1979 and August 1980.

APPROACHES: The coastline is low at the mouth of the river and consequently does not give a good radar return. The Racon on East jetty shows up between 12 to 17 miles. Fog and mist is a complication as it is very prevalent with the added problem of the oil rigs. These are located mainly on the East side of the safety fairway but in August 1980 construction was proceeding on a structure right on the Western boundary of the safety fairway about 4 miles S.W. of the East pier.

The Sea Buoy is difficult to locate, vessel should approach as per the leading line indicated.

A strong West flowing current across the entrance can be encountered.

Draft restriction varies throughout the year and should be ascertained in good time. August 1980 at 40 ft.(FW) but patches of 39 ft. 6 in. in places. (Mud, so no difficulty.)

Officially the Bar at the S.W. Pass is the limiting factor but in practice other areas of the river up to New Orleans are as much of draft restriction factor.

Above New Orleans to Baton Rouge a battle is being fought against silting up and a large dredging programme will have to be commenced soon, otherwise the draft will be severely limited – still at 40 ft. officially.

A new road bridge about 15 miles above New Orleans is under construction called 'Ascension', clearance is likely to be 150 ft., the lowest on the river, at zero gauge or about 130 ft. at High River.

PILOTAGE: Pilot boards at Sea Buoy from a fast cutter. Ladder/gangway arrangements 6 ft. from water, normal port gangway at S.W. Pass.

Change at Pilot Town about 1 hour 45 minutes above S.W. Pass and New Orleans about 6 hours above Pilot Town.

If at anchor and requiring a Pilot a minimum of 3 hours' notice is required. Normally order Pilot through Agent. The Baton Rouge-New Orleans Pilots may only berth ships at Donaldsonville about 3 times per month.

ANCHORAGES:

Belle Chase	Mile post	75	1 hour below New Orleans
12 Mile Pt.	Mile post	81	30 minutes below New Orleans
Bonte Carre	Mile post	128	2 hours above New Orleans
Burnside	Mile post	169	4 hours above New Orleans

All anchorages are standing moor operations, if proceeding down river 2 tugs will be required to swing vessel into current, this is *essential* in High River season.

The bank is steep and muddy and as long as vessel lies quietly onto bank little damage can result. In fact this is preferable to hanging out in midstream and getting hit by passing barge strings and shipping.

VHF: Public correspondence as per ALRS. Moving upriver-Venice, New Orleans, Convent (Channel 25) and Baton Rouge. Just about in coverage all the way up from Pilot Town to berthing, all stations very busy in working hours.

Pilot ordered through Agent and on Channel 16.

USCG: Follow VTS booklet.

Boat service: At 12 Mile Point anchorage a launch service operates on Channel 20. Pilots and Agent board by this service.

TUGS: 'Crescent' tugs of around 2,000 h.p. are stationed at Burnside which are available if not handling larger vessels.

BERTHING: *Berth approach and depths:* This is the cause of most concern at Donaldsonville. The channel is at its narrowest off Triad Berth (the downstream berth 0.5 miles below C.F. Industries at Mile Post 173.5), having a minimum depth of 30 ft. (Zero Gauge at Donaldsonville) over a width of 140 ft. and is steep to, falling to 20 ft. over 180 ft. in width.

Gauge reading can vary from about +5 ft. after a dry Summer to +26 ft. or more at the end of the Winter season when the snows to the North are melting.

There is a set onto the Triad Berth varying with the main current. Again as the river height increases, the current varies from 0.5 knots in late Summer to upwards of 5 knots or more in late Winter. Effect is increased by a Northerly wind.

Berth Approach: Head upriver on berthing, unberth stern first until clear of shoal, approximately when bow is 50 ft. downriver of lower Dolphin on Triad Berth, then swing with aid of tugs. Actual depth alongside (Zero Gauge) C.F.I. Berth = 44 ft. (minimum) Triad Berth = 41 ft. (minimum).

Guidelines for berthing as follows:

C.F.I. Berth: Berthing or unberthing at night possible. No vessels to be on Triad, berthing or unberthing.

Triad Berth: Night movements dependent on wind, tug power, etc.

The question of taking bunkers thereby increasing the draft arises. If berthing at Triad only, can take before berthing. If also berthing at C.F.I. it is best left until clear of C.F.I. berth.

Berths: C.F.I. Berth: Reasonable condition. Short steel jetty with 2 dolphins plus mooring buoy at either end, the nearest dolphins either side of the jetty are interconnected by a catwalk.

At 26 ft. the maindeck is level with dolphins so gangway must be turned in. B.O.T. type gangway by pilot ladder position to after dolphin. Port side alongside.

Berth also used for loading bulk fertiliser. Watch the bulk boom as it is left unsecured and can be fouled.

Triad: 0.5 miles downstream from C.F.I. (plants back onto each other).

Basically the same as C.F.I. but dolphins not connected to jetty. No mooring buoys, all dolphins, not as good condition as C.F.I. Bulk fertiliser also loaded. Port side alongside, B.O.T. type gangway amidships.

Moorings: Basically 3, 2, 2, crossed after springs each berth. Mooring boat which moors forward first then aft. Lets go aft first – very handy as propeller is clear quickly. (See "Plan") – have moorings ready before arrival.

CARGO: Ammonia only at both berths plus bulk fertiliser. Labour o both berths assists in connecting up.

C.F.I.: Ship's 12 in. to 8 in. reducer plus shore 150 – 300 ASA spoo piece.

No vapour return line, no venting. Loading at 450 t.p.h. but depend on pumps available, normally two. Emergency stop for ship operation

Triad: Ship's 12 in. to 8 in. reducer. No VRL, no venting. Loading a 350 t.p.h. but again depends on available pumps. Shore tanks are se back further than C.F. Industries and line heating is apparent.

FRESH WATER: Not available at Triad Berth. Available at C.F.I. Bert (Rate 1 t.p.h.). Barge from New Orleans costs about $1,500.

TELEPHONE: On both berths through the terminal operator. Local cal free, long distance calls collect.

GENERAL: Donaldsonville Town nearby, about $5.00 in a taxi. Bato Rouge about 45 minutes away. The International Airport at New Orlean is about 1.5 hours away.

Stores: Lorries can back down jetty roadway to within a few feet o manifold area. A permit has to be obtained at both berths.

USCG: Usual pre-arrival hazardous ship reports to Coast Guar Captain, New Orleans.

Necessary to have a Coast Guard escort through New Orleans. Chec must be made that the Pilot is advising the USCG of the vessel's positio and that she requires an escort. Escort with blue flashing light (fast patro launch) joins off Algies Point and goes through to Huey P. Long Bridge and vice versa.

THE FOLLOWING REPORT (Dated November 1980) IS TO BE REA IN CONJUNCTION WITH THE REPORT ABOVE.

SW Pass: The West flowing current is very strong, about 5 knots acros entrance and in region of Fairway Buoy. Steer well to the East.

9 Mile Anchorage: Boat charges $35.00 per boat, any number persons 24 hour basis. Runs on hour every hour for shore leave purposes b arrangement. Call 'Port Ship Services Poydras' on Channel 20. Minibu to New Orleans at $5.00 per person can be arranged.

Tugs/Pilot: Minimum 2 hours' notice, order through Agent.

VHF: Agent: On Channel 16 and 73, Tricon (Trammo Agent) on Channe 16 and 73. Chandler: Sarussen Marine, on Channel 16 and 9.

Films: Sea View Films: Best to cable direct as per Walport Instructions Also change Vidpack. Change from launch if required when passing New Orleans.

Burnside Anchorage: Boat Charges: $20 per boat plus $5 per person Call "Webber Marine" Burnside on Channel 16 and 18A.

Agents: Call Tricon Burnside on Channel 16 and 73 (Trammo Agents)

Donaldsonville: Depths – See latest chart, shoaling alongside CF Industries and off Triad.

Berthing/Leaving scraped alongside Triad berth, maximum 30 ft. of

Turn when one ship's length below "Triad", lower dolphin.

Three "Parish" tugs used in and out.

To line up manifold at C.F.I., pilot ladder gate should be in line wit gangway on lower dolphin.

Water rate is 5 t.p.h. from fire hydrant stand pipe, not hose.

Water by barge from Baton Rouge at $4.00 per tonne. Minimu 100 tonnes plus $85.00 per hour for tug. Minimum 4 hours =$740.00

No bunkers officially allowed alongside, but can probably take diese at night.

Agents: Tricon in Burnside are now Trammo Agents.

AUTHORITY: *Operator:* C. F. Industries, Inc. P.O.Box 468 Donaldsonville, Lousiana 70346. *Tel:* (504) 473-8291. *Contact:* Arne M Christiansen, Port Captain.

DULUTH-SUPERIOR, Minnesota: 46.49 N. 92.09 W.

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: U.S. or Canadian Pilot compulsory except when Master o officer specially qualified to navigate waters concerned. Pilots obtaine from Upper Great Lakes Pilots Inc., 802 Garfield Avenue, Duluth. Dulut entry – Pilots picked up at point 2 miles due East of pierhead lights Superior entry – pick up Pilot 2 miles N.N.E. of lighthouse. Advise Agents 24 hours in advance of ETA for scheduling Pilot, Customs, Immigratio and Agricultural Inspection. Masters should hold to the South o convergence of shipping lanes at the Duluth Entry and to North of th convergence at Superior Entry when approaching to embark a Pilot.

ANCHORAGES: Anchorage areas near Duluth and Superior entries ar South and Eastward and North and Eastward respectively of mai channel through harbour. Marked by anchorage buoys. Vessels mus only anchor clear of channels at all times.

RESTRICTIONS: Because of varying conditions of wind and current no restriction placed on speed passing through entry piers at eithe Duluth or Superior entry. Speed throughout harbour limited to 7 knots Speed through bridges other than the Aerial Bridge at Duluth ent limited under normal conditions to 6 miles per hour. Because of curren conditions at inner end of Duluth entry, both inbound and outboun vessels must leave vertical black/white striped mid-channel or traf buoy on starboard hand. This gives outbound ships maximum straig run.

MAX. SIZE: Draft 26 ft. Duluth Harbour Entry: Duluth ship's cana minimum width 300 ft. Superior Entry: Minimum width 500 ft. minimu depth at inner end of 27 ft.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illnes Reports made to Chicago Quarantine Station.

RADIO: Prior to entering harbour vessels must make "Security Call" o Channel 51 from 10 to 20 minutes in advance advising intende movement. All vessels should monitor Channel 51 at all times whe under way to determine position and intent of other vessels moving i constricted areas within harbour and approaches.

BRIDGES: Aerial Bridge spanning Duluth entry vertical clearance of 138 ft. Signal for opening bridge shall be given by vessels approaching from lakes, in all circumstances, when not less than 1 mile from bridge. A flashing amber light on harbour side of Aerial Bridge warns outbound vessel of approach of inbound vessel in lake.

TUGS: Available, not compulsory.

BERTHING: *Clure Public Marine Terminal.* Also see "Developments".

Length of dock: 6,600 lineal ft., 7 ship berths, 4 for unloading/loading, 3 for fitting, cleaning, standby, etc. Water depth: 30 ft. 2×90-ton Clyde gantry cranes for container handling. 12 grain loading berths.

C. Reiss Terminal Duluth	2,854	23	None	800,000	None

MEDICAL: All medical assistance available.

DENSITY: Fresh water.

FRESH WATER: Available at most docks in both ports.

FUEL: Available from dock or by barge.

FIRE PRECAUTIONS: No open fire permitted on deck of any vessel while in harbour. This restriction does not apply to a vessel at a shipyard which will be governed by the shipyard's local rules, nor to vessels in lay-up or fit-out status at ore docks.

Ocean vessels, upon docking, shall put on off-shore side of vessel, wire rope lines fore and aft as tow lines for use in pulling ship off dock face in case of fire. Such tow line shall be securely made fast to bitts with eye about 1 ft. above the water.

REPAIRS: All ship repairs can be effected.

DRY DOCKS: At Superior: Fraser Shipyards: one 831 ft. by 95 ft. and one 628 ft. by 76 ft.

CERTIFICATES: Masters are required to present Safety Inspection Certificate of cargo handling equipment and gangways to stevedoring companies and other employers of harbour labour upon request.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required by Immigration.

AUTHORITY: Seaway Port Authority of Duluth, P.O.Box 16877, Duluth, Minnesota 55816 – 0877. *Tel:* (218) 727-8525. *Telex:* 910-561-0052 orcenter Dul. *FAX:* (218) 727–6888. *Contact:* Davis Helberg, Port Director.

EL SEGUNDO, California: 33.54 N. 118.27 W.

OPERATOR: El Segundo is a Chevron U.S.A. offshore multi-buoy marine terminal and refinery.

LOCATION: The terminal Sea Buoy is located approximately 600 yards W.S.W of Berth No. 3 in 102 ft. of water at Lat. 33° 54′ 28″ N., Long. 118° 27′ 29″ W. This lighted bell buoy is painted red with 6 in. high white letters reading, "2 ES". It exhibits a white flashing light every 4 seconds (flash 0.4 secs., eclipse 3.6 secs.). The lantern is 11 ft. above water.

In addition to the many tanks of the El Segundo Refinery, the chimneys of power plants adjacent to the Marine Terminal form prominent landmarks. 2×334 ft. chimneys painted with alternating red and white horizontal stripes mark the Los Angeles Department of Water and Power Scattergood Steam Plant located just North of the Terminal. Directly South of the Terminal is a set of 4 shorter chimneys at the Southern California Edison Co. Power Plant.

DOCUMENTS: Five copies each of the following documents are required for entry and clearance:

Crew List (I-418)

Crew's Effects Declaration (1304)

Ship's Stores Declaration (1303)

Inward Foreign Manifest (1302: If vessel is to discharge at more than one port, each port, with its cargo, must be listed on a separate manifest).

MAX. SIZE:

Berth No.	*Maximum Draft* (ft.)	*Maximum Length* (ft.)	*Vessel Tonnage* (d.w.t.)	*Water Depth at MLW* (ft.)
1	28	550	Up to 30,000	38
2	42	650	Up to 50,000	50
3	51	1,000	Up to 150,000	63
4	56	1,000	Up to 150,000	65

RADIO: *Pre-arrival radio message to ship:*

The vessel's Agent will normally advise the vessel by radio of the following general information when the vessel is approximately 3 days out:

Mooring Master boards 2 miles S.W. of sea buoy in Lat. 33° 54.5′ N., Long. 118° 27.5′ W.

Have starboard hose boom derrick rigged (if so equipped) and 7 good strong mooring lines ready – 3 main deck forward, 3 main deck aft, 4 poop deck (polyester lines only).

Sumatran Crude average cargo temperature must be 125°F on arrival.

Anchor in Anchorage "A" or "B" as directed by message from shore.

Have pilot ladder rigged on starboard side.

Assure 125 p.s.i. pressure on riser during discharge.

Any Customs, quarantine, etc., special information.

Advise if all cargo pumps are in good operating condition, and best average discharge rate.

Radio Communication Prior to Arrival:

Estimated time of arrival (ETA) and requirements for services should be directed to the ship's Agent. ETAs should be sent 7 days, and repeated 3 days and 24 hours, prior to arrival.

Within 2 hours of arrival, communications may be established with the mooring launch via VHF radio Channel 10.

Radio and Telephone Ship to Shore Communications:

UHF Radio. The Mooring Master is equipped with a UHF radio for direct communications with the Terminal Control room at all times from the start of mooring until the vessel has cleared the mooring on departure.

BERTHING: It is expected that the vessel will provide berthing and messing facilities for the 3 man launch crew as well as for the Mooring Master.

Mooring Gear: Each anchor shall be equipped with no less than 10 shackles of chain. Vessels over 50,000 d.w.t. shall have at least 12 shackles on each anchor. Wires on mooring winches should be at least 1,000 ft. (preferably 1,200 ft.) and should be 1.25 in. to 1.625 in. in diameter, depending upon the size of the vessel. Constant tension winches must be braked by means of manual brake.

Synthetic fibre lines of dacron or polyester must be at least 9 in. in circumference and 120 fathoms in length.

NOTE: Polyester/Dacron lines are the only lines acceptable. If vessel is not so equipped polyester mooring lines can be rented from the terminal.

Mooring lines should be located as follows:

1. At least 3 lines on the main deck forward
2. At least 3 lines on the main deck aft
3. At least 4 lines on the poop deck.

If vessel over 100,000 d.w.t. fittings must permit doubling of all lines. Each synthetic line requires a separate bitt.

Mooring Facilities: Berth No. 1 is a 6-point mooring and is used for transfer of refined stock, primarily lub oils and chemical. The unlighted spar buoys mark the offshore end of the pipe-lines and is located approximately 1 mile East of the sea buoy and 1,100 yards offshore. There are also 3 hose marker buoys, one for the end of the chemical hose string and one for the end of each lub oil string. The chemical hose string consists of seven 8 in. diameter × 25 ft. lengths. The lube oil strings are a parallel set of seven 8 in. diameter × 25 ft. lengths which are connected at the ship-end by a piping manifold which the ship provides.

Berth No. 2 is a 6-point mooring and is used for transfer, of light oils (primarily gasoline and jet fuel). It is located approximately 700 yards N.W. of Berth No. 1 and 1,600 yards offshore.

Berth No. 3 is a 7-point mooring used for the transfer of fuel and crude products. It is located approximately 750 yards West of Berth No. 2, and 2,400 yards offshore.

Berths No. 2 and 3 are each equipped with 1 unlit spar buoy and a can buoy. The seaward spar buoy marks the location of the offshore end of the submarine hose when the hose is on the bottom. A can buoy, or hose marker buoy, is connected to the end of the submarine hose by a chain. The submarine hose string in Berth No. 2 consists of nine

12 in. diameter × 25 ft. lengths of which one is over-the-rail, connected to the seaward end of a 16 in. submarine pipe-line leading to the shore facility. The submarine hose string in Berth No. 3 is connected to the seaward end of a 26 in. submarine pipe-line and a 12 in. line for circulation, by seven 16 in. diameter × 25 ft. lengths of hose followed by one 12 in.×25 ft. length hose and one 12 in. diameter × 30 ft. long over-the-rail hose.

Berth No. 4 is equipped with 1 unlit spar buoy and 1 unlit can buoy. The inshore spar buoy marks the end of the 36 in. submarine line and 14 in. circulation line. One hose string comes off the main 36 in. submarine line. The hose string consists of 5×35 ft. long lengths of 20 in. hose, followed by a reducer and then 2×25 ft. long lengths and 1×30 ft. long over-the-rail length of 16 in. hose. The end of the hose string is connected to a can buoy by a chain.

NOTE: All berths are equipped with UHF direct dial radio telephones. VHF marine operator is also available, marine operators are located at Redondo Beach and San Pedro.

Hose Handling: The vessel will be expected to have suitable equipment on deck and ready for making the connection to the submarine hose.

Berths No. 1 and 2 require lifting capacity of at least 5 long tons.

Berth No. 3 requires a lifting capacity of at least 7 long tons for vessels up to 30,000 d.w.t. and at least 8 long tons for vessels over 30,000 d.w.t.

Berth No. 4 requires a lifting capacity (calculated load) of 10 long tons.

Procedure for Discharging: At the completion of most cargo discharges the vessel will be required to receive a 150 bbl. hose wash displacement of cutter stock or gas oil. This is to prevent the hose from plugging while not in use.

Product Transfer Rates, Pressure and Temperature: Lubricants and chemicals are transferred at Berth No. 1 at varying rates depending on the particular product, the maximum rate being approximately 2,100 bbls.p.h. Hoses are rated to 275 p.s.i.

Gasoline and jet fuel loaded at Berth No. 2 are usually transferred at 7,000 – 12,000 bbls.p.h. with a pressure at the ship's rail not to exceed 50 p.s.i. Gasoline and jet fuel are discharged at Berth No. 2 with a pressure not to exceed 125 p.s.i. at the ship's rail. Hoses are rated to 150 p.s.i.

Fuels and crude are loaded at Berth No. 3 at rates to 20,000 bbls.p.h. No. 3 Berth hoses are heavy duty 275 p.s.i. rated. Vessels are expected to maintain discharge pressure of at least 125 p.s.i. at the ship's rail and/or a flow rate of 20,000 – 25,000 bbls.p.h.

No. 4 Berth hoses are heavy duty 275 p.s.i. rated, and the system has a normal working pressure of 180 p.s.i. On this one hose system, vessels are expected to maintain flow rates of up to 50,000 bbls.p.h.

Sumatran Crude cargo will not be accepted by the facility unless the ship's average tank temperature is at least 125°F. However, the average temperature for Sumatran Crude should not exceed 130°F. in order to avoid excessive vaporization of the light fractions in the crude. Heavy viscous residue fuel cargo will not be accepted from a ship unless the ship's average tank temperature is at least 130°F.

MEDICAL: Several hospitals are available in the area. U.S. Coast Guard or local ambulance service may be expected to know what hospital is best suited to handle a particular emergency.

FRESH WATER: Potable water is not available at this mooring. Water barge service is not available in the area. Closest supply is the harbour at San Pedro.

FUEL: Bunker fuel for ship's use is not available in the moorings of the El Segundo Marine Terminal, but may be arranged through Chevron International, San Pedro.

BALLAST: No ballast can be accommodated at the Terminal.

CONSULS: Consulates of most of the maritime Nations are maintained in both the cities of Los Angeles and Long Beach.

AIRPORT: The Terminal is located approximately 2 miles South of Los Angeles International Airport.

TIME: Standard Time along the entire West Coast of the United States is GMT minus 8 hours. Daylight Saving Time is from first Sunday in April till last Sunday in October. Clocks are advanced 1 hour in Summer.

WINDS/TIDES/CURRENTS: *Winds:* Westerly, onshore winds usually prevail. Gales are very rare in Santa Monica Bay, but the local thermal winds blowing from a Northerly direction sometimes necessitate interruption of transfer operations and require moving a ship from the mooring to anchor.

Northerly winds occur during the period from October through May.
In the Autumn and Spring, duration averages 4 to 6 hours
In November, December and January, duration averages 10 hours.
Velocities up to 52 knots have been recorded.

Tides and Currents: Normal tides of approximately 6 ft. pose no significant problems in this open roadstead.

Currents run unpredictably North or South along the coast in the vicinity of the Terminal. The current is most commonly from North to South and is stronger in Summer than in Winter.

TELEPHONE: Each berth is equipped with telephone service. To call El Segundo Terminal, ask Mooring Master. To call local outside numbers within the Los Angeles area, ask Mooring Master.

GENERAL: *Supplies:* Modest quantities of supplies may be taken aboard while at the moorings if absolutely necessary, provided the Mooring Master gives prior approval. This practice is discouraged in view of the sea swell and wind conditions that can develop in the open roadstead of the moorings, as well as the long distances to normal marine supply facilities.

Launch service: A company operated launch may be chartered for vessel's use through the vessel's Agent at the option of the Owner's representative. This launch operates between the moorings and the Port-O-Fino Dock in King Harbour, Redondo Beach, on a published 4 hours' schedule which may be obtained from the Mooring Master. A one-way trip takes approximately 40 minutes. There is a waiting room for use by all tanker personnel awaiting the launch. The waiting room is in the second building facing the yacht moorings. Blue arrows are painted on the side walk between this waiting room and the launch ramp, to assist in identifying the waiting room.

Pilot Ladder: The vessel shall rig a safe and secure pilot ladder or pil hoist (not accommodation ladder) for the Mooring Master an Government Officials to use in boarding and leaving the vessel.

Air Pollution: Any vessel showing visible smoke in excess of 3 minute is in violation and may expect to be cited and required to pay substanti fines.

Dumping of Garbage: Dumping of rubbish or garbage overboard with 50 miles of the coastline is prohibited.

AUTHORITY: *Operator:* Chevron Shipping Co., P.O.Box 910, Sa Pedro, California 90733, U.S.A. *Tel:* (213) 832-6478. *Telex:* TWX 91 345-6396. *Contact:* Captain Gary R. Roberts, Port Superintenden Mooring Master.

U.S.C.G., Captain of the Port, Los Angeles/Long Beach, 165 N. Pic Avenue, Long Beach, CA 90802. Tel: (213) 590-2315.

El Segundo is an open roadstead marine terminal with no official Por Authority other than U.S.C.G.

ERIE, Pennsylvania: 42.10 N. 80.05 W. (See Plan

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: Not compulsory. Seaway Pilots will assist if required.

RESTRICTIONS: Navigation season from 14th April to 26th Decembe approx. The port is connected to Lake Erie by an entrance channe depth 28 ft. Vessel's size restricted by Seaway locks.

MAX. SIZE: 730 ft. length; 26 ft. draft.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illnes Reports made to Chicago Quarantine Station. Quarantine procedu undertaken at Quebec City for incoming vessels from foreign ports.

RADIO: Master must give at least 24 hours' notice to Commander, 9 Coastguard District, Cleveland, Ohio, of the vessel's ETA at Snell Loc Also, at least 24 hours' notice of ETA at first U.S. discharge port a required.

TUGS: Available. Not compulsory, but sometimes necessary in ba weather.

BERTHING:

City of Erie Grain Elevator: Owned by the Port Authority, leased by th Port Authority, berthing length 980 ft., depth of water alongside 24 ft 2.5 million bushel capacity.

Erie Marine Inc. (subsidiary of Litton): New ship assembly yard wi graving dock (largest on Great Lakes), available for dry dock repairs.

Ore Dock: 1,000 ft. long, 26 ft. – 27 ft. of water alongside. The ore doc has 400,000 ton storage pad available for lease.

Port Authority East Bay Industrial Site: 75 acres available for sale o lease.

Erie International Marine Terminal: Leased to Codan Corporatio stevedores for the Port of Erie; 1,400 ft. long, with 28 ft. of wate Terminal used for bulk and general cargo; 23 acres; 750,000 sq. ft. o warehousing and transit sheds with truck and rail loading facilitie 2×200 ton and 1×230 ton mobile cranes equipped with magne buckets and gear for heavy lifts, also 300 ton stiff leg crane. Termin served by ConRail with reciprocal switching for N&W and B&LE railroads. A total of more than 100 acres of waterfront property i available where an industrial complex may be constructed.

DENSITY: Fresh water.

MEDICAL: All facilities available.

FRESH WATER: Obtainable by pipe-line at all docks.

FUEL: All grades available by pipe-line at all docks.

REPAIRS: Local shipbuilding company can handle most repai Dry dock available.

AUTHORITY: Erie-Western Pennsylvania Port Authority, 17 We Dobbins Landing, Erie, Pa. 16507 – 1424. *Tel:* (814) 455-755 *FAX:* (814) 455-8070. *Contact:* Larry Morosky, Executive Director.

EUREKA, California: 40.48 N. 124.10 W. (See Plan

DOCUMENTS: In addition to the documents detailed below, Agent w present to Master normal Customs forms to be signed, such as Master's Oath, Permit to Lade, Inward & Outward Manifest, etc. These forms w be filled out by local Agent and Customs Broker and presented to loc Customs house when entering and clearing vessel:

Foreign Flag Vessels:

I. Entering from another U.S. port:
  3 Crew Lists.
  3 Passenger Lists (only if passengers on board).
  3 Curio Lists.
  3 Stores Lists.
  Permit to Proceed (issued at last U.S. port).
  Travelling Manifest (only if there is foreign cargo on board).
  Ship's Register.
II. Entering from a foreign port:
  3 Crew Lists.
  3 Passenger Lists (only if passengers are on board).
  3 Curio Lists.
  3 Stores Lists.
  Travelling Manifest.
  Permit to Proceed.
  Ship's Register.
  Ship's Tonnage Tax Certificate.
  Clearance from a foreign port.

!! See Plan !!

PILOTAGE: Telegraphic address of Pilot station "Humbar". 24 hours advance notice of ETA; in case of change in ETA give minimum 4 hour notice. Contact pilot boat on VHF 156.8 MHz (Channel 16). Radio watch is maintained 2 hours prior to arrival at sea buoy on Channel 16. Working Channels are 13, 18A and 77.

No Pilot boat on station. Local Pilots use tug "Thor" length 65 ft. 600 h.p. Tug colours: red funnel, red and white superstructure and black hull. As no Pilot boat on station, sound signals not required. Visual international flag and light signals observed. Pilot will board vessel within 1 mile radius North, South and West of sea buoy. Sea-buoy located 1.4 miles from end of North jetty lined up with range lights bearing 105 degrees true.

Specific requirements: *(a)* Pilot ladder with spreaders in accordance with Solas Regulations, and 9 ft. above water. *(b)* At night – brilliant light to illuminate ladder. *(c)* Recommended anchorage outside Humboldt Bay located 1 mile South of sea-buoy in 15 fathoms of water.

ANCHORAGES: Inside harbour, weather permitting. Light draft vessel (22 ft. or less) South of Fairhaven Dock (Simpson) and West of Standard Oil Dock.

RESTRICTIONS: Humboldt Bay is a 24 hour port; restrictions if any would depend upon manoeuvrability and horsepower of vessel during peak tide. Range of tide normally 8 ft., extreme cases 10 ft.

MAX. SIZE: Max. LOA 740 ft., max. beam 115 ft. Max. draft 35 ft.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All ports" before first U.S.A. port (Albany). Illness Reports made to San Francisco Quarantine Station.

RADIO: Send cables through one of the following stations:

ITT World Communications, Inc. – San Francisco Marine Radio Station KFS.

RCA Global Communications – San Francisco Marine Radio Station KPH.

TUGS: 1×600 h.p., 1×800 h.p. and 1×1,000 h.p. tugs available, 1 tug acts as pilot boat, other tug joins vessel when in harbour. Tug's lines are normally used, occasionally a ship's line is used. No extra charge assessed for use of tug's line. Two tugs minimum are used.

BERTHING: No specific requirements relating to berthing; normal procedures prevail. Vessel normally docks stemming the tide.

Berths presently available at Eureka as follows:

Simpson Pulp Co.
Eureka Forest Products.
Louisiana-Pacific Corporation.
Humboldt Dock & Shipping Co.
Olson Terminal.
Standard Oil of California.
Union Oil of California.
North Coast Exporting Co.

Harbour channels maintained to 35 ft. zero tide except for South Bay Channel to Olson Terminal which is maintained at 26 ft. Most of berths at above-mentioned docks also maintained at 35 ft. zero tide; however, some occasionally fill in and recommended check with Agent as to depth available at specific dock where vessel intends moor and load.

STEVEDORES: 6 local gangs available. Groups ordered at 0630 hrs. in the morning for both day and night gangs. Therefore essential that local Agent or stevedore company receives accurate ETA by 0600 hrs. in the morning. Normally, vessel will advise arrival sea-buoy with a 24-hour ETA and correct ETA at a later time if necessary. The basic commodities exported from Eureka are woodpulp, woodchips, logs and lumber.

Westfall Stevedore Co. Cable Address: Westfall, Eureka. Tel. (707) 443-5688.

MEDICAL: Not necessary for Agent to receive advance notice of required medical attention unless ambulance and doctor are required on arrival. 3 hospitals in immediate area. Inoculation and vaccination certificates should be up-dated.

TANKERS: 2 tanker berths available: Standard Oil of California – deepest draft 35 ft. at zero tide. Union Oil – deepest draft 35 ft. at zero tide. Normally only Company tankers use own facilities. Facilities privately owned and are not available for bunkering other vessels.

DENSITY: 1024-1027 (depending on time of year).

FRESH WATER: Available all berths. Delivery by hose. Rate of delivery: 10 t.p.h.

FUEL: If bunkers required, Agent must go through major contractors, who in turn will inform their local supplier of requirements. Generally speaking bunkers are only supplied to vessels on an emergency basis in limited quantities. The bunkers usually diesel grade and delivered by truck on a prearranged schedule.

CONSULS: None. Nearest consuls at San Francisco.

REPAIRS: Small welding jobs, and minor machine work only. Major repairs normally carried out in San Francisco.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Services of gangway guards available if required by ship.

OPENING/CLOSING HATCHES: Normally stevedores' work unless done prior to docking. Vessel's crew may assist in opening and closing hatches, if hatches require special attention.

CERTIFICATES:

Ship's register.
Load Line Certificate.
Derat Certificate.
Cargo Gear Certificate.
Tonnage Tax Certificate and all other usual certificates required.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes and 1 lb. of tobacco. Wine and/or Spirit, 1 bottle (approx. 1 quart).

CARGO GEAR: Must be in good order and safe operating condition and all cargo gear certificates must be valid.

REPATRIATION: Normally done in conjunction with San Francisco, Portland, Los Angeles or Seattle Agent.

AIRPORT: Airport located approximately 20 miles North of Eureka. Limousine service available. Major airline, Republic Air Lines. At present 3 flights per day to San Francisco and 1 flight per day to Portland.

TIME: Local time is Pacific Standard Time and is GMT minus 8 hours. However, from first Sunday in April till last Sunday in October, Eureka is on Daylight Saving Time.

HOLIDAYS: No work performed on following holidays: New Year's Day (January 1st); Thanksgiving Day; Christmas Day (December 25th).

POLICE/AMBULANCE/FIRE: Eureka City Police 442-4545; Eureka City Ambulance 442-4551; Eureka Fire Department 443-5656; Humboldt County Sheriff Department 443-5671; Arcata Fire District 822-2424; Humboldt Fire District No. 1 442-1212.

TELEPHONES: No arrangements for placing telephones on board; however, there are pay phones nearby at each dock as well as phones in nearby offices.

SERVICES: Specific services such as tank cleaning, compass adjusting, tank washing,etc., are not normally performed in the port of Eureka and are usually performed in one of the close major ports such as San Francisco; however, there are facilities available for minor repair.

SHORE LEAVE: Crew members allowed ashore unless restricted for Customs or Immigration reasons.

IDENTIFICATION CARDS: Alien seamen require Crewman Landing Pass (U.S. Form I-95).

DELAYS: Berthing delays seldom incurred primarily due to the fact that the prime Agents are always in contact with the local Agent at Eureka informing them of vessel's ETA and prime Agent is always advised with regard to all arrivals and possible berth conflicts at this port.

AUTHORITY: Humboldt Bay Harbor, P.O.Box 1030, Eureka, California 95502-1030. *Tel:* (707) 443-0801. *Contact:* Jack B. Alderson, Chief Executive Officer.

EVERETT, Washington: 47.59 N. 122.13 W. (See Plan)

DOCUMENTS, PILOTAGE, etc.: Refer to "Tacoma".

PILOTAGE: Pilot boards off Port Angeles Pilot Station. Tel: Seattle 728-6400, dispatcher 448-4455.

ANCHORAGE: Unlimited deep water anchorage in Possession Sound.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: Pilots on Channels 13 and 14.

TUGS: Available, join vessel off berth. 17 tugs, 150 to 900 h.p.

BERTHING:

South Terminal: Length 700 ft. Approach depth over 40 ft. Depth alongside 39 ft. Transit shed 45,000 sq.ft.

Pier No. 1 South: Usable berth length 520 ft.; Approach water depth over 40 ft.; Water depth at pier 28 ft. MLLW; Plank and piling; 20 ft. Apron; Transit shed with 57,960 sq.ft. on pier; Access by road, barge and rail.

Pier No. 1 North: Usable berth length 570 ft.; Approach water depth over 40 ft.; Water depth at pier 36 ft. MLLW; Multi-purpose 35-ton bridge crane (Containers – convertible for bulk cargo handling); Rail spur on dock; Plank and piling; 40 ft. Apron; Transit shed with 36,000 sq.ft. adjacent to pier; Access by road, barge and rail.

Pier No. 3 South: Usable berth length 650 ft. Depth alongside 38 ft. Pier of concrete construction.

Pier No. 3 North: Usable berthing length 650 ft. Depth alongside 40 ft. Pier of concrete construction.

Pier "D": Usable length 450 ft.; Approach Water depth 32 ft.; Water depth at pier 40 ft.; Two 35-ton Whirley cranes; Plank and piling construction; 45 ft. Apron; Access by road and barge.

Pier "E": Usable length 450 ft.; Approach water depth 32 ft.; Water depth at pier 35 ft.; Plank and piling construction; 45 ft. Apron; Access by road and barge.

Norton Terminal: Usable length 1,100 ft.; Approach water depth 32 ft. Channel and berth depth 32 ft. 20 acres terminal, 16,000 sq.ft. chill facility. Rail spur on terminal.

STEVEDORES: 11 local gangs, additional gangs may be imported if required.

MEDICAL: Doctors and local hospital available.

DENSITY: Changes daily as port is at the mouth of a fresh water river.

FRESH WATER: Available at wharves.

FUEL: Available by barge from Seattle or by road tanker.

GANGWAY/DECK WATCHMEN: Required only if detainees aboard.

CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.

AIRPORT: Seattle – Tacoma International Airport is 45 miles South of City of Everett on excellent highway. Driving time is approx. 45 minutes.

HOLIDAYS: See "Tacoma".

POLICE/AMBULANCE/FIRE: Port of Everett Security: 259 – 3164; Everett City Police: 259 – 8711; Everett City Fire Dept.: 252 – 1111; Ambulance Service: 252 – 1234.

TELEPHONES: Will be placed on board vessel on request. Charges are only for calls made. Arrangements should be made through ship's Agent.

SHORE LEAVE: Crew members are able to visit Everett at all times.

AUTHORITY: Port of Everett, 2928 Terminal Avenue, P.O.Box 538, Everett, Washington 98206. *Tel:* (206) 259 – 3164. *Telex:* 4740140-Poeui. *FAX:* (206) 252-7366. *Contact:* Phil Bannon, Executive Director.

"SEE PLAN"

FALL RIVER, Massachusetts: 41.42 N. 71.10 W.

DOCUMENTS: If first port of call in U.S., 2 complete Customs Manifests describing all cargo on board and ports of discharge. Also 1 Cargo List for Fall River cargo; 3 Crew Lists; 3 Stores Lists; 3 Curios Lists; Ship's Register, Load Line Certificate and Tonnage Tax Certificate.
PILOTAGE: Vessel first contact ship's Agent for Pilot and tug arrangements. Northeast Pilots' Association radio call letters KDF-375 on frequency 156.9 MHz, Channel 18. Usual Pilot pick-up is at Brenton Reef Light Tower off Newport, R.I.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
RADIO: Chatham Radio or Amagansett Radio.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Tugs for N.E. Power Station meet at Buoy 6; all other berths North, meet tugs at Buoy 10. Tugs provide own lines at no extra charge.

2 tug companies serve Narragansett Bay and Port of Fall River.

4 tug boats – 24 hour dispatching service: 2×3,000 h.p. boats.
BERTHING: *State Pier:* Principal maritime cargo terminal at State Pier. Berth 600 ft. long with depth of 35 ft. MLW alongside.

Ro-Ro facility 80 ft. wide by 42 ft. inboard depth. (8° incline at water's edge – concrete deck on wood piling).

All utility services available. Further information telephone 617-674-5707 or ship Agents.
BRIDGES: All bridges have 135 ft. clearance with exception of Brightman Steel Bridge at approach to Montaup Electric Co. and Shell Oil docks. This bridge has a draw clearance of 97.5 ft. and passage allowed for vessels with less than 75 ft. beam. No unusual requirements. Practice is to depart on flood tide. (See "Developments".)
TANKERS: Berth at Shell Oil Docks. Depth alongside 35 ft.
FRESH WATER: Available at most berths. State Pier delivery is at 125 pounds pressure.
OPENING/CLOSING HATCHES: Usually performed by stevedores.
CERTIFICATES: All certification of vessel, safety conditions and radio facilities should be available for U.S. Coast Guard.
CARGO GEAR: No additional safety requirements.
TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Saving Time GMT minus 4 hours from first Sunday in April till last Sunday in October.
HOLIDAYS: New Year's Day (January 1st); Washington's Birthday (February 22nd); Patriots' Day (April 19th); Memorial Day (May 30th); Independence Day (July 4th); Labour Day (1st Monday in September); Columbus Day (October 12th); Veterans' Day (November 11th); Thanksgiving Day (last Thursday in November); Christmas Day (December 25th); or any day celebrated in lieu thereof.
TELEPHONES: Available at most berths. Contact Agents.
SHORE LEAVE: Permitted, but consult Agents.
IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95 issued for the same vessel.
DEVELOPMENTS: Plans for construction of a new 150 ft. wide draw bridge to replace the existing Brightman Street Bridge. This will mean unobstructed use of the entire port area.
AUTHORITY: Fall River Port Authority, State Pier, Water Street, Fall River, Massachusetts 02721. *Tel:* (508) 674-5707. *Contact:* William J. Torpey, General Manager.

FERNDALE, Washington: 48.49 N. 122.43 W.

(See Plan)

DOCUMENTS/HEALTH/etc.: Refer to "Seattle".
PILOTAGE: Compulsory. Pilot boards at Port Angeles.
TUGS: Tug escort required if vessel is loaded and is larger than 40,000 d.w.t. Tug horsepower must be 5% of d.w.t. Available up to 3,000 h.p. Additional tugs ordered from Seattle if required.
RESTRICTIONS: Vessels enter any hour day or night.

Regulations prohibit tankers larger than 125,000 d.w.t. in U.S. waters East of a line from Discovery Island Light to New Dungeness Light.
MAX. SIZE: Length 1,000 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
BERTHING: Terminal used for crude and product discharging. Vessels berth alongside finger pier, lines to quick release hooks. Inner berth for barges only. Outer berth 900 ft. long, depth alongside 40 ft. at MLW. Dirty ballast water 3,000 long tons with prior notification.
OPERATOR: B. P. Oil Company, Ferndale Refinery, P.O.Box 8, Ferndale, Wa. 98248-0008. *Tel:* (206) 384-1011. *Telex:* 910-449-2412. *Contact:* P. W. Oves, Refinery Manager.

FORT PIERCE, Florida: 27.27 N. 80.19 W.

PILOTAGE: Compulsory. Pilot boards at sea buoy. Send vessel's ETA to Agent 72 hours, 48 hours and 24 hours prior to arrival.
ANCHORAGE: Vessel anchors and awaits Pilot 0.5 miles seaward of sea buoy.
RESTRICTIONS: Vessels are able to berth and unberth during hours of darkness if the weather is clear. The leading lights are good but the channel is narrow and a number of buoys are unlit. Diameter of turning basin 1,000 ft. Least depth of water in the channel from sea to berth 25 ft. Some shoaling occurs and from time to time the Harbour Master requires vessels over 24 ft. 6 in. draft to depart and arrive at high water only.
MAX. SIZE: Max. draft 25 ft. Range of tide averages 2 ft.
RADIO: Tampa Radio.
VHF: Channels 16 and 13. Watch only maintained when vessels expected.
TUGS: One 500 h.p. tug and one 1,000 h.p. tug available. Large vessels should use tugs when berthing.
BERTHING: Berthing at Fort Pierce is at Indian River Terminal. This privately owned facility has berths of 454 ft., 330 ft., 150 ft. and 200 ft. The city operates an adjacent facility with mooring for small vessels including a Ro-Ro ramp used by a landing craft trading with the Bahamas.

Vessels up to 560 ft. have safely berthed at the terminal facility which is well maintained and fendered. Vessels can arrive or depart at any stage of the tide, however, the Harbour Master has temporarily restricted vessels over 24 ft. 6 in. draft to high water movements only.
CARGO HANDLING FACILITIES: Indian River Terminal provides excellent facilities for general cargo. The pierside refrigerated warehouse serves the citrus industry. Shore side cranes are available on request but most cargoes are discharged and loaded at this facility with ship's gear. The terminal and local stevedores are fully equipped with forklifts, hand trucks, slings and pans for handling palletised or breakbulk products, most particularly fruits and vegetables. Container and heavy lift cargoes have also been loaded at this facility which is serviced by a rail spur directly from the FEC railroad main line. The adjacent city facility provides berthing for several small craft and presently accommodates a cross state waterway inland cruise vessel and a small island trader.

A tug/barge bulk facility that handles argonite occupies an area North of the Indian River Terminal. This facility has a 3-dolphin mooring system for vessels up to 16 ft. draft.
MEDICAL: Doctor and hospital available.
FRESH WATER: Available.
FUEL: Light diesel is available by truck from nearby facilities. Heavier fuel must be barged or trucked from Port Canaveral or Port Everglades.
REPAIRS: No facilities available.
AIRPORT: Local airport 5 miles from port, nearest international airport is within 2 hours by car.
SERVICES: Fresh provisions, laundry services, groceries and meats available.
GENERAL: The Port of Fort Pierce is on the threshold of development. The present level of activity at Indian River Terminal indicates a need for additional facilities to accommodate the expanding export citrus trade and other business. The United States Corps of Engineers has recently approved a harbour deepening and expansion project to allow vessels up to 28 ft. draft to berth. Local community leaders are working to acquire port side undeveloped land that is presently privately held. The Port Authority at the present time does not own or operate any port property.

Stevedores at Indian River Terminal excel in handling breakbulk and palletised citrus fruit. Production and quality of stow are excellent.

Agency and stevedoring personnel are keen, helpful and anxious to co-operate fully.

For more information contact: Curtis King, St. Lucie Country Port and Airport Authority or John Butler, General Manager, Indian River Terminal Company, P.O.Box 1208, Fort Pierce, FL 34954. Tel: (407) 465-7700.
AUTHORITY: St. Lucie Port Port and Airport Authority, 2300 Virginia Avenue, Fort Pierce, Fl. 33482 5652. *Tel:* (407) 461-7899. *Contact:* Curtis King, Director.

FREEPORT, Texas: 28.57 N. 95.21 W.

(See Plan)

DOCUMENTS: See "Houston".
PILOTAGE: VHF Channels 6, 8, 12, 13, 14, 16 at sea buoy. Pilot Office (tel. 233-1120), 200 West 2nd, Freeport, Texas; Pilot boards 0.25 mile North of sea buoy. Anchor 1 mile from sea buoy if awaiting Pilot.
ANCHORAGES: 1 to 2 miles from sea buoy.
RESTRICTIONS: Depth 36 ft. at bar.
MAX. SIZE: Length 670 ft., draft 36 ft. for ships from bar to within upper turning basin, 30 ft. from upper turning basin to Public Facilities. Tide governing these dimensions – plus or minus 3 ft.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
RADIO: Galveston Marine Operator.
TUGS: Join vessel at shore line. Tug's lines to be used, and no charge for use of lines.
BERTHING: 1 hour to reach berth. Deep water terminals at Public Facilities consist of 1,250 linear ft. of deep water bulkhead wharf with 3 modern transit sheds consisting of 200,000 sq.ft. 1 berth of 250 linear feet of deep water bulkhead wharf with transit shed of 36,000 sq.ft. In addition a back-up warehouse is available consisting of 60,000 sq.ft. The large transit sheds and back-up warehouse have railroad tracks under cover, permitting all-weather work and preventing cargo damage.

Ro-Ro facility in operation.

A new public liquid barge dock and tank farm in operation (in connection with the Old River Co.).

The Navigation District owns a total of 9,700 acres of land for future Port and industrial development, 6,500 ft. of this land is situated on the Brazos River.
CRANES: Vessel is required to use own gear, shore cranes are available in area for hire.
STEVEDORES: Obtained through Agent.
MEDICAL: Obtained through Agent and advance notice required. Doctors, hospital available.

TANKERS: Facilities operated by Phillips Petroleum, Dow Chemical and Seaway Pipeline Inc.

Report: Entering and Berthing: Vessels inbound over 630 ft. LOA are to enter harbour only during daylight hours from sunrise to:

1. 30 minutes before sunset going to berths below Phillips Terminal.
2. 1.5 hours before sunset going to berths at Phillips Terminal and above when loaded.
3. Vessels under 630 ft. judged unsafe for handling after dark will be limited to daylight hours.
4. Inbound operations will be suspended during times when weather conditions do not permit safe navigation.

DENSITY: 1020.

FRESH WATER: Available ex-wharf at Brazos Harbor.

FUEL: All grades available by barge from Houston.

CONSULS: None. Nearest at Port Arthur or Houston.

REPAIRS: Available.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: None required but available through Agent.

OPENING/CLOSING HATCHES: Stevedore contract.

CUSTOMS ALLOWANCES: Local Customs Agent control.

REPATRIATION: Possible, through Agent.

AIRPORT: Houston Intercontinental Airport – Houston, Texas (80 road miles to Brazos Harbor); Metro Airlines – Shuttle to Angleton, Texas (15 miles from Brazos Harbor).

TIME: GMT minus 6 hours. Daylight saving time starts last Sunday in April and ends the last Sunday in October – GMT minus 5 hours.

HOLIDAYS: New Year's Day (January 1st); Martin Luther King's Birthday (January 15th); Lincoln's Birthday (February 12th); Washington's Birthday (Third Monday in February); Good Friday; Texas Independence Day (March 2nd); St. Patrick's Day (March 17th); Decoration Day (Last Monday in May); Emancipation Day (June 19th); Independence Day (July 4th); Labour Day (First Monday in September); Columbus Day (Second Monday in October); Veteran's Day (November 11th); Thomas W. Gleason's Birthday (November 8th); Thanksgiving Day (Fourth Thursday in November); Christmas Day (December 25th). No work on Christmas Day or Labour Day.

If any of the above holidays fall on Saturday or Sunday the following Monday will be recognised as the holiday.

POLICE/AMBULANCE/FIRE: Police 239-1211; Fire 233-2651; Ambulance Service 233-2651.

TELEPHONES: No arrangements exist for placing telephones on board.

BANKS: First Freeport National. Tel: (409) 233-4401.

SERVICES: Tank-cleaning facilities available locally. Compass adjusting available from Houston.

SHORE LEAVE: Crew members allowed ashore.

IDENTIFICATION CARDS: None needed.

DEVELOPMENTS: The port has commenced a dredging and widening project, which will on completion give a channel depth of 45 ft. and an alongside depth of 36 ft. The main channel will be widened to 400 ft.

Berths No. 1 and 2 to be extended Eastward to provide a new berth (Berth No. 3) with a length of 640 ft. Berth will be dedicated to rice export.

Berth 'A' is to be extended by 400 ft.

AUTHORITY: Port of Freeport, Brazos River Harbor Navigation District of Brazoria County, 1001 Pine Street, P.O.Box 615, Freeport, Texas 77541. *Tel:* (409) 233-2667. *Telex:* 989173 Pt Freeport Tx. *FAX:* (409) 233-5625. *Contact:* A. J. Reixach, Port Director.

GALVESTON, Texas: 29.17 N. 94.50 W. (See Plan)

DOCUMENTS:

1 visaed Crew List.
3 Passenger Lists.
3 or more copies of complete Manifests of Cargo for discharge at all United States ports.
2 or more copies of Manifest of Cargo for each United States port.
2 Souvenir Lists.
2 Stores Lists.
Ship's Register.
Tonnage Tax.
Load Line Certificate.
Nationality Certificate.
Certificate of Financial Responsibility.
I.O.P.P. Certificate.
No health document required.

PILOTAGE: Radio to local Agent who arranges Pilot and specifies boarding time. United States Coast Guard require 24 hours' notice of arrival at Galveston Bar. Contact pilot boats and pilot station on VHF Channel 14. Pilot boats can be signalled by light in international code. Pilot taken on board at sea buoy No. 1 located 6.7 miles from Galveston.

ANCHORAGES: In Bolivar Roads, 6.7 miles inwards from sea buoy No. 1. Depths 32 ft. – 34 ft.

APPROACHES: Mariners are advised that ship-to-ship lightering activity is regularly conducted in the following general vicinities which are 50 – 60 miles from the Galveston Sea-Buoy.

Lat. 28° 35′ N., Long. 94° 15′ W.
Lat. 28° 25′ N., Long. 94° 34′ W.

Mariners are urged to use caution when transitting these areas, as they make their way to the Port of Galveston.

RESTRICTIONS: Prolonged North winds can reduce water level as much as 4 ft. in Winter. Channel depth 40 ft. F.W.

GEISMAR (Including Sunshine), Louisiana: 30.13 N. 91.01 W. (See Plan)

East bank of Mississippi River, about 187 miles from sea.
DOCUMENTS/PILOTAGE: For all general information, refer to "New Orleans".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available if required; normally not used (see "Tankers").
BERTHING: BASF Corporation: Berth 620 ft. long, 32 ft. depth. BASF Corporation Chemical Division, P.O.Box 457, River Road, Geismar, Louisiana 70734. Tel: (504) 473-9871. Telex: 510-600-7967. Contact: Plant Security.
TANKERS: *BASF Corporation: – Geismar:* General: The BASF Chemical Dock is located on the North side of the river, approximately 180.4 miles above Head of Passes (AHP). A series of mooring dolphins interconnected by rubber faced steel pile fenders form a 615 ft. berthing face. Electric driven warping winches on the dock and mooring dolphins handle vessel's mooring lines.

Cargo Handled and Shore Installations: Various chemicals are handled at this dock, e.g., methanol, ethylene dichloride, perchloroethylene, caustic soda, etc. All chemicals are generally loaded through 6 in. hoses connected to shore lines which are generally 6 in. diameter and vary in length from 0.5 miles to 4 miles.

An emergency loading stop control is located on the dock.

Docking: All vessels are required to use a 600 h.p. tug for assistance in docking and undocking. Vessels should approach the dock stemming the current with a tug on the port bow. The vessel is then manoeuvred alongside for a starboard side to docking.

Docking and undocking are generally performed by the River Pilot.

Nordix/No. 1 – Sunshine: General: The Nordix Dock is located on the left descending bank of the Mississippi River, approximately 170 miles AHP. The dock consists of a hose platform attached by catwalk and fender system to several mooring dolphins for a total dock length of 960 ft.

River current at the dock varies from 1 knot to 4 knots, depending on the height of the river.

Cargo Handled and Shore Installations: Crude is transferred through 2×8 in. hoses at a maximum discharge pressure of 100 p.s.i. on the dock.

Docking: Docking is strictly starboard side to and is performed by the River Pilot. 2×1,200 h.p. tugs are required for all docking/undocking operations.

The normal mooring arrangement calls for 2/3 head lines, 2 stern lines, 1 spring line forward and 1 spring line aft. The leads for breast lines are poor.

Willow Glen/No. 1 – Sunshine: General: The Willow Glen Terminal, approximately 180 miles AHP is on the left descending bank of the Mississippi River. The dock consists of a 150 ft. hose handling platform, 2 breasting dolphins and 4 mooring buoys. All mooring points are equipped with electric capstans for line handling. The dock is normally served by barge but is capable also of handling tankers.

Current at this dock varies between 1 knot and 4 knots, depending on river height.

Cargo Handled and Shore Installations: No. 2 and No. 6 fuel oil are the only products handled. These are transferred to the dock through 4×8 in. Chicksan arms at a maximum discharge pressure of 100 p.s.i. Portable jacks are provided by the terminal to support the cargo arms on the ship.

Docking: Docking is performed by the River Pilot and is strictly starboard side to, vessels of 30,000 d.w.t. or greater are required to use 2 tugs for docking and undocking; smaller vessels are required to use a single tug for these operations.

The normal mooring arrangement calls for 2 head lines, 1 breast line forward and 1 aft, 1 spring line forward and 1 aft and 2 stern lines. Wire or synthetic mooring lines may be used.

Petro United – Sunshine: General: The Petro United Dock is located approximately 170 miles AHP on the left descending bank of the Mississippi River. The dock consists of a 65 ft. hose handling platform and 6 mooring dolphins interconnected by 2 catwalk and fender systems.

At high river the current often causes swirling eddies off the doc which should be accounted for when approaching, docking an undocking.

Shore Installations: 4×10 in. and 2×12 in. hoses are available for th transfer of cargo.

Docking: 2 tugs are normally required for docking and undockin operations. All tugs must come from St. James or Baton Rouge so th a minimum of 2 hours advance notice must be given to the terminal an Agent prior to docking or undocking. Extensive delays have been know to occur due to tug unavailability and insufficient advance notice o docking/undocking requirements.

Docking is performed by the River Pilot and is strictly starboard side t

The terminal generally requires the use of 3 head lines, 2 stern line 2 breast lines forward, 2 breast lines aft, 3 spring lines forward an 2 spring lines aft.
DENSITY: Fresh water (1000).
FRESH WATER: Available ex-wharf.
FUEL: Not available.

GEORGETOWN, South Carolina: 33.22 N. 79.17 W. (See Plan

PILOTAGE: Available. Make contact on VHF Channel 16. Pilot boar at Sea Buoy "2WB" in position 33° 11.6′ N., 79° 05.4′ W. for the 14 mi passage to Georgetown.
ANCHORAGE: Vessels wait for berth at Buoy "2WB".
RESTRICTIONS: Vessels over 600 ft. LOA dock during daytime onl
MAX. SIZE: Max. LOA 700 ft. Max. beam 100 ft. Depth at all termina 27 ft. MLW.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illnes Reports made to New York Quarantine Station.
VHF: Pilot and tug on Channel 16. Port Authority have no facilities.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 2×1,000 h.p. tugs assist vessels from Buoy 28 to the dock.

GOOD HOPE (including Norco), Louisiana: 29.59 N. 90.24 W. (See Plan)

East bank of Mississippi River, 126 miles above Head of Passes.
DOCUMENTS: For all general information, refer to "New Orleans".
ANCHORAGES: South of berth in river for unlimited number of ships.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 1 tug used for mooring/unmooring.
BERTHING: General American Tank (GATX) storage terminal; 4 tanker berths, 40 ft. depth alongside. 2 × 12 in. arms or 8 in. hose. Loading 20,000 bbls.p.h. No ballast facilities.

Norco: Shell Oil Co. 2 tanker berths (80,000 d.w.t., 900 ft. LOA downstream, 55,000 d.w.t., 750 ft. LOA upstream) 16 in. and 8 in. loading arms for transfer, transfer rate variable, ballast line 12 in., capacity 20,000 bbls.

Berthing always starboard side to. Requires 2 tugs to assist in berthing. Forward and aft mooring lines handled simultaneously.

Report: *Norco – Shell/Amoco:* ✓

General: The berth at Norco is approximately 126 miles AHP and consists of a single dock constructed of steel pilings and a concrete deck. A continuous fender system of wood-faced steel piles provides continuity between the dock and mooring dolphins.

All cargo is handled through 6×12 in. loading arms with 8 in. reducers. The arms are arranged so as to permit washing of the arms into a slop tank ashore; thus, grade changes may be made without removing the arms.

Cargo Handled and Shore Installations: Various products are handled through a common shoreline including crude, clean products, jet fuel, kerosene and heating oil.

The maximum allowable rail pressure for discharging vessels is 150 p.s.i.

An emergency shutdown system to stop loading is located in the dock office and at the levee in the guard office.

Docking: Docking is normally performed by the River Pilot and is strictly starboard side to. 1×800 h.p. tug is required for both docking and undocking operations.

Vessels should approach the dock with a tug on the port bow, stemming the current, at a maximum angle to the dock of 10° and at a velocity no greater than 5 ft./sec.

Communications: A public telephone located at the head of the dock is available for use by ship personnel.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunkers are not available.

Fresh water is available at Norco.

Ballast/Slop Facilities: Ballast and slop facilities are available. The shore storage/treatment tank has a 150,000 bbls. capacity and is connected to the dock manifold by a 14 in. shore line.

DENSITY: Fresh water, 1000.
FRESH WATER: Available ex-wharf at Shell Oil Co. Berth.
FUEL: Bunker "C" not available ex-wharf at Shell Oil Co. Berth.
SURVEYORS: Surveyors and Cargo Inspectors available.
STORING: See "Prelims".

1. Yes.
2. Not allowed when loading Grade A and B products.
3. Alongside ship at loading manifold.
4. Yes.
5. Yes.
6. Yes.

SHIPMASTER'S REPORT: February 1979.

Restrictions: Not allowed to take bunkers, lub oils or stores from dock while alongside. Large tankers often require 2 tugs pushing all the time to keep them alongside, especially when river is in flood. This at GATX No. 4.

VHF: Standby on Channel 13 during pilotage and when anchored. Agents normally place walkie-talkie aboard for their direct communication.

Berthing: Always starboard side to. Forward will have 2 backsprings to jetty, 4 headropes, 2 breasts to buoys, lashings not required, same aft. Only one boat used and secures the bow first.

Telephones: Not available at GATX No. 4 but there is one on next jetty upriver.

AUTHORITY: General American Tank.

Shell Oil – Shell Chemical, Norco Manufacturing Complex, P.O.Box 10, Norco, Louisiana 70079.

GRAMERCY (including Garyville and Paulina), Louisiana: 30.03 N. 90.41 W.

DOCUMENTS/PILOTAGE: For all general information, refer to "New Orleans".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available if required; normally not used.
BERTHING: Colonial Sugar Refinery (Mile 146): Berth 600 ft. long, 40 ft. depth. Kaiser Aluminium and Chemical Corp (Mile 145): Berth, 40 ft. depth.

Riverplex International: A Division of Godchaux – Henderson Properties Inc., P.O. Drawer 559, Reserve, LA 70084. Tel: (504) 536-8900. Fax: (504) 536-8993.

Location:	Mile 138, between New Orleans and Baton Rouge, above the Head of Passes on the Mississippi River.
Depth of water:	45 ft. (low water stage).
Wharf:	454 ft. long. 43 ft. wide.
Mooring dolphins:	754 ft. centre to centre.
Upstream buoy:	1,000 ft. centre to centre.
Gantry cranes:	2 × 18,000 lb. Peco gantry cranes, equipped with 8.5 cubic yard buckets with 45 second cycle time. Capacity at 340 t.p.h. per crane of 53 lb. per cu. ft. free digging material.
Maximum crane outreach (from ship fenders):	61 ft.
Height of crane (above low water):	94.34 ft.
Bottom of bucket (at low water): (High water 22 ft.)	79.04 ft.
Transfer capabilities:	Ship to barge or storage. Barge to ship or storage. Storage to ship, barge, rail or truck.
Conveyor System:	42 in. (45°).
From dock to storage:	Heavy duty nylon rubber belt with travel speed of 431 ft. per minute.
Barge loader:	60 in. (45°) nylon rubber belt with travel speed of 431 ft. per minute.
Barge fleeting:	140 barge fleeting area.
Harbour boats:	1,200 h.p., 800 h.p., 2 × 2,600 h.p.
Floating cranes:	Barge mounted crawler, 80 ton 100 ft. boom. Barge mounted 200 ton, Lima with 12 yard bucket.
Rail spar:	24,000 ft. of rail and one yard locomotive.
Weighing scales:	Rail (300,000 lb. capacity). Truck (100,000 lb. capacity). Front end loader scale mounted on IH 80 Hough.
Auxiliary equipment:	International Hough 80 (4 yd. bucket). 3 × 916 cat front end loaders. 931 D-4D cat dozer. Dump trucks. Bobcat 980. Payloaders.
Bulk open storage area:	100 acres of flat ground surface and one acre concrete pad.
Covered storage:	Over 300,000 sq. ft. of covered storage facilities with maximum 80 ft. ceilings, storage racks, climate control, rail docks, truck docks, 4,000 sq. ft. of office suites, stacking and reclaiming capabilities.
Silos:	3 concrete silos, each 79.5 ft. tall, 50 ft. in diameter. Kathbar air provided to Silo No. 3, warm air to walls of Silos No. 1 and 2.
Rail facilities:	Served by Illinois Central and Kansas City Southern Railroads.
Truck facilities:	Property is within 7 miles of Interstate 10 and 55, and 2 miles from U.S. 61.
Water purification plant:	7,000,000 gallons per day.
Waste water treatment:	250,000 gallons per day capacity.
Liquid transfer:	Barge to rail; rail to barge or truck.

TANKERS: *Garyville:* The Marathon Dock is located on the right ascending bank of the Mississippi River, Mile 141. It consists of 2 separate berths fitted with quick connecting hydraulic Chicksan arms for cargo transfer and quick release hooks on all mooring points.

Each dock is equipped with an emergency stop at the Chicksan arm assembly.

Cargo Handled and Shore Installations: Both docks handle asphalt, No. 6 fuel oil, unleaded gasoline and No. 2 diesel oil. Each dock can effect the transfer of No. 6 fuel oil through 2×16 in. arms, No. 2 diesel oil through 2×16 in. and/or 3×12 in. arms, unleaded gasoline through 2×12 in. arms and asphalt through a 1×16 in. arm. All cargo is transferred to or from storage tanks 1 mile away through 16 in. to 24 in. shore lines.

Docking: The River Pilot normally docks vessels at these berths; docking is strictly starboard side to. Vessels of 600 ft. LOA or greater are required to use 2 tugs for assistance in docking and undocking; smaller vessels may use a single tug.

Approach to the docks is made with the vessel stemming the current at slow speed. Tugs assist in positioning the vessel alongside.

The Marathon Terminal requires that vessels use 2 head wires or synthetic head lines, 3 forward spring lines (wire or synthetic), 2 spring lines aft (wire or synthetic) and 2 stern wires or 3 stern ropes. All mooring points are equipped with quick release hooks.

Communications: Public telephones are available for use by ship's personnel.

Gangway: The vessel's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunker C and diesel fuel are available on request; however, no bunker barges are allowed alongside a vessel docked at either berth.

Ballast/Slop Facilities: Ballast and slops can be received by the docks in limited quantities.

DENSITY: 1000.
FRESH WATER: Available ex-wharf.
FUEL: Not available.

SHIPMASTER'S REPORT: December 1979.
Port: Paulina.
Location: 3 miles up river from Gramercy at St. Elmo Point.
Anchorage: A waiting anchorage is situated 2 miles down river from the elevator at Grand View Reach.
Tugs: Available from Gramercy.
Berth: Peavey Grain Elevator. Depth of water alongside is 60 ft. Loading rate with one spout is 1,000 t.p.h.

The berth is a concrete pier on steel girders with 4 weak fenders. Spring lines are run to the pier, and head and stern lines to dolphins.
Fresh Water: Available from pier, rate 6 t.p.h. (approx.)
Fuel: Not available from quay.
Services: Provisions available from New Orleans, will be delivered by launch from Gramercy as pier can only be reached on foot over a catwalk 700 ft. long including stairs.

AUTHORITY: Port of South Louisiana, 152 Belle Terre Boulevard, P.O.Box 909, Laplace, Louisiana 70069-0909. *Tel:* (504) 652-9278, 568-6269. *Telex:* 58364 Nln. *FAX:* (504) 652-9518. *Contact:* R.J. Clements, Executive Director.

GRAYS HARBOR, Washington: 46.55 N. 124.08 W. (See Plan)

DOCUMENTS, etc.: Refer to "Tacoma".
PILOTAGE: A vessel approaching requested to give 24 hours advance notice of arrival to Grays and Willapa Pilots through Everett Radio, KLB which runs on a calling frequency of 500 kHz and VHF Channels 6, 8, 12 and 16. Pilot boat, "Mercury", 65 ft. long, with an 18 ft. beam, powered by a 330 h.p. GM diesel engine. "Mercury" moored at Westport Fishing Basin, and delivers Pilots to vessels outside Grays Harbor Bar.
ARRIVED VESSEL: Vessels must be inside Grays Harbor Bar to be considered an "arrived vessel".
ANCHORAGES: No specific areas in Grays Harbor have been designated as anchorage grounds. The best area is Southward of Sand Island Shoal in depths of 35 ft. to 40 ft.; the holding ground is good.
RESTRICTIONS: Bar Channel and Approach Channel, depth 30 ft. MLLW. Mean tidal range about 10 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available.
BERTHING:

Name	*Length* (ft.)	*Depth* (ft.)	*Use*
Terminal 1	150	–	Barges handling lumber, pulp and logs.
Terminal 2	600	*36 ft.	Bulk, break-bulk, lumber, pulp and logs.
Terminal 4	1,400	*36 ft.	Bulk, break-bulk and logs. 2×50 ton cranes.
Private:			
ITT-Rayonier Pulpmill Dock	475		Pulp and oil.
ITT-Rayonier Sawmill Dock	600		Pulp and logs.
Roderick Dock	500		Logs.
Weyerhaeuser Bay City Dock	800		Logs.
Weyerhaeuser Sawmill Dock	900		Lumber.

* Up to 40 ft. by 1990.
STEVEDORES: 20 local gangs. Additional gangs imported if required.
MEDICAL: All medical facilities available. Local hospital.
DENSITY: Salt water.
FRESH WATER: Available at all wharves.
FUEL: Available at berth or anchorage. Capacity of barge 15,000 bbls.
GANGWAY/DECK WATCHMEN: Required only if detainees aboard.
CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.
HOLIDAYS: See "Tacoma".
AUTHORITY: Port of Grays Harbor, P.O.Box 660, Aberdeen, Washington WA 98520-0141. *Tel:* (206) 533-9528. *FAX:* (206) 533-9502. *Contact:* T.Evans, Executive Director. K.A.Wallin, Operations.

GREEN BAY, Wisconsin: 44.32 N. 88.02 W. (See Plan)

For important general information refer to St. Lawrence Seaway.
DOCUMENTS: No special documents required. All necessary Customs and St. Lawrence Seaway documentation should be accomplished prior arrival.
PILOTAGE: Pilot not compulsory although some Masters prefer Pilot aboard. Pilot boards prior to arrival.
CHANNEL: From Grassy Island, outside mouth of Fox River, to C&NW Railway bridge, channel is maintained 24 ft. below low-water-datum (576.8 ft. above Father Point, Quebec) and 300 ft. width except through bridges. Above C&NW Railway bridge channel and turning basin is maintained at 20 ft. below low-water-datum. From Grassy Island lakeward channel maintained at 26 ft. below low-water-datum varying in width from 300 ft. to 500 ft. for approximately 8 miles. 24 ft. deep turning basin maintained at confluence of Fox River and East River opposite Leicht's North Dock. Currents will flow up and down river and will influence channel depths at times. Present high-water will add 1 ft. – 2 ft. to channel depths.
RESTRICTIONS: Entry may be made at any time of day or night subject to Master's discretion.
MAX. SIZE: Subject water depths and width of bridge openings.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: all Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

Pratique may be obtained prior to entry of St. Lawrence Seaway. Suspected disease should be reported locally.

Rat guards required on all lines.
RADIO: Ships' Agents located at Milwaukee and Chicago, ETA should be directed accordingly.
TUGS: Join vessel at any designated point. Charges should be obtained from tug operators. Use ship's lines.
BERTHING: General cargo at Leicht's North Dock, 1,500 ft. length, full channel depth. Discharge by ship's gear and shore based equipment. Bulk cargo handled at several docks.
CRANES: Shore based lifting devices to 20 tons. 100 ton stiff-legged derrick available for heavy cargo.
BULK CARGO FACILITIES: Available at several places for coal, salt, fertiliser, chemicals, liquid cargo, stone, pig-iron, etc.
BRIDGES: No bridge opening restrictions for railroad bridges. Highway bridges permit vessels of 300 tons or over to transit at any time. However, heavy land traffic occurs about 0730 – 0830 hrs., 1145 - 1315 hrs. and 1630 – 1730 hrs., and co-operation of Masters is urged during these times so that city bridges may remain closed.
STEVEDORES: Services performed by Leicht Transfer and Storage Co. and arrangements should be handled by ship's Agent or directly with Leicht's.
MEDICAL: Subject to regulations of U.S. Customs and Immigration and St. Lawrence Seaway Authorities. 3 excellent hospitals.
TANKERS: The major oil companies have facilities. Limited only by harbour dimensions.
DENSITY: Fresh water.
FRESH WATER: Available through ship's Agent and water company.
FUEL: Fuel oil available in any quantity. Normal fire precautions.
CONSULS: No consuls. Nearest are at Milwaukee, Chicago, and Minneapolis.
REPAIRS: Topside and engine repairs available. Complete repair service available at Sturgeon Bay, 45 miles North.
DRY DOCKS: No local facilities. Available at Sturgeon Bay, Wisconsin.
SURVEYORS: Available through ship's Agent.
GANGWAY/DECK WATCHMEN: Available at ship's option.
OPENING/CLOSING HATCHES: By stevedores.
REPATRIATION: Available through local Immigration officials.
AIRPORT: 8 miles from port. Served by regular airlines with over 30 flights daily.
TIME: Central Standard Time. Central Daylight Saving Time in effect from the first Sunday in April to the last Sunday in October.
HOLIDAYS: January 1st (New Year's Day), May 31st (Memorial Day), July 4th (Independence Day), 1st Monday in September (Labor Day), Last Thursday in November (Thanksgiving Day), December 25th (Christmas).
POLICE/AMBULANCE/FIRE: Police: Green Bay – Administrative calls 436-3800, Emergency 911, Sheriff 911, Ambulance 432-0305, Fire Dept. Rescue – 911, Fire: 911.
TELEPHONES: On board service. Contact Wisconsin Telephone Co.
SERVICES: Tank cleaning, fumigation, waste disposal, chandler.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Proper identification should be carried.
DELAYS: Expect no delays for berthing or harbour movement.
AUTHORITY: The Port of Green Bay, Brown County Board of Harbor Commissioners, P.O.Box 1600, 305 E. Walnut Street, Green Bay, Wisconsin, 54305. *Tel:* (414) 436-3265. *FAX:* (414) 436-3069. *Contact:* Alan T. Johnson, Port Director.

GULFPORT, Mississippi: 30.21 N. 89.05 W. (See Plan)

DOCUMENTS: See "New Orleans".
PILOTAGE: Compulsory from Outer Sea Buoy to docks, provided by Gulfport Pilots Association, arranged through Agent. Pilot boards at Sea Buoy.

Pilot boat has red hull, white superstructure with "Pilot" in black lettering. When pilot boat is underway, contact can be made by VHF Channel 16.
RESTRICTIONS: The Gulfport Channel is 12 miles long running between Ship Island and Cat Island. Channel is 225 ft. wide and has a minimum depth throughout of 30 ft. at MLW. Harbour is dredged rectangular basin about a 0.25 mile wide and 0.5 mile long, this area being protected by piers. Depth in harbour and along wharves is 30 ft. with a 2.5 ft. tide variation. No entry restrictions as to time.

MAX. SIZE: Length of vessel is restricted to approximately 900 ft. by turning basin, no breadth restrictions.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
RADIO: Gulfport Radio KJC 768 – VHF Channel 16. Continuous service.
TUGS: 2 tugs (1,200 h.p. and 2,000 h.p.) available but not required unless requested to assist in berthing.
BERTHING: 5,000 linear ft. of berthing space.
CARGO HANDLING: 50,000 sq.ft. transit shed refrigerated facility.
2 container cranes, 1×30 ton and 1×35 ton, in operation. Ship's gear usually used but mobile cranes available with 48 hours' notice.
STEVEDORES: Must have 12 hours' notice to arrange stevedore gangs. Normal work day 0800 – 1200 hrs., and then 1300 – 1700 hrs. Monday to Friday.
MEDICAL: No advance notice required for medical attention, doctor and hospital care readily available.
DENSITY: Brackish.
FRESH WATER: Fresh water is available. Rate 10 t.p.h.
FUEL: Suppliers of marine fuel at the port provide direct barge to ship service. A 185,000 gallon fuel barge is moved from its mooring and placed alongside the vessel for refuelling. The barge is manoeuvred by an 800 h.p. twin screw push boat. Once alongside, pumps on the barge deliver fuel at a rate of 32,000 gallons per hour. Shallow draft coastal traffic can be fuelled at the port or 6 miles South in the Intra-coastal Waterway.
CONSULS: Many countries have consuls within a 100 mile radius of Gulfport.
REPAIRS: Most deck and engine repairs could be arranged within port facilities.
SURVEYORS: Available from Mobile or New Orleans.
GANGWAY/DECK WATCHMEN: Port guards.
REPATRIATION: Can be arranged.
AIRPORT: Gulfport Municipal Airport is approximately 4 miles from the port and served by regularly scheduled airlines.
TIME: The Port of Gulfport is on Central Standard Time, GMT minus 6 hours; clocks are moved ahead 1 hour during Summer months.
HOLIDAYS: United States national holidays are observed, cargo work can be arranged on these days at a penalty time.
POLICE/FIRE/AMBULANCE: Telephone number for all emergency services is 911.
TELEPHONE: Can be placed aboard only by special arrangement; not normally available.
AUTHORITY: Mississippi State Port Authority at Gulfport, P.O.Box 40, Gulfport, Mississippi 39502. Street Address: Corner Highway 90 and 30th Avenue (Shipping) *Tel:* (601) 865–4300. *Telex:* 785197 Gulfp Port Gup. *FAX:* (601) 865-4307. *Contact:* William W. Edwards, Port Director.

HAINES, Alaska: 59.15 N. 135.25 W. (See Plan)

In Lutak Inlet. Located 5 miles N.W. of Haines. Open all year.
APPROACHES: Lynn Canal to Lutak Inlet.
DOCUMENTS: See "Anchorage, Alaska".
PILOTAGE: Pilot pick-up point located in vicinity of Point Retreat.
ANCHORAGE: Lutak Inlet.
MAX. SIZE: Harbour depth 36 ft. at zero tide. Tides: Diurnal range 16 ft. Also see "Berthing".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 3 available.
BERTHING:
1. Haines Dry Cargo Dock can be secured by request through City of Haines (Telephone: Area code 907 number 766-2231). Berthing length - 967 ft. and an open surface of over 300 ft. in width. Depth at face of dock – 36 ft. MLLW. No covered sheds, 6 acre open staging area. Crane may be available. Continuous to 300 ft. Alaska State Ferry facility.
Ro/Ro cargo facility at N.W. end of Dry Cargo Dock.
2. Schnabel Lumber Co. Dock: Berthing length – 640 ft. long and 80 ft. wide. Depth at face of dock – 45 ft. No covered storage. Open storage. 35,000-ton capacity for bulk cargo storage. Chip loader with 350 t.p.h. capacity. Crane available.
STEVEDORES: 4 gangs.
MEDICAL: Doctor/dentist available.
FRESH WATER: Available in small quantities in temperate seasons only.
FUEL: Not available.
REPAIRS: None.
CUSTOMS: Quarantine, Immigration and Customs locally.
TRANSPORTATION: Air, ferry. Haines Highway principal route connecting Southeast Alaska with the Alcan Highway leading to the interior of Alaska and Canada.
AUTHORITY: City of Haines, P.O.Box 437, Haines, Alaska 99827. Tel: (907) 766–2448. *Contact:* Harbour Master.

HAMPTON ROADS DISTRICT, Virginia: (See Plan)

NORFOLK: 36.51 N. 76.19 W.
NEWPORT NEWS: 36.59 N. 76.26 W.
PORTSMOUTH: 36.50 N. 76.17 W.

DOCUMENTS:
3 copies Cargo Manifest (Forms 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List.
Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours of arrival from a United States port:
Health Pratique.
Master's Oath (Customs Form 1300).
All foreign clearances.
U.S. Certificates of payment of Tonnage Tax (Customs Form 1002).
Certified Crew List.
F.M.C. Certificate of Financial Responsibility.
PILOTAGE: Compulsory; is generally arranged through port Agent. Vessels approaching port may use VHF telephone, Channel 16, radio telephone 2738 kHz. Advance notice of 24 hours is required of ETA. Pilot Lookout Tower located at Cape Henry, Virginia, the entrance to Chesapeake Bay.
The Virginia Pilot Association can be contacted by telephone at (804) 496-0995. Pilot monitors tower VHF-FM Channel 11 and VHF-FM Channel 16.
ANCHORAGES: 4 deep draft anchorages have been dredged at Hampton Roads. Two of the anchorages at Sewell's Point, one of which was dredged to 45 ft. and the other to 40 ft. The other 2 anchorages at Newport News are each 40 ft. deep.
Additional deep draft anchorages exist in the protected waters of the Chesapeake Bay at Cape Charles and Lynnhaven. These 2 anchorages, located near the entrance to the Hampton Roads harbour, have a water depth ranging to 47 ft. and can accommodate approximately 120 vessels. In addition, the inner harbour anchorage areas of lesser depth can accommodate up to 40 vessels.
Anchorage Regulations: A change in U.S. Coast Guard Regulations permits colliers and other bulk carriers, such as grain ships, to use the Big Stone Anchorage in Delaware Bay. Previously, the anchorage was open only to oil tankers. The new rules are advantageous to super colliers that are able to carry up to 150,000 tons, taking advantage of the anchorage's minimum natural depth of 55 ft. The super colliers then can be partly loaded up to about 90,000 tons, at Hampton Roads, Virginia, and topped off at the Stone Anchorage by two 30,000 ton barges.
RESTRICTIONS: Ships entering Hampton Roads from the sea follow a course between the Virginia Capes, across the lower end of Chesapeake Bay via Thimble Shoal Channel into the deep waters of Hampton Roads.
Thimble Shoal Channel: Extends from the Virginia Capes across the lower end of Chesapeake Bay into the deep waters of Hampton Roads. Thimble Shoal Channel is presently 1,000 ft. wide and approximately 13 miles long. The channel is 50 ft. deep within the 650 ft. wide outbound lane and 45 ft. deep within the remaining 350 ft. wide inbound lane.
Two channels extend through Hampton Roads, one southward into Norfolk, Portsmouth and Chesapeake, and one Westward to Newport News and up the James River.
Norfolk Harbour Channel: Extends from Hampton Roads into Southside cities via the Elizabeth River into Norfolk, Portsmouth and Chesapeake. Beginning at the Hampton Roads Bridge Tunnel, the Norfolk Channel is 19.6 miles long. Between deep water in Hampton Roads and Sewell's Point the Channel is 1,000 ft. wide and 50 ft. deep. Between Sewell's Point and a point just South of the Norfolk Southern Railway coal piers at Lambert's Point the channel is 50 ft. deep within the 650 ft. to 800 ft. wide outbound lane. Opposite the Naval Base at Sewell's Point and extending upstream to Norfolk International Terminals, the channel is 45 ft. deep within the 600 ft. wide inbound lane. Authorised improvements provide for deepening the Norfolk Channel to 55 ft. between Hampton Roads Bridge Tunnel and Lambert's Point. A 40 ft. channel extends from the coal piers to the N&W Railway Bridge on the Southern Branch. Beyond this point a 35 ft. channel extends 4.6 miles to a point 0.8 miles above the Interstate 64 Bridge, where the channel connects with the Atlantic Intracoastal Waterway route through the sounds of North Carolina to the South Atlantic Coastal States. Funding is available for the engineering and design study of deepening this portion of the Norfolk Harbour Channel to 45 ft., deepening a portion of the Southern Branch to 40 ft. and enlarging the turning basin at the Southern end of the channel.
The width of the Norfolk Harbour Channel is 1,000 ft. from its outer end to a point opposite Norfolk International Terminals; thence 1,250 ft. to the N&W Railway coal piers; thence 750 ft. to the junction of the Eastern and Southern Branches; thence up the Southern Branch 450 ft. wide to the Belt Line Railroad Bridge; thence 375 ft. wide for one mile to the N&W Railway Bridge; thence 250 ft. wide to its junction with the Atlantic Intracoastal Waterway route.
Newport News Channel: Extends 6.0 miles Westward from Hampton Roads to Newport News and thence up the James River, 68 miles and 90 miles respectively to the ports of Hopewell and Richmond. The Channel to Newport News has a depth of 50 ft. over a width of 800 ft.
TUGS: Tugs are arranged for by the vessel's Agent according to ETA information. The required number of tugs and the horsepower are determined by the assigned tonnage, handling characteristics and final berth destination. Should vessel be unable to manoeuvre normally, Master to advise the Agent and request additional tug power. There are 17 tugs with horsepower up to 4,300 available in the port.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
RADIO: Radio-telephone communications in the Hampton Roads area are furnished by the Chesapeake and Potomac Telephone Company of Virginia. A regular ship-to-shore channel transmits to ship on 2538 kHz and the ship returns the call on 2142 kHz. A "day-time" ship-to-shore channel transmits to ship on 2450 kHz and the ship returns the call on 2366 kHz. In the very high frequency band, "XY" ship-to-shore is available which transmits to the ship on 161.9 MHz and the ship returns the call on 157.3 MHz. A second "day-time" ship to shore channel transmits on Channel 20 and monitors Channel 16.
BRIDGES: Sufficient clearance at all times.

TANKERS:

Operator	*Location*	*Length* (ft.)	*Depth* (ft.)	*Remarks*
Amoco	Chesapeake	60	27-29	1×3 ton derrick with 2×45 ft. booms for hose handling. 655,00 barrels storage for gasoline, light fuel oil, bunker C and asphalt.
Miller Oil Co. Inc.	Norfolk	600	17.0	
BP Oil Inc.	Portsmouth	317	30.0	4×8 in. and 5×6 in. pipelines. 16 storage tanks for gasoline, Kerosene and Heating oil with total capacity 410,000 barrels.
Crown Central Petroleum Corp.	Chesapeake	40	30-31	3×6 in. pipelines. 8 storage tanks. Total capacity 9 million gallons. Products handled are No. 2 fuel oil and gasoline.
Koch Fuels Inc.	Newport News	Tanker Dock Barge Dock	35.0 19-27	1×20 in., 5×12 in., 2×10 in. and 2×8 in. pipelines to storage tanks total capacity 520,000 barrels. Products handled are diesel fuel oil, bunker fuels, asphalt, cement and coal tar.
Mobil Oil	Chesapeake	45 ft. Face	36.0	3×12 in. and 4×10 in. pipelines with 8 in. Tanker connections. 14 storage tanks – 10 million gallons of gasoline, 6.7 million gallons of kerosene, 9 million gallons of fuel oil, 2 million gallons of diesel oil and 11 million gallons of bonded bunker and marine diesel fuel.
Swann Oil	Chesapeake	50 ft. Face	35.0	1×14 in., 2×10 in. and 2×8 in. pipelines to 9 storage tanks (850,00 barrels). 2×10 in. loading arms for off-loading ocean going tankers. Products handled: fuel oil, bunker oils and asphalt.
Citgo Petroleum/ Stratus Petroleum	Chesapeake	200 ft. Face	27.0	2×14 in. and 2×12 in. lines to 6 storage tanks (capacity 350,000 barrels).
Texaco Inc.	Chesapeake	600 ft. Face	32.0	1×12 in, 3×10 in., 4×8 in. 5×6 in. and 13×4 in. Pipelines extend to 163 tanks on shore. Products handled: fuel oil, gasoline, lubricating oil and asphalt.
Union Oil Co.	Chesapeake	45 ft. Face	15-20	4×8 in. mechanical loading arms with 10 in. pipe-line. 7 storage tanks (capacity 400,000 barrels). Products handled: gasoline, fuel oil and diesel oil.
Atlantic Energy Inc.	Chesapeake	–	32	Extreme dolphins 800 ft. apart 2 breasting dolphins 125 ft. either side of dock. 1×14 in. line for propane or butane and 1×6 in. vapour return line. 1×12 in. hydraulically operated marine arm on dock. Safe working height of arm 55 ft. at MLW. Storage capacity 20 million gallons.

Amoco: The terminal of the Amoco Company is located on the Southern Branch of the Elizabeth River, in Chesapeake, about one mile South of the Norfolk Naval Shipyard. This company has a site comprising 80 acres, with a splendid waterfront, on which are erected a ship and barge pier, pipelines, storage tanks, boiler house, tank-car and truck loading racks, and other facililties requisite to a modern petroleum storage terminal.

The terminal has storage capacity of 655,000 barrels for handling gasoline, light fuel oil, bunker C and asphalt.

Vessels carry petroleum products to its terminal from various refineries located in the U.S.A. and from abroad. Petroleum products are also received through the Colonial Pipeline system.

Fuel oil deliveries may be made to vessels at the company's wharf. Deliveries are also made by water to any section of Hampton Roads, Richmond, various other points in the Chesapeake Bay area and its tributaries. Loading equipment for making such delivery consists of barges with the necessary pumps, hose, flanges and other equipment for making up connections.

Mobil: The Mobil Oil Corporation's terminal is located on the Southern branch of the Elizabeth River. Terminal facilities include bulk storage for 10 million gallons of gasoline, 6.7 million gallons of kerosene, 9 million gallons of fuel oil, 2 million gallons of diesel, and 11 million gallons of bonded bunker and marine diesel fuel.

The Mobil Oil terminal can accommodate vessels up to 32,000 d.w.t. Maximum length allowed is 660 ft. with maximum beam up to 90 ft. Maximum draft allowed is 35 ft. Water at this berth is brackish.

Swann: The Swann Oil terminal complex is located on the Southern branch of the Elizabeth River. This is a deep water port that can accommodate vessel drafts of 35 ft. and lengths up to 630 ft. with beams to 90 ft.

The Company's facility has a storage capacity of more than 850,000 barrels and handles a complete range of industrial fuel oils including No. 2 fuel oil, No. 4 fuel oil, No.6 fuel oil and bunker oils. The terminal operates around-the-clock and is connected with the Colonial Pipeline system.

Koch: The Koch Terminal is situated adjacent to the C&O Railroad yards in Newport News. It has a storage capacity in excess of 520,000 barrels for handling diesel fuel, No. 2 fuel oil, No.4 fuel oil, No.5 fuel oil, No. 6 fuel oil, bunker fuels and asphalt.

Products are received into the terminal by tanker and barge. This is a deep water port that is located 24 miles from the sea buoy. Maximum draft allowed is 34 ft. Max. length of vessel allowed is 630 ft. with a beam up to 90 ft.

Limitations from environmental factors on berth operations do not exist. The tidal current sets across the approach. Vessels generally sail at any stage of the tide. Controlling depths in the navigation channel are 45 ft. and at the berth the controlling depth is 33 ft. Flood tide is in a N.W. direction, ebb tide is in a S.E. direction. Current velocities are between 1.1 knots and 1.4 knots.

Equipment available at the terminal to contain oil spills include: 200 ft. of boom, launch, oil snares, and absorbent material. Firefighting equipment on the pier is limited, but includes: 2×150 lb. dry powder extinguishers, and 2×20 lb. dry powder extinguishers. There is no water under pressure on the pier. A public telephone is the only means on the pier used for fire emergencies.

CRANES: 350 ton capacity floating crane operated by Tidewater Construction Corp.

Capacities (short tons)	*Outreach from edge of barge* (ft.)
350	50 ft.
299	60 ft.
218	80 ft.
154	100 ft.

Virginia Marine Services Inc. operate 1×1,000 ton and 1×150 ton floating crane.

STEVEDORES: Labour arranged through International Longshoremen's Association.

1. Straight Time – work between the hours of 0800 and 1200 and between the hours of 1300 and 1700 daily except Saturdays, Sundays and holidays.
2. Double Time – hours daily between 0600 to 0700 and 1200 to 1300, 1800 to 1900, 2400 to 0100 hrs. and all Sundays.
3. Time and one-half – shall be all those hours not included above, except holidays.

DENSITY: Average 40% fresh.

FRESH WATER: Available at all berths. Barge service available if required.

FUEL: All grades available at oil company berths. Delivery by barge to all other locations.

CONSULS: The following countries are represented at Norfolk:

Belgium
Brazil
Denmark
Finland
France
Germany F.R.
Great Britain
Iceland
Italy
Mexico
Netherlands
Norway
Panama
Sweden

GANGWAY/DECK WATCHMEN: Not required unless crew members detained by Immigration.

CERTIFICATES: Cargo Gear Certificate, Derat, Radio, Safety Equipment, and Ship's Register.

REPAIRS: Newport News Ship Building and Dry Dock Company in James River; 5 outfitting piers up to 1,160 ft. length. Floating cranes up to 67 tons capacity. Gantry crane to 900 tons capacity. Other repair facilities and cranes also available.

Norfolk Ship Building and Dry Dock Corporation, situated on East Branch of Elizabeth River. Channel depth 25 ft.; 7 piers equipped for ship's repairs. 4×30 ton diesel locomotive cranes.

Other repair companies in addition.

DRY DOCKS: Norfolk: 1 dry dock 450 ft. long, 57 ft. beam. Berkley plant features the Titan Steel floating dock 950 ft. long, with lifting capacity of 54,250 long tons and second floating dock 670 ft. long, 126 ft. wide lifting capacity 20,000 tons.

Newport News: Dry docks:

	Length inside gate	*Width of entrance*	*Depth of water over sill MHW*

CUSTOMS ALLOWANCES: At the discretion of Customs Officers. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1qt. wine/spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

AIRPORT: Norfolk International Airport, and Patrick Henry International Airport at Newport News, over 100 flights daily.

TIME: Eastern standard time, GMT minus 5 hours. Daylight saving time, GMT minus 4 hours, from first Sunday in April till last Sunday in October.

HOLIDAYS: New Year's Day; Martin Luther King's Birthday; Lee's Birthday; Washington's Birthday (3rd Monday in February); Good Friday; Memorial Day (Last Monday in May); Jefferson Davis Day; Independence Day (July 4th); Labour Day; Election Day (1st Tuesday after 1st Monday in November); Veterans Day (November 11th); Thanksgiving Day; Christmas Day. No work can be arranged on New Year's Day, Labour Day or Christmas Day.

TELEPHONES: Onboard telephones only available at shipyards.

IDENTIFICATION CARDS: Identification required by Immigration for shore passes.

DEVELOPMENTS: *Authorised Channel Improvement:* Major improvements to the channels serving Hampton Roads were authorised in August 1985 and construction began in March 1987 on the first element of these improvements, consisting of a 50 ft. outbound channel. The authorised improvements provide for deepening the Norfolk Harbour Channel from 45 ft. to 55 ft. deepening the Newport News Channel from 45 ft. to 55 ft, and constructing a new channel in the Atlantic Ocean to a depth of 60 ft. The authorised improvements also provide for deepening the Norfolk Harbour 40 ft. channel to 45 ft. and a portion of the Southern Branch 35 ft. channel to 40 ft. A deep draft anchorage opposite the City of Hampton will also be constructed in conection with the 55 ft. channel improvements.

Port Expansion: Plans include extension of Pier C on the North side to allow for the berthing of large container and breakbulk ships simultaneously. Extending the pier by 186 ft. will provide an additional 68,000 sq.ft. of open cargo storage space. In order to increase the apron widths of the piers, the transit sheds will also be modified and updated, allowing for more productive material handling. Pier 8, which lies South of Pier C, will be demolished to allow more manoeuvrability for the larger cargo vessels calling at the terminal.

Expansion is also being undertaken at the coal piers. Dominion Terminal Associates announced plans to expand its facility area by nearly 50%, from it's current 68 acres to 101 acres, in order to accommodate demand for coal. Completion of the project is anticipated in late 1990. The additional space will serve a wider variety of coal qualities and will accommodate more transhippers interested in moving coals to export and domestic markets.

Pier IX Terminal Company announced plans to add cement shipping to it's coal facility in Newporrt News. Construction began in August 1989 and was slated for completion in Spring 1990. The addition will be used to import about 100,000 tons of cement annually.

PILOTAGE: Pilots boats have VHF. Contact is made on VHF Channel 16, then switch to Channel 12. Pilot service is provided on a 24-hour basis upon suitable advance notice.

At Hilo, Pilot boards on starboard side in position 0.75 mile due East of Paukaa Light. In picking up Pilot, vessels should be on Southerly course with enough speed for steerageway. Special instructions will be given by radio telephone.

At Kawaihae, Pilot station in position 1 mile 287° true from Buoy No. 2. Pilot usually boards on port side with vessel on course for the entrance at dead slow speed.

ANCHORAGES: No safe anchorages either Hilo or Kawaihae for vessels awaiting Pilot. In this situation, a vessel should heave to or steam. Under good weather conditions, safe anchorage can be had in Hilo Bay. Anchorage is inside pilotage waters and requires local knowledge for safety; vessels should not anchor without Pilot.

RESTRICTIONS: At Hilo, under good weather conditions, vessels with draft up to 32 ft. 6 in. can be handled at any time.

At Kawaihae, vessels with draft up to 33 ft. handled anytime.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Honolulu Quarantine Station.

RADIO: Communicate through RCA or ITT stations in Honolulu.

TUGS: Tugs join vessels at entrance at Kawaihae and at Coconut Island at Hilo. Tug's lines are usually used at no extra charge.

BERTHING: There are many factors which affect berthing at Hawaii Island ports, the most important of which are surge and wind. Vessels should be well equipped with long mooring lines and sufficient additional line to make up 2×900 ft. buoy lines. In all instances, berthing instructions will be given after details concerning vessel and her cargo are received.

Pier No. 1 in Hilo handles bulk sugar vessels and container vessels, 1,220 ft. of berthing space.

Pier No. 3 in Hilo handles tankers, 575 ft. of berthing space.

Kawaihae has one overseas berth which handles both bulk sugar vessels and tankers, 605 ft. of berthing space.

CRANES: Shore cranes available, max. capacity 90 tons.

STEVEDORES: Hilo Transportation and Terminals Co. (Hilo) and Kawaihae Terminals Inc. (Kawaihae).

MEDICAL: All facilities available.

DENSITY: Variable in Hawaii area due to fresh water run-off.

FRESH WATER: Available from county of Hawaii by pipe-line.

FUEL: Can be supplied subject advance notice.

REPAIRS: Limited repair service available; almost any type of machine work, welding and ordinary electrical repairs can be handled.

GANGWAY/DECK WATCHMEN: Required for tankers. Other ships as may be necessary due to special circumstances.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and one U.S. quart bottle, wine or spirit.

REPATRIATION: Direct air service to Continental United States and to Honolulu International Airport.

AIRPORT: About 1 mile from Port of Hilo and is served by regular airlines.

POLICE/AMBULANCE/FIRE: *Hilo:* Police 9353311; Ambulance and Fire 961-6022.

Kawaihae: Police 8857334; Ambulance 885-7334; Fire 961-6022.

TIME: GMT minus 10 hours all year round.

TELEPHONES: Special arrangements may be made with Hawaiian Telephone Co.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Seamen's Passports only required.

AUTHORITY: State of Hawaii, Department of Transportation, Harbours Division, Port of Hilo, Hilo, Hawaii 96720. *Tel:* (808) 935-4877. *Contact:* Ian Birnie, District Manager.

AGENT: See "Honolulu".

HOMER, Alaska: 59.36 N. 151.25 W. (See Plan

APPROACHES: Via Cook Inlet. Port located at mouth of Kachemak Ba on Kenai Peninsula.

DOCUMENTS: See "Port of Anchorage, Alaska".

PILOTAGE:

(1) Homer Pilots' Association, Radio KTE 21, Tel. 235-8783. Pilot boards 1 mile South of Homer Spit Light on Coal Point.

(2) The Southwest Alaska Pilots' Association serves all ports in Coo Inlet, Prince William Sound, Resurrection Bay, Kodiak Island, the Aleutian Islands, Bristol Bay and Bering Sea. The pilot station for vessels entering Cook Inlet waters is Lat. 59° 36.2′ N., Long. 151° 24.5′ W., approximately 1 mile South of Homer Spit Light on Coal Point. The pilo station cable address is "Homerpilot". The pilot station stands by o VHF Channels 10 and 16, 24 hours a day; call sign "WAB-917 Southwes Pilots". The pilot station also stands by on single side band radio a follows:

8284.4 kHz between 0800 and 1200 hrs. Alaska time, weekdays.
4136.3 kHz between 1300 and 1700 hrs. Alaska time, weekdays.
Call sign "WAB-917 Southwest Pilots".

ANCHORAGES: Kachemak Bay is excellent anchorage for vessels o any size. Foreign vessels may enter bay to anchor, but must have a Pilot aboard to come to dock.

MAX. SIZE: Harbour depth 40 ft. MLLW. Tidal range 28 ft. (−6 ft. t +22 ft.) Max. draft for berthing 30 ft. at MLLW.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

RADIO: Homer Port Radio monitor CB Channel 17. Callsign "KCN 718 Port of Homer".

VHF: Homer Port Radio monitor Channel 16. Call sign "WAB 935".

TUGS: 1 tug available.

BERTHING: Homer City Dock, 410 ft. long and 50 ft. wide. Limited t draft of 30 ft. 3 privately owned mobile cranes available. Capacity 15 35 and 70 tons.

410 ft. face with sloping bottom suitable for vessels with 20 ft. draft o less at chine. Inside and outside storage is available for holding and staging. Water, gasoline and diesel are available on dock.

MEDICAL: Homer Hospital is a 38 bed hospital with 5 full-time doctors.

FRESH WATER: Available from the berth.

FUEL: Available for small craft only.

REPAIRS: No facilities for repairs.

EMERGENCIES: Police department and a volunteer fire department are available plus a rescue truck.

AIRPORT: Daily air service.

AUTHORITY: City of Homer, 491 East Pioneer, Homer, AK 99603-7624 U.S.A. *Tel:* (907) 235-3160. *FAX:* (907) 235-3140. *Contact* L.Christopher, Port Director.

HONOLULU, Hawaii: 21.19 N. 157.52 W. (See Plan)

(B) HAWAIIAN INDEPENDENT REFINERY INC. (HIRI) - BARBER'S POINT
(C) CHEVRON U.S.A. INC. – BARBER'S POINT.

(A) HONOLULU AND PEARL HARBOUR

DOCUMENTS:
4 Crew Lists.
4 Passenger Lists.
Customs Documents.
Clearance, Travelling Manifest.
Local Manifests.
Health Documents.
Bill of Health and Vaccination Certificates.
4 Manifests.
4 Bills of Lading.
Ship's Papers.
Certificate of Registry.
Annual Inspection Certificate.
Load Line Certificate.
Derat Certificate.
Radio Certificate and Licence.
4 Stores Lists.

Vessels scheduled to call at Pearl Harbour are required to furnis 6 copies of Crew Lists and Passenger Lists, if applicable, at leas 1 working day prior to arrival, for Naval security requirement.

The United States Immigration Service requires that the Master o vessels manned by alien crew members arriving from a foreign po present the United States Immigration and Naturalisation Service's Officer with a current Crew List (Form I-418) properly visaed in their possession. An I-94 should be prepared for each passenger prior t vessel's arrival.

U.S. Immigration Department representatives are not stationed at any Hawaiian outports. Customs Officials, however, are stationed at all entry ports and accomplish both Customs examination and Immigration.

The United States Agriculture Service examines and seals ship's stores from restricted ports. Special arrangements for garbage disposa may also be required by this Agency, if for example meat aboard has been purchased in a port where there is a high incidence of "hoof and mouth" disease. All garbage should be disposed of prior to arrival in port.

All regulatory bodies assess overtime charges for services of the personnel if rendered on Saturdays, Sundays, holidays or after hours on week-days.

PILOTAGE: Pilot requested by Agent. Channels 16, 12 and 9, call "WXZ 456". Pilot boat, 37 ft. cabin cruiser, yellow with black striping. Only "H" flag necessary for vessel requiring Pilot. Pilot station, Lat. 21° 16′ 12″ N., Long. 157° 53′ 24″ W., no alternative.

ANCHORAGE: Except during strong Kona (Southerly) winds, anchorages for deep-draft vessels exist outside the harbour in Mamala Bay off Sand Island and West of the Main, or Fort Armstrong Channel. The anchorage is located within 600 yards on either side of an underwater sewer outfall line. Anchorage is not permitted inside the harbour due to the limited swinging room. An explosives anchorage area lies 1.3 miles West of Sand Island's Kalihi Channel, directly off Keehi Lagoon.

RESTRICTIONS: Entry at any time subject to harbour control signals. 24 hours' notice of arrival is obligatory.

MAX. SIZE: *Entrance Channel:* Depth 45 ft. *Harbour:* Depth 40 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Honolulu Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany). Illness Reports made to Honolulu Quarantine Station.

RADIO: VHF Channel 16, call KFQ907, Aloha Tower Harbour Control Station.

TUGS: 30 tugs. Tugs normally join vessel within harbour limits. Both ship's lines and tug's lines used depending on conditions.

BERTHING: Berthing given on a "first-come-first-served basis" according to type of vessel and particular requirements as to cargo, bunkering, etc. Must be arranged through a local shipping Agent.

Pier No.	*Length* (ft.)	*Depth* (ft.)	*Use*
1	1,266	36–40	Containers, autos, lumber, heavy machinery, paper and general cargo.
2	1,779	36–40	Containers, autos, heavy machinery, lumber, paper products and general cargo.
4	–	–	U.S. Coast Guard.
5	–	15	Small cruise ships.
6	160	15	Small cruise ships.
7	710	30	Small cruise ships.
8	595	26–32	Cruise and passenger ships.
9	608	35	Cruise and passenger ships.
10	496	35	Cruise and passenger ships.
11	460	35	Cruise and Passenger ships.
12	50	24	Small cruise ships.
18	212	20	Fish loading.
19	1,107	29–35	Sugar, lumber, general cargo, barges containers, chemicals, vehicles, conveyor/gantry for bulk raw sugar.
20		29–35	General cargo, autos, liquid fertiliser and lumber.
21	494	10–35	Tugs and bunker fuel.
22	446	33	Tugs and bunker fuel.
23	434	33	Grain storage, conveyor, gantry, feedmill.
24	575	27–30	Inter-Island and containers.
25	360	27–30	Inter-Island and containers.
26	695	28–30	Inter-Island, fuel, Roll-on/Roll-off.
27	890	28–30	Inter-Island, autos, Roll-on/Roll-off.
28	540	28–31	Inter-Island, bunkering barges, petroleum products.
29	750	28–31	Inter-Island, petroleum products.
30	270	31–34	Chevron U.S.A. petroleum storage.
31, 31A, 32,33	1,540	30–35	Petroleum products, general cargo, lumber, autos, bulk commodities, caustic soda, asphalt, steel products, chemical products, newsprint.
34	209	35–40	Petroleum products, bulk cement, bunkering vessels.
35	705	27–35	Scrap metal and general cargo.
36	978	20–35	Pineapples and general cargo.
38	62	10–25	LPG.
39	2,139	15–35	Autos, steel, general and bulk cargoes.
40	2,260	30	Autos, lumber, cement, grain, general and bulk cargoes.
51A	556	40	Containers and jet fuel.
51B	800	40	Containers.
52–53	1,746	40	Containers, general cargo, molasses, autos and Roll-on/Roll-off.

STEVEDORES: Gangs must be ordered 24 hours in advance. General cargo, average load per hour: 15 long tons; average discharge per hour: 15 long tons.

MEDICAL: Agents would like as much advance notice as possible. Complete medical facilities available. Vaccinations in accordance with U.S. Public Health requirements.

TANKERS: 4 tanker berths, max. draft 36 ft. No slop discharge facilities. *Pearl Harbour:* U.S. Navy Terminal. Max. LOA 800 ft. Max. draft 38 ft. 6 in.

Also see Sections "B" and "C".

DENSITY: Pure salt water, no fresh water allowance.

FRESH WATER: Delivered via 2.5 in. fire hose with meter on pier. Rate of delivery between 30 t.p.h. and 60 t.p.h., depending on the berth.

FUEL: All U.S. grades available, no advance notice other than establishment of credit.

FIRE PRECAUTIONS: Fire wires required by tankers berthed alongside. Permit required for hot work whilst in port.

CONSULS: The following countries are represented in Honolulu:

American Samoa
Australia
Austria
Denmark
Finland
France
Germany F.R.
Great Britain
Guatemala
India
Indonesia
Italy
Japan
Korea
Mexico
Monaco
Nauru
Netherlands
New Zealand
Norway
Panama
Philippines
Portugal
Sweden
Switzerland
Thailand
Western Samoa

REPAIRS: All types of deck and engine repairs possible. Hull repairs below water-line in accordance with dry dock capacities.

DRY DOCKS: Commercial within Honolulu Harbour. Dry dock: 2,800 long ton lifting capacity, 385 ft. long, 56 ft. wide. Floating Dock: Lifting capacity 2,620 tons. Length 200 ft. Width 100 ft. Marine railway: 1,400 long ton lifting capacity, 223 ft. long, 65 ft. wide.

Commercial within Barber's Point Harbour. Dry dock: 7,875 long tons lifting capacity, 516 ft. long, 110.5 ft. wide.

GANGWAY/DECK WATCHMEN: Services of watchman recommended, usually arranged by Agent.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and 1 bottle, U.S. quart, wine or spirits.

REPATRIATION: All facilities, crews generally leave State within 24 hour period.

AIRPORT: International airport, served by all major airlines, 5 miles from harbour.

TIME: GMT minus 10 hours all year round.

HOLIDAYS:

New Year's Day	January 1st or following Monday
President's Day	Third Monday in February
Kuhio Day	Third Monday in March
Good Friday	Friday before Easter
Memorial Day	May 30th or nearest Monday or Friday
Kamehameha Day	June 11th or nearest Monday or Friday
Admission Day	Third Friday in August
Labour Day	First Monday in September
Discoverer's Day	Second Monday in October
General Election Day	First Tuesday after First Monday in November (election year)
Veteran's Day	November 11th
Thanksgiving Day	Last Thursday in November
Christmas Day	December 25th

POLICE/FIRE/AMBULANCE: Police, Ambulance, Fire dial 911.

TELEPHONES: Telephones can be placed on board at any dock.

SERVICES: All services found in major U.S. ports are available.

SHIP SUPPLY SERVICE:

Name & Address	*Vessels*	*Services*
Dillingham Tug & Barge Pier 21, Honolulu, HI 96817 (Tel: 5439325)	Mioi, Huki, Ma'a	Ship stores and fuel.

(B) HAWAIIAN INDEPENDENT REFINERY INC. (HIRI) – BARBER'S POINT

LOCATION: The HIRI Calm – Type Single Buoy Mooring (SBM) is approximately 2 miles bearing 146° True from Barber's Point Light on the Island of Oahu, Hawaiian Islands. Position: Lat. 21° 16.4′ N., Long. 158° 05.5′ W.

DOCUMENTS: *Arrival and Departure Requirements:* All arrival and departure requirements are handled through the ship's Agent. All matters related to arrival or departure should be referred to that Agent.

VESSEL ACCEPTANCE: In order to maintain safe control, all vessels must be nominated to and accepted by HIRI prior to arrival. HIRI reserves the right to refuse any nomination due to vessel's specifications or previous experience with similar vessels. As a guide, vessels calling at the HIRI SBM should be in compliance with the "OCIMF" publications "Recommendations for Equipment Employed in the Mooring of Ships at Single Point Moorings", and "Standards for Oil Tanker Manifolds and Associated Equipment".

The minimum SWL for the vessel's port hose handling boom or crane should be 5 tons for tankers less than 50,000 d.w.t. and 6 tons for larger tankers.

Tankers must have sufficient clean ballast for safe manoeuvring.

Officer accommodation should be available for the Mooring Master and Inspector and meals are to be provided for both.

PILOTAGE: Tankers will be boarded by the HIRI Mooring Master in the immediate vicinity of the marine terminal or at the anchorage if the tanker is waiting at anchor. The pilot ladder should be rigged to provide an adequate lee for boarding. The vessel should maintain minimum headway. The end of the ladder should be 1.0 m. above the water and crew should be standing by on deck with heaving line. The Mooring Master will usually board from a small mooring assist tug.

The Mooring Master will advise the tanker's Master on approaches to the berth, mooring, unmooring, and all operations within the terminal area. Manoeuvring of ships within limits of the terminal shall be done in accordance with the advice of the Mooring Master, subject to the understanding that in all cases the Master of the vessel being manoeuvred shall remain solely responsible on behalf of his vessel's owners, for the safety and proper manoeuvring of the vessel. The Master or a qualified Deck Officer must be on the bridge at all times while the ship is manoeuvring.

ANCHORAGE: Vessels have anchored in the vicinity of 21° 16.6′ N. and 158° 03.5′ W. while waiting for their berthing opportunity. In doing so they are cautioned to remain clear of the approaches to both the HIRI and Chevron offshore terminals. Vessels are also cautioned not to anchor within the charted restricted anchorage to the East of the mooring area.

The Honolulu Harbour Master has directed that all tankers awaiting their turn at the Barber's Point moorings shall anchor in the vicinity of the moorings in lieu of the anchorages off-port Honolulu.

RESTRICTIONS: Berth and terminal operate 24 hours a day. Mooring and unmooring during hours of darkness is customary. At times weather and sea conditions can deteriorate to the extent that mooring operations are suspended and/or vessel must be unmoored.

MAX. SIZE: In general, tankers having these maximum particulars are acceptable:

LOA	945 ft.
Beam	150 ft.
Summer d.w.t.	150,000 tons
Bow to centre manifold	470 ft.
Draft	Depth of water at the berth is in excess of 80 ft.

TUGS: 2 mooring assist boats are used during the mooring operation. One of these boats will standby at the mooring throughout the period the tanker is in the berth. Tugs may be used to assist in mooring at the Mooring Master's or Tanker Master's discretion.

By order of the U.S. Coast Guard Captain of the Port, all laden or partially laden tankers mooring or unmooring at the HIRI SBM must have adequate tug assistance standing by until safely moored or unmoored and clear of the vicinity.

Tugs are available from Honolulu and can be arranged by the vessel's agent.

RADIO: 72 hours, 48 hours and 24 hours prior to arrival, tankers should advise HIRI/Primarine (Telex 7431356) of their ETA.

VHF: During loading/discharging operations, the Mooring Master will have 2 portable VHF transmitter/receiver radios for communications between the tanker and HIRI Pumphouse Control Station.

Pacific Resources Terminals, Inc. and Hawaiian Independent Refinery Inc. have been licensed to use the following Simplex VHF frequencies:

Channel 6	Emergency	156.30 MHz
Channel 9*	Ship to Shore (primary)	156.45 MHz
Channel 16	Calling/Emergency	156.80 MHz
Channel 19A*	Ship to Shore (Secondary)	156.95 MHz

(*Either 9 or 19A may be used as working Channel).

HIRI Pumphouse	Call Channel 16, Communicate Channel 9/19A, Call sign: "KTD 466".
Pacific Resources, Inc.	Call Channel 16, Communicate Channel 9, Call sign: "KIZ 799" (Not guarded).

Other useful VHF Channels are:

Aloha Tower, Honolulu Harbour Control:	Call Channel 16, Communicate Channel 12, Call sign: "KFQ 907" (Guarded 24 hours)
Honolulu Pilots:	Call Channel 16, Communicate Channel 12, Call sign: "WXZ 456"
Chevron Shipping:	Call Channel 16, Communicate Channel 10, Call sign: "KEN 778"
Davies Marine Agencies:	Call Channel 16, Communicate Channel 11, Call sign: "KXJ 712"
Hawaii Pacific Maritime:	Call Channel 16, Communicate Channel 10, Call sign: "KMC 208"
P & R Water Taxi	Call Channel 16 Call sign: "WYH 6327"
Hawaiian Tug & Barge (Pier 21)	Call Channel 16, Communicate Channel 18A Call sign: "WLX" (Guarded 24 hours)
Uakewai Diving, Salvage & Fishing, Inc./Marine Logistics, Inc.	Phone: 947-6881 or 737-4312
M/V "Nene"	Call sign: "WSR 3068"
M/V "Nahoa"	Call sign: "WJ 7030" Call Channel 16, Communicate any working Channel

TERMINAL FACILITIES: Hawaiian Independent Refinery, Inc. (HIRI) is located onshore to the East of Barber's Point Light about 2 miles from the offshore marine terminal.

The offshore terminal consists of a CALM type single point mooring buoy. A 30 in. crude pipeline, a 20 in. clean product pipeline and a 16 in. bunker pipeline connect the SBM to the shore. 3×840 ft. long 16 in. floating hoses reduced to 12 in. over the rail, connect the tanker to the SBM. Flanges on all hoses are standard 150 pound ANSI-B 12 in. lap ring type.

Crude oil is normally discharged through 2 hoses with a max. pressure of 225 p.s.i. and a max. flow rate of 33,000 bbl./hr. per hose. Product is loaded and discharged through one hose. Loading rates vary between 6,000 bbl./hr. and 12,000 bbl./hr., depending on the product.

BALLAST: Normally, no dirty ballast is accepted. However, with prior notification, facilities can be made available to receive limited quantities. The vessel will be charged for use of the refinery ballast facilities.

Tankers must arrive with sufficient clean ballast for safe handling having due regard to existing weather and sea conditions. It is the responsibility of the Master to ensure that no oil or contaminated ballast of any kind is pumped overboard. Inspection of ballast is strict. Any trace of oil on the surface of the ballast will preclude overboard discharges.

Tankers equipped with a segregate ballast system are permitted to discharge cargo and load ballast simultaneously with prior approval of the Mooring Master.

MOORING/UNMOORING: Prior to mooring, the Mooring Master will deliver a copy of the "General Instructions, Discharging/Loading Orders and Indemnification Letter" to the ship's Master for his signature (see Appendix). By his signature he agrees, on behalf of his owners, to comply with all relevant terminal conditions.

The ship will moor to a single hawser, usually through the forward centreline Panama fairlead. The hawser is 180 ft. long, connected to a 40 ft. long chafe chain. A 500 ft. long 10 in. poly pick-up line is attached to the chain for heaving it on board. The chafe chain will be secured using either a bow chain stopper, Smit-type bracket or vessel's bitts with a terminal supplied nylon snotter, depending on the type of mooring equipment installed on the vessel.

The deadweight tonnage and size of mooring equipment on the vessel will determine whether she is moored to the 76 mm. (3 in.) or the 54 m. (2.15 in.) portion of the chafe chain.

The ship's crew is responsible for securing the mooring chafe chain with advice from the Mooring Master. A suitable messenger line should be available on the fo'castle to retrieve the mooring hawser pick-up line. A ship's deck officer shall be on the bow during mooring and unmooring operations. The Mooring Master will be stationed on the bridge to advise the Master and crew during approach and mooring operations.

HOSES/CARGO OPERATIONS: The ship's crew is responsible for connecting and disconnecting hoses. A ship's deck officer shall be in the area of the cargo manifolds during hose handling operations. The Mooring Master will be available to advise the crew during hose operations.

The ship's crew is responsible for all cargo operations. The Mooring Master will advise with respect to operating conditions and hazards, but will not direct the loading or unloading.

It is dangerous to close ship's valves against the oil stream. Such a procedure creates excessive pressure which may damage terminal facilities. Tankers will be held liable for damages resulting from failure to observe this precaution.

The Mooring Master reserves the right to suspend oil transfer operations, if necessary, to protect the terminal facilities or the environment.

All rules and regulations concerning safety, local conditions, terminal operations and oil transfer will be carried aboard the tanker by the Mooring Master.

The following are specific requirements for all vessels while moored at the HIRI SBM:

1. The vessel's main engines, steering gear and all necessary equipment shall be maintained in a condition to allow immediate manoeuvring of the vessel.
2. A qualified live bridge watch shall be maintained at all times while moored to the SBM.
3. A qualified bow/SBM lookout shall be maintained to report if the ship begins to encroach upon the buoy. This lookout shall be in radio contact with the bridgewatch.
4. A suitable line shall be available on the stern for towing if necessary to maintain clearance between the ship and the buoy.
5. Sufficient crew shall be available to disconnect hoses, unmoor and get underway at all times.
6. An officer fluent in English shall be on duty at all times.
7. Oil transfer shall cease if radio communication with the terminal is lost.
8. Oil transfer shall cease and the U.S. Coast Guard notified if oil is spilled.

All tankers are expected to unmoor as soon as practicable after completion of cargo operations. The ship's crew will disconnect hoses and unmoor. The Mooring Master will be stationed on the bow to advise the Master and crew during unmooring.

FRESH WATER: Not available at SBM. Available at limited locations in Honolulu Harbour.

FUEL: Subject to availability, bunker and diesel fuel can be supplied at the SBM. Prior arrangements with HIRI are required. Fuel can be delivered by barge in Honolulu or off port.

Bunker orders: Telex 7430292 or Telephone 808-547-3269, 3205.

MEDICAL: Honolulu has many excellent medical facilities and hospitals. Services can be arranged by local agent.

REPAIRS: Limited ship repair facilities are located in Honolulu.

STORES: Stores are available in Honolulu. Stores cannot be loaded while the tanker is in the mooring, except with express permission of the Mooring Master.

AIRPORT: Honolulu International Airport has regularly scheduled flights to all parts of the world.

TIME: The Hawaiian Islands observe "Hawaiian Standard Time" year round which is GMT minus 10 hours. Daylight Savings Time is not observed.

WEATHER/TIDES: The Master is referred to published sailing instructions for this area for information on tides, currents, wind and weather.

The Hawaiian Islands are dominated in all seasons by tradewinds from the N.E. These tradewinds are present about 75% of the time and their average velocity is 12.5 m.p.h. They exceed 20 m.p.h. approximately 2% of the time; however, gusts approaching 100 m.p.h. are possible.

Hawaii's average temperature ranges from about 74°F in March to 79°F in September. Almost everywhere in Hawaii, the warmest and coolest months differ, on the average, by only 9° or less.

"Kona" weather refers to the Southerly winds which occur most frequently during the months of October through April. During these storms, heavy rainfall and cloudiness can be expected. Moorings scheduled during these months may be subject to delay.

The predicted times and heights of the high and low tides are published for Honolulu. The periodic tides around Barber's Point average only 1 ft. to 2 ft. and are normally mixed. The effect of strong winds added to normal tidal action may cause water levels to fall considerably below chart datum and/or rise considerably above MHHW. At Barber's Point where the trades usually blow directly off the land, a shift to Kona winds or to a calm has been observed to raise the tide level a few tenths of a foot.

Currents at the mooring normally run parallel to shore in an Easterly and Westerly direction. The maximum velocity varies from 3.0 ft. per second on the surface to 1.3 ft. per second 3 ft. above the sea bottom.

Tsunamis or tidal waves are possible in this area although quite infrequent. On receipt of a tsunami warning, tankers will be unmoored and will proceed to safe locations until the warning is lifted or the danger is passed.

APPENDIX:

TO: Master

SUBJECT: GENERAL INSTRUCTIONS, DISCHARGING/LOADING ORDERS AND INDEMNIFICATION

In addition to those Regulations mandated by the U.S. Coast Guard for vessels operating in U.S. waters, the following instructions and guidelines are provided to encourage safe operations while your vessel is moored at the HIRI Marine Terminal.

A. GENERAL. It is expressly understood and agreed that at all times and under all circumstances, the Master of the vessel will remain solely responsible to his vessel and her Owners for manoeuvring, mooring and unmooring of the vessel, connecting and disconnecting cargo hoses, discharging and loading cargo, ballasting, pollution prevention and adherence to Coast Guard Regulations and these instructions.

B. POLLUTION PREVENTION. A Mooring Master has been assigned to assist in the mooring of your vessel, connecting of cargo hoses, discharging/loading of cargo, disconnecting cargo hoses, unmooring and departing from the Marine Terminal, and to provide information on matters relating to the Terminal facilities. The Mooring Master additionally will act as a Pollution Prevention Officer. In this capacity, he will maintain surveillance over cargo operations and require that all regulations be observed. The Mooring Master may direct your vessel to discontinue cargo operations or unmoor at any time he deems it necessary for the safety of the vessel or the Marine Terminal, or to prevent violations or infringement of U.S. Coast Guard Regulations or these instructions.

C. INDEMNIFICATION. It is understood and agreed by you on behalf of the vessel and its Owners that the Mooring Master, operators and crew of the tugs, assist and standby launches, and said launches and tugs, are supplied upon the condition that in the performance of any service they may render to your vessel, that they are the servants of the vessel and its Owners in every respect and not the servants of Hawaiian Independent Refinery, Inc., Pacific Resources Terminals Inc., Pacific Resources, Inc., or its subsidiaries, or the Owners of said launches. It is further agreed that the Hawaiian Independent Refinery, Inc., Pacific Resources Terminals, Inc., Pacific Resources, Inc., and its subsidiaries, and the Owners of the assist and standby launches, from any liability, loss, claims or damages arising out of the rendering of services to your vessel by said Mooring Master, operators, crews and launches, whether or not arising out of the fault of said Mooring Master, operators, crew or said indemnitees. In addition, it is expressly agreed that the presence of the Mooring Master on board in no way relieves you, the Master of the vessel, of any legal responsibilities. FINAL DECISIONS REMAIN YOUR PREROGATIVE.

D. CHARGES. Charges for the service of the Mooring Master will be for the account of your vessel and Owners.

E. LANGUAGE OF PORT. The official language of the Marine Terminal is English. The ship will provide personnel available at all times capable of communicating in English with the Mooring Master and between the ship and personnel ashore.

F. DISCHARGING. After your vessel is properly moored at the Marine Terminal, cargo hose(s) will be connected to the ship's manifold. The ship's crew will be required to perform this function, supervised by a qualified Deck Officer. When the vessel is ready in all respects to commence cargo operations, and the HIRI personnel have indicated their readiness to receive cargo, the vessel shall commence the discharge of cargo at the rate of approximately 12,000 U.S. bbls.p.h. in order to displace the material in the pipe-line. Thereafter, upon receipt of instructions from the Mooring Master, vessel shall increase to maximum pumping rate using all main cargo pumps, but not exceeding either 225 p.s.i. at the vessel's rail or a flow rate of 34,000 b.p.h per 12 in. cargo hose.

G. LOADING. After your vessel is properly moored at the Marine Terminal, cargo hose(s) will be connected to the ship's manifold. The ship's crew will be required to perform this function, supervised by a qualified Deck Officer. Prior to commencement of loading, the tanks must be inspected by an independent third party inspector to determine whether the tanks are in suitable condition to receive cargo. When the vessel is ready in all respects to receive cargo, it must notify the Mooring Master who, in turn, will co-ordinate the commencement of loading with the refinery. The refinery will commence loading at the rate acceptable to you and will increase the loading rates as per your instructions. The maximum refinery loading rate is approximately 12,000 b.p.h.

H. BALLASTING. For the safety of your vessel and at your discretion based upon the weather, sea and wind conditions, etc., the discharge of cargo should be arranged so that when approximately 65% of the total cargo has been discharged, there will be sufficient empty and dry tanks to accommodate ballast as required to produce a mean draft of approximately 25 ft. and in a trim condition, not to exceed 6 ft. by the stern upon the completion of discharging operations. The independent third party inspector will conduct the inspection of the tanks prior to the loading of ballast and again upon the completion of discharge of all cargo.

I. OIL SPILL. It is unlawful to pollute the waters adjacent to the State of Hawaii. It is the responsibility of the Master of the vessel to assure that no oil (crude oil, bunker fuel, diesel, bilge oils, etc.) is spilled or pumped overboard. Drip pans must be provided at the flange connections. In the event of an oil spill, or anyy other occurrence which results in pollution of the sea, the U.S. Coast Guard, the Mooring Master and the vessel's "Agent" must be notified immediately. The Mooring Master will notify the U.S. Coast Guard immediately if the ship's Master fails to do so. By Federal Order CFR 153.305, no dispersants will be applied to an oil spill without U.S. Coast Guard approval. Failure to report pollution, regardless of the extent thereof, will result in severe penalties being imposed by the State of Hawaii and the U.S. Coast Guard. No garbage or trash will be discharged in the mooring.

J. EMERGENCY UNMOORING. A sufficient number of officers and crew members must be on board at all times to disconnect the hoses, unmoor, and vacate the berth, should such action become necessary, or be deemed advisable. The main engine must be kept ready for use at all times. Under no circumstances are engine repairs to be undertaken while the vessel is moored in the sea berth.

K. MISCELLANEOUS. We desire that the discharging and/or loading of cargo will be done safely and efficiently, and that your stay in Hawaii will be pleasant. To this end, please do not hesitate to call upon us for any assistance we may be able to render.

You are requested to sign and return the attached copy of these instructions in acknowledgement of receipt, understanding, and agreement therewith.

Hawaiian Independent Refinery, Inc.
Refinery Manager.

Master

Date and Time

GENERAL: All tankers calling at United States ports must undergo inspection by the United States Coast Guard. Upon successful completion they will be issued a "Tank Vessel Examination Letter" that is valid for one year. No tanker is permitted to transfer oil without a valid "TVEL".

"Notice of Readiness" will not be accepted at time of arrival unless the tanker is in all respects ready to load or discharge.

Laws of the United States govern this terminal and all personnel are required to abide by them. Regarding any matter in question, it is the responsibility of the Master to obtain the necessary clarifications from his local agents.

OPERATOR: Hawaiian Independent Refinery, Inc., 733 Bishop Street, P.O.Box 3379, Honolulu, Hawaii 96842. *Tel:* (808) 547-3241/3648. *Telex:* ITT 7431356. *FAX:* (808) 547-3145. *Cables:* Primarine. *Contact:* Captain W.E. Haddaeus, Port Captain.

(C) CHEVRON U.S.A. INC. – BARBER'S POINT:

LOCATION: Chevron U.S.A. Inc. has been granted the use of the following anchorage for its Barber's Point Offshore Tanker Terminal:

> The waters of the Pacific Ocean within an area beginning at a point in Latitude 21° 16′ 58″ N. and Longitude 158° 04′ 39″ W., thence on a bearing of 090° true, 850 yards, thence on a bearing of 180° true, 450 yards, thence on a bearing of 270° true, 850 yards, thence on a bearing of 000° true, 450 yards to the point of commencement.

The centre of the above described area is on an "approximate" bearing of 119° true, 2.3 miles from the Barber's Point Light. The four corners of the mooring are marked by buoys. The two Southerly corners of the area are marked by lighted buoys which are painted yellow and red and are in 84 ft. of water. The Northerly corners of the area are marked by white spar buoys and are in 66 ft. of water. The area is designated as Area "C" – See "Plan".

The offshore terminal facilities in the above described area are owned and operated by the Chevron U.S.A. Inc., Hawaiian Refinery, and serve to handle cargo between the refinery at Barber's Point and tankers calling at the terminal.

The offshore tanker terminal is the responsibility of the Blending and Shipping Area Supervisor, Chevron U.S.A. Inc., Barber's Point, Oahu, Hawaii. The marine representative in Hawaii is the Chevron Shipping Company Senior Mooring Master. He is responsible for all ship operations.

DOCUMENTS:

A. *For Immediate Entry for Customs* (for Preliminary Entry Certificate Issuance):
Original and 3 copies of I–418, Crew List and Passenger List.
Original and 3 copies of CF–1304, Customs Crew Effects Declaration.
Original and 3 copies of CF–1303, Customs Ship's Stores Declaration.
Original and 3 copies of CF–1301, Customs General Declaration.
Original and 3 copies of CF–1302, Customs Inward Foreign Manifest.
Original and 3 copies of CF–1300, Customs Master's Oath of Entry.
For Immigration Inspector:
Visaed Crew List (Form I–418) or Waiver prepared in lieu – fee U.S.$15.00.
Form I–95, completed for each crew member for issuance of D–1.
For USDA Inspector (when entering Honolulu Harbour):
Shipmaster's Declaration (AIQ–43) – (Inspector will bring on board).

B. *Required for Formal Entry and Clearance at U.S. Customs House:*
Entry:
Original set of Preliminary Entry Manifest as prepared dockside (see above).
Port Clearance (last port).
Vessel's Certificate of Registry.
U.S. Tonnage Tax Receipts (CF–1002), prior voyages.
SOLAS Certificate (Safety Equipment Certificate).
Load Line Certificate.
Certificate of Financial Responsibility (CFR).
Clearance:
Master's Oath of Clearance, original and 2 copies, CF–1300.
General Declaration, original and 2 copies, CF–1301, signed by Master.

PILOTAGE: Pilotage is compulsory for all vessels using the berth. This service is performed by the Chevron Shipping Company Mooring Master who remains aboard the vessel the entire time the vessel is in the berth. The Mooring Master will advise the vessel's Master on approaching and departing the berth, mooring, and unmooring. With the concurrence of the vessel's Master, this advice may take the form of directions to members of the vessel's crew. All manoeuvring within the mooring area should be done in accordance with the advice of the Mooring Master. Nevertheless in all cases the Master of the vessel shall remain solely responsible on behalf of the vessel's owner, for the safety and proper manoeuvring of the vessel. The vessel's Master and a qualified deck officer must be on the bridge at all times while the vessel is manoeuvring.

Pilot Station: When not anchoring on arrival, a Chevron Shipping Company Mooring Master will board arriving vessels. For vessels arriving from the West, the Mooring Master boards about 2 miles South of the anchorage area. For vessels arriving from the East, the Mooring Master boards about one mile South of the anchorage area.

ANCHORAGE: Pilotage is not required for anchoring in the Barber's Point Terminal area. Foreign flag vessels, however, should not enter inland waters North of a line connecting Barber's Point Light to Diamond Head Light and all vessels must remain clear of several prohibited anchorage areas. Masters should be aware that this is a very limited area for anchorage with deep water and poor holding ground. Vessels awaiting berth may anchor, however, in such a position so that the approach to and departure from the berths is not impeded. Chevron recommends (but does not warrant the safety of) anchoring within a 500 yard radius circle centred on position: Latitude 21° 16.2′ North, Longitude 158° 03.7′ West (approximately 3.2 miles East–Southeast of Barber's Point Light). Vessels should not anchor directly South of the Chevron U.S.A. Berth unless next scheduled for berthing as notified by Chevron Shipping Company, Honolulu.

RESTRICTIONS: Mooring and unmooring operations can be conducted at any time, day or night, weather permitting.

MAX. SIZE: *Berth Capacity:*

A. Maximum length overall 1,000 ft.
B. Maximum distance stern to centre manifold 500 ft.
C. Maximum deadweight tonnage 125,000. Chevron may allow vessels of a larger size under special circumstances to be determined on a case–by–case basis by Chevron Shipping Company.
D. Maximum draft 50 ft. (salt water). Vessels with a draft greater than 50 ft. (salt water) may be accepted on a case–by–case basis.

HEALTH: Vessels arriving from a foreign port must clear with U.S. Customs and Immigration before handling cargo. This is normally done with the assistance of a local agent. Either the vessel or the agent is required to furnish the U.S. Coast Guard at least 24 hours' advance notice of the ship's arrival time.

The agent brings the port authorities to the mooring area in a launch where they board.

Should a vessel arrive from a foreign port with sickness on board, the U.S. Public Health Service must be notified. This is usually done through the agent.

TUGS: At the Mooring Master's discretion one or more tugs are normally used to assist the vessel in mooring at this terminal for vessels over 70,000 d.w.t. A mooring launch is used to attach the vessel's lines to the mooring buoys and assist in picking up the submarine hoses. A mooring launch stands by continuously to assist in unmooring and in any emergency which may arise while the vessel is in the berth.

BERTHING: Within the mooring area there are 7 mooring buoys. Vessels should moor by using both of the ship's bow anchors and b running lines to the mooring buoys.

Mooring Equipment: Chevron U.S.A. Inc. reasonably believes, but does not warrant, that vessels meeting the following criteria may safely moo at the berth.

A. All ground tackle must be in good working condition. Vessels up t 50,000 d.w.t. must have at least 10 shackles of chain on each anchor Vessels over 50,000 d.w.t. must have at least 12 shackles of chai on each anchor.
B. Mooring wire and rope requirements are shown on the "Summary of Minimum Wire and Rope Requirements" – See "Appendix".
C. To accommodate wires and/or ropes, winches, fairleads, bitts and chocks must be so placed that mooring lines (wires or ropes) may be handled as follows:
    1. Vessels smaller than 80,000 d.w.t.:
        (a) 3 lines on the forecastlehead or main deck forward (2 t weather side, 1 to lee side).
        (b) 3 lines on the main deck aft (2 to weather side, 1 to lee side). It is desirable that winch or warping head arrangement be capable of working one line or wire out of each side simultaneously.
        (c) 4 lines on the poop deck (2 to weather side, 1 aft and 1 t lee side).
    2. Each synthetic line must be secured to a separate bitt.
    3. For vessels larger than 80,000 d.w.t., fittings must permit doubling of all lines for a total of 14 mooring lines.
D. Each mooring winch must be capable of heaving the first layer o wire or rope on the drum at a no–load speed of at least 150 ft./min and a loaded speed of at least 75 ft./minute. The respective winch speed must be maintained during simultaneous operation of one winch on the main deck forward, one winch on the main deck at 2 winches on the stern and one anchor windlass operating.
E. Mooring winches must be capable of warping the vessel in position without tug assistance. On a case–by–case basis the Mooring Master may waive this requirement and utilise tug assistance instead. Tugs will be for vessel's account.

Berthing Procedures: The procedure is modified to fit conditions of the berth, wind, current, sea state, vessel size/loading, limitations of vessel's mooring gear, and other factors as recognised with the advice of the Mooring Master.

In general, the following procedure is followed for typical berthing.

Vessel approaches the mooring on a due North heading, passing approximately 200 yards East of No. 6 mooring buoy.

Starboard anchor is let go at Point A and 9 – 9.5 shackles of chai are paid out on the run, starboard chain is then held.

When starboard chain fetches up leading aft, port anchor is dropped at Point B and stern is worked into berth as the starboard chain is held and the port chain is paid out to approximately 8 shackles and the lines are run to the mooring buoys. Then both chains are adjusted as necessary to position the vessel properly i the berth.

Wind and current will largely govern usage of tug assistance and which mooring lines are run out first.

Miscellaneous Vessel Requirements:

A. Vessels should be equipped with a searchlight on each bridge wing to assist in illuminating buoys during mooring and unmooring at night.
B. The ship's crew is required to perform all hose handling work (including raising, connecting, adjusting, disconnecting, and lowering the hoses), and adjusting of mooring wires and anchor chains. In addition, the crew will be required to take aboard a gear basket and to return it to the mooring launch before departure. All of this work will be done with the advice of the Mooring Master.
C. All vessels are required (at their expense) to provide food and accommodation for the Mooring Master and up to 3 mooring launch personnel for the duration of the visit.
D. All vessels shall comply with regulations and procedures set forth i the Operations Manual for the Chevron Barber's Point Offshore Tanker Terminal in addition to U.S. Coast Guard Regulations set forth in Title 33 of the Code of Federal Regulations (33 CFR). In the event of conflicts between the Operations Manual and the USCG Regulations, the provisions of the USCG Regulations shall prevail except when provisions set forth in the Operations Manual are more stringent than USCG's and other government regulations.
E. All vessels are subject to inspection to confirm their suitability for the Barber's Point berth. Vessels not meeting any one of the requirements may be refused berthing.
F. Vessels may be required to unberth and/or otherwise incur delay during adverse weather conditions.

Departure from Berth: The procedure for leaving the berth is conventional for such moorings and includes the following steps:

Hose is disconnected, blinded and lowered to the sea bottom.

Lines to buoys are slacked by the vessel's crew then released at the buoy by the mooring launch crew.

Anchors are either heaved in simultaneously or the port anchor is heaved in first, while No. 5 line is held until the vessel's stern is well clear of the spar buoys.

Mooring Master leaves the vessel after it is underway and clear of the moorings.

HOSES: Two pipelines serve to transfer products between the terminal and the refinery, 1×20 in. diameter and 1×30 in. diameter. Hose strings attached to the ends of each of these pipelines are raised by lifting the free end of the hoses by their attached buoys and chains. When the free end of the hose string is above the vessel's deck, the hose string is secured to the vessel by an attached chain bridle between the e and second lengths of the hose string. The end of the hose is then lowered in a smooth curve to the deck, the cap removed and the hose connected to the vessel's manifold. Both pipelines and hose strings terminate on the port side of the vessel.

The hose string description is as follows:

Pipeline	Hose Order from Shore	No. of Sections	Hose Diameter (in.)	Hose Length (ft.)	Total Length (ft.)
20 in.	1	1	16	25	25
	2	5	16	30	150
	3	2	12	30	60
	Total	8		Total	235
30 in.	1	1	16	25	25
	2	10	16	30	300
	3	2	12	30	60
	Total	13		Total	385

Each hose string is terminated on the free end of the last 12 in. diameter section by a lever–operated, blanked butterfly valve and a standard 12 in. 150 ANSI flange. The 20 in. system is normally used for transferring residual products such as bunker fuel and low sulphur fuel oil. The 30 in. system is normally used for transferring crude oil.

The submarine pipelines extend nearly 2 miles to the shore and then approximately one additional mile across flat land to the Chevron Refinery. Both submarine pipelines contain internal gut water lines which can be used to provide heat when hot water is circulated through them. Water is pumped out one gut line from the refinery and returns through the other. The two gut lines are connected at the seaward end by a short submarine hose.

Hose Handling/Cargo Transfer Equipment Requirements:

A. Port hose boom and related equipment shall have minimum safe working load capacity of 10 long tons except that vessels up to 30,000 d.w.t. may have 7 long ton minimum safe working load capacity.

B. Bitts for hanging-off the hose chain should be provided in front of the port side manifold. If the vessel is to load bunkers while handling cargo, separate bitts shall be provided for the bunker hose, also on the port side.

C. Rail to manifold distance should not be less than 15 ft. Top of roll bar should not be higher than the lower lip of the manifold flange(s).

D. All fittings, piping and valves outside of and including the first valve on the ship's cargo and bunker systems must be of steel construction and properly supported by a permanent installation (i.e., vessel must meet the Arco Cast Iron Clause). No more than one reducer outside the vessel's permanent installation will be allowed and in any case all connections must be made inside the oil drip pan.

E. All vessels must have the capability of loading segregated ballast during discharge equal to at least 30% of vessel deadweight. Those with the capability of handling segregated ballast quantity above 30% will be less subject to delay during adverse weather conditions. Vessels may load segregated ballast during discharge of cargo. Ballast may be loaded into unsegregated systems either during cargo discharge or when discharge is interrupted, but only if piping used for ballast is segregated from cargo piping by at least two valves. Single valve separation is acceptable if it can be shown that no leakage will occur through the valve except that in this case ballast cannot be loaded concurrently with transfer of cargo. Vessels not capable of meeting these requirements may be forced to vacate the berth prior to completion of discharge.

BALLAST: There are no shore facilities for handling either dirty or clean ballast at the terminal.

Pollution: It is imperative that no oil or pollutants of any type escape into the water. All regulations regarding pollution of the sea or air must be complied with.

Reporting Oil Discharges or Spill: Any oil spill into the water from a vessel in the moorings, at anchor, or underway in the vicinity of the Terminal shall be immediately reported to United States Coast Guard and the Terminal facility. If a Mooring Master is onboard, he shall notify the shore facility by radio as appropriate. In addition, the ship's Master shall in all cases notify the vessel's agents of the occurrence of the spill, no matter how small nor from what cause. If no Mooring Master is aboard, the vessel shall inform the Terminal facility by the most expeditious means available. Any other notifications required of the vessel by law shall also remain the responsibility of the vessel to carry out.

MEDICAL: Arrangements must be made with the ship's Agent for medical services. Medical services are normally obtained by taking the patients to Honolulu by launch. This is a distance of 12 miles (one way). Ambulance service is provided by the City & County of Honolulu through the island–wide emergency telephone No: 911.

FRESH WATER: Not available.

FUEL: Arrangements for bunkers are made with the ship's Agent.

Bunker "C" only is available at the mooring by submarine hose. It must be arranged for at least one week in advance through the ship's Agent. Pumping rate is approximately 2,000 b.p.h. Bunkering by barge is not permitted at the mooring.

REPAIRS: Repairs which render the vessel incapable of getting underway are prohibited while the vessel is in the berth.

TIME: All islands in the State of Hawaii are on Zone plus 10 (10 hours slow of Greenwich Mean Time) throughout the year. All communications should be in local time.

WEATHER: *Normal/Storm Conditions:* The local weather is usually moderate with temperatures between 75°F. to 85°F. and N.E. trade winds between 10 to 15 miles per hour. Tropical storms and hurricanes occasionally affect the islands between June and November. They cause high surfs and wind conditions at the mooring. In Winter months, storms with strong southerly winds called "Kona" winds may render the berth unusable for several days at a time. All vessels must be especially alert to the dangers caused by this type of weather condition.

Other violent winds may occur with the passing of a frontal system or a trough. These are more localised and occur from either the North or the South with violence and little warning.

A complete discussion of local weather is contained in the U.S. Coast Pilot No. 7. Up-to-date weather information is broadcasted by the National Weather Service on 162.55 MHz.

Any changes in the weather should be immediately brought to the attention of the Mooring Master so he may take appropriate action.

Tides and Currents: The maximum tidal range at the Mooring Area is approximately 3 ft. Mean higher high water is 2.0 ft., mean tide level is 0.8 ft. and mean lower low water is 0.0 ft. The extreme low water is −1.0 ft.

Currents normally set from East to West and are influenced more by wind than tide. However, they do sometimes reverse. When setting from West to East, they are usually strongest when the wind velocity is low and from the N.E. or when the wind direction is from the South to West quadrant.

Visibility: The visibility in the mooring area is usually excellent with only rare occasions of limited visibility.

APPENDIX: SUMMARY OF MINIMUM WIRE AND ROPE REQUIREMENTS.

	Wires				Synthetic Lines					
Vessel Size d.w.t.	Number	Diameter (in.)	Length (Note 2) (ft.)	Breaking Strength (lb.)	Number	Circumference (in.)	Length (ft.)	Material	Breaking Strength (lb.)	
Up to 50,000	7	1.25	1,000	130,000	4	8 (minimum) 10 (maximum)	720	Note 3	130,000	
					OR					
	any combination of wires and ropes (per above)									
					OR					
					11	9 (minimum) 10 (maximum)	720	Note 3	175,000	Note 1
50,000 to 80,000	7	1.5	1,000	165,000	4	8 (minimum) 10 (maximum)	720	Note 3	175,000	
					OR					
	any combination of wires and ropes (per above)									
					OR					
					11	9 (minimum) 10 (maximum)	720	Note 3	175,000	Note 1
Over 80,000	7	1.5	1,000	165,000	7	8 (minimum) 10 (maximum)	720	Note 3	175,000	

Notes:

(1) Vessels equipped with fewer than 7 wires may be required to unberth and/or otherwise incur delay during adverse weather conditions.

(2) Synthetic rope pendants may be used to achieve the necessary length if the breaking strength of the pendant is at least 1.25 times that required for the wire.

(3) Polyester required. Nylon or polypropylene not acceptable.

SAFETY:

Fireboats: A fireboat is available only from Honolulu harbour. Because of the distance to the harbour, this fireboat would be called upon only in the event that the ship's equipment cannot control a fire.

Crude Washing: Crude washing should be undertaken only with approval of Mooring Master. The Shore Control Operator shall also be notified.

Inert Gas Systems: Normally a vessel fitted with an inert gas system (IGS) will not be permitted to carry on cargo operations unless the inert gas system is in good order and in operation. When an IGS equipped vessel arrives with the system inoperative, the vessel will not be berthed until the IGS is repaired and/or put in operation. If after a reasonable time the system is not operative and/or cannot be repaired, the terminal may elect to berth the vessel and carry on the cargo operation under strictly controlled conditions and in compliance with existing governmental regulations. If the IGS breaks down after the vessel has berthed, all cargo operations will be stopped and the terminal may elect to take the vessel off the berth unless the IGS is repaired in a reasonable time. If the IGS cannot be repaired, the terminal may elect to carry on cargo operations under strictly controlled conditions and in compliance with existing governmental regulations.

All time lost because of the IGS being inoperative and/or out of order will be for the vessel's account.

Containment Equipment: The area of the refinery where the marine pipelines emerge above ground is protected by dykes which are designed to adequately impound any oil leakage from valve packings, flange leaks or pipeline leaks.

The Refinery is a member of Clean Islands Council Oil Spill Cooperative (CIC). Should an onshore or offshore oil spill occur, the Refinery has access to all the CIC equipment.

A "Vikoma hull" with 1,500 ft. of "Zoom–Boom" is provided by CIC and is stationed in the berth area whenever a vessel is present. This equipment is to provide immediate first response capability in case of an offshore oil spill.

Onshore response time is within one hour. Offshore deployment time is dependent on the availability of tugs. A mooring tug is available to assist in the event of an offshore oil spill, under the operational control of the Mooring Master. Depending on the reason for the spill, ocean conditions, and the vessel's situation, the Mooring Master may or may not allow the tug to return to port to obtain the spill containment equipment.

GENERAL:

Charts and Publications:

The anchorage area is shown on the following charts:

National Oceanic and Atmospheric Administration

19362 – Oahu, Ahua Point to Barber's Point.

19357 – Island of Oahu.

Publications of value and interest are:

Current edition of United States Coast Pilot No. 7 (Pacific Coast).

Hawaiian Refinery Emergency Plans and Procedures Manual.

U.S. Coast Guard Regulations 33CFR153, 154, 155 and 156.

Rules of the Road: All vessels should be aware that inland rules apply inshore of a line connecting the Diamond Head Light and Barber's Point Light.

Provisions: Arrangements for provisions are made with the ship's Agent. Provisions are brought from Honolulu to the ship by launch. Weather conditions usually allow loading only on the vessel's port side. Terminal Regulations prohibit lifting stores with the hose boom while the submarine hose is connected.

Launch Service: If shore leave is allowed, the vessel's Master must make arrangements with the Agent to provide personnel launch service. A mooring launch is provided for line handling. The mooring launch does not leave the terminal area while the ship is in the berth.

Check List: A Marine Terminal Check List has been prepared for vessels using the berth. It must be signed by the vessel's Master and Chief Engineer and the Mooring Master before cargo can be handled. Its purpose is to ensure that important safety and anti-pollution procedures are followed by all personnel aboard the vessel.

OPERATOR: Chevron U.S.A. Inc., P.O.Box 1299, Honolulu, HI 96807. *Tel:* (808) 527–2764. *Telex:* TWX 7238372, answerback 8373 Chevr Hr. *FAX:* (808) 533–2807.

HOUSTON, Texas: 29.45 N. 95.20 W. (See Plan)

DOCUMENTS:

1 Visaed Crew List.

3 Passenger Lists.

3 or more copies of complete Manifests of Cargo for discharge at all U.S. ports.

2 or more copies of Manifest of Cargo for each individual U.S. port.

1 Souvenir List.

1 Stores List.

Ship's Register.

Tonnage Tax.

Load Line Certificate.

Nationality Certificate.

No health document required.

PILOTAGE: Compulsory. Radio to local Agent who arranges Pilot and specifies boarding time. U.S. Coast Guard requires 24 hours' notice in advance of arrival Galveston Bar. Pilot boats and station on VHF Channel 66, Bridge to Bridge is Channel 13 and tugs for docking and off-docking on Channel 14. 3 Pilot boats marked "HP No. 1" – 53 ft., "HP No. 2" – 61 ft. and "HP No. 3" – 106 ft. in length. Pilot boats contacted by light in International Morse code; no sound signal. Pilot taken on board at Sea Buoy No. 1, located 6.7 miles from Galveston. Seldom, if ever, is water too rough for boarding at above location. Anchorage located in Bolivar Roads, 6.7 miles inward from Sea Buoy No. 1.

ANCHORAGES: Vessels are prohibited from anchoring in the Houston Ship Channel or Turning Basin, except in cases of emergency, in which circumstances they shall anchor as near as possible to the channel edge or Turning Basin so as not to interfere with free navigation or obstruct the approach to any pier.

Vessels may anchor in the Gulf of Mexico in the Galveston Entrance Anchorage Areas, just inshore of the intersection of the Galveston Safety Fairway with the Coastwise Fairway. Inside Galveston Harbour, a federally designated anchorage area has been established along the North side of the Inner Bar Channel, this area is described as follows: bounded by the North edge of the channel, extending West from Buoy 10 (Latitude 20° 20′ 48.5″ N., Longitude 94° 42′ 52.5″); thence to Buoy 12 (Latitude 29° 20′ 43″ N., Longitude 94° 44′ 46.5″ W.) thence 029° to Buoy B (Latitude 29° 21′ 15″ N., Longitude 94° 44′ 47″ W.) thence 09 to Buoy A, (Latitude 29° 21′ 05.3″ N., Longitude 94° 42′ 51.4″ W.) thence 183.5° to the point of origin. This anchorage area is for temporary use of vessels of all types, but especially for naval and merchant vessels awaiting favourable weather and travel conditions. Except when stress of weather makes sailing hazardous, vessels are not permitted to anchor in this area for periods exceeding 48 hours, unless longer periods are expressly authorised by the Captain of the Port.

In Galveston Bay, small craft can anchor anywhere outside the dredged channels where the depth is sufficient. The water in the bay may be lowered as much as 2 ft., by a "Norther" and vessels should anticipate this when selecting an anchorage during the Winter.

RESTRICTIONS: None with respect to time of day or night, or with state of tide.

Notes: (1) Includes 400 ft. channel width.
(2) Includes 300 ft. channel width.
(3) 40 ft. to Brady Island. Authorised.

*All depths refer to the plane of mean low tide.

Tidal Range and Currents of Galveston Bay:

Under ordinary conditions, mean tidal range is 0.6 ft. to 1.3 ft. in the lower and upper parts of Galveston Bay and 0.5 ft. to 1 ft. in the San Jacinto River and Buffalo Bayou. Extreme ranges, under ordinary conditions, are about 2 ft. in the lower part of Galveston Bay, 1.2 ft. in the upper part of the bay and 1 ft. in San Jacinto River and Buffalo Bayou. Freshets cause rises of over 12 ft. in Buffalo Bayou, however, this condition has not occurred since completion of Addicks and Barker Dams for flood control on the upper watershed of Buffalo Bayou. Height of tides is dependent largely on the wind, and during strong "Northers" in Winter season the water surface of Galveston Bay may be depressed 2 ft. below mean low tide.

Report: Mariners are advised that ship-to-ship lightering activity is regularly conducted in the following general vicinities which are 50 miles – 60 miles from the Galveston Sea-Buoy.

Lat. 28° 35′ N., Long. 94° 15′ W.

Lat. 28° 25′ N., Long. 94° 34′ W.

Mariners are urged to use caution when transitting these areas, as they make their way to the Port of Houston.

MAX. SIZE: Max. 850 ft. long, 115 ft. breadth and 39 ft. draft. Tide minimal, affected primarily by wind only. Should a vessel's draft exceed 39 ft., permission to enter must be obtained from the U.S. Coast Guard.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: International Telephone and Telegraph – ITT – Galveston call letters KLC.

TUGS: Tugs come alongside just off dock or immediately prior to entering turning basin if vessel is to turn, or at Pilot's discretion.

BERTHING: No special requirements other than authority from terminal operator local Agent.

Public Wharves – Port of Houston Authority Facilities:

Barbours Cut Ro/Ro Platform		2		

*Dredging is accomplished every 4 years.

Care Shipping Inc.: Located 12 miles East of Houston. Deep-water terminal. Length 500 ft. Depth alongside 38 ft.

Manchester Terminal Company: 3 ship berths – 1,650 ft. in length (including 1 piling cluster). Depth 32 ft.

Served by 1 marginal track and 2 outside tracks behind docks plus loading tracks to all other facilities. Special loading-unloading docks for motor trucks available.

Equipment: 62 lift machines; 7 tractors; 1 towmotor, 30,000 lbs. capacity; 4 sweepers, 3 scrubbing machines.

Manchester Terminal Company also has 18,000 cargo pallets.

New Terminal Warehouse Corporation: Capacity 3 ship berths. Wharf 1,400 ft. long. Open storage areas of 50,000 sq.ft. Covered storage areas of 200,000 sq.ft.

Other Wharf Facilities: In addition to the for-hire terminals Port of Houston has some 43 ship berths plus various barge facilities on the Ship Channel maintained and used exclusively by industries. Most of these facilities are tanker ship berths at the refineries. There are also 4 liquid-bulk terminals for hire: Amerada Hess Terminal and General American Tank Storage Terminals, the latter having 2 separate locations; South Coast Terminals; Robertson Terminals, Inc.

Fentress Bracewell – Barbours Cut Terminal: The Port of Houston Authority continues development of its massive intermodal facility. Barbours Cut is located 2.5 hours from open sea where the Houston Ship Channel enters Galveston Bay. The facility is equipped to handle container, Ro/Ro and LASH services. There are 4 container berths each 1,000 ft. in length, representing 4,000 ft. of continuous quay. The channel is dredged to a depth of 40 ft. Additionally, 8 Paceco Portainers service the 4 container berths. The 4 container berths are backed up by approximately 152 acres of container marshalling are suitable for both grounded and wheeled operations. 11 rubber tyred yard cranes handle the stacking of containers in the container yard.

A Ro/Ro platform is provided for vessels equipped with ramps. There are two 100,000 sq.ft. Ro/Ro transit sheds with rail service available as well as 35 acres of concrete paved open storage for heavy equipment and automobiles. A "U" head pier and mooring dolphins provide for berthing of LASH ships. Additionally, a barge fleeting area and barge mooring dolphins are provided.

There is a container freight station with 55,000 sq.ft. of covered storage and rail service available. A railroad yard or ramp point with 1 lead track, 1 storage track and 2 working tracks provides a facility to unload containers and trailers to and from flat cars. The car capacity on the working and storage tracks is approximately 121 ft.×89 ft. long cars.

Container and chassis repair services are available on and off terminal. Container storage areas are available adjacent to the terminal as are automobile storage and preparation facilities.

Bayport Division: A 300 ft. wide by 42 ft. deep Bayport Ship Channel and its 1,600 ft. diameter turning basin connects with the Houston Ship Channel in Galveston Bay and extends approximately 2 miles inland to provide berths for deep-draft tankers and bulk freighters. Petro United Inc., Celanese Corporation, American-Hoechst Corporation and Hudson Oil Company have docks and facilities on the Bayport Ship Channel.

BULK HANDLING FACILITIES:

Public Grain Elevators: Back of Wharves 14 and 15. Capacity 6,000,000 bushels. Max. LOA 700 ft. Air draft 36 ft.

Equipped to unload from 110 to 120 cars in 10 hours, or deliver a combined total of 80,000 bushels per hour to 2 ships. 6 mechanical grain trimmers are in use at the Elevator as well as other major equipment including 3 hopper car dump tracks and 7 hopper scales of 150,000 lbs. capacity. 2 modern grain truck dumpers can unload up to 30 trucks/hr.

Public Bulk Materials Handling Plant: At Greens Bayou. Loading capacity at 67 lb./cu.ft. material, unloading capacity at 94 lb./cu.ft. material free digging rate. Fully automatic plant handles dry bulk commodities rapidly to and from ships and barges through the loading and unloading towers, conveyor systems, hoppers, pits, surge bins and scales; with rail and truck facilities and ample ground storage. Rail cars are rapidly moved with large rubber-tyre tractors. Boom of unloading tower reaches 76 ft. from face of dock, bucket capacity is 12 tons; loading tower boom reaches out 66 ft. from dock face and is equipped with automatic trimmer. Both towers can travel the full length of the dock. Mooring facilities for a waiting vessel have been installed next to existing dock. Also available: 2 heavy-duty front-end loaders and 4 heavy-duty car shakers. Max. LOA 750 ft. (larger if cleared with Houston Pilots prior to chartering). Max. beam 116 ft. Max. draft 39 ft. Air draft 40 ft. Depth of water 40 ft. Minimum hatch size 25 ft.×25 ft. Travel of loader 500 ft.

Transfer capabilities of dry bulk weighing 50 lb./cu.ft. or more from vessels, barge, rail or truck into 20 ft. containers.

Elco Shipside Elevator Company: 2,000,000 bushel capacity elevator which loads up to 25,000 bushels per hour to vessels berthing at Dock No. 2 of the Port Authority's Manchester Wharves. Length of berth 500 ft. Depth 32 ft.

Woodhouse Corp.: Grain elevator with 12,000,000 bushel capacity – 4 ship berths. Also general cargo handling. Max. draft 38 ft. Loading rate 1,000 t.p.h.

Union Equity Co-Operative Exchange: Grain elevator with 6,000,000 bushel capacity, 1 grain berth, 1 lay berth, each 980 ft. long, water depth of 40 ft. for all berths. Loading rate 1,200 t.p.h.

Adams Terminal: Phillips Terminal Company. 2,700 linear ft., capacity 5 vessels. Bulk cargo loading conveyor system rated at 400 t.p.h.; horizontal boom, hammerhead-type clamshell unloader equipped with five-yard ore bucket, rated at 150 to 250 t.p.h.; 2 gantry cranes, capacity 40 tons at 30 ft. radius; Robbins heavy-duty car shakeout; 20-ton truck mounted crane. One D & H gantry crane modified to handle five-yard bucket for bulk ore discharge. 100 t.p.h. Specialists in import and export bulk cargo. Covered storage – 73,000 sq.ft.

International Terminal Corp.: Shiploading Rate 3,000 t.p.h. Depth in turning basin 42 ft. Storage capacity 150,000 tonnes (corn, soya, wheat, etc.).

Jacintoport Terminal: Deep-water shipside terminal located on the North side of the Ship Channel some 15 miles downstream from the Turning Basin.

Three ship berths (length 1,500 ft.) with water depth alongside the wharf at 36 ft. 24,000 sq.ft. of transit sheds; 2 berths for preferential berthing for Omniport. Rail service by the PTRA and Missouri Pacific. Slip is 4,200 ft. long and 400 ft. wide, owned by Port of Houston Authority.

Cargill, Inc.: Grain elevator with a capacity of 5,700,000 bushels. 2 ship berths. Max. draft 40 ft. Loading rate 70,000 bushels per hour to 140,000 bushels per hour.

CRANES: (Capacities 1 ton=2,000 lbs.)

Mobile Crane – Diesel: Capacity 80 tons

Gantry, American Revolver R-25 Electric: Capacity at 65 ft. radius – 50 tons

Gantry, Clyde Whirley, Diesel Electric: Capacity at 45 ft. radius – 30 tons

Gantry, Portainer, Electric: Capacity at 81 ft. reach – 27.5 tons

Gantry, Portainer, Diesel Electric: Capacity at 113 ft. reach – 44 tons

Gantry, Portainer, Electric: Capacity at 140 ft. reach – 30 tons

Stiff Leg Derrick, Electric: Capacity at 50 ft. reach – 75 tons

BRIDGES: Two bridges cross channel, one immediately East of Public Wharf 31, clearance of 135 ft. and the other immediately West of the Shell Terminal, clearance 175 ft.

STEVEDORES: Stevedore, on advice from representative of local Agent, must order labour prior to 1700 for 0700 or 0800 hrs. start the following day. Can order at 0800 for 1000, 1100 for 1300 and 1700 for 1900 hrs. start. Gangs must be ordered prior to 1700 hrs. on Saturday for Sunday or holiday.

MEDICAL: Give sufficient notice to order doctor or ambulance. Numerous hospitals available. Seaman's health certificate required.

TANKERS: No specific requirements for oil carriers with respect to load/discharge lines. Tankers must be gas free to enter turning basin area. 12 tanker berths available

Limitations: Houston Ship Channel Limitations are set by the Pilot Association:

(a) Bolivar Roads to Barbours Cut: 950 ft. LOA, 135 ft. beam, 95,000 d.w.t., 40 ft. draft.

(b) Baytown to Boggy Bayou (Shell Terminal): 860 ft. LOA, 120 ft. beam, 80,000 d.w.t., 40 ft. draft.

(c) Boggy Bayou to Sims Bayou (Arco Terminal): 750 ft. LOA, 116 ft. beam, 55,000 d.w.t., 40 ft. draft.

Note: For vessels with beam from 105 ft. to 116 ft. no passing traffic above the Shell Terminal at Boggy Bayou.

(d) Sims Bayou to Turning Basin: 750 ft. LOA, 105 ft. beam, 45,000 d.w.t., 36 ft. draft.

Note: For vessels greater than 700 ft. LOA and/or 37 ft. draft daylight transit only.

All dead ships and LPG/LNG vessels greater than 550 ft. LOA daylight transit only through the entire Houston Ship Channel.

Arco/Sims Bayou: General: The Arco Refinery Terminal consists of berths "B" and "C". This terminal is located in the vicinity of Sims Bayou, approximately 48 miles from Sea Buoy.

Mooring and Berth: At both berths 2 or 3 tugs are used for docking, while only 1 is necessary for undocking. The tugs and Docking Master meet the vessel 1 mile below the berths and turn the ship at the Arco Turning Basin for a starboard side berthing. The terminal does not provide a gangway.

Cargoes handled at both berths include crude, gasoline, distillate, lube oil, av. gas, jet fuel, and petro-chemicals. Sizes of cargo hoses are 4 in., 6 in. and 8 in. All cargoes are pumped at 100 p.s.i. Both berths can receive ballast and slops. Only av. gas and jet fuel are handled by a common pipe-line.

Charter International Oil – Traweek: General: The Charter International Oil Company Berth is the Traweek Dock located 49 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: Tug requirements are determined by the vessel's Master. Vessels are generally turned, if light, in the vicinity of the berth and moored starboard side to. Breasting units keep the vessels directly off the side of the dock. All lines are doubled-up. Long bow/stern leads allow considerable fore and aft movement of the vessel. To counter the movement good spring lines are required. Hooks on shore are secured to 2×1.625 in. wires to a "deadman" on the upper bank. All lines are handled by a workboat. The terminal does not provide a gangway.

Passing ships in the Ship Channel affect vessels at this berth. Strict attendance to mooring lines is essential.

Cargoes handled at this terminal include gasoline, fuel oils, jet fuel, No. 6 fuel oil, and kerosene. All cargoes are transferred through 8 in. lines and hoses at a maximum pressure of 100 p.s.i. Connections at the manifold are made with bolted flanges. Both ballast and slops can be received at this berth.

Crown Central Petroleum Co.: General: The Crown Central Petroleum Co. Berth is located 50 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: 2 or 3 tugs are used for docking and 1 or 2 tugs are used for undocking. Tugs meet the vessel below the berth depending on existing conditions and turn the vessel prior to docking. No gangway is provided at this terminal.

Cargoes handled at this terminal include distillite, gasoline, petro-chemicals, heavy fuel oil and crude oil. Petro-chemicals are handled through 6 in. lines at 40 p.s.i. All other products and crude are handled through 8 in. lines with pressures varying between 30 p.s.i. and 100 p.s.i. All cargo hose connections are ASA-type connections. Ballast and slops are received at this terminal.

GATX No. 1 and No. 2 – Galena Park: General: The Galena Park Terminal of GATX consists of 2 berths, No. 1 and No. 2. Storage capacity: 5 million barrels.

Mooring and Berth: 2 tugs are used for both docking and undocking. Vessels are usually turned when in the light condition. The terminal does not provide a gangway.

Cargoes handles at both berths include heavy fuel oil, special petroleum products, solvents, and other clean products. Heavy fuel oils are handled through 8 in. lines only. All other products are handled through 4 in., 6 in. and 8 in. lines. Maximum pumping pressure for all products is 100 p.s.i. All connections are ASA flange connections.

GATX – Pasadena: Mooring and Berth: Tug requirements are determined by the vessel's Master. Vessels are normally turned in the light condition. The berth is close to the Houston Ship Channel and vessels can be affected by passing traffic. Vessels moored at this berth should be well moored and all lines kept taut. The terminal does not provide a gangway.

This terminal handles a variety of products. Crude oil or products requiring heating are not handled by this terminal. All products are handled through 4 in., 6 in. and 8 in. lines at 100 p.s.i. Hose handling may be expected to be slow on account of the limited equipment on the pier.

Hess No. 1: General: The No. 1 Ship Dock of the Amerada Hess Corp. is located 48 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: Vessel's Master determines tug requirements for docking and undocking. The vessel proceeds past the berth when docking and backs into the berth for a port side berthing. The stern will be approximately 100 ft. from the North bulkhead of the berth. The terminal does not provide a gangway. Gangway placement is critical.

Cargoes handled at this terminal include crude oil, fuel oil, light oil and gasoline. Fuel oil is handled through a 10 in. line at 150 p.s.i. All other cargoes are handled through 12 in. lines at 150 p.s.i. Connections are all "quick connections". There are no ballast or slops storage space at this terminal.

Hess No. 2: General: The Amerada-Hess Corp. No. 2 Ship Dock is located 45 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: A minimum of 2 tugs are used for docking and undocking. Loaded vessels approach from the channel, normally starboard side to. After discharging the vessel is than turned to seaward. A loaded vessel can be turned should a port side mooring be required. All lines are carried to mooring dolphins by a small boat. A gangway is not provided by the terminal.

Intercontinental No. 1: Mooring and Berth: 2 tugs are required for docking and undocking. The vessel is met by the tugs and Docking Master near Lynchburg Crossing. As the vessel approaches Slough, tugs assist in turning the vessel broadside to the channel and in line with the berth. The vessel is then manoeuvred into the berth. Most vessels are moored starboard side to. A gangway is not provided by the terminal.

Various clean products are handled by this terminal. There are no facilities for receiving ballast or slops.

Oil Tanking No. 1, No. 2 and No. 3: General: These berths are locate at the Oil Tanking of Texas Terminal which is 42 miles from the Se Buoy on the Houston Ship Channel.

Mooring and Berth: 2 or 3 tugs are used for docking and 2 tugs a used for undocking. Vessels docking at Berth No. 1 are turned t starboard for a port side mooring. Vessels are moored head-in, starboar side to in Berth No. 2 and port side to, head-in at Berth No. 3. At Bert No. 2 and No. 3 mooring lines are handled by a launch. Bollards on th outer breasting/mooring platform are fitted with hooks on steel wi pennants so as to be accessible to the boat crew. The terminal ca provide a gangway at all 3 berths.

Vessels should use extra spring lines leading aft as there are no ster line leads available. The terminal plans to install a mooring buoy betwee the platform and the nearer channel line.

Crude oil and clean products are handled at Berth No. 1. Crude oil i the only product handled at Berth No. 2 and No. 3. All cargo transfe lines are 16 in. Connections are made with ASA flanges, reducers ar furnished by the terminal. There are no facilities for ballast or slops.

Paktank No. 1 – Deer Park: Cautionary Advice: There is a considerab chance that passing traffic and/or wind could cause a ship exceedin 630 ft. LOA to break away from the berth, which could lead to disastrou consequences with regard to oil pollution.

General: The Paktank Terminal is located at Deer Park which i 36 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: A mooring buoy has been installed by the termina to secure stern lines. This mooring buoy is apparently inadequate bot from a standpoint of proper location and strength.

2 tugs are normally used for docking and undocking. The vessel i turned into the berth directly off the channel, upbound. A complemen of mooring wires and leads are used at this terminal.

Crude oil, petro-chemicals, and various refined petroleum product are handled by this terminal. All transfer hose and lines are 6 in. or 8 i Connections to the manifold are bolted. Maximum pumping pressure i 100 p.s.i. There are no facilities for receiving ballast or slops.

Shell No. 1, No. 2, No. 3 and No. 4 – Deer Park: General: The She Oil Company Refinery is located 42 miles from the Sea Buoy on th Houston Ship Channel.

Mooring and Berthing: When docking at any of the 4 berths at th terminal, 1 or 2 tugs are used. 1 tug is normally used for undockin Vessels are turned prior to docking for a starboard mooring. The usua complement of mooring lines and/or wires are used at these berths Constant attention must be paid in keeping proper tension on all line due to the surging effect caused by passing ships in the channe Gangways are provided by the terminal at all 4 berths.

Crude oil, No. 6 fuel oil, gasoline, diesel fuel, jet fuel, aviation fuels and other refined petroleum products are handled at this terminal. A cargoes are transferred through 8 in. lines with bolted connections t the ship's manifold. Maximum pumping pressure for all products i 100 p.s.i. The terminal has facilities for handling ballast and slops.

Warren Gas No. 2 and No. 5: General: The Warren Gas Terminal Ber No. 2 and No. 5 are located 46 miles from the Sea Buoy on the Housto Ship Channel.

Mooring and Berthing: Tug requirements for undocking and dockin are determined by the Master. Vessels proceed directly into Berth No. for a port side mooring. A motor launch is used to run wires or lines t the mooring points. Gangways are only provided when requested pri to arrival.

Propane and butane are handled at Berth No. 2 and No. 5. All transfe lines are 12 in. at Berth No. 2 and 16 in. at Berth No. 5. Connections t ship's manifold are bolted. Maximum pumping pressure is 100 p.s.i a Berth No. 2 and 150 p.s.i. at Berth No. 5.

DENSITY: Classed as full fresh but varies with rainfall and tide, usua 4 in. to 5 in. allowance on full draft.

FRESH WATER: Available at all terminals through pipe and hose.

FUEL: All grades and viscosities available.

FIRE PRECAUTIONS: All standard precautions per code of Federa Regulations plus local ordinances. Tankers, unless gas free, no permitted at wharves in the immediate turning basin area.

CARGO GEAR: Cargo gear safety certificate required.

REPATRIATION: Danner Guard Service can handle all phases.

AIRPORT: Approximately 0.5 hours by car; served by regular airlines.

TIME: Central Standard with daylight saving time effective from April to October.

HOLIDAYS: January 1st; January 15th; February 12th; 3rd Monday in February; March 2nd; March 17th; Good Friday; last Monday in May; June 19th; July 4th; First Monday in September; 2nd Monday in October; November 8th; November 11th; 4th Thursday in November; December 25th. When holiday falls on Saturday or Sunday the following Monday will be holiday.

POLICE/FIRE/AMBULANCE: All services provided or available.

TELEPHONES: Currently no arrangements for placing telephones aboard but easily accessible on wharves.

SERVICES: All services available.

SHORE LEAVE: Shore leave granted except when individual not qualified.

IDENTIFICATION CARDS: Immigration Form I-95 card required.

DEVELOPMENTS: Channel depths to be maintained at 40 ft.

Bayport development East and South of Morgans Point to have deep draft berths for liquid bulk and general cargo.

Construction of Berths No. 5, 6 and 7 at Barbours Cut underway. Berth No. 5 will be completed in mid-1991.

SHIPMASTER'S REPORT:

Customs:

Bond remained sealed.

2 copies of Curio Lists.

2 copies Stores Lists.

1 copy Crew List.

Immigration:

No visit. 1 copy Crew List.

Agents:

Given Travelling copies of Clearance last port, Tax Tonnage receipt last port plus cargo manifests.

Agricultural Dept. Re-sealed meat and vegetable rooms. Inspected Galley Messrooms, etc. Garbage cans to be covered.

Provisions and Stores. Satisfactory. Select own ship chandler.

Laundry. Facilities available but not used.

Coast Guard. No visit.

National Cargo Bureau: Same as New Orleans.

Watchmen: None placed on board. Security at gate strict.

Telephone: None placed on board. Use dock office.

Fresh Water: Available.

Fuel: Available by barge if required. Do not over stem.

Engineering and Repairs: Efficient and satisfactory. Price high compared to N.Z.

Radio Messages: Send ETA after departure New Orleans to Agents and Houston Pilots with draft. Notify Agents of any explosives.

Stevedores: Hours of work. 0800 to 1200 hrs., 1300 to 1800 hrs., 1900 to 2300 hrs. Weekday gangs will work through meal hours to finish. At weekend, day labour works right through to midnight if necessary on time and a half then double time for meal hours.

Crew must not clean hatches. Labour has claim on cleaning and has to be paid in addition to crew. Crew open and close hatches, but not until hatch foreman present. Not before labour working hours.

Working heavy lifts with ship's gear loading rate very slow, especially at end of shift. Due to nature of deck cargo; 11 ton lifts 52 ft. long.

Constant supervision needed for deck cargo.

Head stevedore checks Factory Act Book before starting.

If detailed plan is required for break bulk (general cargo) additional clerk must be ordered.

General: Pilot boards from large grey metal cutter off Fairway Buoy. Flash every 2.5 seconds. Give good lee and have ladder 8/10 ft. above water with usual manropes, heaving line, etc.

If you have to anchor, most vessels use the Eastern anchorage about 1.5 miles East of fairway buoy and clear of fairway marked channel. Soft mud bottom. Use plenty of cable.

Berth: Ships spaced very close to each other. Rise and fall of tide about 1 ft.

Moorings: At least 4 head lines and stern lines plus 2 springs each end. Ships frequently passing and channel narrow consequently a good deal of surge. Lines to be frequently looked at and kept tight. Parted 3 springs in as many days!!! Gangway also to be watched. General rule is to use ship's gangway. Wide apron in front of sheds with rail lines but fork-lifts used most.

Agents have office on wharf with direct line to city office and outside lines.

Wooden piling which acts as fenders. Bollards of the large cleat type. Sufficient but not plentiful. Two linesmen each end when arriving and departing. No permanent cranes but mobile ones can be hired. Quay about 25 ft. above water.

Recommended not to walk about or up to bus especially at night. Better for 2 or more to get a taxi. Fairly good, 3–4 dollars to Houston.

Seaman's Mission near by. Very good, new and modern.

Tugs: Used for berthing and unberthing. Had 2 on arrival due to strong wind and close proximity of mast top to bridge.

Sailing had 1 tug lashed up alongside forward shoulder.

Tugs use own lines.

Bridge: There is a bridge above Upper Clinton Bend from Manchester on the South to Clinton Park on the North. This is a relatively new bridge to be passed under with a clearance of only 135 ft. Check the rise of tide on way up.

SHIPMASTER'S REPORT: August 1980.

Tenneco Terminal – Vessel discharged ammonia.

Approaches: B.A. Chart 975.

The safety fairway is usually very busy and it is advisable to ensure that you are in fact keeping to the starboard side.

At the entrance to the fairways there are many oil rigs. With the predominately low lying coast, radar positions are extremely difficult. Satellite navigator is highly useful in this respect. The first good check is off the buoys in the final safety fairway. These showed on radar at about 7 miles.

Some radar echoes are received from Galveston itself.

The charted rigs in Anchorage 'A' are in fact in those positions.

Pilotage: If anchored, the pilot boat will call vessel into the "Whistle Buoy" for boarding.

The cutter is a large, fast launch and usually lies inside until working a vessel.

Pilot ladder about 8 ft. from the water to clear the boarding platform.

Contact can be made via Galveston Pilots initially on Channel 16 who will relay the messages. Houston Pilots themselves work on Channel 14.

One Pilot, the length of pilotage is about four hours to the first line ashore. Two tugs used.

No night time pilotage for a vessel of this size (32,000 g.r.t.) and type. There is a TV video surveillance system operating throughout the length of the channel.

Berth: About 4 miles below Warren Terminal.

Plant and terminal now owned by Occidental (Oxy) but Tenneco rent the berth.

Berth is far too small for this vessel, at least as far as the moorings are concerned. Typical American 'T' barge jetty, the head of which is only about 25 m. long, with walkways leading to 3 dolphins at each end. The bow and stern overlap these mooring dolphins and head and stern lines are taken to posts on the river bank. These are only breast lines and it is advisable to make advance preparations to put out as many as 4 springs at each end. There is a great deal of traffic passing continuously.

Gangway: The gangway should remain stowed until in position. Whether vessel can use the accommodation ladder will depend on draft. If vessel deeper than 26 ft. there will not be sufficient clearance from the fender so a "B.O.T." type gangway resting on accommodation turntable will have to be used.

When the accommodation ladder is used it has to be turned through 120° and landed on the aft dolphin immediately adjacent to the jetty head.

Discharge: 12 in. flexible hose 150 ASA used. 'T' piece, two shore hoses.

Max. back pressure allowed is 50 p.s.i. Vapour return line is 4 in.

The plant ashore is only equipped to export cargo and its reliquefaction plant is small.

A shore walkie-talkie is placed with the officer of the deck.

Discharge rate can vary (October 1979 – 260 t.p.h., August 1980 – 550 t.p.h.).

Shore surveyors figure taken for bill of lading. Density 1001.

USCG: No inspection prior to commencement, apparently this is normal. The port is far too busy for them to visit every ship. But be prepared, they are very particular on navigation equipment and Officers' Certificates and experience.

General: It is possible to load bunkers by barge alongside the terminal if prior arrangements and permission are obtained but it depends on Agent and Authorities.

Fresh water is available from the jetty, at a very low rate.

Storing can present difficulties as the after crane does not plumb the dolphin. By arrangement, vessel can use shore crane when the operation is not too difficult.

Public telephone on dock – minimum charge 25c.

Liferaft service available, 24 hours' service.

A considerable distance from the city, which rather complicates services and communications.

Agents leave a radio onboard for contact with Agent and office, but often outside range, office on maximum range.

No private transport (taxis) allowed into refinery area. Transport to the gate by their own minibus and then telephone for taxi. Crew transport service allowed into berth area with pass from Agent.

AUTHORITY: Port of Houston Authority, P.O.Box 2562, Houston, Texas 77252-2562. (1519 Capitol Avenue, Houston, Texas 77002) *Tel:* (713) 226–2100. *Telex:* 910–881– 5787. *FAX:* (713) 226-2134. *Contact:* James D. Pugh, Executive Director. James Baker, Director of Operations. Thomas Kornegay, Managing Director.

AGENT: Rice, Unruh, Reynolds Co., 1717 East Loop, Suite 330, Houston, TX. 77029. Tel: (713) 675-2808. Telex: TRT 168920. Fax: (713) 675-7750.

HUENEME, California: 34.09 N. 119.12 W. **(See Plan)**

PORT LIMITS: No laytime boundary. "Arrived Ship" status commences at berth dockside.

DOCUMENTS: See "San Francisco".

PILOTAGE: It is requested that ships entering port stand-by 1 mile off harbour entrance just seaward of the Port Hueneme seabuoy designated "R2" (Fl. R. 4 secs. Bell) and await port Pilot who will board from a tug. The U.S. Coast Guard Station at the Channel Islands Marina maintains a radio beacon. Contact Pilot or "Port Hueneme" on VHF Channel 16, shifting to Channel 14 for Administration; VHF Channel 65A for tug/pilot/bridge.

All vessels 300 g.r.t. and over or carrying a foreign flag entering, leaving and shifting within the Port of Hueneme, including area of the Oxnard Harbour District, must be piloted by a port Pilot duly licensed to perform the services of piloting vessels within the Port of Hueneme. The Oxnard Harbour District does not maintain Pilots; licensed Pilots are available on a 24-hour-a-day basis from Port Hueneme Pilots' Association (Captain Carl Dingler at (805) 984-4933).

ANCHORAGES: If there is a wait for Pilot caused by weather, visibility, congestion in harbour, or any other reason, the best anchorage area is W.S.W. of the harbour entrance where there are no hazards and there is some protection afforded by the natural curve of the coastline.

RESTRICTIONS: The length of entrance channel is 2,300 ft. The narrowest width of harbour entrance channel is 330 ft. However, because of prevailing fresh winds, this is a one-way channel; thus, deep-draft ships not able to manoeuvre easily in a restricted channel have precedence over smaller craft. Vessels may enter/leave at any time day or night.

MAX. SIZE: Due to the 1,400 ft. × 1,200 ft. turning basin, vessels with greater length than 700 ft. requires U.S. Navy permission to enter. Longest vessel berthed in harbour was 826 ft. Vessels draft normally to be 2 ft. – 3 ft. less than water depth.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Los Angeles Quarantine Station.

Ships required to pass quarantine may enter port and moor. "Q" Flag is to be flown. Upon mooring, ship must post gangway watch until ship has passed quarantine. When Port of Hueneme is its port of first arrival in the United States from foreign ports or from States other than California, a ship must be inspected by the Department of Agriculture. There is a local representative in Oxnard. The Oxnard Harbour District will order officials if requested by ship or Agent.

RADIO: The "Port Hueneme Wharfinger" guards Channel 16 and will normally shift to Channel 14 for administrative purposes. The harbour tugs guard Channel 16 continuously. The harbour Pilots, when expecting a commercial merchant vessel guard Channel 16 voice circuit and voice call "Port Hueneme Commercial Pilot".

Tugboat working frequency is VHF Channel 65A (156.275 MHz).

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Tug services for Port of Hueneme are furnished by the Oxnard Harbour District, Port Hueneme, California. Requests for tug services may be made to the Executive Director or Director of Operations of the Oxnard Harbour District, who will act as Agent for ship in forwarding them. 3 tugs are available on a 24 hour basis. The tugs are 3,000 s.h.p. single and twin screw vessels. The number of tugs to be used on any movement is determined by port Pilot in charge of the movement. Tugs are not available for deep-sea towing, except in case of emergency to save life or property. A twin screw 500 h.p. pusher/pilot boat is also available for small tows and assistance work. As a service to all vessels, the Oxnard Harbour District, acting as Agent for vessel, will pay all tug fees to United States Government when necessary, subject to reimbursement conditions as arranged between the vessel, her Owners, or Agents, and the Executive Director, Oxnard Harbour District. Seldom are tug charges more than the minimum due to the short transit time to berths.

BERTHING: Berthing arrangements should be made with the Director of Operations by Agent as far in advance of arrival date as possible, specifying dates of arrival and sailing, and nature and quantity of cargo to be handled. Agent is requested to submit Berthing Application in timely manner. The Oxnard Harbour District also has a licence agreement with the U.S. Naval Construction Battalion Center, Port Hueneme, for the use of additional berths and terminal facilities on an "as available" basis. Prior arrangements must be made, should use of these additional facilities be desired or necessary. The Port of Hueneme has 5×600 ft. berths with depth 35 ft. MLW and appropriate terminal facilities. At the present time there are 11 deep-draft berths within the entire port area.

Bottom is sand and mud. Mean low water is + 1.5 ft. Height of wharf above the MLLW is 13 ft. 6 in.

CRANES: Many land cranes available which can handle loads up to over 100 tonnes in most cases.

STEVEDORES: Stevedore work is presently performed by resident stevedores, the Marine Terminals Corporation, Stevedore Services of America and Metropolitan Stevedoring Co., who also have offices in San Francisco, Long Beach, etc. MTC maintain an office at 111 Ponoma Street, Port Hueneme; SSA at 241 Market Street, Suite 1 and MSC at P.O.Box 547, Wilmington, CA 90748. They provide modern handling equipment to suit cargo's need. There is no special fixed bulk handling equipment available as yet. Longshoremen are members of the International Longshoremen's and Warehousemen's Union and conform to the Pacific Coast Longshore Agreement. Hours of work are as outlined in this agreement. Longshoremen at this port do all covering and uncovering of hatches and rig the gear. There are 8 gangs available in the port. Day and night gangs for Tuesday through Saturday (except Monday through Saturday, 1900 hrs. initial start) must be ordered by 1500 hrs. the previous day. Night gangs required Monday for a 1900 hrs. initial start, and Sunday and Monday gangs must be ordered by 1100 hrs. Saturday. Cancellation time is same as ordering time, if gangs which have been ordered are cancelled after the aforementioned deadlines, the agreement's 4 hour minimum applies. Normal day shifts begin at 0800 hrs. and normal night shifts at 1800 hrs. Each sh consists of 8 hours and on sailing day 10 hours may be worked by th final shift. There are no obstructions on the wharf to keep all hatche from being worked concurrently.

MEDICAL: Patients are provided with medical attention at the Medica Center, Port Hueneme, or St. John's Hospital, Oxnard Californ Temporary visa must be obtained from Department of Immigration an Transportation if a crew man or passenger must remain after the sh sails.

FRESH WATER: Fresh water is available. There are hydrants along th wharves and delivery to ship is effected by hose. Water is good to tas but is hard. It is not suitable for boilers. Contact wharfinger on duty fo delivery of water. Boiler feed water is available by truck upon reques

FUEL: Diesel oil and bunker fuel is available by pipe-line at Wharf No. 1 and by truck at all wharves.

REPAIRS: Minor repairs may be made in port. Machine shops in Ventur and Oxnard are qualified for normal voyage repair work.

GANGWAY/DECK WATCHMEN: Gangway or special wharf watchme are available upon request.

HOLIDAYS: U.S. Federal and State holidays are observed by the Po and Terminal management. If stevedoring is required on holiday it i performed in accordance with the International Longshoremen's an Warehousemen's Union-Pacific Coast Longshore Agreement.

TELEPHONES: Pay telephone booths are located at the centre of Whar 2 and 12 pay telephone booths on Wharf No. 1. The wharfinger's offic has a telephone which may be used by people calling in to contact th ship. This telephone is manned 24 hours a day for convenience. I number is (805) 488-4615. The Port of Hueneme office telephones ar available to ship's officers and Agents for local calls or collect lon distance calls. Wharf lines permit a telephone to be installed at a nomina charge if desired by Agent.

SHIP SUPPLY SERVICE: Port Hueneme Marine Supply, 700 Hueneme Road, Port Hueneme, CA 93041. Tel: (805) 488-098 Fax: (805) 488-3141. Total ship chandlery, except food.

Allied Maritime Agency, 345A Ponoma Street, Port Hueneme CA 93041.

AUTHORITY: The U.S. Navy (Commanding Officer, U.S. Nava Construction Battalion Center) exercises overall Port Control Authorit the Oxnard Harbour District is solely responsible for its commercia operations.

Port of Hueneme, Oxnard Harbour District, P.O.Box 608, Po Hueneme, California 93041-0608. *Tel:* (805) 488-3677. *Contact:* Rober K. Harmuth, Director of Marine Operations. Anthony J. Taormina Executive Director.

HUNTINGTON BEACH, California: 33.38 N. 118.00 W. **(See Plan**

LOCATION: Approximately 1.3 miles off Huntington Beach as show on United States West Coast California San Pedro Channel Cha 18746, published by the U.S. Department of Commerce Nationa Oceanic and Atmospheric Administration.

A lighted Bell Buoy "2HB" is located 2,242 ft. from the spare buoy a the Western approach to the Seaberth. It is a private aid to navigatio and is shown on the above chart.

PILOTAGE: Mooring Master will board the vessel in the Los Angele area for an inspection and acceptance of the ship's mooring facilitie He may accompany this vessel, after agreement, to the Seabert On repeat visits, he may join vessel at Seaberth area.

RESTRICTIONS: In addition to max. size, wind force, wave height an direction in conjunction with mooring lines, sizes, place limits o conditions for remaining in the mooring. When these conditions ar approached or predicted the vessel will return the submarine hose t the seabed after flushing, as necessary, to avoid damage to the crud unloading facilities. The determination of these limitation conditions i made by the Mooring Master in conjunction with the Terminal Supervis

MAX. SIZE: Length 1,000 ft., beam 150 ft., draft 43 ft.

TUGS: A mooring vessel will run the ship's lines to the buoys and serve also as a first response Pollution Control Vessel. It has aboard, fo immediate deployment, 1,000 ft. of 14 in. Expandi Boom.

BERTHING: *Multi Point Mooring:* Consists of 8 buoys. Water depth 50 f Tidal range 5 ft. to 6 ft. Bottom sand. Current max. 1.7 knots, excludin storm conditions.

Normal Mooring: Bow anchors and 7 buoys are used.

Mooring Equipment: Require 14 lines, either 9 in. synthetic or 1.25 i wire rope minimum. Minimum length for 9 in. synthetic rope 720 f Minimum length of 1.25 in. wire rope on drum 1,200 ft. Both bow anchor serviceable with an appropriate length of chain for vessel's si according to Lloyd's or ABS requirement. Usual mooring condition require 8 to 10 shackles of chain in the water.

To allow flexibility in the charter market or vessel availability, th 1,200 ft. wire rope on drum requirement can be reduced to 900 f provided 720 ft. is usable at the rail and a 2,500 h.p. to 3,000 h.p. tu is utilised, charged to the vessel's account. The tug will normally on be needed during the mooring operation if the vessel cannot slip its wi mooring lines off the drums. A tug, again, may be necessary for th vessel's account in unmooring.

If mooring wires are used, the synthetic tail or eye, if so fitted, mu be in good condition and of 125 per cent breaking strength of the wi The tail or eye, if so fitted, shall be connected to the wire with a Mand Shackle or equal. A minimum pennant length of 60 per cent, if possib is requested for ease of handling by the mooring vessel.

Mooring Gear: If ship's gear and winches preclude fast deployment o mooring lines a tug may be required. This applies primarily to vesse with hydraulic winches and is dependent on the size of vessels, sea an wind conditions.

General: The moorings at seaberth have been modified to allow handling of vessels up to 150,000 d.w.t. under certain wind, wave and sea conditions. This modification includes the repositioning of all buoys, increasing the size of the dip and riser chain to 3.125 in. and the installing of additional 5 ton anchors to supplement the 10 ton existing anchors.

No. 4 or D buoy, which is at the stern of the vessel, has 2×3.125 in. dip and riser sections and 4 shackles of 3.125 in. chain. Mooring lines to this buoy are doubled during each mooring operation. Weight has been added to each buoy to decrease the buoyancy. An additional buoy, No. 8 or H, was added to allow the moorings to be used by barges.

DISCHARGING: *Lifting Equipment Requirements:* Derrick that can be utilised to lift the 12 in. hose from the seabed and swing the hose to the ship's manifold. Minimum lifting capacity, 5 tons.

Products Received: Crude, Naphtha and other refinery requirements.

Discharge Rate: Maximum 22,000 bbls./p.h. through 8 or 9 lengths (200 ft. – 225 ft.) of hose, 12 in. diameter into 22 in. I.D. sealine. Emergency flush possible from cross connected 10 in. line from shore. Pumping distance to shore tanks 9,479 ft. Height to shore tank 3 ft. – 4 ft. Tank height max. 39 ft. 6 in.

Temperature Limitation at Rail: Maximum product, Crude or Fuel Oil temperature of 150°F.

General: Refinery will furnish the Mooring Master with pertinent information on crude pours and vessel charter conditions, e.g. pump rates or lay time, in order that the Mooring Master can be fully appraised of the Charter Party Terms and conditions. Deviations from the Charter Party Terms furnished, if not correctable in discussions with the vessel's Master, will be discussed via radio with the Supervisor of Pipe-lines and Terminals to determine if a protest should be filed.

FRESH WATER: Not available.

FUEL: Not available.

BALLAST: No facilities.

AUTHORITY: Berth within Los Angeles Customs District.

Operator: Golden West Refining Co., 13539 E. Foster Road, Santa Fe Springs, CA. 90701. Postal address: P.O.Box 2128, Santa Fe Springs, CA. 90670. *Tel:* (213) 921-3581. *Telex:* 910-583-4797 GWR-CO-SFES-UD. *Contact:* John W. DeVries, Manager, Shipping and Receiving.

HURON, Ohio: 41.24 N. 82.35 W.

Refer to St Lawrence Seaway for important general information.

PILOTAGE: None required other than what is required for Great Lakes.

ANCHORAGES: Depth 3 to 10 fathoms.

MAX. SIZE: Length 716 ft., breadth 75 ft., draft 26 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: WMI Lorain.

TUGS: Meet vessel at the pier head. Use ship's lines.

BERTHING: Norfolk and Western Ore Dock, operated by the Lake Erie Dock Co., can handle 15,000 tons of ore in 8 hours. Ore slip is 1,400 ft. long with 26 ft. of water.

Limestone Dock, 700 ft. length with 26 ft. of water.

Grain loading facilities operated by the Pillsbury Company. Load speed, 20,000 bushels; unload speed, 15,000 bushels; berthing space, 832 ft.; max. length 610 ft.

STEVEDORES: None available.

FRESH WATER: Available.

FUEL: None available.

CONSULS: Nearest at Cleveland.

REPAIRS: No facilities.

REPATRIATION: No facilities.

AIRPORT: 50 miles from port (Cleveland International Airport).

POLICE/AMBULANCE/FIRE: 433-4114.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required by Immigration.

AUTHORITY: The Huron Joint Port Authority, P.O.Box 468, Huron, Erie County, Ohio 44839. *Tel:* (419) 433-5240. *Contact:* F.James, Chairman.

JACKSONVILLE, Florida: 30.20 N. 81.40 W. (See Plan)

DOCUMENTS:

Public Health:

Maritime Quarantine Declaration Form HSM 13.19.

Customs:

3 U.S. Customs Manifests for cargo to be discharged at first port of entry.
2 U.S. Customs Manifests covering all other cargo on board vessel for discharge at other than first port of entry.
3 Stores Lists.
3 Crew Lists.
3 Passenger Lists.
3 Curio and Crew Personal Items Lists.
Vessel's Clearance from last port.
Vessel's Register and Load Line Certificate.
Vessel Utilisation and Performance Report.
Form MA.578 for dry cargo vessels.

Immigration:

1 Certified Crew List and Landing Permit form I-95 for each crew member.
Valid Passport for each crew member.

PILOTAGE: Vessels approach Pilot Entrance Buoy STJ No. 2 (Red) approximately 6 miles at sea off jetty entrance to St. John's River. Pilot station located just inside jetty on river channel at Mayport Naval Station. Pilot station operates both VHF and HF frequencies, VHF Channels 16 and 18 A. HF Frequencies 2738 and 2182 kHz. Pilot cable address "Jaxpilot". Pilot boards from pilot boat "Jaxpilot" just East of Entrance Buoy STJ No. 2. Pilot boat does not maintain station at sea but answers call or is dispatched on information by vessels' Agents. Vessels anchoring awaiting Pilot should anchor as near Entrance Buoy as safely possible.

ANCHORAGES: 2 anchorages located inside harbour near dock sites with depth of about 31 ft.

RESTRICTIONS: For vessel drawing not more than 38 ft. water no restrictions and vessel can enter and clear harbour on 24 hour basis. Pilots and tug assistance available all hours day or night. Vessels drawing more than 38 ft. required to await tide.

MAX. SIZE: Draft should not exceed 38 ft. for dry cargo vessels and tankers.

Note: St. John's Bar Pilot Association advises max. draft 37 ft. (20th April, 1982).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Tropical Radio, Miami, Fla. Call letters WAX. Lantana Radio, Boynton Beach, Fla. Call letters WOE.

TUGS: Under normal conditions with vessels able to proceed under own power, tugs approach vessel in vicinity of pier at which vessel is to dock. Tugs use own lines but no charge made.

BERTHING: Vessels can dock day or night. Transit time from pilot station to berths about 2 hours.

Blount Island Terminal: Operator: Jacksonville Port Authority. Length of berth, 4,700 ft. Depth alongside at MLW 38 ft. (11.6 m.). Containers, autos, paper and general cargo are handled.

Blount Island has 3 on-terminal transit sheds with a total cargo floor area of 372,000 sq. ft. There are also 220 acres of paved open storage area, with more under construction. For cargo handling, Blount Island offers 3×40 ton capacity Paceco container cranes, 2×40 ton capacity IHI container cranes, 3×70,000 lb. container stackers; a 100 ton capacity gantry crane; a 40 ton Le Tourneau straddle hoist; a 50 ton capacity gantry crane; 2×80,000 lb. movable Ro/Ro ramps; 2 self-propelled multi-level rail car automobile loading ramps; and 200 reefer outlets.

Also see "Developments".

Tallyrand Docks and Terminals: Operator: Jacksonville Port Authority. Length of berth 2,880 ft. Depth alongside at MLW 36 ft. Cargo handled – general, cars, lumber, containers, steel, coffee and petroleum.

There is over 400,000 sq. ft. of warehouse space available, with 500,000 cu. ft. being refrigerated. Talleyrand's cargo handling equipment includes 2×40 ton capacity container cranes, 1×50 ton capacity gantry crane; 1×100 ton multi-purpose crane: a dry bulk conveyor system; 2×40 ton straddle carriers; 10 container stackers; 2 self-propelled multi-level rail car automobile loading ramps; and tanker discharge facilities

Talleyrand and Blount Island are served by railroad and truck service. 2 surface tracks on the pier apron and 2 platform-level tracks serve both facilities.

11th Street Terminal: Adjacent to Tallyrand Docks and Terminals (See "Plan"). Length 1,200 ft. Depth alongside at MLW 35 ft. 2 container cranes, capacity 27.5 tons and 30 tons.

8th Street Terminal: Operator: J.M.Family Enterprises, Inc. (See "Plan"). Length of berth 707 ft. Depth alongside at MLW 34 ft. Cars are handled.

Commodore Point Terminal: Length of wharf 2,750 ft. Depth alongside 34 ft. Cargo handled: Oil, cement and liquid chemicals. Terminal also occupied by North Florida Shipyards. Storage facilities: Charter Oil; 340,000 barrels. Glidden – Durkee: 60,171 barrels for chemical storage. Atlantic Cement; 6 silos capacity 40,000 tons. Universal Atlas Cement; 6 silos capacity 32,000 tons.

Jacksonville Bulk Terminals: A subsidiary of Occidental Petroleum. Length of loading berth 1,000 ft. Depth MLW maintained at 36 ft. – 38 ft. 2 fixed loading towers capable of loading vessel at a rate of 2,850 long tons of phosphate per hour. Maximum outreach 81 ft., clearance above MLW of 40 ft. Terminal also capable of loading superphosphoric acid, phosphate rock, zircon sand (of sufficiently low moisture), granular fertilisers, tachonite, ilmenitite and mullite. Storage facilities: 6 concrete silos, each with a designed capacity of 5,000 tons of phosphate rock. Six tanks with capacities of 15,000 tonnes of superphosphoric acid each.

Dunns Terminal: Length of wharf 1,000 ft. Depth 38 ft. Leased for exclusive use by Military Sea Transportation Services.

Celotex Corp: Tel: (904) 751-4800. Berth: 635 ft. (205 m.) with dolphins. Depth: 32 ft. (9.8 m.). Terminal for receipt of gypsum rock by self-unloading vessels.

BRIDGES: Only 1 bridge that vessel would have to negotiate and that only if docking at Commodore Point terminal.

STEVEDORES: Master should keep Agents closely advised by radio of ETA and any amendments to first ETA given. Recommended that Master give ETA 72, 48 and 24 hours in advance of arrival. Enables ordering gangs or cancelling gangs ordered in event of delayed ETA.

MEDICAL: Hospital facilities available. International Vaccination Certificates required by all crew members.

TANKERS: All petroleum terminals provide own hose ranging from 8 in. to 12 in. Prior to arrival, Master should request information from Terminal Company size of connection required.

Private Terminals:

Amerada Hess: Tel: (904) 765-4427. Berth: 200 ft. (60.1 m.) with dolphins. Depth: 30 ft. (9.2 m.). Tank storage capacity: 460,000 barrels. Receipt of petroleum products.

Alton Box Board Company: Tel: (904) 353-3611. Berth: 750 ft. (230 m.) with dolphins. Depth: 24 ft. (7.2 m.). Receipt of residual fuel oil.

Eastern Seaboard Petroleum Company: Tel: (904) 355-9676. Berths 250 ft. (80 m.) with dolphins (1); 160 ft. (48 m.) with dolphins (2). Depth: 18 ft. (5.5 m.). Tank storage capacity: 1,266,000 barrels.

Shipping of petroleum products by barge; loading of barges for bunkering vessels at berth in the harbour; fueling of tugs and small vessels.

Gulf Oil & American Oil: Berth: 200 ft. (60.1 m.) with dolphins. Depth: 33 ft. (11.5 m.). Tank storage capacity: 900,000 barrels.

Gulf: Tel: (904) 765-5541.

American: Tel: (904) 768-2583.

Receipt of petroleum products and loading of barges.

Phillips Petroleum Company: Tel: (904) 353-6740. Berth: 205 ft. (60.2 m.) with breasting dolphins. Depth: 34 ft. (10.5 m.). Tank storage capacity: 243,000 barrels. Receipt of petroleum products.

Shell Oil Company Wharf: Tel: (904) 355-5521. Berth: 230 ft. (98 m.) with dolphins. Depth: 33 ft. (10 m.). Tank storage capacity: 448,500 barrels. Receipt of petroleum products; occasionally fuels towboats and loads barges for bunkering vessels at berth in the harbour. Light marine diesel fuel only.

Standard Oil Company Terminal: Tel: (904) 353-1094. Berths: Barge –300 ft. (92 m.) with dolphins; Tanker – 760 ft. (230 m.) with dolphins. Depth: Barge – 10 ft. (3.1 m.); Tanker – 32 ft. (9.8 m.). Tank storage capacity: 595,000 barrels. Receipt and shipment of petroleum products. No bunkering of vessels.

Texaco Pier: Tel: (904) 356-6344. Berth: 550 ft. (167 m.) with dolphins. Depth: 32 ft. (9.8 m.). Tank storage capacity: 320,000 barrels. Receipt and shipment of petroleum products; fuels towboats.

Report: *Approaches:* The Jacksonville Sea Buoy lies outside the entrance of the St. Johns River on the edge of the Gulf Stream where a strong Northerly current is usually experienced. The Sea Buoy ("2STJ") is a red/white, lighted and whistle (Morse (A)) buoy. A counter current setting to the South is usually found close along the coast just inshore of the Sea Buoy. Both the direction and velocity of currents and counter currents vary depending on past and prevailing weather conditions.

Broken ground with least depths of 4 to 5 fathoms lies from 4 to 6 miles from the coast for a considerable distance Northward and Southward of the St. Johns River entrance.

Numerous fish havens are Eastward of the entrance to St. Johns River; the outermost, marked by a private unlighted buoy, is about 27 miles Eastward of St. Johns Light.

All vessels should approach Jacksonville Sea Buoy from between S.E. and N.E. to avoid shallow water along the coast. There are many bright lights ashore at night which would cause confusion or mistaken identity with navigation lights. Refer to current N.O.S. charts regarding danger and cautionary areas.

Sea traffic, especially Southbound ships steaming inshore near the Sea Buoy to avoid the force of the Gulf Stream and take advantage of the counter current, may be encountered.

Naval vessels may be encountered entering and departing Mayport and may also be encountered on exercises outside the Sea Buoy area.

Entrance Channel: A Federal project provides for a channel depth of 42 ft. from the ocean to St. Johns Point. A lighted whistle buoy is about 2 miles off the entrance to the river. The 800 ft. wide entrance channel between 2 converging rubblestone jetties is marked by lighted buoys. Two-way traffic is normal.

The echo sounder should be monitored continuously for any silting that may occur and findings reported.

Anchorages: Vessels waiting outside the entrance to St. Johns River can anchor in depths of 36 ft. – 50 ft. N.N.E. of the jetties if wind and sea permit. Anchorage South of the jetty is not recommended because of heavy shrimp boat activity in that area.

Pilots sometimes anchor vessels in the channel opposite Mayport Basin or at St. Johns Bluff in emergencies or while waiting for weather to clear upstream; however, these anchorages are not recommended due to strong currents. A tug should be stationed alongside to assist turning during change of tide.

St. Johns River Designated Permanent Anchorages:

General (Upper) Anchorage: Located on the South shore off Commodore Point between Miller Creek and Empire Point. Vessels remaining in the anchorage more than 24 hours require a permit from the USCG Captain of the Port.

Quarantine (Lower) Anchorage: Located in the area off the Tallyrand Docks and Terminal. Use requires permit from the USCG Captain of the Port.

The holding ground in both anchorages is only fair and both are somewhat constricted. It is not recommended that vessels with drafts over 34 ft. use these anchorages.

DENSITY: Varies from fresh water 1.000 density to mixed salt water 1.0075 density. St. John's River is fed from fresh water sources and for most practical purposes may be considered fresh.

FRESH WATER: Potable water is available through hose connections at all berths operated by the Port Authority. No water barges.

FUEL: Most grades marine fuels available ranging from bunker "C" to light marine diesels with intermediate blends in between. Most major oil companies have bunkering facilities.

FIRE PRECAUTIONS: No smoking except in officers' lounge and crew's lounge. No open flames. No sparking from funnel.

OPENING/CLOSING HATCHES: Crew may open hatches prior to vessel's arrival at dock. After arrival at dockside this work reserved for longshoremen. Vessels equipped with MacGregor type or other automatic opening devices, crew may open hatches at any time. Longshoremen do not open and close these type hatches.

CERTIFICATES: Vessel Register, Load Line, Gear Certificate, Derat.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes per man. If vessel remains in port over extended period of time, sea stores can be opened under Customs supervision and additional allowances made. Wine/Spirits: No specific limits as to quantity allowed per man; Customs accept Masters' recommendations for allowances so long as they are reasonable. This applies to beers, wines and spirits.

GANGWAY/DECK WATCHMEN: Watchmen services available but no necessary.

CONSULS: Costa Rica, Denmark, Dominican Republic, Finland France, Federal Republic of Germany, Guatemala, Italy, Netherland Norway, Sweden.

REPAIRS: All types engine and deck repairs possible. 2 well-equippe shipyards.

DRY DOCKS: 3 large dry docks of 18,000 to 33,000 tons capacity an 6 smaller with capacity of 1,000 to 12,000 tons.

SURVEYORS: *Hull Surveyors:*

PILOTAGE: Request for Pilot normally made through Agent or through Captain K. Bohlin, Tel: 572-7343. Contact Pilot on VHF Channel 12. Pilot boards 0.25 mile East of Waihee Reef lighted Buoy No. 2. Anchorage 0.5 mile East of Buoy.
ANCHORAGES: No anchorage inside breakwaters. Only anchorage 0.5 mile East of Waihee Reef lighted Buoy No. 2 in 9 to 12 fathoms.
RESTRICTIONS: 24 hours' notice of arrival is obligatory. No tide restrictions.
MAX. SIZE: Max. length 700 ft. Max. draft 32 ft. 6 in.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Honolulu Quarantine Station. (Health: Tel. 244-4273.)
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany). (Agriculture: Domestic Overseas Arrivals Tel: 877-7801. Foreign Arrivals Tel. 244-3882.)
RADIO: Communicate through RCA or ITT stations in Honolulu.
TUGS: 1 × 1,500 h.p. tug stationed at Kahului. Additional tugs dispatched from Honolulu if necessary. Tug joins vessel between breakwater and Waihee Reef Lighted Buoy No. 2. Tug's lines normally used. No extra charge.
CARGO HANDLING: Kahului has 1 berth specially equipped to load bulk sugar. Matson Navigation Company operates a straddler to move Matson containers.

Young Brothers Ltd. operate a forklift to move containers.

Dock Load Limits: 500 lb./sq.ft. over the area supported by piles, cylinders or seawall. 1,000 lb./sq.ft. over the area supported by land or fill.
STEVEDORES: To be ordered by 1500 hrs. of day prior to operations.
MEDICAL: Hospital facilities available. Tel: 244–9056.
TANKERS: Discharge only. 12 in. line for molasses, 12 in. line for heavy fuel oil, 6 in. lines for light fuel oils. No slop discharge facilities. One berth available for tankers, max. draft 32 ft. 6 in. Two berths available for barges.
FRESH WATER: Available from 2 in. water line at each berth. Rate of delivery about 200 gallons per minute.
FUEL: Small amount of diesel fuel and heavy fuel available in an emergency only.
REPAIRS: Minor deck and engine repairs only.
GANGWAY/DECK WATCHMEN: Services of watchman recommended, usually arranged by Agent.
OPENING/CLOSING HATCHES: Normally carried out by stevedores.
CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and 1 bottle wine or spirits. (Customs Port Director Tel: 877-6013).
AIRPORT: Distance to airport 1.5 miles. Served by Inter Island Airlines.
TIME: GMT minus 10 hours all year round.
POLICE/FIRE/AMBULANCE: Police 911; Ambulance 911; Fire 911.
EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard: Tel. Honolulu 536-4336 or Locally Tel. 244-5256.
TELEPHONES: Arrangements made with Hawaiian Telephone Co. (Tel: 242-5211), to install on board.
STORING: 48 hours' free time for domestic cargo. 120 hours' free time for foreign cargo. Trucks allowed alongside to handle special cargoes; bulk and heavy lifts.
DELAYS: Occasional delays due to limited berthing space and shortage of stevedore gangs.
AUTHORITY: State of Hawaii, Dept. of Transportation, Harbors Division, P.O.Box 216, Kahului, Maui, Hawaii 96732-0216. *Tel:* (808) 877-6051. *FAX:* (808) 877-0554. *Contact:* Harold T. Campbell, District Manager and Harbour Master.

AGENT: See "Honolulu".

KETCHIKAN, Alaska: 55.20 N. 131.38 W.

DOCUMENTS: See "Anchorage, Alaska".
APPROACHES: Port located on Revillagigedo Island. Open all year round. Ships coming from Hecate Straits or outside Graham Island proceed into Dixon Entrance to vicinity of Guard Island where the Pilot will meet them.

Vessels coming up the inside passage from Vancouver, B.C., are met at Lucy Island Pilot Station.

PILOTAGE: South Eastern Alaska Pilots' Association, Box 1539, Ketchikan, Alaska 99901. Telegraphic address; Alaska Pilots Ketchikan. The Alaska Pilot Service requires 5 days, 48 hours, and 12 hours advance notice of ETA and can be contacted on Channel 16 VHF or 2182 kHz.

The pilot boat "Jenny B" (RG 2437) normally rendezvous with the vessel 0.75 miles from Guard Island.

ANCHORAGE: Safe anchorage can be obtained in the area for deep draft vessels; however there are no specified anchorage areas.
MAX. SIZE: The largest vessel to be berthed to date is a 26,000 ton freighter; however larger vessels could be accommodated.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
RADIO: Cables to Agent, Receivers, and Pilots can best be routed through AKM Juneau.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Tugs can be arranged through the ship's Agent. Lines from tug are normally used with no additional charge.
BERTHING: City Berth I-S: Length 450 ft., depth 33 ft. LW.

City Berth I: Length 375 ft., depth 26 ft. at North end.
City Berth II: Length 575 ft., depth 33 ft.

Ketchikan Pulp Company (at Wards Cove, 6 miles North of Ketchikan): private dock, berthing length 800 ft., depth 33 ft. at low water. 50 ton crane on rails, also mobile units and fork lifts.

MEDICAL: Hospital facilities available.

TANKERS: Citgo Petroleum Corp. B-Dock, 673 ft. length, 36 ft. depth; C-Dock, 660 ft. length, 34 ft. depth; D-Dock 665 ft. length, 36 ft. depth. Also see "Shipmasters Report No. 1".

Continental Oil Co. Berth 1, 1,000 ft. length, 40 ft. depth; Berth 3, 1,000 ft. length, 40 ft. depth.

PPG, 700 ft. length, 40 ft. depth.

Olin Corp. Dock: 400 ft. length, 28 ft. depth. Also see "Shipmaster's Report No. 2".

DENSITY: Salt water in Summer, fresh water in Winter. Allow density 1000 for drafts.

FRESH WATER: Available at all berths.

FUEL: Bunker "C" and diesel available at Cities Service berths; other berths served with bunkers by barge.

FIRE PRECAUTIONS: Usual precautions.

REPAIRS: Small repairs carried out only; very limited facilities.

DRY DOCKS: None.

SURVEYORS: 1. Cargo inspectors are available.
2. Surveyors are available.

GANGWAY/DECK WATCHMEN: Not required.

HATCHES: Rigging performed by stevedores. MacGregor-type hatches opened by crew, others by stevedores.

CARGO GEAR: Shore cranes available at ship's request.

CUSTOMS ALLOWANCES: At the discretion of Customs officers. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 litre wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

REPATRIATION: Facilities exist. Arrange through Agent.

AIRPORT: 7 miles from port. 26 flights per day.

TIME: CST, that is GMT minus 6 hours.

HOLIDAYS: Only 2 days affected on which no work carried out – Labour Day and Christmas Day.

POLICE/AMBULANCE/FIRE: Police or Fire, 911. Fire only 491–1350. Police only 491–1311. Ambulance 433–1677, 433–4411 and 433–1668.

EMERGENCY CO-ORDINATION CENTRE: United States Coast Guard, Sabine, Texas. Tel: (713) 971–2361.

TELEPHONES: None on board ship.

BANKS: Calcasieu Marine National Bank, 844 Ryan Street, Lake Charles, Louisiana 70601.

Premier Bank of Lake Charles, 3401 Ryan Street, Lake Charles, Louisiana 70605.

Gulf National Bank, 825 Ryan Street, Lake Charles, Louisiana 70601.

Lakeside National Bank, One Lakeside Plaza, Lake Charles, Louisiana 70601.

National Bank of Commerce, 535 Kirby Street, Lake Charles, Louisiana 70601.

STORING: See "Prelims".

1. Vessel can be stored by barge or truck.
2. Vessel can be stored during loading/discharging as long as it does not interfere.
3. Trucks can proceed alongside berth.
4. Forklifts can be used on docks.
5. No customs regulations for United States stores.
6. Longshoremen must be employed to assist in storing.

SHORE LEAVE: Allowed if not detained by Immigration.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

SHIP SUPPLY SERVICE: *Offshore Waters Personnel Transfer:*

Air: ERA Helicopters, Inc., P.O.Box 6566, Lake Charles, La. 70606. Tel: (318) 478-6131.

Petroleum Helicopters Inc., P.O.Box 16490, Lake Charles, Louisiana 70616. Tel: (318) 433-6658, 433-1749.

Boat: McCall Boat Service, P.O.Box 186, Cameron, La. 70631. Tel: (318) 775-5685.

Inland Waters Personnel Transfer:

Land and Water: Port Shuttle, Inc., P.O.Box 1772, Lake Charles, La. 70601. Tel: (318) 433-1613.

DELAYS: Very few delays encountered at any berth.

SHIPMASTER'S REPORT No. 1: 1977.

Cities Services Oil Co., Clifton Ridge:

Location: Lat. 30° 09′ 32″ N., Long. 93° 19′ 30″ W.

Max. Size: Length 805 ft., beam 115 ft., draft 39 ft. (FW).

Density: 1005.

Restrictions: Vessels may berth and unberth at any stage of the tide day or night.

Anchorage: At Bar: 2 miles East of seabuoy in depth of 42 ft. For Bunkering: South of Clooney Island in Old Calcasieu River Channel in midstream.

Distance to Berth: Sea buoy to berth 45 miles.

Terminal Information: 2 × 10 in. Chicksan arms. Max. discharge pressure 150 p.s.i. Derricks not required. Accommodation ladder not required.

Services: Fresh water, provisions, fuel oil, diesel and lube, doctor, hospital, airport and laundry.

The following services are not available: Repairs, drydocks, Lloyd's Surveyor and slop tanks.

Telephone Numbers: Dock 318-583-2432. Terminal Supervisor 318-491-6121, 318-491-6437.

SHIPMASTER'S REPORT No. 2: 1979. Olin Chemical Berth.

Approach: If without Loran "C" or satellite navigator the approach at night can be awkward, best made in daylight.

Due to flat coastline, lack of European navigation aids (Decca and Racon) plus numerous oil rigs the entrance to Calcasieu River (like Sabine) is difficult to make.

Calcasieu and Sabine D/F good.

Numerous oil rigs South of buoyed channel which are either side of safety fairway. This corridor can be clearly seen on radar and provides a good longitude.

The soundings, in particular the 100 fathom line, give a good latitude.

The wreck buoy on chart 975 – (Approach to Calcasieu River) at Lat. 29° 19.5′ N., Long. 93° 12′ W. has been removed.

'CC' Buoy was picked up at 6 miles.

Pilot/Channel: (B.A. Chart 975). The channel is easy to follow as long as U.S. system of buoyage is remembered. Vessels under 30 ft. can go out of the channel on their starboard side leaving starboard hand buoys to port. This is quite in order up to Pilot Area No. 1. Do not go on port side or West as this is spoil ground.

A Westerly current sets across channel 90% of the time and up to 1 knot. The boarding area is as Vol. No. 6 ALRS. If vessel takes a Pilot at Area No. 3 it costs $300 more than No. 1 (not necessary unless vessel restricted by draft – 24 hour service).

Pilot boat is an ex-fishing cutter. White, very fast and strong. Minimum notice for Pilots: Boarding at Area No. 1 four hours, Area No. 3 six hours. For sailing from Lake Charles 2 hours. From Area No. 1, one Pilot to Lake Charles, from Area No. 3, two Pilots. Pilot will *not* use hoist.

VHF: Calcasieu Pilots Channels 12, 13 and 16. Difficult to contact pilot station until well into channel North of 'CC' Buoy.

Public Correspondence: Several stations in area – Port Arthur, Cameron, Erath, Lake Charles, a number, notably Erath and Lake Charles have the "80" Channels which they use in preference to "20" Channels. Very busy, but if you search around you can get through fairly quickly. As with all U.S. Marine Operators, overseas ships have difficulty if not calling 'Collect'.

Calcasieu Channel: About 35 miles to Lake Charles from breakwaters. 5 hours from Pilot Area No. 1 to 'Olin' Chemical Dock.

With Northerly wind and heavy rain on ebb, a current of up to 5 knots at Cameron at entrance just North of breakwater.

Bridge: Highway 102 gives 135 ft. clearance HW. 3.75 hours North of breakwater.

Draft: Max. transit draft of 38 ft. 6 in. (FW) from No. 30 buoy to Lake Charles Docks. We consistently had 39 ft. on echo sounder.

Tugs: 2 tugs of 2,500 h.p. and 3,200 h.p. secure in American style, port side, at bridge 102 and leave in same area.

Berthing: Olin Chemical.

Dock: At head of seagoing navigation at bridge interstate 10. In cut, so no traffic passing. New concrete pier upgraded from barge dock. Min. depth 30 ft. Head in, starboard side to. Vessel left at 0200 hrs. without difficulty.

Moorings: 3 headlines, 2 breast lines and 2 springs each end. Springs go on to bollards on the jetty and breast lines and stern lines on to hooks on the bank.

Cargo Hoses: 8 in. × 300 ASA and spool piece to 12 in. × 150 ASA. 3 lengths, ship connects. Takes about 1 hour to connect and disconnect.

VRL: No.

Venting: No, on shore there are detectors on the tanks for ammonia. Generally the wind is onto the works which makes the detection of venting immediate. Vessel has to wait for a change of wind from the North.

Samples: Taken by chemist of tank atmosphere before loading. Must have min. 97% NH_3 by volume before loading.

Rate: Max. 330 t.p.h. (15 minutes of notice if possible, to stop).

Nitrogen: Available but not for hose purge.

Fresh Water: Water on berth very acid. Difficult to get hold of fresh water barge.

Stores: Ship's crane can reach end of jetty. Also small crane on hose platform on jetty which can be used for stores. Lorry cannot get to ship's side.

Gangway: No difficulties. Some ships have to use pilot ladder.

Developments: LPG dock at Beacon 85/86 about half way up the canal owned by Citgo Petroleum Corp. Good mooring facilities. 1 Chicksan. Dredged area 1,000 ft. long, 45 ft. deep.

SHIPMASTER'S REPORT No. 3: June 1988.

Louisiana pilot's office works on Channel 66. Passage in and out varies between 2 hours and 5 hours, depending on tide and where vessel leaves pilot on way out.

The Customs District for this port is New Orleans.

At Conoco Berth (Clifton Ridge), their regulations prohibit the loading of any flammable goods while vessel discharging cargo. (I pointed out that we were discharging 66,000 tonnes of flammable goods, i.e. crude oil and on our return we were able to load flammable goods during discharge). However, vessels unable to take bunkers alongside and have to go further up river and then anchor, 1 shackle in water and lie against the bank. This means that vessels require 2 tugs when departing from anchorage.

AUTHORITY: Lake Charles Harbor and Terminal District, Port of Lake Charles, 150 Marine Street, P.O.Box AAA, Lake Charles, Louisiana 70602. *Tel:* (318) 439–3661. *Telex:* 50–2449 Port Lk Chas. *FAX:* (318) 493-3523. *Contact:* William T. Duke, Executive Director.

LONG BEACH, California: 33.45 N. 118.13 W. (See Plan)

DOCUMENTS:

Certificate of Registry.

International Load Line Certificate – Tonnage Certificate (Admeasurement).

Inspection Certificate.

Derat Certificate.

Safety Radio Certificate.

Inbound cargo for discharge – United States must have a Travellers' Manifest (Form 7527), original manifest, and dock inspection copy covering cargo to be discharged at first U.S. port of entry, Custom's Utilisation Form 1302 (Inbound), Form 1302A (Outbound) must be filed within 10 working days after vessel's entry at first U.S. port. Landing permits must be made out prior to arrival (Form I-95) for each crewman of alien origin for the U.S. Department of Immigration (and Form I-418 for each passenger of alien origin). 3 sets of Crew Lists (Form I-418) must be presented to U.S. Customs, plus 2 sets to the Immigration Inspector, and 1 for the U.S. Public Health Service (Quarantine), and 3 sets Stores Lists plus 3 sets Curio Purchases List for U.S. Customs.

American Ships from Foreign Ports:

Safety Equipment Certificate.

Cargo Ship Safety Construction Certificate.

Customs Form CF 226 Affidavit of Repairs Abroad.

Certified Crew List.

Foreign Ships:

1 copy of Visaed Crew List for Immigration (Form I-418 & 5 copies). Other forms may be necessary under certain circumstances, but normally can be taken care of after the vessel's arrival.

If a foreign vessel from a foreign port departs for a foreign port, 2 copies of (Form I-418) covering crew changes in the United States must be submitted to the Department of Immigration upon sailing of the vessel.

(a) Number of copies required: all single except as noted.

(b) The reports mentioned above are all government laws, requested by U.S. Customs, U.S. Immigration, Department of Agriculture, Public Health Service, and B.I.A.

(c) Purpose of documents: to record all vessel movements such as cargo, crew changes, health standards, etc.

(d) Procedure of presenting documents: documents must be presented to Quarantine Boarding Officer and Customs Broker and/or Agent, during or immediately after Quarantine.

PILOTAGE: Pilots ordered by local Agents. Order placed by telephone to 435-6354/5. Pilots require 1 to 2 hours notice prior to arrival. Pilot station contacted on VHF radio Channel 12 (156.6 MHz) or Channel 16 (156.8 MHz). Call sign KMA – 372 Long Beach Pilots. Pilot boats motor cruisers, light grey, fly International Flag "H". Local whistle signal for a Pilot on ship's whistle, 1 short and 1 long blast. Pilot boat normally meets vessels in vicinity Long Beach Sea Buoy or approximately 1 mile South of breakwater entrance. Vessels should have a Pilot ladder on starboard side, weather permitting. In bad weather vessels may be required to proceed inside breakwater entrance prior to Pilot boarding. Pilot boat on VHF Channel 13.

ANCHORAGE: Preferably outside anchorage approximately 0.5 mi S.E. of Long Beach Sea Buoy in 66 ft. of water. Inside anchorag available N.E of channel in outer harbour at approximately 8 fathoms water depth. Special explosive anchorages available by request, on bot sides of entrance channel in 48 ft. of water.

U.S. Coast Guard Anchorage Regulations:

1. The Master of every vessel upon anchoring shall notify the Coas Guard Captain of the Port giving vessel name, anchorage number an time anchored.

2. The Master of every vessel upon departing anchorage shall noti the Coast Guard Captain of the Port giving vessel name, anchorag number, time underway and destination; i.e., bound for sea or for ber number.

3. For the above reports, the call to the Coast Guard Captain of th Port should be made on VHF Channel 16.

RESTRICTIONS: Vessels with dangerous cargoes aboard or loading o discharging such cargo within port district shall obtain permit from U.S Coast Guard, countersigned by Long Beach Fire Prevention Bureau an Long Beach Port Authority, subject to safety inspection prior entry t assigned anchorage or berth. (Application for entry or handlin dangerous cargoes must be requested by Steamship Company o authorised Agent and approved prior entry.)

Also see "Tankers" last paragraph.

MAX. SIZE: (1) Designed depth of water at general cargo berths i 30 ft. – 42 ft. at MLLW.

The Entrance Channel is maintained at 60 ft. MLLW.

(2) No length or breadth restrictions at general cargo berths.

(3) Dry bulk facility berths designed depth at MLLW is 36 ft. to 50 f No restriction on length. However, ships with over 130 ft. beam migh experience some difficulty in loading without turning ship.

There are 10 bulk oil facilities, 1 with 76 ft., 1 with 55 ft. of water a MLLW and 8 with 37 ft. to 52 ft. of water at MLLW alongside berths. I is feasible that vessels over 1,000 ft. in length could use the deep-wate oil facilities. There are no restrictions as to beam.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Los Angeles Quarantine Station.

QUARANTINE: Quarantine Station, U.S. Public Health Service, 20 World Way, L.A. International Airport, Los Angeles, CA 90045, Tel: 215 2365. Hours: 0600 – 1800 hrs. regular boarding hours. 1800 – 0600 hrs overtime boarding hours.

STANDARD PROCEDURE FOR MARITIME BOARDING

Dockside Boarding: Vessels subject to Quarantine Inspection ar normally boarded upon arrival in berth.

A vessel crewman should be stationed at the gangway to prevent an crew member from going ashore and shore personnel from comin aboard until the vessel has been passed by the Quarantine Boardin Officer.

Vessels are boarded at anchor.

Boarding in the Stream: Vessels are boarded at anchor:

Only if ship is to be at anchor for some time, such as waiting bert etc.

Or upon special request by the ship's Agent.

Effective July 1st, 1973, Radio Pratique as a method of quarantin clearance was discontinued at all ports under control of the Unite States. Changes in regulations, policies, and procedures concernin Maritime Public Health Clearance has been promulgated.

Vessels Subject to Routine Inspection: Only vessels in the followin categories will be subject to on board Public Health Inspection upo arrival at ports under control of the United States:

A. Vessels which, during the 15 days prior to arrival in the Unite States, or since the last U.S. port (whichever period is shorte have or have had on board among passengers or crew any o the following conditions or illness signs or symptoms:

  1. Temperature of 100°F (38°C) or greater (a) which persiste for 2 days or more; or (b) which was accompanied or followe by any one or all of the following: rash, jaundice, glandula swelling; *or*

  2. Diarrhoea severe enough to interfere with work or norma activity; *or*

  3. On board occurrence of death, regardless of the signs an symptoms above.

B. Vessels which have been in plague infected country in th 60 days prior to arrival in the United States.

Procedures: Vessels in any of the categories A or B above will b granted Provisional Pratique and boarded upon arrival for inspection. I addition, vessels boarded for quality control may be boarded upon o subsequent to arrival. IN ACCORDANCE WITH REGULATIONS YO MUST INFORM THE QUARANTINE STATION, THROUGH YOU VESSEL AGENT, AT OR NEAREST THE INTENDED PORT OF YOU VESSEL'S FIRST ARRIVAL IN THE UNITED STATES OF TH OCCURRENCE OF ILLNESS AS SPECIFIED IN A ABOVE. Based o information you provide your Agent, or information your Agent alread possesses regarding your vessel's itinerary, your Agent will notify th Quarantine Station if your itinerary included a plague infected count

ARRIVING VESSELS NO LONGER NEED TO COMPLETE MARITIME PUBLIC HEALTH DECLARATION UNLESS BOARDE FOR INSPECTION AS DESCRIBED ABOVE. THE BOARDIN INSPECTOR WILL PROVIDE THE DECLARATION.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany)

RADIO: Station KOU Marine Operator, San Pedro.

Channel 1 — ship transmit on 2009 kHz
ship receive on 2566 kHz

Channel 4 — ship transmit on 2126 kHz
ship receive on 2522 kHz

Station KOU also monitors Channel 16 (156.8 MHz) and Channel 2 (157.3 MHz) for distress, safety and calling.

Hours of report 0805, 2005 PST. Operator gives notice 5 minutes pr to each report. No ship traffic is handled during report period.

RADAR/VHF: Radar service provided to vessels only if Pilot aboard, in which case radar advisory information will be fed from shore-based radar at Pilot Station.

Use	*Channel*	*Frequency* (MHz)
Distress, Safety and Calling	16	156.80
Safety, S.A.R.	6	156.30

Harbour tugs, secondary	65A	156.275
San Pedro Marine Operator	24	157.20
San Pedro Marine Operator	26	157.30

Note: The Marine Operator does not guard Channel 16.

Channel 77 – Pilot/Tug channel: This channel is restricted to communications by a harbour pilot and support personnel in the movement and docking of ships. The use by commercial and recreational boat users is *in strict violation* of FCC rules. The loss of communications between a pilot and his assisting tugs due to interference by unauthorised users could result in a serious catastrophe within a harbour.

Channels 12, 14, 65A – Port Operations channels: Messages are restricted by FCC Rules to "the operational handling, movement and safety of ships and, in emergency, to the safety of persons." Other use is a violation of FCC rules.

Channel 13 – Navigational Bridge to Bridge channel: Use of this channel is restricted by FCC rules to navigational communications, such as meeting and passing arrangements, and vessel traffic services. No shore-based of this channel is permitted in this harbour area except Marine Exchange VTIS and the Cerritos Channel lift bridges.

Vessel Traffic Information Service: Upon entering the precautionary area, vessels are encouraged to contact the Marine Exchange on VHF Channel 13 (Call Sign KGW-299) to ascertain what vessel traffic may be expected.

TUGS: Tugs will meet vessel inside breakwater prior reaching inner harbour area. Pilot and tugs are in communication.

BERTHING: No requirements as to time of entry providing berthing arrangements have been made with Port Authority. Assignments classified as follows:

Preferential Assignments. Secondary Assignments, Subordinate Right granted for use of Preferential Assigned Berth. Temporary Assignment – temporary permission granted to use certain berth.

Note: All berth assignments shall be held by Assignee subject provisions of Port of Long Beach Tariff as to charges, rates, rules and regulations applicable thereto, and to all of terms, conditions and provisions contained in such assignment.

Depths/Elevations: Average elevation of wharf decks above mean lower low water datum and design depth of water alongside berths below mean lower low water datum. (Design Depths are subject to variations) (Data as of 1986)

GENERAL CARGO FACILITIES:

Berth 1, 2:

Terminal Operator:	Salen Shipping Agencies
Cargoes Handled:	Fresh citrus fruit, bananas, frozen shrimp.
Total Terminal Area:	7.9 acres (2.8 ha.)
Length of Berths:	1,070 ft. (326 m.)
Wharf Height:	25.3 ft. (7.7 m.)
Wharf Area:	37,995 sq.ft. (3,530 sq.m.)
Apron Width:	34 ft. (10.4 m.)
Open Storage Area:	174,240 sq. ft. (16,204 sq.m.)
Loading Platform Area:	13,000 sq.ft. (1,208 sq.m.)
Design Depth of Water:	30 ft. (9.1 m.)
Transit Shed Area:	108,000 sq.ft. (10,044 sq.m.)
Special Equipment/Facilities:	Specialised equipment to handle unitised cargo. Also handles general cargo and containers.

Berths 3, 4:

Terminal Operator:	Cooper/T. Smith Stevedoring Co.
Cargoes Handled:	Steel, lumber.
Total Terminal Area:	8.5 acres (3.4 ha.)
Length of Berths:	1,000 ft. (304.8 m.)
Wharf Height:	22.4 ft. (6.8 m.)
Wharf Area:	34,075 sq.ft. (3,166 sq.m.)
Apron Width:	35 ft. (10.7 m.)
Open Storage Area:	275,000 sq.ft. (25,548 sq.m.)
Loading Platform Area:	11,505 sq.ft. (1,069 sq.m.)
Design Depth of Water:	30 ft. (9.1 m.)
Transit Shed Area:	99,840 sq.ft. (9,275 sq.m.)
Special Equipment/Facilities:	Mobile cranes, forklifts.

Berth 201:
Terminal Operator: Port of Long Beach.
Cargoes Handled: Standby berth.
Length of Berths: 600 ft. (183 m.)
Wharf Height: 16 ft. (4.9 m.)
Wharf Area: 36,000 sq.ft. (3,066 sq.m.)
Apron Width: 60 ft. (18.3 m.)
Open Storage Area: 36,000 sq.ft. (3,066 sq.m.)
Loading Platform Area: 36,000 sq.ft. (3,066 sq.m.)
Design Depth of Water: 32 ft. (9.8 m.)
Special Equipment/Facilities: None.

Berth 208:
Terminal Operator: Standard Fruit and Steamship Co.
Cargoes Handled: Fresh bananas.
Total Terminal Area: 5.7 acres (2.3 ha.)
Length of Berths: 600 ft. (183 m.)
Wharf Height: 19.1 ft. (5.8 m.)
Wharf Area: 24,000 sq.ft. (2,044 sq.m.)
Apron Width: 40 ft. (12.2 m.)
Loading Platform Area: 14,000 sq.ft. (1,300 sq.m.)
Design Depth of Water: 40 ft. (12.2 m.)
Transit Shed Area: 4 electric, travelling banana
Special Equipment/Facilities: unloaders. Capacity 17,000 boxes (365 tons) per hour. Electric conveyor system from unloaders to trucks, with automatic computer controlled diverter system. Truck scale, maintenance building, 41,500 sq.ft. refrigerated warehouse.

Berths 12, 13, 17, 18:
Terminal Operator: California United Terminals.
Cargoes Handled: Steel, lumber, breakbulk, containers, rolling stock.
Total Terminal Area: 20.4 acres (8.3 ha.)
Length of Berths: 2,696 ft. (821 m.)
Wharf Height: 18.7 ft. – 22.2 ft. (5.7 m. – 6.8 m.)
Wharf Area: 108,462 sq.ft. (10,076 sq.m.)
Apron Width: 45 ft. – 200 ft. (13.7 m. – 61 m.)
Open Storage Area: 186,325 sq.ft. (17,310 sq.m.)
Loading Platform Area: 12,000 sq.ft. (1,115 sq.m.)
Design Depth of Water: 32 ft. – 36 ft. (9.7 m. – 11 m.)
Transit Shed Area: 180,000 sq.ft. (16,722 sq.m.)
Special Equipment/Facilities: Mobile cranes, forklifts, container handlers, Ro/Ro ramp. Heavy lift capability. Rail spur.

Berths 28, 29, 30, 31, 34:
Terminal Operator: California United Terminals.
Cargoes Handled: Breakbulk general.
Total Terminal Area: 30 acres (12.1 ha.)
Length of Berths: 2,900 ft. (884 m.)
Wharf Height: 10.5 ft. – 18.5 ft. (3.2 m. – 5.6 m.)
Wharf Area: 126,000 sq.ft. (11,705 sq.m.)
Apron Width: 45 ft. – 130 ft. (13.7 m. – 39.6 m.)
Open Storage Area: 288,600 sq.ft. (26,811 sq.m.)
Loading Platform Area: 9,000 sq.ft. (836 sq.m.)
Design Depth of Water: 36 ft. – 43 ft. (11 m. – 13.1 m.)
Transit Shed Area: 96,000 sq.ft. (8,922 sq.m.)
Special Equipment/Facilities: Stevedoring equipment. Access for rail to heavy lift berths. Ro/Ro ramp.

Berth 122:
Terminal Operator: Weyerhaeuser Company†
Fremont Forest Products‡
Cargoes Handled: Lumber and lumber products.
Total Terminal Area: 19.9 acres (8 ha.)†
7.5 acres (3 ha.)‡
Length of Berths: 600 ft. (183 m.)
Wharf Height: 22.7 ft. (6.9 m.)
Apron Width: 50 ft. (15.2 m.)
Open Storage Area: 432,600 sq.ft. (40,188 sq.m.)†
210,000 sq.ft. (1,951 sq.m.)‡
Design Depth of Water: 40 ft. (12.2 m.)
Transit Shed Area: 2 dry storage sheds total 10,000 sq.ft. (929 m.)‡
Special Equipment/Facilities: 150 ft. notched wharf to accommodate barges and lumber handling equipment. Notch height – 12.7 ft. (3.9 m.) Weyerhaeuser storage located at Berths No. 115-116.

Berths 204, 205:
Terminal Operator: Steel Terminal, Inc. (SSA).
Cargoes Handled: Steel and lumber products.
Total Terminal Area: 18.9 acres (7.6 ha.)
Length of Berths: 1,275 ft. (335 m.)
Wharf Height: 18.5 ft. (5.6 m.)
Wharf Area: 130,000 sq.ft. (12,077 sq.m.)
Apron Width: 50 ft. – 150 ft. (15.2 m. – 45.7 m.)
Open Storage Area: 480,000 sq.ft. (45,335 sq.m.)
Loading Platform Area: 9,000 sq.ft. (836 sq.m.)
Design Depth of Water: 36 ft. (11 m.)
Transit Shed Area: 180,000 sq.ft. (16,722 sq.m.)
Special Equipment/Facilities: Stevedoring equipment. Terminal services.

Berths 206, 207:
Terminal Operator: Crescent Terminal, Inc. (SSA).
Cargoes Handled: Steel products.
Total Terminal Area: 17.5 acres (7 ha.)
Length of Berths: 1,192 ft. (313 m.)
Wharf Height: 18.5 ft. (5.6 m.)
Wharf Area: 57,500 sq.ft. (5,341 sq.m.)
Apron Width: 48 ft. (14.6 m.)
Open Storage Area: 530,000 sq.ft. (49,237 sq.m.)
Loading Platform Area: 13,800 sq.ft. (1,288 sq.m.)
Design Depth of Water: 32 ft. (9.8 m.)
Transit Shed Area: 190,000 sq.ft. (17,651 sq.m.)
Special Equipment/Facilities: Stevedoring equipment. Terminal services.

Berth 62:
Terminal Operator: Cooper/T. Smith Stevedoring Co.
Cargoes Handled: Steel, plywood, automobiles, truc
Total Terminal Area: 20 acres (8 ha.)
Length of Berth: 750 ft. (228.5 m.)
Wharf Height: 12 ft. (3.9 m.)
Apron Width: 89 m.
Open Storage Area: 579,348 sq.ft. (53,879 sq.m.)
Design Depth of Water: 42 ft. (12.8 m.)
Transit Shed Area: 44,160 sq.ft. (4,107 sq.m.)
Special Equipment/Facilities: Stevedoring Equipment. Terminal services.

Berth 50:
Berths 52, 53 54:
Terminal Operator: Forest Terminals Corp.
Cargoes Handled: Newsprint/lumber/lumber products
Total Terminal Area: 17.1 acres (6.9 ha)
Length of Berths: 3 wharfs, 1,982 ft. (604 m.)
Wharf Height: 10.2 ft. – 17.1 ft. (3.1 m. – 5.2 m.)
Wharf Area: 63,645 sq.ft. (5,912 sq.m.)
Apron Width: 30 ft. – 38 ft. (9.1 m. – 11.6 m.)
Open Storage Area: 6.9 acres lumber storage
Loading Platform Area: 9,750 sq.ft. (906 sq.m.)
Design Depth of Water: 40 ft. (12.2 m.)
Transit Shed Area: 2 × 247,400 sq.ft. (22,984 sq.m.)
Special Equipment/Facilities: Specialised ships and barges designed for newsprint vacuum handling, loading and unloading. Vacuum lift truck on dock, heavy-duty lift trucks for lumber handling easy access to L.B. Frwy. Minimu time truck loading.

Berths 82, 83:
Terminal Operator: Pasha Group*/Toyota Motor Sales U.S.A.**
Cargoes Handled: Automobiles.
Total Terminal Area: 78.4 acres (31.7 ha.)*
79.3 acres (32 ha.)**
Length of Berths: 1,300 ft. (396 m.)
Wharf Height: 14.4 ft. (4.4 m.)
Wharf Area: 61,750 sq.ft. (5,737 sq.m.)
Apron Width: 95 ft. (30 m.)
Open Storage Area: 2,730,000 sq.ft. (253,617 sq.m.)*
2,100,000 sq.ft. (195,090 sq.m.)**
Design Depth of Water: 38 ft. (11.6 m.)
Special Equipment/Facilities: Pasha Group – office, processing and assembly buildings, body sho dewax, truck maintenance buildin Capacity for 36 rail cars. Toyota Motor Sales, U.S.A. – offic and processing buildings, body shop, car wash, truck bed installation building.

*Pasha Group
**Toyota Motor Sales, U.S.A.
†Weyerhaeuser Company
‡Fremont Forest Products

CONTAINER FACILITIES:
Berths 6, 8, 10:
Terminal Operator: Long Beach Container Terminal, In
Total Terminal Area: 85.3 acres (34.5 ha.)
Length of Berths: 2,700 ft. (823 m.)
Wharf Height: 15 ft. (4.6 m.)
Crane Truck Gauge: 100 ft. (30.4 m.)
Clear Lift/Above Water: 105 ft. (32 m.)
Boom Outreach: 137 ft. (41.8 m.)
Backreach: 50 ft. (15.2 m.)
Open Storage Area: 3,216,000 sq.ft. (298,766 sq.m.)
Design Depth of Water: 50 ft. (15.2 m.)
Cargoes Handled: General cargo in containers.
Special Equipment/Facilities: Ground and chassis operation. 4 travelling container cranes of 40 long ton capacity; 46 tons with spreader. 11 transtainers, 4 and 5 high stacking. 14,000 TEU ground capacity, incl. 340 reefer outlets, 2,000 FEU chassis slots, 600 FE chassis stacked vertically.

Berths 20, 22, 24, 26:
Terminal Operator: California United Terminals.
Total Terminal Area: 96 acres (38.8 ha.)
Length of Berths: 1,950 ft. (594 m.)
Wharf Height: 11.3 ft. – 18.4 ft. (3.4 m. – 5.6 m.)
Crane Truck Gauge: 50 ft. (15.2 m.)
Clear Lift/Above Water: 98 ft. (29.9 m.)
Boom Outreach: 115 ft. (35 m.)
Backreach: 50 ft. (15.2 m.)
Open Storage Area: 2,520,000 sq.ft. (234,108 sq.m.)
Design Depth of Water: 37 ft. (11.3 m.)
Cargoes Handled: General cargo in containers, Ro/Ro cargo, breakbulk and steel slabs.
Special Equipment/Facilities: 2 Ro/Ro ramps, one stern ramp. 4× 40 ton travelling container cranes, transtainers, top handlers, side handlers. Container storage space for 14,400 TEU ground capacity, 2,500 FEU chassis slots, 360 reefer outlets. 11-lane main gate and 6 scales. Rail spurs.

Berths 227, 228, 229, 230:
Terminal Operator: Sea-Land Service, Inc.
Total Terminal Area: 108.6 acres (44 ha.)
Length of Berths: 2,550 ft. (778 m.)
Wharf Height: 15.6 ft. (4.8 m.)
Crane Truck Gauge: 100 ft. (30.4 m.)
Clear Lift/Above Water: 106 ft. (32.3 m.)
Boom Outreach: 115 ft. – 127 ft. (35 m. – 38.7 m.)
Backreach: 60 ft. (18.3 m.)
Open Storage Area: 5,317,200 sq.ft. (493,619 sq.m.)
Design Depth of Water: 42 ft. – 44 ft. (12.8 m. – 13.4 m.)
Cargoes Handled: General cargo in containers
Special Equipment/Facilities: Ground and chassis operation. 1×40 ton, 6×30 ton travelling container cranes. Space for 10,230 TEU containers, 2,550 grounded, 5,900 chassis, including 482 reefer chassis spaces. Container freight station separate from terminal with 71,150 sq.ft. (6,610 sq.m.). 4 transtainers.

Berths 232, 233, 234:
Terminal Operator: International Transportation Services, Inc.
Total Terminal Area: 103.6 acres (42 ha.)
Length of Berths: 2,300 ft. (701 m.)
Wharf Height: 16 ft. (4.9 m.)
Crane Track Gauge: 50 ft. – 100 ft. (15.2 m. – 30.4 m.)
Clear Lift/Above Water: 96 ft. – 106 ft. (29.3 m. – 32.3 m.)
Boom Outreach: 115 ft. – 137 ft. (35 m. – 41.8 m.)
Backreach: 45 ft. – 50 ft. (13.7 m. – 15.2 m.)
Open Storage Area: 2,980,460 sq.ft. (276,885 sq.m.)
Design Depth of Water: 36 ft. – 42 ft. (11 m. – 12.8 m.)
Cargoes Handled: General cargo in containers.
Special Equipment/Facilities: Ground and chassis operation. 4×30 and 2×40 long ton container cranes. 6×40 long ton and 4×30 long ton capacity transtainers. Space for storing 12,800 TEU containers on ground, including 264 reefer outlets. 4,000 TEU chassis slots. Container Freight Station with 60,100 sq.ft. (5,583 sq.m.).

Berths 243, 244:
Terminal Operator: Maersk Line Agency.
Total Terminal Area: 45.1 acres (18.2 ha.)
Length of Berths: 1,200 ft. (366 m.)
Wharf Height: 15.9 ft. (4.8 m.)
Crane Track Gauge: 50 ft. (15.2 m.)
Clear Lift/Above Water: 106 ft. (32.3 m.)
Boom Outreach: 115 ft. – 125 ft. (35 m. – 38 m.)
Backreach: 50 ft. (15.2 m.)
Open Storage Area: 1,512,000 sq.ft. (140,464 sq.m.)
Design Depth of Water: 42 ft. (12.8 m.)
Cargoes Handled: General cargo in containers.
Special Equipment/Facilities: Chassis operation. 3×40 ton travelling container cranes. 2×40 ton transtainers. 2,460 FEU container slots on chassis and 1,800 TEU container slots grounded, 250 reefer outlets. Side handler and top pick with 15 and 40 ton capacity. One rail line through Berth 246.

Berths 245, 246, 247:
Terminal Operator: Pacific Container Terminal.
Total Terminal Area: 62.5 acres (25.3 ha.)
Length of Berths: 2,100 ft. (640 m.)
Wharf Height: 15.9 ft. (4.8 m.)
Crane Track Gauge: 50 ft. (15.2 m.)
Clear Lift/Above Water: 91 ft. – 106 ft. (27.7 m. – 32.3 m.)
Boom Outreach: 115 ft. – 125 ft. (35 m. – 38 m.)
Backreach: 50 ft. (15.2 m.)
Open Storage Area: 2,500,000 sq.ft. (232,250 sq.m.)
Design Depth of Water: 36.4 ft. – 40 ft. (11 m. – 12.2 m.)
Cargoes Handled: General cargo in containers.
Special Equipment/Facilities: Ground and chassis operation. 4×40 ton travelling container cranes. 40 ton transtainers. Athwartship capability. Space for storing 12,000 TEU containers. Complete reefer container services and storage, with 168 reefer outlets. Container freight station, 34,000 sq.ft.

CRANES: Barge cranes available capacity 45 tons – 275 tons. A U.S. Navy floating crane capacity 385 tons available for hire.

BRIDGES: No restrictions into Port of Long Beach. The Gerald Desmond Bridge over Back Channel has vertical clearance of 155 ft. Cerritos Channel which connects Long Beach through Back Channel to Port of Los Angeles has 2 bridges which must be opened for passage of vessels.

Signal for Opening: 3 long blasts on horn or whistle. During inclement weather, call through a megaphone or make a loud and distinct stroke on a bell.

MEDICAL: Advance notice preferable. Adequate hospital and medical facilities available for providing necessary or emergency care. From information available, Public Health Department may, if required, request certain information prior to granting Free Pratique for inoculations, Vaccination/Fever Certificates.

DENSITY: Local water density 1.025 grams per millilitre or pure sea water at all stages of tide.

FRESH WATER: Potable fresh water available all Municipal berths through 2 in. lines. Rental charge for use of each 50 ft. length water hose when furnished.

FUEL: All grades (viscosities) of bunker fuels available in any amount through pipe-lines at most Municipal berths, and by barge at anchor or at berths if desired. Notify quantity and type desired to local Steamship Company or Agent.

DRY BULK FACILITIES:

Berths 32, 33:
Terminal Operator: Pacific Coast Cement Corp.
Cargoes Handled: Bulk cement.
Total Terminal Area: 2 acres (0.8 ha.)
Length of Berths: 676 ft. (206 m.)
Wharf Height: 13.8 ft. (4.2 m.)
Open Storage Area: 157,623 sq.ft. (14,643 sq.m.)
Design Depth of Water: 36 ft. (11 m.)
Special Facilities/Equipment: Silo capacity 50,000 tons. Screw-type unloader capacity 600-800 t.p.h., unloads to conveyor system direct to silos. Highest elevation vertical screw 42.5 ft., lowest elevation vertical screw 38 ft. Max. reach 94 ft. from face of wharf (concrete), 91.5 ft. from pierhead line. Vertical clearance under boom at MHW 89 ft., under vertical screw at MHW 20 ft. Truck loading spouts.

Berth 46:
Terminal Operator: Domtar Gypsum.
Cargoes Handled: Gypsum.
Total Terminal Area: 9 acres (3.6 ha.)
Length of Berths: 600 ft. (183 m.)
Wharf Height: 12 ft. (3.7 m.)
Design Depth of Water: 36 ft. (11 m.)

Berth 82:
Terminal Operator: Gold Bond Building Products.
Cargoes Handled: Bulk gypsum.
Total Terminal Area: 17.3 acres (7 ha.)
Length of Berths: 650 ft. (198 m.)
Wharf Height: 14.4 ft. (4.4 m.)
Open Storage Area: 65,340 sq.ft. (6,076 sq.m.)
Design Depth of Water: 38 ft. (11.6 m.)
Special Facilities/Equipment: Adjustable, elevated receiving hopper served by an elevated electric belt conveyor system extending to a 40,000 ton capacity storage bulding. 800-900 t.p.h. capacity.

Berths 209, 210:
Terminal Operator: Ocean Salt Co.
Cargoes Handled: Bulk salt.
Total Terminal Area: 4.9 acres (2 ha.)
Length of Berths: 1,100 ft. (335 m.)
Wharf Height: 19.2 ft. (5.9 m.)
Open Storage Area: 117,740 sq.ft. (10,938 sq.m.)
Design Depth of Water: 40 ft. (12.2 m.)
Special Facilities/Equipment: Movable inclined elevated electric belt conveyor system with receiving hopper extending from wharf to stock pile area. Packaging plant adjacent.

Berths 210, 211:
Terminal Operator: Koch Carbon Co.
Cargoes Handled: Dry bulk products.
Total Terminal Area: 6.7 acres (2.7 ha.)
Length of Berths: 1,100 ft. (335 m.)
Wharf Height: 19.3 ft. (5.9 m.)
Open Storage Area: 291,000 sq.ft. (27,000 sq.m.)
Design Depth of Water: 40 ft. (12.2 m.)
Special Facilities/Equipment: Truck wash, new conveyor system, truck dump for petroleum coke with new control room. Silo storage 65,000 tons.

Berths 212, 213, 214, 215:
Terminal Operator: Metropolitan Stevedore Co.
Cargoes Handled: Bulk petroleum coke, coal, potash, borax, soda ash, iron ore and prilled sulphur.
Total Terminal Area: 39.2 acres (15.9 ha.)
Length of Berths: 1,900 ft. (243 m.)
Wharf Height: 18.5 ft. – 18.8 ft. (5.6 m. – 5.7 m.)
Open Storage Area: 75,000 metric tons
Design Depth of Water: 37 ft. – 50 ft. (11.3 m. – 15.2 m.)
Special Facilities/Equipment: Stockpile area 85,682 sq.ft. (7,960 sq.m.). Two electric, travelling bulk shiploaders. The first with retractable straight-line bridge boom having 58 ft. (17.7 m.) outreach beyond pierhead line, 60 ft. (18.3 m.) above MLLW to bottom of shuttle, 47.5 ft. to bottom of swivel. Boom equipped with 48 in. (1.2 m.) electric belt conveyor and a telescopic loading spout with mechanical trimming head. Loading rate 3,900 long tons/hr. The second shiploader features a retractable straightline bridge boom with a 75 ft. (24.2 m.) outboard reach 66 ft. (20.1 m.) air draft telescoping loading spout with spoon. Designed loading rate is 5,000 metric tons/hr. Rail facilities: 85 car unit trains can be accommodated while waiting movement to dump sites. One rotary and one bottom dump system. Shiploaders travel on rails along rear of wharf for distance of 1,485 ft. (453 m.); working range is 1,175 ft. (358 m.). Bulk materials are handled by 48 in. (1.2 m.) and 72 in. (1.9 m.) belt conveyor systems extended to shiploader through tunnel reclaim from car unloading sheds and storage areas. Prilled sulphur also exported from facility. Two covered silos with 30,000 tons of sulphur storage capacity.
Covered Storage: 380,000 tons
Silo Storage: 30,000 tons

TANKERS:

Berths 30, 31, 32:
Terminal Operator: Baker Commodities Inc.
Cargoes Handled: Tallow, vegetable oils (coconut oil, palm oil, cotton seed oil).
Total Terminal Area: 1.2 acres (0.5 ha.)
Length of Berths: 992 ft. (302.4 m.)
Wharf Height: 10.9 ft. – 12.1 ft. (3.3 m. – 3.7 m.)
Design Depth of Water: 43 ft. (13 m.)
Special Facilities/Equipment: 2×6 in. pipelines from Wharf D-30 to storage tanks. Storage capacity 6.7 million gallons. Also 3×10 in. pipelines from Berth D-32 to storage tanks.

Berths 73, 74:
Terminal Operator: Powerline Oil Company.
Cargoes Handled: Crude oil and fuel oil.
Total Terminal Area: 8.8 acres (3.6 ha.)
Length of Berths: 830 ft. (253 m.)
Wharf Height: 11.7 ft. (3.6 m.)
Design Depth of Water: 37 ft. (11.3 m.)
Special Facilities/Equipment: Storage capacity: 570,000 bbls.

Berths 76, 77, 78:
Terminal Operator: Four Corners Pipe Line Company.
Cargoes Handled: Petroleum.
Total Terminal Area: 28 acres (11.3 ha.)
Length of Berths: 2,150 ft. (655 m.)
Wharf Height: 14.4 ft. (4.4 m.)
Design Depth of Water: 46 ft. (14 m.)
Special Facilities/Equipment: Capacity for storage: 1,800,000 bbls.

Berths 82, 83:
Terminal Operator: Petro-Diamond.
Cargoes Handled: Gasoline, gasoline blend stocks, diesel, toluene, MTBE and lube oil. 1×8 in. dock hose conecting into one of 2×500 ft., 12 in. dock lines capable of receiving up to 7,500 bbls./hr.
Total Terminal Area: 5.4 acres (2.2 ha.)
Length of Berths: 1,300 ft. (396 m.)
Wharf Height: 14.4 ft. (4.4 m.)
Design Depth of Water: 38 ft. (11.6 m.)
Special Facilities/Equipment: Terminal has pipeline connections which allow petroleum products to be shipped to most L.A. Basin Refiners and common carrier pipelines. Truck rack at the Terminal is capable of loading 100 trucks per hour period. Permits are available for DSP and bonded storage. Capacity for petroleum products: 410,000 bbls.

Berths 84, 85, 86, 87:
Terminal Operator: Texaco Inc.
Cargoes Handled: Crude oil, petroleum products, bunker fuel.
Total Terminal Area: 10.7 acres (4.3 ha.)
Length of Berths: 1,770 ft. (540 m.)
Wharf Height: 16.3 ft. (5.0 m.)
Design Depth of Water: 52 ft. (15.8 m.)
Special Facilities/Equipment: Discharge capacity 32,000 bbls./hr. 24 in. pipeline to storage and tank farm. Storage capacity: 245,000 bbls.

Berth 118:
Terminal Operator: Four Corners Pipe Line Company.
Cargoes Handled: Petroleum products.
Total Terminal Area: 3.3 acres (1.3 ha.)
Length of Berths: 1,000 ft. (305 m.)
Wharf Height: 21.5 ft. (6.6 m.)
Design Depth of Water: 55 ft. (16.8 m.)
Special Facilities/Equipment: 4×12 in. (30.5 cm.) hydraulic-operated, marine swivel-jointed loading arms mounted on elevated steel structure on centre wharf. Discharge capacity is 50,000 bbls. (7,950,000 litres) per hour.

Berths 120, 121:
Terminal Operator: Four Corners Pipe Line Company.
Cargoes Handled: Crude oil and petroleum products.
Total Terminal Area: 5.7 acres (2.3 ha.)
Length of Berths: 1,100 ft. (335 m.)
Wharf Height: 20 ft. (6.1 m.)
Design Depth of Water: 76 ft. (22.4 m.)
Special Facilities/Equipment: 4×16 in. diameter articulated crude unloading arms and 1×8 in. diameter articulated bunker/diesel loading arm; 275 p.s.i. max. workin pressure; designed to accommoda tankers from 50,000 to 265,000 d.w.t. tankers; arms are FMC Chicksan with hydraulic couplings. Storage tankers available at ARCO facilities in Carson and the inner harbour via 42 in. and 24 in. pipelines.

Berths 209, 210, 211A:
Terminal Operator: Golden West Distribution.
Cargoes Handled: Petroleum products and bunker fu
Total Terminal Area: 4.6 acres (1.9 ha.)
Length of Berths: 790 ft. (241 m.)
Wharf Height: 19.1 ft. (5.8 m.)
Design Depth of Water: 40 ft. (12.2 m.)
Special Facilities/Equipment: Storage tankage for bunker fuel 404,570 bbls. Discharge rate: 4,50 bbls./hr.

Berth 210:
Terminal Operator: C. Brewer Terminals.
Cargoes Handled: Crude products.
Total Terminal Area: 1.9 acres (0.77 ha.)
Length of Berths: 570 ft. (174 m.)
Wharf Height: 19.1 ft. (5.8 m.)
Design Depth of Water: 40 ft. (12.2 m.)
Special Facilities/Equipment: Storage capacity; 62,000 bbls.

Berth 242:
Terminal Operator: C. Brewer Terminals.
Cargoes Handled: Bulk molasses, miscellaneous bulk liquid chemicals and bunker fuel.
Total Terminal Area: 7.4 acres (3 ha.)
Length of Berths: 700 ft. (213.4 m.)
Wharf Height: 15.0 ft. (4.6 m.)
Design Depth of Water: 36 ft. (11.0 m.)
Special Facilities/Equipment: Pumping and pipeline system designed to handle product from barges, ships rail cars and trucks. Heavy duty pumps to handle a variety of bulk liquids, storage tank capacity: 13 million gallons. Also use Pier A, Berth 210.

The following is part of a letter sent by the Captain of the Port to a tanker operator:

The safety of the port and the VLCC tankers using the harbour f bunkering and provisioning is of paramount concern to the Coast Gua Consequently the following guidelines have been established for all su vessels 200,000 d.w.t. and larger when utilising the Outer Harbo (inside of the breakwater) of the ports of Los Angeles/Long Beach:

a. Vessels may enter or depart the harbour areas inside th breakwater only during daylight if over 56 ft. draft.
b. Minimum visibility of 1 mile is established for vessel moveme
c. Adequate tugboat assistance shall be provided when passi through the breakwater entrances upon entering or departu and when navigating inside the breakwater to and fro anchorages.
d. A qualified Pilot must be onboard when entering or departing th harbour. One way traffic is to be maintained during the VLCC transit through the breakwater entrance.
e. Vessel must have a 10% draft clearance under the keel wh crossing either the Los Angeles or Long Beach entrance.
f. No "dead ship" status will be permitted without prior approv the Captain of the Port.
g. No vessel with a beam in excess of 200 ft. shall enter ei harbour without the permission of the Captain of the Port.

FIRE PRECAUTIONS: 2 fire boats and 1 fire station; in addition City fire service available.

Special fire precautions required at all berths handling petroleum products or dangerous cargoes. In addition to all applicable provisions of Long Beach Municipal Code, flammable and combustible liquids and flammable gases shall be handled and stored at Marine Petroleum Terminals in accordance with minimum fire safety requirements promulgated by Chief, Department of Fire, City of Long Beach.

CONSULS: (Consul Generals, Consul or Vice-Consul). In Los Angeles. (Area code 213)

REPAIRS: Within greater port area facilities to accomplish all types of deck and engine repairs.

DRY DOCKS: Within greater port area 2 large private commercial dockyards, Bethlehem Shipbuilding and Repair, and Todd Shipyard Corporation with large floating dry docks and repair facilities. Also, 3 large capacity graving docks located at Naval Shipyard available for emergency use by merchant vessels when not occupied by naval vessels.

SURVEYORS:

1. Lloyd's Register (local office), 1328 N. Avalon Blvd., Wilmington, CA 90744, (P.O.Box 575) 90748. Tel: (213) 834 2334.

American Bureau of Shipping, 200 Pine Ave., Suite 415, Long Beach, CA 90802. Tel: (213) 437-6488.

2. Pacific Cargo Inspection Bureau, Pier A, Berth 4, Long Beach, CA 90802. Tel: 435-7861.

Jacobsen and Associates, Inc., 1324 N. Avalon Blvd., P.O.Box 248, Wilmington, CA 90748. Tel: 834-4553.

GANGWAY/DECK WATCHMEN: Normally used, but only compulsory when detainees aboard.

OPENING/CLOSING HATCHES: Crew can open or close hatches at sea or at anchor. If closed or opened at dockside, the use of longshoremen compulsory.

CUSTOMS ALLOWANCES: Tobacco, each crew member entitled to 300 cigarettes, 50 cigars and 3 lb. of tobacco or combination of above. If the stay in port is such that additional tobacco is required, Customs will so issue. Wine and/or Spirit, not to exceed 1 quart of alcoholic beverage each adult non-resident. This exemption for alcoholic beverages may be applied to more than one kind but not to an aggregate volume of more than 1 quart for each adult crew member.

Note: Upon arrival of vessel from foreign port, or vessel engaged in foreign trade from a domestic port, sea stores and ship's stores not required for immediate use or consumption on board while vessel in port, and articles acquired abroad by officers and members of crew, for which no permit to land has been issued, shall be placed under seal, unless Customs Officer is of the opinion that circumstances do not require such action.

CARGO GEAR: Employer shall not use ship's cargo handling gear until he has ascertained that vessel has a current and valid Cargo Gear Register and Certificate indicating that cargo gear has been tested, examined and annealed in accordance with requirements of International Labour Organization Convention No. 32.

REPATRIATION: Through U.S. Department of Justice, Immigration and Naturalisation Service, and clearance of personal effects by U.S. Customs.

AIRPORT: Los Angeles International Airport approximately 18 miles from port, and provides regular scheduled and international airline service.

TIME: GMT minus 8 hours. United States observes Daylight Saving Time, from first Sunday in April till last Sunday in October.

POLICE/AMBULANCE/FIRE: Port of Long Beach – Police 590-7320 (routine), 911 (emergency); Fire Department and Paramedics 911; Harbour Security Officers 590-4195; U.S. Customs 590-2457.

In an emergency dial 911.

EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard, Captain of the Port, 165 N. Pico Ave., Long Beach, CA 90802. Tel: (213) 590-2326.

HOLIDAYS: The subject Legal holidays are defined as follows: New Year's Day (1st January); Lincoln's Birthday (12th February); Washington's Birthday (3rd Monday February); Memorial Day (Last Monday May); Independence Day (4th July); Labour Day (1st Monday September); Admission Day (9th September); Columbus Day (2nd Monday October); Veterans' Day (11th November); Thanksgiving Day (4th Thursday November); Christmas Day (25th December).

Notes: (1) Also, every Statewide Election is a holiday.
(2) Also, any other legal holiday that may be proclaimed by State or National authority is a holiday.
(3) When one of the above days falls on Sunday, the following Monday shall be observed as a holiday.

TELEPHONE: Installation of telephone aboard ship at Municipal berths.

SERVICES: All services from tank cleaning to compass and instrument repair available at various locations within greater port area.

STORING: See "Prelims".

1. Vessel can be stored by barge or truck by prior arrangement.

2. No restriction on storing from barge while vessel is discharging or loading except when the vessel is handling hazardous cargo, petroleum products or bunkering.

3. Truck can proceed alongside the berth for the purpose of delivering or receiving stores and chandlery supplies.

4. Forklift trucks may be used on the berth to handle stores with approval of the stevedoring company.

5. Customs Regulation regarding storing: Stores *not in bond* may be taken on board the vessel on an export declaration certified by the Customs' Inspector on duty. Stores *in bond* must be signed off by the bonded warehouse on a vessel supply export document and received on board the vessel by the Customs' Inspector on duty.

6. Riggers employed to assist with storing, stevedores or longshoremen assist with the stores on the wharf but the storing on board vessel is done by the ship's crew.

SHIP SUPPLY SERVICE: See "Los Angeles".

SHORE LEAVE: Crewmen allowed shore leave providing necessary application presented to U.S. Immigration Officer is approved and crewmen's Landing Permit issued (Form 5129). Customs declaration required for articles to be landed by crew members (1 quart of alcoholic beverage with seal broken is allowed).

IDENTIFICATION CARDS: U.S. Department of Justice, Immigration and Naturalization Service Form I-95-A (Form I-94 for passengers) must be completed.

DELAYS: Arrival at berths are normally on time as scheduled. However, there are times of inclement weather or lack of cargo at a berth which create a short delay. Shortage of longshoremen can also cause a delay in discharging or loading cargo. No delay experienced in bunkering.

DEVELOPMENTS: Landfill of 147 acres underway adjacent to Pier J. Completion is expected in 1991 and 2 container terminals will come on stream in 1992.

GENERAL: For information regarding various social organisations, call 436-9041. Long Beach Recreation Department, for information.

AUTHORITY: Board of Harbor Commissioners, Port of Long Beach, P.O.Box 570, (925 Harbor Plaza), Long Beach, California 90801 – 0570. *Tel:* (213) 437-0041. *Telex:* 656452. *FAX:* (213) 437-3231. *Cables:* Portobeach. *Contact:* Paul E.Brown, Acting Executive Director. Stan Westover, Director of Operations.

LONGVIEW, Washington: 46.10 N. 122.55 W.

(See Plan)

DOCUMENTS:

3 Complete Cargo Manifests.
3 Stores Lists.
3 Possessions Lists.
3 Crew Lists on Immigration forms.
Vessel's Documents.
Tonnage Tax Statement.
Quarantine Form completed.

At first port of arrival, ship is boarded and inspected by Customs, Immigration, Public Health and Agriculture officials. At each subsequent port only Customs Agent will board prior to docking.

PILOTAGE: See "General – Pilotage" before first U.S.A. port.

ANCHORAGE: Safe anchorages indicated by Columbia River Pilots.

RESTRICTIONS: None in regard to arrival time or state of tide. Channel depth 40 ft. at mean low water and tidal range varies between 2.5 ft. and 4 ft.

MAX. SIZE: No limitation on length or breadth. Depth alongside 40 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Columbia River Pilots have knowledge of tug positions and other knowledge pertaining to tugs aiding a vessel.

BERTHING: 7 berthing facilities are available at Port Longview, starting adjacent to the Lewis & Clark Bridge and extending upstream for a distance of nearly a mile.

Berths 1 through 4 are located on one continuous wharf 2,155 ft. long. Berths 1, 2 and 3 are equipped to handle general cargo, pelletised feed grains, bulk ores and chemicals. 2 gantry cranes serve Berths 1 and 2 and a 600-ton capacity heavy lift is located at Berth 3. A paved 2.8 acre assembly area fronting Berth 2 is suitable for handling lumber or multi-commodity project shipments. Both gantry cranes can be used at this facility. 3 transit sheds and 1 gear locker are located near the three berths which are also served by 1,500 ft. of surface track on the wharf apron plus 2 spur tracks under the gantry cranes.

Berth 4 is used for receiving and shipping grain and is served by a 5 million bushel grain elevator operated by the Port. The overhead grain gallery extending along the wharf is served by 6 gravity-fed loading spouts. A marine leg located at the inland side of the wharf is used for unloading grain barges.

Berth 5 is a 515 ft. wharf and is an exporting facility for the shipment of bulk chemicals. It is also available for the loading of logs using ship's gear from the water side of the vessel, and handling barges.

Berths 6 and 7 form a continuous wharf 1,500 ft. long. The ship-side container crane is located at Berth 7. An open cargo handling area of 54 acres is located adjacent to the 2 berths. On the dock is one large transit shed (100,666 sq.ft.). 3 rail tracks are located along the length of the apron. There is a rail spur on the inland side of the transit shed.

Port Longview operates its own facilities and performs all terminal services between ship's tackle and consignees or inland carriers.

In addition to these facilities operated by the Port, there are 9 other berths operated privately in the Longview Port District. Weyerhaeuser Company owns 6 berths and Reynolds Metals Company, International Paper Company and Longview Fibre Company each operate 1 berth apiece. 6 of the 9 berths are used primarily for export while the other 3 are used mainly for receiving raw materials used by the mills.

BULK HANDLING FACILITIES:
Containers: Port Longview's container facility centres around a 30 long ton, electrically operated, rail mounted crane.

The crane has a rated lifting capacity of 30 long tons below the spreader and 37 long tons below the cargo beam. The telescopic spreader can be adjusted to handle 20 ft., 27 ft., 35 ft. and 40 ft. containers. It is designed to handle 20 load/discharge containers per hour.

The boom can be raised and lowered to provide clearance of ship superstructure and is designed for through-leg rapid load-handling.

With an outreach of 124 ft. from the waterside rail and a vertical reach of 110 ft., the crane can service Panamax size vessels.

Utilising a unique "trailer-train" system, a continuous flow of containers can be maintained between storage and staging areas to sustain loading/unloading operations.

A 40-acre area located behind Berth 6 – 7 is for use as a container storage yard.

Containers received from the vessel can be immediately inspected and rerouted either to warehouses for devanning or to rail or truck for ongoing movement. Export containers are staged to the vessel in loading sequence in the adjacent cargo assembly area.

Grain: The Port operates the 5,165,000 bushel capacity grain elevator at the Port of Longview Terminal.

Pellets/Soda Ash/Coke/Fertiliser: Port Longview has three dry bulk shipping facilities. Sugar beet pulp pellets are loaded at Berth No. 1 through a 600 t.p.h. loader.

At Berth 2, a new state-of-the-art loader went into operation in the Summer of 1990 to handle bulk chemicals and minerals at 1,800 t.p.h.

Atlantic Richfield Co. uses a calcined coke storage/loading facility at Berth No. 5 that loads at 900 t.p.h.

Two portable hoppers with belt conveyors are available to handle inbound free flowing dry bulks unloaded by ship's gear or dock Whirley cranes equipped with clams.

Roll-on/Roll-off: A 240 ft. extension to the upstream end of Berth 7 to accommodate Ro/Ro vessels is available at the Port of Longview. 96 ft. of the extension is constructed at a level 8 ft. lower than the remainder of the dock and serves as the loading/unloading area to accommodate a Ro/Ro vessel's stern ramp.

BRIDGES: One bridge crossing Columbia River at Longview has sufficient clearance so as not to present a problem. Clearance 169 ft. – 185 ft. depending on season.

CRANES: 2 electric-powered gantry cranes serve Berths 1 and 2 on 550 ft. of track. They are readily adaptable for handling various types of bulk cargoes, containers, logs, machinery and large equipment. 1 crane is equipped with a 130 ft. boom and has a capacity of 60 tons at a 45 ft. radius. The other crane has a 120 ft. boom with a 50 ton capacity at a 45 ft. radius. Both cranes are served by two 400 ft. railroad tracks permitting direct handling between rail cars and vessels.
